DELHI BOMBAY CALCUTTA MADRAS

PREFACE TO THE FIRST EDITION

THE idea of the present work, the publication of which has been inevitably delayed by the war, was first conceived in 1933. It is designed to cover the same ground, though on a different scale, as the well-known dictionaries by Sir William Smith on Greek and Roman antiquities and on Greek and Roman biography, mythology, and geography. The eighth edition (1914) of Lübker's *Reallexikon* was taken as a general model, but with certain modifications in principle and with certain differences in emphasis. The present work is intended to be less purely factual than Lübker. It devotes more space to biography and literature, less to geography and to bibliographical information, aiming in this latter respect at no more than referring the reader to the best work, in English and foreign languages, on the various subjects. A special feature is the inclusion of longer articles designed to give a comprehensive survey of the main subjects and to place minor characters, places, and events, the choice of which has been necessarily selective, against their appropriate literary or historical background. The *terminus ad quem* is, generally speaking, the death of Constantine (337), and proportionately less space has been allotted to persons who lived later than the second century A.D.; but a few prominent figures of later ages, such as Augustine, Eustathius, Photius, Psellus, Thomas Magister, Triclinius, and Tzetzes, who are important for the student of classical antiquity, have been included. Christian writers, as such, have been excluded.

The editors of the dictionary at its inception were Mr. J. D. Denniston, for Greek literature; Professor J. Wight Duff, for Latin literature; Professor H. M. Last, for Greek and Roman history and geography; Professor A. D. Nock, for Greek and Roman religion; Sir David Ross, for Greek and Roman philosophy, mathematics, and science. Professor R. G. Collingwood advised on matters concerned with art and archaeology until his death in 1943. In 1937 Professor Last found himself unable to continue his editorship, and his place was taken by Professor M. Cary and Dr. H. H. Scullard, who are alone responsible for the selection and form of articles on history, geography, law, archaeology, and art. In 1944 Professor Wight Duff died, and Professor A. Souter agreed to see the articles on Latin literature through the press; and in 1945 Professor H. J. Rose took over from Professor Nock the final stages of the editorship of articles connected with religion. In the autumn of 1939 Sir Paul Harvey undertook the complicated and laborious task of securing uniformity in such matters as spelling, transliteration, and abbreviations, and of adding the requisite cross-references. He had all but completed this work when in June 1948 illness compelled him to relinquish it. Professor Paul Maas has placed his many-sided learning at the Delegates' disposal in the final stages, and contributed the short bibliographical articles at the end of the book. Valuable help and advice have also been received from Mr. R. Syme and Professor A. Momigliano.

Every effort has been made by the editors to incorporate the results of recent scholarship and to bring the work as much up to date as possible, but a task which involved communication with so many widely scattered contributors has been made much harder by the interruptions of war and the difficulties of present production. For any omissions therefore, particularly in the bibliographies, the reader's indulgence is sought.

June 1948

ABACUS, a counting-board, the usual aid to reckoning in antiquity. The Egyptians, Greeks, and Romans alike used a board with vertical columns, on which (working from right to left) units, tens, hundreds, or (where money was in question) e.g. $\frac{1}{4}$ obols, $\frac{1}{2}$ obols, $\frac{3}{4}$ obols, obols, *drachmae*, sums of 10, 100, 1,000 *drachmae*, and talents were inscribed. When an addition sum was done, the totals of the columns were carried to the left, as in our ordinary addition. The numbers might be marked in writing or by pebbles, counters, or pegs. W. D. R.

ABARIS, a legendary servant of Apollo, similar to Aristeas (q.v.), and believed to be a Hyperborean (q.v.). He lived without food, and travelled everywhere bearing the golden arrow, the symbol of the god (Hdt. 4. 36). Pindar assigned him to the time of Croesus (fr. 283 Bowra). Later authorities tell of his presence in Athens (*Suda*, s.v.) and of his helping the Spartans by directing the performance of sacrifices which prevented all plagues thereafter (Apollonius, *Mn.* 4). W. K. C. G.

ABDERA, a flourishing Greek city lying on the coast of Thrace (q.v.), to the east of the mouth of the Nestus (Diod. 13. 72. 2, Strab. 7. fr. 46, Hdt. 7. 126). Originally a Clazomenian colony, founded in the seventh century B.C., it was reoccupied by colonists from Teos (among them Anacreon, q.v.) in the second half of the sixth century (Hdt. 1. 168; Pind. *Paeon* 2); its site was near Bulustra, a corruption of the name it bore in the Middle Ages, Polystylon. Lake Aenus (q.v.), Abdera owed its wealth (it was the third richest city in the Delian League, with a contribution of fifteen talents) to its corn production (see the coins), and to the fact that it was a port for the trade of Upper Thrace, and also a centre for commerce with the Odrysian rulers (see THRACE). Abdera was one of the resting-places chosen by Xerxes (q.v.) in his journey along the northern shores of the Aegean in 480 B.C. (Hdt. 7. 120). In 431 B.C. Abdera, under Nymphodorus, an Athenian *proxenos* (Thuc. 2. 29. 1), was the protagonist in the attempt to unite Thrace and Macedonia with Athens. Nymphodorus arranged an alliance between Athens and his brother-in-law, the Odrysian ruler, Sitalkes (q.v.). Abdera was incorporated in the kingdom of Macedonia by Philip II (q.v.), and after the death of Alexander the Great (q.v.) it was in the hands of the successive masters of Macedonia. Abdera was a 'free city' under the Romans (Pliny, *HN* 4. 42). The coin types of Abdera reached perfection in the third quarter of the fifth century B.C. Though 'Abderites' was a by-word for stupidity (Cic. *Att.* 4. 17. 3; 7. 7. 4), Abdera boasted among its citizens Democritus (q.v.) and Protagoras (q.v.).

J. M. R. C.

ABYDOS, Milesian colony on the Asiatic side of the Hellespont, at its narrowest point, opposite Sestos (see

HERO AND LEANDER). Xerxes crossed here to Europe early in 480 B.C. From 477 to 412 Abydos was a member of the Athenian Empire. In 411 B.C. the Spartan fleet was defeated by the Athenians near Abydos. In 200 the town, until then a free city, fought heroically against Philip V of Macedon, but was forced to surrender. Three years later Antiochus III made Abydos one of his chief bases of support. Later it probably belonged to Pergamum, but as an autonomous State.

V. E.

ACADEMY, (1) a park and gymnasium in the outskirts of Athens sacred to the hero Academus (or Illecademus), now under excavation; (2) the school or college established there by Plato, possibly as early as 385 B.C. This was organized as a corporate body with a continuous life of its own and survived down to its final dissolution by Justinian in A.D. 529.

There can be little doubt that Plato's chief object in the foundation was to train men for the service of the State, and there is evidence that a number of his pupils played a considerable part in the political life of their cities. But his method of training consisted of a thorough education in science and philosophy, and the school is better known for its contributions to these subjects. Under Plato and his immediate successors a great deal of important work was done in mathematics and astronomy. But later more purely philosophical interests became paramount. In the third and second centuries B.C., under Arcesilaus and Carneades, the Academy became known as the chief sceptical school, though there is some doubt as to the exact length to which their scepticism went. In the following century this tendency was abandoned. After that we know practically nothing of the institution for several centuries, though occasional indications justify us in believing in its continued existence. It does not emerge into the light again until the fifth century A.D., when it appears as a centre of Neoplatonism, particularly under the leadership of Proclus (q.v.). It was also active in the production of commentaries on Plato and Aristotle, some of which still survive and preserve information of great value.

Histories of Ancient Philosophy: Zeller; Gomperz; Robin, J. Burnet, *From Thales to Plato* (1914), ch. 12, G. C. Field, *Plato and His Contemporaries* (1910), ch. 3, W. Jaeger, *Aristotle*, ch. 1 (Engl. Transl. 1934), H. Cherniss, *The Riddle of the Early Academy* (1942); R. E. Witt, *Albinus and the History of Middle Platonism* (1937); I. Whittaker, *The Neo-Platonists* (1918), ch. 9. G. C. F.

ACAMAS, in mythology, son of Theseus, brother of Demophon (qq.v.), eponym of the tribe Acamantis. When Diomedes went to Troy to ask for the return of Helen, Acamas accompanied him; Laodice, daughter of Priam, fell in love with him and had by him a son, Munitus (Parth., *Amat. Narr.* 16). After the Trojan War, according to one account, it was he, not Demophon, who came to Thrace and met and deserted Phyllis. While in Cyprus he opened a mysterious box she had given him, and, frightened by what he saw in it, galloped wildly away, fell, and was killed by his own sword (schol. Lycophron 495).

Acamas and Demophon appear in art chiefly in late

archaic and early classical representations of the Sack of Troy, rescuing their grandmother Aethra. Both were shown in Polygnotus' Troy at Delphi (Brommer, *Vasenlisten*², 164, 198). H. J. R.; C. M. R.

ACARNAN, eponym of Acarnania; in mythology, son, with Amphoterus, of Alcmæon (q.v. 1) and Callirhoe. When Alcmæon was murdered, Callirhoe prayed Zeus, who was her lover, to make her sons grow up immediately; he granted her prayer, and they avenged his death on Phegeus and his sons (Apollod. 3. 91-93). H. J. R.

ACARNANIA, a district of north-west Greece, bounded by the Ionian Sea, the Gulf of Ambracia, and the river Achelous. It contained a fertile plain along the lower Achelous, but was ringed off on other sides by mountains. Neolithic pottery has been found in a cave on the Krithote peninsula, and there are traces of Early and Middle Helladic occupation. Mycenaean remains are scanty: house foundations near Astacus, and a tholos tomb reported from Chrysovitza. A part of the shadowy 'mainland' in the *Odyssey*, its inhabitants long remained semi-barbarous. In Thucydides' day they still went about carrying arms (1. 5). In the seventh century the best sites on the seaboard were occupied by settlers from Corinth. The Acarnanians formed a confederacy in the fifth century, if not earlier, fortified their cities, and invoked Athenian help against the Corinthian colonists (Thuc. 2. 68), and later against the Ambraciotes and the Peloponnesians in 429-426 B.C.; but they were subdued by Agesilaus in 390 and remained under Spartan rule until 375, when they joined Athens' Second League. They supported Boeotia in its triumph over Sparta but reverted to Athens in resisting Philip of Macedonia. Subsequently they became dependants of Macedonia. In 314, at the instance of Cassander, they replaced their early cantonal league by a federation of newly founded cities (their largest town being Stratus). Frequent frontier disputes with the Aetolians led to the partition of Acarnania between Aetolia and Epirus c. 255; but after the fall of the Epirote monarchy c. 230 the Acarnanians recovered their independence and acquired from Epirus the island of Leucas. Though they sided with Philip V of Macedonia against the Romans (200), they were allowed by the latter to retain their confederacy until 30 B.C.

BSA 1911 2, 1947, P-K GL 2 2. 368 ff., J. A. O. Larsen, *Greek Federal States* (1968), 89 ff. M. C., N. G. 1. II

ACASTUS, in mythology, son of Pelias (see NEPTUS); he took part in the Argonautic expedition and the Calydonian boar-hunt. When Peleus (q.v.) took refuge with him, Acastus' wife (variously named) loved him, and being repulsed, accused him to her husband of improper advances. Acastus, therefore, contrived to steal Peleus' wonderful sword and leave him alone on Mt. Pelion, where he was rescued by Chiron (see CENTAURS). Afterwards Peleus took Iolcus, putting to death Acastus' wife and, by some accounts, Acastus himself (Apollod. 3. 164-7, 173; schol. Ap. Rhod. 1. 224; cf. Paus. 3. 18. 16). H. J. R.

ACCA LARENTIA (less correctly **Larentina**), an obscure Roman goddess, whose festival (Larentalia or Larentinalia) was on 23 Dec. A story current in Sulla's time (Valerius Antias ap. Gell. 7. 7. 5-7) makes her a prostitute, contemporary with Romulus (or Ancus Martius, Macrob. *Sat.* 1. 10. 12), who became rich by the favour of Hercules and left her property to the Roman people; another, perhaps invented by Lacinus Macer, says she was wife of Faustulus (q.v.), mother of the original Fratres Arvales (q.v.) and adopted mother of

Romulus (Macrob. *ibid.* 17). The name looks as if there should be some connexion with Larunda (q.v.). That she had another festival in April (Plut. *Quaest. Rom.* 35) is probably a mis-statement, but see E. Tabeling, *Mater Larum* (1932), 57 and Latte, *RR* 92.

Mommsen, *Rom. Forsch.* II. 1 ff.

H. J. R.

ACCIUS, LUCIUS, born in 170 B.C. at Pisaurum in Umbria where his family had an estate. He was a friend of Pacuvius (q.v.) and at the same games both produced plays, Accius aged 30 and Pacuvius 80. He lived at least to 90 B.C. (Cicero knew him—*Brut.* 107). He did not belong to the circle of Scipio: his friend and patron was Brutus (q.v. 2) Callaicus (cos. 138 B.C.), and Accius composed a dedication in Saturnians for the temple built to celebrate his Spanish victories. He made an educational tour to Athens and the Greek cities of Asia Minor.

WORKS: (1) *Didascalica*: a work in nine books which dealt with the history of literature, particularly drama, from Homer and Hesiod to Accius himself. Twenty-two lines remain, some of which are sotadic, some trochaic and iambic, some seem to be prose, it may be that the work was in mixed verse and prose (like Varro's Menippean satires)—though allowance must be made for the inaccuracy of ancient quotation and for the possibility that some of the verses were quoted by Accius from other authors. The work may have been in dialogue-form, with a Greek expounding Greek literary history; if so, it belonged to the popularizing Peripatetic genre to which Cicero's *Brutus* belongs. His chronology of Roman drama was in error by forty-three years since he assumed that Livius Salinator (cos. 210, 207 B.C.) had been the owner of Livius Andronicus. The mistake was corrected by Varro. (2) *Pragmatica*: another work on drama, in trochaic metre. (3) *Parerga*: of unknown content, also poetical. (4) *Annales*: books of hexameter poetry not on history, but on months and festivals (like Ovid's *Fasti*). (5) *Sotadica*: apparently a collection of mixed erotic verse (Pliny, *Ep.* 5. 3. 6, Gellius 6. 9. 16.). Accius interested himself in the question of spelling-reform, and engaged in heated controversy with Lucilius (q.v. 1)—cf. Varro *de ling. Lat.* 10. 70. (6) *Tragedies*: it was as a tragedian that Accius' fame grew throughout antiquity, acclaimed the greatest Roman tragedian in the first century A.D. (cf. Vell. Pat. 1. 17; Columella *praef.* 30). Fragments of some forty-six named plays are extant. Most of the recognizable plays were translated from Euripides, some from Sophocles, a few from Aeschylus; a number of his plays seem to have had post-Euripidean originals. Sufficient fragments of *Bacchae* and *Phoenissae* are extant to allow some comparative judgement. Accius clearly was at least as free with his originals as Ennius (q.v.). In the case of the *Armorum Inductum* it has been suspected that Accius used a play of Aeschylus but added to it from the *Ajax* of Sophocles. He continued the writing of *fabulae praetextae* (q.v.) with a *Brutus* (on the founding of the Republic) and *Aeneade vel Decius* (on the self-immolation of the young Decius Mus at Sentinum in 295 B.C.). Accius created for the expression of tragic sentiment a style that was vigorous, elevated, solemn, and sonorous, which excited the interest and admiration of later rhetoricians—characteristic features are frequent alliteration, paronomasia, word-play, antithesis, careful parallelism of cola, and neologisms (but Grecisms are very few indeed). He was much quoted by Cicero (with whom his *Atrius* was a favourite) and imitated by Virgil (Macrob. *Sat.* 6). Even in the fragments there is a strong impression of a turbulent, almost wayward, personality, a man of influence in his own time and of great importance for the development of Latin literature: he was a scholar who devoted himself to collecting and criticizing the work of his predecessors and considering questions of authenticity (like a

Hellenistic Greek scholar) and he was the last real tragedian in Rome, an original poet in his own right who stamped his Greek material with a powerful style of his own.

FRAGMENTS E. H. Warmington, *Remains of Old Latin* II (Loeb, 1936), 326 ff. (with trans.) Dramatic fragments only. Ribbeck, *TRF*, Klotz, *Scaen. Rom. Frag.* 1, 190 ff. Non-dramatic: Morel, *PFL*, 34 ff. *Didascalia*. Funaioli, *Gramm. Rom. Frag.*, 25 ff. GENERAL: F. Leo, *Gesch. d. rom. Lit.* (1913), 384 ff. For an attempt to discern contemporary politics: B. Iliniski, *Accio ed i Gracchi* (Accad. Polac. di Scienze e Lett. fasc. 3; Rome, 1958). G. W. W.

ACCLAMATIO at Rome was public applause or disapproval (often combined with action), especially on important occasions such as triumphs or games. In the Republic *principes viri* could gauge public opinion in this way; though the shouts might be contrived (as by Clodius (q.v. 1) against Pompey; Cic. *Q. Fr.* 2. 3). Under the Empire claque spread even at recitations and declamations. The imperial family was greeted in public by words soon ritually fixed. In the Senate, as discussion disappeared, *acclamatio* provided the only expression of opinion. By the second century A.D. it became a recognized procedure, recorded in the minutes. It thus came under official control, losing its dangerous spontaneity. The mob, protected by numbers and anonymity, always retained a certain freedom of protest. The vestigial popular assemblies, municipal councils, and ultimately the Church, also used *acclamatio* as a procedure.

Dar. Sag. 1. 18, Mommsen, *Röm. Staatsr.* III, 349, 951. E. B.

ACESTES (*Αἰέστης*, *Αἰέστος*), in mythology, son of a Trojan woman of noble rank, exiled for some reason by Laomedon (various accounts in Dion. Hal. *Ant. Rom.* 1. 52. 1 ff.; Serv. on *Aen.* 1. 550; schol. Lycophron 953 ff.), and a non-Trojan father, usually said to be the Sicilian river-god C(ri)m(n)isus. He founded Egesta (Segesta) in Sicily, and hospitably received Aeneas (*Aen.* 1. 550 and 5. 36 ff.). H. J. R.

ACHAEA (*Ἀχαια*) is a name derived from *Ἀχαιοί*, which in Homer refers particularly to Achilles' men and Agamemnon's followers. *Ἀχαιοί* may also appear in the forms *Abhijava* and *Ekwesh* in Hittite and Egyptian texts of 1400–1200 B.C. Considerable Mycenaean remains have been found, e.g. in the regions of Aegium, Dyme, Pharai, and Patrae (see E. T. Vermeule, 'The Mycenaean in Achaea', *JAArch.* 1960, 1 ff.) It is held that Achaea was not spared by the upheavals of the beginning of the Iron Age, and there may be good justification for the part played by Achaea in 'migration' saga. In historical times the name was restricted to south-east Thessaly (*Ἀχαια Φθιώτικη*) and the north coast of the Peloponnese between Elis and Sicyon. Here a narrow territory, with good soil in the plains and on hill terraces, extends between the almost harbourless Corinthian Gulf and a steep range of mountains with some passes of importance into Arcadia. Twelve small towns, forming a federal State, divided this territory; they met at the sanctuary of Poseidon Heliconius until Helice fell into the sea (after an earthquake in 373 B.C.), later generally at Aegium. For the topography, history, and remains of Achaea, see J. K. Anderson, 'A Topographical and Historical Survey of Achaea', *BSA*, 1954, 72 ff. Some remains of the classical period have been found at Aegium and Leontium (destroyed by Philip V?). Patrae (modern *Patras*) has considerable remains of the Roman Odeum.

The Achaeans sent colonists to Sybaris, Croton, Metapontum, Caulonia in south Italy; otherwise they had an unimportant early history, remaining neutral in the Persian Wars and most of the wars between Greeks. In the third and second centuries the Achaean Confederacy (q.v.) became the chief power in Greece, eventually

including nearly all the Peloponnese and part of central Greece.

T. J. D.; R. J. H.

From 146 B.C. this area was attached to the Roman province of Macedonia, but in 27 B.C. it became the centre of the senatorial province of Achaea, which included Aetolia, Acarnania, part of Epirus, Thessaly, and the Cyclades, with the governor (a proconsul of praetorian rank) residing at Corinth. Temporarily, from A.D. 15 to 44, Achaea was again joined to Macedonia as an imperial province governed by the imperial legate of Moesia. Nero's proclamation of freedom for Greece (67) was withdrawn by Vespasian (70 or 74). At latest from the time of Antoninus Pius, Epirus became a separate province and Thessaly was added to Macedonia. Rome allowed some regional and fluctuating confederacies to revive, while a Panachaeian League, under a Helladarch and high priest, became responsible for the imperial cult. A wider Panhellenic League (Panhellenion) was created by Hadrian, whose favour Greece, and especially Athens, enjoyed. Cities like Athens, Sparta, Patrae, Corinth, and Elis flourished, but in some parts much land apparently fell into the hands of wealthy men whose great estates overshadowed the poorer cities, yet in more remote districts moderate and small landowners may have continued to make a moderate living.

ACHAEAN CONFEDERACY. An early Achaean Confederacy, organized at an unknown date, lasted through the fourth century. It was notable for the admission of non-Achaeans (Calydon). As an ally of Sparta it escaped dissolution after the King's Peace. The later Achaean Confederacy, apparently regarded as a continuation of the old, was founded in 280 B.C. by the union of four cities, to which the remaining Achaean cities soon were added. It acquired importance through the incorporation of non-Achaeans, who were admitted on terms of equality, so that Dorians and Arcadians could become Achaean statesmen. When Sicyon was admitted after the expulsion of its tyrant in 251, Aratus (q.v. 2) of Sicyon soon became the leading Achaean statesman and adopted a definitely anti-Macedonian policy. The later admission of Megalopolis and other Arcadian cities led to hostility with Sparta and paved the way for reconciliation with Macedonia. During the Cleomenic War (see CLEOMENES III) Aratus himself asked for Macedonian help and permitted the Achaeans to join the Hellenic League of Antigonus Doson (224). This alignment lasted till Achaea went over to Rome in 198. The new alliance led to the incorporation of almost the entire Peloponnese, but also led to frequent clashes with the Roman authorities. After the Achaean War of 146 the Confederacy was dissolved, but a smaller Achaean Confederacy soon was organized and continued under the Empire (see ACHAEA).

At the head of the Confederacy were two generals until a single general was substituted in 255. Immediate reelection was forbidden, and prominent leaders commonly served every second year. Alongside of the general stood a board of ten *demourgoi*, who shared in the administration and presided over the assemblies. The federal deliberative bodies were a *boule* and an *ekklesia* in which all male citizens over 30 could take part. For a regular meeting of either or both bodies the term *synodos* was used; for an extraordinary meeting, *synkletos*. There were apparently four regular meetings a year, at first attended by both the *ekklesia* and the *boule*. Then, shortly before 200 B.C., a

law was passed to the effect that the *ekklesia* could not be summoned except to extraordinary meetings to deal with a question of alliance or war. The subject was announced in advance, and only this one subject could be acted on. The vote was taken by cities, the votes apparently being weighted in proportion to the size of the cities. Other business, even elections, was handled by the *boule*. See also FEDERAL STATES.

ACHAEMENIDS, descendants of Achaemenes (Hakhamanish), the eponymous founder of the Persian royal house. According to Herodotus (7. 11) and the Behistun inscription, he was the father of Teispes, ancestor of Cyrus and Darius. At first kings only of Parsumash, a vassal State of the Median Empire, the Achaemenids extended their sovereignty over Anshan and Parsa; Cyrus II (q.v.) or III challenged and conquered Astyages, and the Median Empire passed to the Persians (550 B.C.). Campaigns in the north and east, the conquest of Lydia and the defeat of Nabonidus of Babylonia, brought the whole of western Asia into one vast empire, to which Cambyses added Egypt. A collateral branch of the family assumed the succession with Darius (q.v.), the greatest of the Achaemenids. His reign marks the climax of Persian rule. Subsequent reverses, e.g. the failure of Xerxes' Greek expedition, and harem intrigues weakened the dynasty, until with the defeat of Darius III Codomannus by Alexander in 330 B.C. the line perished.

Achaemenes; Teispes; [? a Cyrus and a Teispes]; Cyrus I, c. 645-602; Cambyses I, c. 602-559; Cyrus II, 559-530; Cambyses II, 530-522; Darius I, 522-486; Xerxes I, 486-465; Artaxerxes I Longimanus, 465-424; Xerxes II, 424-423; Darius II Nothus, 423-404; Artaxerxes II Mnemon, 404-359; Artaxerxes III Ochus, 359-338; Arses, 338-336; Darius Codomannus, 336-330.

ACHAEUS (1), eponym of the Achaeans, in mythology, son of Poseidon (Dion. Hal. *Ant. Rom.* I. 17. 3), Zeus (Serv. on *Aen.* I. 242), Xuthus (Apollod. I. 50), or Haemon (schol. *Il.* 2. 681).

ACHAEUS (2) of Eretria (b. 484-481 B.C.), Athenian tragic poet, to be distinguished from the Achaeus (? of Syracuse) who won a Lenaeon victory c. 330. He wrote 44 (or 30 or 24) plays, the first produced about 447 B.C., and won one victory. He was probably dead when the *Frogs* was produced in 405 (*Suda*, s.v.). Of nineteen known titles more than half are probably satyric; the philosopher Menedemus thought his satyric plays second only to those of Aeschylus (Diog. Laert. 2. 133). The Alexandrians placed him in the *Canon* (see ARISTOPHANES 2) and Didymus wrote a commentary on him. Euripides is said to have adapted one line from him (Ath. 6. 270b) and he is twice quoted by Aristophanes (*Vesp.* 1081, *Ran.* 184). Aethnaeus (10. 451c) describes him as lucid in style, but liable to become obscure and enigmatical.

TGF 746-59.

A. W. P.-C.; D. W. L.

ACHAEUS (3) (d. 213 B.C.), general of Antiochus III (q.v.) and his kinsman (whether cousin or maternal uncle is uncertain). In 223-2 he recovered most of Seleucid Asia Minor from Pergamum; but he was encouraged by Antiochus' difficulties in the East to proclaim himself independent (220). His soldiers refused to follow him against Antiochus, but he maintained himself in Asia Minor until the king was at liberty to deal with him. After a two years' siege in Sardes he was betrayed to Antiochus and barbarously executed.

Polyb. bks. 4, 8, H. H. Schmitt, *Untersuchungen zur Geschichte Antiochus' des Grossen und seiner Zeit* (1964), 301, 158 ff., 181 ff.; P. Meloni, *Rend. Linc.* 1949, 535 ff., 1950, 161 ff. G. T. G.

ACHARNAE, the largest Attic deme (the figure 3,000 hoplites in Thuc. 2. 20. 4 is too high; 1,200 is more likely), lay around Menidi in the north-west corner of the Attic plain, near the pass from the Thriasian plain along which Archidamus and the Spartans marched in 431 B.C. Although made famous as charcoal-burners by Aristophanes, the Acharnians gained a livelihood primarily from the growing of corn and the cultivation of vines and olives. They were also noted for their bravery (Pind. *Nem.* 2. 16) and had, appropriately, a sanctuary to Ares.

Thuc. 2. 19-23; Ar. *Ach.* A. Milchhöfer, *Karten von Attika* (1887) II. 42 ff.; S. Dow, 'Thucydides and the number of Acharnian Hoplitai', *TAPA* 1961, 66 ff. C. W. J. E.

ACHATES, in mythology, faithful companion of Aeneas (*Aen.* I. 312 and often), he killed Protesilaus (schol. *Il.* 2. 701).

ACHELOÛS, the longest of Greek rivers, rising in central Epirus and debouching after a course of 150 miles (mostly through mountain gorges) at the entrance to the Corinthian Gulf. Its lower reaches constituted the frontier between Acarnania and Aetolia. It had no value as a line of communications.

ACHERON, a river of Thesprotia in southern Epirus, which breaks through an impenetrable gorge into the Acherusian plain where a lake lay in ancient times. The entrance to Hades was reputed to be there at the confluence of the Cocytus and Pyriphlegethon streams which joined the Acheron river below the lake. The setting of Odysseus' evocation of the dead in the *Odyssey* draws on the scenery of the Acherusian plain, and the Oracle of the Dead by the confluence of the rivers (Hdt. 5. 92. 7) has been excavated.

S. I. Dakaria, *Tô Éργον* 1958, 95 ff. et seq.; *Prakt. Arch. Et.* 1960 (1963), 114 ff. et seq.; *Antike Kunst* 1961, Beiheft 1, 51 ff. N. G. L. H.

ACHILLES (Ἀχιλλεύς), in mythology, son of Peleus and Thetis (qq.v.); usually said to be their only child, but cf. Lycophron 178 and schol. there. The etymology of his name is unknown, though there could be a connexion with the river-name Acheloüs, and a possible form of the name occurs for persons in Linear B. All the evidence goes to show that he was a man, real or imaginary, and not a 'faded' god, and that his widespread cult (Leuke in the Black Sea, Olbia, and elsewhere in that region; sporadically in Asia Minor; Epirus; doubtfully in Thessaly; Elis; Croton in Italy) is the result chiefly or solely of the *Iliad* (see Farnell, *Hero-Cults*, 285 ff.). His portrait was drawn once for all by Homer, and later writers merely added details from their own imagination, or possibly from obscure local legends of which we know nothing.

In the *Iliad* he appears as a magnificent barbarian, somewhat outside the circle of Achaean civilization, though highly respected for his prowess. He, alone among

Homeric figures, keeps up the old practice of making elaborate and costly offerings, including human victims, at a funeral (*Il.* 23. 171 ff., condemned as 'evil deeds', 176); contrast the sceptical attitude of Andromache (22. 512-14). His treatment of the body of Hector is of a piece with this (22. 395, again stigmatized as 'unseemly deeds', and 24. 15 ff.). So also is his furious and ungovernable anger, on which the whole plot of the *Iliad* turns; in 24. 560 ff. he is himself conscious of this weakness and afraid that it may overcome his chivalrous pity for Priam. When not roused by anger or grief, he is often merciful (21. 100 ff.), but in his fury he spares no one and has no respect even for a visible god (22. 15-20). Apart from his valour in battle, he is a pathetic figure, being conscious of the fated shortness of his life (9. 410 ff., cf. 19. 408 ff.). He is capable of the most generous sentiments, witness his devoted friendship for Patroclus throughout the poem and his strong detestation of lying (9. 312), an unusual thing in a Homeric Greek.

He comes to Troy, apparently, of his own free will, not as in any sense a subject of Agamemnon, at the head of a contingent of fifty ships (*Il.* 2. 685), and there distinguishes himself in a series of engagements during which he takes twelve towns along the coast and eleven inland (9. 328-9), including Lyrnessos, where he captures Briseis (2. 600). Agamemnon, on being compelled to return his own captive, Chryseis, to her father (1. 134 ff.), takes Briseis from Achilles by way of compensating himself (*ibid.* 320 ff.). At this insult, Achilles refuses further service and begs his mother Thetis to move Zeus on his behalf (352 ff.). She succeeds in inducing the god to punish Agamemnon and his army; a false dream encourages the king to go out against the Trojans, who, hearing that Achilles is no longer fighting, profit by their strategic superiority (their reinforcements are close at hand, Agamemnon can get none from nearer than Greece) to offer battle, instead of merely standing on the defensive (9. 352 ff.). The result is a series of engagements in which Agamemnon loses far more men than he can afford (*Il.* 2-8). Now Agamemnon offers a full and handsome honour-price to Achilles, who puts himself in the wrong by refusing it (9 *passim*), but is later induced to let Patroclus go at the head of his followers, the Myrmidones (16. 1 ff.), to keep the Trojans from actually burning the Greek camp. Patroclus, however, is killed fighting (16. 786 ff.), and Achilles, on hearing the news, is frenzied with grief (18. 15 ff.), hastily reconciles himself to Agamemnon, goes out the next day, routs the Trojans, and kills Hector (19. 22). He is wearing armour specially made for him by Hephaestus (18. 468 ff.), as his own had been worn by Patroclus and fallen into the hands of Hector. He then gives Patroclus a magnificent funeral (23) and, warned by his mother (24. 137), lets old Priam ransom Hector's body.

His death is foretold in the *Iliad* (22. 359-60); he is to be slain by Paris and Apollo. The *Odyssey* (24. 35 ff., a doubtfully authentic passage) describes the fight over his body, his funeral, and the mourning of Thetis and the other sea-nymphs over him. Later authors add the following details, among others.

He had his education from Chiron (see e.g. Pind. *Nem.* 3. 43 ff., developing *Il.* 11. 832). When the contingents were gathering for the Trojan War, Peleus, or Thetis, knowing that he would die at Troy, hid him in Scyros, dressed as a girl. Here he met Deidameia, daughter of Lycomedes, king of the island, who bore him Neoptolemus (q.v. 1). Calchas having told the Greeks that Troy could not be taken without him, Odysseus with other envoys found him and discovered his sex; after which he went willingly with them (so unnamed and rather doubtful cyclic poets in schol. *Il.* 19. 326, and many later writers). On the way to Troy, the Greeks landed in

Mysia, and there Achilles wounded Telephus (q.v. 1) in battle, afterwards healing him (so the *Cypria*, which also makes Achilles marry Deidameia after the affair in Mysia). Still according to the same poem, the army then reassembled in Aulis, where the affair of Iphigenia (q.v.) occurred, went on to Tenedos, where Achilles and Agamemnon had a quarrel, and finally reached Troy, where a number of exploits of Achilles are recorded (killing of Cycnus and Troilus, checking of a plan to abandon the enterprise, etc.). After the events in the *Iliad*, Troy was reinforced successively by the Amazon Penthesilea and by Memnon (qq.v.), who were both slain by Achilles. Immediately afterwards he was killed by Apollo (or Paris, or Apollo in the shape of Paris). So far the *Aethiopis*.

Further details are mostly erotic. Achilles and Patroclus were lovers (e.g. Aesch. fr. 135 Nauck); other loves were Troilus (Serv. on *Aen.* 1. 474), Polyxena daughter of Priam (Hyg. *Fab.* 110), Helen (Lycophron 171 l., where he merely dreams of her; Paus. 3. 19. 13, where he is united to her in Leuce), and, oddest and earliest, Medea (Ibycus and Simonides ap. schol. Ap. Rhod. 4. 814; Lycoph. 174; in the Elysian Fields). The story that he was made invulnerable by Thetis (save for the heel in which he traditionally got his death-wound, originally no doubt from a poisoned arrow) by being plunged into Styx is not found earlier than Statius (*Achil.* 1. 134, whereon see schol. 269). It is a common folk-tale.

Achilles is very popular in art, especially Attic vase-painting, from the sixth century; early he is often bearded, from the late archaic period regularly beardless. Favourite scenes are: the ambush, death, and battle over the body of Troilus; Achilles' armour brought by Thetis; the fight with Hector and the ransom of his body; the funeral games of Patroclus; fights with Penthesilea and Memnon; dicing with Ajax; the battle over, and rescue of, Achilles' body; later, among the daughters of Lycomedes (Roman paintings and sarcophagi, perhaps inspired by the fourth-century picture by Athenion). He is also shown as a baby brought by Peleus to Chiron.

'Achilleus', in Roscher's *Lexikon*; for Achilles as historic, D. L. Page, *History and the Homeric Iliad* (1959), 107 ff. In art, Brommer, *Vasenlisten*, 249 ff.; D. von Bothmer, *Amazons in Greek Art* (1957), (Penthesilea), Schauenburg, *Bonner Jahrb.* 1961, 215 ff.
H. J. R. C. M. R.

ACHILLES TATIUS (1), Greek romancer from Alexandria, author of 'The Adventures of Leucippe and Cleitophon' (*Τὰ κατὰ Λευκίππην καὶ Κλειτοφάντην*), flourished in the second century A.D., as recent papyrus discoveries demonstrate (thus confirming Altheim's acute hypothesis), and not in the fourth-sixth century A.D., as was previously believed. Of his life nothing certain is known: the *Suda* ascribes other works to him (two lost, an *Etymology* and a *Miscellaneous History of Many Great and Illustrious Men*, and one partly preserved, *On the Sphere*, the authorship of which is, however, debated) and says that the writer was later in life converted to Christianity and even became a bishop, which is doubted by most scholars. The novel, in eight books, follows the usual patterns of the genre (a much hindered love—between the two protagonists—triumphs in the end over numberless difficulties, terrifying dangers, and complicated adventures—voyages, shipwrecks, tortures, guiles, abductions, attacks by pirates and robbers, etc.); the story is told—in this is unusual in the genre—in the first person by Cleitophon himself, whom Achilles pretends to have met in Sidon. The author's style is typically Atticistic in that it is characterized by an extreme Attic purity of diction (occasionally marred by vulgarisms), *aphelieia* (short, asyndetic sentences), *isokola* and sound-effects, detailed descriptiveness (sophistic *ekphrasers*: Achilles relishes describing objects, animals,

places, natural phenomena in their minutiae), propensity to declamations and disquisitions (e.g. on the effect of tears, often of the antithetic type, e.g. on love for women and paederasty, on fame and calumny). Achilles Tattius shows an uncommon ingenuity in inventing *coups de théâtre* (e.g. 'apparent deaths': Leucippe is made by him to die three times and is each time unexpectedly resuscitated; unforeseen letters and arrivals are also exploited for effect). The numerous and irrelevant interruptions relegate the plot into the background; the characterization of the personages—which, as Rohde has noted, shows a propensity towards realism, as a reaction against the idealism prevailing in the genre—is poor. Achilles Tattius was much admired by Byzantine critics for his diction and style, whereas his licentiousness scandalized them (cf. e.g. Phot. *Bibl.*, *Cod.* 87 and *Anth. Pal.* 9. 203).

EDITION PRINCEPS. Heidelberg 1601; preceded by Latin translations (Della Croce; 1544 [partial], 1554 [complete]).

STANDARD EDITION. E. Vilborg (Stockholm, 1955).

COMMENTARIUS. F. Jacobs (Leipzig, 1821), E. Vilborg (Stockholm, 1962).

CRITICISM. Rohde, *Griech. Roman*, 498 ff., W. Schmid, *PW*, s.v. Achilles Tattius; Christ-Schmid-Stahlin II 2^a, 1046 ff., A. Lesky, *Griech. d. griech. Litt.* (1963), 921 ff. (especially for new papyrus evidence), H. Rommel, *Die naturwissenschaftlich-paradoxographischen Exkurse bei Philostratos, Heliodoros und Achilles Tattius* (1923); H. Sexauer, *Der Sprachgebrauch des Achilles Tattius* (Diss. Heidelberg, 1899), A. Stavroskiades, *Ach. Tat., ein Nachahmer des Platon, Aristoteles, Plutarch, Aelian* (Diss. Erlangen, 1889); H. Dörrie, *De Longi Achilles Tatti Heliodori memoria* (Göttingen, 1915).

Latest English Translation by S. Gaselee (Loeb, 1917, repr. 1947); numerous translations into modern languages (English, French, German, Italian) since 1546 (a list in Gaselee, *Introd.*, xvi).

G. G.

ACHILLES TATIUS (2) (probably 3rd c. A.D.), author of a Greek commentary on Aratus, the only surviving part of his work *Περὶ σφαίρας*.

Ed. E. Maass, *Commentarium in Aratum Reliquiae* (1898), 25.

ACHILLEUS, rebel in Egypt, A.D. 296-7, not the Domitianus of the coins, but his chief assistant. Domitianus revolted in summer 296 and was conquered by Diocletian in person early in 297. His revolt was probably due to economic distress connected with Diocletian's reform of the coinage.

W. Seston, *Diocletien et la tétrarchie* (1946), 137 ff. | H. M.

ACILIUS (*PW* 4), GAIUS, Roman senator and historian, who interpreted for Carneades, Diogenes, and Critolaus in the Senate in 155 B.C., wrote a history of Rome, in Greek, from early Italian times to his own age, certainly to 184 B.C. (Dion. Hal. 3. 67. 5); it appeared c. 142 (Livy, *Per.* 53; reading *G. Acilius*). His senatorial tradition is seen in the anecdote of Scipio and Hannibal (Livy 35. 14. 5). His work was reproduced in Latin by a Claudius, probably Claudius (q.v. 11) Quadrigarius, who would then have incorporated it in his annalistic form.

Peter, *IRRel.* 1^a (1914), cxvi, 49, *FGrH* III. c. 881 ff., Scullard, *Rom. Pol.*, 224 n. 1. 24.

ACRAE (modern *Palazzolo Acreide*), founded by Syracuse in 663 B.C., stands on a hill protected by steep declivities, commanding the westward route from the Syracusan plain. It enjoyed local self-government, but its fortunes were throughout its history linked with those of its metropolis. Remains of a theatre and council-house attest its prosperity under Hieron II (q.v.). Extensive catacombs reveal it as still flourishing in the fifth century A.D.

Bérard, *Bibl. topogr.*, 39 f.; L. Bernabò Brea, *Akrai* (1956).

A. G. W.

ACRAGAS (Lat. *Agrigentum*, modern *Agrigento*—until 1927 *Girgenti*) was founded c. 580 B.C. by the Geloans in

Sican territory in south-west Sicily. One of the most substantial Hellenic cities in size and affluence, it occupied a large bowl of land, rising to a lofty acropolis on the north and protected on other sides by a ridge. Its early access of power was owed to the tyrant Phalaris (q.v.). In 480 Theron (q.v.) was the ally of Gelon (q.v.) in his victory at Himera. After expelling Thrasydacus, Theron's son, Acragas had a limited democratic government, in which Empedocles (q.v.), its most famous citizen, took part in his generation. Acragantine sixth- and fifth-century prosperity is attested by a remarkable series of temples, the remains of which are among the most impressive any Greek city can offer.

Sacked by the Carthaginians in 406, Acragas revived to some extent in the time of Timoleon (q.v.) and Phintias (286-280 B.C.), but suffered much in the Punic Wars. By Verres' time it was again wealthy, and with the rest of Sicily received full Roman citizenship after Julius Caesar's death. In the post-Roman period its inhabited area contracted to the old acropolis, but it has always been one of the principal cities of Sicily; even so, the modern city by no means covers the area of its ancient counterpart.

Ancient descriptions: Pindar, *Pyth.* 12 int., Ptolemy, q. 27, Strab. 6. 2. 5. Modern works: Bérard, *Bibl. topogr.*, 40 ff.; Dunbabin, *Western Greeks*, P. Grillo, *Agrigento— a guide* (1958), P. Marconi, *Agrigento* (1929). Good plan of the ancient city in *Fests. Archaeologiae* 1957 (1959), plan A.

A. G. W.

ACRISIUS, in mythology, son of Abas, king of Argos, and his wife Aglaia, father of Danae and brother of Proetus (q.v.). After Abas' death the two brothers quarrelled; in their warfare they invented the shield. Proetus, defeated, left the country, returned with troops furnished by his father-in-law Iobates, and agreed to leave Argos to Acrisius, himself taking Tiryns; both were forthwith by the Cyclopes. See schol. Eur. *Or.* 965. Cf. PERSEUS (1).

H. J. R.

ACRON, HELFNIUS (2nd c. A.D.), wrote commentaries (now lost) on Terence (*Adelphi* and *Eunucius* at least) and Horace; but evidence for a commentary by him on Persius is slender. The extant pseudo-Acron scholia on Horace (ed. O. Keller, 2 vols., 1902-4) appear in three recensions of which the earliest dates from the fifth century. Alongside of excerpts from Porphyryon (q.v.), these scholia may contain genuine Acron material; but their attribution to him (not made in any MS. before the 15th c.) is probably due to a humanist. See SCHOLARSHIP, LATIN.

Schanz-Hoebius, § 601.

J. F. M.

ACROSTIC. Acrostics were perhaps composed in Latin earlier than in Greek. They were used by Ennius and the composers of Sibylline oracles (Cic. *Div.* 2. 110-12). Phlegon (q.v.) cites two examples from oracles (*Mir.* 10: Keller, 76 ff.). Cf. also *Anth. Pal.* 14. 148 (to Julian the Apostate), *GGM* 1. 238-9 (where the acrostic determines the authorship of a work), Dionysius Periegeta (*GGM* 2. 102 ff., 109 ff., 513 ff.), the acrostic prologues (of uncertain date) to Plautus' plays, and the beginning and end of the *Homerus Latinus*, giving (Silius) -Italicus as the author. A comedy-prologue of the third century B.C. has a series of lines beginning with α , β , etc. (Page, *GLP* 324).

H. Diels, *Sibyllinische Blätter* (1890).

J. D. D.

ACTA. Under the Roman Republic magistrates took an oath, on entering office, to respect the laws of the State. With the fall of the Republic and the increasing scope and importance of the Emperor's enactments (loosely called *Acta*), it was desirable that these should acquire a permanence comparable with that of the laws. Magistrates,

therefore, emperors included (Dio Cass. 60. 10), took the oath to observe the *Acta* of previous emperors, except those whose *Acta*, directly after their death, were explicitly rescinded (*rescissio actorum*) or at least excluded from the oath. Thus no oath was taken to observe the *Acta* of Tiberius, Gaius, Galba, Otho, Vitellius, Domitian, or Caracalla; though it is clear from the evidence of Gaius, *Inst.* 1. 33 (citing an edict of Nero) and *Digest* 48. 3. 2 (citing an edict of Domitian), that the wise enactments of even bad emperors might survive their death. The exact definition of *Acta* was not easy. The term was eventually held to cover the 'Constitutiones Principum' (i.e. *edicta*, *decreta*, and *rescripta*); but the difficulties arising from a loose definition of it were apparent when Julius Caesar's *Acta* were ratified by the Senate after his murder (Cic. *Phil.* 1. 16 ff.). A second difficulty concerned the relation of the *Acta* of the living emperor to those of his predecessors. The first recorded case of an oath to observe such *Acta* was that taken by all the magistrates to observe the *Acta* of Julius Caesar in 45 B.C. (Appian, *BCiv.* 2. 106). Similar oaths were taken to observe the *Acta* of Augustus in 29 and in 24 B.C. (Dio Cass. 51. 20; 53. 28). At first moderate emperors, as Tiberius and Claudius, sought to restrict the oath to the *Acta* of Divus Augustus, excluding their own *Acta* (Suet. *Tib.* 67, *Tac. Ann.* 1. 72; Dio Cass. 60. 10), but, with the increase of autocracy, the oath came to include the *Acta* of reigning emperors.

The *Acta Senatus* (or *Commentarii Senatus*) constituted the official record of proceedings in the Senate under the Roman Empire, the senator responsible for the record being, since the reign of Tiberius, selected by the Emperor (*Tac. Ann.* 5. 4). The *Acta Diurna* were a gazette, whose daily publication dates from 59 B.C. (Suet. *Jul.* 20); it recorded important social and political news, and was read not only at Rome but also in the provinces (*Tac. Ann.* 16. 22). The *Acta Senatus* were preserved and could be consulted by senators. Tacitus used, or depended on authorities who used, both these (e.g. *Ann.* 15. 74) and the *Acta Diurna* (*Ann.* 3. 3). J. P. B.

ACTAEON, in mythology, son of Aristaeus (q.v. 1) and Autonoe, daughter of Cadmus (q.v.). A keen hunter, he one day came upon Artemis bathing; offended at being thus seen naked by a man, she turned him into a stag and he was chased and killed by his own hounds; so first in Stesichorus ap. Paus. 9. 2. 3 (fr. 59 Page, *Poet. Mel. Gr.*); most famously in Ovid, *Met.* 3. 138 ff. Other versions of his offence were that he was Zeus' rival with Semele (Acusilaus, fr. 33 Jacoby) - Apollod. 3. 30) or that he boasted that he was a better hunter than Artemis (Eur. *Bacch.* 339-40), and that he wished to marry Artemis (Diod. Sic. 4. 81. 4). But to see any deity uninvited brings destruction (Callim. *Lav. Pall.* 101-2).

Actaeon torn by hounds under Artemis' eyes is found in many works of art from the early fifth century. In early pictures he sometimes wears a deerskin, and was shown sitting on one in Polygnotus' Underworld, but the first in which he sprouts antlers are after the middle of the century. Artemis surprised bathing appears first in Pompeian painting.

Brommer, *Vasculisten* 2, 336 f. See also P. Jacobsthal, *Morburger Juhl. I. Kunstwissenschaft*, 5 (1900). Caskey Beazley, *Attic Vase Paintings in the Museum of Fine Arts, Boston* II (1954), 46 ff., 83 ff. H. J. R.; C. M. R.

ACTE, CLAUDIA (PW 390), freedwoman of Nero (or possibly Claudius), came from Asia Minor: hence her alleged descent from the Attalidae. In A.D. 55, encouraged by Seneca in Agrippina's despite, Nero made her his mistress, but from 58 onwards she was gradually supplanted by Poppaea (q.v.). Her wealth is attested by

records of her household and estates in Italy and Sardinia. She deposited Nero's remains in the tomb of the Domitii.

Tac. Ann. 17. 12; Suet. *Nero* 28, 50, Dio Cass. 61. 7 G. E. F. C.

ACTIUM, a flat sandy promontory on the coast of Acarnania (q.v.), at the entrance to the Ambracian Gulf, forming part of the territory of Anactorium. There was a temple of Apollo there at least as early as the fifth century B.C. Actium was the site of Antony's camp in 31 B.C., and gave its name to the naval battle fought just outside the gulf, in which he was defeated by Octavian (2 Sept.). Octavian commemorated his victory by founding Nicopolis (q.v. 3) on the other (northern) side of the strait.

Augustus developed the local Actian Games in honour of Apollo into a quinquennial festival, modelled on the Olympian; these *Actia* were later adopted by several other Greek States. An Actian 'era' was established, with probably a double initial date of 32/1 or 31/30.

P.-K, *GL* II. 380 f.; W. W. Tarn, *JRS* 1931, 173 ff., 1938, 165 ff.; G. W. Richardson, *JRS* 1937, 153 ff., H. Volkmann, *Cleopatra* (1958), 176 ff., 230 f. G. W. R.

ACTS OF THE PAGAN (or HEATHEN) MARTYRS is the name given by modern scholars to about a dozen fragments of Alexandrian nationalist literature, preserved on papyri mostly written in the second or early third century A.D. The majority of the fragments give, in dramatic form, reports of the hearing of Alexandrian embassies and of the trials of Alexandrian nationalist leaders before various Roman emperors. The episodes related, of which the dramatic dates range from the time of Augustus to that of Commodus, are probably basically historical and the accounts appear to be derived to some extent from official records. But they have been coloured up, more in some cases than in others, for propaganda purposes, to caricature the emperors, to stress the fearless outspokenness of the Alexandrians, who are sometimes surprisingly rude to the emperors, and to represent their punishment, usually execution, as martyrdom in the nationalist cause. This literature is in general bitterly hostile to Rome, reflecting the tensions between Alexandria and her overlord during the first two centuries of Roman rule. These included antagonism between the Greeks and Rome's protégés, the Jews, and three episodes concern their quarrels. But despite the violent hatred expressed by the Greeks for the Jews, anti-Semitism is only a subsidiary feature in these primarily anti-Roman compositions.

H. Musurillo, *The Acts of the Pagan Martyrs, Acta Alexandrinorum* (1954; with commentary), also Teubner text (1961) E. M. S.

ACUSILAUS, of Argos, lived 'before the Persian Wars' (Joseph. *Ap.* 1-13) and compiled *ἱστοροίαι*, translating and correcting Hesiod, with ingenious conjectures but no literary merit.

FGH I 2.

ADAERATIO, the term used during the later Roman period for the commutation into money of levies or issues in kind. The transaction was sometimes unofficial, sometimes official, and might be made at the initiative of the government, the tax-collector, or the taxpayer in the case of levies, or of the distributor or recipient of issues. The rate of commutation might be settled by bargaining, or fixed by the government at the market price or at some arbitrary sum. Nearly all *adaeratio* was into gold from the mid fourth century. Levies of expensive objects, such as horses, oxen, or uniforms, were commuted from an early date in order to distribute their incidence over a number of taxpayers. The regular land-tax, payable in grain,

wine, oil, and meat, was still normally levied in kind in the East in the mid fifth century, being commuted as a special privilege, on the basis of five years' average of prices. Anastasius commuted most of the land-tax to gold. In the West the land-tax was already all paid in gold in the mid fifth century. The rations (*annonae*), fodder (*capitus*), and uniforms of the troops were mostly commuted by the early fifth century; those of the civil servants were first officially commuted in 423, those of the higher officers of State in 439.

A. H. M. J.

ADAMKLISSI, the site of two Roman monuments in the plan of the Dobruja (S. Roumania): (1) a military funeral altar inscribed with the names of at least 3,000 Roman casualties, commemorating either the defeat of Cornelius Fuscus (A.D. 86), or that of Oppius Sabinus the year before, in the Dacian War of Domitian (cf. Em. Dorușiu, *Dacia* 1961, 345 ff.), (2) a *tropaum* dedicated to Mars Ultor by Trajan in 109 to commemorate his victories over the Dacians. In the near-by valley Trajan founded a small city, *Tropaeum Traiani*.

Florea Bobu Florescu, *Monumentul de la Adamklissi* (1961). German transl. *Das Siegesdenkmal von Adamklissi* (1965), I. A. Richmond, *FBRS* 1967, 29 ff. J. J. W.

ADEIA, permission given by the Athenian *ekklesia* to make proposals or give information under special circumstances: e.g. proposals (1) to revoke sentences of *atimoi* (q.v.), or to remit State debts; (2) to rescind a special clause forbidding the alteration of certain laws or decrees (Thuc. 2. 24. 1; 8. 15. 1); (3) to impose an *eisphora* (q.v.), or to borrow from the treasury of Athena. For a grant of *adeia*, at least in case (1) above, a quorum of 6,000 votes was necessary. *Adeia* was also necessary, for non-citizens, to make supplication to the assembly or lay information about crimes of which it took cognizance (see *EKKLESIA*). A similar procedure was observed in many other Greek States.

A. W. G.

ADIABENE (*Hadab*), district of the two Zâb rivers in north Mesopotamia. A Seleucid eparchy, it became a vassal kingdom, later a satrapy, of Parthia, and was constantly involved in her internal disputes and in her wars with Rome. One of the dynasties of Adiabene embraced Judaism (Joseph. *AJ* 20. 17–37). Trajan's army overran Adiabene in A.D. 116 and Caracalla's in 216, but neither campaign had more than a momentary effect on the status or allegiance of the country. It was absorbed into the Sassanid Empire at the time of the final collapse of Parthia.

M. S. D., E. W. G.

ADLECTIO. A man could enter the Roman Senate (see *SENATUS*) either by holding a magistracy or by having his name placed on the senatorial roll (in the Republic, by the censors). Admission by this second means (which Sulla temporarily suppressed) was known technically as *adlectio* under the Principate, when *adlectio* was also employed to accelerate the magisterial careers of senators; an ex-quaestor, for instance, who was *adlectus inter praetorios*, like Germanicus in A.D. 9 (Dio Cass. 56. 17), could proceed directly to the consulship. Princes of the imperial house might be *adlected* by the Senate—e.g. Germanicus and Drusus, son of Tiberius, in A.D. 9 (Dio Cass. 56. 17), following the precedent set for Octavian in 43 B.C. (Augustus, *Res Gest.* 1). Though the right of *adlection* had been largely employed by Julius Caesar, it was exercised cautiously by the first emperors, and only in connexion with the holding of an official *lectio senatus* or the tenure of the censorship: by Augustus probably, and certainly by Claudius (*ILS* 968) and by Vespasian

and Titus (*ILS* 1024). After Domitian the right of *adlectio* was exercised as a normal power of the Emperor. Men were *adlected inter quaestorios* (i.e. to the rank of ex-quaestors in the *cursus honorum*), *inter aedilicios*, *inter tribunicios*, *inter praetorios*. *Adlectio inter consulares* was an innovation of Macrinus and met with opposition (Dio Cass. 78. 13); under the constitution of Diocletian and Constantine it became common.

J. P. B.

ADONIS (Ἄδωνις), in mythology, the son of Cinyras (q.v.), king of Cyprus, by an incestuous union with his daughter Myrrha or Smyrna, according to the usual myth (Ov. *Met.* 10. 298–559, 708–39). The beautiful youth was beloved by Aphrodite. While hunting he was killed by a boar, or, in some accounts, by the jealous Hephaestus, or by Ares disguised as a boar. Panyasis (in Apollod. *Bibl.* 3. 14. 4) calls Adonis the son of Theias and Smyrna. Aphrodite concealed the infant in a box and entrusted it to Persephone, who was unwilling to restore him till Zeus decreed that Adonis should spend part of each year on earth with Aphrodite, part in the underworld with Persephone. Adonis was a divinity of vegetation and fertility, whose disappearance marks the harvesting of the crops (cf. Euseb. *Praep. Evang.* 3. 11. 12). He is akin to the Babylonian Tammuz; the name Adonis may be simply the Semitic title 'Adon', 'Lord', by which he was known in Phoenicia. Byblus was especially sacred to Adonis, and his death, which annually stained the river Adonis with his blood, was localized at the near-by Aphaca (Lucian *Syr. D.* 6–9). He was worshipped at Amathus in Cyprus, and it was probably from Cyprus that his cult was carried, by the fifth century, to Athens, where he was, at least partially, identified with Eros. His cult existed only in conjunction with that of Aphrodite (q.v., § 3), to whom swine seem to have been sacrificed only where she was associated with Adonis.

THE ADONIA. At Byblos there was a period of mourning for the dead Adonis, but his resurrection (Lucian, loc. cit.) is borrowed from the Osiris cult, not original. At Alexandria the rites consisted of a magnificent pageant of the wedding of Adonis and Aphrodite; the next day women carried his image to the sea-shore amid lamentations (Theoc. *Id.* 15). The mourning of the women and the setting out of the ephemeral 'Gardens of Adonis' on the house-tops marked the festival at Athens. There was perhaps considerable variation in the content as in the date of the festival, and much of the original intent of the rites appears to have been forgotten. In fifth-century Athens they were held in April, in Ptolemaic Egypt perhaps in September, while under the Empire the accepted date was 19 July. The cult was especially popular with women.

Gow, *JHS* 1938 (detailed commentary on Theoc. 15); F. R. Walton, *Harv. Theol. Rev.* 1938, P. Lambrechts in *Mélanges G. Levy* (1955), W. Atallah, *Adonis dans la littérature et l'art grecs* (1966). F. R. W.

ADOPTIO, a legal act by which a Roman citizen—whether he is in the *patria potestas* (q.v.) of another or is *sui iuris*, i.e. himself a *paterfamilias*—enters another family and comes under the *patria potestas* of its chief. When the adopted person is *sui iuris* the act is called *adrogatio*. Both entail the consequences of a *diminutio capitis* (q.v.) *minima*.

2. *Adrogatio* effects the fusion of two families, for together with the *adrogatus* all the persons under his power (*potestas, manus*) and all his property pass into the family of the *adrogator*. In early times a public act was necessary for the validity of *adrogatio*: the vote of the *comitia curiata*, preceded (since it involved the extinction of a family and its *sacra*) by an investigation by the

pontiffs; by the time of Cicero the *comitia* were replaced by thirty lictors, who gave their assent as the representatives of the *curiae*. Since the *comitia* met only in Rome, *adrogatio* could take place only there until, certainly under Diocletian and probably before, a new method of *adrogatio*, by imperial rescript, was introduced. The old form thereafter disappears.

3. *Adoptio* of a *filius familias* had a more private character. Its form was the same as that of *emancipatio* (q.v.) save that after the third sale the final stage was not a *manumission* but a collusive claim by the adopter that the son was in his *potestas*. These formalities were finally abolished by Justinian and replaced by a simple declaration before a magistrate.

4. The effect of both *adoptio* and *adrogatio* was to place the adopted person for all legal purposes in the same position as if he had been a natural child in the *potestas* of the adopter. The adopted son took his adoptive father's name and rank. He acquired rights of succession on death in his new family and lost all such rights as he had in his old family. Moreover, *adoptio imitatur naturam*, and therefore an adoptive relationship was, for example, as much a bar to marriage as a natural one. (Another result was the rule that the adopter must be older than the person adopted—according to Justinian at least eighteen years older.)

5. Adoption (of both kinds), since it was a method of acquiring *patria potestas* and continuing the agnatic family, could originally be by men only. Adoption by women *ad solatium liberorum amissorum*, perhaps first allowed by Diocletian, shows a new conception. *Adrogatio*, since it involved the extinction of one family in order to preserve another, was subject to other restrictions—in particular that the adopter must have no children and must either be over the age of sixty or for some reason have no prospect of begetting children.

6. Since *adoptio* destroyed the adopted person's rights of succession in his old family, and a subsequent *emancipatio* by the adoptive father would likewise destroy his rights in his new family, Justinian, in order to remove this possibility of injustice, made a drastic change in the character of *adoptio*. In the ordinary case it was to do no more than create rights of succession in the new family (so-called *adoptio minus plena*). For all other purposes, including the retention of existing rights of succession, the person adopted was to remain in his natural family. *Adoptio* was to have its full effect (so-called *adoptio plena*) only when the adopter was a natural ascendant (e.g. maternal grandfather) and therefore less likely to indulge in capricious emancipation.

7. The testamentary adoptions recorded in non-legal sources in the late Republic and Principate, and which may have been influenced by Greek practice, would seem to have created only an obligation (from which the praetor could give dispensation) to take the testator's name. In the case of Caesar's adoption of Octavian legal effect was given to the adoption by a posthumous *adrogatio*.

G. Desserteaux, *Effets de l'adrogation* (1892); F. Wiesecker, *Eos* 1956, G. Lavaggi, *Stud. et doc. hist. et iur. xii* (1946); W. Schmittenhennet, *Octavian u. das Testament Caesars* (1952). And see textbooks under LAW AND PROCEDURE, ROMAN, I.

A B; B N.

ADOPTION, GREEK. The Code of Gortyn includes the earliest detailed reference to adoption in Greece. There it takes place *inter vivos*; the adoptive father must not himself be an adopted son, but otherwise he was free to adopt, whether or not he already had children of his own. The adoptive son was allowed some rights of inheritance, but these were not as great as those of a son by birth.

From Athens we have abundant but not altogether reliable evidence in the speeches of fourth-century orators, particularly Isaeus. In Attic law the original

purpose of formal adoption was to enable a citizen who had no son to choose an heir, usually if not always from among his relatives. (It is likely enough that in all periods more informal adoptions took place which did not give the same legal and financial privileges.) By the time of Isaeus we hear of three types of adoption: (i) *inter vivos*; (ii) testamentary; (iii) posthumous, in which case a man who had neither left a son nor adopted a son in his will was after his death assigned a son by adoption to carry on his family. The principle that adoption imitates nature (see ADOPTIO) is not accepted in Greece, and the adoption of a daughter's husband was a regular practice. Isaeus reiterates the view that religious considerations were important: a son must be adopted so that the family rites may be kept up and the continued existence of the family assured. In earlier times this may well have been so, but the circumstances in which adoption, particularly testamentary and posthumous, was employed suggest that by the fourth century financial factors weighed more heavily. This view is supported by the evidence that a man sentenced to suffer hereditary disabilities might normally give his sons away in adoption, thus saving them from the financial penalties of his sentence at the cost of extinguishing his branch of the family (cf. Plut. *Mor.* 834 b).

Elsewhere inscriptions are almost our only source of evidence. Many adoptive formulae are used, either of the type Διονύσιος Εὐρύμοιος φύσει δὲ Δαμπρίων or Πασαφῶν Ἐπιδύκου καθ' ὑθεσίαν δὲ Δαμοκλεῦς (or κατὰ θυγατροποιαν when a woman is adopted). These formulae are not a safe guide to the relative frequency of adoption in different parts of Greece. Very few Attic inscriptions have the local formula γόνυ δέ. Yet the number of occurrences in Rhodes, greater there than in all the rest of Greece, surely reflects some special situation. It seems clear, for instance, that in Rhodes by the second century B.C. adoption was used as a means of manipulating priest-hoods normally confined to particular families, so that in some cases an old man had to arrange for his adoption into the right family. There are signs elsewhere that adoption could amount to what we should rather call fosterage (see Cameron's article, cited below), and again that it might be used as a kind of apprenticeship. (Note the mention of adoption with reference to medical practice in the Hippocratic Oath.)

At least by the early years of the Roman Empire a person might be adopted by a city or a group within it as υἱός (θυγατήρ) τῆς πόλεως or υἱός τοῦ δήμου. This might be traced back to some privilege granted to war-orphanas such as is mentioned in Pericles' Funeral Speech (Thuc. 2. 46), but the earliest explicit reference to adoption by a community belongs to the second century B.C. (a Rhodian adopted by the Delians: cf. Hiller, *J. Oest. Inst.* 1901, 164 ff.)

Jar.-Sag. s.v. adoption, *PW*, s.v. adoptio (1). A. Wentzel, 'Studien über die Adoption in Griechenland', *Hermes* 1930, 167 ff. contains useful material despite the mistaken argument that Rhodian adoption is a sign of Roman influence; A. Cameron, 'ὑπερτός and related terms', in *Anatolian Studies presented to Buckler* (1930), 27 ff.; M. S. Smith, 'Greek Adoptive Formulae', *CQ* 1907, 302 ff. M. S. S.

ADRASTUS, the name of several mythological persons, the only one of importance being the son of Talaua, king of Argos. His name, if it means 'the unescapable', is very appropriate to a warrior-prince and gives no grounds for supposing he was originally a god. In historical times he had a cult at Sicyon and Megara (see Farnell, *Hero-Cults*, 334 ff.). Probably much of the tradition concerning him is derived from the lost cyclic epic *Thebais*; whether it has any historical content is doubtful.

When a young man he was driven out of Argos by dynastic rivalries and took refuge in Sicyon with his mother's father Polybus (q.v.). He married Polybus'

daughter and succeeded him as king (*Il.* 2. 572 and scholiast there; Pind. *Nem.* 9. 9 ff., with schol.); afterwards he returned to Argos, making terms with Amphiarus (q.v.). While reigning there he received in his house Tydeus and Polynices (qq.v.), both exiles, and recognized in them the lion and boar to whom he had been bidden marry his daughters, Argeia (to Polynices) and Deipyle (to Tydeus) (see, e.g., Apollod. 3. 58-59). He then undertook to restore them, and began by attempting to set Polynices on the throne of Thebes. The army was led by himself, his two sons-in-law, and Parthenopaeus (originally Adrastus' brother, in later accounts son of Atalanta, q.v.), Amphiarus, Capaneus, and Hippomedon—the famous Seven against Thebes; in some lists the exiles are omitted and Mecisteus and Eteocles substituted (see Wilamowitz-Moellendorf, *Aischylos Interpretationen* (1914), 97 ff.). On the march to Thebes the army halted at Nemea, and there were shown the way to water by Hypsipyle (q.v.). While she was thus engaged her charge, the baby Archemorus, was killed by a serpent; Amphiarus secured her pardon and the Nemean Games were founded in memory of the infant (see especially Eur. *Hypsipyle*, ed. G. W. Bond 1963). The attack on Thebes was a complete failure, only Adrastus escaping home, thanks to his marvellous horse, Arion. Our chief authorities here are Aeschylus, *Septem* and some odes of Pindar, notably *Ol.* 6. 12 and *Pyth.* 8. Ten years later Adrastus led the sons of the Seven, the Epigoni, against Thebes with better success; the city fell, but Adrastus' son Aegialeus was killed in the fighting. According to the earlier story (Paus. 1. 43. 1) the aged Adrastus died of grief on the way home; a sensational and late account (Hyg. *Fab.* 242. 5) makes father and son burn themselves alive *ex responso Apollinis*. H J R.

ADRIA, modern *Atria*, a coastal city in the north of the Po delta, now 12 miles from the sea. Perhaps Venetic in origin, it was probably one of the twelve Etruscan cities north of the Apennines. It had a large Greek population, and from the late sixth century onwards was an important entrepôt for Greek and Etruscan trade with the Po valley and Northern Europe. Varro (*Ling.* 5. 161) derives *atrium* from *Atria*.

Mostra dell'Etruria Padana e della città di Spina (Bologna, 1960), passim. D. W. R. R.

ADRIANUS of Tyre (c. A.D. 113-93), sophist, pupil and successor of Atticus Herodes at Athens. He subsequently taught rhetoric at Rome and his works included *μολύβδαι*, epideictic speeches, and treatises on *ἰδέαι* and *σπάσεις*.

ADRIATIC SEA (ὁ Ἀδριακός; *mare Adriaticum* or *superum*). This term was used indifferently with that of 'Ionian Sea' (q.v.) to denote the gulf between Italy and the Balkan Peninsula. Its southward limit was extended by some authors to include the sea east of Sicily. In neolithic times seafarers from the south settled round the Gulf of Valona at the entry to the Adriatic, and in the Bronze Age there is evidence of trade in Baltic amber (q.v.), perhaps in Bohemian tin (q.v.), and in weapons from the north to Italy and Greece with ports of call in Albania, for instance in the Mati valley. Seafarers from the Adriatic occupied the Nidhri plain in Leucas, where they practised burial under a tumulus such as occurred in Albania in the Middle Helladic period. Greek exploration of the Adriatic was said to be the work of the Phocaeans, who penetrated to its upper end by 600 B.C. (Hdt. 1. 163); but Greek colonization was settled from Corinth and Corcyra in the late seventh and the sixth centuries, their chief foundations being Apollonia and Epidamnus (qq.v.). Emigrants from Cnidos occupied Black Corcyra (*Cur-*

zola), and Syracusans (probably refugees from Dionysius I) took possession of Issa (*Lissa*). But the north Dalmatian coast was not colonized. Temporary settlements were made by Rhodes in south Apulia (Strabo 14. 654); probably in the sixth century. In central Italy Ancona (q.v.) was a solitary Greek foundation. Adria and Spina (qq.v.) at the Po estuary thrived on trade with the Etruscans from the early fifth century, and finds of coins in the Po valley indicate Tarentine trade up the Adriatic in the fourth century.

Adriatic commerce and colonization were impeded by the brigandage of the Illyrians on the South Dalmatian coast, where deep recesses and off-shore islands provided ideal pirate bases. This nuisance was eventually suppressed by the Romans, who swept the Adriatic with a war-fleet after the First Punic War (229 and 219 B.C.), and from the time of Augustus patrolled it with a regular police flotilla. But Greek trade in the Adriatic fell away after 300 B.C., and the Romans made little use of this sea except on the crossings from Brundisium and Ancona (qq.v.).

R. L. Beaumont, *JHS* 1936, 159 ff.; Hammond, *Epirus*, 326 ff. M. C.

ADULIS or **ADULE**, on the west coast of the Red Sea (at Zulla in Annesley Bay near Massawa), was used by Ptolemy II and III for elephant-hunts, and became an important export-mart for African and re-exported Indian wares, a caravan-route leading thence inland. Greeks and Indians frequented it. When the Axumite kingdom rose (1st c. A.D.; see *AXUMIS*) Adulis became their main port and base (for voyages to E. Africa and India), surpassing all others in the third century A.D. Two famous inscriptions (combined in *OGI* 54) are among its monuments.

Periplus M. Rubr. 4, *Thyn.* 6. 172, *Ptol. Geog.* 4. 7. 8; 8. 16. 11; Cosmas, ed. Wilmstedt, 101B ff. E. H. W.

ADULTERY. 1. In GREEK STATES the punishment of adultery (*μοιχεία*) ordinarily took the form of private self-help. A law of Draco allowed a man to kill anyone caught in the act with his wife, mother, sister, or daughter; according to a law of Solon the offended husband could deal with the adulterer as he liked. The adulterer could, however, buy himself off by paying a money penalty. It was also open, alike to interested persons and to others in the first instance, to enter a legal prosecution against him. Penalties were very severe and differed in the individual States. The husband of a woman convicted of adultery was compelled to repudiate her, otherwise he became liable to *atimia* (q.v.) by a law of Solon. In the Graeco-Egyptian papyri some marriage contracts (so the oldest one, *PEleph.* 1) prescribe a pecuniary penalty for adultery.

II. ROMAN LAW (except as indicated below) took cognizance only of adultery by the wife. Until the legislation of Augustus (below) its punishment was left either to the outraged husband (cf. Gell. 10. 23; Val. Max. 6. 1. 13) or to the judgement of a family council. It is probably to this practice that is attributable the legend of a law of Romulus (Dion. Hal. 2. 25) punishing the adulteress with death. In the late Republic it would entitle the father or the husband to sue for *iniuria* (q.v.), but this was true also of the seduction of an unmarried woman. Adultery would also be a ground for the husband's retaining part of the dowry on divorce (see *MARRIAGE, LAW OF*), but it was not brought within the criminal law until the *Lex Julia de adulteris coercendis* (18 B.C.). The right of self-redress was regulated: the father might kill his adulterous daughter and her adulterer if caught in the act in his or her husband's house; a husband might not kill his wife,

and only in certain circumstances the adulterer. A special court (*quaestio*), presided over by a praetor, was created to try cases of adultery. The normal penalty was *relegatio* (q.v.) of both wife and adulterer (but in *diversas insulas*), confiscation of parts of their property, and for the woman loss of half her dowry. The husband with clear evidence must divorce immediately, or be punished as a *leno* (procurer). The accusation must be made by husband or father within sixty days after the divorce; thereafter it could be made within four months by anyone (both periods counting only *dies utiles*, i.e. days on which the court sat).

The penalties of the *Lex Iulia*, to which a special title is dedicated in Justinian's *Digest* (48. 5), were made more severe by the Christian emperors. Constantine introduced the death-penalty (which Justinian confirmed) but restricted the right of making a charge against the guilty person to the husband and the relatives of the wife.

Adultery by the husband was never as such a crime, but his illicit intercourse with a respectable woman constituted the crime of *stuprum* under the *Lex Iulia*, and in the fifth century (*Cod. Just.* 5. 17. 8) his adultery in the matrimonial home or his adultery with a married woman anywhere entitled his wife to divorce him without incurring the penalties by then imposed for unjustified divorce (see MARRIAGE, LAW OF).

ADVOCATUS. The parties to a Roman civil trial might entrust the presentation of their case to advocates (*advocati, patrum, causidici*). These men, who appear as a class in the late Republic under the influence of Greek rhetoric, and of whom Cicero (q.v. 1) and the Younger Pliny (q.v.) are prominent representatives, were orators rather than lawyers. They would necessarily have or acquire some knowledge of law, but their reputations were founded on their skill in forensic rhetoric. They and the jurists (see JURISPRUDENCE) regarded each other as distinct classes, with different (and in the eyes of the other class inferior) functions, though occasionally an advocate might become a jurist. Advocates were supposed to give their services gratuitously, the *Lex Cincia* (q.v.) forbade the acceptance of any reward, and the ban was repeated by Augustus and more than once in the first century A.D., but evidently to no purpose, and by the end of the second century it was accepted (*Dig.* 50. 13. 1. 9 ff.) that advocates might claim an *honorarium* (or *palmarium*, if payment was conditional on the case being won.). In the later Empire, with the disappearance of the professional jurist, the advocates, at least in the East, are no longer merely orators, but are qualified lawyers who have studied at a law school and form a privileged corporation. Their number is limited, their fees are regulated, and they are attached to a particular court. The majority of the compilers of the *Digesta* (q.v.) were advocates.

Advocates must be distinguished from legal representatives. In the earliest procedure, *per legis actiones* (see LAW AND PROCEDURE, ROMAN), the parties must in general be present in person; under the formula procedure they might appoint representatives (*cognitores, procuratores*; *Gal. Inst.* 4. 82 ff.) who would take their place in the proceedings. But in either case they might also employ the services of an advocate.

F. Schulz, *Roman Legal Science* (1946), 43 ff., 108 f., 268 ff.

A. B.; B. N.

AEACUS, in mythology, son of Zeus and Aegina (daughter of the river-god Asopus), ancestor of the Aeacidae, the (post-Homeric) genealogy being:

Aeacus, 1 Endis (daughter of Sciron of Megara)

Thetis = Peleus	Hesione	Telamon = Eriboea
Achilles	Deidameia	Teucer
Neoptolemus		Atas = Tecmessa
		Euryaces

Some accounts give Aeacus a third, illegitimate son, Phocus, who was killed by his brothers; they consequently left the island of Aegina (so named from their grandmother). Aeacus was celebrated for his piety. In response to his prayers to Zeus Hellenios a drought came to an end (Isoc. 9. 14-15 and later authors). Because the population of the island was scanty, or had died of a plague sent by Hera, he besought Zeus to help him, and the god turned a swarm of ants into men, who were, therefore, called Myrmidones (Hes. fr. 76 Rzach; *Ov. Met.* 7. 517 ff.). He judged between the gods (*Pind. Isthm.* 8. 25); built part of the walls of Troy (*Pind. Ol.* 8. 31; no other authority). After his death he became a judge of the dead (Isoc. loc. cit; Plato, *Ap.* 41 a, *Grg.* 523 c). H. J. R.

AECAE, a Roman town (modern *Troia*) 14 miles south-west of Foggia in northern Apulia. It sided with Hannibal (q.v.) and later became a stage on the Via Traiana. The largest of all the Apulian centuriation (q.v.) systems covered over a hundred square miles east of the town.

CIL ix, 85 T. Ashby and R. Gardner, *PBSR* 1916, 141 ff.

G. D. B. J.

AEDESIUS (d. c. A.D. 355) of Cappadocia, Neoplatonist, pupil of Iamblichus and teacher of Maximus, Chrysanthus, Priscus, and Eusebius Myndius. He set up a school of philosophy in Pergamum. No writings remain; biography by Eunapius.

AEDILES. The aediles originated as two subordinate officials of the *plebs*, created to assist the tribunes, whose sacrosanctity they partly shared, either for the maintenance of the prison, or, as is more likely, to superintend the common temple (*aedes*) and cult of the *plebs*, that of Ceres (q.v.). Soon their functions began to extend to the administration of public buildings in general, particularly to the oversight of the archives, both *plebisca* and *senatus consulta*. With the addition in 367 B.C. of two *aediles curules*, elected from the patricians, the aedileship became a magistracy of the whole people. After the admission of plebeians the curule magistracy was held alternately by either order, but in the Empire was omitted by patricians. The office was elective—either in the *concilium plebis*, or, for the *curules*, in the *comitia tributa*—and annual, being held after 367 for the consular, not the tribunician, year (see CALENDARS, §8). *Curules* ranked below praetors, *plebei* at first below tribunes but eventually with the *curules*. The office was non-essential in the *curius honorum*, but its connexion with the games rendered it useful to men with political ambitions, and it was the first office to confer full senatorial dignity and the *ius imaginis* (see IMAGINES). The competence of either branch was the same. Their duties were the *cura urbis*, *cura annonae*, and *cura ludorum sollemniium*. *Cura urbis* meant care for the streets of Rome, traffic regulations, public order in religious matters and cult practices, care for the water-supply and the market, especially the supervision of weights and measures. Consequently they had powers of minor jurisdiction. Fines exacted went to separate chests for *plebei* and *curules*. Out of the *cura urbis* developed the *cura annonae*, the maintenance and distribution of the

corn-supply (see *ANNOA*), a heavy charge until Julius Caesar created special *aediles Cereales* for this duty, which passed under Augustus to the *praefectus annonae* and other officials. Care for the public games, which grew out of their urban administration, increased in importance with the growth of wealth and political rivalry in the later Republic, till the greater part of the expense was borne by the aediles as a means of gaining popularity and votes. Augustus, however, transferred the games to the praetors. The *ludi Romani* and the *Megalesia* fell to the *curules*, the *ludi Cereales* and *plebeni* to the plebeians. Aediles are also found as the normal minor administrative officials of all Roman municipalities (see *MUNICIPIUM*), and in corporate bodies such as *vici* (see *VICUS*) or *collegia* (see *CLUBS, ROMAN*). See also *AERARIUM*.

Livy, Dion. Hal.; Cicero, *Verrins*, 2 and 5. 14. G. De Sanctis on origins, *Riv. Fil.* 1932, 433 ff. Mommsen, *Röm. Staatsr.* II, 470 f. H. Siler, *Römisches Verfassungsrecht* (1952), 200 ff.; Broughton, *MRR*. A. N. S.-W.

AEDITUUS (older *Aeditumus*), properly the keeper or sacristan of a consecrated building, *aedes sacra*. In practice two kinds of official were so named, (a) a man of rank and standing, who was responsible for the upkeep of the building, (b) a servant, often a slave, who did the actual work of cleaning, etc.

AEDON (*Ἀηδών*), in mythology, daughter of Pandareos, the son of Hermes and Merope. She married Zethus and had two children, Itylus and Neis. Envyng Niobe (q.v.), Amphion's wife, for her many children, she planned to kill them, or one of them, at night; but Itylus was sleeping in the same room as they and she mistook the bed and so killed him. In her grief she prayed to be changed from human form, and became a nightingale (*ἀηδών*).

Schol. Od. 19. 518. Rose, *Handb. Gk. Myth.* 282 and 340n. H. J. R.

AEDUI, a Gallic tribe which occupied most of modern Burgundy. They appealed to Rome against the Arverni and Allobroges (121 B.C.) and received the title of *fratres consanguineique*. During the Gallic War they gave valuable though not whole-hearted support to Caesar, and when they finally joined Vercingetorix in 52 their support was lukewarm. Under the Empire they became a *civitas foederata*, and were the first tribe to furnish Roman senators. *Duoviri* replaced the *Vergobretus* as magistrates, and the hill-fort Bibracte was abandoned for Augustodunum (c. 12 B.C.). They took part unsuccessfully in the rebellions of Sacrovir (A.D. 21) and Vindex (68). In the third century the region suffered heavily from civil war and barbarian invasion; the panegyrist Eumenius celebrates the relief measures of Constantius and Constantine.

CIL, III, 400. O. Hirschfeld, *Kl. Schr.* (1913), 186 ff.; C. Julian, *Hist. de la Gaule* (1907-26), III, 535 ff.; VI, 423 ff. C. E. S.

AEGAE (*Vodena*, now *Edessa*), early capital of Macedonia, commanding the route from the Macedonian plain to upper western Macedonia. Formerly called Edessa, it formed a base for the Macedonian conquest of the coastal plain c. 640 B.C., was renamed Aegae, and remained the cult-centre of the royal house even after Archelaus moved the court to Pella (q.v.). Its strong position is illustrated in S. Casson, *Macedonia, Thrace, and Illyria* (1926), fig. 69. N. G. L. H.

AEGEAN SEA, between Greece and Asia Minor. To it the modern name Archipelago was originally applied, but the ancient Greeks derived the name Aegean variously from Theseus' father Aegeus (q.v.), who drowned himself

in it; from Aegea, Amazonian queen, who was drowned in it; from Aegae city. They subdivided it into *Thracian*, along Thrace and Macedonia to the north coast of Euboea; *Myrtoan*, south of Euboea, Attica, Argolis, west of the Cyclades; *Icarian*, along (Asiatic) coasts of Caria and Ionia; *Crete*, north of Crete. Some, like Strabo, treated the last three as separate, ending the Aegean at Sunium in Attica. The whole Aegean contains many islands in three groups: along the Asiatic coast, including Lesbos, Chios, Samos, Rhodes; a small group off Thessaly; Euboea and the Cyclades, a continuation or reappearance of the mountains of the Greek mainland.

Cary, *Geographic Background*, chs. 1 and 2.

E. H. W.

AEGEUS (*Αἰγέως*), almost certainly a humanization of Poseidon of Aegae; hence Theseus (q.v.) is sometimes called his son, sometimes Poseidon's. In legend, however, he is a king of Athens, son (usually) of Pandion and Pylia, daughter of Pylas, king of Megara. Born in Megara, he afterwards conquered Attica. Probably Athenian claims to the Megarid in historical times have much to do with this and similar legends. Having no children, he consulted Delphi, and was told in riddling phraseology to be continent till he reached home (*Eur. Med.* 679, and schol.), but did not understand, and begat Theseus on Aethra, daughter of Pittheus, king of Troezen, who understood the oracle and purposely brought it to pass that the divinely ordained child should be his grandson. Later, he gave Medea a refuge on her flight from Corinth (see *MEDEA*), and married her; their son was Medus (*Ilg. Fab.* 26. 1, from some Alexandrian source). On her trying to poison Theseus when he arrived in Athens, Aegeus drove her out (different account in Hyginus, *ibid.* 2). Theseus freed him from the attacks of Pallas and his fifty sons, who were trying to overthrow him, and afterwards left for Crete to meet the Minotaur (see *MINOS*). On returning, however, he forgot to change the black sails of his ship, and Aegeus, seeing them and thinking his son dead, killed himself by leaping off the Acropolis or *ἡαο* the sea, hence, in this account (but see preceding article), called the Aegean (*Αἰγαῖον πέλαγος*) after him. See, for connected accounts, Plutarch, *Theseus*, and Apollod. 3. 206 ff.

H. J. R.

AEGIMIUS, a legendary king, son (or father, schol. *Pind. Pyth.* 1. 121) of Dorus, eponym of the Dorians. Being attacked by the Centaurs, he asked Heracles to help him, and in gratitude for his aid adopted Hyllus (q.v.) and made him joint heir with his own sons.

AEGINA, an island in the Saronic Gulf, inhabited from late neolithic times and in contact with Minoan Crete and Mycenae. It was conquered c. 1100 B.C. by the Dorians under Deiphontes (q.v.), son-in-law of Temenus of Argos. Early in the seventh century (probably) it fell to the Argive tyrant Pheidon (q.v.) and struck the first coins of Greece proper, the long-lived silver 'tortoiseshells'. Throughout the archaic period it was a naval power, often in rivalry with Samos (war with King Anphicrates; voyages of Sostratus of Aegina and Colaeus of Samos; establishments at Naucratis (q.v.); attack c. 520 on Samians settled in Crete).

In 506 began the long struggle with Athens. The Athenian fleet that won Salamis was raised ostensibly against the Aeginetans who had 'medized' in 491; but at Artemisium, Salamis, and Plataea they fought on the Greek side, winning the prize for valour and much besides. To this period belongs the temple of Aphaea (q.v.) with its splendid sculptures now in Munich.

When Athens founded the Delian League (q.v.), Aegina may have become a member, but war broke out between Athens and Aegina in 459. A decisive naval

defeat in 459 led to the capture of the 'eyesore of the Piraeus' and its forced inclusion in the Delian League (458), to which it paid 30 talents yearly. The Aeginetans helped to foment the Peloponnesian War, and on its outbreak were expelled from their island, which was occupied by Athenian cleruchs, among them the families of Aristophanes and Plato. Restored by Lysander in 405 they received a Spartan harmost, and till its bequest to Rome by Attalus of Pergamum the island played a minor, mainly passive, role. Its supreme glory is to have inspired some of Pindar's greatest poetry, including the eighth Pythian.

MacDowell, 'Aegina and the Delian League', *JHS* 1960, 118 f. P. N. U.; N. G. L. H.

AEGIS, attribute of Zeus and Athena, usually represented as a goatskin. When Zeus shakes the aegis (*Il.* 17. 593 ff.) a thunder-storm ensues and he puts fear into the hearts of Achaeans. Athena and Apollo use the aegis to disperse enemies and to protect friends (*Il.* 15. 229, 307; 21. 400).

The aegis made by Hephaestus (*Il.* 15. 307 ff.) for Zeus is indestructible, resisting even lightning (*Il.* 21. 400). That of Athena (*Il.* 5. 738) is surrounded by Fear, Fight, Force, and Pursuit, and has a Gorgon-head in the centre. In art the aegis appears as an attribute of Athena from mid sixth century on (A. Rumpf, *Chalkidische Vasen* (1927), 143). It is shown as a short cloak worn over the shoulders or, like a shield, over the left arm; it is bordered with snakes and has often the head of Gorgo in the centre. It is assumed that originally the aegis was conceived as a storm-cloud (Aesch. *Cho.* 585) and came to be regarded as a goatskin because of the similarity of words *αἰξ* goat and *καταιγὶς* hurricane.

Dar-Sag. 8 v., N. Prins, *De Oorspronkelijke Betekenis van de Aegis* (1911); Cook, *Zeus* iii. 837. G. M. A. H.

AEGISTHUS, in mythology, surviving son of Thyestes (see ATREUS, so Aesch. *Ag.* 1605), but a version apparently Sophoclean (see Dio Chrys. 66. 6; cf. Apollod. *Ept.* 2. 14; Hyg. *Fab.* 87 and 88. 3-4) makes him the incestuous offspring of Thyestes and his daughter Pelopia after the murder of the elder sons. His name suggesting the word *αἰξ*, a story is told, in connexion with that mentioned above, that he was exposed and fed by a she-goat (Hyg. *ibid.* and 252). When adult, he returned to Argos to avenge his father. All this is post-Homeric; the *Odyssey* (3. 517 ff.) evidently thinks of him as a baron having an estate near the domains of Agamemnon, and gives no reason for the quarrel except Aegisthus' intrigue with Clytemnestra (q.v.; cf. 1. 35 ff.). For his murder of Agamemnon and the revenge taken by Orestes, see the appropriate articles.

The death of Aegisthus is a favourite subject in archaic and classical art (Brommer, *Vasenlisten*², 321 f.; and see under CLYTEMNESTRA, ORESTES). H. J. R., C. M. R.

AEGRITUDO PERDICAÆ, an anonymous Latin epyllion narrating the calamitous love of Perdica for his mother, Castalia. Its ascription to Dracontius (q.v.) is unwarrantable, though it almost certainly belongs to his period, and probably to Africa.

TEXIS. Riese, *Anth. Lat.* n² (1906), no. 808; *PLM* v² 238. A. H.-W.

AELIANUS (1), CLAUDIUS (c. A.D. 170-235), generally known as 'Aelian', of Praeneste, where he was pontifex. He taught rhetoric in Rome, but later confined himself to writing. Extant works: *Il. ζῶων ἰδιότητος* (*De Natura Animalium*), a collection of excerpts and anecdotes of a

paradoxical or moralizing character, concerned chiefly with the animal world; *Ποικίλη ἱστορία* (*Varia Historia*), a similar collection dealing with human life and history; *Ἐπιστολαὶ ἀγροικικαί*, short stylistic exercises in letter form. Fragments exist, chiefly in the *Suda*, of *Il. προνοίας* and *Il. θεῶν ἐναργειῶν*, collections designed to illustrate the workings of providence and divine justice.

Aelian's philosophical ideas, notably that of universal reason as manifested in the animal creation, derive from Stoicism; he is especially bitter against the Epicureans. His excerpts, largely derived from intermediate sources (Sostratus, Alexander of Myndos, Pamphilus, etc.), often supplement our knowledge of earlier writers. He enjoyed a reputation for Attic purity of diction (*Suda*, Philostratus); he affects Herodotean simplicity (*ἀφ᾽ ἑλεια*) and lack of arrangement. His works enjoyed great subsequent popularity, and were much drawn upon by Christian writers. He is probably to be distinguished from the author of a *Tactica* (see article below).

Suda; Philontr. *VS* 2. 31. Editions: R. Hercher 1858 (preface); id. (Teubner) 1864; *De Nat. An.*: A. F. Scholfield (Loeb, 1958-9). Criticism: W. Schmid, *Atticismus* (1889) iii. 1 f. (language); M. Wellmann, *Hermes* 1891, 1892, 1896, 1916 (sources of *Il. ζ. l.*); F. Rudolph, *Leipz. Stud.* 1884 (sources of *Il. l.*). W. M. E.

AELIANUS (2), author of a *Tactica* (in Greek), probably in Trajan's reign, on the long-dead Macedonian phalanx, mostly taken from Asclepiodotus (q.v.). Its value is slight.

TEXT: H. Köchly and W. Rustow, *Griechische Kriegsschriftsteller* (1855).

AELIUS (1, *PW* 105) **PAETUS CATUS, SEXTUS** (cos. 198 n.c.), a Roman jurist, and author of the *Triperitita*, so called because it contained first the law of the XII Tables, then an account of its development by legal interpretation, and finally the *legis actiones*. Pomponius (q.v. 6) says of it: 'ueluti cunabula iuris continet'. He also mentions a collection of *legis actiones* (*Ius Aelianum*) which, he says, superseded the *Ius Flavianum* (see FLAVIUS 1). This may be identical with the third part of the *Triperitita*. No fragment of either work survives. A. B.; B. N.

AELIUS (2), LUCIUS, born probably c. A.D. 100, had the same name, *L. Ceionius* (*PW* 7) *Commodus*, as his father. He became praetor in 130, cos. I in 136, and was adopted (as 'L. Aelius Caesar') later in 136 (*CIL* vi, 10242) by Hadrian as his successor. Aelius received the *tribunicia potestas* in Dec. 136 and was cos. II in 137. Elegant, luxurious, and consumptive, he nevertheless governed the two Pannonias well (136-7). He died on 1 Jan. 138, honoured but not deified.

S.H.A. *Had.* and *Ael.*; Dio Cassius bk. 69; *Diz. Epigr.* iii. 638 ff.; *Lambrechts, Senat.* no. 36, Struck, *Reichsprägung*, ii. 166 ff.; *B.M. Coms. Rom. Emp.* iii. J. Carcopino, *Rev. Ét. Anc.* 1949, 284 ff.; Grénade, *Rev. Ét. Anc.* 1950, 258 ff.; R. Syme, *Athenaeum* 1952, 306 ff.; *Tacitus* ii. 601. See also under HADRIAN and VERUS, LUCIUS. C. H. V. S., M. H.

AELIUS (3, *PW* 117) **PROMOTUS**, physician from Alexandria, probably belonging to the period between Hadrian and Pertinax (A.D. 138-93). He wrote a book on curative methods called *Δυναμειρόν*, sections of which remain.

AEMILIANUS, MARCUS AEMILIUS (*PW* 24), Emperor A.D. 253. His *patria* was Djerba. While governor of Moesia he repelled a Gothic invasion and was saluted Emperor by his troops in opposition to Trebonianus Gallus (253). His reign lasted only three months. When news reached Rome that Valerian had been proclaimed Emperor, Aemilianus was assassinated by his own soldiers.

G. M. Bersanetti, *Riv. Fil.* 1948, 257 ff. H. M. D. P.; B. H. W.

AENEAS (1) (*Αἰνείας* or *Αἰνέας*), son of Anchises and the goddess Aphrodite, a famous Trojan leader in Homer's

Iliad and the hero of Virgil's *Aeneid*. In the *Iliad* he is said to have been respected equally with Hector (5. 467), and honoured like a god (11. 58). He fought against Diomedes (bk. 5), Idomeneus (bk. 13), and Achilles himself (bk. 20). His actions are not strikingly heroic, and more than once he is protected or rescued by one of the gods, to whom he exhibits marked piety (20. 298, 347). Aeneas was descended from the younger branch of the Trojan royal house (20. 230 ff.), and had a grudge against Priam, who came of the elder branch, for not giving him his due (13. 460). But he himself hoped to succeed to the kingship (20. 180), and Poseidon prophesies that he and his descendants will rule over the Trojans (20. 307). Aeneas is thus the one Trojan hero who has a definite future before him.

From this hint tradition developed the legend of his flight from Troy with his father Anchises (q.v.), his son Ascanius (q.v.), and his ancestral gods (see *PIANATES*) (Xen. *Cyn.* 1. 15), and the legend of his subsequent wanderings. Arctinus represents him as retiring to Mt. Ida, and afterwards he was thought to have visited or founded many places on the mainland of Greece and elsewhere, which either had names resembling his own, like Ainos in Thrace and Ainea in Chalcidice, or possessed temples of Aphrodite, often with the cult title *Αἰνείας*, such as those in Leucas, at Actium, and at Elymus in Sicily. This story of his wanderings was developed with the addition of other places, such as Delos and Crete, by later writers, especially by Hellanicus, Timaeus, and Dionysius of Halicarnassus. The association with Sicily acted as a stepping-stone both to Rome and to Carthage. Stesichorus may have asserted that Aeneas reached 'Hesperia', but the story that he came to Latium appears first in Hellanicus. It became popular after the wars with Greece, when patriotism urged the Romans to seek a founder within the cycle of Greek legend, but among the enemies of Greece. Among Roman writers this development is found in Naevius and Ennius, in Q. Fabius Pictor and later historians, including Livy. Considerations of chronology later made Aeneas the founder, not of Rome itself, but of Lavinium (q.v.), the head of the Latin League. The connection of Aeneas with Carthage was known to Varro, and there is a possible earlier reference to the meeting of Aeneas and Dido in a fragment of Naevius (q.v.). Archaeological evidence shows that the legend of Aeneas was known in Etruria from the end of the sixth century B.C.

Virgil thus inherited a flat and disconnected story of Aeneas' wanderings, a legend of his association with the foundation of Rome, and a hero with no definite characteristics, except a scrupulous piety. Out of this material he constructed the epic of the *Aeneid*. The legends of the wanderings he wisely telescoped into the third book, while the association with Rome is developed into the great national theme of the poem. Virgil's portrait of Aeneas is based on the piety ascribed to him by Homer, but this is amplified in the full sense of the Roman *pietas* into a devotion to his father, to his mother and the gods in general, and to the great destiny of Rome.

The *Aeneid* ends with the slaying of Turnus by Aeneas, but other writers tell of his meeting with Dido's sister, Anna, on the banks of the Numicius (Ov. *Fasti* 3. 601 ff.) and of his purification in the river and his assumption to heaven with the title of Indiges (Ov. *Met.* 14. 581 ff.).

Aeneas' flight from Troy, with Anchises on his back and Ascanius at his side, is shown in late archaic and early classical vase-paintings of the sack of Troy; also on a late sixth-century coin of Aeneia (Macedonia); also on scarabs and as terracottas of c. 500 B.C. in Etruria. Combats with Aias and Diomedes are also found (Brommer, *Vasenlisten*², 273 f., 278, 287).

J. Perret, *Les Origines de la légende troyenne de Rome* (1942); F. Bömer, *Rom und Troia* (1951); E. D. Phillips, *JHS* 1953, 66 f.;

Alföldi, *Early Rome and the Latins*, 250 ff., for Lavinium; K. Schauenburg, *Gymnasium* 1960, 176 ff., for Aeneas and Rome. C. B.; C. M. R.

AENEAS (2), commonly called *Tacticus*, probably the Aeneas of Stymphalus who was general of the Arcadian Confederacy in 367 B.C., wrote several military treatises (epitomized later for Pyrrhus), of which the one on the defence of fortified positions, probably written soon after 357, has survived. As advice to the defenders of a besieged town it is rather elementary, though it contains interesting details; but its real value is the light it throws on social and political conditions in early fourth-century Greece, for it is assumed throughout that the chief danger to the defence is not so much the enemy without the wall as the opposing faction within, who will betray the city if they can. Philologically, the work, as an early non-Attic document, has some interest for the study of the growth of the Hellenistic *Koine*.

Illinois Greek Club, *Aeneas Tacticus* (Loeb, 1923); L. W. Hunter, *Aeneas Poliorhetika* (1927); D. Batends, *Lexicon Aeneum* (1955), with bibliography. W. W. T.

AENESIDEMUS of Cnossos, Sceptic, probably of the Ciceronian period. Philo seems to have borrowed from him an account of the *τρόποι τῆς ἐποχῆς* (grounds of suspense of judgement). Works: *Πυρρώνειοι λόγοι*, *ὑποτάξεις εἰς τὰ Πυρρώνεια*, *Κατὰ σοφίας*, *Περὶ ζητήσεως*, *Πρώτη εἰσαγωγή*. His aim was to restore the sceptical character which the teaching of the Academy had under Antiochus' influence lost. Diogenes Laertius (in the life of Pyrrhon) and Sextus Empiricus give many details of his teaching, which was substantially followed by Sextus himself. The *τρόποι τῆς ἐποχῆς* were directed against the reliability of the senses. W. D. R.

AENIANES, situated east of Dodona in the Homeric Catalogue (*Il.* 2. 749), moved probably through Cassopaia into the upper Spercheus valley, where their tribal state became a member of the ancient Amphictiony centred on Anthela (see *AMPHICTIONIES*). This state survived into Roman times.

P.-K. *GL* 1. 1. 242 f., Hammond, *Epirus*, 375 f. N. G. L. H.

AENUS, a flourishing Greek city, originally an Aeolic foundation (Hdt. 7. 58. 3), on the coast of Thrace (q.v.), 11 miles from Doriscus, on the east side of the mouth of the Hebrus (Alcaeus, fr. 29 Lobel); the modern *Enes* is on the site of the ancient city. Like Abdera (q.v.), Aenus owed its wealth to its geographical situation. Not only did it command the trade that descended the Hebrus valley, but also it provided an alternative route to the Bosphorus and the Dardanelles for trade that wished to reach the Aegean from the Black Sea; merchandise could be disembarked at Odessus, sent overland to the Hebrus valley, and then down to Aenus. Aenus thus lay at the entrance to the natural route to the rich cornlands, ranches, forests, and fruit-producing regions of eastern and central Thrace. It also derived considerable revenue from its fisheries. Aenus was an Athenian tributary state, contributing 12 talents to the Delian League in 454 B.C. The subsequent lowering of the tribute of Aenus was due partly to the rise of the Odrysian power (see *THRACE*), and partly to the Athenian development of the sea-route from the Black Sea, which diverted commerce from the land-route by the Hebrus valley. Possibly, after the rise of the Odrysian power, Aenus passed out of Athenian control, but this was later re-established; Aenus supplied peltasts at Pylos (q.v.) in 425 B.C., and was an ally of Athens in Sicily in 415 B.C. (Thuc. 4. 28. 4; 7. 57. 5). Between 341 and 185 B.C. Aenus passed through the

hands of the Macedonian, Egyptian, and Pergamene kings, until in 185 B.C. it was declared a 'free city' by the Romans (Pliny, *HN* 4. 43). The coin types of Aenus reached perfection in the third quarter of the fifth century B.C.

AEOLIAE INSULAE, the volcanic Aeolian Islands, 25 miles north-east of Sicily, had a flourishing Neolithic culture based on the obsidian industry and well represented in the Diana plain and Castello (Lipari), a natural fortress with a succession of Neolithic, Bronze Age, Greek, and Roman settlements. The islands took full commercial advantage of their position between east and west in the Early Bronze Age (Capo Graziano culture): imported pottery (MH, LH I-II, Mycenaean IIIA 1 and 2) has established the first absolute dates in the pre-history of western Europe. Aegean (LH IIIA) contact continued in the Middle Bronze Age (Milazzese culture): contact with the peninsular Apennine Culture agrees with the Liparus legend (Diod. Sic. 5. 7) and gave rise to the Late Bronze Age-Early Iron Age Ausonian culture, (q.v.) with its parallels at Milazzo for the proto-Villanovan urnfields of the mainland. The Cnidian-Rhodian colony of Lipara was founded in 580-576 B.C., and conquered in 252 by Rome; under the Empire it had the status of a small provincial town with Roman citizenship. The islands produced obsidian, sulphur, alum, pumice, and coral.

AEOLIS, the territory of the northernmost group of Greek immigrants to the western coast of Asia Minor, extending from the entrance of the Hellespont to the mouth of the Hermus—a linguistic and ethnological, not a geographical, unit. Near the end of the second millennium B.C. the Aeolians, deriving from Boeotia and Thessaly, planted their first settlements in Lesbos, and thence expanded northwards to Tenedos, and along the mainland coast to the east and south. The Troad was occupied much later (perhaps in the seventh century B.C.) by secondary colonization, principally from Lesbos. There must have been considerable racial fusion with the local barbarian inhabitants. Most of the Aeolian cities derived such prosperity as they enjoyed primarily from agriculture, commerce being of minor importance in Lesbos. The Aeolian settlements in the south were grouped together in a league, whose origin was probably religious. Its members were Aegae, Aegrusa, Cilla, Cyme, Gryneum (where the temple of Apollo was perhaps the central sanctuary of the league), Larissa, Myrina, Neon-teichos, Pitane, Smyrna (later resettled by Ionians), and Temnos. The most important cities in the north were: Antandros, Assus, Cebren, Gargara, Ilium, Neandria, and Seepsis.

J. M. Cook, *The Greeks in Ionia and the East* (1962).

D. E. W. W.

AEOLUS, (1) the ruler of the winds (perhaps by derivation 'the changeable'); in *Od.* 10. 2 ff. a mortal, son of Hippotes; he lives in Aeolia, a floating island, with his six sons and six daughters, who have married one another; he can tie up the winds in a sack to prevent them blowing. In *Aen.* 1. 51 ff. he is a minor god and keeps the winds in

a cave on Aeolia. Sometimes confused with (2) a son of Hellen (q.v.), eponym of the Aeolians and the Aeolidae:

Canace killed herself, or was killed by her father, because of incest with Macareus (*Ov. Her.* 11). Arne, or Melanippe, became by Poseidon mother of (3), another ancestor of the Aeolians; see *Hyg. Fab.* 186 and *Rosc. ad loc.*; Euripides, frags. of *Μελανίππη ἡ δευμώτις* and *Μ. ἡ σφῆ*.

H. J. R.

AEPYTUS, in mythology, son of Cresphontes, king of Messenia, also called Cresphontes (see *TGF* 497) and Telephontes (*Hyg. Fab.* 137. 3). Fleeing, as a child, when his father was killed by Polyphontes, he returned with false news of his own murder and, after narrowly escaping death from his mother Merope, killed Polyphontes, thus becoming king.

H. J. R.

AEQUI, primitive Italic tribe inhabiting the valleys of the Timentia, Tolenus, and upper Anio (q.v.); their dialect probably resembled Oscan (q.v.). Expanding from the highlands towards Latium, by 500 B.C. they held the mountains behind Tibur and Praeneste (qq.v.), and for seventy years, despite their small numbers (*Livy* 6. 12), they proved even tougher enemies to the Hernici, Latins, and Romans (qq.v.) than their Volscian allies. They established themselves on the Alban Hills and were not expelled until 431 (see *ALGIDUS*). Thereafter, however, Aequi are only casually mentioned until 304, when they apparently occupied their original central Italian area, Rome now almost exterminated them; she established Latin colonies at Carsoli and Alba Fucens (qq.v.), gave the surviving Aequi *civitas sine suffragio* and rapidly romanized them (*Livy* 9. 45; 10. 1. 9). The Aequian nation thus disappeared, although a *municipium Aequiculorum sive Aequiculorum* is still recorded after 90 B.C. (Pliny, *HN* 3. 106); its name survives in the district Ciciliano north of the Fucine Lake. Their name (*aequi*) gave rise to the tale that the Aequi invented the *ius fetiale* (*Livy* 1. 32).

G. Devoto, *Gli antichi Italici* (1951), 127 ff.

E. T. S.

AERARII, a class of Roman citizens who had incurred the censors' reproof and condemnation for some moral or other misbehaviour. They were condemned to pay *tributum* at a higher rate than other citizens (*aerarii* is obviously connected with *aes*). Such an individual, *aerarius factus*, might receive additional punishment, e.g. be *tribu motus* (after 304 B.C. this involved relegation to one of the four urban tribes), but it has been clearly demonstrated by Fraccaro that *aerarium facere* is not identical with *tribu movere*.

The origin of the custom is obscure. Mommsen's theory, though now discredited, has enjoyed wide acceptance. He argued that an *aerarius* originally had no landed property and therefore was not registered in any Servian tribe; he was exempted from voting and military service, but had to pay a poll-tax in proportion to his means. Fraccaro, however, has clearly demonstrated that an *aerarius* should not be opposed to a *tribulus* and that all citizens were members of tribes from the beginning.

Mommsen, *Röm. Staatsr.* II², 302 ff. A. H. J. Greenidge, *Infamia* (1894), applied *aerarii* to the centuries instead of the tribes. P. Fraccaro, *Athenaeum* 1933, 150 ff. (= *Opuscula* II. 149 ff.). Cf. Taylor, *Voting Districts*, 10 f.

H. H. S.

AERARIUM, derived from *aer*, denotes 'treasury'. The main *aerarium* of Rome was the *aerarium Saturni*, so called from the temple below the Capitol, in which it was placed. Here were kept state documents, both financial and non-financial (including *leges* and *senatus consulta* which were not valid until lodged there), and the state treasure, originally mainly of bronze, *aes* (hence the name), but including also ingots of gold and silver and other valuables. The *tabularum* (q.v.) was built near it in 78 B.C.

The *aerarium* was controlled by the quaestors under the general supervision of the Senate, with a subordinate staff of *scribae*, *viatores*, etc. The *tribuni aerarii* (q.v.), men of a property-class a little below the knights, were probably concerned with making payments from the tribes into the treasury. The *aerarium sanctius* was a special reserve, fed by the 5 per cent tax on emancipations. 'Treasure was withdrawn from it in 209 B.C. and on other occasions. Caesar in 49 B.C. insisted on seizing the reserve for his own uses.

Caesar placed two aediles in charge of the *aerarium*, Augustus two *praefecti* (28 B.C.) and then two praetors (23). Claudius (A.D. 44) placed it again under the quaestors, Nero, finally, in A.D. 56 under two *praefecti*. These officials are last attested in the mid fourth century. In the earlier Empire at least the *aerarium* remained the official repository for state documents and cash; payments from it could be ordered by the Senate and, in practice, by the Emperor. *Bona caduca*, *bona damnatorum*, and other revenues were increasingly diverted to the *fiscus* (q.v.). The details of this process, especially as regards the provincial *tributum* (q.v.), remain obscure.

The *aerarium militare* was founded by Augustus in A.D. 6 to provide for the pensioning of discharged soldiers. Augustus provided for it a capital sum of 170,000,000 sesterces from his own funds and an income from the *centesima rerum venalium* and the *vicesima hereditatum* (see VECTIGAL). It was administered by three ex-praetors (*praefecti aerarii militaris*), at first chosen by lot, later by the Emperor.

O. Hirschfeld, *Die kaiserlichen Verwaltungsbeamten* (1905), 13 f.; A. H. M. Jones, *JRS* 1950, 22 ff.; E. Millar, *JRS* 1964, 33 ff.

AES, bronze, i.e. copper, as generally used with alloy of tin, etc.

Aes, by itself, can denote (1) a document recorded in bronze, e.g. the ground-plan of a colony, (2) 'stipendium', 'military pay', and from that 'military service', (3) the bronze list of recipients of free corn (*aere incisi*). *Aes*, with explanatory adjectives, has a wide range of uses: thus *aes alienum* (or *circumforaneum*) = 'debt', *aes multaticum* = 'money raised by fines', *aes equestre* = the grant to the knight to buy his horses, *aes hordearium* = the allowance for the keep of the horses. *Aes et libra* represented the old method of purchase, by touching the scales with a piece of bronze.

All these uses depend on the fact that bronze was the first metal employed by the Romans to measure values (see COINAGE, ROMAN). Most important is the reckoning with cardinal numbers and the genitive *aeris*, representing originally pounds of bronze, but, subsequently, perhaps, smaller amounts, as the *aes* fell from the full pound to two ounces, one ounce, a half, and even a quarter. The characteristic meaning, however, seems to be the original, 'pounds', so that, even in later days, when the silver *sestertius* was the unit of reckoning, it was equated to the old pound of bronze. When Gaius gives the limit fixed by the *Lex Voconia* as 100,000 *aeris*, he does not mean anything different from the 100,000 *sestertii* recorded by Dio Cassius.

AESCHINES (1) (c. 397-c. 322 B.C.). Athenian orator whose exchanges with Demosthenes (q.v. 2) in the courts in 343 and 330 provide a large part of the evidence for the relations of Athens and Macedon in the 340s and the 330s. His origins were sufficiently obscure to allow Demosthenes' invention full play. He probably did not receive the usual formal training in rhetoric, but after hoplite service of some distinction in the 360s and early 350s, and a period as an actor, he embarked on a public career as a supporter first briefly of Aristophon (q.v.) and then of Eubulus (q.v. 1), during whose supervision of the city's finances Aeschines' brother, Aphobetus, was a Theoric Commissioner (see THEORIKA). In 347/6 both Aeschines and Demosthenes were members of the *boule* (q.v.) and their disagreements led to sixteen years of enmity. Early in 346 (though many have dated the affair to 348/7) when alarming news reached Athens of the extension of Macedonian influence to Arcadia, Eubulus supported by Aeschines took the lead in urging Athens to protest to Arcadia and to seek to organize a Common Peace, which would provide for common action against aggressors and so make it unnecessary for any state to seek Macedonian help. Aeschines was sent on an embassy to Megalopolis (q.v.) where he sought to dissuade the assembly of the Arcadians from dealings with Philip. Whether through the indifference of the Greek states or through the new threat to Greece caused by the refusal of the Phocian tyrant, Phalaecus, to permit access to Thermopylae (q.v.), the key-point for the defence of Greece, the initiative of Eubulus and Aeschines proved abortive. An embassy of ten, including Aeschines and Demosthenes, was hastily sent to negotiate peace terms with Philip. Their return to the city was closely followed by a Macedonian embassy, and on the 18th and 19th Elaphebolion, when the peace was debated and voted, Aeschines played a notable if ineffectual part. Demosthenes, realizing that peace was essential and that the only form of peace which Philip would accept was a plain alliance with Athens and her allies of the Second Athenian League (q.v.), made himself responsible for getting the decree of Philocrates (q.v.) passed: Aeschines strove without success for a Common Peace open to all the Greeks. The ten ambassadors then set off again to secure Philip's oath to the treaty which he did not render until his forces were in position to attack Phocis. When the ambassadors returned with this alarming news, it was decided in the *boule* to recommend an expedition to save Phocis, but by 16th Skirophorion, when the people met, it was known that Philip had occupied Thermopylae; Demosthenes' proposal was not even read out and he was himself shouted down. Aeschines then made a speech, which Demosthenes chose to regard as proof that Aeschines had been won over by Macedonian bribery. The truth was probably far different; since Phocis could not be saved, Aeschines sought to reconcile the Athenians to the fact by reporting vague suggestions of Macedonian proposals for central Greece which were very much what Athens was seeking. From that day Demosthenes was implacably opposed to Aeschines as well as determined to destroy the Peace, while Aeschines was gradually won over to support it and seek its extension into a Common Peace. In 346/5 Demosthenes with the support of Timarchus began a prosecution of Aeschines for his part in the peace negotiations; Aeschines replied by charging Timarchus with breach of the law forbidding those whose misconduct was notorious from addressing the assembly; the *Against Timarchus* was successful and Demosthenes was forced to recognize that the time was not ripe to attack Aeschines. By mid 343 the mood of Athens had clearly begun to change; early in the year Philocrates had been successfully prosecuted by Hyperides (q.v.) and in the *de Falsa Legatione* Demosthenes attacked Aeschines, the advocate of merely

amending a discredited peace, as if he had been the orator really responsible in 346 for Athens' accepting the Peace. Aeschines replied in a speech of the same title and, supported by Eubulus and Phocion (q.v.), was narrowly acquitted. Aeschines continued to have some influence in the assembly, and in 340/39 was sent as one of Athens' representatives to the Amphictyonic Council (see AMPHICTYONIES), on which occasion he appears to have displayed a serious lack of judgement in relation to the affairs of central Greece: at a time when the war against Philip had recommenced and there was a clear need to avoid exacerbating the divisions of Greece, Aeschines replied to Locrian charges against Athens with such a vigorous attack on the conduct of the Amphissians that hostilities began and Philip was the more easily able to intervene.

Aeschines was a member of the embassy sent to negotiate with Philip after Chaeronea, but from then on he withdrew from politics only to re-emerge on two occasions when circumstances seemed favourable for an attack on Demosthenes. The first was in early 336 when Ctesiphon proposed that Demosthenes should be crowned in the theatre at the Dionysia (q.v.) for the excellence of his services to the city: earlier Demosthenes had been similarly honoured without protest but, at a time when Demosthenes' gloomy predictions after Chaeronea seemed mocked by the opening of the Macedonian invasion of Persia, Aeschines indicted the decree under the *Graphē Paranomon* (q.v.). However, the murder of Philip made the future too uncertain for Aeschines to be confident of success, and he decided not to proceed with the indictment for the moment. In 330 after the defeat of Persia at Gaugamela and the failure of Agis' revolt, which Demosthenes had chosen not to support, Athens was in almost complete isolation with no prospect of liberation from Macedon, and Aeschines thought the moment suitable for him to proceed with his prosecution of Ctesiphon. In the *Against Ctesiphon*, after adducing minor, if perhaps valid, legalistic considerations concerning the details of the original decree, he reviewed the career of Demosthenes, somewhat selectively, and sought to show that Demosthenes was unworthy of the crown. In the *de Corona* Demosthenes replied with all the devastating effect that his great rhetorical gifts could command, and Aeschines failed to secure the necessary fifth of the jury's votes to save him from a fine and the limitation of the right to prosecute. He chose to retire from Athens to Rhodes, where he taught rhetoric.

The supremacy of Demosthenes as an orator has to a large extent beguiled posterity into the opinion that he alone fully appreciated the menace of Macedon and correctly diagnosed the causes of Philip's success, and Aeschines has been represented as an opportunist with little judgement and less principle. In fact, there was no obvious way of saving Athens and Greece, and it is probable that Aeschines no less than Demosthenes sought to maintain his city's power and independence.

SPEECHES. The only genuine speeches of Aeschines known to the critics of the Roman period were the three that we have: a fourth, concerning Delos, was rejected by Caecilius (q.v.4). Aeschines was a man of dignified presence and fine voice, who deprecated the use of extravagant gestures by an orator, preferring a statuesque pose. Proud of his education, he displays it by frequent quotation of poetry. In the use of historical argument he cannot compare with Demosthenes, but in a battle of wits he more than holds his own. His vocabulary is simple but effective, though occasional obscurities may be found in his sentences. Ancient critics ranked him lower than he deserves; the fact is that he was not aiming at literary perfection; his object was to produce a powerful effect on his audiences, and he was justified by the result.

For general bibliography, see ATTIC ORATORS and DEMOSTHENES (2).

Text. Blass (Teubner, 1908). Text and translation Adams (Loeb); Martin and Budé (Bude) Index: S. Preuss (1896). For complete Scholia see 1865 Teubner edition of Aeschines (ed. F. Schultze) G. L. C.

AESCHINES (2) SOCRATICUS (4th c. B.C.), of the Athenian deme Sphettus, one of Socrates' most devoted adherents, was present at his master's condemnation and death. He founded no school of philosophy, but is said to have had Xenocrates as a pupil. He also wrote speeches for the lawcourts, and taught oratory. He fell into great poverty, but found a refuge at the court of Syracuse; whether in the time of Dionysius I or in that of Dionysius II (i.e. after 368) is not known; he returned to Athens after the expulsion of Dionysius II in 356. He is best known as the author of Socratic dialogues which were highly esteemed for their style and their faithfulness to Socrates' character and way of speaking. Those which were pretty certainly genuine are *Μιλτιάδης*, *Καλλίας*, *Ἀξίλοχος*, *Ἀσπασία*, *Ἀλκιβιάδης*, *Τηλαύγης*, *Ῥίνων*; seven others passed under his name, but were judged by antiquity not to have the genuine Socratic character.

Ed. H. Dittmar (1912). More fragments of the *Ἀλκιβιάδης* in *POxy.* xiii. 88-94. W. D. R.

AESCHYLUS. (See also TRAGEDY.)

I. LIEFF (525/4-456 B.C.)

Aeschylus, son of Euphorion of Eleusis, a member of a Eupatrid family, was born 525/4 B.C. (*Marm. Par.*) and witnessed the end of tyranny at Athens in his youth, and the growth of democracy throughout his life; he fought at Marathon (*Marm. Par.*), where his brother Cynegeirus met a noble death, and probably at Salamis (schol. Aesch. *Pers.* 429; Pausanias (114. 5) adds Artemisium, and the *Ile* Plataea, but these reports are much less certain). On the strength of Ar. *Ran.* 885-7 many have believed that he was initiated into the Mysteries. It is not clear what inference should be drawn from Aristotle's statement (*Eth. Nic.* 3. 1) that when accused of revealing the Mysteries, he replied that he did not know that what he said was something which might not be uttered. (Clement of Alexandria (*Strom.* 2. 461) says that he obtained acquittal by proving that he was not initiated; there is no agreement as to the plays in which the supposed revelation was made.) But his temperament was profoundly religious and intensely patriotic, and the effect upon it of the great events of his youth and manhood was seen in his assertion of the supremacy of justice and his conception of Divine Government.

His first appearance in tragedy seems to have been very early in the fifth century (*Suda*, s.v. 'Pratinas'); his first victory was in 484 (*Marm. Par.*). Of his extant plays, the *Persae* was produced in 472, the *Septem contra Thebas* in 467, and the *Oresteia* (*Agamemnon*, *Choephoroe*, and *Eumenides* with the lost satyric *Proteus*) in 458. The *Supplices*, in view of certain archaic features, used commonly to be regarded as the earliest extant play, but in 1952 a fragmentary Hypothesis was published (*POxy.* 2256, 3) from which it appears that the Danaid trilogy (see below, II) was produced in competition with Sophocles; there is an indication that 463 may be the date. The *Prometheus* was probably one of the latest plays (see below, II). Aeschylus seems to have paid two visits to Sicily, the first not many years after the foundation by Hieron in 476 of the new city of Aetna, the second after the production of the *Oresteia*. On the first visit he wrote a play (*Aetnae* or *Aetnaeae*) in honour of the new city, and gave a performance of the *Persae* at Hieron's request; the second ended with his death at Gela in 456. No better reason for these visits need be sought than the attraction of such a centre of literary men as Hieron's court; the causes imagined by old writers—his defeat by Sophocles

in 468, or by Simonides in the composition of an epitaph on the heroes of Marathon, or the collapse of the wooden theatre during one of his plays, or the unpopularity caused by the terrifying effect of the *Eumenides*—may be dismissed. The epitaph on his monument at Gela, in which his fighting at Marathon is mentioned, but not his poetry, may (as Paus. 1. 14. 5 asserts) or may not have been composed by himself. After his death the Athenians decreed that anyone desiring to produce the works of Aeschylus should be granted a chorus by the archon (*Vit. Aesch.*). In view of this, not too much must be made of Aristophanes' allusion (*Ran.* 807) to disagreements between Aeschylus and the Athenians. The figures in the *Life* and in the *Suda* giving the number of his plays and victories are uncertain or corrupt. The catalogue of his plays in the Medicean MS. includes 72 titles, but omits 10 plays ascribed to him elsewhere, most of them probably correctly. The statement in the *Life* that his plays gained many victories after his death may well be true.

II. WORKS

The trilogies or tetralogies of plays connected in subject which are recorded with complete or virtual certainty are (1) *Laius*, *Oedipus*, *Septem contra Thebas*, and the satyric *Sphinx*; (2) *Supplices*, *Aegyptii*, *Danaides*, and the satyric *Amymone* (*POxy.* 2256, 3); (3) *Orestea* (see above); (4) *Λυκοῦργεια*, including *Edom*, *Bassarides* or *Bassarai*, *Νεωίτικοι*, and the satyric *Lycurgus*. The *Prometheus Δεσμώτης* was followed by the *Prometheus Αἰώμενος*; it is a matter of debate whether the *Prometheus Ηυφώροπος* (if not satyric and identical with the *Prometheus Ηυκαεύς*) came first or third in the trilogy, if such a trilogy was ever completed. Certain peculiarities in the extant play have led a few scholars to doubt its Aeschylean authorship; others suppose that it was written for production in Sicily and perhaps not given its final form by Aeschylus. No connexion of subject can be traced between the plays produced in 472—*Phineus*, *Persae*, *Glaucus Potnieus*, and the satyric *Prometheus* (? *Ηυκαεύς*), but a number of titles have been grouped together with greater or less likelihood:

Myrmidones, *Nereides*, *Phryges*, or *Ἐκτοπος Αἶτρα*, with choruses attendant upon Achilles, Thetis, and Priam (see B. Snell, *Scenes from Greek Drama*, 1964).

Ὀπλῶν Κρίσις, *Threissae*, *Salaminiae*, the first turning upon the contest for the arms of Achilles, the second on the death of Ajax, the third perhaps on the misfortunes of Teucer.

Argivi, *Eleusini* (which corresponded in subject to Euripides' *Supplices*), perhaps preceded by *Nemea*.

On the Argonautic story: *Argo*, *Lemnians*, *Hypsipyle*, *Cabiri*. (The statement in Ath. 10. 428 f. that Aeschylus brought drunkards on the stage for the first time in the *Cabiri* suggests a satyric play.)

Semele or *Υδροφόροι*, *Xantrai*, *Bacchae*, *Pentheus* (order and some titles uncertain), with the satyric *Διονύσου Τροφοί*. (See E. R. Dodds, *Euripides, Bacchae*² (1960), xxviii ff.; H. Lloyd-Jones, *Aeschylus* (Loeb) ii. 566 ff.)

The satyric *Δικτυουλλοί*, about the infant Perseus (for important papyrus fragments see Lloyd-Jones, op. cit. 531 ff.), may have followed *Polydectes* and perhaps *Phorides*, though this too could be satyric.

Besides these, *Telephus* and *Mysi* probably belong to one group, *Memnon* and *Ψυχαστασία* to another, *Ixion* and *Perrhaebides* to a third. *Ψυχαγωγοί* (cf. Hom. *Od.* xi), *Penelope*, *Ὀσολόγοι*, may possibly have formed a tetralogy with the satyric *Circe* (Wilamowitz *Aeschylus Interpretationen*, 246, n. 1), but *Ὀσολόγοι* and *Ψυχαγωγοί* could themselves have been satyric.

The titles not enumerated above include: *Athamas*,

Aetnae or *Aetnaeae* (see Lloyd-Jones, op. cit. 593 ff.), *Alcmene*, *Atalante*, *Heliades*, *Heraclidae*, *Thalamopoioi*, *Ἰεπέαι*, *Callisto*, *Cares* or *Europa* (for a papyrus fragment see Lloyd-Jones, op. cit. 599 ff.), *Cressae*, *Niobe* (for a papyrus fragment see Lloyd-Jones, op. cit. 556 ff.), *Palamedes*, *Propompoi*, *Toxotides* (on the death of Actaeon), *Philoctetes* (see Dio Chrys. 52), *Orithyia*; and the satyric plays *Θεωροί ἢ Ἰσθμιασταί* (for important papyrus fragments see Lloyd-Jones, op. cit. 541 ff.), *Cercyon*, *Κήρυκες*, *Icon*, *Sisyphus* (possibly two plays, *Σ. δραπέτης* and *Σ. πετροκυλιστής*).

III. CHARACTER OF HIS WORK

It was Aeschylus who in all probability organized the external presentation of the drama on the lines which were to become traditional—the rich costumes, the decorative (though probably not in his time thick-soled) cothurni, the solemn dances. He seems to have had a special liking for gorgeous or impressive spectacular effects, such as were presented in the *Supplices* and *Eumenides* and, indeed, in nearly all his plays, though in a certain fondness for the barbaric (cf. Ar. *Ran.* 928 ff., 962 f.) and in some experiments in mechanical devices which may have bordered on the grotesque his successors did not follow him. The Egyptian and oriental dresses in the *Supplices* and *Persae* are of a piece with his enjoyment of the geography of strange lands. The Persian Wars affected him as they affected Herodotus. His love of long and magnificent descriptions—the battle of Salamis in the *Persae*, the armour of the heroes in the *Septem*, the fall of Troy in the *Agamemnon*—is characteristic, and in a trilogy there was room for it. In other respects, too, he was a master of impressiveness—the long silences of some of his characters, the recurrent refrains (*ἐθύμνα*) of many choral odes, the solemn grandeur of Darius in the *Persae*, the litany of invocation in the *Choephoroe*, are sufficient illustrations—it must also have been he who created the tragic dialogue in the forms which became regular, though in him they sometimes show (especially in stichomythia, as compared e.g. with Sophocles) a certain stiffness, and there is not much adaptation of style to speaker. His characters are 'typical', in the sense that in most there is not much minute drawing of the details of character—Danaus is the cautious father, Pelagius the constitutionally-minded king, Atossa the royal mother, Eteocles the champion and defender of his city, Prometheus the victim and the unyielding opponent of tyranny, and so on—and that most are the embodiment each of some great passion or principle which determines all their words and acts.

The characters share the greatness of the issues which are worked out in their destiny. A man's destiny depends on the interaction of two factors, his own will and the higher powers that rule the world; each of the great personages of Aeschylus possesses a will that can rise to the conflict; but the Clytemnestra of the *Agamemnon* stands above them all as one in whom the imagination of a poet is added to a commanding and relentless personality. Not that Aeschylus is incapable of pathos; but even in Cassandra there is no lack of strength.

His choruses are all very distinctly characterized, though still 'typical'; the foreboding solemnity of the old men of the *Agamemnon*, tremulous, not what they were, but not prepared to endure an Aegisthus, contrasts sharply with the fussy, noisy terror of the women in the *Septem*; and the tender sympathy of the Oceanids with the savage joy of the Erinyes in their horrible office. The chorus in most plays serves as a foil to set off in relief the character of the leading personage. Now and then, as in the Watchman in the *Agamemnon* and the Nurse in the

Choephoroe, there is a thoroughly homely character with little human touches.

In the *Frogs* of Aristophanes Aeschylus is made to defend the 'high-flown' language with which he is taunted on the ground that great thoughts and minds need great words for their expression, in other words, that the grandeur of his style is of a piece with that of his characters and conceptions. The defence was a just one in a poet who had fought at Marathon; the critics belonged to an age when grandeur did not come naturally and was not taken seriously. He is not afraid of compound words of which each embodies a whole picture; of epithets strung together in a mass, passing rapidly from one metaphor to another, rather than giving for comparison (as Sophocles does) a single picture clearly and beautifully drawn; of phrases suggesting the outline of some great imaginative idea, not so minutely analysed as to be expressible in simple language. He lives in a world of metaphor, and his metaphors are drawn from a wide range of sources in human life and the natural world, and if sometimes strange, often give pictures of incomparable beauty. An image or related images are repeated or developed throughout a play or trilogy (e.g. birds of prey in the *Supplices*, the net in the *Oresteia*).

The plot of an Aeschylean play is usually of the kind which Aristotle calls simple or straightforward (*ἀπλῆ*), i.e. uncomplicated by *περίπλοκα* or by recognition scenes of the kind which often compose the crisis in his successors' plays; events move relentlessly forward, as the divine plan works itself out. The connected trilogy was a form specially fitted for the presentation of the divine operation in its slow but certain working, and the forms of surprise, which were very telling and almost necessary when the action was confined to a single play and a single day, were less natural to Aeschylus. For what Aeschylus taught was the lesson of the ultimate justice of Providence, in whose designs the rival claims, whether of men or of supernatural powers, were at last reconciled and contending wills brought to work together within the universal scheme of ordered government and goodwill towards men, which is what the name of Zeus signifies to him, and in which there is room for both Apollo and the Eumenides. That at least was the moral of the *Oresteia* and the Prometheus trilogy, and probably of the Danaid trilogy also, as is strongly suggested in the choruses of the extant play. Everything that is of the nature of *ὑβρις*, unless it has become incurable, must be pruned of its selfishness and its excess—the Danaids' rejection of Aphrodite, the irreconcilability of Prometheus, the savagery of the age of the Titans and the Furies. Zeus himself (this is perhaps the boldest of Aeschylus' imaginations) has had to grow in wisdom and learn the spirit of good government. The current ideas of inherited evil, of the curse upon a house and the fatality of great prosperity, Aeschylus takes over but purifies. The curse will not fall on a man unless he calls it out by his own wrongdoing and so gives the demon in the house his chance, nor will wealth, perilous though it be, harm its possessor if he keeps himself free from *ὑβρις*; the stroke of justice, however long delayed, will never fail to fall where it is deserved, but there may be at last, by the grace of God, an escape from the fatal chain of evil, and the cruellest suffering, like that of Io, may be seen in the end to have been only a step in a great and beneficent design of the Divine Will.

In the history of his own time, no less than in legend as he interpreted or refashioned it, Aeschylus read the same lessons. The antithesis of tyranny and freedom was in the air the poet breathed, and it is not far below the surface in any play. The failure of Persia was unmistakably the downfall of *ὑβρις*, and as for Athens, the salvation of the State lay in freedom and righteousness

and in the reconciliation, through moderation on either side, of rival claims—that is the moral of Athena's speeches in the *Eumenides*, a play which ends in a great festival of reconciliation, recalling at every point the Panathenaea, the festival of united Athens (see W. Headlam, *JHS* 1906).

AESCULAPIUS, latinized form of *Asclepius* (q.v.), was brought to Rome from Epidaurus at the instance of the Sibylline Books, perhaps seconded by Delphi, after a plague in 293 B.C. Legend told how the sacred snake, incarnating the god, itself chose the Insula Tiberina for its abode, and there on 1 January 291 a temple was dedicated to Aesculapius (Livy 10. 47; *epit.* 11; *Ov. Met.* 15. 622–745; *Fasti* 1. 289–94). The cult was patterned directly on that of Epidaurus, but of the minor deities worshipped there only Hygieia was received, to whom, from about 180 B.C. (Livy 40. 37), the name of the Italic goddess Salus was sometimes applied. They received a joint cult from the military in various parts of the Empire, but the relative strength of Aesculapius in Dacia and Spain may be due to Greek or Oriental elements there. The Aesculapius worshipped with Caelestis in and about Carthage is a Semitic god of the Eshmun type.

W. A. Jayne, *The Healing Gods of Ancient Civilizations* (U.S.A. 1925), ch. 7; J. Toutain, *Les Cultes païens dans l'Empire romain* (1907), 330 ff.; E. J. and L. Edelstein, *Asclepius* (1945). F. R. W.

AESEPEUS, god of the Mysian river of that name, Hesiod, *Theog.* 342.

AESERNIA, modern *Isernia*, with interesting ancient remains, strong site near the upper Volturnus River controlling north-west Samnium (q.v.). A Latin colony, established here after the Samnite Wars (263 B.C.), was staunchly pro-Roman until Social War insurgents captured it (90 B.C.) and made it their capital. Strabo (5. 250) exaggerates its unimportance; it became a flourishing *municipium*.

Castagnoli, *Stud. urb.* 79 ff.

E. T. S.

AESERNINUS, grandson of Asinius Pollio (q.v.), an orator under Tiberius.

AESOP, famed as a teller of fables used metaphorically to illustrate a point, lived as a slave on the island of Samos in the early sixth century B.C. Ancient chronological reckoning put his death in the year 564, four years before Croesus became king of Lydia. The name Aesop as that

of a sculptor appears in a contemporary inscription from Sigeum in the Troad. Aesop the fabulist came originally not from Phrygia (this was a later literary invention), but from Thrace, according to the testimony of the local chronicler Eugeon of Samos who wrote before 431 B.C. What Eugeon said about Aesop's origin is implied by Herodotus in speaking of Rhodopis of Thrace as Aesop's fellow slave, and his other statements are not in conflict with Herodotus' account of Aesop (ii. 134-5). As Herodotus lived on the island of Samos before the year 456 B.C., he was well acquainted with its historical traditions. The belief of the Delphians in Herodotus' time, that Aesop was unjustly killed as a scapegoat by their ancestors, was a mistaken belief and is easily explained, with its cause, as a myth. It is very improbable that Aesop ever went to Delphi. Likewise purely mythical is the much later story that he acted as diplomatic courier for King Croesus.

The ancient testimonies about Aesop are assembled in B. E. Perry's *Aesopica* i. 211-41; and the total meaning of them, as outlined above, is analysed in detail by the same author in his *Babrius and Phaedrus* (Loeb, 1905), xxx-xlv. B. E. P.

AESOPUS (1st c. B.C.), tragic actor, 'gravis' (IIor. *Epist.* 2. 1. 82), contemporary of Roscius (Quint. *Inst.* 11. 3. 111 'Roscius citator, Aesopus gravior'). He gave Cicero lessons in elocution (*Auct. ad Her.* (3. 21. 34) suggests that he was greatly his senior) and supported Cicero's recall from exile (*Sest.* 120-3); he returned to the stage for Pompey's ludi, 55 B.C., without much success (*Pom.* 7. 1. 2). See *Div.* 1. 80; *Tusc.* 4. 55; *QFr.* 1. 2. 14. His son, M. Clodius Aesopus, was rich enough to be a wastrel (IIor. *Sat.* 2. 3. 239; Pliny, *HN* 9. 122). G. C. R.

AETHRA, in mythology, daughter of Pittheus, king of Troezen, and mother of Theseus by Aegeus (qq.v.). Since Theseus was often called son of Poseidon, various explanations grew up. Aethra was sent by Athena (hence called Apaturia, the Deceitful) to the island of Hiera or Sphairia, where Poseidon met her (Paus. 2. 33. 1); Poseidon visited her the same night as Aegeus (Apollod. 3. 208, *Hyg. Fab.* 37. 1); it was a tale invented by Pittheus to save her credit (Plut. *Thes.* 6.). Her appearance as waiting-maid to Helen (II. 3. 144) also needed explanation; a story apparently as old as the Cycle (*Iliu Persis*, fr. 3 Allen, cf. Apollod. 3. 128) says the Dioscuri carried her off while Theseus was in Hades, as reprisal for his kidnapping of Helen, and her grandsons, Demophon and Acamas (qq.v.), fetched her home when Troy fell.

Aethra is shown in late archaic and early classical vase-paintings as Helen's old slave rescued by her grandchildren at the sack of Troy. In Polygnotus' Troy at Delphi she was still in attendance on Helen. There are also pictures of a story unknown to surviving literature, where Theseus draws his sword on her. (Brommer, *Vasenlisten*², 163). H. J. R.; C. M. R.

AËTION, painter (and sculptor?), dated by Pliny 352 B.C. In his most famous picture, the 'Marriage of Alexander and Roxane' (not before 327), Roxane was seated in the marriage chamber, Alexander standing before her, Hephaestion leaning on Hymen; Erotes fluttered round the chief actors and played with Alexander's arms in the background. Aëtion was probably not the sculptor mentioned by Theocritus (*Epigr.* 8) and Callimachus (*Epigr.* 24). T. B. L. W.

AËTIUS, eclectic of the first or second century A.D., summarized in his *Συναγωγή περὶ ἀρεσκόντων* the opinions of the Greek philosophers on natural philosophy. These *Placita* are reproduced in the ps.-Plutarchean *Epitome* and in Stobaeus' *Eclogae*, and have been edited by H.

Diels in *Doxographi Graeci* (1879), 273-444. They form one of our most important sources for the opinions of the philosophers whose works have for the most part perished, but must be used with caution: the tradition they represent derives in part from the *περὶ φυσικῶν δοξῶν* of Theophrastus (q.v.), but augmented and modified by Stoic, Epicurean, and later Peripatetic theories. W. D. R.

AETIUS, FLAVIUS, d. A.D. 454, a Roman patrician, was born at Durostorum (near Silistra in Bulgaria), the son of Gaudentius, a high-ranking military officer. He won profound influence with Valentinian III (q.v.) and became the effective ruler of the Western Empire, being consul three times (432, 437, 446), an unprecedented distinction for one who was not a member of the imperial house. Appointed *patricius* in 433 he fought successfully thereafter against barbarians and rebels in Gaul, his main achievement being the destruction of the kingdom of the Burgundians (q.v.) centred on the city of Worms. In 446 the Britons appealed to him in vain for help against the barbarian invaders of their island. In 451 he joined forces with the Visigoths and defeated Attila and the Huns in the battle of the Catalaunian Plains; but he could do little to oppose Attila when the Huns invaded Italy in 452. He was assassinated at the instigation of Petronius Maximus, the later Emperor. E. A. T.

AETNA, (1) Europe's highest active volcano (10,705 ft. in 1950), lying between Tauromenium and Catana in Sicily. The lower slopes are remarkably fertile, principally in vines, olives, lemons, and oranges, and are thickly populated; woods and scrub cover the middle slopes; the upper are desolate. Eruptions were attributed to a giant (Typhon or Enceladus) beneath the mountain. The Sicani traditionally removed westwards because of them. They have been more frequent, apparently, in modern times. The ancients recorded comparatively few, although those of 475, 396, and 122 B.C. were notable.

C. S. du Riche Preller, *Italian Mountain Geology*, iii (1927) A. G. W.

AETNA, (2) the name given to Catana when Hieron I (q.v.) settled a colony there. In 461 these colonists were expelled, and transferred themselves and the name to Sicel *Inessa* (perhaps *Porra*, between Paternò and Centuripe). Ducetius (q.v.) captured Inessa-Aetna in 451, but it subsequently became a Syracusan stronghold. Dionysius I (q.v.) garrisoned it with Campanians whom Timoleon (q.v.) had trouble in dislodging. It suffered at Verres' hands, but its later fortunes are unknown.

Dunbabin, *Western Greeks*, 131 f.; D. Adamesteanu, *Kοκκός* 1962, 169 ff., where, however, a Hieronic foundation at Civita, west of Paternò, rather than at Catana is postulated. See also ΕΡΜΗΔΕΣ. A. G. W.

AETNA, Latin didactic poem of unknown authorship. It attempts to explain the volcanic activity of Mt. Etna.

The poem is ascribed to Virgil in our earliest MSS. and included amongst his *juvenilia* by the *vita Donati*, where, however, doubt is expressed about its authenticity. Few, if any, would now maintain the ascription. There is no consensus of opinion about date, but the style and language seem to point to the Silver Age. Since the poem does not mention Vesuvius, it can hardly be later than the eruption of A.D. 79. There has been much speculation about authorship.

Rejecting mythological explanations, the author argues that the controlling force behind eruptions is wind operating at high pressure in narrow subterranean channels, and that the volcanic fire, produced by friction, gets a nutritive material especially in the lava-stone (*lapis molaris*). The poem is embellished by digressions. One

passage (222-81) extols physical science; another (603-45) narrates the devotion of two brothers who rescued their parents during an eruption. *Aetna* makes hard reading, partly because of its corrupt text, partly because of the difficulty of the subject-matter and the author's style. He strains after brevity, overloads words and phrases, indulges freely in metaphor and personification; in his terse mythological allusions details are taken for granted as well known. Nevertheless, the work does not lack polish or animation. It also shows an earnest enthusiasm for the study of nature. The scientific sources of *Aetna* are uncertain, though Posidonius may well have been one. Similarities of thought and expression in Seneca's *Naturales Quaestiones* seem to indicate, not a debt to Seneca, but a common source. Amongst poets Lucretius is the author's principal model, but he also seems much influenced by Virgil.

AETOLIA, a country bordered on the west by the lower and middle valley of the river Achelous, and on the east by Mt. Oxya, the watershed between Aetolia and Malis. It contains the southern continuation of the Pindus mountain range. While the mountains of north Aetolia run north and south, the main range of southern Aetolia runs east and west, cutting off the rich plains of central Aetolia by Lake Conope and Lake Trichonis from the coast of the Corinthian Gulf. The coast between the mouths of the Achelous and the Euenus contains shallow lagoons but no good harbour. While five coastal towns, especially Pleuron and Calydon, were known to Homer, the religious centre of classical Aetolia lay inland at Thermum near Lake Trichonis, and its history was entirely that of a land power. Seclusion from the sea left Aetolia undeveloped in the fifth century B.C. (Thuc. i. 5), little urbanized, and organized in tribes who formed a common front against Demosthenes' invasion (426 B.C.). It grew in power after 370 B.C. when the Aetolian Confederacy was formed as a close-knit federal State (Tod no. 137). The natural avenues of expansion lay into Acarnania and northwards to Amphiloehia and Malis; but Aetolia did not develop successfully along these lines until the third century B.C. See AETOLIAN CONFEDERACY.

W. J. Woodhouse, *Aetolia* (1897). K. D. Stergiopoulos, *Ἡ ἀρχαία Αἰτωλία* (1939), P.-K. GL 2. 2. 290 ff. N. G. L. H.

AETOLIAN CULTS AND MYTHS. The chief divinities of Aetolia were Artemis, Apollo, and Athena (dedication of statues of all three by Aetolians at Delphi, Paus. 10. 15. 2; of Artemis and Apollo only, id. 10. 16. 6). The cult centre of Artemis Iaphria was Calydon (later Patrae, id. 7. 18. 8-13); Apollo was worshipped at Calydon, but principally at Thermum; Athena is associated with Pleuron (Stat. *Theb.* 2. 726-31; Dion. Calliphon. 57-9 = *GGM* i. 240). At Phistyon the Syrian Aphrodite (see ATARGATIS), to whom the epithet Phistys was here applied, shared a temple, from at least 213/12 B.C., with the Mother of the Gods and the Virgin (Parthenos), possibly local deities in origin; the cult is known only from inscriptions. The cults of Dionysus (cf. Paus. 7. 21. 1-5), Heracles, Zeus Soter, and some others are also known.

Prominent in myth are Aetolus, the reputed founder, and the family of Oeneus, Althaea, Meleager, and Deianira (qq.v.). For the Calydonian boar-hunt see MELEAGER (1).

J. de Keitz, *De Aetolorum et Acarnanorum sacris* (Diss. Halle, 1911); W. J. Woodhouse, *Aetolia* (1897); E. Kirsten, *PW* xx, 1304 ff., s.v. Nachträge (Phistyon); for the inscriptions are *IG*³ ix. 1 and G. Klaffenbach, *Sitz. Berl.* 1936; for the myths, C. Robert in L. Preller, *Griechische Mythologie* ii. 1 (1920), 85 ff. F. R. W.

AETOLIAN CONFEDERACY. The looser tribal organization of the Aetolians gave way during the fourth century B.C. to a federal State (*sympoliteia*, q.v.), which acquired considerable power already in the latter part of that century and retained it even during the first period of the Roman intervention. In the third century the Aetolians exercised a protectorate over Delphi and through their expansion secured a controlling interest in the Amphictionic League (see AMPHICTIONIES). Since they normally were hostile to Macedonia, they naturally became Rome's first active allies within Greece proper. Their later hostility to Rome and co-operation with Antiochus III proved their downfall. Their conquests and outside influence were lost, and in 189 B.C. the Aetolians were forced to accept a treaty as subject allies of Rome. The Confederacy was not dissolved, but all its importance and influence were gone.

At the head of the Confederacy was a general elected annually. The primary assembly had two regular meetings a year and could be summoned for special sessions. In this body the votes seem to have been counted by heads and not, as in some federal States, by cities. The *boule* or *synedrion*, in which the cities were represented in proportion to population, contained some thousand members. Hence, particularly in time of war, much of the leadership fell to a smaller body, the *apokletoi*, itself containing over thirty members, probably a committee of the *boule*. The cities contributed to the federal treasury in proportion to the number of their representatives in the *synedrion*. At no time did the leadership of the Confederacy pass out of the hands of the Aetolians proper. This was in part because the more distant States were not made regular members, but merely bound to the Confederacy by *isopoliteia* (q.v.), which involved civil rights, protection, and potential citizenship but no participation in federal affairs unless residence was established in a community possessing active citizenship. Grants of *asylia* (q.v.) by the Aetolians were not infrequent and were highly prized on account of their extensive use of piracy and the right of reprisal. See also FEDERAL STATES.

G. Klaffenbach, introduction to *IG*³ ix. 1 with references to the widely scattered sources; R. Flacelière, *La Aitolie et Delphes* (1937); J. A. O. Larsen, *TAPA* 1952, 1 II., *Greek Federal States* (1968), 78 ff. J. A. O. L.

AETOLUS (Αἰτωλός), eponym of the Aetolians. His legend seems to be founded on traditions of the relation between certain Greek peoples. Endymion, king of Elis, had three sons, Paeon, Epeios, and Aetolus; he set them to race at Olympia, promising the kingship to the winner. Epeios won, hence the ancient name *Epeioi* for the people of the district; Paeon left the country and gave his name to the district of Paconia; Aetolus had later to leave because of a blood-feud, and went to Aetolia, which is called after him (Paus. 5. 1. 3-8). H. J. R.

AFER, GNAEUS DOMITIUS (*PIW* 14) (d. A.D. 59), of Nemausus (*Nimes*), considered by Quintilian the best orator of his age. After his successful prosecution of Claudia Pulchra, cousin of the elder Agrippina, in A.D. 26, he enjoyed a distinguished, but sinister, reputation. Prosecuted by the Emperor Gaius in 39, he saved himself by flattery and was made consul (Sept. 39). J. P. B.

AFRANIUS (1), LUCIUS (b. c. 150 B.C.), Latin poet; Cicero's report of him (*Brut.* 167) suggests that he was an orator and therefore a Roman citizen. He was the most prolific composer of *comediae togatae*, whose representation of domestic life in Italian towns he made more artistic and involved, with wider and coarser appeal. His plays were performed even in imperial times, the most renowned being *Divortium*, *Epistula*, *Fratriae*, *Privignus*,

Vopiscus. He admired Terence, from whom he confessedly borrowed, and was compared by Horace (*Epist.* 2. 1. 57) with Menander. He portrayed chiefly family life and the 'middle classes'. See TOGATA.

FRAGMENTS. O. Ribbeck, *CRF*³ 164 (Teubner, 1897); F. Leo, *Gesch. d. röm. Lit.* (1913), 375 ff.; W. Beate, *The Roman Stage* (1964), 128 ff. E. H. W.

AFRANIUS (2) (*PIV* 6), LUCIUS, of Picene birth (*ILS* 878), served under Pompey (q.v.) in Spain and against Mithridates. His triumph (*Cic. Pis.* 58) was probably won in a praetorian province between these two legateships, possibly in 69 B.C. As consul in 60 he was overshadowed by his colleague Metellus (q.v. 9) Celer, and was therefore ineffective on Pompey's behalf. His consular province was one of the Gauls, probably Cisalpine, but there is no evidence that he ever proceeded to it. From c. 53 he governed Hispania Citerior as Pompey's legate with three legions, and in 49 commanded at Herda. Pardonned by Caesar, he returned to Pompey, though charged with treachery by other Pompeians. He escaped from Pharsalus, but was captured and executed after Thapsus. G. F. F. C.

AFRICA, ROMAN. The Punic Wars (q.v.) made Rome heir to the Carthaginian Empire. In 146 B.C. she left most of the continental territory in the hands of Masinissa's descendants, but formed a new province in the most fertile part. This covered about 5,000 square miles of the northern part of Tunisia, north-east of a frontier line (the *fossa regia*) from Thabracca to Hadrumetum, it was governed by a praetor from Utica. Except for this community and six others of Phoenician origin who had deserted Carthage, most of the land became *ager publicus*. Though the attempt by Gaius Gracchus to found a *colonia* at Carthage failed, Roman and Italian traders and farmers settled in the province in large numbers, and many of Marius' veterans settled west of the *fossa regia*. After the battle of Thapsus (46 B.C.) Caesar added to the province (Africa Vetus) the Numidian territory of Juba I (Africa Nova); his colonial foundations in Africa included Clupea, Curubis, and Neapolis, and his plan to colonize Carthage was carried through by Octavian. A substantial territory in Numidia centred on Cirta was given to his supporter P. Sittius (q.v.) and a numerous following.

2. Under Augustus, after various changes of boundary, the united province (Africa Proconsularis) extended from Cyrenaica to the river Amsagas. At least eleven colonies were founded in it, and the flow of Italian immigrants was substantial. Thirteen colonies were founded on the coast of Mauretania, which, however, was ruled by the client prince Juba II. The enlarged province was governed by a proconsul from Carthage, who also commanded the Legio III Augusta. Under Gaius the command of the legion was handed over to an imperial *legatus* who became responsible for the government of Numidia and the frontier districts. The provincialization of North Africa was completed by Claudius with the creation of two provinces in Mauretania. Resistance to Roman rule on the fringes of the Sahara and in the mountainous regions such as the Kabylie and Aurès was no more than sporadic and for over three centuries the whole area from Cyrenaica to the Atlantic was protected by only one legion and auxiliaries. The frontier ran from Arae Philaenorum through Cydamus (*Gadhamès*), Nelta, Vescera (*Biskra*), and Auzia (*Aumâle*) to the Atlantic south of Volubilis.

3. Urban life in North Africa was of pre-Roman origin. In spite of the destruction of Carthage, a number of towns of Phoenician or Carthaginian origin survived on the coast, notably Hadrumetum and Lepcis Magna and places between; on the north and west coast, Icosium,

Tingi, and Lixus appear to have been Carthaginian settlements of some size. In a few places Carthaginian language and institutions survived into the second century A.D. Over large areas of the interior, the influence of Carthaginian civilization on the primitive Berber tribes was profound especially in central Tunisia and in the region of Cirta where Numidian dynasties had encouraged it. However, under Roman imperial rule, urbanization was on a vastly increased scale. Over 500 communities ranked as separate *civitates*, of which a large number obtained the rank of *municipium* or *colonia*. The area of densest urbanization was in the vicinity of Carthage and in the Bagradas valley, where some of the towns were only a dozen miles apart; among these may be mentioned Thuburbo Maius, Thibucca, Membressa, Vaga, Bulla Regia, and Simitthus. In the centre of Tunisia, Mactar, Sufes, Suferula, and Ammaedara were notable. The last named, like the Numidian towns of Theveste, Thamugadi, Lambaesis, and Diana Veteranorum, owed its origin to the Third Legion. *Equites Romani* of African origin are known from the mid first century A.D., soon followed by senators. During the second century African senators, the best known being the orator Fronto, formed the largest western provincial group. The influence of Africans reached its height under Septimius Severus, born at Lepcis Magna.

4. The wealth of Africa was proverbial throughout the Roman period, and consisted largely of agricultural products. Of these corn was the chief, and the amount annually exported, largely through Carthage which became the largest city in the west after Rome, amounted to perhaps over half a million tons. The most productive districts for cereals were the Bagradas valley and the region round Cirta and Sitifis. From the second century olive-growing was equally prosperous in the drier regions of central Tunisia, and in Numidia and Mauretania. Productivity depended largely on the maintenance of irrigation systems of various kinds which Roman settlers introduced. Africa was notable for the vast estates in the hands of a few men, the largest landowner being the emperor. These were to some extent balanced by the estates of more modest size owned by members of the municipal upper class. Epigraphy reveals complicated systems of tenure which applied to the *coloni* on the large estates. Other exports from Africa were marble, wood, precious stones, dyes, gold-dust, and wild animals for show in Rome and elsewhere. There is evidence that the inhabitants of Carthage and other ports gained considerable profits from trade. The arts and crafts of Africa lacked the refinement of those of Italy and the northern shores of the Mediterranean; there were, however, vigorous and effective local schools of sculptors and mosaic makers.

5. During the third century, Africa suffered less than most provinces in the west from imperial usurpations, although the consequences of the failure of Gordian I were serious. Christianity spread more rapidly than in any other western province, first in the urbanized areas but making rapid strides in Numidia after c. 200. The works of Tertullian and Cyprian (qq.v.) were of considerable importance in the development of Latin Christianity.

6. In Diocletian's administrative changes, the provinces of Numidia, Byzacena, Tripolitana, Mauretania Sitifensis, and Mauretania Caesariensis formed the diocese of Africa, the proconsular province being strictly outside the diocesan system, and Mauretania Tingitana being part of the diocese of Spain. The military forces of the area were put under a *comes Africae*, and the frontier was divided into districts each under a *praepositus limitis*, a system unique in the Empire. Throughout the fourth century, North Africa was affected by a serious division among the Christians; the Donatists, condemned as

schismatics by imperial legislation from Constantine onwards, were particularly strong in the rural areas of Numidia and Mauretania where social discontents were growing and where the government's authority was declining. Augustine of Hippo was active in stimulating the orthodox against the schismatics. In spite of these troubles, the area remained relatively prosperous in comparison with the devastated provinces of northern Europe, and it was a decisive stage in the collapse of the Roman Empire when it was conquered by the Vandals in 429. The invaders found Africa an easy prey, since the defensive system was suited for no more than policing and the suppression of sporadic tribal revolts.

W. N. W.; B. H. W.

AFRICANUS (1), JULIUS (PW 45), a speaker of the first century A.D. from Gaul, ranked by Quintilian, who knew him, alongside of Domitius Afer and admired for his force (*Inst.* 10. 1. 118; 12. 10. 11). He delivered a loyal address to Nero after Agrippina's death (*Inst.* 8. 5. 15).

AFRICANUS (2), SEXTUS CAECILIUS (PIV 29) (c. A.D. 150), a Roman jurist, almost certainly a pupil of Salvius Julianus (q.v. 2). His *Quaestiones* (9 books) record for the most part the views of his master, edited without any systematic arrangement, and usually introduced by a simple 'ait', 'inquit', or 'respondit', without mention of Julian's name. He is not a fluent writer, indeed his texts are sometimes hardly intelligible. A reconstruction of this work has been edited by O. Lenel, *Sav. Zeitschr.* 1931. His *Epistulae* are known from one citation, and there are indications that he also wrote a commentary on the *Lex Julia de adulteriis*. A. B.; B. N.

AFRICANUS (3), JULIUS (PW 47), a Christian philosopher of Aelia Capitolina, went c. A.D. 220 on an embassy to Elagabalus which secured city rank and the title of Nicopolis for Emmaus, and established a library in the Pantheon for Severus Alexander. His principal works were the *Chronographies* (Χρονολογία) in five books, a synchronization of sacred and profane history from the Creation to A.D. 221, which was the basis of Eusebius' *Chronicle*, and *Oi Kéaroi* in twenty-four books, a miscellany of information, chiefly relating to magic, on various topics ranging from medicine to tactics. He also wrote a letter to Origen, in which he questioned the authenticity of the story of Susannah, and a letter to a certain Aristides, in which he harmonized the two genealogies of Christ.

H. Gelzer, *Sextus Julius Africanus* (1880-98); W. Reichardt, *Die Briefe des Sextus Julius Africanus an Aristides und Origenes* (1909). A. H. M. J.

AFTER-LIFE. In Greek and Roman thought, bound by no generally received dogma or revelation, numerous and often contradictory concepts of the after-life existed side by side. These peoples were concerned primarily with this life, but, certain philosophers apart, a belief in

some sort of survival after death was almost universal. That the dead live on in the tomb was perhaps the most primitive, and most enduring, concept of all. There they still feel human wants, which are satisfied both by the household objects buried or burned with the body and by the continued tendance regularly paid to the dead by their families. Already in Mycenaean times this tendance seems to have given rise, in the case of individuals especially powerful both in life and death, to the continuing cult of heroes by persons not related to them and eventually by the whole community. By a different line of development arose festivals such as the Attic Anthesteria in which the dead in general received attention.

2. The belief that the dead dwell together in a common, subterranean abode, the realm of Hades and Persephone, dark and gloomy like the grave, found its classic expression in Homer (especially *Od.* 11), and so became fixed as the popular eschatology of all antiquity. Thither all mortals must repair, there good and evil alike lead a shadowy and cheerless existence. The dead need nothing and are not to be feared, for Homer's aristocratic society, separated from the ancestral tombs, has forgotten or ignores the older ideas (which, however, reappear in the post-Homeric age), and the elaborate funeral rites are in the main but meaningless survivals.

3. A totally different conception, that of Elysium or the Isles of the Blest, situated at the ends of the earth, appears in Homer (*Od.* 4. 561-9) and Hesiod (*Op.* 167-73) as the place to which certain favoured heroes, exempted from death, are translated by the gods. Elysium appears to be a survival from Minoan religion; when a later age concerned itself with the fate of the blessed dead, Elysium was transferred to the nether regions, in conformity with Greek ideas and the Homeric picture.

4. By the sixth century the Eleusinian Mysteries, an old, probably pre-Greek, agrarian cult, through an association of its chthonic divinities and the powers of the underworld, had begun to promise to its initiates a happier lot in the after-life (*Hymn. Hom. Cer.* 480-2; *Ar. Ran.* 154-8, 455-9); apparently, there as in this world they will continue to celebrate the Mysteries. A more clearly ethical note was struck in some mystic speculation, notably that reflected in Pind. *Ol.* 2 and frs. 131 and 133 Bergk. The divine origin of the soul was affirmed; popular ideas of punishment after death were combined with a doctrine of metempsychosis, and assurances of blessedness were held out to those who, throughout a series of existences in this and the other world, should lead pure lives. These or similar ideas were entertained by Pythagoreans and by Orphics, and had wide currency, but it is doubtful that there was any consistent doctrine of 'Orphism'.

5. Hitherto the hope of immortality had been at most based on intuition or religious teaching. Plato, whose eschatology was profoundly influenced by 'Orphism', however much he scorned its baser manifestations, first supplied this hope with a philosophical foundation, by arguments based on anamnesis, the Theory of Ideas, and ethical considerations. The precise nature of immortality he never defines, but his intense conviction that to the good man nothing but good can come and that the highest part of man's nature is allied to God has had far-reaching consequences.

6. Aristotle denied the power of survival to all but the intellectual part of man's tripartite soul, and even this is deprived of all sensibility. The Hellenistic age was, in general, little inclined to speculate on the after-life. The Academy adopted a thoroughly sceptical attitude. Epicurus and his followers attacked the fear of death with the claim that the soul, like the body, was composed of material atoms, and was dissipated at death. While some Stoics admitted a limited survival, at least of the souls of the wise, until the next cosmic conflagration, Panaetius

denied even this. Posidonius, however, reverted to Platonic language and imagery, and the first century B.C. witnessed a considerable revival of interest in the after-life.

7. The Thracian-Phrygian cults of Dionysus and Sabazius and the hellenized mysteries of Attis and of Isis offered to many adepts the assurance of a blessed after-life—whether the dead was thought of as inhabiting the old underworld, or whether his continued existence was transferred to the celestial spheres. This belief in a celestial immortality, which was in no sense limited to the mystery religions, derived its popularity from the new concept of the universe as a series of concentric spheres around the earth and from philosophic speculations on the soul, whether in the Platonic sense of something from the world of Being which had descended into the world of Becoming, or the Stoic sense of something essentially Fire. Such ideas found easy acceptance in the cult of Mithras (q.v.), who was identified with the Sun, and in that more general solar piety which played so large a part in the later religious life of antiquity.

8. A final word on the specifically Italic concepts of the after-life: the ghosts of the dead join the undifferentiated mass of *Manes* or *Lemures* in the underworld (*Inferi*), and can return only at certain specified times, as at the feast of the Lemuria in May; no idea of divine retribution is discernible. On this primitive core of belief was superimposed the whole range of Hellenic conceptions, at first through Magna Graecia and through Etruria, which had combined Greek ideas with an elaborate demonology, and later by direct contact with Greece and the East. From the latter years of the Republic on, the Graeco-Roman world was essentially one in its development of religious and philosophic ideas of the after-life.

F. R. W.

AGAMEMNON, in mythology, son of Atreus and brother of Menelaus (qq.v.); king of Mycenae, or Argos; probably an historical person, who, if not overlord of some or all of the princes of the Mycenaean era, was the most important of them.

In Homer, Agamemnon is commander-in-chief of the Greek expedition against Troy. In the *Iliad* he is a man of personal valour, but lacking resolution and easily discouraged. His quarrel with Achilles (q.v.) supplies the mainspring of the poem's action. The *Odyssey* (1. 35 ff.; 4. 512 ff.; 11. 405 ff.; 24. 96-97) tells how, on his return, he was carried by the wind outside his own territory to the barony of Aegisthus (q.v.), the lover of his wife Clytemnestra, sister of Helen, who treacherously set upon him and his men at a banquet and killed them all, Clytemnestra also killing Cassandra, daughter of Priam, whom Agamemnon had brought back with him. This story later authors retell with elaborations and small changes, e.g. the scene is generally (as in Aesch. *Ag.*) transferred to Argos.

The *Cypria* is the earliest evidence for the sacrifice of Agamemnon's daughter Iphigenia (q.v.). The cause of it was the offence given to Artemis by Agamemnon, who after a successful hunt boasted that he was a better hunter than she. Calchas, when the fleet was wind-bound at Aulis, explained that the goddess was the cause and the

sacrifice must be made to appease her. Iphigenia was therefore sent for to Aulis on the pretext that she was to be married to Achilles. For sundry variants, see Rose, *Handbook of Greek Mythology*, 119 and notes.

In other stories Agamemnon appears as a subsidiary figure, or is handled with more or less disregard of tradition, as in the fantastic perversion of the legend in Hyginus, *Fab.* 88.

In historical times Agamemnon had cults at several places (see Farnell, *Hero-Cults*, 321 and note 55). The remarkable statement (Lycophron 335 and 1369, with schol.) that he was called Zeus at Sparta has never been satisfactorily explained. In any case, there is no earlier evidence for it, and it seems to be a development of the Hellenistic period.

Agamemnon's children in all accounts include Orestes (q.v.). A quite unsupported story (Hyg. *Fab.* 121) gives him an illegitimate son, Chryses, by his slave-concubine Chryseis (*Il.* 1. 111, etc.). His daughters are Chrysothemis, Laodice, and Iphianassa in *Il.* 9. 145; Iphigenia, whom Homer does not mention, seems to be a later substitution for Iphianassa.

In archaic and early classical vase-painting Agamemnon appears in occasional Trojan scenes, separating Ajax and Odysseus when they quarrel or supervising the voting on their claims. In Polygnotus' Troy he was judging the lesser Ajax; in his Underworld leaning on a sceptre and holding the speaker's staff. His death is very rarely illustrated (see under CLYTEMNESTRA). The Chryses story is now found on a silver cup of the first century B.C. (see Corbett and Strong, *BMQ* 23 (1961) 68 ff.).

Brommer, *Vasenlisten* 3141.

II. J. R.; C. M. R.

AGANIPPE, in mythology, daughter of the river-god Permessus (Paus. 9. 29. 5: spelling 'Ter-'), nymph of the spring of that name on Helicon (Callim. *Jr.* 696 Pf.), sacred to the Muses.

AGAPENOR (Ἀγαπήνωρ), in mythology, leader of the Arcadian contingent against Troy (*Il.* 2. 604), son of Ancaeus (q.v.). On the way back from Troy he arrived at Cyprus (Lycoph. 479 ff.), where he founded Paphos and a temple of Aphrodite and settled (Paus. 8. 5. 2).

AGASIAS, (1) sculptor, son of Dositheus, of Ephesus. He signed the Borghese warrior in the Louvre (Winter, *KB*, 382. 3), a nude figure striding forward to parry an attack from above, showing remarkable knowledge of anatomy and probably deriving from an earlier group. The signature and another from Thessaly are dated late second to early first century B.C.

T. B. L. W.

AGASIAS, (2) sculptor, son of Menophilus, of Ephesus, known from signatures in Delos, of about 100 B.C. One base may belong to the wounded warrior of Delos, part of a group (Winter, *KB*, 350. 1; C. Picard, *BCII* 1932, 491).

T. B. L. W.

AGATHARCHIDES, Greek grammarian and Peripatetic of Cnidos, became guardian to a young Ptolemy (? Soter II) of Egypt, c. 116 B.C.

WORKS: (i) *Tὰ κατὰ τὴν Ἀσίαν*, on the Diadochi; (ii) *Τ.κ.τ. Εὐρώπην*, on history ? 323 B.C. to fall of Macedon; (iii) *Περὶ τῆς Ἑρυθρᾶς θαλάσσης*; [(iv, epitome of (ii)), not Agatharchides? (v) on Troglodytes (q.v.)—same as (ii)?]; (vi) epitome of writers on (?) wonders; (vii) historical *Ἐκλογαὶ ἱστοριῶν*; (viii) Intercourse of Friends.

Extracts survive from (iii), in Photius and Diodorus bk. 3, dealing with elephant-hunts; name of 'Red' Sea,

etc.; Ethiopians; gold-mining on Egypto-Ethiopian frontier; races and animals west of Red Sea; cause of flooding of the Nile in summer; Arabians, especially Sabaeans.

FGH n. 86; *GGM* i. liv-lxxiii, 111-95 (Red Sea); E. H. Bunbury, *Hist. of Anc. Geog.* (1879) ii. 50 ff.; A. Hertzliet, *L'Afrique sahar. et soudanaise* (1927) 215 ff.; Thomson, *Hist. of Anc. Geog.* 136, 175, 182, 210; Hyde, *Greek Mariners*, 196 ff. E. H. W.

AGATHARCHUS (5th c. B.C.), painter, of Samos. He made a 'scene' for Aeschylus (probably for a revival at the time of the Peloponnesian War), and was compelled by Alcibiades (c. 430 B.C.?) to paint his house (with perspective scenes?). He wrote a book on 'scene-painting', which inspired Anaxagoras and Democritus to write on perspective. He was the first painter to use perspective on a large scale (isolated instances occur on vases from the late sixth century B.C.).

Overbeck, 1178-25; Pfluhl, 723; A. Rumpf, *JHS* 1947, 13; *Malerei und Zeichn.* 121; J. White, *Perspective in Ancient Drawing and Painting* (1956); T. B. L. Webster, *Bull. Rylands Libr.* 1962, 243. T. B. L. W.

AGATHIAS (c. A.D. 531-c. 580), surnamed *Scholasticus*, 'the Advocate', was born in Aeolis, studied in Alexandria and Constantinople, and practised law in the latter city. A good scholar with fine taste, he is best known as compiler of a seven-book *Circle* of recently written poetic epigrams, many of which entered the Greek Anthology (q.v.). *Anth. Pal.* 4. 3. is his preface to it, including a table of contents (113-33). The Anthology contains about a hundred of his epigrams: some are little more than conceits in the Alexandrian manner, but the love poems are warm and effective. In metre, vocabulary, and style he is deeply indebted to Nonnus.

Later (*Hist.*, preface, p. 11. 5 Bonn), Agathias embarked upon a *History* designed to bring up to date the narrative of Procopius' *Wars*. Only the years 553-9, however, are covered in the five books completed at the author's death. Agathias' poetic interests can be seen in the elaborate vocabulary and in his expressed determination to make the work pleasing as well as informative (iii. 1). He accordingly treats his material (mainly military—the campaigns of Narses in Italy and the end of the war in Lazica) in a rhetorical and moralizing way. But we owe to his industry and curiosity three important excursions, one on the Franks and the others on the history and customs respectively of Sassanid Persia; the last of these makes use of the Persian Royal Annals. Though himself a Christian, Agathias tried to exclude from his secular history specific references to Christianity. The motivation, however, is recognizably Christian; unlike his model, Procopius, Agathias makes no use of the concept of *τύχη* as a force in history. The work appears to have been well received, and was at once imitated and continued by Menander Protector.

History, ed. R. Keydell (Berlin, 1967); forthcoming monograph by A. Cameron, W. S. Teuffel, *Studien und Charakteristiken* (1886?) 296 ff.; G. Franke, *Quaestiones Agathianae* (Breslau, 1914); A. Mattsson, *Untersuchungen zur Epigrammen-anthologie des A.* (1942); A. and A. Cameron, 'The Cycle of Agathias', *JHS* 1966, 6 ff. (dating publication to A.D. 567/8); A. Cameron, 'Herodotus and Thucydides in A.', *BzZ Zeitsch.* 1964, 31 ff. O. Veli, 'Der Geschichtsschreiber A. von Myrina', *Wissenschaftliche Beilage zum Jahresbericht 1952/53 des Gymnasiums Christian-Ernestinum Bayreuth* 18 ff., 35 ff. G. H. A. M. C.

AGATHINUS, CLAUDIUS (c. A.D. 50-100), pupil of the Stoic L. Annaeus Cornutus and of Athenaeus (q.v. 3) of Attalicia, the founder of the pneumatic school of medicine. He was the teacher of Archigenes (q.v.). Adopting some of the tenets of the empirical and methodical schools of medicine, he founded an eclectic school. Works: *Περὶ ἐλλειβρόν*; *Περὶ ἡμικριταίων* (on semi-tertian fevers); *Περὶ σφυγμῶν* (on the pulse).

W. D. R.

AGATHOCLES, tyrant and king of Syracuse, was born at Thermae Himeraeae in 361 B.C., migrating to Syracuse in Timoleon's time. He distinguished himself in wars against Acragas and the Bruttii (c. 325) but, intriguing against the ruling oligarchy, was exiled, restored, and exiled again. In 317 he overthrew the oligarchs, and ruled as tyrant with the support of the lower classes. Suppressing attempts to raise a coalition against him, he captured most of eastern Sicily. Carthage intervened when he attacked Acragas, and he was blockaded in Syracuse after a heavy defeat at Licata (311).

With the resource of desperation Agathocles slipped out of Syracuse and landed in Africa, where, obtaining help from Ophellias (q.v.) of Cyrene, he nearly succeeded in capturing Carthage; meanwhile, Carthaginian attacks on Syracuse failed. He returned to Sicily to defeat an alliance organized by Acragas, but, going back to Africa, he found that things had deteriorated in his absence; whereupon he abandoned his army and made good his own escape (307). His ruthless campaigns in Sicily ensured that thereafter he ruled the major part of a pacified island. He assumed the title of king in 304. Subsequently he intervened in Italy, and even captured Corcyra (c. 300). Family animosities frustrated his attempts to found a dynasty, and before his death (289) he 'restored Syracusan freedom'. But his own career had made the gesture illusory, and his real legacy was a continuing anarchy. However, history may give him less than his deserts, for the bulk of the information about him is ultimately derived from his bitter enemy Timaeus (q.v. 2).

H. J. W. Tillyard, *Agathocles* (1908); H. Berve, *Die Herrschaft des Agathokles* (*Sb. Akad. München* 1952, Heft 5). A. G. W.

AGATHON, after the three great masters the most distinguished tragic poet, son of Tisamenus of Athens, and remarkable for his personal beauty, won his first victory at the Lenaea in 416 B.C., when he was probably under thirty years of age (*Pl. Symp.* 198 a). The *Symposium* of Plato represents a feast in honour of his victory. In 411 he heard and approved of Antiphon's speech in his own defence (*Arist. Eth. Eud.* 3. 5)—this may mean that his sentiments were not on the democratic side—and in the same year he was caricatured in Aristophanes' *Thesmophoriazousae*, but about 407 he went to the court of Archelaus in Macedonia (*Ar. Ran.* 83-85; *Acl. VH* 13. 4; *Anecd. Ox.* iv. 269; *Pl. Symp.* 172 c), and died there, probably about 401. He came under the influence of the sophists, Gorgias and Prodicus (*Pl. Prt.* 305 d). His speech in Plato's *Symposium* is in the manner of Gorgias, and some quotations from his tragedies are in a pointed, epigrammatic style, probably due to sophistic influence. His originality was shown by the composition of a tragedy (*Antheus*, not *Andros*) in which characters and plot were his own invention, not taken from legend (*Arist. Poet.* 9); traces of the plot may perhaps be found in Alexander Aetolus (Powell, *Coll. Alex.* 122) and Pith. *Amat. Narr.* 14; by making choral odes, for the first time, mere interludes (*ἐμβόλημα*) without reference to the plot (*Poet.* 13), and by the free use in tragedy of the chromatic scale and various florid musical figures (*Plut. Quaest. conv.* 3. 1. 1). Aristophanes (*Thesm.* 101 ff.) parodies his lyrics and hints that they are voluptuous and effeminate. Aristotle also criticizes him (*Poet.* 18) for including too lengthy a story, such as the whole sack of Troy, within a single plot. He was evidently a 'modernizer' in tragedy, who sat loose to tradition but was not without genius, though less than forty lines of his work survive. (*TGF* 763-9).

A. W. P.-C.; D. W. L.

AGDISTIS, a form of the Phrygian mother-goddess; at Pessinus Cybele (q.v.) was called Agdistis (Strabo 469,

567). According to the myth (see ATTIS), she was originally androgynous. Her cult spread to various parts of Anatolia, to Egypt (by 250 B.C.), to Attica (with that of Attis in Piraeus 4th-3rd, cc., *JG* ii². 4671; at Rhamnus, 83/2 B.C.), Lesbos, and Panticapeum. At Lydian Philadelphia her private shrine (1st c. B.C.) enforced a strict moral code (*SIG* 985; O. Weinreich, *Sitzb. Heid.* 1919). There and elsewhere Agdistis appears with *theoi soteres*. See ANATOLIAN DEITIES.

H. Hepding, *Attis* (1903); Hüller v. Gaertringen, *ARW* 1926. Rhamnus inscription. K. A. Rhomaios, *Ελληνικά* 1928, P. Rousset, *Rev. Ét. Anc.* 1930. F. R. W.

AGELADAS (Hageladas), Greek sculptor of Argos, reputed teacher of Myron, Polyclitus (2), and Phidias (qq.v.). It is uncertain whether our records regarding Hageladas refer to two sculptors of that name or to only one. In the latter case his activity must have extended from the last two decades of the sixth century B.C., when he made statues of athletes at Olympia in 520, 516, and 507 B.C. (cf. Pausanias 6. 14. 11; 10. 6; 8. 6), to much later; for he made a Heracles Alexikakos, 'Averter of Evil', of which the name is thought to have been derived from the plague of 430 B.C. His most famous work was a bronze statue for the sanctuary of Zeus at Ithome, commissioned by the Messenians who had settled at Naupactus (Paus. 4. 33. 2). It is perhaps reproduced on coins of Messene, on which appears a striding Zeus, hurling a thunderbolt with one hand, an eagle perched on the other. For the people of Aegium he made another statue of Zeus 'as a boy', also in a striding attitude (Paus. 7. 24. 4), which is apparently reproduced on Roman coins of that city. A contemporary extant bronze statue by an unknown sculptor, the striding 'Poseidon' from the Artemesium, now in Athens, may give us some visualization of these statues.

G. M. A. R.

AGENOR (Ἀγήνωρ), name of several mythological persons, the most important being the king of Tyre (or Sidon), father of Europa (q.v.). On the disappearance of his daughter, he sent out his sons to look for her, bidding them not come back without her; hence Phoenix, Cilix, and Cadmus founded respectively the Phoenician and Cilician peoples and Thebes in Boeotia. His genealogy, which varies somewhat (see Stoll in Roscher's *Lexikon*, s.v. 'Agenor'), links various Eastern peoples together.

H. J. R.

AGENTES IN REBUS (or RERUM). The detested *frumentarii* (see POLICE) were abolished by Diocletian, and he or his successors replaced them with the vaguely named *agentes in rebus*, to take charge of the Postal Service (q.v.), but in fact (at least before long) also to take over the police duties of the *frumentarii* (cf. Aur. Vict. *Caes.* 39. 44). Soon equally detested, they were practically abolished by Julian, but under his successors reached an establishment of several thousand. By the middle of the fourth century A.D. they were attached to the Magister Officiorum (q.v.), forming a *schola* under a *princeps*, with promotion based fairly strictly on seniority. Senior ranks were popularly called *curiosi* (at least implying 'spies'), and this term later became official. One or two of them were regularly sent to inspect each province. Their secret service functions and their abuse of their wide powers are amply attested in the *Codes* and the literary sources. There were many applicants for the career, and they were carefully selected. By the time of the *Theodosian Code* (and probably earlier), freedmen, Jews, and heretics were excluded; relatives of *agentes* had preference for entry, and various dignitaries had limited rights of

nomination. From the highest grade of their service, these trusted agents usually went as *principes* to various *officia*, and sometimes then went on to govern provinces. They ultimately retired to high rank and numerous privileges.

E. J. Holmberg, *Zur Gesch. d. cursus publicus* (1933), 104. Jones, *Later Rom. Emp.* ii. 578 (with notes); W. G. Sumner, *Byz. Zeitschr.* 1964, 78 ff. E. B.

AGER PUBLICUS. I. IN ITALY. During her conquest of Italy Rome penalized such communities as offered a stubborn resistance or subsequently rebelled, by confiscating a part (usually a third) of their territories. The use to which the public land should be put was from an early date—according to tradition as far back as 486 B.C.—disputed between the patricians, who preferred to maintain public ownership, under which they could occupy it as *possessores* (see POSSESSIO), and the plebs, who wished it to be distributed among themselves. As the *ager publicus* grew by conquest, the patricians became more liberal. Some land was distributed to individuals (*virtutis assignatus*); part of the territory taken from Veii was so treated in 393. More was allocated to colonies of Roman citizens; this practice, according to tradition, dates back to the early fifth century. Larger areas were devoted to the Latin colonies which Rome planted after the dissolution of the Latin League in 338. By the Licinio-Sextian laws of 367 (see SVOLO) no citizen might occupy more than 500 *iugera* of this land.

The defections of the allied communities during the Second Punic War were punished by extensive confiscation of land, and the conquest of Cisalpine Gaul added large areas to the *ager publicus*. Most of the Gallic land was devoted to colonies, and the remainder was distributed in small holdings (173 B.C.). Elsewhere few colonies were planted, and vast tracts, especially in the south, remained in the hands of the State. The best of this land was leased by the censors and brought in a good rent to the State, but large tracts were occupied by *possessores*, being mostly used for ranching. The *possessores* were supposed to pay dues, and the size of their tenures was legally limited by the Licinio-Sextian laws. But the laws were regularly evaded or ignored, and the collection of dues was lax.

Under the agrarian law of T. Gracchus (133) a commission was set up to resume for the State public lands occupied in excess of the Licinio-Sextian limit (increased in favour of *possessores* who had sons) and to distribute them in small holdings, which were to remain public and pay a *vectigal*. Much land was distributed under this scheme, which was revived by C. Gracchus in 123-122 B.C., until in 119 the land commission was suppressed. C. Gracchus also planned several colonies, one of which at least was planted. By the agrarian law of 111 the Gracchan small holdings, whose *vectigal* had been abolished in 122, and the holdings of *possessores* within the Gracchan limit were declared private land, the *vectigal* which had been reimposed in 119 on the latter being abolished. After this law the following categories of land remained public: (a) open spaces at Rome; (b) roads; (c) lands leased by the censors, notably the *ager Campanus*; (d) lands assigned to Roman and Latin colonies and *municipia* corporately; (e) holdings allotted on condition of maintaining the roads; (f) lands granted to state creditors (*in trentabulis*); (g) pastures on which contiguous owners had exclusive rights (*compascua*); (h) all other public lands, which were henceforth to be common pasture. Sulla confiscated the territories of many cities which opposed him for the benefit of his veterans. Caesar in 59 distributed the *ager Campanus* to Pompey's veterans. Octavian in 30 expropriated cities which had favoured Antony to find land for his veterans, but compensated the owners in money or provincial land.

II. IN THE PROVINCES. According to Gaius the *dominium* in all provincial soil was vested in the Roman people or the Emperor; but this theory, which probably did not arise till the first century A.D., had no practical import. The public land acquired under the Republic comprised (a) the estates of prominent opponents, in so far as these were not immediately sold or given away; (b) the territories of cities which were, like Carthage and Corinth, destroyed or were merely, as were a few Sicilian and Pamphylian communities, punished by the loss of their lands; (c) the royal lands of kings who were deposed or bequeathed their kingdoms to Rome. These comprised some Macedonian estates, Attalid lands in the Chersonese, and an extensive tract of desert in Cyrenaica; the Bithynian and Pontic royal lands seem to have been assigned by Pompey to the cities of the new province. Most of the provincial public lands (except in Cyrenaica) seem to have alienated by the beginning of the Principate, some, such as Carthage and Corinth, being devoted to Roman colonies. Under the early Principate more royal lands were added to the *ager publicus*, notably the γῆ βασιλική of Egypt and extensive domains in Cappadocia.

The *ager publicus*, both in Italy and the provinces, was swelled by *bona vacantia*, *caduca*, and *damnatorum*. These sources, negligible under the Republic, became important under the Principate owing to the severe *leges caducariae* passed by Augustus and to the frequent condemnations of wealthy men. All public lands gradually passed under the administration of the Emperor, and most seem eventually to have been assimilated to the imperial estates; see DOMAINS (b, Imperial).

AGESILAUS (444–360 B.C.), Spartan king, son of Archidamus and half-brother of Agis II, secured the succession in 399, largely through Lysander's influence, in preference to Leotychidas, whose legitimacy was suspect. Lysander had hoped to use Agesilaus for his own ends, but was quickly brought to heel. As commander in Asia Minor from 396, Agesilaus overran Phrygia and routed Trissaphernes, but failed to check the growing Persian naval menace. Recalled with his army in 394, he took the overland route and reached Coronea almost unopposed. The ensuing battle with the Boeotian and allied forces was a Pyrrhic victory, and Agesilaus had to evacuate the country. He won minor successes, however, in the vicinity of Corinth and in Acarnania (391–388). He condoned, on grounds of expediency, Spartan intervention against Mantinea, Phlius, and Olynthus (in violation of the principle of autonomy enjoined by the peace of Antalcidas), and the still more flagrant occupation of the Cadmea by Phoebidas (382), and attempt on the Piraeus by Sphodrias (378). The alliance between Thebes and Athens resultant on this policy was unshaken by Agesilaus' invasions of Boeotia in 378 and 377. His refusal in 371 to admit Epaminondas' claim to represent all Boeotia at the peace congress in Sparta precipitated the Battle of Leuctra. In the years of Sparta's humiliation he organized the defence of the city (370 and 362) and sought to augment the State revenues by foreign service (in Asia Minor with Ariobarzanes 364, and in Egypt with Nectanebo 361). He died on the homeward voyage from Egypt (360).

Despite his poor physique and a strain of romanticism, Agesilaus was typically Spartan in his qualities and limitations. He was an efficient soldier, but a better tactician than strategist, and he failed to understand the importance of sea-power. The narrowness of his loyalties

dissipated those moral assets by virtue of which alone Sparta could maintain her hegemony.

AG(G)ENIUS URBICUS (perhaps 5th c. A.D.), *gromaticus*, author of a commentary on Frontinus' treatise *De controversiis agrorum*.

AGIADS (Ἀγιάδαι) was the name of the senior royal house at Sparta. The Agiad dynasty enjoyed a ceremonial precedence over the other (Eurypontid) house, but possessed no constitutional privileges. The most notable Agiad kings were Cleomenes I and III, Leonidas, and Pausanias (qq.v.).

AGIS II, son of Archidamus, king of Sparta c. 427–c. 399. Though active in the Archidamian War, he first gained distinction in the campaign of 418 against the Argives and other enemies of Sparta. After failing to utilize what appeared to be a strategic advantage, he subsequently won a decisive victory near Mantinea, which restored Spartan authority in the Peloponnese and Spartan prestige throughout Greece. In 413 he was sent to occupy Decelia as a permanent base for plundering Attica. Remaining here, he attempted to exert an autocratic control over Spartan policy, but his influence waned when the centre of war moved to Asia. He collaborated with Lysander in the blockade of Athens in 405–404, and in his last years reduced Elis by a successful invasion. As a military leader he was at least competent and energetic, but, like so many Spartan kings, he seems to have lacked constructive statesmanship.

Thucydides, bks. 5 and 8.

H. D. W.

AGIS III, king of Sparta (338–331 or 330 B.C.), Eurypontid, organized the resistance of the Greeks against Macedonia during Alexander's Asiatic campaign. Assisted by the Persian admirals' gifts of ships and money, he assembled an army, consisting mostly of 8,000 Greek mercenaries, fugitives after Issus. He was successful in Crete and then in Peloponnesus, where some States revolted from Macedonia (331). Athens, however, stood aloof (in spite of Ps.-Dem. 17), and so did Megalopolis, Messene, and Argos. While besieging Megalopolis, Agis was forced to meet Antipater and an army almost twice as numerous as his own. After a hard struggle, he was beaten and died heroically. His death put an end to all Greek revolts against Alexander.

Arrian, *Diodorus*, Curtius, Berve, II no. 15, Glotz, *Hist. grecque* iv. 194 f.; E. Badian, *Hermes* 1967, 170 ff. V. E.

AGIS IV (c. 262–241 B.C.), son of Eudamidas, ascended the Eurypontid throne at Sparta in 244. Heavy mortgages, large estates in single hands, and a depleted citizen-body were evils he resolved to cure by a return to 'Lycurgus' constitution'. In 243, as ephor, his supporter Lysander introduced relevant bills; in 242 Agis deposed new, reactionary ephors, and Leonidas, the Agiad king whom he had already impeached, fled to Tegea. Supported by his rich uncle Agesilaus, Agis now burnt the mortgages; this done, Agesilaus turned against him and while Agis was absent assisting his Achaean allies against Aetolia, Leonidas returned and seized power. Arriving back, Agis took sanctuary; but the ephors deceived him and executed him.

High-minded but unrealistic, he fell before cleverer men: his death became the legend around which a new generation rallied.

AGONES, public festivals at which competitors contended for a prize, were a distinctive feature of Greek life. Most of these festivals were under the patronage of a god or hero, the smaller gatherings depending on local support, the larger drawing spectators from all parts of the Greek world. The best-known were the Olympic, Pythian, Nemean, and Isthmian games, together with the Dionysia and Panathenaea at Athens (qq.v.). In most cases chariot-races, foot-races, and field events were the chief attractions, but at Athens the first place was given to the dramatic competitions in honour of Dionysus. See also **ATHLETICS**. Introduced at Rome in 186 B.C., contests in the Greek manner became fairly common towards the close of the Republic. A regular quinquennial festival (Neronia) was established by Nero, a quadriennial *Agon Capitolinus* by Domitian in A.D. 86, and an *Agon Solis* by Aurelian in 274.

Friedlander, ii. 117 ff.

F. A. W.

AGONIUM, name given to 9 Jan., 17 March, 21 May, and 11 Dec. in the Roman calendar. It does not denote a festival of any particular god, and the ancients were in doubt of its meaning, witness the etymologies (Festus, 9 Lindsay, and note in his larger ed. *Gloss. Lat.* iv. 104). Possibly it is a latinization of *ἀγών*, in its old sense of 'assembly'. The January entry may have displaced the name of the festival of Janus, presumably **Iannuar*.

H. J. R.

AGORA, the forum or civic centre of a Greek city. For the Agora of Athens see **ATHENS**, **TOPOGRAPHY**.

R. Martin, *Recherches sur l'Agora grecque* (1951), R. E. Wycheley, *How the Greeks built Cities?* (1962).

II A T.

AGORACRITUS, Greek sculptor, a native of Paros and pupil of Phidias. Pliny (*HN* 36. 17) records that he was defeated in a competition for a statue of Aphrodite and then sold his statue to the people of Rhamnus, where it served as a statue of Nemesis. Pausanias (i. 33. 3), who attributes the statue to Phidias, gives a detailed description of it and of its base. It represented the goddess standing, holding an apple-branch in one hand and a phiale in the other, and wearing a crown decorated with deer and images of Victory. Excavations at Rhamnus have brought to light a colossal female head, now in the British Museum, corresponding to Pausanias' description, as well as fragments of the base, now in Athens. A Roman relief at Stockholm preserves versions of four of the figures on the base. Furthermore, a standing figure on a coin of Cyprus represented holding a branch in one hand and a phiale in the other has by some been thought to reproduce the statue; but not enough of the head is preserved to make the interpretation convincing. In addition Agoracritus is known to have made a colossal marble statue of the Mother of the Gods for the Metron of the Athenian Agora, and bronze statues of Athena Itonia with Zeus-Hades in Coronea (Paus. 9. 34; Strab. 9. 411). Of the Mother of the Gods a number of reproductions, large and small, have been identified, and recently the head of the Zeus-Hades has been recognized in heads in the Barberini Collection, Naples, and Sweden (cf. Andren, *Rend. Acc. Pont.* xxxv (1962-3), 27 ff.).

G. M. A. R.

AGORANOMOI (ἀγορανόμοι), overseers of the market, an office known in more than 120 Greek states. In classical times they were usually elected by lot. In Athens there were ten, five for the city and five for the Piraeus. They kept order in the market, saw to the quality and correct weight of goods, and collected market dues. They had power to punish small infractions of their rules with fines, from the proceeds of which they maintained and extended the market buildings; for graver offences they

initiated prosecutions before the dicasteries and presided at the trials. See also **METRONOMOI**, **SITOPHYLAKIS**, **ASTYNOMOI**.

A. W. G.

AGRICOLA. (1), GNAEUS JULIUS (*PW* 49) (A.D. 40-93), of Forum Julii (*Fréjus*), was son of Julius Graecinus, senator, and Julia Procilla; he married Domitia Decidiana, and had one son (died an infant) and one daughter. He was educated at the University of Massilia. He was *tribunus militum* to Suetonius Paulinus in Britain (A.D. 61); quaestor of Asia (64); *tribunus plebis* (66); praetor (68); commissioner for the recovery of temple property (68); recruiting officer for Mucianus (69); legate of the Twentieth Legion, in Britain (71-73); legate of Aquitania (74-77); consul (77); legate of Britain (from 78).

His career, in particular the British governorship, is described in his *Life* by Tacitus, his son-in-law. Previous experience in Britain, shrewd intelligence, provincial sympathies, and an exceptional eye for country, enabled Agricola both to pacify civilians and to advance far into Scotland, where his permanent outposts at Inchtuthil (*JRS* 1919 and 1953-65), Fendoch (*PSAS* lxxiii. 110 ff.), Stracathro (*JRS* 1961, 123), and others yet to be confirmed by excavation, blockaded the Highlands. The advance was by stages. North Wales was reconquered and Anglesey occupied (Tac. *Agr.* 18), the west coast ('silvas ac aestuaria', *Agr.* 20) was annexed. Then came a preliminary advance to the Tay (*Agr.* 22), gripping the Tweed crossing at Newstead and followed by a consolidation between Forth and Clyde (*Agr.* 23) with forts at Camelon and near Mumrills and Calder and perhaps signal-posts at Bar Hill and Croy Hill (G. Macdonald, *Roman Wall in Scotland*, 1934). This marked the limit of conquest permitted by Titus. The fifth campaign was probably in south-west Scotland, where Agricola's forts are now known at Dalswinton, Glenlochar, Gatehouse of Fleet, and Loudon Hill. The sixth (A.D. 83) marked a fresh advance northwards beyond the Forth (made possible by a change of emperor) and the foundation of a fortress for Legio XX at Inchtuthil. Marching camps extend to Auchinchove. In the seventh the Highlands were spurred to defeat at 'mons Graupius' perhaps not far short of Inverness. Agricola was then recalled after a rather specialized experience which did not fit him for service elsewhere. Roman historians were most struck by his circumnavigation of Britain (*Agr.* 38; Dio Cass. 39. 50. 4; 66. 20. 1-2); kindred explorations were also made (Plut. *De def. or.* 18; cf. Dessau, *Hermes* 1911, 156).

His civil policy involved the encouragement of urbanization and the foundation of self-ruling *civitates* in southern Britain to fill the administrative gap caused by moving the garrison north. The Verulamium forum inscription (*JRS* 1956, 146 f.), too, illustrates *Agr.* 21. 1. The great extension of the governor's military duties caused the appointment of a *legatus iuridicus* in A.D. 79 (*ILS* 1011).

Tacitus, *Agricola*, ed. R. M. Ogilvie and I. A. Richmond (1967). I. A. Richmond, *JRS* 1944, 34 ff., Frere, *Britannia*, ch. 6.

I A R; S. S. F.

AGRICOLA (2), SEXTUS CALPURNIUS, waged war as governor of Britain for Marcus and Verus (A.D. 163); was legate in the German phase of the Marcomannic War and governor of *Tres Daciae* in 167-8. British inscriptions attest his military building at Corbridge and Chesterholm in Tynedale and at Ribchester on the Ribble; also a change of garrison at Carvoran on Hadrian's Wall.

I A R.

AGRICULTURAL IMPLEMENTS. Manual implements for cultivating the soil were the essential tools of the farmer throughout classical antiquity. Persistent

tillage of the fallow between crops was necessary to the successful growing of cereals, and hoe cultivation was never superseded by the plough, since flat arable land was scarce both in Greece and Italy. Greek farmers seem to have made few improvements in the design of their implements. In ancient Italy, however, the great variety of soils encountered in the various regions produced much variety in the basic implements of tillage, the spade and the hoe. The foot-rest spade (*bipalium*) afforded greater penetration, and multiple-tined hoes (*bidentes*, *rastra*) helped to produce a fine, even tilth for the seed-bed. The advance of viticulture and the extension of orchards stimulated the development of specialized implements for the skilled operations of lopping and pruning, ranging from the simple bill-hook (*falx putatoria*) to the perfected form of the vine-dresser's knife (*falx vinitoria*), with which six different operations could be performed (Colum. *RR* 4. 25). Similar advances in design may be noticed in harvesting implements; the balanced sickle (*falx messoria*), though not invented by Roman farmers, was much improved by them; many other specialized harvesting implements are mentioned by the Roman authorities, including a 'spitted' sickle (*falx veruculata*), which probably improved the process of gathering in the stalks before cutting. Cato's hand-book (2nd c. B.C.) and that of Palladius (4th c. A.D.) contain valuable inventories of farm equipment, including lists of iron implements. Machines are somewhat rare. The threshing-sledge (*tribulum*) was borrowed from Greece, and an improved version (*plottellum poenicum*) was one of many agricultural legacies from Carthage. Separation of the grain from the chaff was a laborious process in antiquity, whether effected by the back-breaking method of flailing with a hingeless stick, or by treading out with animals; the *tribulum*, a heavy board with flints embedded in the under-side, was an advance on earlier methods, and the process was still further improved by the substitution of sets of small wheels for the flint teeth as in the *plottellum poenicum*. But the most significant mechanical invention was the *vallus*, a reaping machine equipped with a row of sharp knives, which was driven through the standing corn by an animal harnessed at the rear, tearing off the heads of grain and depositing them in a container. This 'heading' machine is reported by Pliny the Elder and by Palladius as used on the open fields of northern Gaul, where it saved both time and manpower. A sculptured slab depicting a *vallus* was discovered in 1958 on a late Gallo-Roman site on the borders of Belgium and Luxemburg. See PLOUGHING.

AGRICULTURE (Greek and Roman). The general technique of Greek and Roman agriculture, its utilization of most of the plants, animals, and tools employed until modern times, may have originated in the mesolithic and neolithic periods; but the beginning of the Iron Age, i.e. the dawn of history in Greece and Italy, witnessed a revolutionary change. The iron plough and other tools, now made of the new metal, increased agricultural production as never before. Most of the villagers of the Minoan and Mycenaean regions seem to have been serfs of their kings, but the periods of Homer, Hesiod, and Solon preferred small and economically independent agricultural units, and revolted successfully against the rule of big landlords. Small estates of knights and pea-

sants were now the rule. A few slaves, together with their owner's family, did all normal work. Free labourers were employed during harvest and for tasks for which the farmers and their servants lacked sufficient time. Small irrigation works and canals were necessary almost everywhere. After a year of cultivation the land was left fallow for one, and in some regions, for two years and was ploughed in autumn, in spring, and in summer (in some regions only twice in the year). The production of grain, flax, and vegetables was supplemented by arboriculture, olive-culture, viticulture, and especially pasturage, which were the most lucrative forms of land work.

2. The period of classical Greece witnessed a rational differentiation of the various agricultural plants and their habits, of the different kinds of soil, and of the appropriate manures, and production was stimulated by the growing demand for grain, meat, and vegetables in towns. The time had come for threefold rotation of crops (*IG* II². 2493 and Xen. *Oec.* 16. 12-15). The agricultural production of Greece must have increased very greatly when the soil could be continuously cultivated without being exhausted. No wonder that the first capitalistic slave estates were established at this time, and that capitalists investing in land began to lease to tenants tracts which were too large for their own or their stewards' management. Small estates remained nevertheless the rule in the Greek motherland, and were common also in Sicily and on the Black Sea coast.

3. From Alexander to Augustus Mediterranean agriculture was improved by many inventions (especially machines for hoisting water). Suitable varieties of plants and animals were transferred from one part of the civilized world to another, and new crops developed in many countries. Attica seems to have produced 1,100,000-1,250,000 bushels of grain in Alexander's time, of which amount only c. 15-20 per cent. appears to have been wheat. The production of the Hellenistic East increased considerably. The two-crop system originating in the ancient East was improved under Greek management, and independent Greek cultivators were settled throughout the Seleucid Empire.

4. The Ptolemies refined and expanded the New Kingdom economy of Egypt in their state-controlled agriculture (cf. Wilbour Papyrus). Oil-seeds, grain, and textile plants had to be cultivated in each region of the Nile country according to an official schedule, which was revised each year. The seed, iron tools, and cattle for agriculture were commonly lent to the cultivators by the government. Almost the whole of the crop had to be paid (for taxes in kind, rent) or sold to the government, which built up a granary system for wheat export throughout the Nile country. Only a few large estates of distinguished owners were partly exempted. Handbooks on agriculture (the sources of Cato, Columella, the *Geoponica*, Mago, Varro) were used in this new cultivation system as well as by the more educated owners of large slave estates, which now superseded many of the peasant homesteads in all Mediterranean countries. Another characteristic of the same period was the surprising extent of division of labour and specialization in Greek and Roman agriculture, and the very common, almost capitalistic calculation of expenses, revenues, and profits.

5. The highest standard of ancient cultivation was reached in the Italian agriculture of the later Republic and early Principate. Big slave estates prevailed here, so long as prisoners of war were cheap. The varieties of plants, the rotation of crops, and the other methods of cultivation, amelioration, irrigation, and manuring, book-keeping, the organization and division of labour, the buildings, tools, old and new machines were carefully selected from the technical as well as from the economic

point of view, and similar methods spread to the provinces.

6. The Roman *villa* (q.v.) of this period underwent decisive changes, as soon as slave economy ceased to pay. Estate management of the highest type had to be confined to comparatively small tracts, so far as cheap labour for it was available. Most of the land had to be given to small tenants who were gradually bound to the soil (see *COLONUS*). This development did not mean the collapse of Graeco-Roman agriculture, but its final preservation. The agricultural methods of small peasants had not been much improved during the prevalence of slave estates; but the landlords of necessity now saw to it that their tenants should learn as much of the results of scientific agriculture as was suitable for their small economic units.

7. The unification of Mediterranean agriculture as seen to-day was completed from the second century A.D. onwards by the popularizing of plants, animals, tools, machines, and methods of estate agriculture under the peasantry of the Empire. Germanic and Oriental prisoners of war, who were settled throughout the Empire, were similarly taught, and transferred such knowledge to their home countries. Agriculture did not break down in Europe after the conquest of the Western Roman Empire. On the contrary, the agriculture of middle and northern Europe was modelled on Late Roman lines; it was a fundamental heritage of the Ancient World. See also AGRICULTURAL IMPLEMENTS, ARBORICULTURE, BEE-KEEPING, HORSES, LATIFUNDIA, OLIVE CULTURE, PASTURAGE, VILLAGES, VITICULTURE.

AGRI DECUMATES, a territory including the Black Forest, the basin of the Neckar, and the Swabian Alb, annexed by the Flavian emperors between A.D. 74 and 98 to shorten communications between the Rhine and Danube armies, and lost to Rome c. A.D. 263. It had been occupied by the Helvetii and later by Suebi, but after the migration led by Maroboduus (c. 6 B.C.) there was no compact tribal community left, and a number of homeless Gauls settled there. The meaning of *Decumates* has been much disputed; it has been widely held that the term was derived from the Celtic word for ten, the *Agri Decumates* thus consisting of ten units, possibly cantons (cf. the *Decempagi* of the Mediomatrici).

The only classical reference to the *Agri Decumates* is Tac. *Germ.* 29. E. Hesselmeier, *Klio* 1931, 1 ff.; E. Norden, *Alt-Germanien* (1934), 137 ff.; Tacitus, *Germania*, ed. Anderson (1938), 148 f. O. B.

AGRIPPA (1) **I, MARCUS JULIUS** (10 B.C.-A.D. 44), erroneously called 'Herod' in Acts of the Apostles xii, a grandson of Herod the Great (q.v.), lived at the imperial court from childhood until the death of his friend Drusus, 'Tiberius' son (A.D. 23). He then returned to Palestine, where he pursued a varied and impecunious career. He came back to Italy in 36 on borrowed money, but was imprisoned by Tiberius for treason. He had, however, cultivated the friendship of Gaius, who released him and appointed him king of the tetrarchy of his uncle Philip (q.v. 4) in 37 and of that of Herod (q.v. 2) Antipas also in 39. On a visit to Rome in 40 he courageously dissuaded Gaius from his proposal to desecrate the Temple. In 41 Claudius, whose accession he had assisted, added the province of Judaea (see *ARCHELAUS* 4) to his kingdom, and his rule was popular despite his generosity to Greek cities, especially Berytus. But his plan to fortify the northern suburb of Jerusalem and his ambitious foreign policy disquieted Claudius, who on his death annexed his whole kingdom.

Josephus, *HJ* 2. 178-83, 206-20; *AJ* 18. 143-301; 19. 236-763; Philo, *Leg.* 261-330. M. P. Charlesworth, *Five Men* (1936), 3 ff.; A. H. M. Jones, *The Herods of Judaea* (1938), 184 ff. E. M. S.

AGRIPPA (2) **II, MARCUS JULIUS** (b. A.D. 27/28), did not succeed his father Agrippa I in 44, but lived at Claudius' court until 49/50, when he was appointed king of Chalcis, (see *ITURAEA*). This principality had been granted to his uncle Herod (a brother of Agrippa I) by Claudius in 41 and ruled by Herod till his death in 48. In 53 Agrippa was transferred to the former tetrarchy of Philip (q.v. 4) together with Abilene and Arcene. Nero added four tetrarchies of Galilee and Peraea. Though his subjects were mostly gentiles, Agrippa maintained close relations with the Jews. He inherited his uncle's right to appoint the High Priests and to control the Temple treasury, and frequently visited Jerusalem (cf. Acts xxv-xxvi). But he supported the Roman government, and after unsuccessful attempts, first by argument and then by military action, to prevent the Jewish revolt in 66, he gave military help to the Roman commanders throughout the war and was present at the siege of Jerusalem; he was rewarded with an accession of territory. Indications in Josephus (q.v.) that he was dead before the publication of the *AJ* (93/94) and *Vita* are confirmed by epigraphic evidence against Photius' statement (*Bibl.* 33) that he died in 100.

Josephus, *HJ* 2. 335-526, etc.; *AJ* 20. 1-223. A. H. M. Jones, *The Herods of Judaea* (1938), 217 ff. E. M. S.

AGRIPPA (3), **MARCUS VIPSIANUS** (*PW* 2), the lifelong friend and supporter of Augustus, was born in 64 or 63 B.C. of obscure but probably well-to-do family. He accompanied Octavius to Rome from Apollonia after the murder of Caesar, helped him to raise a private army, prosecuted Cassius in the court set up by Pedius (q.v. 1) in 43 (possibly as tribune), was prominent in the war against L. Antonius (q.v. 6), and became *praetor urbanus* in 40. Subsequently as governor of Gaul he suppressed a rebellion in Aquitania (q.v.), led a punitive expedition across the Rhine, and, either now or in 20, helped the Ubii to settle on the left bank. As consul (37) he fitted out and trained a new fleet for Octavian's war against Sextus Pompeius, converting the Lacus Avernus near Cumae into a harbour (Portus Julius) for the purpose, and in 36 won the two decisive naval engagements at Mylae and Naulochus, where his improved grapnel was highly effective. In 35 and 34 he took part in the Illyrian War. In 33 his munificent aedileship must have contributed greatly to the popularity of Octavian's cause. In 31 his vigorous naval operations were the primary cause of Antony's defeat; at Actium (q.v.) he commanded the left wing. He next (31-29), with Maecenas, managed affairs in Italy in

Octavian's absence. On Octavian's return he helped him to carry out a drastic *lectio senatus* and a census (29-28); he held a second and third consulship (28 and 27). When Augustus, seriously ill (23), handed him his signet-ring, he probably meant to indicate him as his most suitable successor. He was entrusted with the control of the eastern half of the Empire and probably granted the proconsular *imperium* for the purpose (23). Friction with M. Marcellus (q.v. 7) possibly may have been a secondary cause of this mission, which he performed from headquarters at Mytilene. He was recalled in 21 to represent Augustus in Rome; in 20 he proceeded to Gaul and in 19 to Spain where he put an end to trouble with the Cantabri (q.v.). In 18 he was associated even more closely with Augustus by the conferment of the *tribunicia potestas* for five years, and his *imperium* was apparently renewed for the same period. In 13 his tribunician power was renewed for five more years and his *imperium* made *maius* like that of Augustus. As one of the *quandecimviri sacris faciundis* (q.v.) he assisted in the celebration of the *ludi saeculares* in 17. His second mission to the East (17/16-13) is notable for the establishment of Polernon (q.v. 1) of Pontus in the Bosphorus kingdom, the settlement of veteran colonies at Berytus and Heliopolis (qq.v.), and his friendship with Herod (q.v. 1) and benevolent treatment of the Jews. Early in 12 he went to Pannonia where there was a danger of revolt, but fell ill on his return and died about the end of March. After a public funeral he was buried in the mausoleum of Augustus.

Agrippa's immense wealth, due no doubt to his first marriage (see below) and his position as right-hand man of Augustus, was spent freely in the service of Rome and the Empire. For Rome he built the Pantheon (q.v.), the first great public baths (q.v.), a granary, a new bridge over the Tiber, two new aqueducts (Julia and Virgo), and a network of installations for the distribution of the water, he also cleaned out and repaired the sewers, and managed the entire water-system of the city till his death. His constructions in the provinces included buildings at Nemausus (q.v.) and a system of main roads radiating from Lugdunum (q.v.). By his will Augustus received the greater part of his property, including the whole of the Thracian Chersonese (q.v.); he also made generous bequests to the people of Rome.

He wrote an autobiography (now lost) and a geographical commentary (also lost, but used by Strabo and Pliny) from which a map of the Empire, displayed on the Porticus Vipsania built after his death, was constructed.

Agrippa was married three times: (1) c. 37, to Attica (q.v.), who bore him a daughter Agrippina (q.v. 1); (2) c. 28, to Augustus' niece Marcella, whom he divorced; and (3) in 21, to Julia (q.v. 2), by whom he had three sons, Gaius Caesar (q.v. 7), Lucius Caesar (q.v. 8), and Agrippa (q.v. 4) Postumus, and two daughters, Julia (q.v. 3) and Agrippina (q.v. 2). Through his Agrippina the Emperors Gaius and Nero were descended from him.

Upright, simple in his tastes, and avoiding undue distinction (he refused three triumphs), Agrippa was above all a man of action, equally successful both in war and peace. He was not without ambition, but consistently subordinated it to the interests of Augustus.

Vell. Pat. 2, Joseph. AJ 12 3, 15, 10, 16, 2-6; Suet. Aug., App. HCiv. 5, Cass. Dio 48-55; M. Reinhold, *Marcus Agrippa* (1933); R. Daniel, *M. Vipsanius Agrippa* (1933); Syme, *Rom. Rev.*, see Index; F. W. Shipley, *Agrippa's Building Activities in Rome* (U.S.A. 1933); Schanz-Hosius, II 329 ff.; for his geographical commentary, A. Klotz, *Klio* 1931, 35 ff., 386 ff. (fragments); for the map, J. J. Tierney, *Proc. Royal Irish Acad.* 1963, 151 ff. Iconography: F. Poulsen, *Röm. Privatporträts und Prinzenbildnisse* (1939) 11 ff. G. W. R.; T. J. C.

AGRIPPA (4) POSTUMUS, MARCUS VIPSANIUS (*PIW* Juli 128), third son of Agrippa (3) and Julia, born after his father's death in 12 B.C., was adopted by Augustus along with Tiberius in A.D. 4 and hence renamed Agrippa

Julius Caesar. He was a youth of fine physique but his depraved and contumacious character ultimately exasperated Augustus into disinheriting him. He was first sent to Surrentum, then condemned by the Senate to perpetual exile on Planasia (A.D. 7). Later a conspiracy to rescue him and place him at the head of a military insurrection was uncovered and suppressed. He was put to death immediately after the death of Augustus, it is not clear on whose instructions. The story of a visit by Augustus to Planasia some months earlier (*Tac. Ann.* 1. 5) is generally rejected. After Agrippa's death a slave of his called Clemens impersonated him with a view to overthrowing Tiberius, but was taken and killed (A.D. 16).

M. P. Charlesworth, *AJP* 1923, 145 ff.; E. Hohl, *Hermes* 1935, 350 ff.; M. L. Paladini, *Atene* 1954, 113 ff. G. W. R.; T. J. C.

AGRIPPA (5), Sceptic, later than Aenesidemus (q.v.; date otherwise unknown). Diog. Laert. 9. 88 ff. ascribes to him five *τρόποι της ἐνοχῆς* (grounds of doubt), which are distinguished by Sext. Emp. *Pyr.* 1. 164 from those previously recognized by the Sceptics. W. D. R.

AGRIPPINA. (1) VIPSANIA AGRIPPINA (d. A.D. 20) was daughter of M. Agrippa and granddaughter of Pomponius Atticus. Married to Tiberius, she bore him a son, Drusus, but he was forced by Augustus, against his will, to divorce her and marry Julia in 12 B.C. She then married Asinius Gallus (q.v. 5) and bore him at least five sons.

(2) **AGRIPPINA MAJOR** (c. 14 B.C.-A.D. 33), Vipsania Agrippina, the daughter of M. Agrippa and of Julia (daughter of Augustus). She married Germanicus (probably in A.D. 5), to whom she bore nine children. She was with Germanicus on the Rhine from 14 to 16 and in the East from 18 until his death in the following year. From 19 to 29 she lived in Rome, the rallying point of a party of senators who opposed the growing power of Sejanus. With Tiberius, whom she suspected (without evidence) of causing her husband's death, her relations were consistently bad, and he refused her request in 26 for leave to marry again. She was arrested in 29 on the instruction of Tiberius and banished by the Senate to Pandateria, where she starved to death in 33. She was survived by one son, Gaius (q.v. 1), and three daughters, Agrippina II, Drusilla, and Livilla.

(3) **AGRIPPINA MINOR** (A.D. 15-59), Julia (*PIW* 556) Agrippina, the eldest daughter of Germanicus and Agrippina, was born on 6 Nov. A.D. 15 at Ara Ubiorum. In 28 she was betrothed to Cn. Domitius Ahenobarbus, to whom she bore one son, the later Emperor Nero, in 37. During the principate of her brother Gaius (37-41) her name, like those of her sisters, was coupled with the emperor's in vows and oaths; but when she was discovered at Moguntiacum late in 39 to be involved in the conspiracy of Gaetulicus, she was sent into banishment. She was recalled by her uncle Claudius, who married her in 49. Aided by Pallas, Seneca, and Burrus, she quickly achieved her ambitious purpose. Receiving for herself the title Augusta, she persuaded Claudius to adopt Nero as guardian of his own son Britannicus. She was generally believed to have poisoned Claudius, to make room for Nero (54). In the first years of Nero's rule she was almost co-regent with him but, after Pallas had fallen in 55 and Burrus and Seneca turned against her, she lost her power. In March 59 she was murdered at Baiae by a freedman, Anicetus, acting on Nero's instructions. She wrote an autobiography.

J. P. V. D. Balsdon, *Roman Women* (1962).

J. P. B.

AGROECIUS, fifth-century bishop of Sens, wrote a treatise *De Orthographia* (ed. Keil, *Gramm. Lat.* vii. 113-25) as a supplement to Flavius Caper (q.v.).

Schanz-Hosius, § 1100.

AGYRRHIUS (c. 400 B.C.), Athenian democratic politician, restored the 'Theorika' (q.v.), and introduced payment for attendance at the Assembly, first one, later three obols.

AHALA, GAIUS SERVILIUS (*PW* 32). The legend that Servilius saved his country in 439 B.C. by killing Sp. Maelius (q.v.) with a dagger concealed under his armpit was probably invented as an aetiological myth to explain the *cognomen* (perhaps Etruscan) Ahala or Axilla (i.e. armpit) borne by the *gens Servilia*. When it was discovered that Servilius Ahalae occurred in the Fasti before 439, a different version was elaborated, according to which Servilius acted neither as a private citizen nor illegally, but as Master of Horse in Cincinnatus' second (fictitious) dictatorship. Later embellishments, due to political propaganda of Gracchan and Sullan times, include Servilius' exile from his ungrateful country. The legend of the tyrannicide and saviour of republican liberty decisively influenced a descendant of the *gens Servilia*, M. Brutus (q.v. 5).

Mommmsen, *Röm. Forsch.* ii. 199 ff.; Ogilvie, *Comm. Livy*, 1-5, 550 ff. P. T.

AIAS (*Aías*, Lat. *Ajax*). (1) Son of Telamon, king of Salamis, hence A. Telamoniun (see AEACUS, TELAMON 1), but nowhere called an Aeacid till after Homer. In the *Iliad* he is of enormous (*πλώριος*) size, head and shoulders above the rest (3. 226-9). Only in a brief reference in the Catalogue (2. 557) is he connected with Salamis. He is a blunt, stolid man, slow of speech, of unshakable courage, who repeatedly leads the Greek attack or covers the retreat. His stock epithet is 'bulwark (*ἔρκος*) of the Achaeans' and his characteristic weapon a huge shield, evidently of Mycenaean pattern. Fighting Hector in a duel, he has rather the better of it (7. 206 ff.); he draws a wrestling-match with Odysseus, strength against cunning (23. 708 ff.). He is one of the three ambassadors who treat with Achilles (q.v.; 9. 169 ff.). In the *Odyssey* (11. 543 ff.) mention is made of his death in consequence of the arms of Achilles having been adjudged to Odysseus and not to him after the death of their owner. The story is probably that found in later authors, e.g. Sophocles (*Ajax*), that he went mad with anger and disappointment and finally killed himself; it was told in the *Little Iliad*.

In the *Great Ehoi* (Hesiod, fr. 140 Rzsch) and thence in Pindar (*Isthm.* 6. 34 ff.), Heracles visits Telamon and, standing on his lion-skin, prays that his new-born child shall be as stout (*ἄρρηκτος*) as the skin; Zeus, in answer, sends an eagle, *αἰετός*, and hence the baby is named Aias. From this develops (Lycophron 455 ff.) the tale that Aias was invulnerable save at one point, where the skin had not touched him when (in this version) he was wrapped in it. In the *Aethiopis* Aias carries off the body of Achilles, while Odysseus keeps off the Trojans (cf. *Od.* 5. 309). Of his death various stories were told; he died of an arrow-wound received from Paris, or, being invulnerable, was buried alive by the Trojans throwing clay on him (argument to Soph. *Aj.* ad fin.). When he killed himself his blood flowed on the ground and there sprang up the iris (*ἰάκινθος*), which also commemorates the death of Hyacinthus (q.v.); hence the markings on its petals recall the hero's name (*Aías*—*αἰαί*, see *Ov. Met.* 13. 394 ff.).

Aias had a cult in Salamis, Attica, Megara(?), the Troad, and Ilyzantium (Farnell, *Hero-Cults*, 307 ff. and note 58). That he was not originally a man at all, but a gigantic and supernatural being, is an ingenious theory (see, for instance, P. von der Mühl, *Der grosse Aias*, 1930) but based on slight evidence. Page more convincingly argues that he was a traditional figure of Mycenaean epic as the bearer of a man-covering shield and was drawn

into the story of the *Iliad* later (*History and the Homeric Iliad* (U.S.A. 1959), 232 ff.) Certainly from Homer on he was conceived as a very tall and powerful man, nothing more.

The suicide of Aias is a favourite theme in art in many media from the seventh century. Other subjects popular from the sixth are: combats with Hector and others; dicing with Achilles; lifting Achilles' body; and various phases of his quarrel with Odysseus over Achilles' arms (Brommer, *Vasenlisten*², 275 ff.).

(2) Son of Oileus or Ilcus, the Locrian chieftain. In Homer Aias is leader of the Locrian contingent (*Il.* 2. 527 ff.); he is 'much lesser' than the son of Telamon (hence often called Aias the Lesser), quick-footed, and often paired with his greater namesake as a brave fighter. He is, however, of hateful character and on occasion grossly rude (as 23. 473 ff.). Athena hates him (*ibid.* 774; *Od.* 4. 502); in the latter passage he is drowned by Poseidon for blasphemy against the gods while scrambling ashore after shipwreck. In the *Iliu Persis* Aias drags Cassandra away from the altar of Athena, pulling the Palladium with her. For his historical existence there is some argument in the Locrian custom of sending every year two virgins of their noblest families to serve in the temple of Athena of Ithum, if they were not killed on the way by the townspeople. From early in the third century B.C. the Aiantes, the hero's own clan, undertook to furnish these girls (inscription published by A. Wilhelm, *JÖAI* 1911, 168 f.; for the custom in general, see Lycophron 1141 ff. and schol. there; Polybius 12, fr. 5, 6 Büttner-Wobst; Plutarch, *De sera* 557 d). It ended in the second century B.C. The Locrians had maintained that it was imposed for 1,000 years. It has seemed inconceivable to some scholars that this should be the result of an imaginary person's fabulous crime, and therefore the classical explanation, that it is a penance for Aias' carrying off the Palladium or raping Cassandra at the altar of Athena, during the sack of Troy, has been accepted, but it seems to owe its imposition in historical times to the Delphic oracle. See further Farnell, *op. cit.* 294 ff. and *ibid.* 293-4, for Aias' cult; A. Momigliano, *CQ* 1947, 49; Parke and Wormell, *Delphic Oracle* (1956), i. 326 ff.

The dragging of Cassandra from the image of Athena is frequently found in vase-painting and other arts from the beginning of the sixth century. In Polyphnotus' Troy Aias was shown taking an oath about the assault before the Greek kings (Brommer, *Vasenlisten*², 282 ff.).

That two heroes so unlike should have the same name is curious, and at the same time an argument against supposing that they were originally one.

H. J. R. / H. W. P. / C. M. R.

AION (*Αἰών*), a personification of (1) period of time, (2) passage of time, indefinitely long time (hardly eternity, except in thought deriving from Plato, *Tim.* 37 d). In cult, (1) is represented by the festival at Alexandria (late and Greek but not unconnected with Egyptian ideas, see E. Norden, *Geburt des Kindes*, 28, and refs. there), at which an image was brought out of the inner sanctuary of the *Kopeion*, with the announcement that 'the Maiden (*Κόρη*) has brought forth Aion.' This is apparently the year; cf., for an allegedly Phoenician mythological figure of the same kind, Philon of Byblos ap. Euseb. *Praep. Evang.* 1. 10. 7. (2) perhaps in Eur., *Heracle.* 900, but cf. Wilamowitz-Moellendorf on *HF* 660; cf. Heraclitus, fr. 79 Bywater. In cult he is late, probably Orphic (Kern, *Relig. der Griechen* iii. 243), possibly Mithraic also (Cumont, *Textes et Monuments* (1895-9), i. 76; *Rel. or.* (4. 140 and note 46), cf. the Iranian Zervan Akarana). Mythologically, Aion is an

important character in Nonnus, *Dionysiaca*. His connexion with a number of figures showing a lion-headed deity is problematical, cf. Cumont, *Textes*, loc. cit., Nilsson, *GGR* II. 478 ff. An inscription to him, of the Augustan period, comes from Eleusis, *SIG*, 1125. Cf. A. D. Nock, *Harv. Theol. Rev.* 1934, 53 ff. on the complexity of ideas attaching to this term (and on the publicist or patriotic sense of *Aeternitas* at Rome); C. Bonner, *Hesp.* 1944, 30 ff. H. J. R.

AISYMNETES, according to Aristotle (*Pol.* 1285^a), a supreme ruler appointed by some early city-states in times of internal crisis, for life, for a prescribed period, or till the completion of his task, e.g. Pittacus (q.v.). Aristotle defines the office as an elective tyranny; Dionysius (s. 73) compares the Roman dictator. These *aisywnetai* have affinities with the early lawgivers (Solon, Zaleucus, Demonax, etc.), the difference being one of local nomenclature. Inscriptions (*SIG* 38, 57, 272, 642, 955) show regular magistrates so called in Teos, Miletus, Naxos, Megara, Selinus, and Chalcedon. The word first occurs in *Od.* 8. 258, meaning a referee. P. N. U.

AITHER (*Aithēr*), personification of the purer upper stratum of air (approximately the stratosphere), next to or identical with the sky; son of Erebus and Night (Hesiod, *Theog.* 124–5); of Chaos and Darkness (Hyginus, *Fab. praef.* 1); husband of Day and of Earth (*ibid.* 2–3).

H. J. R.

AIUS LOCUTIVUS, the unknown divine 'sayer and speaker' who, a little before the battle of the Allia (q.v.) in 390 B.C., bade one M. Caedicius tell the magistrates that the Gauls were coming. After their departure a precinct (*templum*) and shrine (*sacellum*) were dedicated near Vesta's shrine, on the Nova Via, where the voice was heard.

Livy 5. 32. 6, 50. 5 Plutarch Ashby, 3 f.

H. J. R.

ALABANDA, a city in northern Caria, on the Mærsyas, a tributary of the Maeander, at the point where the road from Tralles branches westward to Halicarnassus and south to the coast opposite Rhodes. Its site (now *Arabisar*) between two hills is likened by Strabo to a pack-saddle. In the province Asia it was a *civitas libera* and the centre of a *conventus*. It was proverbial for opulence and comfort. W. M. C.

ALAE, a term originally denoting the two contingents of *socii* normally posted on the legion's flanks; after the Social War (90–89 B.C.) it bore the more restricted sense of cavalry. In his Gallic campaigns Caesar employed contingents of tribal cavalry, mainly under native *praefecti equitum*, and many of these, no doubt, were embodied for service in the Civil Wars and placed under veteran officers. When Augustus organized the *auxilia* the cavalry contingents were called *alae* and commanded by equestrian *praefecti equitum* (the title *praefectus alae* becomes common later), and numbered either 1,000 men (*ala miliaria*), or 500 (*ala quingenaria*), subdivided into 24 and 16 *turmae* respectively. They commonly bore titles indicating the country from which they had been recruited (e.g. *Hispanorum*), or the emperor or general who had raised them (*Aelia, Siliana*), or as a mark of honour (*Augusta, pia, fidelis*), or to distinguish their armament (*sagittariorum*). In this way many units acquired a multiplicity of titles (e.g. *ala III Augusta Thracum sagittariorum civium Romanorum*).

By the middle of the first century A.D. the regular *capitei* of equestrian officers comprised the *tres militiae*—*praefectus cohortis*, *tribunus militum*, *praefectus alae*. Thus

the command of an *ala* was held to be more important than the legionary tribunate. The pay of members of *alae*, though lower than that of legionaries, was above that of other auxiliary units: the basic rate was two-thirds that of the legionary.

In the Late Empire *alae* survived as cavalry units of the frontier armies.

See ARMIES (ROMAN), AUXILIA, LIMITanei, MERCENARIES (ROMAN), PRAEFECTUS, SIGNA MILITARIA, STIPENDIUM.

G. L. Cheesman, *The Auxilia of the Roman Army* (1914); K. Kraft, *Alen und Kohorten an Rhein und Donau* (1951); Jones, *Later Rom. Emp.* H. M. D. P., G. R. W.

ALAMANNI (ALEMANNI), a Germanic people, who formed a loose confederation of tribes in western Germany in the third and later centuries A.D. Whether they were immigrants from eastern Germany or a regrouping of peoples who had been known to Tacitus, is obscure. At any rate, they were unknown to Tacitus under this name. They finally broke through the Roman *limes* (c. 260) and thenceforward lived south of the river Main in the old *Agri Decumates* (q.v.). Their raids on the Roman provinces had become serious in the thirties of the third century, and their warriors more than once penetrated into Italy itself. Their defeat by Julian in 357 at the battle of Strasbourg scarcely checked their raids, and they never ceased to devastate eastern Gaul. In the fifth century they settled permanently in Alsace and in northern Switzerland, which they converted into German-speaking countries. They were finally conquered by the Franks. E. A. T.

ALANS, a people of nomadic pastoralists who lived in south-eastern Russia in the first two centuries A.D. After the arrival of the Goths (q.v.) in the Ukraine, they lived between the Volga and the Don. They often tried to cross the Caucasus; but the Roman emperors from Nero and Vespasian onward fortified the western exits of the Caucasus against them; and Arrian, when governor of Cappadocia, beat off an attack by them. In the fourth century they were driven westwards by the Huns, crossed into Gaul in 406, and in 409 reached Spain, where they were absorbed by the Vandals (q.v.).

E. A. T.

ALARIC, Visigothic leader (died A.D. 410), led his people from Lower Moesia in 395, devastated Greece, and in 401 entered Italy. Defeated by Stilicho (q.v.) at Pollentia (*Pollenzo*) in 402 and at Verona in 403, he besieged Rome itself three times in the years 408–10. He finally entered the city on 24 Aug. 410 and plundered it for three days. There is little reason to attribute any extensive damage of the city's buildings to his men. Intending to occupy Africa he marched to Rhegium, but his ships were wrecked in a storm, and the enterprise was abandoned. He died at Consentia (*Cosenza*) in that same year and was buried in the bed of the river Busuntus.

E. A. T.

ALASTOR, in mythology, son of Neleus and brother of Nestor, (q.v.). Like all his brothers save Nestor himself, he was killed by Heracles (*Il.* 11. 693; Apollod. 1. 93). He married Harpalyce, daughter of Clymenus of Argos, but on the way home he was overtaken by Clymenus and robbed of his bride, for whom her father had an incestuous passion. To revenge herself, she killed her younger brother, cooked his flesh, and served it to her father at a feast. She then prayed to be taken from the world of men, and became a *χαλκίς*, here a night-bird of some kind (Parthenius 13, from Euphorion).

ἀλάστωρ, subst. or adj., in the latter case often with *δαίμων* added: an avenging power, as Aesch. *Ag.* 1501,

where it is the supernatural agent who, according to Clytemnestra, exacts vengeance on Atreus' descendants for his crime (see *ATREUS*, *AGAMEMNON*). Hence the criminal himself, presumably as giving occasion for such punishment, e.g. Aesch. *Eum.* 236, where Orestes uses it of himself; hence occasionally a mere vague term of abuse, 'wretch', 'scoundrel', as Dem. 19. 305. II. J. R.

ALBA FUCENS, an ancient town just north of the Fucine Lake (q.v.) in central Italy, first mentioned as a Latin colony planted in *Aequis*, but near the Marsi, 303 B.C. (Livy 10. 1); perhaps the Via Tiburtina was now extended thus far east (see *VIA VALERIA*). Alba usually supported the Roman government, e.g. against Hannibal, the *socii* (90 B.C.), Caesar, and Antony; its recalcitrant attitude in 209 was exceptional (App. *Hann.* 39; Livy 27. 9; 29. 15; *Eptt.* 72; Caes. *BCiv.* 1. 15; Cic. *Phil.* 3. 6). Roman State prisoners were often kept here (Livy 30. 17; 45. 42; *Eptt.* 61). Excavations at *Albe* (reports in *Ant. Class.* 1951, etc.) have revealed its extent and importance. Macro (q.v.) was a prominent native son.

P. L. MacKendrick, *The Mute Stones Speak* (1962), 95 ff. E. T. S.

ALBA LONGA, on the Albanus Mons (q.v.), near modern *Castel Gandolfo*, a very ancient city traditionally founded c. 1152 B.C. by Ascanius (q.v.) (*Aen.* 3. 390 f.). Its necropolis contains tombs of c. 1100. Alba founded some, certainly not all, Latin cities (reject Livy 1. 52, *Aen.* 6. 773; and see A. Alföldi, *Early Rome and the Latins* (U.S.A. 1965), 236 f.). Apparently it once headed a league (of *Prisci Latini*? see Festus, 253 L.), the nature and members of which cannot be exactly determined: lists in Diodorus (7. 5), Dionysius (4. 92; 5. 61), and Pliny (*HN* 3. 69), like surviving lists of Alban kings, are untrustworthy. Alba lost its primacy in Latium perhaps in the seventh century B.C., allegedly through its destruction by Rome: some families are said to have migrated to Rome (Julii, Tullii, etc.: Livy 1. 29 f., Tac. *Ann.* 11. 24), while others joined neighbouring Bovillae and preserved Alban cults and memorials until late times (*Albani Longani Bovillenses*: *ILS* 6188 f.). Alba was never rebuilt, but modern *Albano* preserves its name (from *Albanum* — Domitian's Alban villa, which became a legionary camp under Septimius Severus and subsequently the nucleus of today's town). Alban wine and building stone (peperino) were famous.

M. Pallottino, *Arch. Class.* 1960, 27 ff.; F. Dionisi, *La scoperta topografica di Alba Longa* (1961), P. G. Gietow, *The Iron Age Culture of Latium*, I (Lund, 1960), II, 1 (1964) E. T. S.

ALBANIA (Caucasian), the land (modern *Shirvan*) adjacent to the eastern Caucasus and the western Caspian, separated from Armenia by the river Cyrus (*Kur*). Its Caspian flat-lands were fertile, but the Albanian people remained a rude and warlike folk of herdsmen, hunters, and fishers, who traded by barter. Under a common king they had twelve local chiefs and spoke twenty-six different dialects; their chief worship was an orgiastic cult of the moon-goddess. Albania was explored by Pompey in 65 B.C. and was occasionally attached to the Roman Empire as a client State.

Strabo 11. 491 ff.; Pliny, *HN* 6. 15, 29, 39, Ptol. *Geog.* 5. 12. Cary, *Geographic Background*, 177. E. H. W.

ALBANUS LACUS (modern *Lago Albano*), a crater lake in the Albanus Mons (q.v.) near Rome. Its wooded banks in imperial times were studded with villas, e.g. Domitian's. Lacking natural outlets, its waters reach the Rivas Albanus, and thence the Tiber, via a tunnel through the crater rim built c. 397 B.C. The Romans reputedly excavated this *emissarium* to ensure the fall of Veii which, an oracle prophesied, awaited the overflow-

ing of the lake (Livy 5. 15–19). Actually their motive was to carry off the waters rapidly for irrigation purposes (Cic. *Div.* 2. 69); otherwise seepage through the porous subsoil would waterlog the districts below.

Ogilvie, *Comm. Livy* 1–5, 658 ff.

E. T. S.

ALBANUS MONS, the Alban Hills and more specifically their dominating peak (*Monte Cavo*, 3,115 feet), 13 miles south-east of Rome. Until c. 1150 B.C. the Albanus Mons was an active volcano, discouraging dense population in Latium; the volcano, however, has been inactive in historical times. On the summit stood the Latin federal sanctuary of Jupiter Latiaris where Roman consuls celebrated the *Feriae Latinae* (Dion. Hal. 4. 49; the antiquity of the festival probably is underestimated). Remains exist, not indeed of the temple, but of the Via Triumphalis leading to it; here at least five Roman generals celebrated ovations after being refused regular triumphs in Rome (e.g. Marcellus in 211 B.C.: Livy 26. 21).

For early settlements, see P. G. Gietow, *The Iron Age Culture of Latium* I (Lund, 1960), II (1964). E. T. S.

ALBINOVANUS PĒDO, a poet-friend addressed by Ovid in *Pont.* 4. 10, author of a *Thesaid*, is mentioned by Martial (1 *praef.*; cf. 5. 5. 6) as one of his models in epigram. Under Tiberius he wrote a poem on Germanicus' North Sea expedition from which Seneca (*Suas.* 1. 15; cf. Bachr. *FPR*, p. 351) quotes over twenty hexameters as a typical Latin description of the ocean. Its rather turgid rhetoric does not exhibit the qualities in him which appealed to Martial; but the younger Seneca (*Ep.* 122. 15–16) calls him a 'fabulator elegantissimus' and gives his vividly amusing story about a noisy neighbour who turned night into day.

H. Bardon, *La Littérature latine inconnue*, II (1956), 69 ff. J. W. D.

ALBINUS (1), Platonist philosopher, pupil of Janus. Taught at Smyrna, where Galen heard him lecture in A.D. 151–2. Extant writings are (i) a brief preface to Plato's dialogues (*Πρόλογος* or *Εἰσαγωγή*), concerned with their classification and the order in which they should be studied; (ii) a summary of Plato's doctrines (*Επιστομή* or *Διδασκαλικός*), designed as a handbook for the general public. (By a misreading the latter work is ascribed in the MSS, and earlier editions to an otherwise unknown 'Alcinous'.) Albinus' version of Platonism reveals the eclectic tendencies of his time, especially in its bold incorporation of Aristotelian elements. He attributes Aristotle's categories to Plato; he equates Plato's *Demiurge* with Aristotle's *Unmoved Mover*; he interprets Plato's transcendent 'Forms' as the thoughts of this Aristotelian God. Much of the raw material of Neoplatonism is present in Albinus, but he has no doctrine of the One and shows no tendency to mysticism.

TEXT AND FRENCH TRANSLATION: P. LOUIS (1945) Text also in C. F. Hermann's Teubner edition of Plato (1853), VI. 147 ff.

DISCUSSION: R. E. Witt, *Albinus and the History of Middle Platonism* (1937); J. H. Loenen, *Mnem.* 1956, 296 ff., and 1957, 35 ff. E. R. D.

ALBINUS (2) (4th c. A.D.), writer on metre and music. His works are lost.

Teuffel, § 405, 2 and § 407, 5; Schanz-Hosius, § 865.

ALBION, ancient (Celtic or pre-Celtic) name of Great Britain (but not Ireland), first recorded c. 525 B.C. by a Massiliote seaman (quoted by Avienius, q.v.) who spoke of Ireland, two days' sail from Brittany, 'alongside the island of the Albionnes'. The name 'Albion' was used by the author of *De Mundo* (who said that it and Ireland were bigger than the Mediterranean islands, but smaller

than Ceylon), but it was soon ousted by the Celtic 'Britannia'. A number of Latin geographic names begin Alb- (cf. also 'Alpes'). The Romans, connecting 'Albion' with *albus*, 'white', referred the name to the cliffs of Dover, perhaps rightly—W. J. Watson, *History of Celtic Place-names of Scotland* (1926), 10; the name Albion may be pre-Celtic—S. Casson, *Greece and Britain* (1943), 16; Hyde, *Greek Mariners*, 122.

Avienius (ed. A. Holden, 1965), 90 ff.; Ps.-Arist. *de Mundo* 3; Pliny 4. 102; Ptol. 2. 31 and 7. 5. 11. E. H. W.

ALBUCIUS (1), TITUS (praetor c. 105 B.C.), orator: Lucilius satirized the absurdities of his Graecomania (88–93 Marx) and Cicero called him 'doctus Graecis vel potius plane Graecus' (*Brut.* 131). He was an Epicurean and after his condemnation in 103 B.C. for extortion in Sardinia he spent his exile in philosophical study at Athens (Cic. *Pro Scauro* 40, *Tusc.* 5. 108). C. J. F.

ALBUCIUS (2) **SILUS**, GAIUS, Augustan orator and springer of rhetoric, from Novaria in Cisalpine Gaul. Though over-conscientious and distrustful of himself, he could command a grand simplicity, and Seneca classes him as one of the four outstanding practitioners of his time (*Cont.* 7 pr. 1–9; *Suet. Rhet.* 6).

A. Asserato, *Gaio Albucio Silo* (1967).

C. J. F.

ALBUM, a whitened *tabula*, was used for publishing, in black writing, priestly notices, *fasti*, notices of *comitia* and Senate, *proscriptiones* and edicts (e.g. *album praetoris* with *formulae actionum*), also member rolls (e.g. *album senatorum*, *decurionum*, *iudicum*, *collegii*), and lists of recipients of corn.

A. H. M. D.

ALBUNEA, nymph of the *albulae aquae*, a sulphurous spring and brook rising at Tibur, where it forms the well-known waterfall, and flowing into the Anio. Near the fall was a dream-oracle (*Aen.* 7. 81 ff., needlessly doubted by Heinze and Wissowa, *RK* 211 n. 4). Albunea herself was called a Sibyl (Varro ap. Lactant. *Div. Inst.* 1. 6. 12); Servius on *Aen.* 7. 84 equates her with Leucothea (q.v.) and says the god [*sic*] Melitius is her subordinate.

B. Tilly, *Foght, Latium* (1917), ch. vi (*JRS* 1914, 25 ff.).

H. J. R.

ALCAEUS (1) (b. c. 620 B.C.), lyric poet, of Mytilene in Lesbos (Strabo 617), was still a boy when his brothers, Antimenidas and Cicis, overthrew the tyrant Melanchros (frs. 53, 75, Diog. Laert. 1. 74). Melanchros was succeeded by Myrsilus, who was helped by Deinomenes and Pittacus. Alcaeus' early years seem to have been spent in combating all three. At first he lost and went into exile at Pyrrha (schol. ad fr. 114), where he wrote fr. 42, and possibly fr. 130, in which political conditions are described in seafaring language. A fight followed, and to Alcaeus' delight Myrsilus was killed (fr. 332). He was succeeded by Pittacus, with whom Alcaeus seems at first to have been friendly, since both fought against Athens at Sigeum (Diog. Laert. 1. 74) c. 600 B.C. Here Alcaeus lost his shield and celebrated the fact (fr. 428). On the conclusion of peace Pittacus became all-powerful, and was attacked by Alcaeus, who regarded his election to power as an act of madness (fr. 348), and reviled him for his physical defects (Diog. Laert. 1. 81), his ambitious marriage (fr. 69), his riotous behaviour (fr. 70), and his craftiness (fr. 72). The result of the struggle was that soon after 600 B.C. Alcaeus went to Egypt (Strabo 37) and his brother Antimenidas became a mercenary of the king of Babylon (fr. 48). Alcaeus seems also to have been in Thrace (fr. 45) and to have had negotiations with the Lydians (fr. 69). Before Pittacus resigned his powers in

580 B.C. he forgave Alcaeus (Diog. Laert. 1. 75), who must have returned home. The rest of his life and the date of his death are unknown.

His works survive only in fragments. Edited by Aristophanes and Aristarchus in at least ten books (Heph. p. 74, 12 ff.), they seem to have been arranged according to subject, since *Ἔμνοι* (schol. Heph. p. 169, 28 ff.) and *Στρασιωτικά* (Strabo 617) are mentioned, but the papyrus fragments give no indication of systematic arrangement. The remains indicate that Alcaeus wrote lyrical songs, usually monodies; many dealt with contemporary politics, while others are drinking-songs (frs. 335, 338, 346, 347, 366), sometimes with a meditative tinge (fr. 38), love-songs (fr. 71; cf. Theoc. 29. 30, Hor. *Carm.* 1. 32. 11), hymns to Apollo (fr. 307), Hermes (fr. 308), and the Dioscuri (fr. 34). Sometimes he seems to write variations on themes of folk-song (fr. 10) or describes a festive scene (fr. 115). He writes in vernacular Aeolic, with occasional Homerisms. He uses two- or four-lined stanzas with a wide variety of metres, including the Greater and Lesser Asclepiads, the Sapphic and Alcaic stanzas, and other stanzas of his own invention. He occasionally employs an elaborate allegory (frs. 119, 326), but normally he writes directly and easily, and is at his best in describing simple sights or emotions.

CRITICISM: D. L. Page, *Sappho and Alcaeus* (1955), 147 ff.; C. M. Bowra, *Greek Lyric Poetry*, 130 ff. *PW* Suppl. xi, 8 ff. C. M. B.

ALCAEUS (2) is called by the *Suda* *καμικός τῆς ἀρχαίας κομωδίας* and author of ten plays. His *Πασιφάν* took the fifth (last) prize in 388 B.C. (hyp. 4 *Ar. Plut.*). Fragments of seven other plays survive; the titles suggest that he specialized in mythological burlesques.

FCG 1. 244–9, CAF 1. 756 ff.; FAG 1. 886 ff.

K. J. D.

ALCAEUS (3) of Messene (fl. 200 B.C.) has some fifteen epigrams in the Greek Anthology, including several biting lampoons on Philip V of Macedon. Plutarch (*Plam.* 9) says that one of them was repeated all over Greece, and gives the king's bitter parodic reply. These are the earliest extant epigrams containing political invective. In technique, perhaps also in outlook, Alcaeus owes something to Cercidas (q.v.). His iambs, which must have been pasquinades too, are lost.

C. Edson, *CPhil* 1948, F. W. Walbank, *CQ* 1942, 135 ff., 1943, 1 ff.; T. B. L. Webster, *Hellenistic Poetry and Art* (1964), ch. 10. G. H.

ALCAMENES, Greek sculptor, probably of Athens, active during the whole of the second half of the fifth century B.C. He was called both a pupil and a rival of Phidias (cf. Pliny *IIN* 36. 16; 34. 49 and 72). Like Phidias he worked in bronze, marble, and gold and ivory. A few of his works have been more or less tentatively identified in reproductions of Roman date. For instance, the seated statue that he made for the sanctuary of Dionysus 'near the theatre' (Paus. 1. 20. 3) appears on Roman coins of Athens. The Aphrodite of the Gardens, one of his most famous works (cf. Lucian *Eikones*, 6; Pliny 36. 16), has been recognized by some in the so-called Venus Genetrix type. The group of Progne and Itys in the Acropolis Museum has been thought to be the group dedicated by one Alcamenes (Paus. 1. 24. 3)—possibly but not necessarily identical with the sculptor. The most reliable attribution appears to be that of 'a Hermes of the Gateway', seen by Pausanias at the entrance of the Acropolis (1. 22. 8), and identified in two inscribed herms with a bearded head, one found at Pergamum, the other at Ephesus. The fame of the original is borne out by the large number of extant copies. The statement by Pausanias (5. 10. 8) that Alcamenes made the sculptures of

the western pediment of the temple of Zeus at Olympia does not fit either the chronology or what is known of the style of Alcámenes, and must be due to a mistake.

G. M. A. R.

ALCATHOUS (Ἀλκάθοος or Ἀλκάθους), in mythology, son of Pelops and Hippodameia, to whom games (Alkathōia) were celebrated at Megara (Pind. *Isthm.* 8. 74 and schol. on *Nem.* 5. 46). A folk-tale (theme H 105, Stith 'Thompson) told by Dieuchidas (ap. schol. Ap. Rhod. 1. 517) says that, exiled for his share in the murder of his brother Chrysippus, he killed a lion (it haunted Cithaeron and had killed Eubippus, son of Megareus, king of Megara, who promised his daughter's hand and the succession to his throne to whoever slew it, Paus. 1. 41. 3), cut out its tongue, and when false claimants arose, used it to refute them. He then built temples to Apollo Agraios and Artemis Agrotera (Paus. *ibid.*) and walls for Megara; Apollo helped him, and rested his lyre on a stone still shown in Pausanias' time (*ibid.* 42. 2). His eldest son, Ischepolis, was killed on the Calydonian boar-hunt; one Callipolis brought the news and scattered the wood of a fire on which Alcathous was offering, whereat Alcathous killed him with one of the billets (*ibid.* 42. 6). H. J. R.

ALCESTIS (Ἀλκήστις), in mythology, a daughter of Pelias (see NILEUS) and wife of Admetus, king of Phærae in Thessaly. For some unknown reason she is the central figure of two interesting legends, one of them also moving and famous in literature, but both characteristic folk-tales.

(1) When she was of age to marry, many suitors appeared, but her father would not give her to any who could not fulfil the prescribed condition of driving wild beasts yoked to a chariot. This is of course one of the unnumberable stories told of extraordinary tasks set wooers (see Stith 'Thompson, H 335). In this instance it does not appear that Pelias apprehended any danger from Alcestis' marriage, or had any special reason for wanting her at home. Admetus succeeded, thanks to a divine helper. Apollo had shortly before killed the Cyclopes who made Zeus' thunderbolts (cf. Eur. *Alc.* 1 ff.), because he did not dare to avenge the death of his son Asclepius (q.v.) on Zeus himself. In consequence, he was banished from heaven for a time (the common punishment of a human manslayer is here transferred to a god), and made to serve a mortal. Admetus was renowned for his piety and treated his divine serf with every consideration, employing him (appropriately, as he is a god of flocks and herds, see APOLLO) to tend his horses or cattle. The god, in return for this, in a later form of the legend, because Admetus was very handsome and he loved him (first in Callimachus, *Ap.* 40, who does not mention the affair of the banishment) brought him a lion and a boar yoked, and he drove away with Alcestis behind this team (Hyg. *Fab.* 50. 51; source unknown; 50. 1 suggests another form of the story in which the successful candidate was allowed to choose whichever of Pelias' daughters he preferred).

(2) At the bridal feast, Admetus forgot to sacrifice to Artemis (Apollod. 1. 105, who also had the story of the lion and boar), and on opening the bridal chamber found it full of serpents. The snake being a chthonian creature for the most part, this was an omen of imminent death, and Apollo again intervened. By the primitive method of making the Fates drunk (Aesch. *Eum.* 728) he persuaded them to promise that if anyone else would die on Admetus' behalf, he might continue to live. But no one would consent to die, except Alcestis (Eur., *ibid.* 15 ff. who makes no mention of the portent). That there was any baseness in accepting her offer did not occur to tellers of the legend before Euripides; elsewhere Admetus is a wholly admirable character. So far, the tale

embodies popular moralizing (a man's truest friend is a good wife). On the appointed day Alcestis accordingly died, i.e. the rest of her life was transferred to her husband. Now comes a form of the widespread tale (Tammuz and Ishtar is the oldest known form) of the recovery from the lower world of one of a pair of lovers. It is sometimes said (Apollod., *ibid.* 106) that Persephone sent Alcestis back of her own accord; but the usual version is that Heracles (q.v.) intervened. Admetus, with his usual piety, had received him hospitably in the midst of his own grief; by way of return for this, he set out to harrow Hell, and fought successfully either with Hades himself (Apollod., *ibid.*) or with the death-spirit, Thanatos, compelling him to give Alcestis back.

A. Lesky 'Alkestis der Mythos und das Drama', *Sitzb. Wien* 1925, gives the best analysis of the legend and disposes of the view that Admetus is a faded god.

Apart from these tales, neither of the pair has much mythology. Admetus took part in the Argonautic adventure, (Hyg. *Fab.* 14. 2 and elsewhere); the Calydonian boar-hunt (Apollod. 1. 67); the funeral games over Pelias (Chest of Cypselus in Paus. 5. 17. 9, where he drives a chariot); perhaps in imitation of this, Statius (*Theb.* 6. 310 ff.) makes him compete at the first Nemean games with a team of mares.

One account (Phanodemus ap. schol. Ar. *Vesp.* 1239) says that in his old age Admetus was driven into exile with Alcestis and their youngest child, Hippasus (the elder son, Eumelus took part in the Trojan War, *Il.* 2. 713-14; he was a skilled charioteer, 23. 288-9, but had ill success in the chariot-race at Patroclus' funeral, *ibid.* 391 ff.; the daughter, Perimele, married Argos, son of Phrixus, Ant. Liberialis 23). The cause of the exile is not known, and the story is plainly connected with the famous skolion (quoted by Ar. *Vesp.* 1238), *Δομήτωι λόγον ὠταίρε μάθων τοὺς ἀγαθοὺς φίλει*, said by Phanodemus to refer to Admetus' kind reception by Theseus.

There appears to have been no hero-cult of either Alcestis or her husband. I. J. R.

ALCHEMY in antiquity was a mixture of chemical, metallurgical, and glass technology, Greek philosophy, mystical and syncretist religion, and astrology; it was probably not yet concerned with the 'philosopher's stone' nor with the transmutation of base metals into gold.

2. The word 'alchemy' is from the medieval Latin, from the Arabic *al-kīmīyā*, the etymology of this is dubious, but it is commonly derived from the Greek *khēmia*, which according to Plutarch meant Egypt (the black land), from the Egyptian *km*, 'black'. This is supported by the fact that Plutarch also quotes 'the pupil of the eye' as another meaning, which is true of *km*; and by the Coptic *chēmē*, 'the black (land)', Egypt, found in the place-name Pelchēm (which incidentally gave the Arabic form Bilkūm). But there was early confusion of *khēmia* with *chumeia* (iota-cism), from the root of *cheō*, 'pour', *chumeia* being a metallurgical term; and, according to Professor Dubs, alchemy is derived via the Arabic from the article *al* plus the Chinese *kuan-iōk*, 'sperm of gold', presumably through Jundishapur in the eighth century. In any case ancient alchemy was never called by such a name, being always referred to in such terms as 'the Work', 'the Sacred Art'.

3. The art is distinguished from the pure science of chemistry by its mixture of mystical and magical elements with the technology. Its origins are obscure. Later distinctions, such as that between esoteric and exoteric alchemy, or theoretical and practical, are irrelevant, probably being developed between the eighth and twelfth centuries. Alchemy in late antiquity was born of the confluence of three streams. (1) *technology*, especially the arts of glass colouring and metal-working, including making

other metals *look like* gold and silver—the appearance was always very important; (2) *theory*, derived from Greek philosophy: two doctrines are of special importance, that of the four elements (which held the field from Empedocles to Boyle), and that of the essential unity of all things, the *hypokeimenon* common to philosophers from the Presocratics to Aristotle and on, and found also in Orphics and Neoplatonists and others; which leads us to (3) *occult religion*, and the mystical and syncretist magical beliefs of late Hellenistic times. The symbol of unity, the *ouroboros*, the snake eating its own tail, is common in astrological, Gnostic, and apocryphal texts, as well as in alchemical ones. All of this points fairly definitely to Egypt, to Alexandria, in about the second and third centuries A.D.

4. The inventor was said to be Hermes, and alchemy is linked with other occult sciences in the Hermetic literature of the first three centuries A.D., along with neo-Pythagorean, Neoplatonic, and Gnostic ideas. That Alexandria was the early home of the art is most probable, as the cradle of the Hermetic literature, of syncretist philosophical movements, and of the ancient and well-developed arts of the glassworker, potter, goldsmith, and jeweller: one man often combined several of these skills, and Jewish craftsmen in these arts are mentioned in the Talmud. The earliest works are attributed to Democritus or his teacher Ostanes; there might be some technological connexion with Democritus (cf. Sen. *Ep.* 90. 32–33). At this stage the art was concerned with colour-changes in glass and metals, especially with the production of alloys and the imitation of gold and silver. Then philosophy was added to technology: the fundamental identity of the stuff of the universe, the permutations of the four elements and four qualities (Aristotle); the lack of any clear distinction between animate and inanimate, which led to the idea of 'generation' not being limited to the animate, and the ideas of the 'pneuma' or spirit that could flow through the universe, and its exhalations (Aristotle and the Stoics); all this widened the scope of the art and opened the way to (1) the idea of the transmutation of metals and (2) the introduction of religion and astrology, which shared the belief in the essential unity of all things. It may have led to the search for a substance to achieve transmutation, and possibly also long life—much later known as the Philosopher's Stone, or Elixir (probably derived by the Arabs (*al-iksir*) from *xeron*, a desiccative powder for wounds, though Dubs derives this also from the Chinese). Zosimus (fl. c. A.D. 300), much of whose work remains, seems to stand at the beginning of this tradition. There must certainly be some doubt whether alchemy in classical times, or at least before the fourth century A.D., ever went much beyond the arts of the jeweller and goldsmith, concerned with the alloying and imitation of gold and silver.

5. Their apparatus included furnaces, with bellows to produce high temperatures; crucibles and retorts of various kinds, of metal, pottery, and glass; the *bain-Marie*, still used by chemists, going back to Mary the Jewess, who is said also to have invented the *tribikos*, or three-spout still, and the *kerotakis*, originally a warmed plate on which wax-mixed colours were kept soft for working, and then used to subject molten metals to the action of vapours to produce alterations in colour. The substances used by these early alchemist-craftsmen can very often be identified, but when alchemy and astrology were fused the language became more esoteric and difficult to interpret. The arts had always been kept secret in the families involved, and the admixture of magic, etc., made things worse. The 'seven stars in the sky' were identified with seven metals—sun/gold, moon/silver, Mars/iron, Mercury/mercury, Venus/copper, Jupiter/tin, Saturn/lead—and the symbols used for either or both.

6. There are no early Latin alchemical texts, but the general connexion between technology, secret arts, and astrology is evident in the fourth-century Firmicus Maternus' work: those born when Mercury is in the fourth station in the evening will be 'goldsmiths or goldminers or masters of certain hidden arts'; those born when the moon is between Mars and Venus will practise the 'arts of pigments or scents or stones and gems, and will often be colourers of metals'; and those 'who are polishers of precious stones or who give gems another colour with various pigments' are linked with 'those who know the secrets of the heavens or who easily learn secret and hidden matters'.

ALCIBIADES (c. 450–404 B.C.), son of Cleinias, Athenian general and statesman. Brought up in the household of his guardian Pericles, he became the pupil and intimate friend of Socrates. His brilliance enabled him in 420 to assume the leadership of the extreme democrats, and his ambitious imperialism drew Athens into a coalition with Argos and other enemies of Sparta. This policy, half-heartedly supported by the Athenians, was largely discredited by the Spartan victory at Mantinea (418). Though Alcibiades temporarily allied with Nicias to avoid ostracism, the two were normally adversaries and rivals, and when the former sponsored the plan for a Sicilian expedition, Nicias vainly opposed it. Both were appointed, together with Lamachus, to command this armament, and received extraordinary powers (415). Alcibiades was suspected of complicity in the mutilation of the Hermæ (*see* ANDOCIDIS 1) and other profanations at Athens, and soon after the fleet reached Sicily he was recalled for trial. He escaped, however, to Sparta, where he gave the valuable advice that a Spartan general should be sent to Syracuse and that a permanent Spartan post should be established at Decelea in Attica.

In 412 his mission to Ionia caused many allies of Athens to revolt, but he soon lost the confidence of the Spartans and fled to Tissaphernes. He tried to secure reinstatement at Athens by winning the support of Persia and fomenting an oligarchic revolution, but he could not induce Tissaphernes to desert the Spartan cause. The Athenian fleet at Samos appointed him general, and for several years he skilfully directed operations in Ionia and the Hellespont, winning a brilliant victory at Cyzicus in 410. He returned to Athens in 407 and was entrusted with an extraordinary command. Against the powerful combination of Lysander and Cyrus he could effect little, and when in his absence a subordinate suffered defeat at Notium (406), his enemies roused popular suspicion against him. He then withdrew, and in 404 through the influence of the 'Thirty Tyrants' (q.v.) and Lysander he was murdered in Phrygia, where he sought refuge with Pharnabazus.

Alcibiades showed himself to be outstandingly able as a politician and later as a military leader, but his personal ambition and the excesses of his private life aroused the distrust of the Athenians, who twice discarded him when his leadership might have been a decisive factor (cf. Thuc. 6. 15. 3–4).

ALCIDAMAS (4th c. B.C.), rhetorician and sophist, was born at Elaea in Aeolis. He studied under Gorgias,

and led the orthodox branch of Gorgias' followers, while Isocrates led the innovators; the difference consisted largely in the fact that Alcidamas emphasized the importance of a power of improvisation resting on wide knowledge, while Isocrates excelled in dialectical skill and delicacy of language. The works extant under Alcidamas' name are (1) *Περὶ τοὺς γραπτοὺς λόγους γραφόντων ἢ περὶ σοφιστῶν*, (2) (spurious) *Ὀδυσσεὺς κατὰ Παλαμῆδους προδοσίας*. The most important of the lost works seems to have been that called *Μουσείον*.

Ed. F. Blass, in his *Antipho* (1892), 183.

W. D. R.

ALCINOUS (*Ἀλκίνοος*), in mythology, son of Nausithous (*Od.* 7. 63), husband of Arête, his first cousin (*ibid.* 66), king of the Phaeacians in Scheria (*ibid.* 6. 12, etc.), father of Nausicaa (q.v.). He received Odysseus hospitably (see *ODYSSEUS*) and sent him to Ithaca on one of the magic ships of his people (13. 70 ff.), though he had had warning of the danger of such services to all and sundry (13. 172 ff.). In the Argonautic legend (see especially *Ap. Rhod.* 4. 993 ff.) the Argonauts visit Scheria (here called Drepane) on their return from Colchis; the Colchians pursue them there and demand Medea. Alcinoüs decides that if she is virgin she must return, but if not, her husband Jason shall keep her. Warned by Arête, she and Jason consummate their marriage.

H. J. R.

ALCIPHON (2nd or 3rd c. A.D.), sophist, whose *Letters*, supposedly written by Athenians of the fourth century B.C. (fishermen, farmers, 'parasites', hetairai) attest his wide reading in classical literature and preserve many reminiscences of New Comedy, especially of Menander. See *LETTERS* (GREEK), § 6.

ALCM(A)EON (1) (*Ἀλκμῆων, Ἀλκμαίων*), in mythology, son of Amphiaraus (q.v.). After the expedition of the Seven against Thebes, he avenged his father's death on his mother Eriphyle, and afterwards became, by command of Apollo, leader of the expedition of the Epigoni, which took Thebes (or the expedition came first, the matricide afterwards, contrast Asclepiades in *schol. Od.* 11. 326, with *Apollod.* 3. 86). Being maddened by the Erinyes, he left Argos and went to Psophis where King Phegeus purified him and gave him his daughter Arsinoë or Alpheisiboea, but as a famine visited the land he left, settled in the new land formed by the Achelous at its mouth, and therefore not seen by the sun when Eriphyle was killed, and married Achelous' daughter Callirhoë (see *ACARNAN*). But the brothers of Arsinoë waylaid and killed him, afterwards shutting their sister up in a chest and selling her as a slave. In Euripides' *Alcmeon at Corinth* he met Manto on his wanderings and had two children by her.

Alcmeon is present at the departure of Amphiaraus in sixth-century vase-paintings, especially a Corinthian krater in Berlin, and on the Chest of Cypselus (on connexion see H. G. G. Payne, *Necrocorinthia* (1931), 139 ff. with refs.).

ALCMAEON (2) of Croton, probably a younger contemporary of Pythagoras (q.v. 1) and certainly in contact with his school, wrote a book on natural science known to Aristotle and Theophrastus. As a physician he explained bodily conditions and human affairs in general by the interplay of opposites (health being an *isonomy* of hot and cold, wet and dry, etc., disease a *monarchy*).

He operated on the eye and discovered 'passages' linking the sense-organs to the brain, which he recognized as the seat of thought and feeling (followed by Plato but not Aristotle); and he compared the immortality of the soul to the endless circling of the heavenly bodies.

Testimonia and fragments in Diels, *Vorsokr.* 11. 210-16; Cardini, *Pitagorici* 1 (1958). J. Wachtler, *De Alcmaeone Crotoniata* (1896); Guthrie, *Hist. Gr. Phil.* 1. G. E. L. O.

ALCMAEONIDAE, a noble Athenian family prominent in politics. Its first noteworthy member was Megacles, who as archon, perhaps in 632/1 B.C., involved it in a hereditary taint (see *CYLON*) first used against it about a generation later, when party-strife between the descendants of Cylon's followers and the Alcmaeonidae was resolved by the condemnation and expulsion of the whole family, living and dead. Within a few years, however, they were back: Alcmaeon, son of Megacles, commanded the Athenian contingent in the first Sacred War (q.v.); the rich reward he received for his services to the Lydian king's emissaries at Delphi helped him to a victory in the chariot-race at Olympia (502?). His son Megacles (q.v.) increased the family's renown still further when he married the daughter of Cleisthenes (q.v. 2), the tyrant of Sicyon. His own daughter's marriage to Pisistratus (q.v.), however, broke down, in part because of the family curse. When Pisistratus was finally established as tyrant (c. 546), the Alcmaeonidae had to go into exile again; but must have been allowed to return before the archonship of Megacles' son Cleisthenes (q.v. 1) in 525/4. Later, perhaps after the murder of Hipparchus (q.v. 1) in 514, Hippias (q.v. 1) expelled them yet again. After several unsuccessful attempts to return, and the loss of the fortified post which they set up at Leipsydrium inside Attica, they eventually succeeded, with the co-operation of Delphi, in effecting the overthrow of Hippias and their own restoration (511/10). The ancestral curse was invoked again by Cleomenes (q.v. 1) in the year of Cleisthenes' reforms (508/7) and caused another temporary withdrawal of the family. In 490 they were suspected of collusion with the Persian invasion-force, and the early victims of ostracism (q.v.) included another Megacles, nephew of Cleisthenes (486), and Xanthippus (q.v.), husband of Megacles' sister Agariste (484). During the remainder of the century individual members of the family flourished: what part it played collectively, if any, is not easy to show: the development of the democracy would tend to reduce both its influence and its vulnerability. Pericles, son of Xanthippus and Agariste, was able to ignore the Spartan appeal to the curse in 432/1, and Alcibiades, who also had an Alcmaeonid mother, does not appear to have been attacked on this score.

G. W. Williams, *Hermathena* 1951, 32 ff., 1952, 3 ff., 1953, 58 ff.; W. G. Forrest, *CQ* 1961, 232 ff.; T. L. Shear, *Phoenix* 1961, 99 ff. T. J. C.

ALCMAN (fl. 654-611 B.C., Jerome-Eusebius; 631-628 B.C., *Suda*), lyric poet, who lived in Sparta in the second half of the seventh century B.C. While some (ap. *Suda* s.v. *Ἀλκμάν*) said that he was a Laconian from Messoa, others (Crates ap. *Suda*) said that he came from Sardes in Lydia, and support for this has been found in fr. 16, where the poet may be addressing himself. In the latter case he would be an Asiatic Greek. He is also said to have been a slave who was granted his liberty because of his skill (*Heracleid. Pont.* fr. 2). His fragments show no direct reference to contemporary history, though fr. 41 may refer to the end of a war, and fr. 64 may be a tribute to Spartan methods of government. His work seems to belong to the period of peace which followed the Second Messenian War, and is mainly concerned with Spartan feasts and festivals. He wrote lyrical poems

which were later collected in six books (*Suda*, loc. cit.). These seem to have been mainly choral and to have often been sung by choirs of maidens. From one more than half survives (fr. 1). Beginning with a myth which illustrates the punishment of pride, it goes on to give personal remarks about the girls who sing and is very hard to interpret. It has been variously ascribed to festivals of Artemis, the Dioscuri, Dionysus, and Helen; it seems to have been sung at night in some kind of competition against another choir. He wrote on cosmological notions, giving an important part to Thetis (fr. 5). Other fragments come from hymns to the Dioscuri (fr. 2), Hera (frs. 3, 60), Athena (frs. 43, 87, 120), Apollo (frs. 45-50), and Aphrodite (fr. 55), while one seems to describe a nocturnal festival of Dionysus (fr. 56). He also wrote in hexameters what may have been Preludes to recitations of Homer. In these he sometimes varies a Homeric theme (fr. 77) or speaks about himself (fr. 26). He uses a literary language which includes Dorian and Aeolic elements and shows echoes from Homer. References to the Issedones, the Rhipae mountains, and King Kolaxais of Scythia may perhaps be taken from the work of Aristeas of Proconnesus. He writes with unaffected charm about simple matters such as birds (frs. 26, 39, 40), horses (fr. 1, ll. 45-49, 58-59), food (frs. 17, 19, 20), and with magic about night and sleep (fr. 89). The *Suda* says that he was the inventor of love-poems, but his fragments give no evidence on this beyond the tender emotions which he describes between the different members of a choir. His metres are varied and usually simple, though in fr. 89 he shows an advanced technique. It is not clear that he used a triadic structure in his verse.

ALCMENE, in mythology, daughter of Electryon. When her husband Amphitryon (q.v.) killed her father by mischance, she left Argos for Thebes with him, but refused to allow him conjugal rights till he had avenged the death of her brothers on the Taphians and Teleboans. He gathered an army and set out; but during his absence his wife was visited by Zeus (see HERACLES). She thus bore Heracles to Zeus and Iphicles to Amphitryon (Hesiod, *Shield* 1 ff.). The birth was delayed by Hera (ll. 19-114 ff., much elaborated in Ov. *Met.* 9. 290 ff., Ant. Lib. 29, from Nicander). After the death of Heracles, she and her children were persecuted by Eurystheus; according to Euripides (*Heracles*) they took refuge in Attica. Eurystheus attacked but was defeated and captured, the victory being bought by the sacrifice of Heracles' daughter Macaria to Persephone, in accordance with an oracle; Alcmenne insisted on the death of Eurystheus. At her own death Alcmenne was taken to the Islands of the Blessed and a stone substituted in her coffin (Pherecydes ap. Ant. Lib. 33. 3). She had a cult at Thebes and elsewhere (Farnell, *Hero-Cults*, 409).

ALESIA, a town of the Mandubii, a client-state of the Aedui, modern *Alise-St. Reine*, a hill-fort built by La Tène Celts. Excavation has revealed a Gallic town with *munus Gallicus*. In 52 B.C. Caesar besieged Vercingetorix here, and after beating off a large relieving army received his surrender. Siege-works corresponding to Caesar's minute description were discovered in 1860-5. A Gallo-Roman town on the hill, with some important buildings, has been excavated. It suffered damage in A.D. 69 and c. 166, and in the third century, eventually falling into decay.

Caesar, *BCall.* 7. 68-89 (siege). J. Le Gall, *Alesia* (1963), J. Harmand, *Une Campagne césarienne, Alesia* (1967). C. E. S.

ALETES (Ἀλέτης), in mythology, (1) son of Hippotas. Asking at Dodona how he might become king of Corinth, he was told he would be 'when one gave him a clod of earth on a day of many garlands'. He went there on a festival as a beggar, and was given earth by one of whom he asked bread; subsequently he became king through an intrigue on the occasion of a festival (schol. Pind. *Nem.* 7. 155). (2) Son of Aegisthus, see ERIGONE (2).

II. J. R.

ALETRIUM (modern *Alatri*), town of the Hernici (q.v.) 45 miles south-east of Rome. Always loyal to Rome after 358 B.C., Aletrium became a prosperous *municiptium* (Cic. *Clu.* 46) and remained such (reject *Liber Colon.* 230). Its massive polygonal walls have survived almost intact, those surrounding the citadel being particularly remarkable.

L. Gasperini, *Aletrium, i. I documenti epigrafici* (1965), G. Lupli, *La tecnica edilizia romana* (1957), 131 ff. E. T. S.

ALEUADAE, the leading aristocratic family of Thessaly, who dominated the neighbourhood of Larissa. The military and political organization of the Thessalian national State was ascribed to Aleuas the Red. The earliest *tagus* (q.v.) who was certainly an Aleuad was Thorax; his intrigues with Persia caused a temporary eclipse of Aleuad influence after the invasion of Xerxes. The Aleuadae vigorously opposed the tyrants of Pherae and several times invited Macedonian intervention. Simus, at first a creature of Philip, later defied him, and the suppression of this movement against Macedonian domination finally broke the power of the Aleuadae.

H. D. Westlake, *Thessaly in the Fourth Century B.C.* (1935); *JHS* 1936, 12 ff. H. D. W.

ALEXANDER (1) **I**, king of Macedon c. 495-450 B.C. He submitted to Persia (492) and served with the Persian forces under Xerxes. Nevertheless he succeeded in helping the Greeks without arousing Persian suspicion; he advised the Greeks to abandon Tempe and is said to have given information to the Athenians before Plataea. For his services he was admitted as a Hellene to the games at Olympia, where he won a victory, and became proxenus at Athens. He endeavoured to hellenize his court, to which he invited Pindar. After the Persian retreat he annexed territory as far as the Strymon valley, capturing silver-mines in the Krusha Balkan, whence he issued the first Macedonian coinage on the standard used by Abdera. His further expansion was checked by the Delian League and Athens' reduction of Thasos. He was the first king of Macedon to enter Greek politics, to establish claim to Greek descent, and to introduce Greek ways into Macedonia.

F. Geyer, *Historische Zeitschrift*, Beiheft 19 (1930); J. Papantavrou, *Μακεδονική πολιτική κατά τον Σπ. π. Χ. αιώνα* Αλέξανδρος I (1936). N. G. L. H.

ALEXANDER (2) **II**, eldest son of Amyntas and king of Macedon 369-368 B.C. Invoked by the Aleuadae (q.v.) against Alexander of Pherae, he garrisoned Larissa and Crannon before a rebellion in Macedonia compelled him to return. Pelopidas ejected the Macedonian garrisons, arbitrated in Macedonia, and made alliance with Alexander. Shortly afterwards Alexander was murdered. He probably instituted the *pezetaeri* (see HETAIROI and ARMIES, GREEK AND HELLENISTIC, § 4). N. G. L. H.

ALEXANDER (3) **III** of Macedonia ('the Great'), 356-323 B.C., son of Philip II and Olympias of Epirus. Aristotle became his tutor, and he early showed his powers of intellect and command. Despite serious

quarrels with Philip, occasioned by palace intrigues and uncertainty as to the succession, Alexander did succeed without difficulty (336), and immediately devoted himself to the plan of invading Asia which was part of his inheritance. To invade the Persian Empire with limited objectives was not difficult, experience having shown that a Greek army could penetrate to Mesopotamia and, with good cavalry, might defeat any Persian army. Distances were great and communications sometimes difficult; but an army could usually live on the land, and had nothing to fear, west of Iran, from a national resistance of hostile populations.

2. Having secured Macedonia, Greece, and his northern frontiers, Alexander crossed the Hellespont (334) with an army of about 40,000 men, of whom fewer than half were Macedonians, and fewer than a quarter were Greek contingents from city-members of the Corinthian League. His immediate object was certainly to liberate the Greek cities in Asia. This was quickly achieved, after the battle of the Granicus (near the Hellespont) had reduced the Persian advance forces to defending a few strong places. He now disbanded his fleet and proceeded to 'defeat the Persian fleet on land', by conquering its remaining bases in Phoenicia and Egypt. Having completed the conquest of western and southern Asia Minor, he was brought to action by the Persian 'Grand Army'. The battle of Issus (near Alexandretta) was fought on ground unfavourable to the Persian cavalry; it was won by the brilliance of the Macedonian infantry and Alexander's brilliant cavalry leadership. Shortly after, he refused peace on favourable terms—the first certain sign that, exceeding the more restricted aims of the Greeks and probably of Philip, he intended to conquer the whole Persian Empire. But though the way to Babylon and the East lay open, he adhered to his original plan and spent the next year in occupying Phoenicia, Palestine, and Egypt. The capture of Tyre represents his greatest military achievement, and with it Persia ceased to be a Mediterranean Power.

3. In 331 Alexander left Egypt for Babylonia, where Darius had collected another 'Grand Army'. At the battle of Gaugamela (in the plain of Mesopotamia), he outmanoeuvred and defeated the Persians on their own terrain; Darius escaped, but now became a mere fugitive. Alexander proceeded to occupy the Persian capitals (Babylon, Susa, Persepolis, Ecbatana), where the vast treasures of the Empire were stored. The sack of Persepolis was probably unpremeditated, since it seems at variance with his policy towards the Persians in general (see 5a below). The death of Darius left Alexander free to assume the title of *Basileus* (Great King) and to treat further resistance as rebellion (330). In a great sweep from the Caspian to the south-east slopes of Hindu Kush he found little opposition (330–329), but the conquest of Bactria and Sogdiana (Russian Turkestan) cost him nearly three years of hard fighting. Here was a national resistance broken only by time, a strategy adapted to new conditions, and a final gesture of reconciliation, Alexander's marriage with the Sogdian Roxane.

4. The Indian Expedition (327–325) extended the eastern frontiers of the Empire to the Hyphasis (Beas) and lower Indus. The nations of north-western India, unable to combine, presented to Alexander an opportunity like that which the disunion of Greece had given to Philip. The only formidable opponent was Porus (king of the Paurava), and the only great battle (the 'Hydaspes battle') was another triumph for Alexander's versatility. Having overrun the Punjab, he turned back because the army refused to follow him further. The return journey to Persia became a voyage of discovery. With half of the army, part marching and part in ships newly built, he reached the Indus delta, whence the fleet was to make

the unknown voyage to the Persian Gulf, while he took an equally dangerous land route to prepare its bases. This return march through Gedrosia has been called Alexander's 1812; exaggerated though its horrors may have been, it was certainly the nearest that he ever came to a great disaster. The fleet suffered too, but arrived safe (325–324).

5. The last year of Alexander's life reveals how great would have been his difficulties had he survived. Misgovernment and disloyalty among his subordinates, a mutiny of his Macedonians, a rising of Greek soldier settlers in Bactria, imminent war in Greece—these were the fruits of his policy, which may conveniently be summarized under two heads, (a) Alexander's conception of conquest; (b) his conception of himself.

(a) In the government of the Empire he made only one important innovation, some separation of fiscal from military authority in the western provinces, with a more centralized financial administration. To peoples used to being ruled, the change of rulers meant little; with the former rulers themselves, the Iranian nobility, the case was different. With striking originality, Alexander adopted the style and ceremonial of a Persian king; he drafted Iranian cavalry into his army, and had 30,000 boys trained to fight in the Macedonian style. He married into the Iranian nobility and eventually made his highest officers do likewise, and encouraged mixed marriages by the soldiers. This bold policy was not wholly successful *vis-à-vis* the Iranians themselves: most of his Asiatic governors turned out badly. To many of his Macedonian officers it was odious from the first, and gave rise to those unsavoury affairs of Philotas and Parmenion (q.v.), of Cleitus (q.v.), and of Callisthenes (q.v.) and the Royal Pages, which show Alexander at his most tyrannical, besides suggesting an essential insecurity at the foundations of his power. Finally his plans for a new 'mixed' army occasioned the great mutiny of 324, when even the Macedonian soldiers, devoted hitherto, stated their grievances. To the Macedonians the situation was simple: they were the conquerors, the barbarians were the conquered. To Alexander it appeared that some at least of the barbarians should be partners in the Empire: the combined aristocracies of Macedonia and Iran were to be the ruling class.

(b) It is likely though not certain that in 324 Alexander officially requested the Greek cities to treat him as a god (Aelian, *VH* 2. 19, Hyperides 5, col. 31; Arrian, *Anab.* 7. 23. 2): this act perhaps contains a clue to his inner personality and aims. It is usually interpreted as a political manoeuvre, a means of evading his obligations to the Greek city-members of the Corinthian League; but, if so, it was a very inept manoeuvre, and failed of its purpose. Greek religion certainly allowed for the possibility of a man, a great benefactor, becoming a god; but there was no religious consciousness in Greece which could override the highly developed political consciousness, and there was no question of Alexander's deification appearing to any Greek as a 'revelation', or as compensating for the loss of his political birthright, complete autonomy. Alexander himself, however, may have believed in his own divinity: if Greeks in general could hail a benefactor as a god, who more likely to believe in his divinity than the benefactor himself? In 332–331 Alexander had gratuitously undertaken a long and dangerous march to the desert oracle of Ammon (oasis of Siwah), and his own propaganda later announced that he had been recognized as son of Ammon (Zeus) (Callisthenes ap. Strabo 17. 1. 43, and see AMMON). This may well have been a customary local formula addressed to a new pharaoh; but, equally, its effect can have been incalculable on one whose whole career reveals his extraordinary preoccupation with the gods of all nations and,

perhaps, his emulation of the Greek gods, Heracles and Dionysus in particular.

6. It remains a debated question whether Alexander aimed at a universal monarchy. The chief evidence supporting this view is probably not authentic (Diodorus 18. 4. 3 ff.); in fact, there is no sign that he intended in the immediate future anything more than exploration, and perhaps conquest, on his southern and northern frontiers (Arabia and the Caspian). His desire in India to conquer still further had been natural if, as is likely, he thought the eastern Ocean comparatively near. If he believed in his own divinity, that does not make him intent on conquering the West as well as the East, since no Greek god (except perhaps Zeus) was ever supposed to hold a universal rule. What is certain is that he would never have settled down.

7. Alexander was undoubtedly the greatest general of his race and probably of antiquity. He profited by the splendid army of Philip, and by technical improvements in siegecraft; but this does not explain his achievement, which was due to a profound, if unconsidered, insight into the essentials of strategy, and a wonderful versatility. By temperament an inspired leader of cavalry and a 'monster of celerity', he could nevertheless be patient (siege of Tyre), and could fight a defensive battle until the moment came to strike (Gaugamela). No doubt he exposed himself too readily, and in leading a charge he lost control of the battle; yet to this personal courage and his powers of endurance he partly owed his continued ascendancy over officers and men, despite their accumulating grievances. As a ruler, he must be judged by his plans for the Empire (above), which were grand and original, but perhaps impossible of execution, even by himself. His foundations of new cities show a superb appreciation of strategic needs and economic possibilities. He was always eager to find some new thing, whether a new land or a new piece of knowledge. His favourite book was the *Iliad*, his favourite sport hunting, and his only relaxation the symposium. His character was 'heroic' rather than amiable: extravagantly brave and generous by nature, he was extravagantly passionate and revengeful when thwarted, vices which led him to great and spectacular crimes. In him the soul wore out the breast, and he died, in his thirty-third year, of a fever which might well have spared him had he ever known how to spare himself.

ANCIENT SOURCES. *Alexander-historians* (see under the separate names). There are three main lines of tradition. (1) The 'good' tradition includes perhaps Alexander's official *Journal* (see *EPICURISMUS*) written by Eumenes of Cardia, and such letters of Alexander as are genuine, the geographical work of his hematists Baeton and Diogenes, the histories of Ptolemy I and Aristobolus, Nearchus' book, and some valuable information in Eratosthenes. (2) An anti-Alexander tradition of the Greek opposition, which came to include a theoretical element, of Alexander as a tyrant, corrupted by power and owing his success to Fortune (3) The so-called vulgar tradition is a name used to embrace Cleitarchus and some lesser writers, as Onesicritus and Chares; it is popular history, making the most of any material that is in any way sensational. Callisthenes comes under no label, but as the earliest of all the writers was probably used by most of the rest. Many writers are known, from the fourth century B.C. to the fourth A.D., of whom nothing survives but the name or a few fragments, among them may be mentioned Anaximenes the rhetorician, Ephippus the gossip-monger, Androtion and Polyaeus the geographers, Nymphus and Marsyas of Pella, historians, Anticleides the antiquarian, Hegesias, rhetorician and untrustworthy historian-grapher. (For lists see Müller and Jacoby, below.)

Of extant writers the most important, Arrian, is noticed under his name. Plutarch's *Life of Alexander* is compiled from every kind of source, good and bad, the first part of his *De Alexandri fortuna* is a young man's passionate protest against slanders. Diodorus 17 is largely based on Cleitarchus. Curtius gives some invaluable information mixed with much rubbish, he uses Cleitarchus extensively, but Ptolemy and a hostile source from time to time, and so presents a strangely inconsistent picture. Justin is almost worthless, except as showing the hostile tradition more consistently than elsewhere. Several extant works—the *Melita Epitome*, *Itinerarium Alexandri*, P. Oxyrhynchus 1798, *Codex Sabbaticus* 29—illustrate the transition to the Romance. The problem of the modern historian is how far to use Diodorus and Curtius. C. Müller, *Scriptores rerum Alexandri*

ALEXANDER (4) IV of Macedonia (323–?310 B.C.), posthumous son of Alexander the Great and Roxane, succeeded to the Empire jointly with Philip Arrhidaeus, but never lived to rule, though the possession of his person was important to the 'legitimist' generals in the wars of the *Diadochi* (q.v.), and later (316) to Cassander (q.v.), the greatest enemy of Alexander's house. Prisoner though he then became, his name and cause were still useful to Antigonus in his efforts to re-unite the Empire under his own rule; and correspondingly his continued existence embarrassed Cassander, who finally put him to death. G. T. G.

ALEXANDER (5) OF PHERAE, tyrant 369–358 B.C., nephew of Jason (q.v. 2). Throughout his tyranny he was opposed by Larissa and other cities, which refused to recognize him as *tagus* (q.v.). His enemies received occasional support from Thebes and became increasingly formidable, especially after Pelopidas had organized a Thessalian Confederacy modelled upon that of Boeotia. Pelopidas, who three times visited Thessaly, defeated him at Cynoscephalae in 364, and Pherae was subsequently compelled to join the Boeotian alliance. Alexander was at first an ally but later an enemy of Athens. In 358 he was murdered by the sons of Jason.

The cruelties attributed to Alexander by a tradition which glorified Pelopidas may well be exaggerated. He possessed great energy but little judgement, and, unlike Jason, attempted to crush the Thessalian cities rather than win them by diplomacy.

ALEXANDER (6) I, king of Molossia in Epirus, 342–330 B.C. Philip II of Macedon, his brother-in-law, placed him on the throne, expelling Arybbas and subjugating Cassopaea; as king of the Molossi he united Epirus in the form of a symmarchy with himself as *hegemon*. Invoked by Tarentum c. 333, he conquered most of south Italy, allied with Rome, and was defeated and killed at Pandosia; he had made Epirus an important power, coming gold and silver, and united to Macedon by his marriage with Cleopatra, sister of Alexander the Great.

P. R. Franke, *Alt-Epirus und das Konigtum der Molosser* (1955); Hammond, *Epirus*, 534 ff. N. G. L. II.

ALEXANDER (7) II, king of Molossia 272–c. 240 B.C. During the Chremonidean War (see CHREMONIDES) he invaded Macedonia, was routed and deposed by the

generals of Antigonos, who set up a republic (c. 263 B.C.). Restored with Aetolian help, he conquered Acarnania and divided it with Aetolia. He died shortly afterwards.

Hammond, *Epirus*, 588 ff.

N. G. L. II.

ALEXANDER (8) (b. c. 315 B.C.), of Pleuron in Aetolia (hence called *Aetolus*), made his name as a tragic poet and was included in the *Pleiad* at Alexandria. Circa 285–283, he was entrusted by Ptolemy Philadelphus with the *diorthosis* (preliminary sorting-out) of the tragedies collected for the Library. Later, c. 276, he appears at the court of Antigonos Gonatas in Macedonia.

WORKS. The only trace of Alexander's tragedies is one title, *Ἀσπραλασταί* (*Dice-players*), *TGF*² 817. Two elegies are known, the *Apollo* and the *Muses*. The first was a collection of love-stories with unhappy endings, framed as a series of prophecies uttered by Apollo himself. Thirty-four lines (fr. 3) survive from the story of Antheus and Cleoboea; the language is learned and the style extremely dry. The *Muses* contained literary history. A striking appreciation of Euripides in anapaestic tetrameters (fr. 7) must come from a similar work. From two epyllia, *Halieus* (*Fisherman*) and *Circa* or *Critica*, only a fragment apiece survives. Other works mentioned are *Phaenomena* (Alexander met Aratus in Macedonia), *Epigrams*, and *Ionian Poems* (without music; cf. Strabo 14. 648; Ath. 620e) in imitation of Sotades.

ALEXANDER (9) (c. 290–c. 245 B.C.), son of Craterus (q.v. 2), and his successor as viceroy of Corinth and Euboea, declared himself independent in 250–249 (not 252, as commonly held) at Ptolemy's instigation, and allied himself with the Achaean Confederacy. A short war with Athens and Argos ended in 249, Gonatas acquiescing in his usurpation. The Aetolian victory of Chaeronea (245) split his realm in two, and about this time he died (poisoned, an unlikely rumour claimed, by Gonatas), leaving his throne to Nicaea, his widow.

W. H. Porter, ed. Plutarch's *Aratus*, introd. (1937) F. W. W.

ALEXANDER (10) BALAS (d. 145 B.C.), pretended son of Antiochus IV, became king of Syria after the defeat and death of Demetrius I (q.v. 4). He was a pawn of Pergamum and Egypt and had support from the Roman Senate, which feared (unnecessarily) a revival of Seleucid power; as a king, he was incompetent. His reign (150–145) was ended by his expulsion and death; it is important mainly as marking the beginning of a period of civil wars which hastened the disintegration of the Seleucid Empire.

H. Volkmann, *Klio* 1925, 373 ff.

G. T. G.

ALEXANDER (11) 'Polyhistor', born c. 105 B.C. at Miletus, came as prisoner of war to Rome; freed by Sulla (c. 80 B.C.), he took the name L. Cornelius Alexander; he was pedagogue to a Cornelius Lentulus, and later taught C. Julius Hyginus. He was accidentally burnt to death at Laurentum. His vast literary output (*FGRII* 273), probably after 49 B.C., included compilations of material on various lands, Delphi, Rome, the Jews, wonder-stories, and literary criticism. Alexander followed Crates' school; industrious and honest, he lacked taste and originality.

F. W. W.

ALEXANDER (12) (2nd c. A.D.), son of Numenius, wrote a *τέχνη* in which the rival theories of Apollodorus and Theodorus were discussed; also *Π. σχημάτων* (based

on Caecilius), which influenced later writers. See also ANONYMUS SEGUERIANUS.

Spengel, *Rhet.* i. 427–60, iii. 1–6, 9–40. T. Schwab, *Alexander Numeni, Rhetorische Studien*, 5. J. W. H. A.

ALEXANDER (13) OF ABONUTEICHOS (Ἀβώνου τεῖχος) in Paphlagonia, a contemporary of Lucian (q.v.), whose bitterly hostile account of him, *Ἀλέξανδρος ὁ ψευδόμαντις* (see M. Caster, *Études sur Alexandre ou le faux prophète*, 1938) is our chief source of information. He claimed to have a new manifestation of Asclepius (q.v.) in the form of a serpent called Glycon. With this divine aid, he gave oracles and conducted mysteries, from which he carefully excluded all unbelievers, especially Epicureans, and all Christians. He got a considerable following, a prominent member being a Roman of some standing, named Rutilianus. He was personally handsome and apparently popular with women especially; to what extent, if any, he believed his own doctrine can hardly be determined in the absence of any description of him other than Lucian's, which represents him as a thorough impostor, applying to him all the stock abuse of rhetorical controversial writings. The cult survived its author.

Nilsson, *GGR* ii. 452 ff.

II J. R.

ALEXANDER (14) OF APHRODISIAS (fl. early 3rd c. A.D.), Peripatetic philosopher. He began lecturing at Athens in A.D. 198 or soon after, and dedicated his book *Περὶ εἰσαγωγῆς* to Septimius Severus and Caracalla. His teachers had been Aristocles of Messana, Herminus, and Sosigenes. He was the ablest of the Greek commentators on Aristotle, and is treated with great respect by his successors among these, who preserve many fragments of his lost works. He is singularly free from the mystical tendencies of his time. He assumes the indissoluble unity of the mental faculties and denies the immortality of the soul and the reality of time, but apart from a few such individual doctrines, confines himself to the attempt to explain Aristotle's views without innovation or criticism, treating them, as no doubt Andronicus (q.v.) had before him, as forming one coherent system. The extant commentaries are on *An. Pr.* i (ed. M. Wallies, 1883), *Top.* (ed. M. Wallies, 1891), *Met.* (ed. M. Hayduck, 1899), *Sens.* (ed. P. Wendland, 1901), *Metaph.* (ed. M. Hayduck, 1891; only bks. 1–5 are by Alexander); the most serious loss is his commentary on the *Physics*. There are also extant under his name a work of his own *Περὶ ψυχῆς* (ed. J. Bruns, 1887), *Ἀπορίαι καὶ λύσεις*, *Ἠθικά προβλήματα*, *Περὶ εἰσαγωγῆς*, *Περὶ κράσεως καὶ ἀδύσεως* (all ed. by J. Bruns, 1892). Of these *Περὶ ψυχῆς* i, *Περὶ εἰσαγωγῆς* (tr. A. Fitzgerald 1931), and *Περὶ κράσεως καὶ ἀδύσεως* are probably genuine. *Ἰατρικὰ ἀπορίματα καὶ φυσικὰ προβλήματα* and *Περὶ ποικίλων* (ed. J. L. Ideler, *Physici et Medici Graeci Minores* (1841), 3, 81), and *Προβλήματα ἀνέκδοτα* (ed. U. C. Bussemaker, *Aristotelis Opera* (1857) iv. 291), are spurious.

ALEXANDRIA (1) was founded by Alexander the Great immediately after his conquest of Egypt; communication with Europe by sea was important, and none of the existing harbours on the Delta coast could accommodate a large fleet. Whether he designed to make it the capital of the country is unknown; it was not till after Ptolemy had established himself in possession of Egypt that the seat of government was transferred from Memphis to Alexandria. But it grew rapidly, and was made a centre of learning as well as of commerce and industry by the second and third Ptolemies. Under the Romans it was

the one city that counted in the province; and, despite disasters in the third century, it did not begin to decline till the Arab conquest shifted the connexions of Egypt from Europe to Asia.

The plan of ancient Alexandria is difficult to reconstruct, as nearly all buildings have been destroyed and debris has covered the old levels. It lay on a neck between the sea and Lake Marcotis, and the island of Pharos was linked with the mainland by a mole, seven stades (c. 1 mile) long, so as to provide a double harbour. The chief edifices were by the eastern harbour—the Emporium fronting the sea, the Palace on the east, the Caesareum and Theatre, probably also the Museum and Library, behind; a wide street intersected the city from east to west, by which was the Gymnasium. The only one of these of which the site is certain is the Caesareum. The Temple of Sarapis stood in the western quarter. Under the early Ptolemies the city in all probability possessed the normal organs of democratic government, but these may have lapsed, or been abolished before the end of the dynasty. Augustus definitely refused to grant any self-government, though the Alexandrian citizenship was allowed to continue and carried with it certain privileges—e.g. it was the avenue to Roman citizenship for an Egyptian. In 200 Alexandria was given a Senate by Severus, simultaneously with other Egyptian towns. Probably the control of the city was kept strictly in the hands of the Prefect: the only special local official mentioned is the head of the police. The Jews, who were numerous and inhabited a special quarter, had their own ethnarch and council under the Ptolemies, and Augustus confirmed these privileges. J. G. M.

For archaeological material, excavations, etc., see the *Bulletin de la Société royale archéologique d'Alexandrie* (1898), and the publication of the Musée gréco-romain (written first by E. Breccia and then by A. Adriani) *Le Musée gréco-romain* (1922, 32) and *Annuaire du Musée gréco-romain* (1931 (with title in Italian)—1, 1952). For political history, constitution, etc., see especially P. F. A. Jonquier, *Bull. Soc. arch. Alex.* 1938, 71 ff. (Ptolemaic period); H. A. Musurillo, *Acts of the Pagan Martyrs* (1954), *passim*, esp. 83 ff., 106 ff. (particularly for Roman period); E. Vissler, *Götter und Kulte im ptolemäischen Alexandria* (Amsterdam, 1938); H. J. Bell, *Cults and Creeds in Graeco-Roman Egypt* (1953). A detailed general survey is lacking, but the historical guide to the Museum by Breccia, *Alexandria ad Aegyptum?* (1922), is a good introduction, see also Adriani, *Repertorio d'Arte dell'Egitto greco-romano*, Ser. A 1 ii (sculpture), Ser. C 1 ii (archaeology and topography) (1961, 1963).

ALEXANDRIA (2) 'ad Issum', near Iskenderun (*Alexandretta*) on the Gulf of Issus, was probably Myrian-drus refounded by Alexander (333 B.C.). It lay six miles south-west of the Cilician Gates (hence the alternative name 'Alexandria of Cilicia'), and was also the key of the Syrian Gates (*Beilan Pass*).

ALEXANDRIA (3) 'Arachosion' (of the Arachosii) or Alexandropolis, at or near Kandahar in Afghanistan, was founded or refounded by Alexander, 329 B.C. It lay on an important trade-route between Merv (or else Meshed) and India through the Bolan and Mula Passes, Kabul, and Las Bela. It soon ceased to be a Greek town.

ALEXANDRIA (4) 'Areion' (of the Arii), Herat in Khorassan, founded or refounded by Alexander, was the chief town in Ariana. It lay on an important trade-route from Merv (or else Meshed) through Kandahar to India.

ALEXANDRIA (5) 'Eschate', or 'the Farthest' (*Khod-jend?*), hurriedly founded by Alexander on the Jaxartes as a fortress held by Macedonians, Greek mercenaries, and local Asiatics, against savage peoples beyond. It was refounded by Antiochus I as an 'Antiocheia'.

Arrian, *Anab.* 4. 1. 3; Curtius 7. 6.

ALEXANDRIA (6) 'among the Paropamisadae' was a short-lived colony of Alexander, north of Kabul, at the junction of routes from Aria, Bactria, and India.

Arrian, *Anab.* 3. 28. 4 ff.; 4. 22. 5; Strabo 12. 514 E II W.

ALEXANDRIAN POETRY. This term commonly denotes the Greek poetry, other than the New Comedy of Athens, composed between c. 300 and c. 30 B.C., and is justified by the fact that till 145 (expulsion of the scholars by Ptolemy Physcon) Alexandria, thanks to its library and museum, was the literary capital of the Greek world. The distribution of this poetry over the period indicated is very uneven. Two decades of fairly intense activity form a prelude to Alexandria's Golden Age, which itself only lasts from c. 280 to c. 240. The writers who follow are all Epigoni, and the second century B.C. is the least productive in the history of Greek poetry. But the beginning of the first century witnesses a St. Martin's Summer of Alexandrian poetry thanks to Meleager and his contemporaries. Meleager's *Garland* becomes known at Rome, and soon Parthenius and others introduce their pupils to Alexandrian poetry as a whole, which is thus enabled to play an important part in shaping the course of Roman poetry.

2. The struggles of the *Diadochi* discouraged the production of any poetry except Comedy and the Epigram, but c. 300 a revival becomes visible in the south-eastern corner of the Aegean, both on the mainland (Zenodotus and Menecrates of Ephesus, Hermesianax and Phoenix of Colophon) and in the neighbouring islands, where the chief representatives were Philetas of Cos, Simias of Rhodes, and Asclepiades of Samos. The last-named, together with his associates Posidippus and Hedylus, was mainly important as an epigrammatist, but the other two exerted a wider influence. Both were scholars as well as poets and reviving the tradition of another scholar-poet, Antimachus of Colophon, set an example of a learned poetry, appreciable only by the cultivated few, which their successors followed almost as a matter of course. Though very little of their work survives, it seems that Philetas, Simias, and their contemporaries experimented in most of the poetical forms which the next generation commonly favoured, i.e. Narrative Elegy, Epyllion or Short Epic, Catalogue-poem, Hymn, Iambus, Didactic Poem, Epigram, and Paigmon. After 280 the leading figures are Aratus of Soli, chiefly but by no means solely a didactic poet; Theocritus of Syracuse, best known for his pastorals but active in many other fields; Callimachus of Cyrene, the most representative Alexandrian poet, thanks to the clarity with which he formulated his poetic creed and the consistency with which he practised it; and finally Callimachus' opponent, Apollonius of Rhodes, who dared to question his former master's ruling and to compose an Epic in the grand manner. Contemporary with these poets was, it seems, Herodas of Cos, whose *Mimiambi* reflect the spirit of the age no less by the archaism of their form than by the modernity of their content. Of Alexandrian tragedy (though its seven most famous writers were known as the Tragic Pleiad) and Satyr-play little can now be established. The *Alexandra*, attributed to Lycophron, one of the Pleiad, probably belongs to the early second century.

3. In the quarrel between Callimachus and Apollonius the victory went to the former, but the question remained unsettled. Thus after the Golden Age, while Euphorion and Eratosthenes cultivate the Epyllion, Rhianus and others revert to the longer Epic. Moschus and Bion continue the Pastoral down to c. 100, and the didactic poems of Nicander of Colophon are best dated about the middle of the second century. But at Alexandria the

savant had displaced the scholar-poet. For the poets referred to above see under their names. E. A. B.

4. *General character of Alexandrian poetry.* In Alexandrian times the new material from the conquered East, the great scientific institutions like the Alexandrian Museum or the vast Hellenistic libraries, the prevailing Aristotelian spirit, and even the patronage of the kings, tended to foster science rather than poetry. The third and second centuries B.C. are the great age of Greek natural science, mathematics, and scholarship, but not of creative literature. All Alexandrian poets were hampered by the weight and the splendour of classical Greek literature. Unable to create original poetic forms, they mixed and mingled elements from the old and clearly defined types of poetry. Scholarly and highly polished verse became the main criterion of great art. This often led to an artificial and fastidious style, delighting in archaic words, scholarly allusions, and a number of intricate and varied metres. Moreover, as real religious feeling had on the whole declined in the Hellenistic world the gods and the heroes were humanized, and the Panhellenic versions of the myths were avoided; *delectare* takes the place of *prodesse*. Realism and individualism, which came to play such a prominent part in that period, gave love—both ideal and sensual—a central position in poetry. At the same time, big city life, which developed in the large Hellenistic cities, excited a longing for the tranquillity and the beauty of country life, such as we find in the Bucolic poets, the true precursors of the Roman *ruris amatores*. This turn to the simple and the rustic brought animals, children, slaves, and landscape into Alexandrian verse, subjects on the whole beyond the scope of classical poetry. It is fair, however, to stress that by conscious art many Alexandrians did all they could to live above the limitations of their age.

ALEXANDRIANISM, LATIN. The work of the 'Alexandrian' poets of the first century B.C. is distinguished from the earlier hellenizing movement, represented in epic and drama, by a difference of models and a corresponding difference of purpose. Their main interest was turned from the classical Greek writers to the poets of the third and second centuries, and their aim was not now to bring into Latin what was best in Greek literature but to promote the ideals of technical perfection presented by the Alexandrians. Alexandrianism was a movement of scholarship, and it found a natural home in Italy when the period of creative activity which had come with the Punic Wars and the first contacts of Rome with Hellenism had been succeeded by an age of criticism of which the beginnings are seen in Lucilius and Accius; and the social and political unrest in Italy which set in with the Gracchi may well have encouraged an attitude which turned men of letters upon themselves and on the pursuit of art for art's sake.

The movement begins with the work of poets writing near the beginning of the first century B.C. and bridging the gap between the old style and the new—the epigrams of Porcius Licinus, Valerius Aedituus, and Lutatius Catulus, and the bizarre erotic poems of Laevius. These pioneers were succeeded by a school of poets (associated with Cisalpine Gaul), of which Catullus is the only surviving representative, but which also included

Valerius Cato, Cinna, Calvus, Cornelius Nepos, Tigidas, and probably Furius Bibaculus. These poets and their followers, who turned away from the traditional idioms of Latin poetry and found new patterns in Alexandria, are sometimes called *neoterici*, the 'Moderns'. The name was sarcastically given to them by Cicero (*de re publica* Att. 7. 2. 1., 50 B.C.; 'poetae novi', *Orat.* 161, 46 B.C.), who was impatient of their mannerisms and their self-conscious pretensions. In *Tusc.* 3. 45 (45 B.C.) he puts the worst face on their devotion to Alexandrian models by calling them 'cantores Euphorionis'; the description would utterly misrepresent the width of Catullus' own interests, but Catullus and Calvus were dead when the words were written, and Cicero may be thinking (as Horace is in *Sat.* 2. 5. 41) of lesser men who aped the fashion.

Four of the outstanding characteristics of the Greek Alexandrians reappear in their Latin successors: (1) the development of new genres, especially 'epyllion', elegy, and epigram, all miniature forms replacing the large-scale epic and drama; (2) a regard for form, for concinnity and symmetry in language and metre, which left a lasting impression on Latin literature; (3) the cult of erudition, seen in the vogue of didactic verse, in wealth of mythological allusion, and in the search for novelty in storytelling; (4) the emergence of a subjective and personal way of writing—in elegiac and lyric a new individualism, in narrative a sentimental treatment and a psychological interest. Two differences probably tempered the excesses of Alexandrian mannerism in transplanting: while in Greece Alexandrian literature was a literature of exhaustion, in Italy it was one of revolt and experiment, and the first Italian Alexandrians, for all their *ars* and *doctrina*, were not confined, as were their masters, to the sheltered life of the study.

Thus established, Alexandrianism exercised its influence throughout the century. The mock heroic *Culex* and the romantic *Ciris* of the *Appendix Vergiliana* are Alexandrian in technique, as were the lost elegies of Gallus. In Virgil's *Eclues* and *Georgics* the influence of Alexandrian models is strong; in his mature work Virgil learned to turn their lessons to his own purposes and to reconcile Alexandrian ideals with the tradition of Latin epic. The combination of learning with intense individualism in Propertius reflects his avowed allegiance to the masters of Alexandrian elegy; Ovid's elegies owe much to the same sources, while the *Metamorphoses* and the *Fasti* are akin to the narrative verse of Callimachus, but in Ovid the influence of Alexandrianism is fused with that of the rhetoric of the schools. C. J. F.

ALEXIS (c. 375-c. 275), Middle and New Comedy poet, born at Thuri (*Suda*), but apparently living most of his long life at Athens. Wrote 245 plays (*Suda*); the first of his Lenaeae victories came probably in the 350s (sixth after Eubulus, fourth after Antiphanes in the victors' list, *IG* ii². 2325. 150), and he won a victory at the Dionysia in 347 (*IG* ii². 2318. 278). The good anonymous tractate on Comedy (§ 17, p. 9 Kibel) makes Menander a pupil of Alexis—a relationship more plausible than that of blood alleged by the *Suda*.

About 140 titles and 340 fragments survive, but it is difficult to assess from them the part played by Alexis in the transition from the older to the newer forms of Comedy. Three facts, however, are notable: Alexis used both the older form of the chorus which was addressed by the actors (fr. 237) and the newer form known best from Menander (fr. 107); the *παράστροφος* seems to have received his common name from Alexis (fr. 178); and Alexis' *Ἀγώνης ἢ Ἰμπιακός*, dating probably from the 330s, was an early example of the type of plot especially associated with New Comedy, involving both a love affair and a confidence trick. The fragments show sometimes

real reflection and beauty of language; fr. 70, carnal love a crime against real Love; fr. 219, life as a carnival (influencing the profounder Menander, fr. 416 Koerte?); fr. 228, old age as life's evening. Pleasant wit is revealed in frs. 102, 163 (see Arnott, *Hermes*, 1965, 298 ff.). Of interest also are fr. 45, a verbally clever comparison of man and wine; fr. 98, beauty-culture; fr. 108, part of a postponed prologue (of the New Comedy type); fr. 124, a cook's cure for burnt pork; fr. 135 (from the *Alivos*, one of about a dozen mythological burlesques in Alexis), Heracles' teacher has a library of classical Greek authors; fr. 245, a man philosophizes about the nature of Eros.

Alexis' fame continued down to Roman times. Gellius (*NA* 2. 23. 1) notes that Alexis' plays were adapted by Roman comedians; Turpilus used his *Δημήτριος* as a model; and Plautus' *Poenulus* may at least in part derive from his *Καρχηδόnius*.

FRAGMINIS FCG III. 382 ff., CAF II. 297 ff., III. 744, Demiańczuk, *Suppl. Com.* 211, POxy. 1801. (*PHerol.* 11771 [text in Page, *CLP* no. 48] is sometimes attributed to Alexis, but only on the slenderest evidence.) Interpretation: A. Olivieri, *Thomson*, 1939, 279 ff. (unreliable). W. G. A.

ALFENUS (PII' 8) VARUS, PUBLIUS? (*consul suffectus* 39 B.C.; *praenomen* inferred from designation of P. Alfenus Varus, *cos.* A.D. 2, presumably his son, as P. f.) was a pupil of the jurist Servius Sulpicius (q.v. 2) Rufus, many of whose *responsa* were published by Alfenus in his *Digesta*, a work in forty books; two epitomes of this work were used in Justinian's *Digest* (q.v.), one under the name of Paul. Alfenus is identified by Porphyrio (q.v.) with *Alfenus wafer* mentioned by Horace (*Sat.* 1. 3. 130), who was a shoemaker of Cremona; this identification, which has been widely accepted, is rejected by some (e.g. E. Fraenkel, *Horace* (1957), 89 f.). If from Cremona, this *novus homo* and his son were apparently the only Cisalpine to reach the consulship under Augustus. In 41 Alfenus served with Asinius Pollio and Cornelius Gallus on a commission to confiscate land in Transpadane Gaul and divide it among war veterans; he acted probably as a legate or prefect, or possibly was a praemagistrate (cf. Broughton, *MRR* II. 377 f.). He was not Pollio's successor as governor of Cisalpine Gaul, as is erroneously stated by Servius on *Ecl.* 9. 10). He acted harshly towards Mantua (Servius, loc. cit.); Virgil's land in the district was confiscated but was later returned (or the poet was compensated). Alfenus may be the Varus named in Veig *Ecl.* 9; it is less certain whether *Ecl.* 6 was dedicated to him or to Quinctilius Varus.

L. De Salvo, *Alfenio Varo e i suoi Digesta* (1940). H. H. S.

ALFIUS (ALPHIUS) AVITUS, a 'neoteric' (cf. ALEXANDRIANISM) of Hadrian's time, used iambic dimeters in poems on historical events.

Baehr *FPR*, Morel, *FPL*, Schanz-Hosius, § 513. 3.

ALGIDUS, the easternmost section of the outer edge of the Albanus Mons (q.v.), famous for its temples of Diana and Fortune and its fashionable villas (Hor. *Carm. Saec.* 60; Livy 21. 62; Sil. 12. 536). The rim of the Albanus Mons is here pierced by a narrow pass which the Aequi (q.v.) seized in the fifth century B.C. (Diod. 11. 40 implies the date 484). This pass, which the Via Latina (q.v.) later used, dominated the route to the Hernici (q.v.); consequently Cincinnatus and other Roman generals strenuously tried to dislodge the Aequi, Postumius Tubertus finally succeeding in 431. E. T. S.

ALIMENTA. The purpose of the *alimenta* in the Roman Empire was to give an allowance for sustenance to poor children, and this was achieved by the investment of

capital in mortgage on land, the mortgage interest being paid to, and administered by, municipalities or State officials. The system originated in private philanthropy, the earliest known benefactor in this field being T. Helvius Basila in the late Julio-Claudian period (*ILS* 977). A later philanthropist, the Younger Pliny, who made a similar gift to Comum, has recorded his reasons for his endowment (*Ep.* 7. 18). Inscriptions record similar private benefactions both in Italy and in the provinces. Gifts from the imperial *fiscus* to Italian towns for this purpose were first made by Nerva and Trajan. According to two Trajanic inscriptions (*ILS* 6675; 6509) from Veleia, near Parma, and from the Ligures Bachiati, near Beneventum, landowners who received money from the Emperor's gift gave security in land, to the value of roughly 12½ times the sum received; on this they paid annual interest at the rate of 5 per cent. The total received annually in interest at Veleia was 55,800 sesterces, which was distributed among 263 boys, 35 girls, and 2 illegitimate children. The boys received 16 sesterces a month, the girls 12, and the illegitimate children 12 and 10 respectively. The system was widely advertised by Trajan, on one of the bas-reliefs of the arch at Beneventum (illustrated, Rostovtzeff, *Roman Empire*, 356, 361) and on coins with the legend ALIM[ENTA] ITAL[IAE] (Mattingly-Sydenham, *RIC* II. 240). Its primary object was to increase the birth-rate among the poorer classes, partly, as Pliny suggests (*Panegyricus* 26), with a view to the recruiting of the Roman legions. There is no reason to think that the landowners needed or even welcomed the loans (which laid a perpetual charge on their property). As the system continued during the second century (there is inscriptional evidence from forty-six Italian towns), a civil service was created for its administration, with a senatorial *praefectus alimentorum* and subordinate equestrian *procuratores ad alimenta*. The *curatores* of the great roads of Italy also took part in this work.

ALISO, a fort on or near the Lippe established during the wars of Drusus, possibly the one mentioned by Dio (54. 33. 4) as set up in 11 B.C. 'at the point where the Lupia and the Elison unite'. The garrison resisted the advancing Germans after the defeat of Varus (q.v. 2) in A.D. 9 and regained the Rhine (Vell. Pat. 2. 120). Germanicus, in 15, re fortified all the posts between Aliso and the Rhine and restored the road (Tac. *Ann.* 2. 7). Its site is uncertain; its identification with an important Roman fort excavated at Haltern, on the Lippe, 30 miles from the Rhine, is not widely accepted. O. B.

ALLECTUS, probably *rationalis* (finance minister) of Carausius in Britain. Allectus assassinated him in A.D. 293/4, but after three years' rule he was overthrown by Constantius I, whose praetorian prefect, Asclepiodotus, defeated and slew him, probably somewhere in Hampshire.

ALLEGORY, GREEK. As philosophy developed, many who valued its various doctrines were led by their admiration for the wisdom and inspiration of Homer and Hesiod to find similar views symbolically expressed in the early poetry. (The tendency survives, as in a modern scholar who depicts Homer as a pacifist because Zeus dislikes Ares in the *Iliad*.) Even the early philosophical critics of Homer's world-view accepted this standpoint, and competed with the poet by expressing their

theories in 'poetic' style, whether by remoulding the myths to suit newer cosmogonies, or at least by using puns, personifications, and 'enigmas', either in verse (Parmenides, Empedocles) or in prose (Anaximander, Heraclitus). Hence the belief that Homer too 'philosophized in verse', and that allegorical treatment could make his teaching fully explicit. This belief was not altogether baseless, for Homer and Hesiod contain some traces of speculative thought and some genuinely allegorical passages. Allegorical interpretation could not develop fully until philosophy had more or less attained an independent life and an abstract (non-mythical) language of its own. Its most flourishing period was the late fifth century B.C., when Metrodorus of Lampsacus, the most thoroughgoing of all allegorists, studied Homer's 'physical' doctrines, and other adherents of Anaxagoras as well as Heracliteans and Sophists specialized (as Plato shows) in the 'hidden meanings' (*ἀπονομαίαι*: *ἀλληγορία* is a later word) of the poets. Once this method had been initiated by the philosophers for its *positive* results, it began to be exploited by 'grammarians' (first, apparently by Theagenes (q.v. 2) of Rhegium, who explained some allegories in Homer's Theomachy) for the *negative* purpose of defending morally offensive passages of Homer. But the leading allegorists were philosophers, who applied their treatment to offensive and inoffensive passages alike. The handmaid of this pseudo-science (never, be it noted, popular among the Greeks) was 'etymology' (q.v.), which dealt in the 'true' meanings, as revealed by assonances, of mythical words and names.

2. Plato attacked *positive* (philosophical) allegorism, chiefly on the ground that the authority of the poets (even if their teaching were ascertainable) cannot do duty for reasoned argument. *Negative* or defensive ('grammatical') allegorism he regarded as unimportant.

3. After Plato, among philosophers allegorism (mainly etymological) was practised by the Stoics (especially Chrysippus) for the illustration and corroboration of their own doctrines. This school, however, from Zeno (following Antisthenes, who was not an allegorist) onwards, admitted the presence of irrational 'opinion' (*δόξα*) in the poets, from which deeper meanings cannot be extracted. The Middle Stoics laid still more stress on this element; hence Cicero's Balbus (unlike the grammarians) refuses to interpret the Theomachy; and the Platonizing Stoic, Ariston of Chios, rejected allegorism entirely. In the first century A.D. the Stoic Seneca regarded it as an aberration of the grammarians; but his contemporary, the Stoic Cornutus (in his *De Natura Deorum* — *Theologiae Graecae Compendium*, Teubner), tried to recall Stoicism to something like the position of Chrysippus. Plutarch was Platonic enough to reject allegorism, but the Neoplatonists (except Plotinus) revived it in a distorted and exaggerated form (see e.g. Porphyry, *De Antr. Nymph.*).

4. As for the grammarians, Alexandrian scholarship (Aristarchus, etc.) rejected the allegorical interpretations of Homer. But Crates and his school, under Stoic influence, adopted the practice for the defence of Homer's good fame. It is ultimately from these grammarians that the bulk of the allegories found in the Homeric scholiasts and in the collection (first century A.D.) known as Heraclitus' *Quaestiones Homericae* (a veritable curiosity of literature) is derived. Their view is that Homer either erred or allegorized (cf. [Longinus] *Π. ὁμήρου* 9. 7), but (unlike Longinus) they are sure that he did not err: if Zeus binds Hera (for example), this means that aether is the boundary of air, and the two 'anvils' are the other two elements. Such is the standpoint also of Strabo (a Stoic of sorts, who regarded myth as the treacle disguising the pill of historical and philosophical truth), [Plutarch] (*Vit. Hom.*), Maximus of Tyre (for whom

poetry is elementary philosophy), Dio Chrysostom, and others. Some, but not all, of these used allegorical interpretation to vindicate Homer's omniscience against Plato.

5. Deliberately written allegories are rare in Greek and never extensive. Examples are Prodicus' *Choice of Heracles* (*Xen. Mem.* 2. 21) and Plato's parable of the Cave (*Resp.* 514 a).

J. Tate, *CR* 1927, 214; *CQ* 1920, 41, 142; 1930, 1; 1934, 105 and literature there cited; L. Radeimacher, *Mythos und Sage bei den Griechen* (1938), esp. 203, n. 10.

ALLEGORY, LATIN. The main line of succession in allegorism leads from Stoicism not to Rome but to Alexandria; Origen, for example, had read Cornutus. Some Romans (Ennius, Varro), however, adopted Greek methods with the Roman gods, and the Stoic in Cicero's *De Natura Deorum* (2. 62–9) supplies examples of 'etymological' allegorism on these lines, deriving e.g. 'Neptunus' from 'nare'. But Horace, who knew Stoicism well, is more typically Roman in ignoring 'physical' and 'etymological' speculations, and merely contending for the moral meanings of the *Odyssey* (*Epist.* 1. 2) and of the tales of Orpheus and Amphion (*Ars P.* 391 ff.). And though the word *ἀλληγορία* first appears in a Roman author (Cicero), it has only a very restricted use, as a term of rhetoric.

Unlike medieval allegorism, which led both before and after the Renaissance to the creation of allegories on a large scale (Dante, Spenser), these theories did not result in any such sustained parallelism as marks *The Pilgrim's Progress* or *The Tale of a Tub*. They merely encouraged certain poetic conceits (like calling the sea 'Neptune'), and numerous personifications, which range from Lucretius' Venus to the Philologia of Martianus Capella. These personifications are sometimes developed in poetry in a way which, as Propertius (2. 12) on the figure of Amor suggests, may indicate the influence of symbolic painting; this manner is most clearly seen in Ovid's picturesque Palace of the Sun, Home of Sleep, etc. (*Met.* 2. 1 ff.; 11. 592 ff.).

A few allegories come directly from Greek: Horace takes over Alcæus' ship of State; Silius adapts the Choice of Heracles. Some rare examples are original and unsophisticated like Tarquin's message to his son or Menenius Agrippa on the belly and the other members (*Livy* 1. 54; 2. 32). The most novel tendency was the allegorical representation of contemporary persons and events: the shepherds of Virgil (and of his imitators) correspond (to a degree still disputed) with real persons. To some modern scholars Aeneas has seemed a similar disguise for Augustus. Actual allusions in the *Aeneid* to contemporary events may excuse such a view; just as Virgil's profundity and deliberate ambiguities may excuse the older interpretation of the *Aeneid* which, from the time of Donatus onwards, found there an allegory of ideas rather than of facts (see D. Comparetti, *Virgil in the Middle Ages* (tr. of 1st ed., 1895), i, ch. 8; D. L. Drew, *The Allegory of the Aeneid*, 1927).

J. T.

ALLIA, a stream flowing into the Tiber 11 miles north of Rome (modern *Fosso Maestro*?), where the Gauls overwhelmed the Romans (18 July, 390 or 387 B.C.). Despite Diodorus (5. 114) the battle probably occurred east of the Tiber (*Livy* 5. 37; *Plut. Cam.* 18). See also AIUS LOCUTIUS.

M. Sordi, *I rapporti romano-etruschi* (1960), 1 ff.

E. T. S.

ALLIFAE, mountain town overlooking the Volturnus (q.v.), the gateway between Samnium and Campania (qq.v.): modern *Castello d'Alife* (with interesting museum in nearby *Piedimonte d'Alife*). Strategic Allifae changed hands repeatedly in the Samnite Wars. Under

Rome it descended to lower ground and became a flourishing town (modern *Alife*, with well-preserved Roman walls, etc.). E. T. S.

ALLOBROGES, a tribe of Gallia Narbonensis, occupying modern Dauphiné and Savoy. The name seems to mean 'foreigners'. They were annexed to Rome in 121 B.C. by Cn. Domitius (q.v. 2) Ahenobarbus and Q. Fabius (q.v. 8) Maximus Allobrogicus. An attempted revolt was crushed by C. Pomptinus (61). On the other hand, they resisted the invitations of Catiline (63) and Vercingetorix (52). Under the Empire the name gives place to *Vien-nenses* (from the capital Vienna), surviving only as the protecting god, *Allobrox*.

C. Julian, *Hist. de la Gaule* (1908), ii. 515, vi. 330 ff. C. E. S.

AL MINA. A port at the mouth of the River Orontes in Syria (now part of Turkey), excavated by Sir Leonard Woolley. It was established as a trading post by 800 B.C. and visited by Cypriots and Greeks, mainly Euboeans and islanders. The Greek interest became dominant, with East Greeks and carriers of Corinthian pottery replacing the islanders in the seventh century. It was probably a major source of goods for Greece in the 'orientalizing' period. After a break during the period of Babylonian domination the port revived under the Persians and flourished until it was eclipsed by the foundation of Seleucia in 301 B.C. It may be the Greek *Posideion*, said by Herodotus to have been founded by Amphilocheus after the Trojan War.

L. Woolley, *A Forgotten Kingdom* (1953); id., *JHS* 1938, J. Boardman, *Greeks Overseas* (1964), 61 ff., 125 J. H.

ALODAEI, in mythology, Otus and Ephialtes, sons of Iphimedeia, wife of Alcæus, and Poseidon. They grew till they were 9 fathoms tall and 9 cubits broad when 9 years old (*Od.* 11. 310-11). They imprisoned Ares in a bronze vessel for thirteen months (*Il.* 5. 385 ff.); they meant to climb to heaven by piling mountains on each other, but were killed by Apollo before they grew up (*Od.* 11. 315 ff.). A later variant (*Hyg. Fab.* 28) says they tried to violate Artemis; Apollo sent a hind between them, and in shooting at it they killed each other. They were punished in Tartarus (*Hyg. ibid.* and *Rose ad loc.*). In their cult (see Schultz in Roscher's *Lexikon* i. 254) they have no such unholy characteristics. H. J. R.

ALPHABET, GREEK. The various forms of local alphabet current in early Greece were all ultimately derived from a Phœnician (Semitic) source, which must have reached the Aegean in the course of trade certainly by the second half of the eighth century (the date of the earliest Greek examples found as yet). The alphabet, as taken letter by letter from the Semitic model, runs: ΑΒΓ ΔΕΖΗΘΙΚΑΜΝΞΟΠΡΨΣΤ, but not all the Greek states found a use for all the letters, though probably all continued for some time to be repeated mechanically in their order. Certain states found no use for Φ ('tau', *μ*), others for Ξ (properly, perhaps, a more complicated sibilant than is implied by our *x*), or Ψ ('qoppa', the *k* before *o* and *u*); and for *s* some used Σ, but others preferred Μ ('san', perhaps corresponding to the English pronunciation of *z*). The most striking feature in the Greek adaptation of the Phœnician model is that by altering (consciously or unconsciously) the original significance of ΑΕΙΟ and adding Υ Greek, unlike Phœnician, achieved an independent representation of vowel-sounds. ΥΦΧΨΩ are all Greek additions. Υ, from its sound and shape, appears to be a variant of Φ, a vowel *u* derived from the semivowel *μ*; evidently it belongs to the very early stage of adaptation, for no local alphabet lacks it. Ω, an Ionic invention (see below), may also be a doublet, formed by breaking the Ο. The exact origins

of the three double-consonant letters ΦΧΨ are disputed, though it is generally agreed that they originated among the eastern Greeks. Another non-Phœnician letter Τ ('sampi'?) see NUMBERS I (2) for the letter signifying 900) was used by many cities in the same eastern Ionic area for the sibilant rendered elsewhere by ΣΣ or ΤΤ; but it did not become widespread. Other Greek states also produced occasionally their own local symbol for some sound not covered by the common alphabet; but these too remained isolated experiments, except for Γ (see below).

An early form of the Greek alphabet is preserved by the archaic inscriptions from the Doric-speaking group of islands headed by Melos, Thera, and Crete. In it, as in many other 'epichoric' or local scripts, we find Φ, Ψ, Μ, and Η = *h* (except for Crete, where Η stood, as in Ionic, for *eta*; see below); but it lacks the non-Phœnician additions Φ, Χ, and Ψ, using Π (or ΠΗ), Κ (or ΚΗ), and ΠΣ. Ω is also absent. At a more developed stage the alphabets fall roughly into two main groups, 'blue' and 'red' in Kirchhoff's original colour-chart. The split lay in their usage of the signs Χ and Ψ. (1) The 'blue' alphabets used Χ for *kh* and Ψ for *ps* (if they used it at all; otherwise, ΦΣ); also (most of them) Ξ for *x*. The 'red' used Ψ for *kh* and Χ (occasionally ΧΣ) for *x*. Kirchhoff further identified the 'blue' as Eastern and the 'red' as Western, and this is still basically true; most of the central and western mainland and the western colonies are 'red', and most of the eastern mainland, the Aegean islands, and the Greek states in Asia Minor are 'blue'. But 'red'-users exist in the eastern sector (e.g. Euboea, the E. Argolid, Rhodes) and 'blue'-users in the western (e.g. Corinth's north-western colonies, and Selinus). Most colonies used the script of the metropolis (e.g. the colonies of Euboea and Achaia); but some, apparently, did not (e.g. Megara's northern and western colonies, and Syracuse).

One variety of the eastern alphabets, namely the East Ionic, eventually became predominant. In the Ionic dialect (as in many others) short *e* possibly had a close quality [e:] (see PRONUNCIATION, GREEK), but there were two forms of long *e*, one open and the other close: [e:] and [e:]. Through the absence of the *h*-sound in Ionic pronunciation, the aspirate-letter Η in this script stood not for an emphatic *h* with its (apparent) following vowel-sound *e*, but only for a lengthened vowel-sound [e:]; again, it is uncertain whether this was originally a conscious or unconscious alteration. The East Ionic alphabet appears also to have originated the new symbol Ω (see above) to represent [o:]. [e:] and [o:] continued for a time to be denoted by Ε and Ο like the short vowels, but before 400 B.C. the development of the original diphthongs *ei* and *ou* into simple long vowels of close quality made it possible to use ΕΙ and ΟΥ not only for the original diphthongs but also for the [e:] and [o:] that had never been diphthongal (e.g. *εἰμι κύριος*, older ΕΜΙ ΚΟΡΟΣ).

The East Ionic alphabet was officially accepted at Athens in the archonship of Euclides (403-402 B.C.) and thereafter gradually extended. Non-Ionic elements like Φ lingered locally for some time, and local differences, especially in vowel-pronunciation, still produced variations in spelling. As Η could no longer express the rough breathing, a modification of it (Γ) was used for this purpose in some areas and has given rise to the sign γ; another modification (Δ) has produced the sign for the smooth breathing.

ALPHABET, LATIN. It has generally been held that the original Latin alphabet of twenty letters (A B C D E F H I K L M N O P Q R S T V X) was borrowed directly from the Greek alphabet of Cumae in Campania. This city, a colony of Chalcis in Euboea, was regarded as the most likely source, because the ancient forms of certain Latin letters strongly resemble the Cumaeian equivalents. Modern opinion, however, favours the view that Latin, like Oscan and Umbrian, owes its alphabet only indirectly to the Greeks, but directly to the Etruscans. For Latin the immediate source is said to be an early form of Etruscan script, derived itself most probably from Campania, but the possibility of a different origin cannot be definitely excluded. Be this as it may, the ultimate source is a western alphabet which contained the signs X — ks and H — h.

In the Latin adaptation of this alphabet the following points are noteworthy:

(1) C (c), i.e. Γ (Gamma), was at first used for *k* as well as for *g*. This peculiarity is usually ascribed to the influence of Etruscan, which made no distinction between voiceless and voiced stops (see PRONUNCIATION, GREEK, B. 1). Of the three signs thus available for the voiceless guttural, K was used originally before *a*, C before *e* and *i*, Q (Greek Koppa) before *o* and *u* (as in Greek) and also before *y*. Eventually C was generalized for all positions except before *y*, where Q continued. Relics of the old spelling are *Kalendae* and *Kaeso*. In the third century B.C. the introduction of G, a modification of C, gave the voiced guttural a separate symbol. C., Cn. — Gaius, Gnaeus are survivals.

(2) It has been held that Z originally occupied the seventh place in the alphabet and represented the voiced *s* (z), but was dropped when this sound became *r* in the fourth century B.C. There is, however, no certain occurrence of Z in any republican inscription. Afterwards it was reintroduced to express ζ in words borrowed from Greek, and found its place then at the end of the alphabet, its original position having been occupied by G.

(3) For Latin *f* the nearest equivalent in Greek was the voiceless Digamma (FH) which occurred in some dialects, and which must have approximated in pronunciation to Scottish *wh*, i.e. *hw*. F is a simplified form of FH. This use of F (in Greek — φ) made it necessary to express *u* as well as *u* by V. Y (another form of V) was added late in the republican period to denote *v* (by then — u) in words borrowed from Greek. I had to do duty for both *i* and *j*. The use of *u* and *i* for the vowels and *v* and *j* for the semivowels is a device of medieval times and not of the Latin period.

(4) An attempt to distinguish long vowels from short by writing the former double is attributed to the poet Accius (q.v.). Later the 'Apex' (a mark like an acute accent) was sometimes employed for the same purpose. *ei* for *i* is common from about 150 B.C. after the diphthong *ei* had become *i* in pronunciation. The occasional use of 'i longa' (e.g. *rei*, *lei*) starts in Sulla's time.

(5) For double consonants a single letter originally sufficed. The reform in this respect belongs to the second century B.C. and is ascribed to Ennius.

ALPHESIBOEA, in mythology, daughter of Phaegeus of Psophis and wife of Alcmaeon (q.v.). According to Propertius 1. 15. 15, she and not Callirhoe's children avenged him; perhaps a mere blunder, perhaps an unknown variant.

H. J. R.

ALPHEUS (Ἀλφειός), the largest river of Peloponnesus, rises in south Arcadia near Asea and flows past

Olympia to the Ionian Sea. Its main tributaries are the Arcadian Ladon and Erymanthus. The Cladeus joins it at one corner of the ancient site at Olympia. Its waters were fabled to pass unmixed through the sea and to rise in the fountain of Arethusa at Syracuse (Pind. *Nem.* 1. 1; Ibycus, fr. 23 Bergk).

P-K, *GL* m. 1. 285 ff.

T. J. D., R. J. H.

ALPS. Although the passes of the Alps were used for trans-European commerce since prehistoric times, the early Greeks had no knowledge of these mountains, though a vague notion of them may lurk in their speculations about the Hercynia Silva and the Rhipaeae Mts. (qq.v); in Herodotus (4. 49) 'Alpis' is a tributary of the Danube. By the fourth century Greek travellers in north Italy and Provence brought information about a 'pillar' or 'buttress' of the north (Ephorus ap. Scymn. 188); but Apollonius Rhodius (4. 627 f.) could still believe that the Rhone and Po were interconnected. The Roman conquest of Cisalpine Gaul and Hannibal's invasion of Italy (Polyb. 3. 50-6; Livy 21. 32-7; the pass remains unidentified) brought more detailed knowledge, and Polybius gave a good description of the western Alps, though he thought that they extended uniformly in a west-east direction. The campaigns of Caesar in Gaul, and of Tiberius in Switzerland and Austria, opened up the Alps thoroughly, and in the first two centuries A.D. at least five paved roads (Little and Great St. Bernard, Splügen, Maloja, and Brenner passes) were built across them. Strabo defined the curve of the Alps with substantial correctness, and graphically described their vegetation and the predatory habits of the valley populations.

The Romans distinguished the following chains: Alpes Maritimae, Cottiae (from Mte. Viso), Graiae (the St. Bernard section), Poeninae (Mt. Blanc-Mte. Rosa), Raeticae (Grisons), Noricae (Tyrol), Carnicae, and Venetae. They also gave the name of 'Alps' to the Austrian and Dalmatian mountains.

E. H. W.

ROMAN PROVINCES. Augustus reduced the area north of Nice on both sides of the Var and constituted it as the province of Alpes Maritimae in 14 B.C.; it was governed by a *praefectus*, later by a *procurator*. The district further north, after pacification, was left under the rule of Cottius (q.v.), later it was annexed by Nero and known as Alpes Cottiae. These two little provinces formed buffers between Italy and Gaul. After Diocletian Alpes Cottiae was restricted to an area east of the Alps, extended eastwards, and included in the diocese of Italy under a *praeses*. Alpes Maritimae was limited to west of the Alps and extended; it was united to the Gallic diocese. In the second century a third Alpine province had been created, Alpes Atrectianae et Poeninae, comprising part of Raetia; it included the Vallis Poenina (upper Rhone valley, today Valais) with centre at Octodurum (Martigny) and was under a *procurator*. Diocletian re-named it Alpes Graiae et Poeninae.

H. H. S.

Cary Warmington *Explorers* 120 ff.; (Pelican) 146 ff.; Cary, *Geographic Background* 7, 105, 108 ff., 247 ff. 276 ff. et al.; R. Heuberger, 'Die Anfänge des Wissens v. d. Alpen', *Zeitschrift für Schweizerische Geschichte* 1950, 337 ff.

ALTAR. The ancients distinguished between βωμός, *altare*, the altar of a supreme god, εἶχαρι, *ara*, that of a hero or demi-god, and ἐστία, *focus*, a domestic altar, though these distinctions were not always observed. An altar for the indispensable sacrifice was a necessary adjunct of a cult (save in the case of infernal deities, to whom offerings were made in pits, βόθροι, *scrobes*). Offering tables or benches seem to have served in place of altars in prehistoric Greece. In Archaic Greece crude block altars were the focus for worship before regular

temples, *oikoi* for the cult images, were built. Later altars are either block-like or, in Ionia, have a broad flight of steps up to the sacrificial platform. Some of these are immense. The great altar of Pergamum was 40 feet high, while others at Syracuse and Parium are credited with a length of one stadium. Within the temples smaller altars served for incense or bloodless offerings. In Hellenistic times circular altars are common, while the Romans preferred the quadrangular form, and their cinerary urns were frequently in the form of altars. Altars were places of refuge, the suppliants being under the protection of the deity to whom the altar belonged.

ALTHAEMENES, in mythology, son of Catreus, king of Crete. Warned by an oracle that he would kill his father, he left Crete for Rhodes. Long after, his father came to seek him; Althaemenes took him for a pirate and killed him (Diod. Sic. 5. 59; Apollod. 3. 12-16).

H. J. R.

ALTINUM, modern *Altino* on mainland Italy near Venice, an important highway junction, where the *Viae Postumia*, *Popillia*, *Annia* (1), and *transalpine Claudia Augusta* met. In antiquity a fashionable resort town, which rivalled *Baiae* (q.v.), *Altinum* is today only a hamlet. Barbarian invasions in the Late Empire ruined it.

E. T. S.

ALYATTES, fourth Lydian king (c. 610-560 B.C.), of the house of Gyges, finally drove out the Cimmerians, extended his dominion to the Helles, and made a war on Cyaxares the Mede (585), during which occurred an eclipse (perhaps the one foretold by Thales). After the conclusion of peace through Labynetos (Nebuchadnezzar) of Babylon he continued the Lydian campaigns against Ionia, conquered Smyrna, but was foiled by Clazomenae and Miletus. He built temples to Athene near Miletus and made offerings to Delphi. The founder of the Lydian Empire, he was buried in a vast round-burrow tomb, described by Herodotus and Strabo and still visible.

Herodotus bk. 1, Strabo 13. 627. G. Radet, *La Lydie* (1893), 193-206.

P. N. U.

ALYPIUS (3rd or 4th c. A.D.), the author of an extant *Εἰσαγωγή μουσική*, the fullest source of our knowledge of Greek musical scales.

Ed. C. Jan, *Musica Scriptores Graeci* (1895), 357-406.

AMADOCUS, dynastic name in the royal house of the Odrysians, who controlled the Thracian hinterland: (1) courted by Alcibiades in 406 B.C. and an ally of Athens in 390 B.C.; and (2) one of the three Thracian kings who made alliance with Athens in 357 B.C. (Tod II, no. 151), held central Thrace against the king of eastern Thrace, Cersobleptes, and invoked the help first of Athens and then of Philip II of Macedon in 352 B.C. who soon absorbed the kingdom into his own sphere of influence. See THRACE.

N. G. L. II.

AMAFINIUS, GAIUS, older contemporary of Cicero, popularized the philosophy of Epicurus in Latin. Cicero refers to him disparagingly (*Fam.* 15. 19. 2; *Acad. Post.* 1. 5. Cf. *Tusc.* 1. 6; 2. 7; 6, 7).

Schanz-Hosius, § 157 b.

AMALTHEA (Ἀμάλθεια), in mythology, a nurse of Zeus, variously described as a nymph or a she-goat (details in Stoll, in Roscher's *Lexikon* i. 262). Possibly

she was originally a theriomorphic goddess (cf. M. P. Nilsson, *Minoan-Mycaean Religion* (1950), 466). Two principal legends, neither early, concern her. She was transformed into the star Capella (Aratus, *Phaen.* 162-4 and many later authors). Her horns were wonderful, flowing with nectar and ambrosia (schol. Callim. *Jov.* 1. 49). One of them broke off, and was filled with fruits and given to Zeus (Ov. *Fasti* 5. 121 ff.). This was the origin (the story is variously told) of the proverbial Ἀμάλθειας κέρας, *cornu Copiae*, first mentioned by Antiphanes ap. Ath. 503 b. It is very likely to be older than its connexion with Amalthea, for it is a widespread folk-motif, the magical object whose possessor can get anything he likes (or all he wants of some specific thing) out of it (see Stith Thompson, D 1470. 2. 3). Ovid has another version: when Achelous' horn was broken off in wrestling with Heracles (q.v.), the Naiads picked it up, filled it with flowers and fruit, and gave it to Bona Copia (*Met.* 9. 88-89); this is Latin, for there is no Greek goddess corresponding to Copia.

H. J. R.

AMANUS, the name applied to the mountain horseshoe of Elma Dag above Alexandretta, together with Giauour Dag which trends north-eastwards. It is separated from Taurus by the deep gorge of the Jihun. It is crossed by great passes, the Amanid Gates (*Baghche Pass* from the Cilician plain to Zeugma), and the Syrian Gates (*Beilan Pass*) carrying a Roman road from Tarsus into Syria. The part of Mt. Amanus which Cicero reduced to order (*Att.* 5. 20. 3) must be the heights that end in Ras-el-Khanzir.

E. H. W.

AMARANTUS of Alexandria (1st-2nd c. A.D.), an older contemporary of Galen (Gal. 14. 208, Ath. 8. 343 f.), was the author of a commentary on Theocritus (*Etym. Magn.* 156. 30, 273. 41), perhaps based on Theon's notes, and of a work Περὶ σκηνῆς, which probably gave historical and biographical accounts of stage performances and performers (Ath. loc. cit. and 10. 414 e).

J. F. L.

AMASEIA, capital of the kings of Pontus until soon after 183 B.C., and home of Strabo the geographer, was situated in a defile between massive heights, with a magnificent fortress commanding the middle valley of the Iris and the chief Pontic roads. Pompey gave it municipal status and made it the administrative centre of a large territory, but it later came under royal rule. Augustus attached it to Galatia in 3/2 B.C., and Trajan to his new Cappadocian province between A.D. 107 and 113. In the second century it received the titles *metropolis*, *neocorus*, and first city. It increased in importance with the development of the roads leading to the eastern frontier.

Strabo 12. 561. F. Cumont, *Studia Pontica* II (1906), 138 ff., iii (1910), 109 ff.; Magie, *Rom. Rule Asia Min.*, 180 and Index.

T. R. S. B.

AMASIS (I) became pharaoh c. 569 B.C. as champion of the native Egyptians against Apries (q.v.), but later 'becoming philhellene' granted the Greeks Naucratis (q.v.), maintained a Greek bodyguard, allied himself with Lydia, Samos, Cyrene, and perhaps Sparta, and made gifts to Greek shrines. These foreign alliances were dictated by the Persian peril, which overthrew Egypt in 525, shortly after Amasis' death. His long reign was remembered as a time of peace and prosperity attested by numerous great buildings, and Amasis himself as a great but unconventional and sometimes deliberately undignified figure.

Herodotus 1. 77 and bks. 2 and 3. G. Maspero, *Popular Stories of Egypt*, 281 ff.; F. K. Kienitz, *Die politische Geschichte Ägyptens vom 7. bis zum 4. Jahrhundert vor der Zeitwende* (1953), 30 ff.

P. N. U.

AMASIS (2) (6th c. B.C.), potter, in Athens; probably father of the potter Cleophrades; known from eight signatures. The Amasis painter, who worked for him 555-525 B.C., painted black-figure *amphorae*, *oenochorae*, *lecythi*, cups. A formal but individual artist; note particularly his Apollo and Heracles (Boston), Dionysus and Maenads (Paris), wedding scene (New York).

Beazley, *ABV*, 150; S. Karouzou, *The Amasis Painter* (1956); D. von Bothmer, *Antike Kunst* 3 (1960), 71.

T. B. L. W.

AMAZONS (*Ἀμαζόνες*), in mythology, a people of female warriors, always situated on the borders of the known world (Themiscyra on the Thermodon, Aesch. *PV* 723-5, but they have been driven from there, Strabo, 11. 5. 4; on the Tanais, Pliny, *HN* 6. 19; the Caspian Gates, Strabo, *ibid.*, citing Cleitarchus), and in all probability nothing more than the common travellers' tale of the distant foreigners who do everything the wrong way about, cf. 11dt. 2. 35. 2 (Egyptians). Attempts to find a sociological significance in the legend (Bachofen, *Mutterrecht*,² 1897, 88 and elsewhere) or other explanation postulating a foundation of fact are mistaken. Why this particular tale caught Greek fancy and was elaborated we do not know.

Amazon customs. Generally it is stated that they provide for offspring by meeting at certain seasons with men of another race, afterwards keeping their female children but getting rid of or disabling the boys (Justin 2. 4. 9-10, Diod. Sic. 2. 45. 3); they destroy the girls' right breasts to prevent them getting in the way in battle, *ibid.*; hence their name, fancifully derived from *ἀ + μαζός*. Their deities are Ares (e.g. Ap. Rhod. 2. 385 ff.) and Artemis (see below). Their occupations are hunting and fighting, their weapons being especially the bow and the 'Amazonian' crescent-shaped shield, but also axe and spear, all used on horseback.

Amazon legends. In the *Iliad* they are warred upon by Bellerophon (q.v.; *Il.* 6. 186) and by Priam (3. 189). After Homer Arctinus (*Amazons*) and others represent them as coming to the help of Priam after Hector's death under their queen Penthesilea (q.v.), daughter of Ares. Achilles kills her, but is accused of being in love with her by Thersites, whom he kills in anger (cf. Quint. Smyrn. 1. 538-810). With these stories are connected the numerous legends that this or that place in Ionia was founded by Amazons (especially Ephesus, Strabo 12. 3. 21 and 1. 4; Pind. fr. 157 Bowra; Tac. *Ann.* 3. 61. 2; cf. schol. *Il.* 6. 186). They are often connected also with the following legends.

Heracles (q.v.) and his campaign against the Amazons to get their queen's girdle produced an echo in the legend of Theseus (q.v.), modelled as usual on that of the greater hero. Either because he had been with Heracles or on account of an expedition he undertook on his own behalf (Plut. *Thes.* 26 gives several versions), the Amazons attacked him in force, reached Attica, and besieged him in Athens itself. A great battle took place on the date of the later festival Boedromia (Boedromion, unknown day), and a chthonian ceremony in Pyanopsion (?) was interpreted as a sacrifice to the dead Amazons. In general, there was a strong tendency, perhaps especially among antiquarians, to explain nameless monuments and festivals whose original meaning had been forgotten by relating them to this event (examples in Plut. *ibid.* 27). The result was that the Amazons were defeated, or at all events so stoutly resisted that they agreed to retire from Attica. For the further history of the Amazon Hippolyta (or Antiope), who had become Theseus' prisoner, see HIPPOLYTUS (1).

Of Hellenistic date, on the other hand, is the legend, or rather cycle, which represents Dionysus (q.v.) as

meeting the Amazons and conquering them. It is part of his conquest of the East; references to it are found, e.g., in Tacitus, loc. cit. and Plut. *Quaest. Graec.* 56. A Euhemerizing story in Diod. Sic. 3. 71. 4 represents them as his allies, and presumably goes back to some legend to that effect.

A favourite legend, originating in the writings of Alexander's contemporaries, represented him as meeting the Amazon queen beyond the Jaxartes. See Tarn, *Alexander ii*, appendix 19.

Amazons are very popular in art from at least the end of the seventh century. They wear short tunics, often from the fifth century showing one breast, sometimes 'Scythian' trousers, and are light-armed. The statues of wounded Amazons at Ephesus in the mid fifth century (Pliny, *HN* 34. 53, confirmed by copies) suggest that the story of their defeat there by Dionysus may be earlier than the literary evidence; see D. von Bothmer, *Amazons in Greek Art* (1957).

Besides the articles 'Amazonen' in Roscher's *Lexikon* and *PW* see especially W. R. Halliday in *The Greek Questions of Plutarch* (1928), 209 ff.

H. J. R.; C. M. R.

AMBARVALIA (*Ambaruale sacrum*, *Lustratio agri*), (1) a private rite, described by Cato, *Agr.* 141; Verg. *G.* 1. 338 ff., cf. *Ecl.* 3. 77; 5. 75 and Servius ad loc.; Tib. 2. 1; see LUSTRATION and AMBURRHUM. (2) A State rite, in which, since even the earliest *ager Romanus* had too large a circumference to be easily got about in one day, sacrifice was offered at particular points (Strabo 5. 3. 2). That this was identical with the sacrifice to the Dea Dia performed by the Arval Brothers has been repeatedly suggested (Wissowa, *RE* 562), but is denied by A. Kilgour, *Mnemos.* 1938, 225 ff. See also Latte, *RR* 65; A. Momigliano, *JRS* 1963, 100 f. and *Maia* 1963, 47 f.

H. J. R.

AMBER, a fossil resin, has a wide natural distribution in northern Europe and is also found in Sicily: so far as is known, the amber from the classical Mediterranean was Baltic. It has been found at Ras Shamra (Ugarit) and Atchana, and also appears in the *terremare* (see TERRAMARA) in northern Italy. The earliest amber from the classical world comes—probably via Wessex—from the Shaft-Graves at Mycenae (q.v.); amber is rare in Minoan Crete. J. M. Navarro deduced that during the Early and Middle Bronze Age amber travelled from west Jutland across Germany along the rivers to the Po and the head of the Adriatic. The trade was probably conducted by central European middlemen who could exchange metal for amber for onward transmission both to the east Mediterranean and westwards to Britain. Amber beads were common throughout Bronze Age Europe, and reached Brittany, central France, and the Iberian peninsula; a gold-bound amber disc from Isopata (LM III A) and a crescentic necklace from Kakovatos in Elis (LH II A) have striking British affinities. In the Iron Age a route starting from the East Baltic conveyed amber to Italy, particularly to the east coast, where Picenum reached its peak as a centre of an indigenous amber industry in the sixth century B.C. Amber was common in Archaic Greece, but not after c. 550 B.C., and it is seldom mentioned by Greek authors; Thales was the first to note its power of attraction. The main centre of amber carving under the Roman Empire was Aquileia: amber was by then a fashionable luxury and played an important part in imperial trade with the free Germans: see Pliny, *HN* 37. 30-51 and Tac. *Germ.* 45, quoted by Cassiodorus in the sixth century A.D. in a letter of thanks for a large gift of Baltic amber sent to Theodoric.

J. M. de Navarro, *Geog. Journ.* 1925, 481 ff.; P. Marconi, *Mon. Ant.* 1935, cols. 406 ff.; O. Brogan, *JRS* 1936, 220; A. Spekke, *The Ancient Amber Routes* (1957); N. K. Sandars, *Bronze Age Cultures in*

France (1957), 72 ff.; id., *BSA* 1958-9, 237 ff. (and A. E. Werner, *ibid.* 261 f.); id., *Antiquity*, 1959, 292 ff.; C. W. Beckwith, *Archaeometry* 1965, 96-109; id., *GRHS* 1966, 101-211; J. Jensen, *Act. Arch.* 1965, 41-86; D. E. Strong, *Catalogue of the Carved Amber* (British Museum) (1966). D. W. R. R.

AMBIORIX, chief of the Eburones, a Gallic tribe between the Meuse and Rhine who were freed by Caesar from dependence on the Atuatuca. However, in 54 B.C. Ambiorix revolted against Caesar: through treachery he destroyed the camp and forces of Titurius Sabinus at Atuatuca. He then induced the Nervii to besiege the winter-camp in their territory which Q. Cicero commanded. It was relieved only by Caesar's arrival. Ambiorix continued to resist (53-51) and though the land of the Eburones was devastated he evaded capture. H. H. S.

AMBITUS, a 'going round' (cf. *ambire*), or canvassing for public office. Personal contact with the electors in Rome was naturally allowed, but propaganda throughout Italy or among provincial citizens, although legal, was generally open to criticism. The State soon intervened against bribery and intrigue. The alleged law *de ambitu* of 432 B.C. is probably either a forgery or an anticipation of the *Lex Poetelia* (358), which forbade propaganda outside Rome but was soon disregarded, or of a law passed in 314 against the *coitiones*, i.e. societies of illegal canvassers. The scandalous increase of electoral corruption in the early second century required an elaborated legislation. From the *Lex Cornelia Baebia* (181) down to the laws enacted by Cicero (*L. Tullia*, 63), Pompey (*L. Pompeia*, 52), and Caesar (*L. Iulia*, 49) attempts were made to stop bribery by threatening heavy penalties (death, exile for ten years or life, etc.). Municipal authorities accordingly took steps to keep order in local elections. But the works of Cicero and the *Commentarium petitionis consulatus* sometimes attributed to his brother Quintus expose the uselessness of such precautions. In the imperial age *ambitus* came to indicate an appointment illegally secured, and was punished with confiscation and deportation.

Mommsen, *Röm. Strafr.* 865 ff.; W. Kroll, *Die Kultur d. römischen Zeit* (1933), i. 50 ff. P. T.

AMBIVIVUS TURPIO, LUCIUS, actor and theatre-director in Terence's day. His experience as a player contributed much to the success of Caecilius Statius and Terence (q.v.). All Terence's plays were, the *didascalae* record, produced by him.

AMBRACIA (modern *Arta*), situated north of the Bay of Actium, in the fertile valley of the lower Arachthus. It was founded as a Corinthian colony by Gorgos, son of the tyrant Cypselus. Its attempts to control the whole coastland of the Bay of Actium brought it into conflict with the Acarnanians and Amphilocheians, who with Athenian aid inflicted a severe defeat upon the Ambracians in 426 B.C. Ambracia allied with Athens against Philip of Macedon, who subdued and garrisoned it. In 294 it was ceded by Cassander's son to Pyrrhus (q.v.) who made it his capital and spent lavishly on its adornment. After the fall of the Molossian monarchy it became a centre of conflict between Philip V of Macedon and the Aetolian Confederacy, from which it was wrested by the Romans after a siege (189). It then became a free city.

Hammond, *Epirus*, 140 ff.

M. C.; N. G. L. H.

AMBROSIA and **NECTAR**, the food and drink respectively (but the reverse occasionally, see *Ath.* 39 a) of the gods. Their effect is to make those who take them immortal (Pind. *Ol.* 1. 60 ff., cf. *Il.* 5. 341-2). They will keep a corpse from decay (e.g. *Il.* 19. 38-39). The

smell of ambrosia is extraordinarily sweet and will overpower bad odours (*Od.* 4. 445-6). Various things connected with the gods are 'ambrosial' (the fodder of Ares' horses, *Il.* 5. 369; the 'beauty', κάλλος, apparently a sort of magical wash, with which Athena treats Penelope, *Od.* 18. 192-3); mortals of high rank wear 'nectarean' garments (*Il.* 3. 385; 18. 25), perhaps 'sweet-smelling'. That nectar is originally some kind of honey-drink (mead?), ambrosia idealized honey, is probable (see Roscher in his *Lexikon* i. 282). H. J. R.

AMBROSIVS, c. A.D. 339-4 Apr. 397, bishop of Milan. Son of the praetorian prefect at Trier, he was educated at Rome, and began a legal career, quickly becoming consular of Aemilia with headquarters at Milan. On the death of the Arian Auxentius (probably 374, not 373 as in the Bodleian MS. of Jerome's chronicle) he was chosen bishop by popular acclamation, though only a catechumen. Over the emperors Gratian, Valentinian II, and Theodosius I (qq.v.), he exercised mounting influence, his objective being an orthodox empire from which error (Arianism, paganism, Judaism) would be excluded. He persuaded Valentinian II to withstand the plea of Symmachus (q.v. 2) and the Roman aristocracy for the restoration of the Altar of Victory (384). By mobilizing popular support he resisted the demand of Justina, Gratian's widow, that a church be given to the Arian Goths in the army at Milan (385-6). By 388 his influence could make it expedient for Theodosius (reluctantly and resentfully) to revoke an order commanding the church at Callinicum on the Euphrates to restore a synagogue burnt by intolerant zealots. More to his credit is his excommunication of Theodosius for ordering the massacre of 7,000 at Thessalonica (390), a decision to which Theodosius submitted in circumstances that are obscure: by 422, in the 'Life of Ambrose' by his secretary Paulinus, the story is already encrusted with legend. Though inclined to domineer, Ambrose had positive qualities, and was not merely the archetypal administrator-bishop. His letters (*ep.* 23 spurious), funeral panegyrics, and sermons are the principal western source for the period 374-97. He used his knowledge of Greek to study philosophy and theology: large borrowings from Philo, Origen, Plotinus, and Basil occur in his commentaries and sermons (which in 384-6 substantially moved Augustine towards conversion). His *de Officiis Ministrorum* is a Christian revision of Cicero. Though there is some narrowness and a too zealous fostering of the popular demand for relics of martyrs, yet there is breadth to Ambrose's vision of the responsibility of the church as being to society as a whole, not to its own private interests. His relations with Theodosius foreshadow the medieval conflicts between church and empire. His hymns, in iambic dimeters, enjoyed lasting popularity; they moved Augustine to tears (*Conf.* 9. 6).

WORKS: Migne, *PL.* xiii-xvii; CSEL 10 vols. J. R. Palanque, *Saint Ambroise et l'empire romain* (1933); F. Holmes Dudden, *Life and Times of St. Ambrose* (1935); A. Paredi, *S. Ambrogio* (1960). E. T. 1064. H. C.

AMBURBIUM, a rite of lustration (q.v.) for the city, corresponding to the Ambarvalia (q.v.), for the fields. It is probable that it was annual, though if so it must have been one of the *feriae conceptivae*, or movable festivals, for it appears in no calendar. Beyond this we have no certain knowledge, for the conjecture of H. Usener (*Weihnachtsfest*², 310 ff.), that it was on 2 Feb. and ultimately christianized into Candlemas is too hazardous to accept even in the modified form proposed by Wissowa (*RK*, p. 142, n. 12), that it was held about then (see L. Delatte *Ant. Class.* 1937, 114 ff.). Lucan (1. 592 ff.) describes an *amburbium* of some kind, but it was clearly an extraordinary ceremony. H. J. R.

AMEIPSIAS, Athenian comic poet, contemporary with Aristophanes. His *Kóivos* (see **PHRYNICHUS** 2) was placed second to Cratinus' *Πυρίων* and above Aristophanes' *Clouds* in 423 B.C. (hyp. 5 Ar. *Nub.*). Connus was Socrates' music-master, and the play may have had a similar character to *Clouds*. Socrates himself was a character (fr. 9 quoted by D.L. 2. 28, without naming the play) and the chorus consisted of *φροντισταί*, i.e. Sophists (cf. the *φροντιστήριον* in *Clouds*). *Κωμασταί* ('Revellers'; see **PHRYNICHUS** 2) won the first prize, defeating Aristophanes' *Hirds*, at the City Dionysia in 414 (hyp. I Ar. *Av.*). We have seven titles.

FGC I. 190 L., CAF I. 670 ff., FAC I. 476 ff.

K. J. D.

AMELESAGORAS, author of a series of Greek miracle stories: cf. Ov. *Fasti* 6. 749 (see Frazer ad loc.), perhaps derived from Amelesagoras. Probably a priest of Eleusis. A fourth-century B.C. *Atthis* is doubtfully ascribed to him.

FGH in 330.

AMELIUS or **AMERIUS GENTILIANUS** (3rd c. A.D.), born in Etruria, was Plotinus' pupil A.D. 246–70. His literary work was devoted mainly to the exposition and defence of Plotinus' philosophy, of which, however, he had little true understanding.

AMERIA, modern *Amelia*, hill-town of southern Umbria. Although very ancient (Pliny, *HN* 3. 114), it is first mentioned by Cicero (*pro Rosc. Amer.* 15, 19, 20, 25), in whose day it was a prosperous *municipium*. It remained such in imperial times. Its massive polygonal walls are still well preserved.

E. T. S.

AMICITIA was a relationship of friendship between Rome and either another State (e.g. Egypt, established in 273 B.C.) or an individual (e.g. a king: see **CLIENT KINGS**); such *amici populi Romani* were recorded in a *tabula amicorum*. *Amicitia* involved only diplomatic recognition and not a formal treaty relationship or legal obligations. In private life, apart from purely personal friendships, *amicitia* might exist between individuals as a link formed for political ends, a political alliance based on common interest rather than on mutual affection. Where the status of one party (either Rome or an individual) was much greater than that of the other, the relationship tended to develop into patronage and *clientela*.

A. Heuss, *Die völkerverrecht. Grundlagen der röm. Aussenpolitik* (1933); E. Badian, *Foreign Clientelae* (1958), 121, 44 f.; J. Helle-gouar'ch, *Le Vocabulaire latin des relations et des partis politiques sous la République* (1963); P. A. Brunt, *PCPS* 1965, 1 ff. H. H. S.

AMICUS AUGUSTI, a term used unofficially to indicate senators and equites who were admitted to the Roman imperial court. The *amici* were graded (by a practice which, in private families, dated from C. Gracchus and Livius Drusus: Sen. *Ben.* 6. 34) as *primae*, *secundae*, or *tertiaae admissiois*. The term was also used in a narrower sense to indicate those who were chosen from this larger body as the Emperor's advisers (*consilarii*) and travelling-companions (*comites*): cf. Suet. *Tit.* 7. 2; Pliny, *Pan.* 88.

J. A. Crook, *Consuetudine Principis* (1955).

J. P. B.

AMISUS, a sixth-century colony of Miletus or Phocaea, situated on the Euxine coast at the head of the one good commercial route into Pontus and Cappadocia. Athenians settled there in the mid fifth century and renamed it Piraeus. Declared free by Alexander the Great, it came under the kings of Pontus, probably by 250 B.C. After its capture in 71, Lucullus restored the city, and gave it freedom and additional territory—gifts confirmed by Pompey, when he shaped its municipal constitution, and by

Caesar. Antony gave it again to kings (40), but Augustus declared it a free and allied city (30), and it remained part of the province of Bithynia and Pontus until Diocletian. The territory included the fertile coastal plain of Themiscyra, and was extended westwards to the mouth of the Halys river. Its abundant coinage and the wide dispersal of its citizens attest a commercial importance which remains today.

Strabo 12. 547; F. Cumont, *Studia Pontica* ii (1906), 111 ff.; iii (1910), 1 ff.; Jones, *Cities E. Rom. Prov.*, see Index; Magie, *Rom. Rule Asia Min.* 185 f., and Index; C. Roebuck, *Ionian Trade and Colonization* (1959), 123. T. R. S. B.

AMMIANUS MARCELLINUS (c. A.D. 330–95), the last great Roman historian, was a Greek who was born into a middle-class family at Antioch. He joined the army, and in 353 was serving among the *protectores domestici* on the Eastern frontier under the command of Ursicinus, an officer whom he highly respected. With Ursicinus he also served in Gaul under the Caesar Julian (q.v.). He marched on Julian's fateful campaign in Persia in 363, and also visited Egypt and Greece. Finally, after 378 he settled in Rome, and it was in Rome and for Roman readers that he wrote his *History*. Accordingly, although his native language was Greek, he composed his great work in Latin. Originally in thirty-one books covering the years 96–378, the *History* was a continuation of the historical works of Tacitus. But books i–xiii have been lost; and the extant narrative begins with the events of 353. Thus, we possess Ammianus' account of the second half of the reign of Constantius II, and of the entire reigns of Julian, Jovian, Valentinian I, and Valens, together with the earlier part of the reign of Gratian. The narrative is written in extreme detail: it is never dull, and its general accuracy has never been called in question. Gibbon exaggerated when he said that Ammianus wrote 'without the prejudices and passions which usually affect the mind of a contemporary', for Ammianus makes no secret of his profound, though not uncritical, admiration of Julian. He was himself a pagan like Julian, though he writes tolerantly of Christianity. Discussion of Ammianus' historical sources has turned largely on the extremely detailed account of Julian's Persian campaign of 363. Another very long account of the same expedition is extant in Zosimus, who took it from Eunapius, who in turn drew on a memoir written by the physician Oribasius, another participant in the campaign. It appears that Ammianus drew heavily on Eunapius' narrative but supplemented it by what he had seen himself. His sources in other parts of his work are practically unknown. The work includes numerous digressions on a great variety of subjects, and some of these (e.g. those on social life in the city of Rome) are of great value.

Text by C. U. Clark (Berlin, 1910–15). A comprehensive study of Ammianus is a desideratum: there are partial studies by W. Ensslin, 'Zur Geschichtsschreibung und Weltanschauung des Ammianus Marcellinus', *Klio*, Heft xvi (1923); E. A. Thompson, *The Historical Work of Ammianus Marcellinus* (1947); A. Cameron, *JRS* 1964, 15 ff., id. *CQ* 1964, 316 ff.; A. Demandt, *Zeitschrift und Geschichtsbild im Werk Ammians* (1965); R. Syme, *Ammianus and the Historia Augusta* (1968). E. A. T.

AMMON (or **AMO[U]N**), originally the god of the city of Thebes in Egypt. During the age of the Egyptian Empire Ammon became an imperial deity whose worship struck roots in Nubia, Syria, and Libya. Ammon appears in Greek literature chiefly by reason of his cult at the oasis of Siwa, which became known to Greeks after the colonization of Cyrene in the seventh century. In the temple at Siwa there was an oracle of Ammon whose fame in the Greek world came to rival that of Delphi and Dodona. In Greece Ammon was usually portrayed on coins and elsewhere with a head of Zeus to which the curling ram's horns of Ammon were added. Pindar and Herodotus testify to the authority of the oracle of Ammon, and we are

told that it was consulted by Cimon, Lysander, and others. In the fourth century Athens had a theoric vessel named the Ammonis, and public sacrifices to Ammon were conducted by the magistrates. The oracle was probably at the height of its influence when it was visited by Alexander the Great. Alexander's question and the answer he received from the god are unknown to us, but some modern writers have asserted that Alexander went to the oracle to be deified. Actually the priests there did but employ a conventional form in greeting Alexander as the son of Zeus. The cult of Ammon seems to have been popular with some members of the Ptolemaic dynasty, but it certainly was not widespread in the Mediterranean world during the Hellenistic and Roman periods. We know of *thasotai* of Ammon in Attica, and Ammon was connected in some way with the cult of Amphiarus at Oropus (*IG* ii², 1282). Occasionally Ammon is included among the Egyptian deities, though there are only two such instances at Delos. Ammon is represented in sculpture chiefly by busts, masks, and relief medallions, most of which portray him in the conventional manner.

T. A. B.

AMMONIUS (1) (2nd c. B.C.), pupil and successor of Aristarchus (schol. *Il.* 10. 397; *Suda*, s.v.), wrote, besides a commentary on Homer (*POxy.* ii. 121), other works on the Homeric poems, e.g. a treatise on Plato's borrowings from Homer ([Longinus], *Subl.* 13. 3), and essays in defence of Aristarchus' recension of the Homeric text (schol. *Il.* 10. 397); these formed a valuable source for Didymus. For his commentary on Pindar (schol. *Ol.* 1. 122 c) he used Aristarchus' work, but made independent additions (schol. *Nem.* 3. 16 b). The work on Aristophanes (schol. *Vesp.* 947), sometimes entitled *Κωμικοδοκίμει* (ibid. 1230), probably discussed the individuals attacked in Old Attic Comedy.

H. Erbse, *Beitr. zur Überlieferung der Illustscholien* (1960), 295 ff. J. F. L.

AMMONIUS (2) **SACCAS**, of Alexandria, Platonist philosopher, active in first half of third century A.D., famous as the teacher of Plotinus, who studied under him 232-42, as well as of Origen the Christian, Origen the pagan, Longinus, and others. According to Porphyry (*apud Eus. Hist. Eccl.* 6. 19) he was brought up as a Christian but reverted to paganism as soon as he began to think for himself. The epithet *θεοδιδάκτος* and the nickname Saccas (sack-carrier? wearer of sackcloth?) would seem to imply a humble origin, though other interpretations have been proposed. He wrote nothing, and no distinctive features of his teaching can be inferred with any certainty from the few references to it in Nemesius, *nat. hom.* 2 and 3, and Hierocles *apud Photium*, cod. 251. Even the story of the vow of secrecy which his pupils, like those of Pythagoras, took and subsequently broke (*Porph. vit. Plot.* 3. 24) is not entirely free from doubt. Nevertheless the teacher who evoked from Plotinus the cry *τοῦτον εἰρήτουν* and retained him as a disciple for eleven years has some claim to be considered the Socrates of Neoplatonism.

Zeller, *Phil. d. Gr.* iii. 2^a. 500 ff.; H. Dörrie, *Hermes* 1955, 439 ff.; E. R. Dodds and others, *Les Sources de Plotin* (Entretiens Hardt V), 24 ff. E. R. D.

AMNESTY. There are few certain records of public amnesties in Greek States, the earliest one being the law of Solon (*Plut. Sol.* 19), who probably restored citizen rights to every man who had lost them, unless he was dis-

franchised for murder or tyranny. Another act of general reconciliation was the decree of the Athenian Assembly after the restitution of democracy (403 B.C.), which excluded only the Thirty Tyrants (q.v. 1) and some of their most important assistants. Aristotle (*Ath. Pol.* 39. 6) quotes its chief regulation: *μηδὲν πρὸς μηδὲνα μνηστικαῖν*. The word *ἀμνηστία* is not used for this act before Plutarch; its first known use is in a Milesian inscription of the second century B.C. (*SIG* 633. l. 36). An amnesty decree as part of a general proclamation of peace (*φιλανθρωπία*) was issued by Ptolemy VIII Euergetes II (118 B.C.) (*PTeb.* 1. 5).

V. E.

AMOEBEAN VERSE, a device found mainly in bucolic poetry, consists of couplets or 'stanzas' assigned alternately to two characters (e.g. Theoc. 5 and 8; Verg. *Ecl.* 3 and 7; cf. Hor. *Carm.* 3. 9). Such passages are generally singing matches (sometimes preceded by mutual abuse) in which each theme introduced by one character is closely 'capped' by the other.

J. F. M.

AMPELIUS, LUCIUS (2/3 c. A.D.), published a *liber memorialis*, a handbook of knowledge, dedicated to a Macrinus, not necessarily the emperor of A.D. 217-18. It gives a summary of cosmography, geography with *miracula mundi*, mythology (Euhemeristic in tendency), and history (Oriental, Greek, and of the Roman Republic, with constitutional interests); incidental references to Trajan occur. Compendious in style, it was based, probably indirectly, on Nigidius Figulus and Varro, Alexandrian works, Euhemeristic genealogies of the gods, and, in the historical part, Cornelius Nepos, Trogus, the epitomized Livian tradition, and the tradition of the *De Viris Illustribus*.

EDITIONS. E. Wolffin (1854); E. Assmann (1915). Cf. E. Wolffin, *De L. Ampeli libro memoriali* (1854).

A. H. McD.

AMPHIARAUS (*Ἀμφιάραος*, *Ἀμφιάρεως*), in mythology, son of Oecles (or Apollo, Hyg. *Fab.* 70, a not unexampled genealogy for diviners). On the return of Adrastus (q.v.) from Sicyon, Amphiarus made peace with him and married his sister Eriphyle (Apollod. 1. 103). Foreknowing the result of the expedition of the Seven against Thebes, he would not take part in it till Eriphyle, bribed by Polynices with the necklace of Harmonia, compelled him (for the necklace, see Rose, *Handb. of Gr. Myth.* 185, 190, 194), it having been agreed between Amphiarus and Adrastus that in case of differences between them she should decide. Before setting out, he commanded his children to avenge his death on Eriphyle and to make an expedition against Thebes (cf. *ALCMAEON* 1). He attacked Thebes at the Homoloian Gate (Aesch. *Sept.* 570), was driven off, and, as he fled, was swallowed up in a cleft in the ground made by Zeus' thunderbolt (rhetorical description, Stat. *Theb.* 7. 771 ff.; for continuous account see Apollod. 3. 60-77). Thus originated the very famous oracular shrine of Amphiarus (Farnell, *Hero-Cults*, 58 ff.; see also under *OROPUS* and *AMMON*).

Whether he was originally a man or a god is disputed; his name ('very sacred') points to the former, as *iepos* is not used of a god in classical Greek (though Hesiod, *Theog.* 21, uses it of the 'race of immortals'). But if so, the epic hero became identified with a local deity.

Polynices offering Eriphyle the necklace appears on a number of fifth-century vases; and she is present holding it in the scenes of Amphiarus' departure popular in archaic art (see *ALCMAEON* 1). A mid-fifth-century Attic vase shows the combats at Thebes and Amphiarus' chariot swallowed by the earth (Brommer, *Vasenlisten*, 337 f., 344 f.).

AMPHICTIONIES (from ἀμφικτιόνες, 'dwellers round about') is the name for leagues connected with temples and the maintenance of their cults. Most important was the Amphictionic League organized around the temple of Demeter at Anthela near Thermopylae and later associated also with that of Apollo at Delphi (see DELPHIC ORACLE, § 6). In the earliest form known the League consisted of the following twelve tribes: Thessalians, Boeotians, Dorians, Ionians, Perrhaebians, Dolopians, Magnetes, Locrians, Aenianes, Phthiotic Achaeans, Malians, and Phocians. Thus it was possible to control the League by reducing the small tribes of central and northern Greece, as was done by Thessaly in the sixth and Aetolia in the third century B.C. The League, in co-operation with Delphi, administered the temple of Apollo and its property and conducted the Pythian Games. In the *syndrion*, which met twice a year, each tribe had two votes cast by two *hieromnemes* (q.v.), alongside of whom stood a number of *pylagorai*, later replaced by *agoratroi*. The *ekklesia* was less important and is seldom mentioned. During the fourth century B.C. a board of *noopoioi* and later of *tamiiai* supervised the rebuilding of the temple and the administration of its funds. The latter even issued Amphictionic coins.

The League was not without political importance. An old Amphictionic oath forbade destroying cities within the League or cutting off their water-supply. Later efforts at Panhellenic legislation included decrees concerning Dionysiac guilds and currency. Violators of Amphictionic laws were tried by the *hieromnemes*, who could even proclaim sacred war against offenders. Strong States, however, disregarded Amphictionic judgements, and the League was important politically chiefly as a tool of powerful States. Votes frequently were transferred from one State to another: Delphi acquired two, those of Phocis were transferred to Philip II, and the Aetolians assigned votes to their friends. They themselves probably were not admitted to the League, but by their conquests acquired direct control of the votes of others, the maximum recorded being fifteen. Under Augustus six votes were added for Nicopolis and the total for the first time increased (from 24 to 30). Under Hadrian there was a readjustment to secure a more just representation, but the details are unknown.

A selection of documents in *SIG³*. G. Busolt, *Griechische Staatskunde* ii (1926), 1280 ff.; U. Kahrstedt, *Griechisches Staatsrecht* (1922), 383 ff.; R. Flacelière, *Les Aitoliens à Delphes* (1937); G. Daux, *Delphes au II^e et au I^{er} siècle* (1936); V. Ehrenberg, *The Greek State* (1960), 108 ff. J. A. O. L.

AMPHILOCHI, a tribe of north-western Greece, occupying the wooded hill-country east of the Gulf of Ambracia and controlling the narrow passage above the coast from Acarnania and Aetolia to Ambracia. The only town, Amphilocheian Argos, claimed as its founders Amphilocheus, Alcmaeon, or Diomedes. Amphilocheia was the scene of many campaigns.

Hammond, *Epirus*, 246 ff.

N. G. L. H.

AMPHILOCHUS, in mythology, brother of Alcmaeon (q.v. 1), and, in some accounts (as Apollod. 3. 82 and 86), his comrade in the expedition of the Epigoni and helper in slaying Eriphyle. After Homer he takes part in the Trojan War (e.g. Quint. Smyrn. 14. 366), and is celebrated as a diviner. He and Calchas left Troy together by land and came to Claros (Strabo 14. 1. 27). A number of local tales (or constructions of Greek historians) connect Amphilocheus with the origins of places and peoples in Asia Minor, as Poseidon on the borders of Syria and Cilicia (Hdt. 3. 91. 1), the Pamphylian nation (ibid. 7. 91. 3), but above all the famous mantic shrine in Mallus (Strabo 14. 5. 16). Apollo killed him in Soli (Hesiod quoted ibid. 17).

H. J. R.

AMPHION (Ἀμφίων) and **ZETHUS** (Ζήθος), in mythology, the sons of Antiope (q.v.) and Zeus. Left behind by their mother at birth, they were found and reared by a shepherd. Amphion was given a lyre by Hermes and became a wonderful musician; Zethus was a herdsman. When, after long captivity, their mother escaped, they were full-grown, and recognizing her, they took her under their protection, killing or at least dethroning Lycus and putting to death his wife Dirce by tying her to the horns of a bull, as she had intended to do to Antiope. Dirce was turned into, or her bones were burned and thrown into, the spring which bore her name. Amphion and Zethus now proceeded to wall the city later known as Thebes (from Zethus' wife Thebe, Apollod. 3. 45; Thebe is a local nymph or minor goddess), Amphion drawing the stones after him by the magical music of his lyre. Amphion married Niobe (q.v.). See Euripides, fr. 179–227 Nauck, and later finds, Pickard-Cambridge in Powell, *New Chapters* iii. 105 ff.; Apollod. 3. 43 ff.; Hyg. *Fab.* 7–9.

The brothers (called also τῶ λευκοπόῳ, the White Horses, or Horsemen) were evidently alternative founders of Thebes to Cadmus (q.v.). For their cult in historical times: Farnell, *Hero-Cults*, 212 ff. H. J. R.

AMPHIPOLIS, on the east bank of the Strymon, which surrounds the city on three sides (hence its name), 25 stades from its port, Eion; it was originally the site of a Thracian town, Ennea Hodoi (Hdt. 7. 114; Thuc. 1. 100; 4. 102). After two unsuccessful attempts in 497 and 465 B.C., it was colonized by the Athenians, with other Greeks, under Hagnon, son of Nicias, in 437–436 B.C. It owed its importance partly to its strategic position commanding the bridge over the Strymon and the route from northern Greece and the Hellespont, with all the lateral communications along the Thracian coast, and partly to its commercial wealth as the depot for the gold and silver mines of the Pangaeian district (see GOLD, SILVER, PANGAEUS), and as a centre for ship-timber (Thuc. 4. 108). In Roman times the Via Egnatia (q.v.) passed through Amphipolis and Eion on its way to the plain of Philippi (q.v.). In 424 B.C. Amphipolis surrendered to the Spartan Brasidas (q.v.) without resistance; the Athenians blamed Thucydides (q.v. 2), the historian, who was with his fleet at Thasos (q.v.) at the time. In 422 B.C. an unsuccessful attempt to recover it was made by Cleon (q.v.), and in the battle both Cleon and Brasidas were killed. Amphipolis was to have been restored to Athens by the Peace of Nicias (421 B.C.), but it remained practically independent till its occupation by Philip II (q.v.) of Macedon in 357 B.C., after which it was a Macedonian city, until the defeat of the Macedonians at Pydna in 168 B.C. Amphipolis was one of the principal mints of the kings of Macedon. Under the Romans it became a 'free city', and the capital of Macedonia prima (Pliny, *HN* 4. 38).

Thucydides, 4. 102–8; 5. 6–11. J. Papastavru, 'Amphipolis, Geschichte und Prosopographie', *Kho*, Beiheft 37 (1916) (bibliography); S. Casson, *Macedonia, Thrace and Illyria* (1926), 214 ff.; W. M. Leake, *Travels in N. Greece*, 3. 183 ff.; P. Perdrizet, *BCH* 1922, 36 ff.; Head, *Hist. Num.* 214 ff.; J. Gachler, *Die Ant. Münzen Nordgriechenlands*, iii 2 (1935), 30 ff.; W. J. K. Pritchett, *Studies in Ancient Greek Topography* (1965), 30 ff. J. M. R. C.

AMPHIS, Middle Comedy poet, not anterior to Plato (fr. 6, which refers to τὸ Πλάτωνος ἀγαθόν). His twenty-eight titles come chiefly from mythology and daily life, but *Γυναικοκρατία*, *Government by Women*, sounds like an Aristophanic theme, and *Διδύραμβος* may have dealt with musical innovations of the time (cf. fr. 14).

FCG iii. 301 ff.; CAF ii. 236 ff.; FAC ii. 313 ff. W. G. W.

AMPHISSA, in western (Ozolian) Locris, commands the route leading west of Mt. Parnassus from Doris to

the Gulf of Crisa. Its traditional policy being enmity with Phocis and alliance with Thebes, Amphissa played a leading part in the Third Sacred War (q.v.), and was reduced to dependence by Onomarchus in 353 B.C. Independent again after the collapse of Phocis, it proposed, probably in the interest of Thebes, that Athens be fined by the Delphic Amphictiony, but Aeschines countered by accusing Amphissa of sacrilege in cultivating the Sacred Plain of Crisa (340); from this sprang the Amphissaeon War, in which Philip II of Macedon captured Amphissa and destroyed its walls (338).

L. Lerat, *Les Locriens de l'Ouest* (1952), P.-K., *Gl.* 2. 2. 580.

N. G. L. H.

AMPHITHEATRES. The earliest known Roman amphitheatre is that of the Sullan colony (c. 80 B.C.) at Pompeii, called by its builders *spectacula* (CIL x. 852). Pliny (*IIN* 36. 117-20) ascribes the introduction of amphitheatres at Rome to Curio (q.v. 2), the first permanent building being erected by Statilius Taurus in 29 B.C., at a time when such buildings were being constructed far and wide throughout the Empire. Architecturally, such examples as those of Emerita (8 B.C.; *Arch. Journ.* 1930, 113, pl. viii) with segmental arches, and of Nemausus (*Nîmes*), with heavy intel construction, exhibit affinity to wooden prototypes, which continued to exist (Tac. *Ann.* 4. 62). In the Pompeian amphitheatre, the arena is sunk below ground level and the seats are supported on a mass of earth held by retaining walls; the façade has external staircases. Natural arenas on artificially constructed earth mounds were common in the provinces. Imperial architects, however, rapidly evolved very large self-contained buildings, in which problems of access and circulation were solved by remarkably ingenious use of balanced vaulting systems. The most famous is the Colosseum (q.v.). The arena was honeycombed with underground passages for stage effects, comparable with those of Julius Caesar's *Forum Romanum* (*JRS* 1922, 8 f.) The amphitheatre should be distinguished from the *ludus*, or gladiators' training-school, which has much less seating and a proportionately larger arena (Lundström, *Undersökningar i Roms topografi*, 22 ff.).

Ashby Anderson-Spicer, *Architecture of Ancient Rome* (1927). See also bibliography s.v. COLLOSSEUM. Methods of laying out the non-elliptical arena are discussed by J. A. Wright, *Archaeologia* 1928, 215. I. A. R.

AMPHITRYON, in mythology, son of Alcaeus.

(1) Alcaeus = wife (variously named)

Taphius and the sons of Pterelaus quarrelled with Electryon and reaved his cattle. In recovering them, Amphitryon accidentally killed Electryon, and so had to leave his native Mycenae (or Argos), taking Alcmena and Lycinia with him. At her urging (see **ALCMENE**) he got together an army, partly by help of Creon I, king of Thebes, who made it a condition that Amphitryon should rid him of the uncatchable Cadmeian vixen, which was ravaging the country. Amphitryon obtained the help of Cephalus (q.v.) and his hound Iaelaps, which never lost its quarry, and the impasse between the beast

which could not be caught and the beast which must catch was settled by Zeus turning both to stone. Amphitryon proceeded against Pterelaus and his people the Teleboans, but could not take their city while Pterelaus lived, nor could the latter die till a golden hair which Poseidon had planted in his head was removed. Comaetho, being in love with Amphitryon, finally betrayed Pterelaus, and their city, Taphos, was taken. See further **ALCMENE**, **HERACLES**.

Apollodorus 2. 50 ff.; a somewhat different account in Arguments 4 and 5 to (Hesiod), *Shield*. H. J. R.

AMPHORA STAMPS (GREEK). Stamps impressed on plain pottery amphoras, usually on their handles, before firing in the kiln. These amphoras were two-handled commercial containers having at the bottom not a base for standing but a knob or tip to facilitate shifting; when filled, such jars were corked or otherwise firmly closed. Not all were stamped. Most were probably made for the transport and storage of wine. The stamps were evidently control stamps, which seem to have endorsed the jars as of standard capacity, each according to its geographical class and particular size. Amphoras produced by different local centres are distinguishable by special features of shape, and the stamped ones most specifically by their stamps.

Typical Greek amphora stamps contain a name in the genitive, apparently that of the endorsing potter or pottery manufacturer; plus a name, sometimes with a title, introduced by the preposition *epi*, presumably a dating authority (in the most numerous class of stamps, the name of the month made the date more precise); plus sometimes an ethnic adjective ('Thasian', 'Knidian', etc.); and/or an identifying device, which may be the arms of the issuing state, as the 'rose' characteristic of the coins of Rhodes is common also in stamps on Rhodian amphoras. Some amphoras were stamped with a single name or device only; a few on the other hand named in their stamps other magistrates in addition to the presumed dating authority.

Stamped containers were issued by a limited number of Greek States, which were important as producers of wine (a few, probably, of oil), or as large-scale commercial handlers. For instance, the elaborately stamped early Thasian amphoras were made at a time of close state-control of the production and sale of the famous wine of Thasos, both wine and control being well attested in ancient literature and in epigraphical texts of the late fifth and early fourth centuries B.C. In contrast, Rhodian wine is very little mentioned by the ancients; and yet Rhodian amphora stamps are by far the most numerous class known to modern study. Presumably the standard Rhodian container facilitated the collection of port taxes which were the main source of revenue of the State of Rhodes. The wine contained was of ordinary grade consumed in bulk, for instance by the troops of Hellenistic times. Perhaps not all of it was made in Rhodes.

Although the original purpose of dating amphoras was no doubt to fix more closely the responsibility for their being standard containers, one effect must have been to date the contents, identifying the age or special vintage of the finer kinds of wine, and the freshness of the cheaper which was not worth drinking after a year. An incidental benefit is that to modern archaeological studies: as the chronology of these objects becomes better established, their very commonly found fragments quite often provide the best evidence available for dating an excavated deposit of the fourth to the first centuries B.C.

Excavations of the Athenian Agora, Picture Book No. 6, *Amphoras and the Ancient Wine Trade* (U.S.A., 1961). Short illustrated account of the history and uses of the commercial amphora, without bibliography.

V. R. Grace and M. S. Petropoulakou, Chapter 14, on the Greek

amphora stamps, in Ph. Bruneau ed., *Exploration Archéologique de Delos*, vol. 27, *L'Îlot de la Maison des Comédiens* (in press 1968), with a general review of the field, and a discussion of earlier publications. New publications in this field are noticed currently by L. and J. Robert under 'inscriptions céramiques' in their regular epigraphical bulletins published in the *Rev. Ét. Grec.* V. R. G.

AMPLIATIO means adjournment and was a peculiarity of Roman criminal procedure in the time of the Republic, exceptionally admitted by some laws on criminal matters. When a certain proportion of the jury regarded the evidence of guilt of the accused as insufficient for condemnation or discharge, they settled by the vote *non liquet* that the case was not quite cleared up and demanded by pronouncing the word *amplius* the reiteration of the evidence. The effect was not a simple adjournment, but a repetition of all proofs with the object of elucidating the case more thoroughly. Although normally *ampliatio* might take place only once, the system lent itself to abuse before an unscrupulous jury: thus in 138 B.C. when L. Aurelius Cotta (*cos.* 144) was prosecuted by Scipio Aemilianus, probably *de repetundis*, proceedings are said to have been repeated seven times. A restriction of *ampliatio* (to once or twice) was imposed in the *questio de repetundis* by the lex Acilia (see GLABRIO 2) and later Glaucia (q.v.) introduced the system of *comperendinatio* (the division of a trial into two parts), though evidence is lacking to show whether *comperendinatio* was applied to any other *questio*. The institution apparently fell into disuse in the early Principate. See LAW AND PROCEDURE, ROMAN, III.

J. P. Baladon, *PBSR* 1938, 109 ff.

A. B., B. N.

AMULETS (Lat. *amuletum*), charms, objects worn for magical use, to protect the wearer against witchcraft, the evil eye, sickness, accidents, etc. (cf. modern mascots). Houses, walls, towns, etc., were protected in the same way. Any kind of material might be used, stones and metals as well as animals and plants, because every sort of material was supposed eventually to possess supernatural or magical virtue. Even parts of the body (hand, *fascium*, *vulva*) had peculiar efficacy; thus the snout of a wolf, fixed upon the door, guarded against evil influences (Pliny, *IIN* 28. 157), etc. The efficacy of the amulet might be enhanced by engraved figures, e.g. deities or symbols, especially on stones and metals (cf. the so-called 'Abraxas gems' and the Solomon gems in Byzantine times). Inscriptions (magical formulas, unknown magic words, the 'great name', alphabets, anagrams) are here often added, but such inscriptions were also thought effective by themselves, just as the inscriptions mentioning Herakles Alexikakos on houses (W. K. C. Guthrie, *The Greeks and their Gods* (1950), 240). A number of apotropaic charms written on papyrus have been found in Egypt (cf. also the illustrations in *POt.* 1). The magical potency was secured and strengthened by a consecration of the amulet (cf. Orph. *Lith.* 366 ff.). The forms of amulets are innumerable (270 kinds in Flinders Petrie, *Amulets*); notable are rings, nails, keys, knots, etc. Special importance derives from the place at which or the circumstances (fitting times, stellar influences) in which the amulet was found or made. A crossway and a burial-place are considered to endue anything there found (plants, bones, skulls) with magic powers. Remains of men whose death had been a violent one (shipwrecked men etc.) were eagerly sought. 'Individual amulets' depend only on chance observation and vague ideas of connexion.

Belief in amulets remained active in Greece, as in Italy, in all classes of the populations through the whole of antiquity and still survives to-day.

Words for amulets: *φυλακτήριον*, *περίαμμα*, *περίπτον*;

amuletum (for etymology see Walde-Hofmann, *Lat. etym. Wörterbuch*² (1938), i. 42), *bullā*, *crepundia*, *fascinum*, *alligatura* (later), etc.

Kropatscheck, *De amuletum apud antiquos usu* (1907); Freire-Marreco, etc., art. 'Charms' in Hastings, *ERE*; cf. Flinders Petrie, *Amulets* (1914), C. Bonner, *Studies in magical amulets* (1950).

S. E.

AMYCLAE, an 'Achaean' town on the right bank of the Eurotas c. 3 miles south of Sparta, mentioned in the Homeric *Catalogue* as in the domain of Menelaus. Accounts vary of its resistance to the Dorians (q.v.) but not later than c. 750 B.C. it, and consequently the rest of S. Laconia (q.v.), fell. It was incorporated in Spartan territory as an *oiba* (see SPARTA). But it reappears with its own magistrates in the Roman period (three *ἐφόροι*—*IG* v. 1. 26, 2nd or 1st c. B.C.). Remains of the famous sanctuary and throne of Apollo Amyclaeus (see HYACINTHUS) have been excavated on the hill of H. Kyriake (probably north of the ancient town).

Paus. 3. 18. 7-19. 6 F. Kiechle, *Lakonien und Sparta* (1963). For the sanctuary and throne: Frazer, *Paus.* ad loc.; E. Riechter, *JDAI* 1918; E. Huscher and W. von Massow, *Ath. Mitt.* 1927.

A. M. W.; W. G. F.

AMYCUS, in mythology, king of the Bebryces, a savage people of Bithynia. He was of gigantic strength and compelled all comers to the land to box with him, the loser to be at the absolute disposal of the winner. When the Argonauts arrived in his country, Polydeuces accepted his challenge, and being a skilled boxer overcame Amycus' brute force. In the fight Amycus was killed (Apollonius), or knocked out (Theocritus), and made to swear to wrong no more strangers, or, having lost the fight, was bound by Polydeuces (Epicharmus and Pisandrus ap. schol. Ap. Rhod. 2. 98).

Ap. Rhod. 2. 1 ff.; Theoc. 22. 27 ff.

H. J. R.

AMYMONE (*Ἀμυμώνη*), in mythology, daughter of Danaus. While at Argos (see DANAUS) she went 'or water, was rescued from a satyr and seduced by Poseidon, who created the spring Amymonia in commemoration (Apollod. 2. 14; Hyg. *Fab.* 169, 169 a).

H. J. R.

AMYNANDER, king of Athamania which lay between Macedon and Aetolia, in 209 B.C. tried to mediate on behalf of the Aetolians with Philip V (q.v.) of Macedon. In the Second Macedonian War he supported the Romans and had the task of bringing in Aetolia on their side. He captured Gomphi and other Thessalian towns (198), and was sent by Flamininus on an embassy to Rome after the conference of Nicaea. After Cynoscephalae Rome allowed him to keep the forts that he had taken from Philip. Later he supported Antiochus on his arrival in Greece: he was driven from his kingdom by Philip, now Rome's ally (191), but recovered it with Aetolian help in 189. He secured peace-terms from the Senate, and persuaded the Ambraciotes to surrender to Rome. He probably died soon afterwards.

S. J. Oost, *CPhJ* 1957, 1 ff.; Hammond, *Epirus*, 614 ff.

II. II. S.

AMYNTAS (1), dynastic name in the royal house of the Macedonians. The most famous bearer of the name, Amyntas III, king of Macedon c. 393-370 B.C., increased the power of his kingdom by withstanding the pressure of the Illyrians and the Dardanian king, Bardylis, and by astute diplomacy. He managed to ally himself with whatever Greek state became his most powerful neighbour: the Chalcidian Confederacy (*Tod*, ii, no. 111), the Spartans who destroyed the Chalcidian Confederacy, the Athenians when they replaced Sparta (*Tod*, ii, no. 120) and then Jason of Pherae. His consolidation of Macedonia and

his example in diplomacy were important factors in the success of his son Philip II. See MACEDONIA. N. G. L. H.

AMYNTAS (2), a client-king of the Romans in Asia Minor. Originally secretary of Deiotarus (q.v.), he commanded the Galatian auxiliaries of Brutus and Cassius in 42 B.C. He deserted after the first battle of Philippi, and after Deiotarus' death received from Antony a kingdom which eventually comprised Galatia, Lycaonia, and parts of Phrygia, Pamphylia, and Pisidia. In 35 he received the surrender of Sextus Pompeius (q.v. 6). He accompanied Antony to Actium, but by a second timely desertion, before the battle, he won Octavian's favour and his kingdom was still further enlarged by the addition of Isauria and Cilicia Tracheia. In 25 he was killed during a campaign against the Homonades, an unruly mountain tribe on the southern borders of his realm. Though he left sons, the greater part of his kingdom was annexed by Augustus and made into the Roman province of Galatia (q.v.).

M C ; T J C

ANABOLE, strictly used of the striking-up of a musical instrument, especially of a lyre, by a bard when he began to sing (*Od.* 1. 155, 8. 266: ἀναβάλλετο, *Pind. Pyth.* 1. 14.), but used in a special sense of a lyric solo introduced into a dithyramb (*Ar. Av.* 1385; *Arist. Rh.* 3. 9. 1) by Melanippides, Cinesias, and Timotheus. C. M. B.

ANACHARSIS, a Scythian prince of the royal blood who in the sixth century B.C. travelled extensively in Greece and elsewhere and gained a high reputation for wisdom. On his return to Scythia he was put to death for attempting to introduce the cult of Magna Mater which he had observed at Cyzicus. So much we learn from Herodotus (4. 76 f.). Diogenes Laertius (1. 10 ff.) and other late writers claim to know more; they give him a Greek mother, and bring him in 592 B.C. to Athens where he is Solon's guest and figures among the 'Seven Sages'; they credit him with many pithy sayings and even with (apocryphal) didactic poems. About his attitude to Greek culture there were apparently two traditions from an early date. Herodotus sees him as an ardent philhellene but mentions the claim that he thought poorly of all Greeks save the Spartans. It was the latter view which eventually prevailed. From Ephorus (fr. 42 Jacoby) onwards he appears as a type of the 'noble savage' who outstrips the Greeks in wisdom and virtue; in the *Letters of Anacharsis*, a Hellenistic composition (third century B.C.?), he becomes a mouthpiece for Cynic diatribes against a corrupt civilization. These letters were much relished: Cicero translated one of them (*Tusc.* 5. 90), and they furnished a model for Montesquieu's *Lettres Persanes* and Goldsmith's *Citizen of the World*.

R Heinze, *Philol.* 1891; P. von der Mühl, *Festschrift für H. Blumner* (1914) *Letters* text in R. Hercher, *Epistologr. Graeci* (1873), 102 ff., text and comm. F. H. Reuters, *de A. epistulis* (Diss. Bonn, 1957). Sayings. *EPG.* 1. 212 ff. E. R. D.

ANACREON (b. c. 570 B.C.), lyric poet, son of Scythian, born at Teos (*Suda* s.v. Ἀνακρέων), but left home c. 545 B.C. when it was threatened by the Persians (Strabo 644); to this he may refer in frs. 46 P. and 74 P. With other Teans he founded the colony of Abdera in Thrace (*Suda*, Strabo, l.c.). References to fighting here against Thracians may be seen in fr. 191 G. a commemorative epigram for a dead fighter, and in fr. 192 G. Here too he may have written fr. 72 P. to a Thracian girl. He was summoned to Samos by Polycrates, who wished him to instruct his son in music (Himer. *Ex Nap.* in *Hermes* 1911. 422), and he was with the tyrant when the fatal messenger came summoning the latter to his death (Hdt. 3. 121). He is said to have made many references

to Polycrates in his poems (Strabo 14. 638), but none survives. To his Samian period must belong fr. 25 with its reference to civil strife, fr. 1 for the Magnesians on the Maeander, and many of his love-poems, which seem to have been to the taste of Polycrates. After the fall of Polycrates Hipparchus fetched him to Athens ([Pl.] *Hipparch.* 228 b); thence c. 514 B.C. he went to Thessaly, where two epigrams, fr. 198 G., a dedication by King Echekratidas, and fr. 199 G., a dedication by Queen Dyeris, show him consorting with royalty. He returned to Athens, where his memory was honoured later by Critias (fr. 8) and by a statue on the Acropolis (Paus. 1. 25. 1). His death, at an advanced age, was said to be due to a grape-pip sticking in his throat (Val. Max. 9. 8). His works were edited by Aristarchus in six books of μέλη, ἱamboi, and ἐλεγεία (Heph. p. 68. 22; 74. 11 ff.). The first class contains his lyric poems, mostly monodic, such as hymns to Artemis (fr. 3 P.), Eros (fr. 13 P.), and Dionysus (fr. 357/12 P.), love-songs to Cleobulus (frs. 14–15 P.) and other convivial or sympotic poems (frs. 11, 13, 18, 57 c, 65 P.). Of his iambic poems the most complete example is his cruel poem on Artemon (fr. 43 P.). His elegiacs contain commemorative poems, dedications, and epitaphs. He writes in an Ionic vernacular with very few traces of Homeric or Aeolic language. His metres are usually simple. He favoured a stanza made of Glyconics with Pherecrateans for *clausulae*, and often used a minor Ionic verse with anacalasis, called Anacreontic after him. He is remarkable for his combination of fancy and wit, which prevents him from taking himself or others too seriously. His poetry is concerned mostly with pleasure, but this may well be due to the circumstances of its performance, and it is unwise to deduce too much about his character from it. See also IAMBIC POETRY, GREEK, and LYRIC POETRY, GREEK.

ANACTORIUM, a joint colony of Corinthians and Acarnanians, was founded c. 620 B.C. on the south coast of the Gulf of Ambracia. It sent troops to fight at Plataea against the Persians. In 425 Anactorium was absorbed into Acarnania.

Hammond, *Epirus*, 62 and 425 f.

N G L. H.

ANAGNIA, chief town of the Hernici (q.v.), in a fertile area of Italy (*Aen.* 7. 684); modern *Anagni* with well-preserved walls. In 306 B.C. Anagnia became a *civitas sine suffragio* (see *MUNICIPIMUM*) which Pyrrhus and Hannibal later ravaged (Liv. 9. 42 f.; 26. 9; App. *Sam.* 10). In the second century it acquired full citizenship (Festus 155 L.) and remained a *municipium* under the Empire (reject *Iab. Colon.* p. 230). Vitellius' general Valens and Commodus' concubine Marcia were born here (Tac. *Hist.* 3. 62; *ILS* 406). The numerous temples near Anagnia were still celebrated in Marcus Aurelius' time (Fronto, *Ep.* 4. 4).

S. Sibilis, *La Città dei Papi* (1939); Castagnoli, *Stud. urb.* 49 ff. E. T. S.

ANAGNOSTES, a reader, often an educated slave, whose duty in Roman houses was to entertain his master and guests at table by an *acroama* in Greek and Latin. Cicero (*Att.* 1. 12. 4) mentions his distress at the death of his young reader Sosthenes. He had one, however, who ran away (Vatin. ap. Cic. *Fam.* 5. 9. 2). Atticus kept very good readers whom he thought indispensable at dinner parties (Nep. *Att.* 13. 3 and 14. 1). Gellius (3. 19) records similar entertainment at dinner with the philosopher Favorinus. The word is used of a scholar giving

a *recitatio* in a theatre (Gell. 18. 5. 2 and 5). The *anagnostes* also took part in grammatical instruction. J. W. D.

ANAHITA (*Anaitis*, Ἀναΐτις), Persian goddess of the fertilizing waters (*Zend-Avesta*, Yašt 5). Artaxerxes II (404–358 B.C.) introduced the use of cult-images (Berossus ap. Clem. Alex. *Protr.* 5. 65. 3), and the cult spread to Armenia, Cappadocia, Pontus, and especially to Lydia. In Armenia sacred prostitution (q.v.) was practised (Strabo 532–3), and in Pontus Anahita possessed many *hierodouloi* (q.v.). In Lydia she was assimilated to Cybele and to Artemis Ephesia, and hence called Mater Anahita or Artemis Anahita, but Iranian traditions, notably the fire-cult, also persisted (Paus. 5. 27. 5–6). She was often called the Persian Artemis. See ANATOLIAN DEITIES.

Nilsson. *GGR* ii. 2 672 ff. (with references to the earlier literature); S. Wikander, *Feuerpriester in Kleinasien und Iran* (1946). F. R. W.

ANAKES (ἄνακες), old by-form of ἄνακτες, hence 'kings', 'lords'. A title especially of the Dioscuri (q.v., and see LSJ, s.v.), but also of the Tritopatores (? q.v.), (Cic. *Nat. D.* 3. 53), and perhaps certain deities at Amphissa (Paus. 10. 38. 7, where MSS. have ἄνακτες).

H. J. R.

ANALOGIA, DE, Caesar's lost treatise inspired by the teaching of Antonius Gniphio (q.v.), written on a journey across the Alps (55 or 54 B.C.) and dedicated to Cicero. It defended the principle of Analogy (q.v.) and a reformed *elegantia* founded on the *sermo cotidianus*. Gellius (1. 10. 4) quotes from its first book the famous advice 'ut tamquam scopulum sic fugias inauditum atque insolens uerbum' (see H. Dahlmann, *Rh. Mus.* 1935, 258 ff.).

J. W. D.

ANALOGY and **ANOMALY** were the watchwords of two opposing schools of thought about linguistic phenomena. In particular, the analogists held that nouns and verbs were capable of classification into orderly declensions and conjugations on the basis of similarity of form (*ἀναλογία*), whereas the anomalists were impressed by the many manifestations of irregularity (*ἀνωμαλία*) which actual usage sanctioned. Neither party viewed language in a true perspective or effected any appreciable change in living speech; but the discussion was not entirely barren in so far as it stimulated grammatical studies. The analogist at least had a standard he could apply in cases of genuine doubt; the strength of the anomalist's position lay in his readiness to accept language as he found it. Underlying the controversy was the question (already discussed in Plato's *Cratylus*; cf. Lucr. 5. 1028–90) whether language was a natural growth or an arbitrary convention; and though matters of style did not at first enter into the argument, the analogists tended to be allied with purists in their condemnation of barbarisms and solecisms, and anomalists with those who claimed a place for new coinages and modes of expression. Amongst the Greeks, the quarrel was most keenly pursued on the side of analogy by the grammarians of Alexandria (e.g. Aristophanes of Byzantium, Aristarchus, Dionysius Thrax), and on the side of anomaly by the Stoics (e.g. Chrysippus, who wrote four books *Περὶ ἀνωμαλίας*) and the scholars of Pergamum (e.g. Crates of Mallos). At Rome the Scipionic circle in their pursuit of *Latinitas* and *purus sermo* inclined to favour the analogical view (cf. Lucil. 964). Varro (*Ling. bks.* 8–10) gives both sides of the controversy but leans towards the analogists, as did Caesar (See ANALOGIA, DE) and 'Atticists' like Calvus. Cicero (e.g. *Orat.* 155–62), Horace

(*Ars P.* 70–72), and Quintilian (1. 6) give greater weight to the claims of *consuetudo*.

Norden, *Ant. Kunst.* 1. 184 ff.; J. E. Sandys, *Hist. of Class. Scholarship* 1 (1921) (*passim*); G. L. Hendrickson, *CPhil* 1906, 97; F. H. Colson, *CQ* 1919, 24. J. F. M.

ANATOLIAN DEITIES. The outstanding characteristic of Anatolian religion is the worship of a mother goddess and her youthful male consort, embodiments of the fertility principle, who reappear constantly under a diversity of local, differentiating names, epithets, and forms. There is some evidence (J. Keil, *JOAI.* xviii. 1915) for a divine triad of mother, father, son, but this is a less constant feature. The apparent diversity which masks the basic similarity of the great pair is due in part to the strength of localism and to local differentiation and development, in part to the complex racial background of Asia Minor, and in part to identification with various Hellenic divinities, each of whom might fitly be thought to represent one facet of the native god's complex personality. Thus the male god, as supreme, might be called Zeus; as giver of oracles, Apollo; and as healer, Asclepius. Generally the goddess predominated in Asiatic cities, while in Hellenic foundations the god was accorded higher rank. The native names, such as Cybele (q.v.), Attis (q.v.), Ma, Wanax, seldom or never appear in Asia Minor on Greek inscriptions (though local epithets do), and are known chiefly from Neo-Phrygian documents or from outside Anatolia. According to Calder (*CR* 1927, 161–3) this shows that while speakers of the native languages used the old names, speakers of Greek did not, except in the Mysteries (cf. the mystic formula in Dem. *De Cor.* 260). Of the Mysteries themselves we know little, and that chiefly from non-Asiatic sources. See AGDISTIS; ANAHITA; ATTIS; CYBELE; EUNUCHS, RELIGIOUS; HIERODOULOI; METRAGYRTES, PROSTITUTION, SACRED; SAHAZIUS.

The inscriptions are our chief source of material: see especially the series *Monumenta Asiae Minoris Antiqua* (1928–) and numerous articles in *Anatolian Studies presented to Sir Wm Ramsay* (1921), *Anatolian Studies presented to W. H. Buckler* (1930), and L. Robert, *Études anatoliennes* (1937). A valuable synthesis in Cumont, *Rel.* or ch. 3. I. R. W.

ANATOMY AND PHYSIOLOGY. The earliest records of true anatomical observations are in fragments of Alcmaeon (q.v. 2; c. 500 B.C.) of Croton. There can be no doubt that he actually dissected animals, discerning the optic nerves and the tubes between the nose and ear cavities now known as 'Eustachian'. He even extended his researches to embryology, describing the head of the foetus as the first part to develop—a justifiable interpretation of the appearances. His followers investigated especially the blood-vessels.

2. The theory of Empedocles (q.v.; c. 492–432 B.C.) of Acragas of four elements was to control medical thought for two millennia, but more immediately influential was his view taken from folk-belief that the blood is the seat of the innate heat (*θερμὸν ἐμφύον*)—'the blood is the life'. This led to the consideration of the heart as centre of the vascular system and chief organ of the *pneuma* which was distributed by the blood-vessels. *Pneuma* was identified, in accord with certain philosophical tendencies, with both air and breath. These views of Empedocles were rejected by the important Coan Medical School, then becoming prominent, but were widely accepted elsewhere. Notably Diogenes of Apollonia, a contemporary of Hippocrates of Cos, was led to investigate the blood-vessels, and his account of the vascular system is the earliest that is intelligible.

3. Early members of the so-called 'Hippocratic Collection' (see HIPPOCRATES 2) are the treatises *On the sacred disease* of about 400 B.C. and *On the nature of man* which

is but little later. The author of the former opened the skulls of goats and found the brain to resemble that of men in being cleft into symmetrical halves by a vertical membrane. The large veins of the neck are intelligibly described. The arteries are said to contain air, an idea gained from their emptiness in dead animals. *On the nature of man*, ascribed by Aristotle to Polybus, son-in-law of Hippocrates, contains the doctrine of the four humours. These—Blood, Phlegm (*pituita*), Black Bile (*melancholia*), and Yellow Bile (*cholē*)—make up the living body as the four elements make up non-living matter. This doctrine persisted till quite modern times and has left definite traces in the anatomical and, indeed, psychological nomenclature of our own day.

4. An interesting Athenian practitioner of the middle and late fourth century B.C. was Diocles (q.v.) of Carystus. He drew his opinions from many sources, adopting the humours of Polybus and the innate heat of Empedocles, regarding with Aristotle the heart as seat of the intelligence but accepting also Sicilian pneumatism. His observations on the early human foetus are the first recorded. His work *On anatomy*, based to some extent on human material, has disappeared and we have no general early treatise on the subject. Our best representative of the anatomy of the fourth century is the tract in the Hippocratic Collection *On the heart*, of about 340 B.C. We cannot be sure that it is based on human dissection, but it discusses the anatomical similarities of man to animals. It places the innate heat in the heart. Air enters direct into the left ventricle, where takes place some subtle change of blood into spirit, and where too the intellect resides. The heart valves are described and experiments are suggested for testing their competence. The startlingly false statement that in drinking some of the fluid passes into the lungs may indeed, as the author of the tract claims, have been 'verified' by experiment: a coloured fluid was found to have stained the inside of the windpipe of a pig whose throat was cut while it was drinking the fluid. This experiment may well have been performed; and the fluid may have entered the windpipe as the animal was squealing. The view that drink passes into the lungs is also found in Plato's *Timaeus* and in other writings; it was opposed by, amongst others, Aristotle.

5. The direct contributions of Aristotle to human anatomy and physiology are unimportant and he did not dissect the human body (though he may have dissected a human embryo). The text of his account of the heart is corrupt and incomprehensible, but it was in any event very inadequate, nor did he make any proper distinction between arteries and veins, though he gave fair descriptions of several of these vessels. On the other hand, he gave excellent accounts of certain organs from the standpoint of comparative anatomy. Some were illustrated by drawings, the first anatomical figures recorded. We can confidently restore certain of them, for example, that of the organs of generation. His nomenclature of the uterine organs is still partially retained.

6. Among the noteworthy errors of Aristotle is his refusal to attach importance to the brain. Intelligence he placed in the heart. This was contrary to the views of some of his medical contemporaries, contrary to the popular view, and contrary to the doctrine of the *Timaeus*. Aristotle must have known all these, and it is conjectured that, having found the brain to be devoid of sensation, he concluded that it could not be associated with it. 'The function of the brain was to prevent the heart from overheating the blood. This was effected by the cold Phlegm (*pituita*) secreted in the nose, supposedly by the brain, an idea preserved in our anatomical term 'pituitary body'.

7. After Aristotle's time Alexandria became the chief

medical centre. Herophilus (q.v.; c. 300 B.C.) of Chalcedon, of the earliest Alexandrian scientific generation, adhered to the humoral theory. He was the first to dissect the body publicly and investigated the anatomy of the eye, the brain, the nervous system, the vascular system, and the organs of reproduction. He recognized the brain as the central organ of the nervous system and the seat of intelligence; distinguished the cerebrum from the cerebellum; described the fourth ventricle of the brain and even its 'calamus scriptorius', which he named (*ἀνάγλυφος κάλαμος*); and described the meninges and the 'wine-press' (torcular, *ληρός*), a confluence of veins which modern anatomists, following Galen, still name after him. He was the first to grasp the nature of nerves other than those of the special senses, and he distinguished motor from sensory nerves. The modern anatomical terms 'prostate' (*ἀδενοειδὲς προστάται*) and 'duodenum' (*δωδεκαδάκτυλον*) are derived, through Galen, from him. We owe to him also the first description of the lacteals and the first clear differentiation of arteries from veins. Pulsation was for him an active arterial process. He wrote an anatomy for midwives and is the first medical teacher recorded—perhaps apocryphally—to have had a woman pupil.

8. Erasistratus (q.v.) of Chios, a younger Alexandrian contemporary of Herophilus, abandoned the humoral doctrine and was the first to set forth a complete physiological scheme. Accepting the atomism of Democritus and its consequent 'materialism' he described the body as a mechanism, combining this with a pneumatic theory. Observing that every organ is equipped with a threefold system of branching vessels—veins, arteries, and nerves—he concluded that the minute divisions of these, plaited together, compose the tissues. Blood and two kinds of pneuma are the sources of nourishment and movement. Blood is carried by the veins, which take it to the heart. Air is taken in by the lungs and passing thence to the heart becomes changed into the first pneuma, the *vital spirit* (*πνεῦμα ζωτικόν*) which is sent to the parts of the body by the arteries. Carried by these to the brain it is there changed to the second pneuma, the *animal spirit* (*πνεῦμα ψυχικόν*), and distributed to the parts through the nerves, which are hollow. The so-called Anonymus Londinensis ascribes to Erasistratus an experiment designed to demonstrate quantitative changes associated with animal metabolism.

9. The view of Erasistratus that the heart is the centre and source not only of the arterial system but also of the venous system was ahead of all opinion until Harvey (1628). Perceiving that arteries though empty in dead bodies, yet when incised in the living contain blood, he sought to explain the presence of the blood in them as due to the escape of pneuma through the wound leading to a vacuum by which blood was sucked into the arteries from the veins through fine intercommunications between artery and vein. The view that arteries contain air was experimentally disproved by Galen 450 years later, but Erasistratus, having realized that the two systems communicate at their periphery, was not very far from the conception of a circulation.

10. Erasistratus advanced on Herophilus' knowledge of the nervous system, giving detailed descriptions of the cerebral ventricles, which he regarded as filled with animal spirit. He observed the cerebral convolutions, noting their greater elaboration in man than in animals, associated, as he thought, with man's higher intelligence. He made experiments on the brain and meninges, traced the cranial nerves into the brain itself, and distinguished cranial sensory from cranial motor nerves. He also attained a clear view of the action of muscles in producing movement, regarding their shortening as due to distension by animal spirit.

11. After Erasistratus anatomy and physiology declined at Alexandria. The schools that arose at Pergamum, Smyrna, Corinth, and elsewhere were poor substitutes. The human body ceased to be dissected and when Galen began his studies about A.D. 145 it was difficult to find even a skeleton in these schools. Nevertheless, two Ephesians of the first Christian century produced noteworthy anatomical works. Of these Rufus gave to many parts of the eye the names by which they are still known, and in his book on the pulse claimed that the heart strikes the chest-wall during contraction. Had this critical observation been known to Galen it should have led him to modify his physiological scheme, perhaps in the direction of a circulation. Soranus of Ephesus wrote a book on pregnancy with figures of the uterus. Indirect medieval copies of these are the first surviving anatomical drawings exhibiting details ascertainable only by human dissection.

12. Anatomical and physiological science in antiquity reached both its climax and its end with Galen (q.v.; A.D. 129-99), who spent his early years gleaning in many schools the traditions of his predecessors. Though he was an eclecticist and a dogmatist (thus he taught the humoral theory which had been abandoned by Erasistratus and others) he engaged in dissection and vivisection (of animals) and in carefully planned experiments, such as his famous experiment designed to demonstrate the irreversibility of the flow from the kidney to the bladder. His active professional life was passed at Rome, where he gave public demonstrations. He never dissected a human body, but made numerous accurate anatomical and physiological studies on a variety of animals, among them the Barbary ape, the structure of which is not very different from that of man. He also experimented on dogs, bears, cattle, and pigs, being struck with the resemblance of the latter to human beings.

13. Galen elaborated a complete physiological scheme which was generally accepted until modern times. It involves three kinds of pneuma or spirit in addition to air. The basic principle of life was drawn from the world-pneuma of air by breathing. Entering the body through the windpipe it passes to the lung and thence to the left ventricle, where it encounters the blood. His view as to the changes that then take place in the blood was most ingenious, and the errors that it involved remained current till the seventeenth century.

14. Galen believed that chyle, brought from the digestive system by the portal vessel, reaches the liver, and that that organ has the power of enduing it with a pneuma, innate in all living substance, which came to be called the *natural spirit* (πνεῦμα φυσικόν). It then became venous blood. This is distributed by the liver through the venous system, ebbing and flowing in the veins.

15. One great branch of the venous system, a mere extension of a great trunk direct from the liver, was the cavity that we now call the right ventricle. The venous blood that entered this had two possible fates. Most of it, remaining awhile in the ventricle, left it to ebb back into the liver, having parted with its fumes or impurities, which were carried off to the lung and thence exhaled—hence the poisonous character of re-breathed air. A small fraction of the blood in the right ventricle, however, trickling through minute channels in the heart-substance, dripped slowly into the left ventricle. There, encountering the air brought through the lung, these drops of dark blood, charged with natural spirit, are elaborated into the higher *vital spirit*, which is the active principle of the bright arterial blood.

16. The arterial blood charged with vital spirits is distributed through the arteries to all parts of the body. Some passes to the so-called 'rete mirabile' (πλέγμα μέγιστον θαύμα) at the base of the brain, and becomes

charged with yet a third pneuma, the *animal spirit* derived from the brain. This is distributed by the nerves. The 'rete mirabile', absent in man, is well developed in cattle. It was from experiments and observations on them that this remarkable system was derived.

17. Of Galen's positive anatomical knowledge the best presentation is his great work *On anatomical procedure* in sixteen books, of which nine survive in Greek while the remainder have been recovered in modern times in Arabic translation. His treatise *On the uses of the parts of the body of man* was the most popular of his general anatomical works. *On anatomical operations* is a superb experimental study. *On the anatomy of muscles* is an accurate and remarkable pioneer survey. *On bones, for beginners* is his only work based on human material and has influenced modern nomenclature. Among his terms current in modern anatomy are apophysis, epiphysis, trochanter, diarthrosis, and synarthrosis.

18. In pure anatomy Galen's best work was on the muscles, and his writings contain frequent references to the form and function of muscles of various animals. Thus the dissection of the muscles of the orbit and larynx was performed on the ox, while those of the tongue are described from the ape. Occasionally he indicates that he is aware of the difference between the muscles he is describing and those of man. His famous and intensely teleological description of the structure and functions of the hand was derived from that of the Barbary ape. There is perhaps in all literature no passage that is more confident as to the exact details of the divine intentions.

19. Galen's anatomical and physiological writings are both voluminous and detailed. They are, however, ill arranged, and, since he has no adequate technical nomenclature and is very argumentative, his meaning is often obscure. Though his account of the brain and of its related nerves is difficult, yet his classification and description of the cranial nerves remained in vogue until quite modern times, and part of his nomenclature of them survives even in current anatomy.

20. Perhaps Galen's most remarkable achievement was his experimental investigation of the spinal cord, the continuity of which at different levels was, he showed, necessary for the maintenance of certain functions. Injury between the first and second vertebrae caused instantaneous death. Section between the third and fourth produced arrest of respiration. Below the sixth it gave rise to paralysis of thoracic muscles, respiration being carried on only by the diaphragm. If the lesion were yet lower the paralysis was confined to the lower limbs, bladder, and intestines. Galen's knowledge of the functions of the spinal cord was not developed and indeed was not adequately appreciated until well into the nineteenth century.

21. Galen's scientific works are among the most influential of all time. Nevertheless he established no school and he had neither disciples nor followers. On his death in 199 the prosecution of original anatomical and physiological inquiry ceased abruptly. Medical writers after Galen, on the whole, restrict themselves to summarizing and commenting upon the views of their predecessors. Galen's influence and reputation in the Middle Ages are, at least in large part, to be accounted for by the fact that his strongly teleological views were, like those of Aristotle, congenial to medieval thinkers.

Remains of fifth-century anatomists in Diels, *Vorsokr.*¹⁰ (1960). E. Krause, *Diogenes von Apollonia* (1908-9). M. ANAXAGORAS (c. 500–c. 428 B.C.; Apollodorus ap. Diog. Laert. 2. 7), son of Hegesibulus, a native of Clazomenae, the first philosopher to reside in Athens. He came in 480, probably with Xerxes' army, and 'began to philosophize at Athens in the archonship of Callias (Calliades) at the age of 20, where he is said to have remained 30 years' (Demetrius of Phalerum ap. D.L. *ibid.*). The teacher and friend of Pericles, he was indicted by the latter's enemies on charges of impiety and medicine; but with Pericles' aid he escaped to Lampsacus, where he founded a school and died in general honour and esteem. Accounts of the trial vary: the probable date is 450, not 432 (as Ephorus ap. Diog. 12. 38 f. and Plut. *Vit. Per.* 32 state). Anaxagoras' astronomical views, the main ground of the charge, were influenced by the fall of the meteorite at Aegospotami in 468–467. Only one work is ascribed to him: from bk 1 a score of fragments is preserved by Simplicius.

Conflicting testimonies make modern reconstructions of Anaxagoras' system problematic. He accepts, like Empedocles, the Eleatic denial of 'becoming' and void, but unlike Empedocles presses this denial to the point of holding that in the beginning the world was a 'mixture' containing 'seeds' (*σπέρματα*) of every qualitatively distinct natural substance, organic and inorganic: these (flesh, blood, bone, gold, etc.) are infinitely divisible into parts like each other and the whole—hence Aristotle's name for them, 'homoeomeries' (*ὁμοιομερῆ*)—and are Anaxagoras' 'elements'. His theory thus conflicts both with atomism and with Empedocles' less drastic pluralism. Seeds take their quality from their prevailing component (fr. 12); but actually, at every stage of division, imperceptible portions of every other 'qualified' thing remain, for (fr. 11) 'in everything there is a portion of everything except mind (*νοῦς*)'. This last Anaxagoras introduces as initiator of cosmic motion and animating principle of plants and animals. Mind, because itself separate and unmixed, can move other things.

Anaxagoras thus explains growth and nutrition without assuming qualitative change (cf. fr. 10): the characters which 'emerge' must have been present, imperceptibly, in the germ of food, and rendered apparent by regrouping. But much is obscure, e.g. the place of the 'opposites' (such as hot and cold, wet and dry) in Anaxagoras' scheme. Tannery, followed by Burnet and others, took these to be the basic ingredients of the 'seeds'. Cornford, identifying them with the things of which Anaxagoras says that there is a portion in everything (frs. 4, 6, 11, 12), used this dictum to explain only the qualitative differences in the seeds and not, as did Aristotle and the ancient commentators, all natural change. But this view, as well as discounting the ancient tradition, imported a gross ambiguity into Anaxagoras' words 'a portion of everything in everything'; and later writers have tried to save the literal sense of the dictum and at the same time save Anaxagoras from the vicious regress that seems to come from combining it with his other thesis that the characters which anything exhibits are those which predominate among its ingredients, e.g. that gold is the stuff in which gold predominates.

Anaxagoras' cosmology is a closely knit part of the

theory. *Nous* starts a rotatory motion (*περιχώρησις*) which gradually spreads. Thus seeds are separated out, the dense, moist, cold, and dark (*αἶψα*) going to the centre, their opposites (*αὐτῶν*) to the circumference. The heavenly bodies are stones, torn from the earth, which motion renders red-hot (cf. ASTRONOMY). Anaxagoras follows the Ionian tradition of a flat earth, but knows the cause of eclipses. Whether he assumes only one world (cf. Cornford against Burnet, *CQ* 1934) remains controversial. Sense-perception depends on the contrast of unlikes.

Anaxagoras' great reputation in antiquity is endorsed on the whole by Aristotle. He solves the problem raised by Parmenides more subtly, if less simply, than the Atomists. His failure to use mind as a teleological principle, which Plato and Aristotle deplore, was fortunate for science.

Diels¹¹, ch. 59. A useful survey of modern literature in D. E. Gershenson and D. A. Greenberg, *Anaxagoras and the Birth of Physics* (1964), to which should be added C. Strang, *Archiv für Gesch. der Philosophie* 1961. On A's use of physiological ideas, G. Vlastos, *Philosophical Review* 1950. A. J. D. P.

ANAXANDRIDES (4th c. B.C.), Middle Comedy poet, possibly of Rhodian birth (Ath. 374 b), won the first prize ten times (*Suda* s.v.), three times at the Lenaean (*IG* ii². 2325. 142). His first victory was in 376 (*Marm. Par.* 70), and he was active at least as late as 349 (*IG* xiv. 1098. 8). Forty-one titles have survived, and eighty citations; some of the titles look back to Old Comedy (e.g. *Cities*, *Huntsmen*), some forward to New Comedy (e.g. *Madman*, *Sannia*), and many are mythological (e.g. *Anchises*, *Protesilaus*). The longer fragments reveal an elegant style and a moralizing strain which earned him a place in anthologies.

K. J. D.

ANAXARCHUS (4th c. B.C.) of Abdera, a follower of Democritus, with Sceptical tendencies, was the teacher of Pyrrhon the Sceptic. His nickname *Εὐδαιμονικός* implies that he treated happiness as the *summum bonum*. He accompanied Alexander the Great on his Asiatic campaigns and was much esteemed by him. He is usually represented in antiquity as a flatterer of Alexander, but this may be due to Peripatetic prejudice. He was cruelly put to death by the Cypriot prince Nicocreon.

Testimonia and fragments in Diels, *Vorsokr.* II n. 235 ff. W. D. R.

ANAXILAS (1), tyrant of Rhegium, 494–476 B.C. By collusion with Samian refugees he tried to seize Zancle, then part of the dominions of Hippocrates (q.v. 1), but the Samians made a compact with Hippocrates and were expelled by Anaxilas in 490/489, who settled there other Greek colonists, chiefly Messenians (see MESSANA). Anaxilas fortified the straits against the Etruscans but, antagonistic to Gelon (q.v.), supported Carthage in 480. Afterwards he made his peace with Syracuse, and married his daughter to Hieron I (q.v.). In 477 he threatened Locri, but Hieron intervened; he died the next year.

E. S. G. Robinson, *JHS* 1946, 13 ff.; Dunbabin, *Western Greeks*, chs. 13–14, G. Vallet, *Rhegion et Zancle* (1958), 335 ff. A. G. W.

ANAXILAS (2) (4th c. B.C.), Middle Comedy poet, can be dated to the middle of the fourth century B.C. by the fact that in three of his plays (Diog. Laert. iii. 28) he ridiculed Plato. We have nineteen titles and some forty citations, the longest of which (fr. 22, from *Neotris*) characterizes well-known hetairai.

K. J. D.

ANAXIMANDER (*Ἀναξίμανδρος*) (c. 610–540 B.C.) of Miletus wrote the first philosophic prose treatise c. 546 B.C. He held that the origin (*ἀρχή*) of all things was the

Infinite (τὸ ἀπείρον), which he regarded as the Divine (τὸ θεῖον), describing it as 'eternal and ageless' and as 'surrounding' and 'governing' the innumerable worlds. Each world he envisaged as the product of a number of pairs of conflicting opposites which are separated from one another out of the Infinite and 'pay due compensation to each other according to the assessment of Time for their injustice'. He thereby first conceived the universe as a cosmos subject to the rule of law. Anaximander revolutionized astronomy by treating the paths of the sun and moon as great circles passing beneath the earth and composed of fire wrapped in vapour. The visible sun is an aperture in the vapour equal in diameter to the earth. The earth remains freely in the centre and cannot fall, because there is no reason why what is situated in the middle and is equidistant from the extremities should move in one direction rather than another and it is impossible that it should move in opposite directions at once. He introduced into Greece the gnomon, which he used for astronomical observation, and drew the first map of the earth. He held an evolutionary theory of the origin of animals and men. See also ASTRONOMY.

Diels, *Vorsokr.* 11. 81 ff.; Burnet, *EGP* 50 ff.; W. Jaeger, *Theology of the Early Greek Philosophers* (1947), 17 ff.; Kirk-Raven, *Presocratic Philosophers*, ch. 11, C. H. Kahn, *Anaximander and the Origins of Greek Cosmology* (U.S.A., 1960), Guthrie, *Hist. Gk. Phil.* 1. 72 ff. A. H. C.

ANAXIMENES (1) of Miletus (fl. c. 546 B.C.), junior and perhaps pupil to Anaximander (q.v.), maintained in simple Ionic prose that the one cosmos, which comes into existence and perishes in a perpetual cycle, is encompassed and sustained by the infinite and eternally moving divine air or vapour (ἀήρ), which it breathes. The cosmos further consists of 'air', which, when rarefied, becomes fire, when condensed, progressively wind, cloud, water, earth, stone; from these lesser divinities all other things are formed. The earth is thin and flat, floating on air. Sun, moon, and stars are leaves of fire. They are exhaled from the earth and carried by air around it; they are invisible at night, behind high ground in the distant north. Anaximenes' astronomy is retrograde from Anaximander's; but his theory of condensation and rarefaction is the first strictly physical account of the relation of things to their primary constituent and had a lasting influence.

Diels, *Vorsokr.* 11. 90 ff.; Burnet, *EGP* 72 ff.; Zeller-Mondolfo, *La filosofia dei Greci* 1. II (1938), 206 ff.; Kirk-Raven, *Presocratic Philosophers*, ch. 19, Guthrie, *Hist. Gk. Phil.* 1. 115 ff. A. H. C.

ANAXIMENES (2) of Lampsacus (c. 380-320 B.C.), historian and rhetorician, a pupil of Zoilus. His historical work (*FGH* 72) comprised *Hellenica*, *Philippica*, and a work on Alexander; [Demosthenes] xi was thought in antiquity to be his; xii is perhaps his also. He also wrote on Homer. The *Rhetorica ad Alexandrum*, first attributed to him by Victorinus, on the ground of Quint. 3. 4. 9, is the sole surviving pre-Aristotelian manual of rhetoric.

Text of *Rhetorica*: M. Fuhrmann (1966); H. Rackham (Loeb). Translation, E. S. Forster, in *Works of Aristotle* xi (1924). See L. Radmacher, *Artium Scriptores* (1951), 200 ff.; V. Buchheit, *Das Genos Epideiktikon* (1960), 189 ff., argues against A.'s authorship of *Rhetorica ad Alexandrum*. D. A. R.

ANAXIPPUS, New Comedy poet, 'in the time of Antigonus and Demetrius Poliorcetes' (*Suda*). Four comedies are plainly attributed to Anaxippus; and one fragment (49 vv.) of another is assigned to '(X)anthippus'—possibly a mistake for Anaxippus—the verbose but humorous speech of a cook who elevates the gastronomic art (see H. Dohm, *Mageiros* (1964), 156 ff.).

FCG i. 469 f., iv. 459 ff.; *CAF* iii. 296 ff.

W. G. W.

ANCAEUS (Ἀγκαῖος), in mythology, (1) son or grandson of Lycurgus of Arcadia (IIy. *Fab.* 14. 14), an Argonaut (Ap. Rhod. 1. 164), the strongest next to Heracles, with

whom he is paired (ibid. 426, 531, etc.), killed in the Calydonian boar-hunt (Ov. *Met.* 8. 315, 391 ff.). (2) son of Poseidon (Ap. Rhod. 1. 187) and king of the Leleges of Samos; often confused with (1) (as Apollod. 1. 112 and 126). A skilled navigator, he steered the *Argo* after Tiphys died (Ap. Rhod. 2. 894). He planted a vineyard and was told by his servant that he should not live to drink its wine. On the grapes ripening, he pressed some of the juice into a cup, but the man remarked πολλά μεταξύ πέλει κύλικος καὶ χεῖλος ἄκρου and Ancaeus was killed by a boar before he could drink (schol. Ap. Rhod. 1. 188).

II. J. R.

ANCHISES, in mythology, son of Capys and grandson of Assaracus, belonged to the younger branch of the Trojan royal house. Spoken of with respect in the *Iliad*, he is chiefly famed for his marriage with Aphrodite while pasturing herds on the slopes of Ida, from which union Aeneas was born. Forbidden to reveal the name of his son's mother, he is said to have boasted of it among his friends, and for this was blinded or lamed by lightning. At the fall of Troy he was rescued by Aeneas, who carried him on his shoulders from the city, and subsequently shared his son's wanderings. Tradition gives many accounts of his death; Virgil places it at Drepanum in Sicily, and later describes him in the Elysian fields.

R. D. Williams, *Virgil, Aeneid* iii (1962), 3 ff.; R. G. Austin on *Aeneid* ii (1964), 247 ff. R. A. B. M.

ANCHISTEIS (ἀγχιστεῖς), the kinship-group, extending to second cousins, which was the basis of family law at Athens; also called ἀγγυγενεῖς. In cases of homicide, the nearest male relative within this limit had to prosecute; in cases of intestacy, the nearest male relative within this limit could claim the property. Relatives on the father's side had precedence, but the mother's relatives were included.

W. K. Lacey, *The Family in Classical Greece* (1967). A. W. G.

ANCONA (Ἀγκών, so called from the shape of its harbour, which resembles an elbow-joint), a town of Italy in the territory of the Piceni, with the only good natural harbour on the central east coast, but with a poorly developed hinterland. It is first mentioned as a colony of refugees from Dionysius I of Syracuse. It was used by Cinna (q.v. 1) as the mustering point of his expeditionary force against Sulla (84 B.C.), and it subsequently served as a port of embarkation to Dalmatia. Trajan rebuilt the harbour and erected a commemorative arch on a mound above it.

G. Annibaldi, *Il Museo naz. delle Marche* (1961), especially for Picene culture. M. C.

ANCYRA (Ἄγκυρα, modern *Ankara*), a city in that part of Phrygia settled by the Galatians, one of whose three tribes, the Tectosages, made it their capital. It lies in a strong position, around the steep fortified crag which formed its acropolis, at an important road junction, and rose to prominence as the capital of the province Galatia, as again to-day as the capital of Turkey. On the walls of the temple of Rome and Augustus, the ruins of which still stand, was inscribed the bilingual record of the reign of Augustus known as the *Monumentum Ancyranum* (q.v.).

W. M. C.

ANDOCIDES (1) (c. 440-c. 390 B.C.), a member of a distinguished aristocratic family, whose grandfather had been one of the ten Athenian envoys who negotiated the Thirty Years Peace of 446. In 415, shortly before the great expedition to Sicily was due to depart, the Athenians were greatly dismayed one morning to discover that

in the night the statues of Hermes around the city had been mutilated: Hermes being the god of travellers, this act was presumably intended to affect the progress of the expedition, but it was also taken, curiously, as a sign that the democracy itself was in danger. In the subsequent accusations the young Andocides and his associates in a club, which was probably suspected of oligarchic tendencies, were named as having shared both in the mutilations and in profane parodies of the Eleusian Mysteries, and were arrested. Andocides, to secure immunity and, as he claimed, to save his father, confessed to a share in the mutilations and gave an account of the whole affair which, though it may have been far from the truth, was readily accepted by the Athenians. This secured his release, but shortly afterwards, when the decree of Isotimides, aimed at him especially, forbade those who had confessed to an act of impiety to enter temples or the Agora, Andocides preferred to leave the city and began to trade as a merchant, in which role he developed connections all over the Aegean and in Sicily and Italy. In 411, seeking to restore himself to favour at Athens, he provided oars at cost price to the fleet in Samos, and shortly afterwards returned to Athens to plead for the removal of the limitation on his rights. Unfortunately for him, the revolution of the Four Hundred had just installed in power the very class of citizens whom his confession had affected, and he was put into prison and maltreated. Released, perhaps at the fall of the Four Hundred, he returned to his trading, in the course of which he was for a while imprisoned by Evagoras (q.v.), the king of Cyprus. At some time after the re-establishment of the democracy in 410, he returned to the city to renew his plea (the speech *de Reditu* belongs to this occasion) but he was again unsuccessful. Returning finally under the amnesty of 403, he resumed full participation in public life, and in 403 (or 399) successfully defended himself in the *de Mysteriis* against an attempt to have him treated as still subject to the decree of Isotimides: the sixth speech of the Lysian corpus, *Against Andocides*, was delivered by one of his accusers. In 392/391 he was one of the Athenian envoys sent to Sparta to discuss the making of peace, and on his return in the debate in the assembly he delivered the *de Pace* urging acceptance of the proffered terms, which were in fact very similar to those of the King's Peace of 387/386. The Athenians, however, rejected the peace, and Andocides and the other envoys were prosecuted by the young Callistratus (q.v. 2). Andocides anticipated condemnation by retiring into exile, and we hear no more of him.

SPEECHES. In addition to the three speeches mentioned above, there is a fourth speech, *Against Alcibiades*, preserved under his name, which purports to be concerned with an ostracism in 415; most scholars regard this as a forgery of late date. Fragments of four other speeches are preserved.

Greek and Roman critics discovered in Andocides faults which, according to their canons, were serious; and admittedly the faults are there. He sometimes carries the use of parenthesis to absurd extremes; he cannot keep to one point at a time; his style is so loose that the argument is hard to follow. On the other hand, this inconsequential method of expression is at times effective, giving the impression of an eagerness which outruns premeditated art. He possessed a natural gift of expression, a fine flow of words, and a good narrative style. He was not a professional rhetorician, and if he neglected scholastic rules, it can at least be claimed for him that he was successful on his own unconventional lines.

For general bibliography see *ATTIC ORATOIS*.

ANDOCIDES (2) (fl. last quarter of 6th c. B.C.), a potter in Athens, known from nine signatures. Two important artists worked for him: 1. Andocides painter. Painted amphorae and cups in black- and red-figure (the black-figure parts perhaps by another), red-figure, and white-figure technique. Successor of Execias (q.v.). 2. Menon painter (probably called Psiax; worked also for the potter Menon, etc.). Painted amphorae, hydriae, and small vases in black-figure, black- and red-figure, and red-figure technique.

ABV 253; ARV² 1.

T. B. L. W.

ANDREAS (d. 217 B.C.), physician of Ptolemy IV (Philopator). Works: *Νάρθηξ* (a pharmacopoeia, with descriptions of plants and roots); *Περὶ δακτύλων* (on snake-bites); *Περὶ τῶν ψευδῶς πεπιστευμένων* (against superstitious beliefs); *Περὶ στεφάνων* (all lost except for fragments).

ANDRISCUS, an Adramyttian adventurer, claiming to be Philip, the son of Perseus (q.v. 2) and Laodice, appeared as pretender to the Macedonian throne. On approaching Demetrius I of Syria, Laodice's brother, he was handed over to Rome, but escaped and with Thracian help invaded Macedonia, where by two victories and repressive measures he established control in 149 B.C. Rejecting negotiations with Scipio Nasica, he defeated Juventius Thalna, but was crushed in 148 by Q. Caecilius Metellus (q.v. 3).

Livy, *Per.* 48-50; Polyb. 36. 9-10 and 17, Zonar. 9. 28 G. Colin, *Rome et la Grèce* (1905), 608. A. H. McD.

ANDROGEUS (Ἀνδρόγεως), in mythology, (1) son of Minos (q.v.) and Pasiphae, was treacherously killed by his defeated rivals after a victory in the Panathenaic games, or (in another version) was sent by Aegeus king of Athens against the Marathonian bull and destroyed by it. To avenge him Minos besieged Athens, and was only appeased by an annual tribute of seven youths and seven maidens to be thrown to the Minotaur. Later he was honoured in Phalerum as *κατὰ πρόθυμον ἥρωες*. (2) Greek leader killed at Troy (Verg. *Aen.* 2. 370-3).

R. A. B. M.

ANDROMACHE, in mythology, daughter of Eëtion king of Thebe and wife of Hector (q.v.; *Il.* 6. 395 ff.). Her father and brothers were killed by Achilles, her mother taken prisoner but ransomed (*ibid.* 414 ff.). After the fall of Troy her son Astyanax was put to death by the Greeks (*Little Iliad*, fr. 19 Allen; *Iliu Persis*) and she herself became Neoptolemus' slave (*ibid.*). She bore him a son, Molossus, eponym of the Molossians. According to Euripides (*Andromache*) she narrowly escaped death at the hands of Neoptolemus' wife Hermione (q.v.) during the visit to Delphi in which he was killed (*see* NEOPTOLEMUS 1). After his death (Euripides) or before his marriage (*Aen.* 3. 327-9) she was handed over to Helenus, with whom she lived the rest of her life in Epirus. H. J. R.

ANDROMEDA, in mythology, daughter of Cepheus king of the Ethiopians and his wife Cassiopeia or Cassiope (*Κασσιόπεια*, *Κασσιόπη*). A principal source of our information about her is apparently the *Andromeda* of Euripides (Nauck³, 392 ff.). Cassiopeia boasted that she was more beautiful than the Nereids; they complained to Poseidon, who flooded the land and sent a sea-monster to ravage it. On consulting Ammon, Cepheus learned

that the only cure was to expose Andromeda to the monster, and she was accordingly fastened to a rock on the sea-shore. At this point Perseus (q.v. 1) came by on his way from taking the head of Medusa. He fell in love with Andromeda at sight, and got her and her father's consent to marry her if he could kill the sea-beast. This he did; but Andromeda's uncle Phineus, who had been betrothed to her, attacked him by open force (Ov. *Met.* 5. 1 ff.) or otherwise (ἐπιβουλεύοντος, Apollod. 2. 44). Perseus showed him and his followers the head of Medusa, turning them all into stone. He and Andromeda stayed for a time with Cepheus, and left their eldest son, Perses, with him; from Perses the Persian kings were descended. They then went on to Seriphus and thence to Argos and Tiryns (see PERSEUS 1). Their other children were Alcaeus, Sthenelus, Heleius, Mestor, Electryon, and a daughter Gorgophone (Apollod. 2. 43-9; other authorities in Nauck, loc. cit). The story is of a type widely distributed (Stith Thompson R111. 1. 3) and may well have had a share in forming the legend of St. George and the dragon (Politis in *Λαογραφία* 1913, 220 f.). (The traditional site in later time was Joppa.)

That Andromeda, Perseus, Cepheus, Cassiopeia, and the monster were all turned into the constellations bearing their names (the monster is Cetus) was asserted by Euripides, according to [Eratothenes], *Catast.* 17, by the natural interpretation of his words; he may, however, merely mean that Euripides tells the story of her rescue. If the first interpretation is right, it is one of the very few Greek star-myths which can be traced back to an earlier date than the Alexandrian period.

Manilius 5. 22 ff., 540 ff.; [Eratothenes] 15-17; Hyginus, *Poet. Astr.* 2. 9-12; schol. German. *Astr.* 77 ff., 137 ff., Bircysig.

H J R.

ANDRON of Ialica, author concerned with the genealogies of Greek cities and families (Συγγενικά or Συγγενικά), a popular subject in the fourth century B.C. The ascription of an *Atthis* to him is improbable.

FGH I. 10.

ANDRONICUS RHODIUS (1st c. B.C.), Peripatetic philosopher, who recalled the attention of the school to the works of Aristotle and Theophrastus, which had sunk into neglect. He arranged the works of both in the order in which those of Aristotle and in part those of Theophrastus have survived; on his arrangement of Aristotle's works is based the list preserved by Ptolemy. He wrote a treatise in at least five books on the order of Aristotle's works, with discussion of their contents and authenticity, an account of his life, and a transcript of his will. In his work he had the assistance of the grammarian Tyrannio. Andronicus' editorial work is probably to be dated about 40 B.C., and his assumption of the headship of the Peripatetic school at Athens, if it can be accepted as historical, shortly thereafter. The work *De Passioibus* which passes under his name (bk. 1, ed. X. Kreuttner, 1885; bk. 2, ed. K. Schuchardt, 1883) is spurious.

M. Plezia, *De Andronici Rhodii studiis aristotelicis* (1946); I. Düring, *Aristotle in the Ancient Biographical Tradition* (1957), 413 ff. W D R.

ANDROS, the most northerly of the Cyclades (q.v.). In the eighth century B.C. the island was dependent on Eretria. It submitted to Persia in 490, thus angering Athens. Pericles planted Athenian colonists there, halving its tribute to the League in 449. About 410 it revolted from Athens; as a free State it entered the second Athenian League (378-377). After the battle of Chaeronea the island came under Macedonian control, which remained more or less continuous until the occu-

pation by Pergamene and Roman forces in 200. After 133 Andros was associated with the Roman province of Asia.

IG xii. 5; P-K, GL IV 89 ff.; T. Sauciuc, *Andros* (1914), D. P. Paschalis, *Andros* (1925). W. A. L.

ANDROSTHENES, of Thasos, sailed with Nearchus (q.v. 2) and wrote an account of the voyage and of his subsequent exploration of the inner Persian Gulf and Bahrein.

See ALEXANDER (3), Bibliography, Ancient Sources.

ANDROTION (c. 410-340 B.C.), of a distinguished and wealthy family, entered Athenian public life c. 386. He was the only attidographer who was an active politician and was engaged in military and diplomatic matters for the next forty years. A pupil of Isocrates and member of the Council before 378, he opposed Demosthenes and Eubulus on the question of a Persian alliance against Macedon, and aimed to recover Athens' prestige by combining a moderate conservative policy at home with an energetic foreign policy against Persia. He was accused by Demosthenes (*Or.* 22) in 354-353 of making an illegal proposal (παράνομα), and was in exile in Megara between 350 and 340 where the eight books of his *Atthis* were written. This shows a deliberate shift of interest from pre-history to contemporary events. Books 1-3 dealt with the early history to the end of the Peloponnesian War and books 4-8 the following sixty years to 343. It was the main source of Philochorus' *Atthis* for the historical period, and was one of Aristotle's sources for the *Athenian Constitution*.

FGH III 324 and see under *Atthis*.

G. L. R.

ANGELS (ἄγγελοι, 'messengers'). Hermes was considered the messenger of the Olympians, and named Angelos (once Eüangelos). The same function was attributed to Iris (in the *Iliad* and *Homeric Hymns*), and in Plato (*Cra.* 407 c, 408 b) the two are the divine *angeloi*. Ossa ('fame') is called *angelos* (*Il.* 2. 93-94), likewise Hecate-Artemis (Sophron in schol. Theoc. 2. 1.), which signifies her intercourse with the nether world and the dead. Hermes is once (*Epigr. Gr.* 575, 1 (1st-2nd c. A.D.)) named the 'messenger of Persephone'. Thera has yielded interesting sepulchral inscriptions (Christian), in which the 'angelos' of the defunct is mentioned, IG xii. 3. 933 ff. (Index, 257; in no. 1238 the protective genius of the grave, cf. Hermes in Thessaly). The angels became important in Gnostic and Neoplatonic systems (in the following order: gods, archangels, angels, demons, heroes); they were connected with the planets (under Jewish-Chaldaean influence), dominated metals and plants, and their names had magic virtues (see *PGM*, Index). Their cult flourished in Egypt and Asia Minor especially in the second and third centuries A.D. and gained new life with the Christians (Michael replacing Hermes, but also Apollo, etc.).

Th. Hopfner, *Griechisch-ägyptischer Offenbarungszauber* (vol. xxi and xxii of Wessely's *Studien zur Pädagogik und Papyruskunde* 1922, 1924) 1. § 135 ff.; H. Leclercq, art. 'Anges' in Cabrol-Leclercq, *Dictionnaire d'archéologie chrétienne* 1. 2, col. 2080 ff.

S. E.

ANGERONA, Diva, a Roman goddess, worshipped on 21 Dec. (Divalia or Angeronalia), in the Curia Acculeia (Varro, *Ling.* 6. 23), or the *sacellum Volupiae*, where there stood on the altar a statue of Angerona with her mouth bound up and sealed (Macrobius, *Sat.* 1. 10. 8; *CIL* i², p. 337). The ancients connected her name with *angina* (Festus, 16, 12 Lindsay) or *angor* (Masurius ap. Macrobius, *ibid.*); Mommsen with *angerere*, 'to raise up', sc. the sun after the solstice, on the basis of the *Fasti Praenestini* (see Latte, *RR* 134).

Wissowa, *RR* 241.

H. J. R.

ANGITIA, or the **ANGITIAE**, Marsian goddess(es), principally worshipped on the Lacus Fucinus at Lucus Angitiae (now *Luco*), also at Sulmo, where the plural of the name is found (see, for the former, *Aen.* 7. 759). Her native name was Anagitia and she seems to have been a goddess of healing and very popular.

R. S. Conway, *Italic Dialects* (1897), 182, 289 f.; Wisniewa, *RK* 49; Schürmer in Roscher's *Lexikon*, s.v. H. J. R.

ANICETUS (*PW*, s.v. Aniketos, 5), prefect of the fleet at Misenum, was freedman and tutor of Nero, who used him to murder Agrippina. Subsequently induced to confess himself Octavia's paramour, he was exiled to Sardinia (A.D. 62). A. M.

ANIMALS, SACRED. Neither Greece nor Italy regarded any beast as an incarnate god in classical times (unlike Egypt, with the practices of which land they became familiar), but various animals were sacred in one sense or another. (1) A number of beasts and birds are connected with individual gods; thus, the eagle is associated with Zeus, the cow and the peacock with Hera, the owl with Athena, the bull with Dionysus, and so forth; in Italy, the wolf and the woodpecker are creatures of Mars (e.g. *Plut. Rom.* 4). It is a tenable theory that some at least of these deities were originally theriomorphic. (2) Besides the consecrating of victims to gods and the dedication of a live creature to some deity (as the horses dedicated by Julius Caesar, Suet. *Divus Iulius* 81; such animals were unworked and called *ἀφῆτοι* in Greek, e.g. *Pl. Critias* 119 d) we occasionally hear of an animal living in a shrine, as serpents (q.v.) very commonly in chthonian cults (Erechtheus, on the Acropolis, *Hdt.* 8. 41. 2; Asclepius, *Ar. Plut.* 733); geese sacred to Juno (Moneta) (*Livy* 5. 47. 4). (3) Sporadically, we hear of some creature locally sacred and inviolable; e.g. tortoises on Mt. Parthenon (Paus. 8. 54. 7); these were regarded as sacred to Pan. Such phenomena have often been explained as survivals of totemism, but there is no evidence that this ever existed in Greece, see Rose, *Primitive Culture in Greece* (1925), 47 ff. Perhaps no one explanation can fit them all. For a full discussion see Nilsson, *GGR* 1⁴. 212 ff. See also **BIRDS** (SACRED). H. J. R.

ANIO (modern *Aniene*), a river of Italy rising in the Sabine country and separating it from Latium (Pliny, *HN* 3. 54). After flowing seventy-five miles west-south-west it joins the Tiber at the site of Antemnae just north of Rome. Landslides in A.D. 105 and later have changed but not destroyed its spectacular cascades at Tibur (Hor. *Carm.* 1. 7. 13; Pliny, *Ep.* 8. 17). It supplied two aqueducts, Anio Vetus (272 B.C.) and Anio Novus (A.D. 52), and below Tibur was navigable (Strabo 5. 238). Skeletal remains of Neanderthal man indicate very ancient habitation of its valley.

G. Colasanti, *L'Aniene* (1906); T. Ashby, *Aqueducts of Ancient Rome* (1935), 54, 252. E. T. S.

ANIUS, in mythology, king of Delos and priest of Apollo. His mother Rhoeo being with child by Apollo, her father Staphylus son of Dionysus set her afloat in a chest, which stranded on Delos. Anius, when he grew up, married Dorippa and had three daughters, the Oenotropoi, Oeno Spermo, and Elais, who could produce wine, seeds, and oil, by grace of Dionysus. They thus supplied Agamemnon's army before Troy. Anius received Aeneas (*Aen.* 3. 80). See Lycophron 170, and scholiast there. H. J. R.

ANNA PERENNA, a Roman goddess, whose festival was on 15 March, i.e. the first full moon of the year by the old reckoning (1 March being New Year's Day). It was popular and merry (see *Ov. Fasti* 3. 523 ff., with

Frazer's commentary). She is usually explained as being a year-goddess, and her name thought of as created from the prayer 'ut annare perennareque commode liceat', 'for leave to live in and through the year to our liking' (Macrobius *Sat.* 1. 12. 6). See, however, Altheim, *Terra Mater* (1931), 91 ff., who makes her 'Mother Perenna', a form of Ceres with Etruscan connexions. She has no mythology, but Ovid (*ibid.*) tells two stories (? of his own invention), one identifying her with Anna the sister of Dido (546-656), the other with an old woman of Bovillae named Anna ('Granny'), who fed the plebeians during the secession to the Mons Sacer (663-74). On what follows, 675 ff., cf. Rose, *Handb. Gr. Myth.*, 324 and Latte, *RR* 138, who would connect it with a mime of Laberius).

H. J. R.

ANNALS, ANNALISTS. From the beginning of Roman history to 400 B.C. only scanty records were preserved, but the main lines of tradition are authentic in the fourth century, and from c. 300 B.C. the *tabulae pontificum* (q.v.) gave regular records of magistrates and events of cult importance. These tables were the first annals, from which Ennius took the title of his historical epic; but their character was still mainly sacral in Cato's day (*Origines*, bk. 4, fr. 77 Peter), and the variance in the foundation-dates of Rome indicates that the pontifical records were not in full chronicle form in the middle of the second century.

The senatorial historians, Fabius Pictor, Cincius Alimentus, Postumius Albinus, and C. Acilius (qq.v.), appear to have been more than annalistic writers, and rather discursive historians, following the Hellenistic *κρίσεις* and episodic histories; Cato's *Origines* continued their work in Latin. The evidence of both pontifical records and historiography sets the first regular annalistic history in the latter part of the second century B.C.

Under Cato's influence the 'old' annalists, Cassius (q.v. 2) Hemina and Calpurnius Piso (q.v. 1), began the systematic reconstruction of Roman history. Then the publication of the *Annales Maximi* in eighty books, *ab initio rerum Romanarum usque ad P. Mucium Pontificem maximum*, presumably by P. Mucius Scaevola himself (Pontifex Maximus from 130 to c. 115 B.C.), set out in formal arrangement year by year the official events of the State, viz. elections and commands, civic, provincial, and cult business. The composition involved for the regal period legendary and antiquarian speculation, for the early Republic systematic reconstruction from the surviving records, and probably added to the framework of the *tabulae pontificum* from fuller records in the archives.

The publication was definitive, and the new material and its formal arrangement determined the character of 'late' annalistic history from Cn. Gellius to the Sullan annalists and Livy. The influence of rhetorical theory allowed, probably Gellius, certainly Valerius Antias and Claudius Quadrigarius (qq.v.) to elaborate the ceremonial form and expand the records in the light of senatorial constitutionalism, legalistic antiquarianism, and family interests, with conventional rhetorical composition; this led, particularly with Antias, to inaccuracy, invention, and tendentious falsification.

The annalistic form was thus established as a historiographical *γένος*. Licinius Macer (q.v. 1) and Aelius Tubero (q.v. 2) in following it appear to have checked their material, but Livy accepted both material and arrangement in its Sullan form, and his work enshrines the annalistic tradition. The form was adapted to the narration of contemporary history, and was used by the imperial annalists, imposing its conventions even on Tacitus.

ANNIANUS, a 'neoteric' (cf. ALEXANDRIANISM) of Hadrian's time, composed *carmina Falisca* on country themes.

Bachr. FPR; Morel, *FPL.* Schanz-Hosius, § 513.

ANNICERIS, of Cyrene, philosopher of the Cyrenaic school, probably lived under Ptolemy I, who died 283 B.C. He, Hegesias, and Theodorus 'the godless' became leaders of three divergent branches of the school, his own originality consisting, so far as we know, in stressing the importance of sympathetic pleasure.

Bibliography, s.v. CYRENAICS.

W. D. R.

ANNOA, the Roman corn supply. Under the Republic, although there was a free market, the Senate maintained a general supervision, forbidding speculation and in a famine authorizing subsidized distribution. At least from 299 B.C., the aediles (q.v.) were in general charge of this. The quaestor (q.v.) at Ostia organized imports to the capital and the Senate watched his efficiency (see SATURNINUS 1). In emergencies other magistrates (e.g. praetors: Asc., *Corn.* 59) might have to act and special *curatores* (e.g. M. Scaurus (q.v. 1) about 104 B.C.) could be appointed. Nevertheless shortages were frequent. Most of the imports came from Sicily and Sardinia.

Gaius Gracchus (q.v. 4) first passed a *lex frumentaria*, offering fixed quantities of grain to each citizen at a subsidized price. Other Populares lowered the price, until Clodius (q.v. 1) made distributions free. A shortage in 57 led to Pompey's *cura annonae* with unprecedented powers. Caesar (q.v. 1) created two new aediles (*Ceriales*) to manage the whole organization and limited recipients of free grain to 150,000.

Augustus, after a famine, accepted a *cura annonae* in 22 B.C., raised the figure of recipients to 200,000 and put distributions under a board of praefects. Later he appointed an equestrian *praefectus annonae*—who became one of the highest equestrian officers—to organize supplies. By the time of Trajan there was a *fiscus frumentarius*. Claudius strengthened and expanded the *Annona* office, put an official in charge of Ostia, and offered encouragement to importers of grain. Large numbers of inscriptions to numerous grades of officials attest the size and elaborate organization of the office. Most of the grain was imported from Egypt and Africa, and imports were recognized as the Emperor's responsibility. The cities of Italy and the provinces looked after their own supplies, usually through special officials; but government help was often given in times of famine, and numerous local dignitaries are honoured for similar services.

Armies, under the Republic, were supplied by requisition and (chiefly) by compulsory purchases in the provinces. Under the Empire, similar methods were commonly used, but the organization of supplies was the Emperor's responsibility. Legionaries (but, after Nero, not the Praetorian Guard) had part of their wages withheld to pay for their provisions. Under Septimius Severus (q.v. 1) continued inflation (and the Emperor's dependence on the army) led to the legions' receiving their food free. The consequence of this was the *annona militaris*—an additional tax (in kind) imposed on Italy and the provinces at first exceptionally, but before long regularly (see INDICTIO), and the word 'annona' henceforth chiefly means this tax. The *mansiones* of the Postal Service (q.v.) were extended to store the produce received, which was generally collected by the soldiers in charge of the service

and managed by an *actuarius*. The chief effect, apart from the heavy burden on the provincials, was to increase the army's independence and the autonomy of provincial forces.

Annona often appears as a goddess on imperial coins, with attributes connected with coins and ships.

PW, s.v. 'Annona', 'Frumentum'. D. van Berchem, *L'Annone militaire dans l'Empire romain au III^e siècle* (1937), *Les Distributions de blé et d'argent* (1939). E. B.

ANONYMUS Ἀντατικιστής, a contemporary opponent of Phrynichus (q.v. 3) the Atticist, who cites from good, but not always Attic, writers many words condemned by Phrynichus. See LEXICA SEGUERIANA.

ANONYMUS SEGUERIANUS (3rd c. A.D.) wrote a *τέχνη τοῦ πολιτικοῦ λόγου*, including references to the work of Alexander (q.v. 12), son of Numenius, which throw light on first-century rhetorical teaching.

Spengel, *Rhet.* 1, 427–60; D. Matthes, *Lustrum* 1959, 76 ff.

ANSER (1st c. B.C.), a salacious erotic poet. Nothing remains of his poems. The only unequivocal reference to him is in Ovid (*Tr.* 2, 435).

R. Unger, *De Anseri Poeta* (1858); Schanz-Hosius, § 246.

ANTAEOUS (Ἀνταῖος), in mythology, a giant, son of Poseidon and Earth, living in Libya; he compelled all comers to wrestle with him and killed them when overcome (Pind. *Isthm.* 4, 56 ff. and schol. Plato, *Thet.* 169 b). He was defeated and killed by Heracles (q.v.). That he was made stronger when thrown, by contact with his mother the Earth (Apollod. 2, 115), seems a later addition to the story.

H. J. R.

ANTAGORAS OF RHODES (3rd c. B.C.), author of a *Thebais*, epigrams, and a *Hymn to Love*.

ANTALCIDAS (more correctly *Antialcidas*) (fl. 4th c. B.C.), Spartan agent and general, converted first Tiribazus (392 B.C.) and later Artaxerxes II (388) to the view that Persia had greater identity of interest with Sparta than with Athens. Having negotiated a Spartan-Persian alliance, he blockaded the Hellespont and forced Athens, and her allies, to agree to the peace which bears his name (386). Its terms abandoned the Greek cities of Asia Minor to Persia (Xen. *Hell.* 5, 1, 32–6). He undertook further diplomatic missions to Persia in 372 and 367, the second of which was a disastrous failure and may have occasioned his death by suicide.

D. E. W. W.

T. T. B. Ryder, *Koine Eirene* (1965), 28 ff.

ANTENOR (1), in mythology, an elderly and upright counsellor in Troy during the siege, who advised the return of Helen to the Greeks, and in return for this (or, according to much later accounts, for betraying the city) was spared by the victors. Pindar says his descendants held Cyrene; but in the story current in Roman times he took with him the Eneti from Paphlagonia (who had lost their king at Troy) and, settling in Venetia at the head of the Adriatic, founded Patavium.

R. A. B. M.

ANTENOR (2), Athenian sculptor, active c. 540–500 B.C. He made the first group of the tyrannicides Harmodius and Aristogiton (see CRITIUS). It was taken to Persia in 480, but restored to Athens by Seleucus I, or Antiochus I Soter, or Alexander the Great, and then stood, together with the group by Critius, in the Agora. Two signed bases by Antenor have been found on the Acropolis of Athens. One of them was dedicated by the potter Nearchus and supported the most imposing of the Maidens of the Acropolis (no. 681). A certain similarity

to the Maidens on the east pediment of the temple of Apollo at Delphi has suggested to some the attribution of that pediment to Antenor. S. C.; G. M. A. R.

ANTHEMIUS, Western Roman Emperor (A.D. 467–72), was the son-in-law of the Eastern Emperor Marcian and was elevated in order to combat the Vandals of Africa. A Greek and a philosopher, he was unpopular in Italy. In 472 Ricimer (q.v.) besieged him in Rome, where his forces were defeated and he himself beheaded. Sidonius Apollinaris addressed a Panegyric to him. E. A. T.

ANTHETERIA, the festival of the flowers, celebrated in the spring, in Athens on the 12th Anthesterion (Feb.–Mar.) and (as the frequent occurrence of the month name Anthesterion shows) in many other Ionian towns. The day before had its name, Pithoegia, from the opening of the wine-jars. The festival had two aspects, on the one hand that of merriment and rejoicing and, on the other, that of gloom. On the chief day, the 12th, the new wine was ceremonially blessed before Dionysus; everyone carried in wine and drank of his own jug, cf. Eur., *IT* 949–60; hence this day was called *Xôcs*, the Jugs. A drinking contest was held. Small children were admitted to the festival and given little jugs; it was a school holiday. On the same day Dionysus was brought in on a ship set on wheels and married the wife of the (Archon-) Basileus, and in the evening, which according to religious reckoning belonged to the 13th, called the *Χύτροι*, pots with cooked fruits were brought to the dead and Hermes Chthonios. At the close of the All-Souls-festival the spirits were expelled with the cry: *Θύραζε, κῆρες, οὐκ ἐντὶ θεοστῆριμα* (cf. J. ter Vrugt-Lentz, *Mnemos*, 1962, 238 ff.).

Nilsen, *GGR* 1st 504 ff.; L. Deubner, *Alt. Feste* (1932), 93 ff.; G. van Hoorn, *Choës and Anthesteria* (1951); A. W. Pickard-Cambridge, *Dramatic Festivals of Athens* (1967), 1 ff. M. P. N.; J. H. C.

ANTHIMUS was a Greek doctor attached to the court of the Emperor Zeno (A.D. 474–91) who was involved in treasonable relations with the Ostrogothic king Theoderic Strabo in 481. He fled Roman territory and took refuge in Italy at the court of Theoderic the Great, who later sent him on a diplomatic mission to the Franks. He wrote some time after 511 a short Latin handbook of dietetics—*De observatione ciborum ad Theodoricum regem Francorum epistula*. The interest of this curious text, half medical textbook, half cookery book, is twofold: first, it provides a detailed and vivid picture of the eating and drinking habits of a Germanic people of the *Völkerwanderung*: beer and mead are drunk for pleasure, wine as a medicine; second, since Anthimus learnt his Latin from the lips of the common people and had no contact with the literary and grammatical tradition, the *De observatione ciborum* is a specimen of the popular Latin of late antiquity, deviating from classical norms in vocabulary, morphology, and syntax, and of great value to the Romance philologist.

Ed. E. Liechtenhan, *CML* 8 i; N. Groen, *Lexicon Anthimum* (1926). R. B.

ANTHOLOGIA LATINA, the title conventionally applied to a collection of poems made in Africa during the early sixth century A.D. It is composed partly of poems written by African poets during the Vandal occupation, partly of miscellaneous earlier pieces. The collection offers enormous variations of interest and literary quality: among much inferior work or outright rubbish are transmitted, for example, the *Pervigilium Veneris* (q.v.) and a number of shorter poems which in modern times have achieved the status of anthology pieces, such as the *De concubitu Martis et Veneris* of Repositianus (q.v.). It played an influential part in the development of

medieval Latin poetry. Much of the attention which has been devoted by modern scholars to the problems of the Anthology is due to the extremely interesting character of the chief MS., the seventh-century Codex Salmasianus (Parisinus lat. 10318), once the property of Claude de Saumaise (1588–1653).

The standard edition is that by A. Riese and F. Bücheler (2 vols., 1894, 1906), it contains much material having only an adventitious connexion with A.L. Some poems will be found in Duff, *Minor Lat. Poets*. Cf. also the useful introduction and bibliography in M. Rosenblum, *Luxorius* (1961). F. J. K.

ANTHOLOGY, *ἀνθολογία*, 'bouquet', means a collection of poems, but was not so used until the Byzantine period. The greatest anthology of classical literature is the Palatine Anthology of Greek poetic epigrams (quoted as *Anth. Pal.*), so called because the only MS. was found in the Count Palatine's library at Heidelberg. From the fourth century B.C. onwards, many collections of poetic epigrams by individual poets or on special subjects were made, but these have been almost wholly lost. (For a fragment of one, arranged by subjects, see Page, *GLP*, 454–9; for a collection of one man's epigrams see Powell, *New Chapters III*, 187.) The first large critical anthology of which we know was the *Garland* collected about 80 B.C. by Meleager (q.v. 2). It contained Greek poems attributed to some fifty poets past and present, from Archilochus to Meleager himself. Most were in elegiac couplets; all were short, averaging eight lines. A scholiast asserts that Meleager arranged them alphabetically by the first letter of each poem, but modern critics believe he grouped them by authors and by subjects. About A.D. 40 Philippus (q.v. 7) of Thessalonica gathered a less abundant *Garland* of Greek epigrams written since Meleager. The poems are duller and more trivial: the Muses were now speaking Latin. During the reign of Hadrian, Straton (q.v. 3) of Sardis made a collection of epigrams on homosexuality, and the scholar Diogenianus produced an anthology perhaps devoted chiefly to convivial and satiric epigrams. About A.D. 568 the Byzantine poet and scholar Agathias (q.v.) compiled a seven-book *Circle* of new epigrams by his contemporaries and himself, which he arranged by subject. His metrical table of contents survives to show the scheme he followed (*Anth. Pal.* 4. 3. 113–33).

Not long before A.D. 900 Cephalas (q.v.) created a large, important, new anthology covering the whole history of the epigram. He used the collections of Meleager, Philippus, Straton, Diogenianus, Agathias, and others; and tried to arrange his material by subject, although he failed to carry out the plan consistently.

The anthology of Cephalas, and all those which preceded it, have been lost as wholes. However, many hundreds of the poems they contained have survived in two extant compilations.

About A.D. 980 an unknown Byzantine scholar (perhaps a group of scholars) made a large volume, which has come down to us in a unique MS., the Palatine Anthology. He based it on Cephalas' work, but he omitted some poems and added a great number of others. It contains some 3,700 epigrams, in fifteen books arranged thus: (1) pious epigrams by Christian poets; (2) a description (see EPIPHRASIS) of the statues in one of the baths of Constantinople; (3) poems describing the sculptures in a Cyzican temple; (4) the poetic prefaces written by Meleager, Philippus, and Agathias for their anthologies; (5) love poems; (6) dedicatory poems for real or imaginary votive offerings; (7) epitaphs; (8) epitaphs and other poems by St. Gregory Nazianzen; (9) epideictic epigrams—displays of wit and imagination on curious facts, famous people, interesting works of art; (10) comments on life and morality; (11) convivial and satirical epigrams; (12) poems on homosexual love; (13) epigrams in unusual

metres; (14) riddles and puzzles; (15) miscellaneous epigrams, including poems shaped like an axe and an egg.

Finally, the monk Planudes produced his own anthology of Greek epigrams, neatly arranged in seven books with complex subdivisions. It is not known what sources he used: certainly the collection of Cephalas; probably two others closely resembling the Palatine Anthology. He cut out many fine poems and bowdlerized some which he thought impure, but he included nearly 400 epigrams which are not in the Palatine MS.; in modern editions these are printed as 'Book 16' of the Greek Anthology. The result, called the Planudean Anthology, has survived in Planudes' own autograph (now in Venice, dated 1301, perhaps a mistake for 1290): it was the first collection of Greek epigrams to be printed (1494) and the only one known until the Palatine Anthology emerged from obscurity (1606), to supersede it.

The Greek Anthology is a mine of jewels choked with masses of lumber. Books 1, 2, 3, 8, 14 have little but historical interest; Books 4, 12, 13, 15 are curious, often fascinating; the remaining books contain some trivialities and some of the finest short poems in the world. (See EPIGRAM.)

ANTICĀTO or **ANTICĀTONES** (Schanz-Hosius⁴ i. 334 ff.), two (?) lost books by Caesar (A. Dyroff, *Rh. Mus.* 1895, 481 ff., thinks one by Hirtius) answering eulogies on Cato, whose death at Utica occasioned laudatory discourses on republican heroes by Cicero, Brutus, and Fadius Gallus. J. W. D.

ANTICLEA (Ἀντίκλεια), in mythology, daughter of Autolycus (q.v.), wife of Laertes, and mother of Odysseus (*Od.* 11. 84-5). Later (as Sophocles, *Phil.* 417 and schol.) Odysseus' real father is Sisyphus (q.v.). H. J. R.

ANTICLEIDES of Athens (fl. early 3rd c. B.C.) wrote a history of Alexander (containing a long digression on Egyptian antiquities), a substantial mythological work, *Nostoi*, reaching into historical times, perhaps as far as Pisistratus, and an account of Delian antiquities. He favoured unusual versions and rationalizations of legends (like the Athidographers and Palaephatus) and invented romantic details of the Trojan War; some fragments show Peripatetic influence.

FGH 140; Pearson, *Lost Histories of Alexander* 251 ff.

F. W. W.

ANTICYRA, Phocian town at the head of the gulf east of Cirrha. An excellent port and outlet for Phocian export, it shared the history of Phocis, being destroyed in 346 B.C. and captured by Roman generals. It gained a reputation from the medicinal plant hellebore (supposed to cure madness), which grew in its neighbourhood.

Le Lerat *Rev. Phil.* 1945, 12 ff.

N. G. L. H.

ANTIDORUS (c. 300 B.C.) of Cyme was the first to abandon the name κριτικός and to call himself γραμματικός (Clem. Al. *Strom.* 1. 16. 79). He wrote a work on Homer and Hesiod, of which the form and content are unknown, and a treatise on λῆξις, which was either a lexical study, perhaps of Homeric expressions, or a work on style (schol. Dion. Thrax, 3, 7, 448 ll.; schol. *Il.* 23. 638-9).

J. F. L.

ANTIDOSIS. An Athenian who had been put to a liturgy (q.v.) had a right to refuse it, by asking, at an officially fixed date, another wealthy citizen either to perform it in his stead or to agree to an exchange of properties (ἀντίδοσις). If the other citizen rejected this offer, a court decided which of them should perform the liturgy. Both parties had to divulge their whole estate on oath, three days after they had formally laid claim to their opponent's possessions before the magistrates. Only shares in the mines of Laurium had not to be declared, because they were free from liturgy obligations.

ANTIGENES (5th c. B.C.), Attic dithyrambic poet, who wrote a dedicatory poem for tripods won at the Dionysian competition by the Acamantis tribe. The poem, preserved at *Anth. Pal.* 13. 28, is tetrameter in couplets, the first line of which is a dactylic tetrameter followed by a trochaic dipody, the second an iambic tripody followed by an alcaic decasyllable. Nothing else is known of him or his work.

TEXT Dichtl, *Anth. Tyr. Graec.* ii 110.

CRITICISM U. von Wilamowitz-Moellendorf, *Sappho und Simonda* (1913), 218 ff. C. M. H.

ANTIGONE (1). In the versions of the legend of Oedipus (q.v.) best known to us, he and Iocasta have four children, Eteocles, Polynices, Antigone, and Ismene, though Homer (*Od.* 11. 271 ff.) and the Cyclic epic *Oedipodia* (see Paus. 9. 5. 11) know nothing of offspring of the incest and the latter makes Euryganeia daughter of Hyperphas the mother of his children. Of these four, the two sons are part of the story from the cyclic *Thebais* onwards; the daughters seem to be a later addition, or at least are unimportant until the fifth century B.C. The earliest certain mention of either appears to be Minnermus fr. 21 Bergk, from which, combined with Phocylides ap. schol. Eur. *Phoen.* 53, it appears that Ismene was 'in converse with Theoclymenus' (unknown in such a context, perhaps a mistake for Periclymenus, one of the Theban heroes) and was killed by Tydeus (q.v.) at the instance of Athena by the spring which bears her name, i.e. the source of the river Ismenus. Ion of Chios (fr. 12 Bergk; both this and the passage of Minnermus are from Sallustius' argument to the *Antigone*) said that both sisters were burned in the temple of Hera by Laodamas son of Eteocles, an otherwise unknown tale. Also, in the older stories neither the affair of the burial of Polynices nor the banishment of Oedipus is told. We have then a legend apparently of fifth-century Attic growth, whether pure invention or founded on some local tradition.

Omitting the spurious termination of the *Septem* of Aeschylus (see discussion by P. Groeneboom, *Aeschylus' Zeven tegen Thebe* (1938), 245 ff.), our materials are the *OT*, *OC*, and *Antigone* of Sophocles and the fragments of Euripides, *Antigone*, with their derivatives. Taking the Sophoclean plays in the order of events in the story, not of their composition, in *OT* 1480 ff. Oedipus takes farewell of his children and commands them to the fatherly care of Creon; they are mute figures. In *OC* he

is a wandering beggar, faithfully tended by Antigone. Ismene, here as elsewhere the less resolute character, remains at Thebes, but comes to Colonus (324 ff.) to bring them news of happenings there. Creon, whose character has deteriorated in this play, kidnaps both sisters in an attempt to force Oedipus to return, but is himself taken by Theseus and the girls rescued (818-1096). Antigone advises Oedipus to grant Polynices an interview (1181 ff.), and vainly begs her brother to abandon the attempt on Thebes (1414 ff.); they address each other in terms of deep affection. In the *Antigone* Creon has forbidden Polynices to be buried after his and Eteocles' death at each other's hands (23 ff.); Antigone resolves to bury him despite this. Ismene is horrified, and will not do more than keep her secret (85). Antigone contemptuously casts her off and later (536 ff.) will have none of her attempts to confess herself a confederate. The attempt to give Polynices at least the formal minimum of burial succeeds (245 ff.), but later (407 ff.) Antigone is arrested while coming to pour libation and replace the dust which had been swept from the body. Creon now sentences her to be placed alive in a vault, despite the protestations of his son Haemon who is betrothed to her (635 ff.). In this he is doubly wrong, for it is impious to put a living person into the underground realm of Hades, and it is Antigone's betrothed husband who should deal with her (P. Roussel in *Rev. Ét. Grec.* 1922, 63 ff.; Rose in *CQ* 1925, 147 ff.). Tiresias warns him (988 ff.) that he is offending the gods by leaving dead bodies unburied; he sets out (1095 ff.) to bury Polynices and rescue Antigone, but finds her already dead by her own hand; Haemon kills himself over her body and Creon's queen Eurydice stabs herself from grief (1183 ff.).

Euripides, possibly using some tradition of the existence of descendants of Antigone, modified Sophocles' story; his play being lost, we have to reconstruct the plot chiefly from Hyginus (*Fab.* 72, which is not an accurate synopsis, see C. Robert, *Oedipus* (1915), 381 ff.; Rose, *Modern Methods in Class. mythology* (1930), 40 ff.; J. Misk in *Wien. Stud.* 1933, 1 ff.). Creon, acting more correctly than in Sophocles, handed over Antigone, when taken, to Haemon to be put to death. He, instead of doing so, hid her among shepherds, and had a son by her. The child lived, grew, and came to Thebes on the occasion of certain games. Since he naturally competed naked, Greek fashion, Creon recognized him as one of his own race, the Sparti, because he had on his body the peculiar birthmark like a spear-head which all that family bore (*Hyg. Fab.* 72. 3, *Arist. Poet.* 1454^b22, very likely from this play). He denounced the young man as a bastard (fr. 168 Nauck) and ordered the deaths, apparently, of Haemon and Antigone. Hereupon, according to Hyginus (72. 3) Heracles vainly interceded; fr. 177 is an apostrophe to Dionysus, and Aristophanes' argument to Sophocles' *Antigone* says that Antigone was 'given in marriage' to Haemon, from which, together with general probability, it seems likely that Dionysus was the intercessor (if indeed the quotation is not from the *Antiope*) and the play ended with a reconciliation and formal union of the lovers.

The story in Hyginus is itself evidence that some development took place in the legend after Euripides, possibly at the hands of the fourth-century tragedians (so Misk). One additional detail, of unknown date of origin, is the appearance of Argia, wife of Polynices, to help Antigone bury him (*Hyginus* 72. 1; *Statius, Theb.* 12. 177 ff.); she meets Antigone by moonlight; they put Polynices' body on Eteocles' still burning pyre, the flames of which divide (cf. *Eteocles* 2); they are taken and sentenced to death by Creon, but rescued by the arrival of the Attic army under Theseus.

Although the above stories are not of Theban origin, they had been adopted in Thebes by imperial times.

Pausanias was shown (9. 25. 2) a place outside the walls called *σῦμμα Ἀντιγόνης*, 'Antigone's drag', said to be the spot where she dragged the body of Polynices, as it was too heavy for her to lift, to lay it on the pyre of Eteocles (see above; this suggests that the legend was popularized there in a rather late form). It was one of several alleged monuments of the mythical past of the city, doubtless rather a by-product of the tourist trade than the result of a real tradition.

See material collected briefly in Jebb's introduction to his edition of Sophocles, *Antigone*, more in Stoll's arts. 'Antigone' and 'Ismene' in Roscher's *Lexikon*.
H. J. R.

ANTIGONE (2), in mythology, daughter of Eurytion son of Actor, king of Phthia. Peleus (q.v.) was purified by her father after the murder of Phocus (see *AEACUS*) and married her, with a third of the country for her dowry. Later he accidentally killed Eurytion at the Calydonian boar-hunt and fled to Iolcus (Apollod. 3. 163). H. J. R.

ANTIGONE (3), in mythology, daughter of Laomedon, king of Troy. Because she vied in beauty with Hera, the latter turned her hair into snakes; afterwards she, or the other gods, turned her into a stork, which therefore preys on snakes (Ovid, *Met.* 6. 93-95; Servius on *Aen.* 1. 27; *Myth. Vat.* 1. 179).
H. J. R.

ANTIGONUS (1) I (probably 382-301 B.C.), 'Monophthalmus' son of Philip, a Macedonian noble, first appears holding a command in Alexander's army (334). He was left as satrap of Phrygia (333). In Alexander's lifetime he did useful work in Asia Minor, but he gave no indication of his future greatness. His opportunity came when his friend Antipater (q.v. 1) gave him command over the royal army in Asia (321). His successful campaigns against the 'rebels' Alcetas (320) and Eumenes (320 and 318-316), and the death of Antipater (319), gave Antigonus alone of the generals, a prospect of reuniting all Alexander's Empire under himself, and this became his unceasing aim. The result was a coalition of the 'separatist' generals against him (Cassander in Macedonia, Ptolemy in Egypt, and Lysimachus in Thrace), but the war (315-311) left him as strong as before, though the occupation of Babylon and the eastern satrapies by Seleucus (312) greatly reduced the area he controlled. The peace of 311 lasted only a year, and his separate attempts to crush Seleucus (310-309), Ptolemy (306-305), and Cassander (304-302) finally convinced them all (with Lysimachus) that Antigonus himself (he had assumed the royal title in 306) must be crushed. In the decisive battle of Ipsus (in Phrygia) he was defeated and killed. Of his kingdom little is known. He is said to have governed well, and he certainly showed statesmanship in his policy towards the Greeks. His reputation rests on his greatness as a general, but in an age of peace he would probably have been a great ruler, and certainly could never have been a bad one.

Diodorus bk. 18-20, Plutarch, *Eumenes and Demetrius*; Berve *Alexanderreich* n. no. 87; Bengtson, *Strategie* 1 (1917), 96 ff.
G. T. G.

ANTIGONUS (2) II (c. 320-239 B.C.), surnamed *Gonatas* (Euseb. 1. 238; meaning unknown), son of Demetrius I and Phila, was in charge of Demetrius' Greek possessions after 287. In 285, having lost much of Thessaly to Pyrrhus, he made peace; on Demetrius' death (284/3) he took the title of king. In 280 he marched on Macedon, but was repelled; Sparta meanwhile stirred up revolts in Greece. After a naval campaign he made a lasting peace with Syria (278); and having defeated 20,000 Gauls near Lysimacheia, he seized Macedonia. For ten months Cassandreia resisted, but by 276, when he married Antiochus' sister, Phila, he was acknowledged king of

Macedon. When in 274 Pyrrhus, back from Italy, attacked Macedon, many Macedonians deserted; Antigonus suffered defeats (274/3) and lost Thessaly and upper Macedonia. In 272, however, Pyrrhus invaded Peloponnesus, and Antigonus joined with Sparta to destroy him. He now re-established his power as far as Corinth. Shortly afterwards, subsidized by Egypt, Athens and Sparta began the Chremonidean War against him (probably 267–263/2), which ended with the fall of Athens. After a short-lived truce (261), in alliance with Antiochus II he resumed the war against Ptolemy, but made a separate peace in 255. Whether his naval victory off Cos, which secured him the Aegean, belongs to this or the Chremonidean War is uncertain. In 250/49, instigated by Egypt, Alexander, his governor of Corinth, revolted, and held Corinth with Chalcis until his death. But after defeating Ptolemy at sea off Andros (246), Antigonus tricked Alexander's widow, Nicaea, out of Acrocorinth (245). This fortress, however, Aratus seized in 243, and Antigonus' subsequent Aetolian alliance proved fruitless; to this period belongs his patronage of Peloponnesian tyrants. In 241/40 he made peace with Achaia, and died in spring 239.

Blunt, honest, and tenacious, Antigonus won not only Macedon, but also its people. Himself a philosopher, he gathered about him poets, philosophers, and historians; and his long reign, despite vicissitudes, re-established Macedon as a nation.

ANCIENT SOURCES. Plut. *Demetr.*, *Pyrrh.*, *Arat.*; Justin bk. 16 ff. For the early years the tradition echoes Hieronymus of Cardia, for the later the pro-Spartan Phylarchus. Inscriptions important. ANTIGONUS (3) III (c. 263–221 B.C.), surnamed *Doson*, son of Demetrius the Fair (who was half-brother of Antigonus II), became guardian to Philip V on Demetrius II's death (229) and married Philip's mother Phthia (Chryseis). After expelling a Dardanian invader he recovered most of Thessaly from invading Aetolians, but made an agreement leaving them Phthiotic Achaia, and renounced the re-establishment of Macedonian influence beyond Thermopylae. Early in 227, as sequel to a threatened mutiny by the army assembly, he took the title of king. An expedition to Caria in 227 was probably directed against Ptolemy: it brought acquisitions in the Aegean, alliances in Crete, and gains in Caria; but the islands generally remained independent, and Macedonian sea-power now rapidly decayed. Meanwhile the Achaean Confederacy was crumbling before Cleomenes; in 227/26 Antigonus received Achaean envoys favourably, and in 224, on Aratus' promise of Acrocorinth, he led his troops to the Isthmus. In two campaigns he recovered Arcadia, and in winter 224 set up a league of the allies, with himself as president. In 222 he crushed Cleomenes at Sellasia and occupied Sparta. But immediately he was summoned to expel the Illyrians from Macedon; having burst a blood-vessel in battle, he died in summer 221, after providing for Philip's succession.

The Achaean alliance and the Hellenic League stamp Antigonus as a statesman of generous vision. His policy mainly followed traditional lines; but his rehabilitation of Macedon gave it new life and a strong material background for Philip's wilder policies.

ANCIENT SOURCES. Polyb. 2; Plut. *Cleom.*, *Arat.* Justin bk. 28. MODERN LITERATURE. W. W. Tarn, 'Phthia-Chryseis', *Athenian Studies presented to W. S. Ferguson* (U.S.A. 1940), 481 ff.; P. Treves, *Athenaeum*, 1934–5; S. Dow and C. F. Edson, *Harv. Stud.* 1937; J. V. A. Fine, *APPhil.* 1940; Maria T. Piraino, *Antigono Dosone re di Macedonia* (1954). F. W. W.

ANTIGONUS (4) of Carystus (fl. 240 B.C.), bronze-worker and writer, lived at Athens in touch with the Academy; worked under Attalus I at Pergamum.

WORKS. An inferior anecdotal collection survives: (1) *Ἱστοριῶν παραδόξων συναγωγή* (*Her. Nat. scr. Graec. Min.* i. 8 f.); Diog. Laert. and Athenaeus contain fragments from (2) *Lives of Philosophers*, personal character-sketches of contemporaries; (3) various works of art-history; (4) *Περὶ λέξεως* (*Ath.* 3. 88 a; 7. 297 a; probably this Antigonus).

A reliable biographer with a flowing, periodic style, Antigonus achieved considerable popularity. He helped to make the statues which celebrated Attalus' Gallic victory.

U. von Wilamowitz-Moellendorf, *A. v. Karystos* (1881), Hansen, *Attalids*, 360 ff. F. W. W.

ANTIOCHUS, in mythology, son of Nestor (q.v. 1), mentioned several times in the *Iliad* as a brave warrior and a fine runner (e.g. 15. 569–70). He brings Achilles the news of Patroclus' death (18. 2 ff.), drives cleverly in the chariot-race (23. 402 ff.), and courteously cedes the second prize to Menelaus (596). His death is mentioned (*Od.* 3. 111); it took place (*Aethiopis*, whence Pindar, *Pyth.* 6. 28 ff.) while he was defending his father against Memnon, when Paris had killed one of Nestor's horses and he called Antiochus to his help. II. J. R.

ANTIMACHUS (probably b. c. 444), of Colophon, poet and scholar. It is possible that he competed in a poetic contest at the Lysandreia in Samos before Lysander (died 395), cf. Plut. *Lys.* 18. 8. Further, the evidence of Hermesianax (fr. 7, 41–46 and [Plutarch], *Cons. ad Apoll.* 9. 106 b may be accepted that he loved one Lyde (probably his mistress, not his wife), and wrote his narrative elegy with that title, a collection of 'heroic misfortunes', to console himself for her loss. Finally Heraclides Ponticus (fr. 91 Voss) records that Plato sent Heraclides to Colophon to collect Antimachus' poems. It is, therefore, probable that Antimachus died fairly early in the fourth century B.C.

WORKS. Our sources mention five poems: *Thebais*, *Lyde*, *Deltai*, *Artemis*, *Iachne* (?). The *Thebais* was an epic narrating the first expedition against Thebes. For his material Antimachus probably drew not only on the Epic Cycle but also on lyric and tragic versions of the story of Thebes. The *Lyde* comprised at least two books, probably considerably more in view of Antimachus' reputation for prolixity, which the fragments detailing the voyage of the *Argo* seem to justify. Other legends mentioned included those of Demeter's wanderings, Bellerophon, and Oedipus. It is clear that except for the metre there was very little that was elegiac about the *Lyde*. Though it is possible that the poem contained a preface in which Antimachus explained the circumstances that had produced it, there is no evidence that once embarked he turned aside from his narration of 'heroic misfortunes' to bewail his own. The laments which according to Hermesianax filled the poem must have been those of the heroes and heroines. Though others, e.g. Mimnermus, had inserted references to myth into their elegies, Antimachus was the real founder of Narrative Elegy and found many imitators. The *Deltai* (? *Tablets*) was perhaps a collection of short poems (? in elegiacs). The *Artemis*, if the first part of *PMilan*. 17 contains excerpts from this poem, was written in hexameters and its careful recording of the goddess's titles and cults recalls the *Hymn to Artemis* of Callimachus.

Later writers praised Antimachus for his sobriety and virility (cf. Asclepiades, *Anth. Pal.* 9. 63 and Poseidippus, *Anth. Pal.* 12. 168), qualities which perhaps explain Plato's liking for his verse. But Callimachus (fr. 589 ff.) found him stodgy and involved. What little survives seems to justify the more unfavourable verdict. But Antimachus' real importance is that as a scholar (he

edited Homer) no less than poet he anticipated by some 100 years the scholar-poets of Alexandria. Unlike his post-Cyclic predecessors, Pisander and Panyassis, he not only borrowed without change from early Epic, but also practised all the arts of 'interpretation', variation, and contamination which were to become so popular with the Hellenistic poets, and not least with Callimachus. In language, too, Antimachus anticipates the Alexandrians. The scanty fragments contain many 'glosses', neologisms, and obscure periphrases.

ANTINOÏPOLIS (*Sheikh Abādeh*), in Middle Egypt, founded in A.D. 130 by Hadrian in memory of Antinous (q.v. 2), stood east of the Nile at the head of a new road to the Red Sea. Its constitution was Greek, modelled on that of Naucratis, with special privileges; hellenized inhabitants were brought, e.g., from Ptolemais; it was also the metropolis of an Egyptian nome. After Diocletian it was the administrative centre of the Thebaid. Considerable remains of public buildings existed in 1800, but have been destroyed. The cemeteries were excavated by Gayet, the mounds explored for papyri by Johnson.

E. Jomard, *Description de l'Égypte. Antiquités*, ch. 15, pls. 53-61; E. Kuhn, *Antinoopolis* (1913), J. Johnson, 'Antinoë and its papyri' (*JfG. Arch.* 1914), H. I. Bell, *JRS* 1940, 133 ff.; P. V. Pistorius, *Indices Antinoopolitani* (1939) J. G. M.

ANTINOUS (1), in mythology, chief of Penelope's suitors, son of Euphetes (*Od.* 1, 383), killed by Odysseus (22. 8 ff.).

ANTINOUS (2, *PII* 5) was born probably between A.D. 110-12 at Bithynium (= Claudiopolis) in Bithynia. His beauty and grace made him Hadrian's (q.v.) favourite. While accompanying the Emperor up the Nile in 130, he was drowned and contemporary gossip surrounded his death with romantic legend; some even said that he had given his life for his master. At Hadrian's instance, he was deified by many communities, and in Egypt Hadrian commemorated him by founding a new city called Antinoöpolis (q.v.); elsewhere he was honoured by cult, festivals, and statues.

B. W. Henderson, *Hadrian etc.* (1923), 130 ff.; C. W. Clairmont, *Die Bildnisse des Antinous* (1967), M. Yourenar, *Hadrian's Mennum* (rev. ed., 1961), 301 ff. C. H. V. S.; M. H.

ANTIOCH (*Ἀντίοχεια*) (1), capital of Seleucid Syria, on the left bank of the Orontes, some 15 miles from the sea, was founded in 300 B.C. by Seleucus I, in a favourable position between his Anatolian and Eastern possessions, on the edge of a large and fertile plain. Seleucia, at the mouth of the Orontes, became its harbour. The king transferred thither the 5,300 Athenian and Macedonian settlers whom Antigonus had planted at Antigoneia nearby in 307, and his successors enlarged the city and adorned it with splendid buildings. Antioch also contained a large Jewish community, whose privileges were said to go back to Seleucus I. Since it was the royal capital, its people played a large part in the dynastic revolutions of the later Seleucid era. After an interlude of Armenian rule (83-66) it was annexed by Pompey (64) and became the capital of the province of Syria; it was made an autonomous city by Caesar (47). Having sided with Pescennius Niger it was in A.D. 194 degraded by Septimius Severus, but was in 201 restored to its former rank, to which Caracalla added the title of colony. Antioch ruled an extensive territory. It was the third city of the East, after Alexandria and Seleucia on the Tigris. Its

wealth was derived from its position on the great commercial road from Asia to the Mediterranean, and from the exploitation of natural resources like wine and olive-oil, extensively produced by its immediate hinterland. The city was ruined when the Persian and Arab invasions put an end to its agricultural activities and to free navigation in the Eastern Mediterranean. Under the late empire, it had enjoyed an intense intellectual life, and also became a centre of Eastern monasticism. Excavation has brought to light a wealth of late antique art.

Festugière, *Antioche païenne et chrétienne* (1959), G. Tchalenko, *Villages antiques de la Syrie du Nord* (1953-8) A. H. M. J., H. S.

ANTIOCH (2) (Pisidian: *Ἀντίοχεια Πισιδίας* or more correctly *πρὸς Πισιδίαν* 'towards Pisidia'), a city in Phrygia (so Strabo, confirmed by inscriptions), lying near the Pisidian border, called 'the Pisidian' to distinguish it from the other Phrygian Antioch on the Maeander, and hence wrongly assigned to Pisidia by Pliny and others. It was a Seleucid foundation, settled by colonists from Magnesia-on-the-Maeander, occupying a plateau above the river Anthios (mentioned on its coins) close to the modern *Yalıvaç*. It was declared free by the Romans after the defeat of Antiochus the Great, but passed under Roman control as part of the kingdom of Amyntas (see GALATIA) in 25 B.C., and about the same time was made a Roman colony with the name Caesarea Antiochia. The colony was linked by military roads with the other colonies subsequently founded by Augustus to control Pisidia. Near it was a wealthy *hieron* of Mén Askaënos with wide estates and numerous temple-servants (*hierodouloi*, q.v.), the site of which has been excavated. In Diocletian's provincial reorganization Antioch was assigned to Pisidia.

Jones, *Cities E. Rom. Prov.* (see Index); B. Levick, *Roman Colonies in S. Asia Minor* (1967), *PW* Suppl. xi, 49 ff. W. M. C.

ANTIOCH (3) (*Margiana*, modern *Merv*) was founded apparently by Alexander, destroyed by Asiatics, and refounded by Antiochus I. Here in a mountain-girt fertile plain a land-route from Seleucia branched, forming silk-routes, (i) through Samarkand, (ii) through Balkh, to central Asia; a third went south through Herat and the Bolan Pass to India.

Strabo 516, Pliny *HN* 6. 46-47.

E. H. W.

ANTIOCH-IN-PERSIS (4), the *Ionaca polis* ('Greek-town') of Ptolemy 6. 4. 2, probably stood on the Gulf of Bushite, whence a road must have run up to Persepolis, as now to Shiraz. It was founded by Seleucus I and recolonized and enlarged by Magnesia-on-the-Maeander for Antiochus I (*OGI* 233). It was a Greek city, with Council, Assembly, and Prytanies, i.e. division into tribes; it worshipped the gods of Magnesia, and was the local centre for the official cult of the Seleucid dynasty.

W. W. T.

ANTIOCHUS (1) **I** (SOTER) (324-261 B.C.), son of Seleucus I (q.v.) and the Bactrian Apama. He ruled the eastern Seleucid territories from 293/2, and took over Seleucus' young wife Stratonice (whether for romantic or political reasons). On his accession (281) he renounced his father's ambitions in the West, and his treaty (278) with Antigonus (q.v. 2) Gonatas formed the basis of peace and friendship with Macedonia throughout the century. Northern Asia Minor, and later much of its southern and western coast, slipped from his grasp, the latter being lost mainly to Egypt ('First Syrian War', 274-271, and war of 263-261). His chief exploit was his defeat of the Gallic invaders of Asia Minor (273?—'the Elephant Victory'), which earned him his cult-name

'Soter'. Of his personal character and internal policy little is known, except that he was the greatest founder of cities after Alexander (see COLONIZATION, HELLENISTIC). His elder son Seleucus became co-regent in the East (280), but proved a failure, and may even have been executed for treason.

W. W. Tarn, *CAH* vii, 701 ff.

G. T. G.

ANTIOCHUS (2) II (THEOS) (c. 287–246 B.C.), second son of Antiochus I and Stratonice. His reign (commencing 261) comprises the most obscure period of Seleucid history. Most of the known facts bear on his relations with Egypt, and show that, by the 'Second Syrian War' (260–253), in alliance with Macedonia, he recovered most of what Antiochus I had lost, namely the coast of Asia Minor (except Pergamum, Caria, and Lycia) and places in Coele Syria. His Egyptian marriage, however, (to Berenice, daughter of Ptolemy II, 252) and repudiation of Laodice (q.v. 2) with her children, created a 'succession question' which became acute on his death.

W. W. Tarn, *CAH* vii, 710 ff.

G. T. G.

ANTIOCHUS (3) III ('the Great') (c. 242–187 B.C.), second son of Seleucus II (q.v.), succeeded (223) to a kingdom already reduced by separatist movements (Bactria and Parthia), which threatened to spread to Media, Persis, and Babylonia and to Asia Minor (see ACHAEUS 3). His aim from the first was to restore and expand. His first attempt to conquer Ptolemaic Syria and Palestine was foiled by a Ptolemaic victory at Raphia ('Fourth Syrian War' 219–216). But by his 'Anabasis' in the East (212–206) he acquired Armenia, and regained Parthia and Bactria, as vassal kingdoms; and his demonstrations in 'India' (Cabul valley) and 'Arabia' (across the Persian Gulf) earned him, like Alexander, the title of 'Great'.

But Antiochus' expansion policy was ruined by his failure to recognize the advent of a new Power in the eastern Mediterranean, Rome. His notorious secret treaty with Philip V of Macedonia to partition the overseas possessions of Egypt (202) was not directed against Rome; but the Senate, already suspicious of Philip, took alarm when Antiochus, after conquering Ptolemaic Syria and Palestine (202–198), invaded Europe to recover Thrace (196). In the protracted diplomatic exchange of 196–193 he and the Senate were at cross-purposes, and finally he lost patience and invaded Greece. He was defeated by the Romans in two land battles, at Thermopylae and Magnesia (ad Sipylum), and also lost a naval campaign to them. By the peace of Apamea (188), despite its seaboard the Seleucid Empire ceased to be a Mediterranean Power, though it remained a great continental Power in Asia. Despite these errors of judgement in dealing with Rome, the triumphs of his youth, his unflinching energy, and his high conception of the Seleucid task in Asia suggest that Antiochus really was a great man.

ANCIENT SOURCES. The most important is Polybius, directly in bks. 2–21, and indirectly in Livy bks. 30–8.

MODERN LITERATURE. M. Holleaux, *Rome, la Grèce, et les monarchies hellénistiques* (1921), and in *CHH* viii, chs. 6, 7; W. W. Tarn, *ibid.* vii, 721 ff.; H. H. Schnitt, *Untersuchungen zur Geschichte Antiochos' des Grossen und seiner Zeit* (1904).

G. T. G.

ANTIOCHUS (4) IV (EPIPHANES) (c. 215–163 B.C.), third son of Antiochus III, became king in 175. The tradition about him is unfavourable, mainly because of his policy towards the Jews. He controlled Judaea firmly (if tactlessly), because it was strategically important as a frontier province; and he wished to hellenize the Jews, probably because he believed in hellenization as an instrument of rule. But the result, apparent only after his death, was to stimulate and revive Jewish nationalism. Despite his reputation for eccentricity, Antiochus was probably not a mere tyrant or trifler: his policy of urbanization,

especially in the East, represents a notable achievement at this date. His Egyptian war (169/8), 'preventive' in motive, could certainly have achieved the annexation of Egypt, had Rome not intervened. Finally, the eastern expedition, on which he met his death, shows that he was alive to the nascent danger from Parthia.

E. R. Bevan, *CAH* viii, ch. 16; S. K. Eddy, *The King is Dead* (1961), chs. 8 and 9.

G. T. G.

ANTIOCHUS (5) V (EUPATOR) (c. 173–162 B.C.), son of Antiochus IV, reigned less than two years through the regent Lysias, and was put to death in Antioch when Demetrius I (q.v. 10) arrived from Rome to claim his throne.

G. T. G.

ANTIOCHUS (6) VI (EPIPHANES DIONYSUS) (c. 148–138 B.C.), son of Alexander (q.v. 10) Balas and Cleopatra Thea (daughter of Ptolemy VI). In the revolt at Antioch against Demetrius II (q.v. 11) he was put forward by the general Diodotus (later called 'Tryphon' as heir to the throne formerly usurped by his father. 'Tryphon' soon deposed (142) and later killed him (138).

G. T. G.

ANTIOCHUS (7) VII (SIDETES) (c. 159–129 B.C.), second son of Demetrius I (q.v. 10) of Syria, succeeded his brother Demetrius II, who had become a prisoner in Parthia (139). Able and energetic, he quickly defeated and killed the pretender Tryphon in Antioch (138), reconquered Palestine (135–134), and temporarily recovered Babylonia from Parthia (130). But his eventual defeat and death in battle against the Parthians brought about the final loss of the Seleucid provinces in the East.

E. R. Bevan, *CAH* viii, 520 ff.

G. T. G.

ANTIOCHUS (8) (HIERAX) (c. 263–226 B.C.), second son of Antiochus II (q.v.) and Laodice, became independent ruler of Seleucid Asia Minor when his brother Seleucus II (q.v.) was occupied with the 'Third Syrian War' (246–241). He defeated Seleucus' attempt to recover Asia Minor ('War of the Brothers', c. 230–236), alling himself with traditional enemies of the Seleucid House, Pontus, Bithynia, and Galatians, and marrying a Bithynian princess, daughter of Ziaelas and sister of Prusias I. The Galatian alliance, however, embroiled him with the rising power of Attalus I of Pergamum, who drove him from Asia Minor (230–228). After an unsuccessful attempt to raise Syria and the East against Seleucus, he became an exile (227), and died by violence in Thrace.

W. W. Tarn, *CAH* vii, 720 ff.

G. T. G.

ANTIOCHUS (9), the name of some kings of COMMAGENE (q.v.):

ANTIOCHUS I, son of Mithridates and Laodice (daughter of Antiochus VIII Grypus of Syria), submitted to Pompey in 64 B.C. and received a strip of Mesopotamia. In the Civil War he sent troops to Pompey. Later he helped the Parthians; in 38 was besieged in Samosata by Ventidius and then by Antony who probably removed him and made his brother Mithridates king. Antiochus built a royal mausoleum for his father at Arsancia (q.v. 2) and a monumental tomb for himself on Mt. Taurus at Nimrud Dag where stood a statue of the deified king on a terrace among seated gods of colossal size. The monument shows a blend of Iranian and Greek elements in both art and religious ideas.

For the monument see R. Ghirshman, *Iran* (1962), 57 ff. H. Dörrie, *Der Königtum des Antiochus von Kommagene* (1964).

ANTIOCHUS II, son of I, was perhaps installed as king by Octavian, but in 29 B.C. he was summoned to Rome and executed for having murdered an ambassador.

ANTIOCHUS IV, who enjoyed the friendship of the Emperor Gaius in Rome, was installed by him in Commagene in A.D. 38, but was deposed soon afterwards. Claudius restored his kingdom in 41 and he reigned until 72; the portrait of his wife (and sister?) Iotape appears on some of his coinage. His son was betrothed to Drusilla, daughter of King Agrippa I (q.v.). She later married Felix, q.v.). Antiochus protected Cilicia against the Cietae (52) and for services under Corbulo against the Parthians he received part of Armenia (60). In the Jewish revolt he helped Vespasian and Titus (69–70), but in 72 he was accused by Paetus of intriguing with Parthia and was deposed. He lived in internment in Sparta and Rome.

For the numismatic evidence of the extent of his kingdom see Magie, *Rom. Rule Asia Min.* 1367 f. II. II. S.

ANTIOCHUS (10) of Syracuse, Greek logographer of the fifth century B.C., wrote a history of Sicily from the mythical Cocalus to 424 B.C., and a history of Italy. He wrote the latter certainly, and the former probably, in Ionic. See HISTORIOGRAPHY, GREEK, § 2

FGH III. 555.

K. J. D.

ANTIOCHUS (11) of Ascalon (b. c. 130–120 B.C.), founder of the 'fifth Academy', became the pupil, at Athens, of Philon (q.v. 3) of Larissa and of the Stoic Mnesarchus. In 88 he accompanied Philon to Rome, and made the acquaintance of L. Lucullus. He had probably already reacted against the teaching of Philon, and he soon abandoned the Scepticism of the Middle and New Academy and reverted to the teaching of the Old Academy. He was head of the Academy at Athens in 79–78, when Cicero attended his lectures. He joined Lucullus again at the time of the Second Mithridatic War (73), and died about 68. His doctrine was an eclectic one in which he maintained the essential agreement of the Academic, Peripatetic, and Stoic philosophies; in spite of lack of originality he had much influence. Cicero quotes him frequently.

H. M. Strachan, *D. Pseudepistologos v. Antiochos v. Askalon* (1921); G. Luck, *Der Akademiker Antiochos* (1953). W. D. R.

ANTIOCHUS (12) of Athens (not later than A.D. 300), author of a popular compilation of astrological lore.

Ed. A. Olivieri, *Cat. Cod. Astr.* I. 108, and F. Boll, ib. VII. 128. PW I. 2494 and Suppl. 4. 32.

ANTIOPE (Ἀντιόπη), in mythology, daughter of the river Asopus (*Od.* 11. 260) or Nycteus, king of Boeotia (tragedians, especially Euripides, see schol. ad loc.). Her story has come down chiefly through Euripides' tragedy *Antiope*, now lost (see AMPHION). Zeus loved her and approached her in the form of a satyr (*Ov. Met.* 6. 110; Nonnus, *Dion.* 16. 243). She then fled from her father to Sicyon, where she married Epopeus; Nycteus, dying by his own hand, bade his brother Lycus punish her. He attacked Sicyon, killed Epopeus, and carried Antiope off. Either then (Apollod. 3. 43), at Eleutheræ, or before meeting Epopeus (*Hyg. Fab.* 8. 2) she bore her twin sons. Lycus and his wife Dirce put her in a dungeon and tormented her till at length she escaped. H. J. R.

ANTIPATER (1) (Ἀντίπατρος) (397–319 B.C.), Macedonian general. He was one of Philip II's right-hand men in war and in diplomacy; in 347–346 he helped to negotiate the peace between Philip and Athens. After Philip's death he aided Alexander in the struggle for the succession, and during Alexander's absence in the East he was governor of Macedonia and 'general of Europe' (334–323). He made himself disliked in Greece by giving support to oligarchs and to tyrants, but he obtained the assistance of the Greek League founded by Philip, when

Agis III (q.v.) of Sparta organized rebellion against Macedonia, and he defeated Agis decisively at Megalopolis (331).

After the death of Alexander, Antipater was caught by surprise when the Athenians, Aetolians, and Thessalians rose in revolt, and had to sustain a siege in Larnia; but after the arrival of Macedonian reinforcements and a victory at Crannon he broke up the rebel league (323–322). He now imposed a more oligarchic form of government upon Athens and drove Demosthenes, whose surrender he demanded, to commit suicide. In 321 he joined a coalition of Macedonian generals against the regent Perdiccas, and after Perdiccas' death he obtained the regency from a conference of generals at Tripuradissus in Syria. He remained a loyal servant of the Macedonian dynasty, and his death in 319 precipitated the break-up of Alexander's Empire.

Diodorus, bk. 17–18, *passim*. Beive, *Alexanderreich* II, no. 94. M. C.

ANTIPATER (2) of Tarsus (2nd c. B.C.), Stoic, successor of Diogenes (q.v. 3) of Babylon as head of the school at Athens and teacher of Panætius. He defended himself in many writings against the criticisms of Carneades, and committed suicide at a great age. His views differed little from those of Chrysippus. Named works: *Περὶ θεῶν*, *Περὶ παντικῆς*. His definition of the end of life (*Stob. Ecl.* 2, p. 76, 11, ed. Wachsmuth) has some importance in the history of ethics.

Testimonia and fragments in H. von Arnim, *STF* III. 244 ff. M. Pohlenz, *Die Stoa* (1955). W. D. R.

ANTIPATER (3) of Sidon (fl. c. 120 B.C.) has about seventy-five epigrams in the Greek Anthology (q.v.) and one more has turned up on papyrus (Page, *GLP*, 454 ff.). Most of them are artificial epitaphs and descriptive pieces, not infrequently adapted from earlier Hellenistic epigrams; but they contain some fine phrases, and the poems on the Roman destruction of Corinth (*Anth. Pal.* 7. 493 and 9. 151) are truly touching. Q. Lutatius Catulus (q.v. 2) knew him as a fluent improviser (*Cic. De Or.* 3. 194); Meleager imitated him in an amusing address to his tombstone (*Anth. Pal.* 7. 428, cf. 427).

T. B. L. Webster, *Hellenistic Poetry and Art* (1964), ch. 9. G. II.

ANTIPATER (4) of Tyre (1st c. B.C.), who introduced Cato of Utica to the Stoic philosophy, died shortly before 44 B.C. Works: *Περὶ καθήκοντος*, *Περὶ κόσμου*, *Περὶ οὐσίας*, *Περὶ ψυχῆς*, *Περὶ γάμου*, *Περὶ γυναικὸς συμβιώσεως*.

ANTIPATER (5) of Thessalonica, Greek epigrammatist, became in about 11 B.C. a client of L. Calpurnius Piso Frugi, the cultured statesman for whose sons Horace may have written the *Ars Poetica*. His latest datable poem belongs to the years A.D. 12–15. In the Greek Anthology there are about eighty of his epigrams—graceful, witty, and unimportant; his attitude to life and art closely resembles Ovid's.

Cichorius, *Rom. Stud.* VII. 6 and 7.

G. II.

ANTIPATER (6), father of Herod (q.v. 1) the Great, was the son of the governor of Idumaea appointed by Alexander Jannaeus. As an Idumaeen he was hated by many true Jews, but dominated the Jewish scene for a generation. He gained power with the support of the Pharisees and his friend Aretas III (q.v.) of Nabataea (he had married a Nabataean), and above all by supporting Hyrcanus, the legitimate heir to the Jewish kingdom, against his brother Aristobulus (see JEWS, A 2). Antipater advocated Hyrcanus' case to Pompey, though himself not pleased with Pompey's settlement. He realized, unlike many contemporaries, that Roman superiority in the

East would be permanent, and he channelled his ambitions into winning Rome's confidence. He helped Scaurus (q.v. 2) to reach terms with Aretas (62 B.C.), and Gabinius to reinstate Ptolemy Auletes in Egypt (55); above all, although he had supported Pompey until Pharsalus, he secured Caesar's favour by raising and leading troops to help him at Alexandria (48). He received as reward Roman citizenship and the administration of Judaea; his sons Phasaël and Herod acted as governors of Jerusalem and Galilee. In 43 he raised funds for Cassius, but was murdered. Thus Rome's client, though an Idumaeans, rendered Rome useful service by maintaining stability in a troubled area.

11. 11. S.

ANTIPATER (7), Aelius, of Phrygian Hierapolis (d. c. A.D. 212), a pupil of the rhetorician Claudius Hadrianus of Tyre. Under Septimius Severus he was *ab epistulis Graecis*, legate of Bithynia, and a consular. Teacher and friend of Caracalla and Geta, he lost imperial favour after Geta's death. He wrote a history of Severus (*F Gr II* 211).

11. 11. S.

ANTIPHANES, poet of Middle Comedy, exhibited his first play in 385 B.C. (Anon. *De Com.* 13) and won thirteen victories (*Suda*, s.v.), eight of them at the Lenaia (*IG II* 2325. 146). The number of plays attributed to him in antiquity ranged between 260 and 365; we have 134 titles and over 330 citations, many of them extensive. Several titles suggest mythological burlesque (including *Ἀνθρωπογυνία*); others are evidently drawn from the plot of the play (e.g. *Ἀκοντιζομένη*, *Ἀλυσμένη*); others, again, refer to types or professions (e.g. *Ἀγροίκος*, *Ἀκέστρια*, *Φιλοθύβριος*)—this last, one would suppose, political in character, but not necessarily to be dated in or even near the time at which Demosthenes was arguing for an alliance with Thebes). Like all poets of Middle Comedy, Antiphanes is often cited by Athenaeus for his references to victuals, but he is also the source of many gnomic passages in Stobaeus' anthology (e.g. frs. 41, 53, 86, 123). Among other citations of exceptional interest are frs. 122 (on metaphysics), 191 (on the difference between the tragedian's art and the comic poet's), and 200 (on music).

FCG III. 3 ff.; *CAF* II. 12 ff.; *FAG* II. 162 ff.

K. J. D.

ANTIPHATES, in mythology, king of the gigantic Laestrygonians in the *Odyssey* (10. 106). On Odysseus sending three of his crew to inquire who the people are, he kills one for his dinner, the others escaping. His people then destroy all Odysseus' fleet save his own ship.

H. J. R.

ANTIPHILUS of Byzantium has about fifty epigrams in the Greek Anthology (q.v.). Many are ingenious paradoxes or descriptions of freak accidents (*Anth. Pal.* 9. 86). Some (e.g. 9. 546) show a genuine love of ships and seafaring. He has an abjectly flattering address to 'Nero' (9. 178): if this is Tiberius, he wrote it about 5 B.C., if Nero, about A.D. 54.

Cichorius, *Rom. Stud.* 334 f.; K. Müller, *Die Epig. des A. von Byzanz* (1935).

G. H.

ANTIPHON (1) (c. 480–411 B.C.), the Attic orator. A man of strong aristocratic prejudices, he never, or very seldom, appeared in court or spoke in public, but gained a great reputation by speeches composed for others. He suddenly came to the front in 411 B.C. as the brain of the oligarchic conspiracy, and was the leader of the extremists against the moderate counsels of Theramenes (q.v.). He went with Phrynichus and eight others to negotiate peace with Sparta in the hope of obtaining support for the oligarchs. The mission failed, and the murder of Phrynichus was followed shortly by the fall of the Four Hundred

and the flight of the leaders to Decelca. Antiphon and Archeptolemus remained, and were tried, condemned, and executed. Antiphon delivered, in his own defence, the finest speech of the kind which had ever been heard (Thuc. 8. 68). When congratulated by Agathon (q.v.) on its brilliance, he replied that he would rather have satisfied one man of good taste than any number of common people (Arist. *Eth. Eud.* 1232^{b7}).

WORKS. The *tetralogies* are oratorical exercises designed to show in outline how speeches should be composed both for attack and defence. Each set contains (a) the prosecutor's opening speech, (b) the first speech for the defence, (c) the prosecutor's reply, and (d) the defendant's conclusion. *First Tetralogy*: a murder case tried before the Areopagus. *Second Tetralogy*: a boy has been accidentally killed by a javelin in the gymnasium, and the boy who killed him is charged with murder. *Third Tetralogy*: an old man, assaulted by a young man, has died of his wounds. *The Murder of Herodes* deals with a real case. Herodes and the accused were on a voyage together; one night Herodes went ashore and disappeared; later, his companion was accused of murder. It is possible that the charge was trumped up to injure the defendant's father, who was unpopular in Mytilene on political grounds (§§ 74–80). *On the Choreutes* (c. 412 B.C.), defence of a *choregos* who has accidentally caused the death of a boy singer by giving him a drug to improve his voice. *Against a Stepmother*: a young man accuses his stepmother of having employed a slave-woman to poison his father. This may be a rhetorical exercise. A few fragments of other speeches survive; some of these may be the work of Antiphon (2), the sophist.

When Antiphon began to write there was no tradition of prose style in the Attic dialect. His contemporary Gorgias wrote in Attic, but his influence cannot have been much felt before 427 B.C., when he first visited Athens. Antiphon then, was free to make experiments. The result was a style which, though crude at times, is always vigorous and precise. He was the first of extant writers to pay careful attention to 'periodic' expression, as opposed to the 'running' style, which is more suitable to narrative than to argument. He indulges freely in antithesis both of word and of thought, and is able to join together clauses so neatly balanced that they correspond even in the number of syllables. In vocabulary, he avoids colloquialisms, and has some partiality for poetical words. Some of the peculiarities of Thucydides may be traced to his influence.

He established a standard form of structure—an introduction, describing the circumstances of the case; a narration of the facts; arguments and proofs, sometimes interspersed with evidence; lastly, a peroration.

His manner is as dignified as his style; he frequently appeals to divine law, which punishes the guilty even though he may escape human justice; he avoids personalities, though in the *Herodes* the speaker exhibits a righteous indignation against his persecutors. He relies on *a priori* probabilities (arguments from character, etc.) at least as much as on the evidence of witnesses.

For general bibliography see ATTIC ORATORS.

J. F. D.

ANTIPHON (2) of Athens (5th c. B.C.), contemporary with Antiphon the orator and often confused with him, sophist and interpreter of dreams, mentioned by Xenophon and Aristotle as an opponent of Socrates. Works: *Ἀλγεία*, *Περὶ ὁμοιοίας*, *Πολιτικός*, *Περὶ κρίσεως ὁνείρων*.

Testimonia and fragments in Diels, *Vorsokr.* II. 334 ff.; M. Untersteiner, *I Sofisti* IV (1962).

W. D. R.

ANTIPHON (3), tragic poet at the court of the Elder Dionysius of Syracuse, by whom he was put to death (Plut. *Quomodo adul.* 27; Philostr. *VS* 1. 15. 3).

TGF 792.

ANTISTHENES (1) (c. 445–c. 360 B.C. (Diod. 15. 76)), son of Antisthenes of Athens and of a Thracian woman (Diog. Laert. 6. 1; Seneca, *Constant.* 18. 5), one of the most devoted followers of Socrates (Xen. *Symp.* 8. 4; *Mem.* 3. 11. 17). He was considered founder of the Cynic sect (Diog. Laert. 1. 15; 6. 13) and probably influenced the philosophy of Diogenes of Sinope, from whose nickname *ὁ κύων* the name of that sect is derived. He also influenced the doctrine of the Stoics.

The main principles of his philosophy were the following. Happiness (*εὐδαιμονία*) is based on virtue (*ἀρετή*). Virtue is based on knowledge and therefore can be taught. This is done through investigation into the meaning of words (*ὀνομαστικὴ ἐπιστήμη*). For he who knows the meaning of a word knows also the thing which it denotes. Whoever knows what virtue is cannot but act virtuously. Whoever has attained this knowledge can never lose it. Most pleasures (*ἡδοναί*) are treacherous and do not contribute to happiness. Only the pleasure which is the result of exertion (*πόσις*) is lasting and unobjectionable. The best government is that of the wise man.

He revered Heracles because he led a life of virtue and exertion, and considered Cyrus the model of a wise monarch. He preferred Odysseus to Ajax because he considered wisdom superior to brutal strength. He wrote dialogues (*Heracles*, *Aspasia*, *Cyrus*, *Protrepticus*, and others), interpretations of Homer, and fictitious orations (*Ajax*, *Odysseus*).

Antisthenes' theory of language is taken by Aristotle to deny the possibility of contradiction (*Top.* 104^b20–1) and of definition (*Metaph.* 1043^b23–6).

Antisthenes fragmenta coll. A. W. Winckelmann (1842), Diogenes Laertius 6. 1–10; F. Dümmler, *Antisthenica* (1882), K. v. Fritz, *Hermes* 1927, 453 ff.; R. Mus 1935, 19 ff.; R. Dudley, *A History of Cynicism* (1937), 1 ff.; J. Snyre, *The Greek Cynics* (1948), R. Høistad, *Cynic Hero and Cynic King* (1948) K. von F.

ANTISTHENES (2) of Rhodes (fl. early 2nd c. B.C.), wrote *Διαδοχαὶ φιλοσόφων*; also a history, perhaps of Rhodes, down to his own time (used by Polybius via Zeno).

FGH 1 508.

ANTISTIUS (1, *PW* 47) **VETUS**, **GAIUS**, under whose father Caesar had served in Spain as quaestor, himself became Caesar's quaestor (date uncertain). He opposed Caelcius Bassus (q.v. 1; see **CORNIFICIUS** 1) in Syria in 45 B.C. (probably as *legatus*), but in 44 joined the Liberators. He was legate of Octavian in Illyricum (35–34?), *cor. suff.* (30), and, perhaps as governor of Hispania Citerior, fought against the Cantabri (26–24). His descendants held several consulships in the early Principate; Antistius (2) was his great-grandson.

Syme, *Rom. Rev.*, see index.

T. J. C.

ANTISTIUS (2, *PW* 53) **VETUS**, **LUCIUS**, consul with Nero in A.D. 55, was legate of Germania Superior (55–6) and planned to connect the Rhine with the Rhône. In 62 he vainly urged his son-in-law Rubellius Plautus to take up arms against Nero. Proconsul of Asia (c. 64), he anticipated condemnation by suicide (65). He is perhaps the writer who was a source for Pliny, *HN* 3–6.

Ritterling, *Fasts des röm. Deutschland*, 16; Schanz-Hosius, ii, 653. A. M.

ANTIUM (modern *Anzio*), roadstead of Latium. Legends envelop its origin, but apparently it was Latin

in the sixth century B.C. (Dion. Hal. 1. 72; Polyb. 3. 22). Shortly thereafter Volsci captured it, and for 200 years Antium was apparently the principal Volscian city. Most fifth-century records concerning it, including the record of the Latin colony in 467, are untrustworthy: the notorious annalist Valerius Antias hailed from here. But in the fourth century it was the centre of Volscian resistance to Rome, that ended only when Maenius (q.v.) captured the Antiatic fleet and made possible the establishment of a citizen colony, 338 (Livy bks. 2–8; Dion. Hal. bks. 4–10). Antiatic pirates, however, continued active even after 338 (Strabo 5. 232). After being sacked by Marius, Antium became a fashionable resort with celebrated temples (App. *BCiv.* 1. 69; 5. 26; Hor. *Carm.* 1. 35). Caligula and Nero were born here and, like later emperors, patronized the town (Suet. *Calig.* 8; *Ner.* 6). Antium nevertheless gradually declined. A pre-Julian calendar, ruined villas, and famous *objets d'art* like the Apollo Belvedere have been found here.

Pre-Volscian Antium: M. I. Scevola, *Rend. Ist. Lomb.* 1959, 417 ff.; 1960, 221 ff.; 1964, 89 ff. E. T. S.

ANTONIA (1, *PW* 112), daughter of the triumvir M. Antonius and his cousin Antonia, born between 54 and 49 B.C. She was promised in 44 to a son of the triumvir Lepidus, but married, c. 34, the rich Pythodorus of Tralles. She seems to have died before her father. Her daughter Pythodoris married Polemon (q.v. 1), king of Pontus (cf. *OGI* 377) and (later) Archelaus, king of Cappadocia (q.v.).

Cf. *PW*, s.v. Pythodorus, 1 and Pythodorus, 13. A. M.; T. J. C.

ANTONIA (2, *PW* 113), elder daughter ('maior' Suet. *Nero* 5. 1; wrongly 'minor' Tac. *Ann.* 4. 44, 12. 64) of M. Antonius and Octavia (q.v. 2), born in 39 B.C., was the wife of L. Domitius (q.v. 6) Ahenobarbus. Their children were Gnaeus, consul A.D. 32 (the father of Nero), Domitia (wife of C. Passienus Crispus), and Domitia Lepida (mother of Messalina (q.v. 1)).

T. J. C.

ANTONIA (3, *PW* 114), younger daughter ('minor' Suet. *Calig.* 1. 1, *Claud.* 1. 6) of M. Antonius and Octavia, (q.v. 2), born 31 Jan. 36 B.C., married Drusus (q.v. 3); their children were Germanicus, Livilla, and Claudius (later Emperor) (qq.v. Cf. *IGRom.* iv. 206). After Drusus' death in 9 B.C. she refused to marry again. In A.D. 31 she gave information to Tiberius leading to the discovery of the conspiracy of Sejanus (q.v.). Her grandson, Gaius, on his accession conferred numerous honours upon her, including the name Augusta, but soon found her criticisms irksome, and, it was said, drove her to commit suicide (1 May 37).

G. W. R.; T. J. C.

ANTONIA (4, *PW* 115), daughter of Claudius and Aelia Paetina, married in A.D. 41 Cn. Pompeius Magnus and afterwards Faustus Cornelius Sulla. Her first husband was put to death by Claudius, the second by Nero. She was killed some months after the Pisonian conspiracy, in which her complicity is possible: less likely is Suetonius' story (*Nero* 35) that her condemnation was caused by her refusal to marry Nero after Poppaea's death.

A. M.

ANTONINUS (1) **PIUS**, Roman Emperor A.D. 138–61, was born in 86 at Lanuvium, near Rome, and was named *Titus Aurelius (PW 138) Fulvius Boionius Antoninus*. He was son of Aurelius Fulvus, of a consular family originally from Nîmes, and Arria Fadilla, also of provincial and consular descent. Antoninus became quaestor, praetor, and in 120 *cos. I ord.* By then he had married Faustina (q.v. 1). Appointed *Ivvir consularis* (see **HADRIAN**), he administered this legal office in Etruria and Umbria, where he owned much property. Proconsul of

Asia between 133 and 136, he gained fame for his integrity and afterwards joined Hadrian's *consilium* (q.v.). Scrupulous, loyal, and gentle, he earned the respect of Hadrian, who, on the death of L. Aelius (q.v. 2) in 138, adopted him as successor, and made him in turn adopt both M. Annius Verus (= M. Aurelius, q.v. 1), Faustina's nephew, and L. Ceionius Commodus (= L. Verus, q.v.), son of Aelius. During Hadrian's last months, Antoninus, now holder of proconsular and tribunician power, was virtual ruler. At Hadrian's death, Antoninus' accession, on 10 July 138, was smooth. He persuaded a hesitant Senate to consecrate the late ruler. The Senate conferred on him himself the title *Pius* (devout) and on Faustina that of *Augusta*. Whether *Pius* commemorated his loyalty to the memory of his adoptive father or his general devotion to his own responsibilities and the gods is uncertain. The title *Pater Patriae*, refused at first, he accepted in 139, with a second consulship; he was *cos. III* in 140 and *IV* in 145.

His policy was unsensational, but beneficent and mildly progressive. Accession gifts (*aurum coronarium*; q.v.) were remitted entirely for Italy, and as to one-half for the provinces. Rome and Italy were the focus of an attention which reflected his *pietas*. His medallions of 140-4 advertise the coming (in 147) 900th anniversary of Rome's founding, and show his belief in her mission. He was fond of the life of a country gentleman in his villa at Lanuvium and perhaps never left Italy during his reign. By suppressing the four imperial supervisors (*II viri consulares*) whom Hadrian (q.v.) had appointed, he returned Italy fully to senatorial control (S.H.A. *Ant.* 11. 6). Completely deferential to the Senate, of which no member was put to death, he nevertheless conceded to it no new powers, and used his advisory *consilium* on all matters. General administration was increasingly centralized. Rotation of office became slower and good officials at home and abroad remained unchanged for years. Permanent officials of the bureaucracy were made members of the *consilium* (*consiliarii*). Imperial control of jurisdiction continued, with experts to assist.

Antoninus dispensed nine 'liberalities' to a total of 800 *denarii* a head; established an alimentary fund (see ALIMENTA) to support *Puellae Faustinianae*, named in memory of Faustina (d. 140-1); lightened the provincial burden of the imperial post; helped many communities financially; and carried out much public building. But he cut down unnecessary public expenditure, and at his death left 675 million *denarii* in the Treasury (Dio 74. 8. 3). Modest and plain-living himself, he disciplined both freedmen and imperial procurators. Confiscation was rare, judicial clemency frequent.

Foreign affairs, though Antoninus' influence encouraged peaceful settlement, were uneasy. About 140-1 the British frontier was advanced (see WALL OF ANTONINUS); but the Brigantes were later to revolt. A restive Germany was further insulated by settling Britons in the Neckar lands. Revolt in Numidia and Mauretania (c. 145-50) was followed by Jewish and Egyptian risings. Dacian trouble (c. 158) caused the partition of that province into three under procurators (159). Kings were assigned to the Colchian Lazii, to the Quadi, and to the Armenians, whom Parthia was warned to leave untouched, though hostilities occurred later (ILS 1076); and Abgar of Edessa was admonished for aggressive conduct.

With the succession assured, and himself—another Numa—high in respect, Antoninus quietly furthered the centralization of government, relying chiefly on a friendly Senate. The general tone of harmony and well-being under Antoninus is well expressed by Aristides (q.v. 5), whose oration 'To Rome' pictures the Empire as a congeries of happy, peaceful, and prosperous city-states under the aegis of Rome's beneficent hegemony and pro-

tection. Antoninus died at Lorium on 7 Mar. 161, entrusting the State to M. Aurelius. Deified by universal accord, he received all the usual honours, including a commemorative column in the Campus Martius, whose base is now in the Vatican, and a temple in the Forum to himself and Faustina.

1. ANCIENT SOURCES. *Literary*: The account of Antoninus in *Historia Augusta* is uncritical. For Aristides' *To Rome*, J. H. Oliver, 'The Ruling Power &c.', *Trans. Am. Philosophical Soc.* 1953, 871 ff. Minor references in Aurelius Victor and Eutropius, and fragments of Dio Cassius bk. 70. The *Meditations* of M. Aurelius and Fronto's *Letters* contain frequent allusions to Antoninus.

ANTONINUS (2), ARRIUS (*PW* 9), maternal grandfather of the Emperor Antoninus (q.v. 1) *Pius*, was *cos. suff.* in A.D. 69, proconsul of Asia under Vespasian, and consul again in 97 under his friend Nerva (q.v.). He is addressed in three letters by the Younger Pliny, who says that his Greek verses recalled Callimachus and Herodas. Probably, like his son-in-law Aurelius Fulvus, he came from Nemausus: his wife Boionia Procilla was certainly Narbonese.

Syme, *Tacitus*, App. 32, 87.

G. E. F. C.

ANTONINUS (3) **LIBERALIS**, mythographer, probably of Antonine times, published a *Μεταμορφώσεων συναγωγή*, based on Hellenistic sources, e.g. Nicander.

TEXT E. Martini, *Mythographi graeci* ii. 1, 61; E. Oeder, *De Antonino Liberali* (1886).

ANTONINUS (1, *PII* 28), MARCUS, praetor (perhaps *pro console*) in 102 B.C., fought against the Cilician pirates. He triumphed late in 100, was consul in 99, and censor (with L. Flaccus (q.v. 5)) in 97. A friend of Marius (q.v. 1) with Arpinate connexions, he opposed the adherents of Saturninus, refused to support the recall of Metellus (q.v. 6) Numidicus, in his censorship enrolled Italians as citizens (thus making the *Lex Licinia Mucia* necessary), and defended Aquilius and Norbanus (qq. v.). He later turned against Marius, was prosecuted under the law of Varius (q.v. 1), but acquitted, and was killed after Marius' return to Rome (87). He and L. Crassus were the leading orators of their age, heard and admired by Cicero, who later drew idealized portraits of them, particularly in the *Brutus* and the *De Oratore*. His oratory was simple, depending mainly on *actio* for its effect, and (perhaps for that reason) he never published his speeches. He left a rhetorical treatise (only the second in Latin, after that of Cato (q.v. 1)), apparently incomplete.

Milovan, *ORF* 221 ff.; Badian, *Stud. Gr. Rom. Hist.* see Index; E. S. Gruen, *JRS* 1965, 67; U. W. Scholz, *Der Redner M. Antonius* (1961). E. B.

ANTONINUS (2, *PW* 29) '**CRETICUS**', MARCUS, son of (1), a weak and easy-going man, dominated by his noble wife Julia (see CAESAR 2). As praetor (74 B.C.) he was given a special *imperium* (described as *infinitum*) to deal with the pirates, perhaps in part to provide a force counterbalancing Pompey's (q.v.). Unsuccessful in his campaigns off Liguria and Spain and oppressive in his requisitioning (see Cic. 2 *Verr.* 3. 213), he was disastrously defeated by the Cretans in a naval battle, made a treaty with them, and died soon after (c. 72). E. B.

ANTONIUS (3, *PI* 19) 'HYBRIDA', GAIUS, son of (1). An officer under Sulla, rewarded in the proscriptions, he escaped prosecution *repetundarum* by appealing to the tribunes on a technicality. As tribune (72 B.C.?) he helped to pass the *Lex Antonia de Termessibus* (q.v.). Expelled from the Senate by the censors (70), he was helped to a praetorship by Cicero (66), made an election compact with his old comrade Catiline (q.v.) in 64 (see Asconius 82 ff.) and was elected consul with Cicero. Given the province of Macedonia by Cicero, he agreed to march against Catiline, but left the fighting to his legate Petreius (q.v.). Oppressive and unsuccessful in Macedonia, he was prosecuted and, though defended by Cicero, convicted. Recalled from exile by Caesar, he was censor in 42. E. B.

ANTONIUS (4, *PI* 30), MARCUS, 'Mark Antony' the triumvir, eldest son of Antonius (2) Creticus, was born c. 83 B.C. After a dissipated youth he distinguished himself as a cavalry commander under Gabinus (q.v. 2) in Palestine and Egypt (57-54), and then joined Caesar's staff in Gaul, where, apart from an interval in Rome (53-52), he remained till the end of 50; in 51 he was quaestor. As tribune in 49 he defended Caesar's interests in the Senate, fled to his camp when 'the last decree' was passed, took part in the fighting in Italy, passed measures restoring the sons of the proscribed and some of those condemned *de ambitu* under Pompey's law of 52, and was left in charge of Italy during Caesar's Spanish campaign. In 48 he served under Caesar in Greece and commanded his left wing at Pharsalus. Caesar then sent him to Italy as his representative and *magister equitum* (till late in 47), but apparently was not wholly satisfied with his conduct, as he held no further post till 44 when he was Caesar's consular colleague. After the Ides of March he was at first conciliatory towards the Liberators, but he made an unscrupulous use of Caesar's papers, and his recruiting of armed supporters, followed by the irregular enactment of a law which gave him Cisalpine Gaul and Gallia Comata for five years (June), strengthened the opinion that he was preparing to step into Caesar's shoes. Further, the activities of Octavian threatened his position as leader of the Caesarian party. By early 43 he faced an armed coalition consisting of Decimus Brutus (q.v. 6), whom he was blockading in Mutina (q.v.), the new consuls Hirtius and Pansa (qq.v.), both moderate Caesarians, and Octavian, backed by the Senate's authority and Cicero's eloquence; in April he was compelled by reverses at Forum Gallorum and Mutina to retreat to Gallia Narbonensis. He was joined there, however, by the governors of the western provinces, Lepidus (q.v. 3), Pollio (q.v.), and Plancus (q.v. 1), and subsequently reconciled with Octavian.

By the *Lex Titia* (November 43) Antony, Lepidus, and Octavian were appointed *tresviri rei publicae constituendae* (see TRIUMVIRI) for five years. The proscription of their political and personal enemies was followed in 42 by the defeat of Brutus and Cassius at Philippi (q.v.), where Antony established his reputation as a general. By agreement with Octavian he now undertook the reorganization of the eastern half of the Empire. In the course of this task he met Cleopatra at Tarsus (q.v.) in 41 and spent the following winter with her in Egypt. The defeat of his brother L. Antonius (q.v. 6) in the Perusine War compelled him early in 40, despite the distraction of a Parthian invasion of Syria (see LABIENUS 2), to return to Italy, but a new agreement was reached at Brundisium by which Antony surrendered his province of Gaul, which Octavian had already occupied, and married his sister Octavia (q.v. 2). In 39 they made the treaty of Misenum (q.v.) with Sextus Pompeius, after which Antony left with Octavia to continue his task in the East. By 38 his lieutenant Ventidius (q.v.) had ex-

pelled the Parthians from Syria. In 37 new differences between Antony and Octavian were settled at Tarentum, and the Triumvirate was prolonged for another five years; but this time he left Octavia behind when he departed for the East, and renewed his association with Cleopatra on a permanent basis. This step was probably not without its political motives. The support of the rich kingdom of Egypt, to which he now restored some of its old territories, was a valuable asset. For similar reasons he saw to it that the able Herod (q.v. 1) was installed in his kingdom of Judaea. The allegiance of Egypt and the Hellenistic East was courted by religious propaganda: Antony had already assumed the role of Dionysus, i.e. of Osiris, and he and Cleopatra could now be represented as a divine pair with Cleopatra as Aphrodite or Isis, united for the benefit of Asia, as had been predicted at Tarsus (Plut. *Ant.* 26). In 36, however, Antony's Parthian expedition ended in a disastrous retreat, and the defeat of Sextus Pompeius and the elimination of Lepidus from the Triumvirate brought the rivalry between Antony and Octavian into sharper focus. In 35 there was fresh cause of offence when Octavia came to the East bringing Antony Roman troops amounting in number only to one tenth of what Octavian had promised and Antony refused to receive her. In 34 he annexed Armenia on the pretext of the desertion in 36 of its king Artavasdes (q.v. 1) and celebrated in Alexandria a triumph, followed by a ceremony in which Cleopatra and her children—including Caesarion (q.v.), whom Antony declared to be Caesar's acknowledged son—were proclaimed as monarchs of the expanded Egypt and other territories inside and outside the Roman Empire. An open breach with Octavian followed; the year 33 saw an acrimonious exchange of accusations. Early in 32 Octavian frightened many of Antony's supporters into leaving Rome (see SOSIUS 1); Antony divorced Octavia; and Octavian forcibly seized and published Antony's will, in which he allegedly left bequests to his children by Cleopatra (an impossibility in Roman law) and requested burial in Alexandria. It was now easy for Octavian to procure the annulment of Antony's remaining powers and a declaration of war against Cleopatra. Antony's legions were supplemented by the Egyptian fleet and the forces of his numerous client-kings, but the presence of Cleopatra in his camp alienated a number of his Roman supporters including Plancus (q.v. 1), Titus (q.v. 2), and Domitius (q.v. 5) Ahenobarbus. Decisively defeated at Actium (q.v.) in September 31, Antony attempted to defend Egypt, but the general defection of his governors and vassals made his cause hopeless. He committed suicide before Octavian's entry into Alexandria (Aug. 30).

Of fine physique, and with a constitution which excesses and hardships alike failed to ruin, Antony was a natural soldier, and his courage, affability, and generosity made him a great soldiers' leader. As a politician, though by no means unskilful, he was sometimes led into serious errors by his irascible temper and self-will. It was his misfortune to face in Octavian a cooler, more single-minded, and less scrupulous opponent. As an administrator he was not without ability: his arrangements in the East, except where they concerned Cleopatra and her family, were largely retained by Augustus. In oratory he inclined to the florid Asian school; his only literary publication was an apologia of 31 *De sua ebrietate*; specimens of his epistolary style can be seen in Cicero's correspondence, the thirteenth *Philippic* and Suetonius' *Augustus*.

Antony was married (1) to Fadia; (2) to his cousin Antonia, daughter of C. Antonius (3), whom he divorced in 47; (3) in 47 or 46, to Fulvia (q.v.); (4) in 40, to Octavia. By Antonia he had a daughter Antonia (q.v. 1); by Fulvia two sons, Marcus and Iullus Antonius (qq.v. 7 and 8); by

Octavia two daughters Antonia (2) and (3), through whom he was the ancestor of the three emperors Gaius, Claudius, and Nero. His marriage to Cleopatra (37?) was not valid in Roman law. For their children see CLEOPATRA VII.

Cicero, *Letters and Philippics*; Caes. *B Gall.* 7. 81, 8, *B Civ.* 1. 3; Vell. Pat. 2; Joseph. *AJ* 14-15, *BJ* 1; Suet. *Jul.*, *Aug.*; Plut. *Ant.*; App. *B Civ.* 2-5; Caes. *Dio* 41-51; J. ANTONIUS (5, *PW* 20), GAIUS, second son of Antonius (2). As Caesar's *legatus* in 49 B.C. he was blockaded by a Pompeian fleet on the island of Curicta in the Adriatic and forced to surrender. After his praetorship in 44 he set out for Macedonia, but was besieged and captured in Apollonia by M. Brutus (March 43). He tried to incite the troops of Brutus to mutiny and was executed by his order, probably early in 42. G. W. R.

ANTONIUS (6, *PW* 23), LUCIUS, third son of Antonius (2). He was quaestor in Asia in 50 B.C. and stayed on in 49 in charge of the province 'pro quaestore pro praetore'; in 44, as tribune, he carried a law giving Caesar special powers in the appointment of magistrates, and after Caesar's death was made chairman of an agrarian commission. In the war of Mutina he served under his brother Marcus. As consul in 41, with the encouragement of Fulvia (q.v.) and in the supposed interests of Marcus (hence his assumed surname 'Pietas'), he asserted the rights of his office against Octavian, and championed the Italians dispossessed by the latter's settlements of veterans. The ensuing civil war ended in the surrender of Lucius at Perusia (q.v.), early in 40. Octavian pardoned him and sent him to a command in Spain, where he appears to have died soon afterwards. G. W. R.; T. J. C.

ANTONIUS (7, *PW* 32), MARCUS, called 'Antyllus' by the Greeks, elder son of the triumvir and Fulvia (q.v.). In 37 B.C. (at Tarentum) he was betrothed to Julia (q.v. 2). He assumed the *toga virilis* after Actium and was put to death by Octavian after the capture of Alexandria.

G. W. R.

ANTONIUS (8, *PW* 22), IULLUS, second son of the triumvir and Fulvia, was brought up in Rome by Octavia (q.v. 2) and married in 21 B.C. to Marcella, her daughter by Marcellus. Praetor (13), consul (10), and proconsul of Asia (7/6?), he was condemned to death (2 B.C.) for adultery with Julia (q.v. 2) and designs on the supreme power, and committed suicide. He wrote verse, including an epic *Diomedea* in 12 books; Horace addressed *Carm.* 4. 2 to him. He had sons called Iullus and Lucius.

K. M. T. Atkinson, *Hist.* 1958, 327; Schanz-Hosius ii. 273.

T. J. C.

ANTONIUS (9) CASTOR, perhaps a freedman of M. Antonius (q.v. 4), was one of the Elder Pliny's sources for botany (*IIN* 25. 9). Pliny mentions that he possessed his own botanical garden.

Schanz-Hosius § 495, 3.

ANTONIUS (10) MUSA, physician of Augustus, whom in 23 B.C. he cured of a serious illness. Apparently he was the first to introduce hydropathy at Rome. He wrote a work in several books on the properties of drugs. The extant works that pass under his name—*De herba*

botanica and *De tuenda valetudine ad Maecenatem*—are spurious and later.

Ed. E. Howald and H. E. Sigerist, *GML* iv.

W. D. R.

ANTONIUS (11) **DIODEGENES** (c. A.D. 100), author of a tale of travels and adventures in twenty-four books, entitled 'The wonderful things beyond Thule' (*Tà υπὲρ Θούλην ἀπὸστα*). The story, of which only Photius' abstract is extant (*Bibl.*, cod. 166), was of a fantastic character (the protagonist, amongst other things, reaches the Moon); the erotic element is very much confined to the background, and the work, as Rohde has shown, belongs rather to the genre 'Reisefabulistik' than to the genre 'love-romance' proper.

TEXT. R. Hercher, *Erotici Scriptores Graeci* i. 233 ff. (Teubner). CRITICISM. Rohde, *Griech. Roman*, 269 ff.; Christ-Schmidt-Stählin II. n^o. 819 ff. See also NOVEL, GREEK.

G. G.

ANTYLLUS (2nd c. A.D.), physician, belonged to the pneumatic school; his chief contributions to medicine were in the sphere of dietetics, general therapeutics, and especially surgery. Works: *Περὶ βοηθημάτων* (on medicine); *Χειρουργούμενα* (on surgery); *Περὶ ὑδροκεφάλων*: all lost except for frs. See SURGERY, § 6.

W. D. R.

ANUBIS, originally one of several local gods of the dead in Egypt, is represented on the monuments as a jackal. In Hellenistic times his cult is both celestial and infernal and he is sometimes identified with Hermes under the name Hermanubis. He is an important member of the cult of the Egyptian deities only at Delos, though we know of a *thiasos* which worshipped him at Smyrna. In the Roman period he is represented at times as a soldier in armour.

T. A. B.

ANYTE of Tegea (fl. early 3rd c. B.C.) was an Arcadian poetess, much admired in her time and thereafter. About eighteen of her charming Doric epigrams, mostly sepulchral, are in the Greek Anthology (q.v.) and one is cited by Pollux 5. 48. Her lyrics are lost, but she translated some of Sappho's spirit into her sensitive elegiac quatrains. She was the first to make epitaphs for animals, and one of the first to write pastoral descriptions of wild nature (e.g. *Anth. Pal.* 16. 228).

M. J. Baale, *Studia in Anytes vitam* (Haarlem, 1903); S. Colangelo, *Stud. Ital.* 1915, 280 ff.; F. Herrlinger, *Totenklage um Tiere in der antiken Dichtung* (1930); G. Luck, *Mit* 1954, 174 ff.; Wilamowitz, *Hellenist. Dichtung* i. 136 f.

G. H.

ANYTOS (5th-4th c. B.C.), a wealthy Athenian and a democratic leader. General in 409 B.C., he failed to prevent the loss of Pylos, and is said to have escaped condemnation only by bribery. After the war, he was one of the restorers of democracy with Thrasybulus, proving himself an honest and moderate politician. Plato (*Meno* 90 f.) introduces him as a well-bred man, but a passionate enemy of the sophists. He probably did not belong to the circle of Socrates, as some sources hint. He became one of the three accusers of Socrates, less for private reasons than from an honest belief that he was doing the best for Athens. Accounts about his banishment and murder may be later inventions.

Prosop. Att. 1324.

V. E.

AORNOS, the mountain stronghold between the Swat and Indus rivers captured by Alexander (327-326 B.C.), has been identified by Sir Aurel Stein with Pir-sar, north of Buner. Two great ridges, Pir-sar and Una-sar, converge at right angles; the 'rock' is Bar-sar on Pir-sar, cut off from the Una ridge (along which Alexander attacked) by the Būrimār ravine (across which he constructed his ramp). The operations can be understood only from a

map, which shows what a great feat of arms it was. 'Aornos' may represent Una (Unra).

Sir A. Stein, *On Alexander's Track to the Indus* (1920), chs. 17-22, with maps. W. W. T.

APAMEA, a city on the Orontes which replaced the Macedonian military colony of Pella. It was founded by Seleucus I, or perhaps Antiochus I. It was the capital of a satrapy and the military headquarters of the Seleucid kingdom. A natural fortress, it was seized by Caecilius Bassus in 46 B.C. and endured a long siege. During the Principate it made only one issue of coins (under Claudius), but ruled a large territory; its citizen population numbered 117,000 under Augustus. Its ruins are being excavated (reports in *Ant. Class.* 1932, 1935-6). Apamea is by no means to be confused with its namesake in Phrygia, where the Romans concluded a peace with Antiochus III (q.v.) in 188 B.C. A. H. M. J.

APARCHE, votive gift to a god. The custom which is expressed by the Latin word *votum* (q.v.), that a gift is promised and given if a certain condition is fulfilled by the god, was common in Greece too (cf. *Il.* 6. 305 ff.); it is expressed by the word *εὔχη*. The words *ἀπαρχή*, *ἀκροβόλια* express the idea that a part of something gained is given to the god. Generally these gifts were understood as a *χαριστήριον*, thank-offering. Cf. *IG* 1². 625 *εὐχολήν τελέους σοι χάριν ἀντιδίδους*.

H. Beer, *Απαρχή und verwandte Ausdrücke in griechischen Weistumschriften* (Diss. München, 1914); J. Rudhardt, *Notions fondamentales de la pensée religieuse, etc.* (1958), 210 ff. M. P. N.

APATURIA, a festival characteristic of the Ionians (among the Dorians the Apellai (q.v. 2) corresponds to it). It is chiefly known from Athens, where it was celebrated by the phratry in the month of Pyanopsion (Oct.-Nov.). Its three days were called (1) *δορπία* (from a late meal), (2) *ἀνάρπσιος* (from the sacrifice of an animal), (3) *κούρειωσις*. On this last day the children and young adult men and newly married wives were enrolled in the phratry. Three sacrifices are mentioned in connexion with this enrolling: the *μεῖον* (the lesser one) was probably brought on behalf of a child introduced into the phratry; the *κούρειον* (cf. *κούρειωσις*) has its name from the shearing of the hair of the ephebes; the *γαμυλία* from the introduction of the newly married young women. See also under ΑΕΙΘΡΑ.

L. Deubner, *Attische Feste* (1912), 242 ff. Note above all the inscription of the phratry of the Demotionidae, *IG* 1². 1237 = *SIG* 921. M. P. N.

APELLAI (1) (*Ἀπέλλαι*), a festival of Apollo at Sparta and elsewhere, at Sparta the occasion for a citizen assembly which modern scholars often therefore call the Apella. Its procedure was defined by the *Rhetra* of Lycurgus; all Spartiates could attend its (perhaps monthly) meetings which were presided over by the kings and Gerousia (q.v.), later (in the 5th c.) by the ephors (q.v.). It could only accept or reject proposals put before it, any right, formal or assumed, of initiating legislation or of amendment having been withdrawn by an addition to the *Rhetra*, ascribed to Kings Theopompus and Polydorus (see SPARTA). It expressed its opinion by acclamation, and if this seemed indecisive, by formal division.

The extent of its competence is uncertain but it had the right to decide disputed royal successions; to appoint military commanders; to elect ephors and other magistrates and members of the Gerousia; to decide on peace or war and the conclusion of treaties; and to approve the emancipation of helots. Any proposed change in the laws required its approval.

We hear also of a *μικρά ἐκκλησία* (Xen. *Hell.* 3. 3. 8)

apparently convoked on urgent occasions, but its composition is uncertain.

Arist. *Pol.* 1273a; Thuc. 1. 79-87; Plut. *Lyc.* 6; *Agis* 8-11; Diod. Sic. 11. 50. (and see SPARTIA). W. G. F.

APELLAI (2). *Ἀπέλλα* is a Dorian word signifying assembly-place, assembly (see preceding article). In the plural it signifies a festival corresponding to the Athenian Apaturia (q.v.) at which the new members of the *gens* were introduced. The name of the month Apellaios proves that it was widely spread among the Dorians; otherwise it is known only through the inscription of the Labyadaí at Delphi (*SIG* 438).

Nilsson, *GGR* 1² 556.

M. P. N.

APELLES (4th c. B.C.), painter, of Colophon, later of Ephesus (sometimes called Coan because of the Coan Aphrodite). Pliny dates him 332 B.C. (because of the portrait of Alexander). He was taught first by Ephorus of Ephesus, then by Pamphilus (q.v. 1) of Sicyon. When in the Sicyonian school, he helped Melanthius to paint the victorious chariot of the tyrant Aristratus. He painted portraits of Philip, Alexander, and their circle, and a self-portrait. Anecdotes connect him with Alexander, Ptolemy, and Protogenes. He died in Cos while copying his Aphrodite, probably early in the third century.

SELECTED WORKS: 1. Aphrodite Anadyomene, in Cos, later in Rome. Aphrodite rising from the sea, wringing out her hair. 2. Alexander with the thunderbolt, in Ephesus. Alexander darker than nature so that the thunderbolt stood out. 3. Calumny, preceded by Envy, Intrigue, and Deception, and followed by Repentance and Truth, dragging her victim before a man with large ears, attended by Ignorance and Superstition. 4. Sacrifice, in Cos. Described by Herodas (4. 59). Copies of his works have been seen in the Herculaneum tragic actor (Gorgosthenes) (Pfuhl, fig. 653; Rumpf, pl. 51/1) and the Alexander mosaic (Pfuhl, fig. 648; Rumpf, pl. 48). The tone of his pictures was due to a secret varnish. He wrote a book on painting; he claimed to know when to take his hand from a picture (contrast Protogenes), and that his works had charm, *χάρμς* (contrast Melanthius).

Overbeck, 591, 1067, 1073, 1090, 1446-8, 1481, 1687, 1726, 1745, 1748-9, 1751, 1759, 1766, 1772, 1774. 1827 1906, 1921. Pfuhl, 801; Rumpf, *Malerei u. Zeichn.* 147, *Ath. mitt.* 1962, 229. T. B. L. W.

APENNINE CULTURE is the term used to describe the material aspects (almost exclusively ceramic) of the semi-nomadic pastoral economy diffused along the Apennine chain from the Bolognese in the north to the south-east tip of peninsular Italy throughout the Middle and Late Bronze Age. There are particularly significant concentrations in south-east Emilia (Toscanelle Imolese), the Marche (Filottrano), Tuscany (Belverde), Latium (Pian Sultano), Campania (Ischia, q.v.), has produced Apennine material associated with Late Mycenaean IIIA sherds, Puglia (Coppa Nevigata, Grotta Manaccora, and the Tarentino), and in Lipari (see AEOLIAE INSULAE). A division between two sequences, northern and southern, may be expressed typologically in terms of pottery traits and topographically by an east-west line between Termoli and Formia; the material from Lipari, however, has affinities with the northern rather than with the southern sites. In the Late Bronze Age the story of the Apennine Culture is closely linked with that of the *terramare* (see TERRAMARA).

Soc.* 1958, 165 ff.; id. *PBSR* 1963, 1 ff.; id. *Central and Southern Italy before Rome* (1966), 109 ff.; C. E. Östenberg, *Lumi sul Mignone e problemi della preistoria d'Italia* (1967). D. W. R. R.

APENNINES, Italy's mountain backbone, branch off from the Alps near Genoa. At first they are of moderate height (3,000-4,000 ft.) and run eastwards forming the southern boundary of Cisalpine Gaul (Northern Apennines); then, near Ariminum, they turn south-east, follow the line of the Adriatic coast and attain great altitudes—9,560 feet at the Gran Sasso (Central Apennines); approaching Lucania they become lower again, swing south and occupy virtually all south-west Italy (Southern Apennines: the granite Sila mountains of the Bruttian Peninsula, although geologically distinct, are generally reckoned a prolongation of the limestone Apennines. Italy's volcanic mountains, however—Albanus, Vesuvius, Vultur—are independent of the Apennine system). The 800-mile Apennine chain is not continuous and unbroken, but consists of tangled mountain masses of varying width, interspersed with numerous upland passes and fertile valleys suitable for agriculture or summer pasturage. Offshoots are numerous, e.g. Apuan Alps (Liguria), Volscian Mountains (Latium); some are completely separated from the main range, e.g. Mons Garganus (Apulia). The Apennines feed most Italian rivers except the Po and some of its tributaries, but, not being perennially snow-capped, supply inadequate amounts of water in summer, when consequently the rivers become mere rills or torrent-beds. The Apennines contain numerous mineral springs but little mineral wealth. In antiquity their cheeses, wolves, bears, goats, extensive forests, and brigands were famous.

Polyb. 2. 16; 3. 110 includes Maritime Alps in the Apennines; Strabo 2. 128; 5. 211; Lucan 2. 306-338, Varro, *Rust.* 2. 1. 5, 16; Pliny, *HN* 11. 240, 16. 197. C. S. du Riche Preller, *Italian Mountain Geology* (1923). E. T. S.

APER, MARCUS, an advocate of Gallic origin who attained the praetorship. He apparently visited Britain, perhaps as *tribunus latelarius*. Tacitus studied his rhetorical methods, and in the *Dialogus* introduces him as a utilitarian vehemently defending lucrative court-oratory in the modern style as against poetry and the older fashions.

Tac. *Dial.* 2; 5-10; 16-21. Syme, *Tacitus*, App. 91. G. C. W.

APEX, a sort of mitre derived from the Etruscans, worn by Roman *flamines* and some other priests, or more properly the top of it (Suetonius ap. Servius on *Aen.* 2. 683, 'apex proprie dicitur in summo flaminis pileo uirga lanata, hoc est in cuius extremitate modica lana est'. The *uirga* was a twig or spike of olive-wood (Festus p. 9. 30 Lindsay); the *lana* was a woollen thread, *apiculum*, with which apparently the spike was tied on (ibid. 21. 10). The lower part of the head-dress was the *galerus*; that of the *flamen Dialis* was called *albugalerus*, being made of the skins of white victims sacrificed to Jupiter (ibid. 9. 29; Varro ap. Gel. 10. 15. 32). This was a close-fitting conical cap (Varro, *Lang.* 7. 44).

K. A. Esdaile, *JRS* 1911, 213 ff.; Wissowa, *RE* 499; Latte, *RR* 157, 404, and (for illustration) pl. 23. H. J. R.

APHAEA (*Ἀφαία*), a goddess worshipped in Aegina, where the ruins of her temple (famous for its pedimental sculptures, now in Munich) are still extant. She was identified with Britomartis (q.v.; Paus. 2. 30. 3); i.e. she was of similar character to Artemis (q.v.). H. J. R.

APHRODISIUS, SCRIBONIUS, slave and pupil of Horace's teacher, Orbilius, took up the subject of Latin orthography and strongly criticized the work of Verrius Flaccus (q.v. 8). Scribonia, Augustus' first wife, freed him (Suet. *Gram.* 19).

APHRODITE, Greek goddess of love, beauty, and fertility. The meaning of the name is uncertain, though the Greeks, from Hesiod on (*Theog.* 188-206), derived it from *ἀφρός*, 'foam', and told of the birth of Aphrodite from the sea. She was worshipped throughout almost all of the Greek world; the sanctuaries at Paphos (q.v.) and Amathus in Cyprus, at Cythera, and at Corinth were especially renowned. To Homer she is 'the Cyprian', and it was probably from Cyprus, in the Mycenaean age, that Aphrodite first entered Greece, though the Hellenic goddess doubtless owes something to earlier Aegean divinities, such as Ariadne, whose cults she absorbed. Greek tradition consistently pointed to an eastern origin for Aphrodite (cf. Hdt. 1. 105; Paus. 1. 14. 7), and it was from Cyprus that Adonis, the consort of Astarte-Aphrodite, was later to come to Athens. But the process of hellenization has already gone far in Homer, who makes Aphrodite the daughter of Zeus and Dione, and the wife of Hephaestus; Ares, in later myth her husband, appears in the lay of Demodocus (*Od.* 8. 266-366) as her paramour. Aeneas is her son by the Trojan Anchises (*Il.* passim; *Hymn. Hom. Ven.* 5), and she is ever the partisan of the Trojans (another hint of her non-Hellenic origin) but no warrior, and when she is wounded by Diomedes, Zeus reminds her that her sphere is not war but love (*Il.* 5. 428-9).

Primarily, she is a goddess of generation and fertility, and in poetry often seems little more than a personification of the sexual instinct and the power of love. Occasionally she presides over marriage, and the bearded Aphrodite of Cyprus seems to be an androgynous type arising from the marriage ritual (see HILMAFAPHRODITUS), but marriage was a domain largely pre-empted by Hera. Prostitutes, however, considered Aphrodite their patron (cf. Aphrodite *Πόρνη*, *Ἑταίρα*, Ath. 13. 572 c-573 a), and there was sacred prostitution (q.v.) in her cult at Corinth, but in general the public cult, at least, was staid and even austere.

The evidence for Aphrodite as a goddess of vegetation is slight, but not to be dismissed out of hand. She is closely associated with Adonis (q.v.), a divinity of vegetation; here too belong the cult names A. *ἐν Κήποις*, A. *Ἀνθεία*, and her associations with the Charites, the Horae, and Eros (qq.v.) (cf. the sanctuary of Eros and A. *ἐν Κήποις* on the north slope of the Acropolis, O. Broneer, *Hesp.* 1932, 1935). The powers of fertility are generally chthonian (A. *Μελαιρίς*, Paus. 2. 2. 4; 8. 6. 5; 9. 27. 5; A. *Ἐπιτροβία* at Delphi, Plut. *Quaest. Rom.* 260 b), and to this trait may be due her frequent association in cult with Hermes (q.v.).

Aphrodite was widely worshipped as a goddess of the sea and seafaring (A. *Πορτία*, *Εὐπλοία*). The armed Aphrodite (*ὀπλισμένη*) or goddess of war (A. *Ἀρεία*, *Στρατεία*) was worshipped in Sparta, Cyprus, Cythera, and elsewhere; this warlike character is probably a direct survival from her Oriental prototypes, and may also explain her associations, chiefly in myth, with Ares (q.v.).

Two very common titles are *Οὐρανία* and *Πάνδημος* (see *PW*, s.vv.), but the philosophical interpretation of these as representing intellectual and common love (Pl. *Symp.* 180 d-181; Xen. *Symp.* 8. 9-10) is unjustified. The title *Urania*, in fact, seems frequently a mark of the Oriental goddess, and was a cult name at Cyprus, Cythera, and Corinth. It was also applied to various foreign goddesses (e.g. the Scythian Argimpasa, Hdt. 4. 59; the Arabian Allat, Hdt. 3. 8; Venus Caelestis = Astarte at Carthage). Pandemus, on the other hand, the 'goddess of the whole people', represents the highest political idea to which Aphrodite attained, notably at Athens, but also at Erythrae, Thebes, Cos, and Megalopolis.

Apart from Hermes, Aphrodite has no strong asso-

ciations in cult with the major Hellenic gods. Nor are her festivals, except in Cyprus, of great importance, though that at Delos, where Aphrodite has replaced Ariadne, was very ancient (Plut. *Thes.* 21; Callim. *Del.* 306-13), and several states had a month named for her. The myrtle and the dove are sacred to Aphrodite (cf. dove used for lustration of temple of Pandemus, *IG* ii². 659); the sacrifice of swine seems to mark the fertility cult and the presence of Adonis.

In the Hellenistic period the name 'Syrian A.', (on Delos A. Ἀνρί) designates Atargatis (q.v.).

The poets, as in the fragment of Aeschylus' *Danaïdes* and the magnificent exordium of Lucretius, exalt Aphrodite as the cosmic generative force pervading all nature.

Farnell, *Cults* ii, chs. 21-23; Nilsson, *Feste* (1906), 362 ff.; *GGR* i. 519 ff.; L. Preller-C. Robert, *Griechische Mythologie* (1894), 345 ff.; R. Dussaud, *Rev. Hist. Rel.* 1916, 1. See VENUS. F. R. W.

APHRODITE IN ART. Greek art took several hundred years to achieve a truly individual vision of Aphrodite. Archaic art represents her either in the Oriental type of a nude goddess or as a standing or seated figure distinguished only by attributes from other goddesses. (E. Suhr, *AJArch.* 1961, 389).

Classical art of the fifth century endows Aphrodite with majestic beauty and grave charm (G. M. A. Hanfmann, *AJArch.* 1962, 281). The famous images by Phidias, Alcamenes, and Agoracritus (A. W. Lawrence, *Class. Sculpt.* 1929) are lost, but we can admire in originals the poetic charm of Aphrodite rising from the sea (Ludovisi Throne: W. Hahland, *JÖAI* 1953, 27; E. Simon, *Die Geburt der A.* 1959), the quiet dignity of Aphrodite on the swan (painted cup, London), the harmony of Aphrodite and Eros in the Parthenon frieze. An Aphrodite on a tortoise and one leaning on a pillar reflect monumental images of Periclean times (Schrader, *Phidias*, 1924).

"The finest statue not only of Praxiteles but in the whole world is the Aphrodite for the sight of which many have sailed to Knidos", says Pliny (*HN* 36. 4. 20). Carved about the middle of the fourth century and known through Roman copies, this statue shows the goddess laying her garment on a hydria before taking a bath. The first convincing representation of the beautiful female nude, distinguished by an evasive charm, the Cnidian Aphrodite became a model for the numerous Aphrodites of Hellenistic and Roman times (T. Kraus, *Die A. von Knidos*, 1957). Of these the best known are Aphrodite of Cyrene, the popular Venus de Milo (J. Charbonneaux, *La Venus de Milo*, 1958), the crouching Aphrodite by the Bithynian Doidalsas (R. Lullies, *Die Kauernde Aphrodite*, 1954), the armed Aphrodite of Acrocorinthus, and the various types described as 'Venus Genetrix'.

C. Blinkenberg, *Knidia* (1933); A. W. Lawrence, *Later Greek Sculpture* (1927); O. Broneer, *The Armed Aphrodite* (1930); M. Bieber, *Rom. Mitt.* 1933. G. M. A. II.; J. R. T. P.

APHTHONIUS, AELIUS FESTUS (3rd c. A.D.), wrote four books *De Metris*, which now form the bulk of the *Ars Grammatica* of Marius Victorinus (ed. Keil, *Gramm. Lat.* 6. 31-173). This incorporation (not due to Victorinus himself) was effected before A.D. 400.

Schanz-Hosius, § 829.

J. F. M.

APICIUS, proverbial cognomen of several Roman gourmets, especially M. Gavius (*PIR*² G 91), who lived under Augustus and Tiberius, made a science of his culinary expertise, and left some writings (Pliny, *HN* 10. 133; Sen. *Helv.* 10. 8-9; schol. Juv. 4. 23; etc.). The *De Re Coquinaria* ascribed to (Caelius) Apicius by the MSS.

was, however, compiled later and probably took its present form in the fourth century.

F. Vollmer, *Sitz. München* (1920), 6.

L. A. M.

APION, son of Posidonius, a Greek (or Graeco-Egyptian) of Alexandria, pupil of Didymus, and successor to Theon as head of the Alexandrian school. He was later at Rome, under Tiberius and Claudius. He was nicknamed Πλειστονίκης (by himself), *cymbalum mundi*, and *propriae famae tympanum* (by Tiberius and Pliny, Pliny *HN* Pref. 25), and, for his industry, *Μόγθος*. He wrote on Egypt (cf. Josephus, *Ap.* 2. 143; and Gell. 5. 14. 10-30); he called up (so he said) Homer's spirit to ascertain the poet's parentage and birthplace, but published no account of the proceedings, and compiled, *inter alia*, an alphabetically arranged Homeric glossary, based, as was usual, on Aristarchus, and preserved only in fragments and in the derivative work of Apollonius Sophistes.

FRAGMENTS *FGH*. 616. A. Ludwig, *Philol.* 1917, 205; 1919, 90; K. Alpers, 'Theognoston, Περὶ ὀρθογραφίας' (*Diis.* Hamburg 1904), 54 ff. P. R. B. F.

APIS, the sacred bull worshipped in Memphis. His cult attained national prominence and under Ptolemaic and Roman rulers official recognition was given to it and to the fast-days connected with it. When the sacred animal died, a successor was chosen and the dead beast was mummified and entombed during a period of sorrow and fasting which lasted for seventy days. Apis is mentioned a few times in Greek inscriptions as one of the gods included among the Egyptian deities, but his chief importance for Graeco-Roman religion lies in the fact that the cult of Sarapis (q.v.) originated in the worship of the Osirified (see OSIRIS) Apis-bulls entombed in the temple at Memphis. T. A. B.

APODEKTAI, a board of ten officials at Athens, who received all the moneys from the revenue-collecting departments and paid them over to the spending departments, under the supervision of the *boule*. They were instituted by Cleisthenes; from the time of Pericles they were appointed by lot.

APOLLINARIUS (c. A.D. 310-c. 390) was a brilliant, original Christian thinker whose treatment of the incarnation ranks as one of the classic heresies (Apollinarianism). A champion of Nicene orthodoxy against Arius' teaching, he became bishop of Laodicea c. 360. As a counter to Julian's anti-Christian educational policy he rewrote parts of the Bible in classical forms. He was the author of numerous commentaries and treatises which (apart from works pseudonymously attributed to orthodox writers) survive only in fragments. His distinctive teaching was that the Logos took the place of the human rational soul in Christ. Only so, he argued, could his unity and moral integrity be secured; but this solution was soon rejected as mutilating Christ's humanity.

Texts in H. Lietzmann, *Apollinaris von Laodicea* (1904).

J. N. D. K.

APOLLO (Ἄπoλλων, Epic also Ἀπoλλων or Ἄπoλλων, as *Il.* 1. 14), the most Greek of all gods, in art the ideal type of young, but not immature manly beauty. His functions are especially music, archery, prophecy, medicine, and the care of flocks and herds; with agriculture he has much less to do. He is often associated with the higher developments of civilization, approving codes of law (as *Hdt.* 1. 65. 6), inculcating high moral and religious principles (as *id.* 6. 86. 15; Aelian, *VH* 3. 44), and favouring philosophy (e.g. he was said to be the real

father of Plato). In matters of ritual, especially of purification, his oracles are commonly regarded as the supreme authority. Politically, he is especially prominent in suggesting or approving schemes of colonization (Apollo Archegetes, q.v.). His cult was panhellenic and he is regularly spoken of with profound respect, some of the war-time plays of Euripides being an exception.

His name is not found on Linear B tablets and is of uncertain etymology, perhaps not Greek. Of his origin there are two principal theories. (1) He comes from somewhere north of Greece. In support of this it is urged that his seats of worship are numerous and ancient in the north; the legendary Apolline people, the Hyperboreans (q.v.), are always thought of as northerners and are real enough to send yearly offerings to Delos which follow a route from the north (Hdt. 4. 33; cf. Farnell, *op. cit. infra*, 99 f.); and the ritual of the Stepteria points north also. (2) He is Asianic, for his title *Λύκειος* and the name of his mother Leto suggest Lycia and the Lycian *Lada*; he has numerous connexions with that country and with the Oriental sacred number seven (e.g. his birthday is the seventh of the month, Hesiod, *Op.* 771); he is especially worshipped at Troy and warmly supports the Trojans in Homer. The question is yet undecided. (Short bibliography in Rose, *Handb. of Gk. Myth.*, 158 n. 2; add Bethe, 'Apollon der Hellenen', in *Antiquarion*, Göttingen, 1924.)

It was conjectured as early as the fifth century B.C. (Euripides, fr. 781, 11-13 Nauck; Aesch. ap. [Eratosth.], *Catast.* 24 is uncertain) that Apollo was the Sun, and this theory prevailed in Hellenistic and imperial times and was for a while revived by modern scholars. It lacks, however, any real evidence (see Farnell, 136 ff.). It is more likely that the god's origins are to be sought in his titles of Nomios and Lykeios. If he was a god of herdsmen in wild country, it is highly probable that his interests would include archery, music, and medicine, and that he should be somehow connected with their worst enemy, the wolf, is equally reasonable; he can both send and stay that and other plagues. How and where he became a prophetic god is not known, but he is so from our earliest records.

Of his oracular shrines, Delphi was the chief, though others were important, notably Branchidae and Claros in Ionia, whereof the latter was particularly prominent in Hellenistic times. The method of divination was by possession, the medium being filled with the god, or his inspiration (see further Farnell, 179 ff. and DELPHIC ORACLE). Of his ritual perhaps the most remarkable was the Delphic Stepteria, held every eight years. In this, a boy, apparently personating the god, was led to a hut near the temple, called the palace of Python (see below); this was set on fire; the boy went away into supposed banishment; and finally all concerned were purified at Tempe and came back by the traditional sacred route known as the Pythian Way (see Farnell, 293). The ancients regarded the ritual as a sort of play commemorating the killing of Python (see below). Delphi, through the enterprise of its clergy, became the nearest approach to a Vatican which Greece possessed, though it had no formal authority to enforce its advice. Delphic propaganda may be traced in the tendency to introduce Apollo as adviser, inspirer, etc., into any and every myth which contains a prophet or a prediction. Delphi claimed to be the centre of the world, the famous stone called the *omphalos* (navel) marking the very spot. In art, Apollo is often represented as sitting on this, but the actual seat of his medium, the Pythia, was a tripod, hence continually associated with Apollo and his oracles.

Apollo's earliest adventure (for his birth at Delos, see LETO) was the killing of Python, a formidable dragon which guarded Delphi (in the earliest version, the

Homeric Hymn to the Pythian Apollo, 300 [122], it is a female and unnamed). He also killed Tityos, a giant who offered violence to Leto, *Od.* 11. 580. For other divine vengeance, see ALCADAE, NIOBE.

Of his many loves, the most famous was that for Coronis, mother of Asclepius (q.v.). For the adventures to which Asclepius' death led, see ALCESTIS. Very interesting is the tale of his unsuccessful rivalry with Idas (q.v.) for Marpessa. Another object of his affections was Cassandra (Alexandra), daughter of Priam. To win her he gave her the gift of prophecy, but having received it she would not grant him her love. He could not recall his gift, but made it futile by causing her always to be disbelieved (Aesch. *Ag.* 1202 ff.). Somewhat similar, probably modelled upon this, is the story of the Cumaean Sibyl, as told by Ovid (*Met.* 14. 132 ff.). He bade her choose whatever she wished, and she asked to live as many years as she held grains of sand. But she forgot to ask for permanent youth, and, having denied him, received no more favours from him; hence she grew so old that she finally hung in a vessel, saying, when asked what she wanted, that she wished to die (Petronius, *Sat.* 48. 8; see Campbell Bonner in *Quantalacunque, Studies presented to Kirsopp Lake* . . . (U.S.A. 1937), 1 ff.). By Cyrene, granddaughter of the river Peneus, he became father of Aristaeus (q.v. 1); he was first attracted to her by observing her courage and prowess in hunting on Mt. Pelion, where she was fighting a lion bare-handed, and carried her off to that part of Africa which was afterwards named after her (Pind. *Pyth.* 9. 17 ff.; it was a foundation-legend of the colony of Cyrene: see L. Vitali, *Religione Cyrenaca* (1932), 107 ff.).

Apollo was usually impartial in politics, though he shows Troy great favour in the *Iliad*. His principal departures from this attitude were during the Persian Wars, when the Delphic oracle began by being partial to the Persians, and the Peloponnesian War, when it was wholeheartedly of the Spartan faction; hence Euripides' attitude (see above).

In Italy, Apollo was introduced early, partly through Etruria (cf. the famous statue of him from Veii), partly direct from Greek settlements. Although now and then equated with native gods (as the deity of Soracte, *Aen.* 11. 785), he never had a generally accepted identification. At Rome his Republican cult seems to have been primarily that of a god of healing (the Vestals addressed him as *Apollo medicus*, *Apollo Paean*, Macrobi. *Sat.* 1. 17. 15) and of prophecy (cf. SIBYLLA, QUINDEFIMVIRI). He had a shrine, *Apollinar*, outside the Porta Carmentalis, and a temple was erected in consequence of the plague of 433 B.C. Augustus, who had a special devotion to him, partly owing to the nearness of the battle of Actium to one of his temples, erected a magnificent temple on the Palatine (thus receiving him *intra pomerium*). It was vowed in 36 and dedicated in 28, to it a celebrated library was attached. Thenceforward, under the Empire, Apollo Palatinus was in some sort the equal of Jupiter Optimus Maximus.

Apollo is very popular in art from the seventh century, as a youth, naked or robed, with bow or lyre, alone or with Artemis and sometimes Leto, the Muses or other deities, or in action-scenes (Niobids, 'Tityos, etc.).

APOLLODORUS (1) (5th c. B.C.), painter, of Athens. Pliny dates him 408 B.C., but he must have been painting by 430, if Zeuxis (q.v.) 'entered the door opened by

Apollodorus'. He was the first to represent appearance (*species*) and was known as σκιαγράφος. Σκιαγραφία, common in Plato for illusionistic painting, means primarily plastic shading by a gradation of colour; on vases shading is not used for human figures until 425–400. Although only two of his pictures are mentioned, his importance was fully recognized in antiquity.

Overbeck, 1641–7; Pfuhl, 734; R. G. Steven, *CQ* 1911, 150; A. Rumpf, *JDAI* 1934, 10; *Maier u. Zschn.* 121. T. B. L. W.

APOLLODORUS (2) of Gela. New Comedy poet, contemporary of Menander according to *Suda*. He has been identified with Apollodorus (q.v. 3) of Carystus, but Pollux 10. 138 and inscriptional evidence (see E. Capps, *AJPhil.* 1900, 45 ff.) prove his separate existence.

FCG 1. 459 ff., iv. 438 ff.; *CAF* iii. 278 ff. W. G. W.

APOLLODORUS (3) of Carystus, New Comedy poet, more famous than Apollodorus (q.v. 2) of Gela, and sometimes referred to as Apollodorus 'the Athenian' (which suggests the grant of Athenian citizenship). He composed forty-seven dramas and won five victories (*Suda*). A contemporary of Posidippus, he produced his first play c. 285 B.C. 'Εκύρα was the original of Terence's *Hecyra*; 'Επιδικάζόμενος of Terence's *Phormio*. These Latin adaptations seem to indicate that Apollodorus was greatly influenced by Menander (q.v. 1), and that one of his characteristics was an obsessive attention to detail in the organization of his plots. Fr. 5, the folly of Greek fighting Greek.

FCG iv. 440 ff.; *CAF* iii. 280 ff.; Demianczuk, *Supp. Com.* 8 f.; Page, *GLP*, no. 58. See E. F. Kiause, *De Apollodori Comici* (1903); M. Schuster, *De Apollodori Poetis Comici* (1907); W. E. J. Kuiper, *Two Comedies by Apollodorus of Carystus: Terence's Hecyra and Phormio* (1938, too speculative); M. R. Posani, *Atene e Roma* 1942, 141 ff.; K. Mraz, *Anz Österreich. Akad.* 1948, 184 ff.; Webster, *Later Greek Comedy*, 205 ff. W. G. A.

APOLLODORUS (4) of Alexandria, physician and scientist of the beginning of the third century B.C. His chief work, *Περὶ θηρίων ὁ λόγος θηριακός* (on poisonous creatures), was the primary source for all the later pharmacologists of antiquity (e.g. Numenius, Nicander, Heraclides of Tarentum, Sostratus, Aelian, Sextus Niger, Pliny, Dioscorides, Archigenes, Aemilius Macer). He seems also to have written a work *Περὶ θανασιμίων* (or δηλητηρίων) φαρμάκων.

Fragments in O. Schneider, *Nicandra*, 181 ff. W. D. R.

APOLLODORUS (5) of Pergamum (c. 104–22 B.C.), rhetor who taught Octavianus (Suet. *Aug.* 89; Tac. *Dial.* 19) and others at Rome. His *Τέχνη*, dedicated to C. Matius, was translated into Latin by C. Valgus Rufus; but his real influence was due to his oral teaching, which was challenged by Theodorus (q.v. 3) of Gadara. His theories and those of his followers are known from Quintilian (2. 11; 3. 1). He insisted that all legal speeches should be composed of the four regular 'parts'—proem, narration, argumentation, peroration—in the regular order. This contrasts with the less rigid precepts of Theodorus.

M. Schanz, 'Die Apollodoreer und die Theodoreer', *Hermes* 1890, D. A. R.

APOLLODORUS (6) of Athens (b. c. 180 B.C.), pupil of Aristarchus, left Alexandria (c. 146 B.C.), perhaps for Pergamum, and later moved to Athens, where he remained until his death. He was a scholar of great learning and varied interests.

WORKS. 1. Chronological: *Χρονικά* or *Χρονική σύνταξις*, dedicated to Attalus II of Pergamum and based on the chronological researches of Eratosthenes (q.v.), was written in comic trimeters and dealt in considerable

detail with successive periods of history, important incidents, philosophical schools, the life and work of individuals from the fall of Troy (1184 B.C.) to 144 B.C.; later it was continued, not certainly by Apollodorus himself, down to 119 B.C. 2. Mythological: *Bibliotheca* (Βιβλιοθήκη), a study of Greek heroic mythology. 'The extant work of this name, which presents an uncritical summary of the traditional Greek mythology, belongs to the first or second century A.D. 3. Theological: *Περὶ θεῶν*, a rationalistic account of Greek religion, much used by later writers. 4. Geographical: a commentary on the Homeric Catalogue of Ships, an important work of scholarship based on Eratosthenes and Demetrius of Scepsis, and containing many quotations from poets and historians and many criticisms of earlier writers; Strabo found it a valuable source for books 8 to 10 of his *Geography*. The *Ἱστὴς περίοδος* or *Περὶ γῆς*, a geographical guide-book in comic trimeters, was probably a later forgery. 5. Critical and exegetical: commentaries on Epicharmus and Sophron; these probably included a critical recension of the text. 6. Etymological: *Ἑτυμολογία* or *Ἑτυμολογούμενα* or *Γλῶσσαι*.

F. Jacoby, *FGH* iiB. 244 and *Apollodori Chronik* (1902); [*Bibliotheca*], R. Wagner in *Mythographi Graeci*, 1 (1894); J. G. Frazer, with translation (Loeb, 1921); C. Robert, *De Apollodori bibliotheca* (1873); A. Diller, *TAPA* 1935, 296 ff.; M. van der Valk, *Rev. Ét. grec.* 1958, 100 ff. (*Bibliotheca*), R. Münzel, *De Apollodori περὶ θεῶν libris* (1883). J. F. L.

APOLLODORUS (7) of Damascus, a Greek town-planner and architect who worked at Rome in the first century A.D. He planned the Forum of Trajan and designed, or supervised, the Basilica and Column of Trajan, and other adjacent architecture; and he built a bridge over the Danube. Trajan treated him with deference; but Hadrian, offended by Apollodorus' criticism of his architectural plans, found a pretext for banishing him in A.D. 129, and ultimately had him executed (Dio Cass. *Epit.* 69. 4). Apollodorus wrote works on military and civil engineering. For his surviving work on *Engines of War* see C. Wescher, *La Poliorcétique des Grecs* (1867), 137 ff. H. W. R.; R. E. W.

APOLLODORUS (8) of Seleucia on the Tigris, Stoic philosopher, the author of an *Ethica* and a *Physics* cited by Diog. Laert. 7. 102, 129; 125, 135. He also wrote logical works. Testimonia in H. von Arnim, *SVF* iii. 259–61.

APOLLONIA was the name of several Greek cities. The chief of these was in Illyria, founded c. 600 B.C. where the river Aous enters the coastal plain, with relatively easy communications across the Balkan range. It was founded as a Corinthian colony by 200 settlers (Steph. Byz. s.v.) and grew rapidly in size and prosperity, until it was able to destroy one of its neighbours, Thronium, by the middle of the fifth century. In the Hellenistic period its strategic position and its wealth attracted the Macedonian, Molossian, and Illyrian kings and also Corcyra. It joined Rome in 229 B.C., was treated as a free city and prospered greatly as the main base of Roman armies in the wars against Macedon. After 146 it was one of the terminal points of the Via Egnatia (q.v.), and it was Caesar's headquarters in the campaign of Dyrrhachium (48). In 45–44 Caesar gathered an army at Apollonia for his eastern campaigns, and at his death his grandnephew Octavianus was stationed there as a cadet.

Recent excavations reported in *Buletin i universitetit Shkollor të Tiranës, Serbia shkencat shqetore* 1960, 1. 51 ff.; 1961, 3. 117 ff.

APOLLONIUS (1) RHODIUS (3rd c. B.C.) of Alexandria or less probably Naucratis, but generally called the

Rhodian owing to his retirement to Rhodes. Born c. 295 B.C., Apollonius was a pupil of Callimachus (*Vitae*, the *Suda*). According to *Vita* 1 (Mooney, 1) he turned late to writing poetry. This conflicts with the statement of the same authority that Apollonius gave a recitation of the *Argonautica* while still a stripling (*ἐν ἑφηβῶν ὄντι*), was badly received, and retired to Rhodes, where he revised his poem, which then became famous. (At several places in bk. 1 the scholia cite the version of the *proekdosis* (= the first edition), but the differences from the present text are not important.) *POxy* 1241, a list of Alexandrian librarians, establishes that Apollonius held the post of *Prostates* (director) of the Alexandrian library after Zenodotus and before Eratosthenes. *Vita* 2 represents Apollonius as being appointed librarian after his return from Rhodes, but this dating and the *Suda*'s statement that he succeeded Eratosthenes as librarian probably originate in a confusion with Apollonius the Eidograph, who is known (from *POxy* 1241) to have followed Eratosthenes in this office. On the whole it is likely that Apollonius succeeded Zenodotus as librarian c. 260 and held the post till the accession of Euergetes in 247. The quarrel between Apollonius and his teacher Callimachus seems to have been one of the important episodes in the bitter literary controversy between the writers of long traditional epics and those of short and highly finished poems. The freedom with which Apollonius refashioned in his own style whole passages of Callimachean poetry suggests the turning of a purely literary discussion into a personal feud (cf. Pf. Call. ii, xli and vol. 1 *passim*). This may well have been enhanced by friction at the library, where Callimachus, who was never librarian, was presumably Apollonius' subordinate. Though Callimachus is said to have been victorious, and Apollonius to have retired to Rhodes, it appears that finally the long traditional epic won the day (cf. K. Ziegler, *Das hellenistische Epos* 1934). Tradition records a reconciliation between Apollonius and Callimachus, and that they were buried close to one another (Vit. Apollon. Rhod. A, in Schol., Wendel, 2. 5).

WORKS. *Verses.* In the fashion of the day Apollonius wrote poems, from which a few hexameters survive, on the Foundation (*κτίσις*) of Alexandria, Naucratis, Caunus, Cnidus, Rhodes, possibly Lesbos. A poem called *Canobus* was in choliambics. Of his *Epigrams* only *Anth. Pal.* 11. 275, an attack on Callimachus, is extant. Apollonius' *magnum opus* was the *Argonautica*, narrating in four books—he was the first epic poet to divide his own work into books—Argo's voyage to Colchis by the Propontis and Black Sea (bks. 1–2), the winning with Medea's aid of the Golden Fleece (bk. 3), and the return by the Danube, Po, Rhône, Mediterranean, and northern Africa (bk. 4). It is the great epic of the Alexandrian period, the only one before Virgil that in subject and extent (5834 hexameter lines) could aspire to a comparison with Homer. In real Alexandrian style Apollonius, who was both poet and scholar, delights in displaying his erudition and explaining the *aetia* (causes) of names, cults, relics, habits, etc., when recasting the celebrated myth. It is evident that he consulted a great number of authorities, and the excellent scholia record many of his sources. Apollonius was the first poet to place love—Medea's love for Jason—in the foreground of the action in an epic poem. The enormous effect this exercised upon subsequent writing has secured for the *Argonautica* a significant place in the history of the world's literature. Except for Sappho, no other Greek poet has so vividly portrayed the first awakening of love in a young woman's heart, nor followed so closely its psychological development. In this lies the perennial charm of book 3. Apollonius is also capable of delightful descriptions. Amazingly rich is, for instance, the shading, when portraying the appearance of morning and night,

and there are brilliant 'baroque' scenes of great plastic charm—e.g. that of Thetis and her sisters assisting Argo through the Wandering Rocks (4. 933 f.)—as well as delightful 'genre' scenes, from which a delicate irony is not absent (e.g. 3. 43 f.). Moreover, he introduces a number of striking new similes. But as an epic the work is unsuccessful. Its main defect is a want of structural unity. The poet did not succeed in moulding into a whole the abundant erudite material he had collected; too often the narrative falls into long, disjointed, soulless passages. At the same time Apollonius is weak in characterization. Jason, his central hero, is highly uninspiring and bloodless, completely lacking the energy of a heroic leader. Even Medea has no unity of character—Medea of book 4 stands in sharp contrast with Medea of book 3—and has little real epic grandeur. How short she falls in that respect of Virgil's Didoe! Apollonius' relation to the heroic past is in a sense almost 'modern'. There is no wholehearted, credulous admiration of the great past, but rather an attitude of coolly critical superiority, and this does not help in the writing of an epic. Apollonius' vocabulary is mainly taken from Homer, but in Alexandrian manner he is continually varying and 'interpreting' the Homeric words and phrases. Not a single line of the *Argonautica* could stand unaltered in Homer. Indeed, his greatest achievement as a stylist lies in the subtle adaptation of Homer's language to describe a new world of romantic sentiment. Metrically Apollonius' hexameter follows Homer rather than Callimachus. Apollonius was much read and admired in late antiquity. The papyri show that he was highly esteemed in the imperial period, and he is one of the few Alexandrian poets whose work survived in medieval MSS.

Prose. Apollonius had some repute as a scholar. A tract of his *Against Zenodotus* is mentioned, also works on Archilochus, Antimachus, and Hesiod.

T.

APOLLONIUS (2, *PW* 112) of Perge mathematician (fl. 2nd half of 3rd. c. B.C.). Born at Perge in Pamphylia, he studied at Alexandria with the pupils of Euclid. There he composed the first version, in eight books, of his *Conics* for a geometer, Naucratis, 'somewhat too hurriedly' (*Conics* 1 *praef.*). He visited Ephesus and Pergamum, where he stayed with one Eudemus, to whom he subsequently sent the first three books of the revised version of the *Conics*. After Eudemus' death the remaining books were sent to Attalus, perhaps King Attalus I of Pergamum (q.v.).

Of the *Conics* (*κωνικά*) the first four books survive in Greek and the next three in Arabic translation; the eighth is lost. Apollonius states (*Conics* 1 *praef.*) that the first four books form an elementary introduction, while the remainder are particular extensions (*περιουσιαστικώτερα*). He claims no originality for the content of *Conics* 1–4, but says that he expounds the fundamental properties 'more fully and generally' than his predecessors. This is fully justified: earlier writers on conics (see **MATHEMATICS**), including Archimedes, had described them as sections of a right circular cone by a plane at right angles to a

generator, and hence the parabola, ellipse, and hyperbola were known as 'section of a right-angled cone', 'of an acute-angled cone', and 'of an obtuse-angled cone' respectively. Apollonius generates all three from the most general type of circular cone, the double oblique. He then defines the fundamental properties in terms of the 'application of areas' familiar from Euclid, using the terms *παράβολή*, *ἐλλειψις* and *ὑπερβολή*, according as the applied figure exactly fits, falls short of, or exceeds that to which it is applied.

Apollonius did for conics what Euclid had done for elementary geometry: both his terminology and his methods became canonical and eliminated the work of his predecessors. Like Euclid, too, his exposition follows the logical rather than the original sequence of working. Investigation of the latter has revealed how 'algebraic' his methods are. His silence on some features of conics (e.g. the focus of the parabola) is not due to ignorance, but to the elementary nature of the treatise; the specialized investigations of books 5-7 cover only a selection of possible topics, but are enough to reveal Apollonius as an original mathematical genius second only to Archimedes in antiquity.

Commentaries to the *Conics* were written by Serenus (3) and Hypatia (q.v.). That by Eutocius on books 1-4 is extant. Pappus provides lemmata, including some to the lost book 8.

Of other works by Apollonius there survives only the *λόγος ἀποτομῆς* (*Cutting-off of a Ratio*), in two books, in Arabic translation. Pappus (bk. 7) describes briefly the contents of five more lost works: (1) *χωρίων ἀποτομῆς* (*Cutting-off of an Area*); (2) *ὁρισμένης τομῆς* (*Determinate Section*); (3) *ἐπαφαί* (*Tangencies*); (4) *νεύσεις* (*Inclinations*); (5) *τόποι ἐπιπέδου* (*Plane Loci*). Apollonius also wrote works on the *Cylindrical Helix* (Proclus in Eucl. 105), the *Comparison of the Dodecahedron and Eicosahedron* (Hypsicles, Euclid bk. 14, 2), and on unordered irrationals (Pappus in Eucl. 10, 219 Jünge-Thomson). In his *ὠκυπόρου* (*Quick Delivery*) he calculated limits for the value of π closer than those of Archimedes (q.v.) (Eutocius in Arch. 258). His *καθόλου πραγματεία* (*General Treatise*) dealt with the foundations of geometry (Marinus in Data Eucl. 234). Pappus (bk. 2) gives excerpts from a work in which Apollonius sets out a system of expressing large numbers by, in effect, using 10,000 instead of ten as a base (cf. ARCHIMEDES, *Sand-reckoner*).

In optics Apollonius wrote a work *Περὶ πυρίων* (*On the Burning-mirror*) (Frag. Math. Bobense, ed. Heiberg, *Mathematici Graeci Minores* 88). In theoretical astronomy his work was of fundamental importance. From passages in Ptolemy's *Almagest* (4. 6 and 12. 1) it seems probable that it was he who first established the equivalence of eccentric and epicyclic models of planetary motion, and applied this to the determination of the moon's eccentricity and the stationary points of the planets. This was an essential foundation for the systems of Hipparchus and Ptolemy (qq.v.).

DATE Evidence in *PW* II 151, further G. Huxley in *GRHS* 1963, 100 ff.

EDITIONS. Critical text of *Conics* 1-4, with Latin translation, Eutocius' commentary and fragments of lost works by J. L. Heiberg (Teubner, 1891, 1893). Of the Arabic version only part of book 5 has been published, with German translation, by L. Nix (1889). For the rest of books 5-7 the basis is still Edmund Halley's Latin translation in the *editio princeps* of the Greek text (1710) *λογων ἀποτομῆς*: no edition of the Arabic, Latin translation by Halley (1706). For the history of the text and editions see Heiberg's edition vol. II, lviii ff.

TRANSLATIONS OF THE CONICS. T. L. Heath, *Apollonius of Perga* (1896, repr. 1961: much adapted, but with useful introduction). French, P. van Eecke, *Les Coniques d'Apollonius de Pergé* (1923, repr. 1963) all seven books, the most useful translation). German, A. Czwalna, *Die Kegelschnitte des Apollonius* (bks. 1-4 only 1926).

COMMENT. H. G. Zeuthen, *Die Lehre von den Kegelschnitten im Altertum* (1886, repr. 1966) Heath, *Hist. of Gr. Maths.* II, 126 ff. (very full summary, includes references to attempts to restore the lost works). O. Neugebauer, *Apolloniusstudien, Quellen und Studien z.*

Gesch. d. Math. (1929-) B 2 215 ff. (for Apollonius' 'algebra'). On Apollonius' astronomical contributions see O. Neugebauer in *Scripta Mathematica* 1959, 5 ff. G. J. T.

APOLLONIUS (3) (3rd c. B.C.), the finance minister of Egypt for about twenty years from 262 B.C., held an estate of some three square miles at Philadelphia in the Fayûm; it was reclaimed land, tenable at the king's will. His development of the estate can be traced from the correspondence of Zenon, his right-hand man; he was specially interested in the improvement of livestock, horticulture, and viticulture. He had extensive business interests in Egypt and the Levant and owned a merchant fleet, as is shown by the same correspondence; there is also mention in it of properties in Alexandria and at Memphis which he seems to have possessed. Zenon, a Carian from Caunus, entered his service soon after his appointment to office, and settled at Philadelphia probably in 256; thereafter he managed Apollonius' estates, and acquired businesses of his own, which he carried on for some years after Apollonius disappears as a landholder at Philadelphia (c. 242). Of his associates the most important was Cleon, an engineer employed in the reclamation of the Fayûm, whose works are recorded in other papyri besides those of Zenon.

M. Rostovtzeff, *A Large Estate in Egypt* (1922); Cl. Préaux, *Les Grues en Egypte* (1947). Apollonius' development of the estate, and Zenon's management of it, are known particularly from the following collections of papyri. Cairo (*Cat. general des antiq. égypt. du Musée du Caire*, Zenon Papyri, ed. C. C. Edgar, 5 vols. 1925-40); Michigan, Zenon Papyri, ed. C. C. Edgar (U.S.A. 1931); Columbia, Columbia Pap., Zenon Papyri, ed. W. L. Westermann and E. S. Hasebroek (2 vols. U.S.A. 1934-40). J. G. M.

APOLLONIUS (4) (2nd c. B.C.) of Alabanda, ὁ μαλακός, a pupil of Menecles of Alabanda. He founded a school of rhetoric at Rhodes, visited by Scaevola (121 B.C.) and M. Antonius (98 B.C.).

APOLLONIUS (5) perhaps of the 2nd c. B.C., author of *Ἱστορίαι θαυμασίων*, a compilation from Aristotle, Theophrastus, Aristoxenus, etc.

Ed. O. Keller, *Rerum Naturalium Scriptores* I. (1877), 43 ff. *PW* Suppl. IV 45.

APOLLONIUS (6) (1st c. B.C.), sculptor, son of Archias, of Athens. Known from signature in Athens and on bronze herm of Polyclitus' Doryphorus (Winter, *KB* 393. 3); three other herms from the same villa in Herculaneum are also probably his.

APOLLONIUS (7), sculptor, son of Nestor, of Athens, signed the Belvedere torso in the Vatican (Winter, *KB* 394. 2). The supposed signature on the bronze boxer in the Terme is apparently an illusion (M. Guarducci, *Ann. della Scuola archeol. di Atene* 1959-60, 361). Apollonius may also have made the cult statue of Jupiter Capitolinus, dedicated 69 B.C., which is reflected in small bronzes.

T. B. L. W.

APOLLONIUS (8) of Citium, an Alexandrian physician of about 50 B.C. Works: (extant) commentary on Hippocrates *Περὶ ἀέρων*; (lost) *Πρὸς τὰ τοῦ Ταπάρτιου* (against Heraclides); *Πρὸς Βακχείων*, *Curatōnes*.

Ed. H. Schone, 1896.

APOLLONIUS (9) **MOLON** (1st c. B.C.), rhetor, a native of Alabanda and pupil of Menecles. He lectured at Rhodes, visited Rome (87 and 81 B.C.), taught Cicero and other Romans, and won success as a pleader.

Cicero, *Brut.* 307, 312, 316; Diog. Laert. 1. 34. G. A. Kennedy, *The Art of Persuasion in Greece* (1963), 326 f.

J. W. H. A.

APOLLONIUS (10) **MYS**, member of the Hierophilean school of medicine, worked for many years in Alexandria, towards the end of the first century B.C. He wrote *Περὶ τῆς Ἱεροφίλου αἰρέσεως*, *Περὶ εὐπορίστων φαρμάκων*, and *Περὶ μύρων*.

APOLLONIUS (11) **SOPHISTA** (c. A.D. 100) compiled a *Lexicon Homericum* which is extant in an abridged form (ed. I. Bekker, 1833). A fragment of the unabridged work survives in a Bodleian papyrus. He used especially the commentaries of Aristarchus, on whose critical method he throws valuable light, and the glossary of Apion.

F. Martinazoli, *Homax legomenon* 1 2 (1957); H. Erbse, *Beitr. zur Überlieferung d. Iliascholien* (1960), 206 ff.; H. Schenck, *Die Quellen des Homer-Lex. des A. Soph.* (1961) J. E. L., R. B.

APOLLONIUS (12) of Tyana (Ἀπολλώνιος ὁ Τυανεύς), a Neopythagorean sage. According to our only full account, Philostratus' *Tà ἐς τὸν Τυανέα Ἀπολλώνιον* (time of Septimius Severus, see Rose, *Handb. of Gk. Lit.* 403, W. Nestle, *Griechische Religionslit.* (1930-3), iii. 123 ff.), he was born at Tyana in Cappadocia, apparently about the beginning of the Christian era, and survived into the Principate of Nerva (for other datings, and the few known facts about him, see J. Miller in *PIW* ii. 146 ff.). He led the life of an ascetic wandering teacher, possessed miraculous powers, visited distant lands, including India, was in danger of his life under Nero and again under Domitian, and saw by clairvoyance the latter's death (Philostr. 8. 25-6, cf. Cassius Dio 67. 18). Philostratus is highly untrustworthy (*PIW* xx. 139 ff., F. Solmsen), and references elsewhere scanty; but Apollonius' existence and Pythagoreanism need not be doubted. An anti-Christian writer, Hierocles of Nicomedia, paralleled Apollonius with Christ, which provoked a reply (extant from Eusebius). Of his writings (see *Suda*, s.v., 623 Bernhardt) there survive some doubtfully authentic letters and a fragment of his treatise *On Sacrifices* (Τελεταὶ ἢ περὶ θυσιῶν). II. J. R.

APOLLONIUS (13), son of Mnesticus, named *Dyscolus*, of Alexandria (2nd c. A.D.). Of his life little is known; apart from a short visit to Rome, he did not leave Alexandria. His works are distinguished, even among grammarians, for obscurity of style and asperity of manner; but his method is genuinely critical, and his zeal for correcting errors extends to his own (cf. *Syntax*, p. 231. 15 Bekk.). For the history of grammar from Dionysius Thrax to his own day he is our chief source of information.

Of some twenty works, mostly on syntax, named in the *Suda*, four survive—on the *Pronoun*, *Conjunction*, *Adverb*, and *Syntax*. A conspectus of his doctrines is given in the *Syntax*, which deals mainly with Article, Pronoun, Verb, Preposition, and Adverb, successively. He approaches syntax from the parts of speech, not the sentence, beginning with the establishment of the 'correct' order of these, assuming that there must be a proper order for them as there is, in his view, for the alphabet; and he has much argument disproving such current opinions as that the function of the article is to distinguish genders, and that *ὦ* is its vocative. As a result, although he correctly settles many details, acutely arguing from function, not form, he nevertheless achieves no comprehensive, organic, system of syntax. His work is marked by a constant quest for principle. 'We must investigate what produces solecisms, and not merely adduce examples.' 'Why do some verbs take the genitive, not the accusative?' In discussing forms and constructions he makes much use of alleged ἀναλογία (see CRAFTS (3) OF MALLOS), e.g. insisting on *ἐμὶ*, not *ἐν ἐμῷ*, by 'analogy' from the plural and dual; also *τεθείκαμαι* (pf. pass. subj.). He also makes use of what he recognizes to be false

analogy (συνεκδρομή), as when he explains that the usage *γράφει τὰ παιδιά* (nominative) is permitted because it sounds the same as when *παῖδιά* is accusative, in which case the syntax is normal.

He himself writes Hellenistic *κοινή*, as befitted a technical writer; Atticism was confined to belles-lettres. So we find such typical turns of syntax as *ἐὰν* c. indic., *εἰ* c. subjunct., *ἐπεὶ* *μή*, etc. Apollonius takes no thought for style, and his work is marked by frequent pleonasm, anacoluthon, etc. He had a wide knowledge of literature and was familiar with Latin. Inevitably perhaps, he falls short of the comparative and historical methods available, if not always adopted, to-day. But it would be hard to overestimate his influence on later Greek and Latin grammarians, notably Priscian, or to quarrel with Priscian's tribute, 'maximus auctor artis grammaticae'.

Edition, by Uhlirg and Schneider in Teubner's *Grammatici Graeci*; P. Maas, *De pronominibus, pars generalis* (1911); E. Egger, *Apollonius Dyscole: Essai sur l'hist. d. théories gramm. dans l'antiquité* (1854), A. Thierfelder, *Abhdl. d. Sächs. Akad. d. Wiss.* 43. 2 (1915), E. A. Hahn, *TAPA* 1951, 29 ff.; H. Erbse, *Beitr. zur Überlieferung der Iliascholien* (1960), 311 ff. P. B. R. F., R. B.

APOLLONIUS (14) of Tyre, the hero of an anonymous novel widely known in the Middle Ages. The oldest extant version (5th-6th c. A.D.) is in Latin, *Historia Apollonii Regis Tyrii*, but subject-matter (the usual story of a couple who become separated and are at last reunited, after innumerable adventures involving pirates, enslavement, apparent deaths, etc.) as well as an analysis of the 'Realien' suggest that there was a Greek original of the second or third century A.D.; an analysis of the diction, on the other hand, has so far led scholars to opposite conclusions (some maintain the existence of such a Greek original, others affirm that the work was written directly in Latin). Certain critics distinguish two strata in the work, one pagan and one Christian.

Text: Riese (Teubner, 1871, 1893²), M. Ring (Pöschel-Leipzig, 1888). Both important, neither definitive.

Critical: Riese, *Griech. Roman*, 475 ff.; Schanz *Historia* iv. 2. 548 ff. (fundamental); Teuffel-Schwabe, *Hist. Rom. Lit.* (transl. G. C. W. Watt) ii² (1892), 548 ff., R. Heilmann, *Der antike Roman* (1950), 47 ff. (good survey of problems). G. G.

APOLLOPHANES, according to the *Suda* an Athenian comic writer. Once victorious, c. 400 B.C. (*IG* ii². 2325). In the *Kōmētes* a character is introduced apparently speaking Doric.

FCG i. 206-7, CAF i. 797 ff.; Demianczuk, *Supp. Com.* 9.

APOPHRADES, unlucky, forbidden days, characterized by gloomy rites (Plato, *Leg.* 800 d), e.g. the Plynteria (Plut. *Ale.* 34), on which no assembly or court was held. Such were also the last two days of the Anthesteria, on which the dead visited their old houses and people chewed buckthorn and smeared the doors with pitch to protect themselves. They were properly called *μπαρὰ ἡμέραι* as opposed to *καθαραί*.

E. Rolide, *Psyche* i (1925), 237, n. 3.

M. P. N.

APPARITORES, public servants who attended Roman magistrates (cf. *apparere*). The most important classes were *scribae*, *lictors*, *viatores* (qq.v.), *accensi*, and *praeco*mes. They were generally freedmen or sons of freedmen. They received an annual salary from the State. Although their appointment was technically annual, they were soon permitted to retain their posts indefinitely. Organized into panels (*decuriae*), they formed corporations which were legally recognized by the State. It is uncertain whether the *apparitores* wore any characteristic uniform.

Mommsen, *Röm. Staater*. P. 132 ff.; A. H. M. Jones, *Studies in Roman Government and Law* (1960), 153 ff. P. T.

APPELLATIO. Until the end of the Republic the judgement of the private *iudex* (q.v.) in the formulary

system of civil procedure (see LAW AND PROCEDURE, ROMAN II) was not subject to appeal. Thereafter appeals were probably admitted. Certainly in the *cognitio extraordinaria* they became normal. Appeal was usually made in the first place to the magistrate who appointed the trial judge, but there might be further appeals, ending with one to the Emperor. *Appellatio* in its developed form had to be made orally or in writing (*libelli appellatorum*) to the judge whose decision was impugned, and he then transmitted all the documents in the case to the competent higher magistrate with a written report (*litterae dimissoriae, apostoli*). The hearing on appeal was a new trial, and fresh evidence was admissible. A frivolous appellant had to pay the other party four times his costs; Constantine punished him with *relegatio* (q.v.) *in insulam* and confiscation of half his property, but Justinian reverted to pecuniary penalties, at the court's discretion. Justinian made an extensive reform of the system of appeal, and the influence of his legislation can still be seen in modern continental law. His *Nov. 82* settled the rule that all judgments except those of the *praefectus praetorio* were appealable.

In the widest sense *appellatio* is any recourse to a higher magistrate for the alteration or quashing of a decree of a lower one. In this sense the term is used with respect to ordinary administrative decisions of magistrates and judgments delivered in criminal cases. In the language of the later classical jurisprudence the term *appellatio* is used indiscriminately with *provocatio* (cf. *Dig. 49. 1* and *Cod. Just. 7. 62*), the proper field of which in former times was criminal jurisdiction. Thus imperial constitutions speak of *appellatio* or *provocatio* against a nomination as *decurio* or *scriba* (*Cod. Just. 7. 62. 4, 7*).

Kelly, *Principes iudex* (1957). For criminal procedure see also UNDO LAW AND PROCEDURE, ROMAN III, and PROVOCATIO. A. H., B. N.

APPENDIX VERGILIANA, a collection of Latin poems of various provenance, genre, and quality, ascribed to Virgil by ancient authorities and most MSS. which transmit them. Ascription to Virgil was early (Lucan knew the *Culex* as Virgilian), partly through deliberate forgery, partly association of anonymous pieces with a famous name. Internal evidence against Virgilian authorship is very strong. It now seems untenable for most of the collection and questionable for any part of it. The poems are mainly late Augustan or of the first century A.D., when they satisfied a demand for Virgilian *juvenilia*, and they provide a fascinating sample of the second- and third-rate verse produced in abundance during this period.

The *vita Donati* of Virgil lists as his juvenile writings *Catalepton*, *Priapea*, *Epigrammata*, *Drae*, *Ciris*, *Culex*, and *Aetna* (the last as doubtful). The *vita Servii* adds *Copa*, *Moretum* and *Elegiae* in *Maccenata* had joined the collection by the ninth century (Murbach catalogue), probably earlier. Our MS. tradition is gravely corrupt and it is often hard to decide which faults are the authors', which the scribes'.

The *CATALEPTON* (κατά λεπτών) contains fourteen poems, miscellaneous in subject and metre. Their quality ranges from the clumsiness of 9 to the brilliance of 10 (a parody of Catullus 4). The contemporary reference of several of the poems renders them enigmatic. It is possible (no more) that some are by Virgil.

CIRIS, an epyllion of Alexandrian inspiration, relates the story of Scylla, daughter of Nisus. The narrative, wilfully unbalanced, with elaboration of a few scenes, is often obscure in thought and affected in expression. Virgilian verses and phrases are ineptly adapted and by their inappropriateness betray the imitator. The *Ciris* is

also strongly influenced by Catullus 64. Though without much literary merit, the poem is an interesting specimen of its genre.

COPA, a pastiche of commonplaces and phrases from Virgil and Propertius, yet with a lively vigour which invests its trivial Epicureanism with considerable charm.

CULEX. A shepherd kills a gnat which has befriended him. The gnat's ghost later appears, reproaches the shepherd for ingratitude and describes the underworld. Though Lucan, Statius, and Martial believed the poem was Virgil's, the language, phraseology, and above all the fumbling adaptation of Virgilian phrases clearly show it is post-Virgilian. The author simulates the young Virgil writing to the young Augustus and thus places his ψευδο-επίγραφον in an interesting historical context. The *Culex* also represents for the Roman Homer a counterpart to the *Batrachomyomachia*.

DRAE (LYDIA). Transmitted as one poem in the MSS. but usually edited as two: *Drae*, in which a dispossessed farmer curses the farm he has lost, and *Lydia*, in which the writer laments his separation from Lydia. Both poems have some originality and force.

ELEG. IN MAEC. (q. v.), two uninspired elegies on Maecenas' death.

MORETUM describes a humble farmer's preparation of his breakfast. It is an accomplished piece of work, realistic and mildly mock-heroic in tone. Its moral implications about country life link it in spirit with the *Georgics*.

PRIAPEA (3 poems). Pliny (*Epist. v. 3. 6*) mentions Virgil amongst those who wrote *versiculos severos parum*. He may mean the *Priapea*.

AETNA. See Art. *AETNA*.

TEXIS Teubner (*PLM* I, Vollmer-Morel, 1930), O.C.T. (Clausen, Goodyear, Kenney, Richmond, 1965).

COMMENTARIIUS *Catalepton*, R. E. H. Westendorp Boerma (1949-63); *Ciris*, R. Helm (1937); *Culex*, F. Leo (1891), *Drae* (*Lydia*), A. F. Naake (1847).

TRANSLATION II R. Fairclough, Loeb *Virgil* II (not reliable). STUDIES *Ciris*, F. Leo, *Augs. kl. Schr.* II 29 ff. (1902-7); *Copa*, Wilamowitz, *Hell. Dicht.* II 311 ff. (1924); *Culex*, E. Fraenkel, *JRS* 1952 I ff.; *Drae* (*Lydia*), E. Fraenkel, *JRS* 1960, 142 ff. F. R. D. G.

APPIAN (*Appianos*) of Alexandria, born probably under Domitian, experienced the Jewish rising of A.D. 116, held office in Alexandria, and after gaining Roman citizenship moved to Rome to become an advocate and, through the influence of Fronto, *procurator Augusti*; under Antoninus Pius he wrote his *Ῥωμαϊκά*. Ethnographic in arrangement, this work treated in turn the Roman conquests: Book I *Βασιλική*, II *Ἰταλική*, III *Σαννιτικὴ*, IV *Κελτική*, V *Σικελικὴ καὶ Ἠσιωτικὴ*, VI *Βηρική*, VII *Ἀνιβαϊκή*, VIII *Λιβυκή*, (IX *Καρρχιδονική, Νομαδική*), IX *Μακεδονική καὶ Ἰλλυρικὴ*, X *Ἑλληνική καὶ Ἀσιανή*, XI *Συριακή καὶ Παρθική*, XII *Μιθριδάτειος*, XIII-XVII *Ἐμφυλίων* (the Civil Wars, books 1-5); XVIII-XXI *Αἰγυπτιακῶν* (the conquest of Egypt); XXII *Ἐκατονταετία*, XXIII *Δακική*, XXIV *Ἀράβιος* (the Empire to Trajan and the Dacian and Arabian campaigns). Books VI-IX, XI-XVII are complete, except for *Νομαδική* (VIII) and *Μακεδονική* (IX), which with I-V are fragmentary; X, XVIII-XXIV are lost.

The extant tradition goes back ultimately, in its successive parts, to an early annalist, Polybius, Posidonius, Sallust, Asinius Pollio in particular, then Iavvy, the memoirs of Augustus, and possibly Nicolaus of Damascus; but it probably came immediately from the composition of an early imperial annalist, whom Appian adapted to his ethnographic form. Loyal and honest, an admirer of Roman imperialism, he wrote in the plain *κοινή*, and though interested mainly in wars and unreliable about Republican institutions and conditions, preserves much valuable material, most notably in bk. I of the *Civil Wars*.

TEXTS L. Mendelssohn (1879-81); P. Viereck, *Bell. Civ.* (1905); H. E. White (1912-14, Loeb); P. Meloni, *Libro Macedonico di Appiano* (1955); E. Gabba, *Appiano e la storia delle guerre civili* (1956); id., *Bell. Civ.* I (1958). A. H. McD.

APRIES (*Ilophra*), fourth pharaoh (589–570 B.C.) of the Saite XXVIth dynasty, relied like his predecessors on Ionian and Carian mercenaries. He made unsuccessful attempts to conquer Phoenicia and Cyrene, and was overthrown by a rising against his mercenaries which set Amasis on the throne.

Herodotus 2. 161 f., 4. 159; F. K. Kienitz, *Die polnische Geschichte Ägyptens vom 7 bis zum 4 Jahrhundert* (1953), 27 ff., 161 ff. P. N. U.

APRONIUS, LUCIUS, *cos. suff.* A.D. 8, served in Germany as legate of Germanicus (15) and received *triumphalia insignia* from Tiberius. Proconsul of Africa (18–21), he was again so honoured. He was in Rome 22–4; in 28 as praetorian legate of Germania Inferior he fought against the Frisii. H. H. S.

APSINES of Gadara (3rd c. A.D.), Athenian rhetor and rival of a certain Fronto of Emesa, author of *II. σχημάτων, Ζητήματα, and Μελέται*. His *Τέχνη* (Spengel, *Rhet.* i. 329–14), which has come down with many interpolations, owed much to Hermogenes and is the latest complete *τέχνη* to survive. J. W. H. A.

APULEIUS, born c. A.D. 123 of wealthy parents at Madaurus in Africa (August. *De Civ. D.* 8. 14), was educated first at Carthage (*Flor.* 18), later at Athens (*Apol.* 72), and at Rome (*Flor.* 17). After much travel (*Apol.* 23) he returned to Africa. Later setting forth on a journey to Egypt he fell sick at Oea (*Tripoli*) c. A.D. 155, where he was visited by an old friend, Sicinius Pontianus; the latter was anxious about his widowed mother Pudentilla, now betrothed to her brother-in-law, Sicinius Clarus. Pontianus, being on bad terms with his uncle, proposed to Apuleius that he should marry Pudentilla; after some hesitation, Apuleius, finding the widow wealthy and attractive, took her to wife. Sicinius Aemilianus (brother of Sicinius Clarus) accused Apuleius of having won her love by magic. The case was tried at Sabrata before the proconsul, Claudius Maximus. Apuleius defended himself with vigour (*Apologia*) and was acquitted, but left Oea for more congenial surroundings. He is next heard of at Carthage, enjoying renown as poet, philosopher, and rhetorician (c. A.D. 161). He was appointed chief priest of the province (*Flor.* 16), and delivered many florid declamations after the manner of the rhetoricians of the 'second Sophistic'. Statues were erected in his honour at Carthage and at Madaurus (the base of the latter has been discovered). He may have had a son named Faustinus. The date of his death is uncertain.

WORKS. (1) *Apologia* (or *Pro se de Magia*) is one of the most interesting and certainly the oddest of all Latin speeches. Apuleius' aim was not merely to rebut the charges against him but to make his opponents look ridiculous and to advertise his own powers of rhetoric. For its theme see above.

(2) The *Metamorphoses* (better known as 'The Golden Ass') is the sole Latin novel that survives entire. A delightful work, imaginative, humorous, and exciting, it tells the adventures of one Lucius who, being too curious concerning the black art, is accidentally turned into an ass, and thus disguised, endures, sees, and hears many strange things. He is at last restored to human shape by the goddess Isis. At the outset a Greek (i. 1), at the close he is referred to as 'a poor man from Madaura' (ii. 27), and the story of his initiations into the mysteries of Isis and Osiris is probably to some extent autobiographical (cf. *Apol.* 55). Many stories are embedded in the novel, the most famous being the exquisite tale of Cupid and Psyche (4. 28–6. 24). Another version of the novel, briefer but in some details remarkably close, is given in the MSS. of Lucian (*Λούκιος ἢ ὄνος*). Both works probably

derive from the same original, the lost *Metamorphoses* of which the unknown Lucius of Patras was either the author or the narrator (Photius 96 b, 12 Bekker). The story of Cupid and Psyche (which, like the conversion of the hero in book xi, has no parallel in *Λούκιος ἢ ὄνος*) may be an adaptation of the Greek of 'Aristolontes Athenaeus' (Fulg. *Myth.* 3. 6). The date is uncertain (an early work according to Purser, late (c. A.D. 180) according to Helm).

(3) The *Florida* are excerpts from declamations on varied themes, mainly trivial and showing an extravagance typical of the author. They contain much that is curious and amusing, while the description of the death of the comic poet Philemon has real beauty. They were largely composed between A.D. 160 and 170.

(4) The *De Deo Socratis* is a flamboyant declamation on the *δαμόνιον* of Socrates, probably based on a Greek original.

(5) A Latin translation of a passage from Menander's *Ἀνεχόμενος*: Baehrens *PLM* iv. 104.

(6) *Lost works.* Poems (*Apol.* 6, 9; *Flor.* 9. 17, 18, 20); Speeches (*Apol.* 24, 55; *Flor.* 16; August. *Ep.* 138. 19); *Quaestiones Naturales, De Piscibus* (*Apol.* 36, 38, 40), *De Re Rustica, De Arboribus, Astronomia, Arithmetica, De Republica, De Proverbiis; Epitome Historiarum; Eroticis; Quaestiones Conviviales*; a translation of Plato's *Phaedo*; a novel entitled *Hermagoras* (Priscian, *Gramm. Lat.* 2. p. 85).

(7) *Doubtful Works:* opinion is now sharply divided on the authenticity of two works (i) the *De Dogmate Platonis*, an exposition of the philosophy of Plato, showing neither knowledge nor understanding. Book 1 deals with Plato's life and physical doctrine; book 2 (dedicated to 'my son Faustinus') sets forth his ethics. Book 3, in which he promised to deal with his dialectic, is missing; some have held that the *Περὶ ἐμπνεύσεως*, a treatise on formal logic, is the third book, but it is regarded by others as spurious. (ii) the *De Mundo* is a translation of the *Περὶ κόσμου* falsely attributed to Aristotle; it too is dedicated to Faustinus.

(8) *Spuria: Asclepius, Herbarius, De Remediis Salutaribus, Physiognomonia.*

The style of Apuleius is a development of Asianism (see RHETORIC, GREEK § 3), which finds its nearest parallel in Pliny (*IIN* 9. 102; 10. 3; 10. 81). There is no justification for calling it *African Latin*. It is florid and extravagant, richly coloured with poetry, full of strange words, Graecisms, archaisms (see ARCHAISM), and idioms drawn from colloquial Latin, its fullest and most perfect development is seen in the *Metamorphoses*, where it finds appropriate scope and at times rises to great heights of beauty (e.g. *Met.* 11. 1). The works of Apuleius are tinged throughout by his personality – a rhetorician posing as philosopher, peacock-proud and full of an immense store of undigested and superficial learning. But his novel won him deserved renown. Indeed St. Augustine was not certain that he had not actually been turned into an ass, and warns the faithful against those who extol him as a thaumaturge whose powers surpassed those of Christ himself (*Ep.* 136. 1; 138).

TEXTS. *Met.*, R. Helm (1907, 1912, 1911); *Apol.*, R. Helm (1905); *Flor.*, R. Helm (1910), *De Deo Soc., Ascl., De Dog. Plat., De Mundo, Περὶ Ἐμπνεύσεως*, P. Thomas (1908), *Herbarius*, E. Howald and H. E. Sigerist, *CML* iv (1927).

COMMENTARIES. Complete, F. Oudendorp (1764 (1823)), G. F. Hildebrand (1842) *Apol.*, H. E. Butler and A. S. Owen (1914); C. Marchesi (1914) *Cupid and Psyche*, L. C. Purser (1910). Commentary on *Met.* bk. i by M. Molt, on bk. ii by B. J. De Jonge, on bk. v by J. M. H. Feinhoult.

TRANSLATIONS. *Apol.* and *Flor.*, H. E. Butler (1909); P. Vallette (1924). *Met.*, W. Adlington (1566 and revised by S. Gaselee) 1915; H. E. Butler (1910).

H. E. B.; M. S. S.

APULIA, a rather unhealthy region of south-eastern Italy (cf. Varro, *Rust.* 1. 6), extending from Mons Garganus to Calabria; modern *Puglia*. Its arid soil is fertile, especially in the coastal and northern plains; southern Apulia contains numerous hills, including Mons Vultur. Apulian wool was famous, summer migration of flocks having been practised there continuously since early times (Varro, *Rust.* 2. 1; Pliny, *HN* 8. 190). Its inhabitants were indiscriminately called *Apuli*; they included Messapic-speaking *Peuceti* and *Dauni* as well as *Apuli* proper who dwelt about Mons Garganus and spoke *Oscan* (Strabo 6. 283 f.). Although lacking Greek colonies, Apulia was much hellenized by 300 B.C. Between 326 and 317 it became subject to Rome, largely voluntarily, and remained loyal against Pyrrhus (Livy 8. 25, 37; 9. 12. 9 f., 20; Zonar. 8. 5). In the Hannibalic and Social Wars, however, many Apulians revolted (Livy 22. 61; Appian, *BCiv.* 1. 39); the consequent devastation ruined Apulia. Chief towns: Teanum, Sipontum, Luceria, Arpi, Herdonia, Venusia, Canusium, Bariuni.

P. E. Aris (ed.), *Ricerca archeologica nell'Italia meridionale* (1960), 95 ff. E. T. S.

AQUAE MATTIACAE, modern *Wiesbaden*. The thermal springs at Wiesbaden are mentioned by Pliny the Elder, who describes their action (*HN* 31. 20), and the site of the Roman baths has long been known. It had military importance because it commanded a stretch of the *limes* and several periods of military occupation have been detected, including a stone cohort fort.

Der obergerman. ch-rätische Limes, II, Bd. II, no. 10 (ed. E. Fabricius, 1909) P. S.

AQUAE SEXTIAE, modern *Aix-en-Provence*, the first Roman foundation in Transalpine Gaul, was established as a tort by C. Sextus Calvinus in 123 B.C. after his defeat of the Salluvii (q.v.) and in 102 B.C. was the scene of Marius' great victory over the Teutones. Under Augustus it was refounded as *Colonia Julia Augusta Aquas Sextias*, initially with Latin rights (Pliny *HN* 3. 36). In A.D. 381 it became the capital of the province of *Narbonensis Secunda*. No major monuments survive, but a gate and the courses of four aqueducts are known.

M. Clerc, *Aquae Sextiae* (1916); F. Benoit, *FOR* v (1936), 65 ff.; Grenier, *Manuel* no. 115 ff., iv, 68 ff. Battle, A. Donnadieu, *Rev. Et. Anc.* 1954, 281 ff. A. L. F. R.

AQUAE SULIS, modern *Bath*, attributed by Ptolemy to the *civitas* of the Belgae. The hot springs were developed from the Flavian period and later attained great elaboration, outstripping the largest Gaulish establishments. The water was led to a partly underground building containing a great lead-lined bath (73 x 29 feet), later vaulted, and two other swimming baths. Hypocaust systems and further plunge baths were later added at either end. To the north lay the tetrastyle temple of Sulis Minerva, of which the steps, pilasters in the Composite style, and fragments of altar and of the famous Gorgon pediment (30 feet wide) survive. Solinus records that coal was burnt on the altar. Facing the porticoed temple court to the east was a further building (a theatre?). Many inscriptions record visitors from Britain and abroad (Collingwood and Wright, *RIB* 138-78). A town-wall enclosing 22 acres was provided in the third century. The site was deserted in Saxon times, the ruins being described in an eighth-century poem.

F. J. Haverfield, *ICH* (Somerset) 1. 219 ff.; W. H. Knowles, *Archaeologia* 1926, 1 ff., 1 A. Richmond and J. M. C. Toynbee, *JRS* 1955, 97 ff.; B. Cunliffe, *Antiquity* 1966, 199 ff. S. S. F.

AQUEDUCTS are justly regarded as one of Rome's most distinctive contributions to architecture and hygiene.

Rome's first aqueducts, *Aquae Appia* (312 B.C.) and *Anio Vetus* (272 B.C.), were tunnelled, no doubt owing much to inherited experience drawn from making the far older drainage-channels (*cuniculi*) and emissaries cut in the soft tufaceous Latian valley-floor (*PBSR* 1963, 74 ff.). Possibly this experience weighed with the builders even more than military considerations, which favoured the hidden underground channel. Such tunnels, like early railway tunnels, were cut in short lengths reached by vertical shafts, which later served for inspection and cleaning. To cross ravines and narrow valleys or to reach elevated points a conduit carried on arches was required, short bridges occurring sparingly on the *Anio Vetus*, as at Ponte Taulella, long arched sectors for the first time on the *Aqua Marcia* (144 B.C.). An alternative method of conveyance, employed for the *Anio Vetus* at Ponte Lupo, was the inverted siphon (Vitr. 8. 7; *ILS* 5348). All these principles were strikingly developed in the wide imperial world, the Pont du Gard near Nemausus (*Nîmes*) and the aqueduct of Segovia furnishing the most famous examples of storied bridges, the *Aquae Marcia* (144 B.C.), *Claudia*, and *Anio Novus* (A.D. 38-52) of Rome itself offering the most remarkable series of arched substructions, the four aqueducts of Lyons the finest series of inverted siphons, made of lead pipes in series bedded upon concrete. The cost and upkeep of these works was high. *Aqua Marcia* cost 180,000,000 sesterces, and Pliny (*Ep.* 10. 37) quotes 3,329,000 sesterces for the aqueduct of Nicomedia in Bithynia. The quality of work varied very much also (cf. Frontin. *Aq.* 120-2; *ILS* 5795). Smaller towns thus contented themselves with simpler underground systems, which were also much in vogue in military forts and fortresses, where wooden pipe-lines were often used. The channels and their course remained public property, often demarcated by *cippi*, and the water, on arrival, was distributed from *castella*, as at Nîmes and *Thuburbo Maius*, to public fountains, baths, and private consumers, the latter relying much upon overflow (*aqua caduca*). Supplies were regulated by gauge-pipes of standard bore (*calices*) or by time-limits (*CIL* vi. 1261, viii. 448). Development of water-power, as on the *Aqua Traiana* (A.D. 109; see *JANICULUM*), was rare. Rents were not designed to cover running costs or capital charges, and the works were usually a liability to the community rather than a source of income.

Under the Republic the aqueducts were maintained by censorial *locatores*; in the absence of censors, other magistrates, especially the aediles by virtue of their general *cura urbis*, were responsible for the water supply. Agrippa, as aedile in 33 B.C., assumed a general responsibility for the aqueducts which he kept till his death in 12 B.C. In the following year Augustus established a permanent board of *curatores aquarum* originally three in number, one being of consular rank. The functions of the *curatores* under the Empire are described by Frontinus who held office in the time of Trajan.

The principal aqueducts of Rome were the following: *Appia*, 312 B.C.; *Anio Vetus*, 272 B.C.; *Marcia*, 144 B.C.; *Tepula*, 125 B.C.; *Julia*, 33 B.C.; *Virgo*, 19 B.C.; *Alsietina*, 2 B.C.; *Claudia*, A.D. 47; *Anio Novus*, A.D. 52; *Traiana*, A.D. 109; *Alexandriana*, A.D. 226.

AQUILA (1), *PONTIUS* (*PW* 17), of undistinguished family, probably from Sutrium, tribune in 45 B.C., annoyed Caesar by not standing up as he passed in triumph after Munda. He was one of Caesar's murderers,

and in 43 served under D. Brutus in the war of Mutina. After defeating T. Plancus (q.v. 2) he was killed in the battle of 21 Apr., and shared the honour of a public funeral with Hirtius and Pansa (qq.v.).

T. J. C.

AQUILA (2) **ROMANUS** (3rd c. A.D.), rhetorician, whose treatise *De figuris sententiarum et elocutionis* (ed. Halm, *Rhet. Lat. Min.* 22-37) was partly based on the Greek of Alexander Numenius, but contains illustrations from Cicero's works (often misquoted from memory).

Schanz-Hosius, § 837. J. F. M.

AQUILEIA, a city 7 miles from the head of the Adriatic. In 186 B.C. Transalpine Gauls occupied this fertile site, which controls roads across the Julian Alps. Rome ejected them and founded a Latin colony (181 B.C.) to forestall similar intrusions and to exploit neighbouring gold-mines (Livy 39. 22, 54; 40. 34; H. Mattingly-E. S. G. Robinson, *Date of Roman Denarius* (1933), 22). Aquileia became a great military, commercial, and industrial stronghold; its amber trade was especially important (Strabo 4. 207 l.; 5. 214). In imperial times it was a *colonia*, sometimes dubbed *Roma secunda*, the capital of *Venetia et Istria*, one of the world's largest cities, until razed by Attila in 452 (Auson. *Ordo Nob. Urb.* 65 l., Amm. Marc. 21. 11 f.; Procop. *Vand.* 1. 330). Its inhabitants fled to the neighbouring lagoons of Venice. Aquileia became a malaria-stricken village, but was still an important patriarchy in the fifteenth century. Ancient remains are numerous.

A. Calderini, *Aquileia Romana* (1930); S. Panciera, *Vita Economica di Aquileia* (1957). E. T. S.

AQUILLIUS (1) (fl. c. 174-154 B.C.), supposed Latin author of *Boeotia* (*Boeotis*?), a *comoedia palliata* which Varro attributed to Plautus.

O. Ribbeck, *GRF* 33 (3rd ed. Teubner, 1897). E. H. W.

AQUILLIUS (2, *PW* 10), **MANIUS**, consul in 129 B.C., succeeded Perperna (q.v. 1) in Asia and completed the war against the allies of Aristonicus. With the help of a senatorial commission, he delimited and organized the province of Asia and built roads in it (Degrassi, *ILLRP* n. 456). He triumphed (126), was accused *repetundarum* and, though clearly guilty, acquitted.

E. B.

AQUILLIUS (3, *PW* 11) **MANIUS**, son of (2), chief legate of Marius (q.v. 1) against the Cimbri and his colleague as consul in 101 B.C., when he crushed the slave revolt in Sicily, personally killing the rebel leader, Athenion. He celebrated an *ovatio* (99?), was later accused *repetundarum* and, though guilty, acquitted through the efforts of his friends Marius and Antonius (q.v. 1). As head of a mission to Asia (89), he restored Ariobarzanes of Cappadocia and Nicomedes (q.v. 4) of Bithynia to their thrones, and then forced Nicomedes to attack Mithridates, thus starting the First Mithridatic War. Defeated by Mithridates, he was captured and killed amid public humiliation and ridicule.

E. B.

AQUILLIUS (4, *PW* 23) **GALLUS**, **GAIUS**, a Roman jurist of the last century of the Republic, pupil of Q. Mucius Scaevola (q.v. 4). He was praetor (probably of the *Quaestio* (q.v.) *de ambitu*) in 66, contemporarily with Cicero, but thereafter devoted himself to the law; he died between 55 and 44 B.C. He is famous as the creator of the *formulae de dolo* (Cic. *Off.* 3. 14. 60; *Nat. D.* 3. 30. 74) which enabled the bad faith of either party to be pleaded in a lawsuit, and thereby added greatly to the flexibility of

the law; he also drafted the *stipulatio Aquiliana* by which all kinds of debts could be converted into one *stipulatio* (q.v.) so that they could be discharged by a single *acceptilatio* (Dig. 46. 4. 18. 1).

B. N.

AQUINCUM, on the Danube at Budapest, was the centre of the Illyrian-Celtic Erawisci, later the provincial capital of Pannonia Inferior. Throughout the Roman period it was a key military base against the Quadi and the Sarmatian Iazyges. From Tiberius it was an auxiliary station and under Domitian was occupied by Legio II Adiutrix. Under Trajan this unit was detached for service in Dacia and the East (c. A.D. 101-14/17), and its place was taken by Legio X Gemina, but it returned to become the permanent garrison of Aquincum, except for two further periods of detachment, 161-7 and under Septimius Severus, when its place was taken by IV Flavia Felix. Around the camp a *canabae* (q.v.) developed its own administration, while the city of Aquincum, a *municipium* (*Aelum*) under Hadrian and *colonia* (*Septimia*) under Severus, developed quite separately on a site 2 miles north of the legionary fortress. Aquincum was abandoned with the rest of Pannonia (c. 400), its last mention being Sid. Apoll. 5. 107.

AQUITANIA, a name originally applied strictly to the area bounded by the Garonne, the Pyrenees, and the Bay of Biscay (modern *Gascony*). The Aquitani are described as differing from the other Gauls in speech, customs, and physique, and archaeologically their culture is distinguished by several primitive Hallstatt survivals. They were divided into many small tribes which were defeated in 56 B.C. by P. Crassus (q.v. 5) and finally subdued after campaigns in 38 and 27 B.C. Augustus made Aquitania an imperial province, governed from Burdigala (q.v.), but extended it to include the Celtic tribes to the Loire which, as Strabo complains (4. 177), made ethnographical nonsense of the name. By the third century, however, the original Aquitanian tribes, which had coalesced to nine, were granted administrative independence as Novempopulana, centred on Elusa (*Eauze*), so that the later provinces of Aquitanica Prima and Secunda (capitals at Bourges and Bordeaux) in fact excluded them, as did medieval Guyenne, while Gascony took its name from the Vascones, a Pyrenean tribe. See also BURDIGALA, LUGDUNUM (2).

ARA PACIS, a monument dedicated on 30 Jan. 9 B.C. by the Senate, as Augustus records in his Testament, to commemorate his safe return from Gaul and Spain. It was erected in the Campus Martius, where the Palazzo Fiano now stands. The altar proper was surrounded by a walled precinct (11.6 × 10.6 m.) with doors on east and west. The walls of this precinct were sculptured with reliefs in two tiers: internally there were festoons slung from ox-heads above and fluting below; externally, the lower frieze was filled with a spreading floral pattern, the upper contained on east and west mythological scenes, on north and south a rendering of the procession on the consecration day (4 July 13 B.C.) with portraits of the imperial family and figures of lictors, priests, magistrates, and representatives of the Roman people. These reliefs rank among the most important products of Augustan art. The smaller reliefs on the inner altar showing Vestals, priests, sacrificial animals (a sheep and two steers or two heifers), etc., continue the procession on the outer walls.

Several sculptured slabs were brought to light about 1568; others were found in 1859 and 1903. They were identified (rightly, despite a recent attempt to prove the contrary) as parts of the Ara Pacis by F. von Duhn in 1879. In 1937-8 the site was thoroughly explored and the monument reconstructed, with most of its surviving sculptures, a short distance to the north of the Palazzo Fiano.

ARABIA. Greeks of the Classical period were familiar with the coast of Arabia and with Arabia Petraea. They knew less about the other divisions into which by Ptolemy's time they had divided the peninsula—Arabia Felix in the south and Arabia Deserta. The Romans of the Empire took account, as their organization of the southern sector of their eastern *limes* reveals, of the historical role of the Arabs, their steady pressure on the settled lands in the north, their infiltration into the Syrian end of the Arabian peninsula, their seasonal movements of transhumation between the Desert and the Sown.

In the north confrontation with, and partial subjection to, the great powers of Mesopotamia and Babylonia are attested on the monuments of the Assyrian kings from Shalmaneser III (853) to Tiglath Pileser III (745-727), and Esarhaddon (680-669) and Babylonian Nabonidus visited Taima in person (552). The Persian King Darius I recorded the tributary status of Arabaya (cf. *Hdt.* 7. 69; 3. 97).

For the Greeks knowledge really began with Alexander. In preparation for his intended circumnavigation his admiral Iheron sailed down the Persian Gulf to Ras Mussendam, and Anaxicrates down the Red Sea through Bab-el-Mandeb to the south coast; the south-east (Oman) long remained unknown. The Seleucids planted some settlements along the coast between the Euphrates and Gerrha, and had a trade arrangement with Gerrha, which supplied Seleucia with spices. Ariston explored down to Bab-el-Mandeb for Ptolemy II, and that king, to chastise the hostile Nabataeans of Petra, tapped the 'incense route' south of them by a trade arrangement with the Libyanites of Dedan (Al-'Ula); Miletus settled for him a colony, Ampelone, as a sea-port for Dedan. The fourth-third-century kingdoms in the south were Minaea on the Red Sea, Katabania at the Straits, and Sabaea, the Hadramaut, and Mahra along the south coast; by the second century Minaea had vanished, and a Sabaeo-Homerite confederacy (Himyarites) dominated Yemen. Both terrain and climate had permitted an early flowering of Arabian civilization in southern Arabia.

In the north much had been achieved by the Nabataean Arabs; their territories as far as the Negev and Transjordan were developed with the aid of skilful water conservation. In the first century Petra grew great, and the Nabataeans finally extended from Damascus to Dedan. The interior was always unknown. Arabia exported frankincense and myrrh, gold and gems, and re-exported Indian spices and other products. The principal routes were the 'incense route' from Sabaea through Medina, Dedan, and Petra to Syria, and routes from Dhofar to Gerrha, from Gerrha across to Petra, and from Egypt to Babylonia via Jauf. Till Augustus' time the southern Arabs were jealous intermediaries of the sea-trade between India and Egypt; Roman Egypt, with direct voyages to south Arabia and India, broke their monopoly, and also diminished the importance of the 'incense route'.

Augustus sent a military expedition under Gallus (q.v. 4) to Arabia Felix (Sabaea), which failed; but Roman naval predominance in the Red Sea was secured and the reduction of Aden (Arabia Eudaemon) early in the

Principate facilitated the movement of Greek merchant convoys on their passage from Egypt to India and back (Anon. *Peripl. Mar. Erythr.* 26). Friendly diplomatic relations with the rulers of the Yemen and Hadramaut coasts replaced attempts at military control in Arabia. But in the north the construction of a military *limes* from Black Sea to Red Sea involved the absorption of the client kingdom of Nabataean Arabia into the Roman provincial system. Trajan sent Cornelius Palma (q.v.) to annex the land of the Nabataeans (q.v.) as a Roman province, and constructed a great road through it from Aela on the Red Sea to Damascus (this city being assigned to Syria). The provincial era started on 22 March 106. Of the two chief cities, Bostra and Petra (qq.v.), the former became the provincial capital, where during the second century Legio III Cyrenaica was stationed. The governors were at first senatorial legates, later equestrian *praesides*. Slightly enlarged to the north under Septimius Severus, the province under Diocletian was divided into two: the part around Bostra retained the name Arabia, the other part was later incorporated in Palaestina but (by c. 358) appears as Palaestina Salutaris.

ARACHNE (i.e. 'Spider'), in Ovid, *Met.* 6. 5 ff., a Lydian woman, daughter of Idmon of Colophon, so skilled in weaving as to rival Athena, whom she challenged to a competition when the goddess visited her to warn her. On Athena's destroying her web, she hanged herself and Athena changed her to a spider. This seems to be originally a folk-tale (Stith Thompson A 2091. 1, 2231. 5).

H. J. R.

ARADUS, the main city of North Phoenicia, on an island off the coast, whose kings ruled a large area on the mainland. Captured by Alexander the Great, it regained its freedom under Antiochus II in 259 B.C. Federated with its former dominions (Gabalat, Carne, Marathus, Simyra), it remained a vassal to the Seleucids. In the second and first century B.C., the federation was gradually dissolved. Captured after resisting Antony (38 B.C.), its prosperity continued as an important harbour for eastern trade. In the mountains opposite the island are the remarkable ruins of the main Aradian high-place, the temple of Zeus Haitokaikes.

H. Seyrig, *Revue numismatique*, 1964.

H. S.

ARAE FLAVIAE, *Rottweil* on the Neckar. In A.D. 74 the Roman Rhine-Danube frontier was shortened by carrying a road south-eastwards from Strasbourg to the Danube. A fort was built at the point where another road coming up from Vindonissa joined it and the settlement Arae Flaviae developed there. Domitian advanced the frontier further and removed the garrison. Arae Flaviae was thought to have lost its importance after A.D. 100 and no public administrative buildings have been found, but the description as a *municipium* in a recently discovered official order of A.D. 186 poses new problems.

W. Schleiermacher, in *Gymnasium Germania Romana* I, *Römerstädte in Deutschland* (1960), 59 ff. O. B.; P. S.

ARAROS (Ἀραρός), son of Aristophanes, produced (after 388 B.C.) two of his father's plays, *Kokalos* and *Aiolosikon* (hyp. 4 Ar. *Plut.*). The first play of his own was produced in 375; we have fragments of five plays, and six titles.

ARATUS (1), of Soli in Cilicia (c. 315-240/239 B.C.), was first taught by Menecrates of Ephesus, perhaps in that town. Later he went to Athens, where he imbibed Stoicism from Zeno and was introduced to Antigonus (q.v. 2) Gonatas. Antigonus c. 277 invited Aratus to the Macedonian court, where he celebrated the king's marriage to Phila, half-sister of Antiochus I. He also celebrated Antigonus' victory over the Celts (277) in a *Hymn to Pan*. Later Aratus went to Syria and joined Antiochus' court. There he completed his edition of the *Odyssey*, but eventually returned to Macedonia, where his death preceded that of Antigonus in 240/239.

WORKS. Aratus' best-known work, still extant, is an astronomical poem, entitled *Phaenomena*. This, undertaken at the request of Antigonus, versifies a prose treatise or treatises of Eudoxus of Cnidos (c. 390-337). After a poem to Zeus (1-18), and a brief reference to the poles, Aratus describes the northern and southern fixed stars (26-453), the circles of the celestial sphere (462-558), and the risings and settings of stars (559-732). The remainder of the poem (733-1154) deals with weather signs, in spite of a separate title (*Προγνώσεις διὰ σημείων*) an integral part of the poem. The *Phaenomena* achieved immediate fame (cf. *Anth. Pal.* 9. 25 (Leonidas of Tarentum); Callimachus, *Epigr.* 27) and found many commentators (the names of 27 are known); but the astronomical mistakes, which some commentators tried to remove by altering the text, were widely criticized, especially by Hipparchus (c. 190-120 B.C.), whose commentary survives. Nevertheless the poem enjoyed a great reputation among both Greeks and Romans (cf. Cic. *De Or.* 1. 69) till the end of antiquity. Latin translations of it were made by Varro of Atax, Cicero, Germanicus, Avienius (see ARATEA). Aratus' style is sober, being modelled on Hesiod, and the language, drawn mostly from Homer, is relatively simple (there are few 'glosses'), but the poem is not easy reading owing to the nature of the subject-matter. There are some bad errors in the formation of Epic words, and some neologisms. The metre is fairly correct, but the refinements introduced by Callimachus are lacking. The Stoic creed pervades the whole poem, while poetic colour is provided by digressions, the longest being the descriptions of the Golden Age (98-136) and of storms at sea (408-35).

Aratus wrote many other poems, now lost, e.g. *Epikedeia*, *Epigramms* (cf. *Anth. Pal.* 12. 129), *Elegies* (Macrobius 5. 20. 8), *Hymns*, *Poegnia*, and a collection of short poems with the title *Τὰ κατὰ λεπτόν* (the meaning is uncertain), from which the *Catalepton* attributed to Virgil takes its name. Other lost works have astronomical or medical titles.

E. A. B.

ARATUS (2) (271-213 B.C.), a Sicyonian statesman, educated at Argos, his refuge after his father's murder (264). He recovered Sicyon in 251, united it to the Achaean Confederacy for defence against Macedon, and solved its economic difficulties by subsidies from Ptolemy Philadelphus, whom he visited personally. As General of the Confederacy, normally each alternate year from 245, he seized Acrocorinth in 243 and defeated Gonatas' Aetolian allies at Pellene (241). In alliance with Aetolia (239-229) he frequently attacked Athens and Argos; additions to the Confederacy included Megalopolis (235) and Argos (229), and on Demetrius II's death (229) Aratus helped to liberate Athens. However, Spartan aggression cancelled these advances. Defeated at Mt. Lycacus and Ladoceia (227) by Cleomenes III, he realistically opened negotiations with Macedon, and Doson's arrival in 224 preserved the Confederacy from disruption. In the crisis he held special powers, judicial and administrative. On Philip V's accession he called in Doson's Hellenic League against Aetolian aggression (220); in the subsequent war he successfully exposed the treachery of the court cabal under Apelles, and after the peace of Naupactus (217) vigorously resisted Philip's anti-Roman policy and proposed seizure of Ithome. His death (213), probably from consumption, was attributed popularly to Philip.

His *Memoirs* (*Υπομνηματισμοί*, Polyb. 2. 40) were pro-Achaean and apologetic in tone, and less reliable than Polybius claims (2. 40. 4).

Though not without personal rancour (e.g. against Lydiades or Aristomachus of Argos), Aratus' actions usually revealed a sound statesmanlike basis. His failure to organize a strong army was serious; but his major decisions were almost invariably correct, and both as a diplomatist and guerrilla leader he carried adaptability to the height of greatness.

ARASIO, a town in Gallia Narbonensis, modern Orange. Near here the Cimbri defeated Cn. Mallius and Q. Caepio (q.v. 1) with huge losses (105 B.C.). Under Augustus a colony for veterans of Legio II Gallica (*Colonia Firma Julia Secundanorum Arasio*) was established on land taken from the Tricastini; details of the centuriation are preserved on marble tablets, of which many fragments have been recovered. Important monuments survive, including the theatre, with an enigmatic semicircular structure adjoining, two temples, and the triumphal arch (with Tiberian inscription) which stands outside the north gate.

ARAXES, properly the Armenian river now called Aras, Ras, or Yerash, rising in Bin Geul Dag, then flowing eastwards across Erzerum and the Mogan Steppe. Until A.D. 1897 it joined the Kur (ancient Cyrus), but now flows separately into the Caspian. Swift and turbulent now, in Graeco-Roman times it marked a trade-route

from the Caspian and the Cyrus to Artaxata and Asia Minor. Herodotus confuses the Aras with the Iaxartes or the Oxus. Xenophon calls it Phasis, his Araxes being probably the Khabur. The 'Araxes in Persis' is probably the Bendamir or Kum Firuz.

ARBITRATION, GREEK. The submission of a dispute to a neutral person or body, whose verdict the disputants engage themselves in advance to accept, was recognized among the Greeks from a very early period, and legend and history alike attest its frequent application. There is evidence for the existence of public arbitrators in numerous States, e.g. Sparta, Gortyn, Ephesus, and Lampsacus, but we have detailed knowledge only about Athens. There private *δαιτηταί*, not necessarily citizens, were frequently employed to settle claims on an equitable rather than on a legal basis (Arist. *Rhet.* 1. 13), while public arbitrators, appointed from citizens in their sixtieth year, were used, especially in the fourth century, for the settlement, under the auspices of the 'Forty', of private claims exceeding 10 drachmas in value, so as to lighten the work of the public courts (Arist. *Ath. Pol.* 53). Once accepted by both parties, the arbitral award became legally binding, but inasmuch as either party had the right of appeal to the lawcourt, these public *δαιτηταί* must be regarded as mediators rather than as arbitrators in the strict sense. Another important application of the same principle was the practice, especially frequent in the Hellenistic age, whereby a State invited a friendly neighbour-State to send a tribunal (*δικασταὶ μετὰπρεμπτοι, ξενικῶν δικαστήριον*) to deal with civil, and sometimes also with criminal, cases affecting its citizens, the visiting judges sought first to settle disputes 'out of court', but where the method of conciliation (*σύλλαυσις*) failed, they had the right to pronounce legal judgements.

But it was in the field of inter-State relations that arbitration attained its greatest influence. Whether the Greeks originated this device for substituting equity for force is uncertain, but it was assuredly they who made it a recognized and frequent means of averting wars. The earliest recorded cases, such as the Spartan arbitration between Athens and Megara regarding the possession of Salamis, are known only from semi-legendary traditions; but the original text survives of an award of about 450 B.C. (*SIG* 56 - Tod 33), by which Argos sought to compose existing differences between her two Cretan colonies Cnossos and Tyllissus and to prevent their future recurrence. After 450 peace-treaties normally contained a clause binding the contracting parties to submit to arbitration all eventual disputes (e.g. Thuc. 1. 78. 4, 140. 2, 144. 2, 145; 4. 118. 8, 5. 18. 4, 7. 4), and we may assume that this course was frequently followed, though circumstances sometimes arose in which the exacerbation of public feeling and the difficulty of finding a suitable arbitrator led to the neglect of this provision. Athens seems to have claimed the right to act as arbitrator in disputes among the members of her Empire (Plut. *Per.* 25), and later the Greek leagues sought by similar means to secure internal harmony.

It is upon inscriptions that we depend for our detailed knowledge of the operation of the arbitral machinery, the size, composition, and appointment of the tribunals, their procedure, the nature of the evidence laid before them, the formulation and publication of their awards, the penalties attaching to their infraction, and the character of the boundary-delimitations carried out by frontier commissions. Among the fullest and most interesting accounts of this kind are those relating to the arbitrations of King Lysimachus and, later, the Rhodians between Samos and Priene (*OGI* 13, *SIG* 509, 688), of the Megarians between Corinth and Epidaurus (*SIG* 471), of the Aetolians between Perea and Melite in

Thessaly (*ibid.* 546 B), of the Senate between Melite and Narthacium (*ibid.* 674), of the Mylasians between Magnesia and Priene (*ibid.* 679), of the Milesians between Sparta and Messene (*ibid.* 683), of the Magnesians between Itanus and Hierapytna (*ibid.* 685), and of the Cnossians between Lato and Olus (*ibid.* 712; *Inscriptions de Délos*, 1513).

ARBITRATION, ROMAN. The history of Roman arbitration begins with the intervention of Rome as a great power in the politics of the Hellenistic world. Rome took the place of the kings who had often acted as international arbitrators between the free cities and leagues of the Greeks. Such disputes were referred to the Senate, which decided the general issue, but sometimes left particular points to a third party with local knowledge for settlement. Rome did not, in the earliest period, enforce the acceptance of her arbitral awards. While not abusing her influence, Rome tended to accept the state of affairs at the time when the appellants first came under her influence as the standard of reference. This practice tended, as her authority increased, to merge into the defence of the privileges of her allies. With the formation of provinces and the consolidation of the Empire, arbitration lost its international character, since, except by special permission, which was sometimes allowed, notably in Sicily, the subject peoples could not turn elsewhere. But senatorial adjudication of disputes between provincial communities of all categories continued to be frequent till the third century of the Empire. Such arbitration tended to merge with the general provincial administration, and was gradually replaced by the activity of special commissioners such as the *curatores* and *correctores* (q.v.) *civitatum*. Its existence illustrates the lively political self-consciousness of the cities of the Roman Empire.

ARBORICULTURE. Neolithic Europe knew apple, and perhaps pear, cherry, and plum-trees; the ancient oriental regions also knew fig-trees and date-palms, pistachio, carob, walnut, peach, lemon, pomegranate, and almond-trees. Greece after the Persian Wars and especially in the Hellenistic age, as well as Italy after 200 B.C., imported and cultivated all these fruit-trees, so far as climate permitted. Under the Roman emperors many of them reached the Rhine, the Danube, and the Atlantic coast, and spread into Germanic and Slavic Europe, and from Iran even to China. Fig and date-trees had great economic importance for the Asiatic and African parts of the Mediterranean world and for southern Greece from Minoan times. The scientific experience of Greece and Rome was used for arboriculture with remarkable results. Orchards flourished everywhere, the methods of their cultivation being well known to us from

papyri and contemporary authors. Cultivation of trees useful for their wood is found in Attica, and in the Ptolemaic and Roman Empires. State plantations of them were established, private plantations encouraged and even commandeered to lessen the scarcity of wood in Egypt and elsewhere. See AGRICULTURE.

ARCADIA, a mountainous area in central Peloponnesus approaching the sea only in the south-west, near Phigalia. Its small valleys have a hard climate but are not infertile. Most of it is drained by the Alpheus and its tributaries, but large parts have no overground outlet for their waters, which disappear through swallow-holes; hence the north and east valleys either held lakes (Pheneus, Stymphalus) or became flooded. The most prosperous parts were the eastern plains, with Orchomenus, Mantinea, Tegea, lying at about 2,000 feet, and the Alpheus valley, where lay Heraclea, the first Arcadian place to coin and one of the religious centres of Arcadia (C. Seltman, *Greek Coins*² (1955), 97). Arcadia offers few traces of Bronze Age civilization (except for infrequent fringe-sites such as Analipsis on the border between Tegeate territory and Laconia), and this is strikingly true of the late Mycenaean period (cf. F. Kiechle in *Kadmos* 1 (1962), 112 ff.). It is possible that refugees from the destruction of Messenian Pylos took refuge in Arcadia to form a heterogeneous population there in the south-west. Later Arcadia, particularly the mountain valleys, was a land of villages. It therefore carried little direct weight in the politics of Greece, but through Mantinea and Tegea it exercised considerable influence on the preoccupations of Sparta especially in the fifth century (cf. W. G. Forrest, 'Themistokles and Argos', *CQ* 1960, 221 ff.; A. Andrewes, 'Sparta and Arcadia in the early fifth century', *Phoenix* 1952, 1 ff.). Recent archaeological discoveries have been made at Gortys (especially a curious bath-building) and Pheneus. Some later fortified sites remain to be identified: cf. *BCII* 1956, 522 ff. The chief strength of Arcadia was manpower, and from the early fifth century we hear of Arcadian mercenaries. From the mid sixth century it came under Spartan hegemony, but disaffection appeared from time to time related (though not necessarily simultaneously) to democratic developments and synoecism (cf. Strabo 7. 337) (and see MANTINEA). Under Epaminondas' direction an Arcadian Confederacy was formed as a counterweight to Sparta, but was weakened by particularism. For Arcadian participation in the Achaean Confederacy see MEGALOPOLIS.

Arcadia's dialect appears (resembling Cypriote) to preserve elements of Old Achaean (Mycenaean). The sequestered character of a good deal of Arcadian life preserved odd myths and cults: cf. the horse-headed Demeter of Lycosoura. The pastoral pursuits are reflected in the small Arcadian shepherd bronzes.

ARCADIAN CULTS AND MYTHS. All the usual gods were worshipped in Arcadia; the most remarkable features of the cult were (1) Zeus on Mt. Lycæon had a holy place, to enter which was death (by stoning, if it was deliberate; mysteriously within a year, if otherwise). It was reported as early as the time of Plato that human sacrifice was practised there, and that he who tasted the flesh of the human victim became a wolf. (2) Poseidon's

shrine at Mantinea stood open but might not be entered; one Aepytyus who disregarded this was blinded by a mysterious wave. (3) Hermes by most reports was born on Mt. Cyllene; there is little doubt that his cult originated in that region. (4) Demeter at Lycosura was associated with a goddess Despoina, said to be her daughter by Poseidon; at Phigalia she was shown horse-headed and bore the surname of Black (see ARCADIA); at Thelpusa, that of Erinyes. In other words, she was a local goddess identified with the normal Demeter, but of more formidable character. (5) Pan is universally said to be an Arcadian god, as was natural enough, considering that the country was largely pastoral. (6) Before a festival at Aliphera sacrifice was made to a godling called Myiagros, 'fly-catcher', and it was believed that after this flies would not trouble the worshippers. Of myths, the most important was the claim of the Arcadians that Zeus was born in their country, and the source of the river Neda had sprung up for Rhea to wash herself and her infant. It was a kind of proverb or standing joke that the Arcadians had lived there since before the moon was created. See also ARES.

W. Immerwahr, *Die Kulte und Mythen Arkadiens* (1891).

H. J. R.

ARCADIUS (1) of Antiocheia, a grammarian, of the later Empire, who wrote a (lost) *Ὄνοματικόν* (table of noun inflexions). To him is falsely ascribed an extant epitome from Herodian, probably made by Theodosius (end of 4th c. A.D.), to which a spurious conclusion was added in the sixteenth century.

Edmon (Hdn. Epitome) M. Schmidt (1860).

P. B. R. F.

ARCADIUS (2), FLAVIUS, Eastern Roman Emperor (A.D. 383-408), was the elder son of Theodosius I. Weak and irritable, he had little influence on the course of events in his time, and throughout his reign the government was effectively in the hands of his ministers, Rufinus (1) and Eutropius (2) (qq.v.), against whom the poet Claudian wrote vigorously, and Anthemius, of whom little is known.

E. A. T.

ARCAS, eponym of Arcadia, son of Zeus and Callisto (q.v.). Being left without a mother, he was reared by Maia. His grandfather Lycæon, to test the omniscience of Zeus, killed him and served up his flesh. The god overthrew the table, destroyed the house with a thunderbolt, turned Lycæon into a wolf, and restored Arcas to life. Later, meeting Callisto in bear-shape, Arcas pursued her into the precinct of Zeus on Mt. Lycæon. Both thus incurred the death-penalty (cf. ARCADIAN CULTS; Ovid, *Met.* 2. 496, says nothing of the shrine but only that he did know her and was about to kill her), when Zeus turned them respectively into the Great Bear and Arctophylax.

Hyginus, *Poet. Astr.* 2. 1 and 4.

H. J. R.

ARCESILAS I, II, III, IV, second, fourth, sixth, and eighth kings of the Battiads, who ruled Cyrene (q.v.) from its foundation (c. 630) for some 200 years. Information on their reigns comes almost entirely from Herodotus and from Pindar and his scholiasts. In detail the chronology is uncertain. Arcesilas I (c. 591?-c. 575?) seems to have followed closely in the founder's footsteps. Arcesilas II, the Cruel (after 570), quarrelled with his brothers, who seceded and founded Barca. They stirred up the Libyans against him, and he was defeated by them, and then murdered by his brother Learchus. He is the Arcesilas depicted supervising the loading of merchandise on the famous cup in Paris (*CAH*, pls. i. 378). Arcesilas III (before 525-after 522) succeeded to a

monarchy stripped of its powers by the reform of Demonax of Mantinea. He seems to have tried to establish a demagogic tyranny, was forced into exile, collected mercenaries on Samos with the help of Polycrates, and regained power in Cyrene, only to be murdered later at Barca. In the meantime he had submitted to Cambyses when the latter conquered Egypt. Arcesilas IV (before 462-c. 440?) employed Pindar to celebrate his victory in the chariot-race at Delphi (462), but a democratic revolution led to his fall and the end of the dynasty.

Ildt. 4. 150-67, 200-5; Pind. *Pyth.* iv, v and scholia F Chamoux, *Cyrene sous la monarchie des Battades* (1953). A. J. G.

ARCESILAUS (1), or **ARCESILAS** (both forms given in the sources), 316/5-242/1 B.C., son of Seuthes, or Scythes, of Pitane in Aeolia. Head of the Academy in the middle of the third century B.C., who gave the school its sceptical turn which it followed, with minor variations, until the age of Antiochus of Ascalon. (The term 'New Academy' is late, and was first applied by Antiochus. The term 'Middle Academy' may also derive from Antiochus. 'Second Academy' is a much later term.) Arcesilaus first studied in his home-town with the mathematician Autolycus, whom he followed to Sardis. On his father's death, his brother wanted him to study rhetoric, but Arcesilaus went to Athens and studied philosophy under Theophrastus. An intimate friendship with Crantor won him over to the Academy, where he came to know Polemo and Crates. On the death of Crates, a certain Socrates, elected scholarch on account of his age, resigned and gave his place to Arcesilaus, who headed the school until his death. He was a man of wide interests, many friends and acquaintances, famous for his wit, and an interesting, though harsh, teacher. He wrote some poetry: two epigrams by him are preserved in Diog. Laert.

Arcesilaus probably (but see D.L. iv. 24 -- *Ind. Herc.* xvi. 14 ff.) published nothing, perhaps (D.L. iv. 32) to avoid any suspicion of dogmatism. What we know of his teachings derives from later sources. The present fashion to ascribe to members of the Academy under his guidance the composition of some of the spurious and dubious dialogues of the Platonic corpus (*Eryxias*, *Chitopho*, *Deusto*) should be treated with Academic doubt. A devoted reader of Plato, Arcesilaus believed that neither he nor Socrates had any doctrines of a 'dogmatic', positive nature, and based his teaching activities on the Socratic practice of arguing for and against any given point of view without reaching any conclusions, the result of which leads the student to the sceptical *εποχή* (withholding of judgement). How much this attitude may have been influenced by Pyrrhonian scepticism is debatable, but it is clear that the story of an esoteric teaching of Platonic doctrines of a more positive nature, revealed by him and his successors in the Academy only to their oldest pupils, is an aetiological myth, used by late sceptics to find a distinction between the Academy and themselves, and by late Platonists to maintain an unbroken continuity of Platonism in Athens. It is now thought that, unlike Pyrrho, Arcesilaus did not consider *εποχή* as a mere attitude of mind whose function is mainly to make the sceptic imperturbable, but rather as a genuine philosophical position, which he believed was the original Platonic one, and which he used in his polemic, especially against the Stoics. The latter based their theory of truth on the concept of *καταληπτική φαντασία* (clear and certain perception), followed and corroborated by *συγκατάθεσις* ('adsensio', certainty). Arcesilaus taught that, by using Platonic arguments against the reliability of our senses and by emphasizing contradictions within Stoic theory, one arrives at the principle of *ἀκαταληψία* (lack of certain perception). In his ethical teaching he

maintained that the main moral principle is to follow what is reasonable (*τὸ εὐλογον*). This concept is nowhere sufficiently defined, but it probably means a common-sense attitude to moral issues rather than a complicated system of ethics.

ARCHAEOLOGY, CLASSICAL, is the study of the ancient Greek and Roman world from sources other than transmitted texts; its primary concern is with material remains and tangible objects. Its upper chronological limit is not tied to the arrival of Greek-speaking and Italic peoples in the Mediterranean lands; in fact the prehistoric as far back as the neolithic commonly falls within the sphere of the classical archaeologist's activity. The lower limit is the breakdown of the pagan civilization of antiquity.

The traditional role of classical archaeology is the presentation and study of the different classes of artistic products, and its principal fields have consequently been the fine arts and architecture. From the sixteenth century in Italy, and the seventeenth and eighteenth centuries in France and England, studies were prosecuted with the aim of providing the best and most correct models for the training of practising architects and artists. To this end, for instance, the Society of Dilettanti (founded in London in 1733) financed a remarkable series of expeditions to study and publish the relics of antiquity; and at the beginning of the nineteenth century it was the view of Goethe and other critics that the arrival of the Elgin marbles sufficed to make London the centre of artistic study. With the reaction against classical taste in more recent times, the study of the antique has gradually lost its bearing on architectural practice and become an end in itself. Scholars have begun to pay more attention to the origins and evolution of architectural forms, the different kinds of secular buildings, and *ensembles* and city planning as revealed by modern excavations; and this has resulted in a greatly increased understanding of the development of ancient cities and living conditions.

In the realm of art, sculpture has been pre-eminent. The collecting of ancient statuary has a long history, and not least in England where King Stephen's brother, Henry of Blois, was concerned in transporting statues from Rome to Winchester, and in the first half of the seventeenth century Lord Arundel formed a notable collection and statues were collected on Delos for King Charles I. Puritanism perhaps partly accounts for the evident decline in interest after this time in England; and certainly it seems to have been the academies in Latin countries that fostered the study of the antique until the mid eighteenth century. But subsequently the acquisition of much of the Parthenon sculptures by Lord Elgin

and the formation of national collections in European capitals gave rise to intense scholarly research in classical sculpture in the nineteenth century (especially in Germany, where art-history became an important subject in the universities and close contact was maintained with Rome through the Institute founded there in 1829). In the present century the study of classical sculpture has begun to suffer from a lack of fresh material and currently, perhaps, from a certain loss of interest in artistic values among classical archaeologists; but further advance may come from new technical approaches or from more serious study of comparative material such as terracotta figurines.

Classical painting (to leave aside Etruscan tombs) cannot be very effectively studied because of the loss of the Greek masterpieces, which are too distantly and uncertainly reflected in the Pompeian murals. Mosaics and Roman painting are only now being adequately studied. Greek painted vases, on the other hand, have been eagerly studied in the 200 years since they began to be recovered in large numbers from Italian cemeteries. In the present century interest has tended to shift from the interpretation of their figured scenes to accurate classification (which is likely in future to benefit from laboratory work on the chemical composition of the clays), analysis of forms and decoration, the recognition of individual artists and their interrelationship, and close dating. This work, in which Beazley has played a dominant part, has lent a new precision to archaeological field-work, because pottery, which had no scrap value and has proved relatively indestructible, provides the most abundant evidence for the dating of most archaeological contexts. An interesting old-established branch of Classical Archaeology is numismatics, which is mainly studied by specialists in contact with coin-collections but enters increasingly within the orbit of historians and archaeologists. Likewise common to history and archaeology, and tending to breed its own specialists, is the study of inscriptions (epigraphy). The discovery of the inscriptions themselves is largely due to the journeys of exploration which, over several centuries, have been directed to the recording of ancient remains and the discovery and identification of sites.

Having a great range of works of art in its repertory, Classical Archaeology has developed a bias in the direction of museum studies; and the museums have been supplied by excavation and illicit traffic in antiquities. From the mid eighteenth century, when the ransacking of Pompeii and Herculaneum commenced, excavation (both licit and illicit) was increasingly adopted as a means of procuring valuable works of art. In the 1870s, however, Schliemann demonstrated that it could be used as an instrument of historical inquiry; and from his labours, and those of successors like Evans, there emerged the image of a hitherto unsuspected civilization—that of Bronze Age Crete and Mycenae. The attraction of this Aegean civilization consisted not only in its revelation of an advanced economy and cultural life, but in the demonstration that the Greek legends of the Heroic Age had a historical foundation whose validity could be tested on the ground. Archaeology thus found itself engaged in making history out of pre-history; and British and American scholars, whose research in classical antiquities had been handicapped by lack of teaching in their home-countries, were quick to turn to this new field of pre-classical research. The significance of context in archaeology was recognized. New methods were developed; and in due course the instrument of stratigraphical excavation came also to be applied to elucidating the successive historical phases of classical civilization.

At the present time, thanks both to the organizing activity of foreign archaeological schools in Mediterranean lands and to the growing interest in archaeology

in other countries, a high proportion of classical archaeologists gain experience of field-work, whether in excavation or in surface (and now also underwater) exploration. The most modern field exploration, such as that being conducted in Messenia by the University of Minnesota, favours a team-approach embracing the physical, biological, and social sciences; there is unlimited scope for work of this sort, which could profitably be supplemented by soundings to resolve particular problems. Excavation has already progressed far, especially in Italy, Western Asia Minor, and, above all, in Greece where the government has encouraged participation on the part of the foreign schools. Accessible sites of obvious appeal (such as Olympia, Delphi, Corinth, Delos, Pergamum, central Athens and Rome, Ostia, Carthage) have been extensively cleared; scores of others have been more or less methodically excavated, and interest is coming to centre increasingly on the fringes of the Greek and Roman worlds where native cultures were encountered. In this context, with the light that it is shedding on military activity and romanization, the Romano-British has become an important sector of Classical Archaeology.

Despite the increased emphasis now being laid on Archaeology as an autonomous discipline and a subject of specialized study, it remains true that research in Classical Archaeology is undertaken mainly by scholars who have specialized in classical studies. Certainly, much can be gained—especially in the less fully documented eras and sectors—from archaeological techniques that are coming to be applied to the study of other cultures. But at the same time there are many aspects of classical civilization in which even the most laborious use of these techniques and methods would not materially alter the conclusions that have been drawn from the various written sources; in general, a thorough grounding in ancient civilization and history is essential to the interpretation of the findings of archaeology, and there is an ever-increasing body of modern (not to mention ancient) literature in different languages which must be digested by those who pursue research in the classical field. It seems therefore natural that, while taking advantage of the skills developed in other fields of study, Classical Archaeology should continue to rank as a branch of the Classics. J. M. C.

ARCHAISM in Latin. The efforts of Ennius to hellenize Latin literature diverted the literary language of Rome away from the popular dialect, and literary Latin became in a sense a dead language. Writers wishing to invigorate their style would introduce from everyday speech words which came in time to appear archaic. We still find in Ennius the original quantity of terminations (e.g. *ponebāt*), nominatives in *-ōr* and *-ā* and elision of *-s* before consonants. The first declension genitive is always in *-āi* or *-ās*, the old genitive plural, e.g. *deum*, is common, and obsolete pronouns e.g. *mis*, *olli*, *sas*, and verbs like *morimur*, *fūmus*. Many of these forms were metrically convenient for later writers, but, apart from such considerations, the success and prestige of the *Annales* stamped such archaisms firmly upon the literary language. Forms thus reintroduced are frequently of popular origin, and it is difficult to disentangle the archaic and the popular elements. Modernizing scribes have removed much of the archaic from Cato, but he still shows archaisms such as *praeſamino* (imperative) and *prohibessis*. In Caesar and Cicero Latin prose reached its zenith of classical purity, but in Sallust we come to one who deliberately imitates the ancients. He is full of old words, e.g. *prosapia*, *obsequela*, *dextumus*, and recalls early comedy in his fondness for frequentatives. In inflexion he uses e.g. *fide* (dat.), *vis* (acc. pl.), *nave* (adv.), *senati*, *nequitur*. Lucretius too is given to archaism, chiefly to show his admiration for Ennius. He uses forms like *im*,

endo, alid, rabies (genit.), *vapōs* (nomin.), *scatit, confluxet, recesses*, infinitives in *-ier, escit, siet, fuat* and elision of preconsonantal *-s*. Archaisms are naturally not frequent in the impassioned poetry of Catullus, but some of the above are convenient and he shows *alis, alid, deposivit, componer, tetulit, recepso*. Horace's *Epistles* and *Satires* have many colloquialisms and a few archaisms, e.g. *erepsemus, surrexe*. Virgil, though a keen antiquarian, keeps archaism within bounds, retaining just enough to give to his work a grateful flavour of antiquity, e.g. *aulāi, olli, iusto, admittit*. The Latinity of Propertius is quite peculiar. He shows many archaisms both in vocabulary and inflexion, e.g. *tergit, lembunt, nullo, toto, uno* (= *nulla*, etc.). The not infrequent archaisms in Livy occur mostly in legal formulae and hardly affect the general tone of his work, for by his time the struggle between the graecizing and archaizing schools had ended in victory for the former. Persius (l. 76-8) mocks Neronian archaizers, and this recurrent phenomenon reappears in Hadrian's time, when it became fashionable to prefer Ennius to Virgil. In Fronto and Apuleius we see a deliberate return to the obsolete diction of Ennius and Cato; and even Gellius, whose language is much purer, is full of archaisms like *edulcare, recentari, aenescator*. In Christian writers, who wrote for the people at large, archaic words which had never died out of the spoken language again came into their own.

A. Ernout, *Recueil de textes latins archaïques* (1957), and texts of authors mentioned in the article. P. S. N.

ARCHEDEMUS of Tarsus, Stoic philosopher, probably a pupil of Diogenes (q.v. 3) of Babylon.

Testimonia in von Arnim, *STB* II 262-4.

ARCHEDICUS, New Comedy poet, who foully slandered Demochares, nephew of Demosthenes (Polyb. 12. 13), in order to gain favour with Antipater.

FCG IV 435 ff., GGF III 276 ff.

ARCHEGETES (Ἀρχηγέτης), i.e. 'leader', 'guide', a title of Apollo (q.v.) in several places, e.g. Naxos in Sicily (Thuc. 6. 3. 1), where he had an altar; of Heracles at Sparta (Xen. *Hell.* 6. 3. 6); of Asclepius near Tithorea (Paus. 10. 32. 12). It signified that the god either personally shared in, or had shown approval of, the foundation of the colony or other institution in question and would protect it. *Archegetis* (ἀρχηγέτις) is used in like manner of goddesses.

H. J. R.

ARCHELAUS (1), philosopher (fl. 5th c. B.C.), probably of Athenian birth, was a pupil of Anaxagoras (q.v.) and followed him in the main, but in some details adhered to the views of the Ionians and Empedocles. The tradition is consequently confused: he is credited both with accepting Anaxagoras' original 'mixture' of elements, from which the hot and the cold are first separated out, and also (improbably) with generating everything, as Anaximenes had, by condensation and rarefaction from air. He is said to have taught Socrates, but it is improbable that he anticipated Socrates by engaging in ethical speculation.

Testimonia and frs. in Diels, *Fragmenta*,¹¹ II. 44 ff.

W. D. R.

ARCHELAUS (2), king of Macedon c. 413-399 B.C. He organized the military strength of Macedonia by training infantry and building forts and roads (Thuc. 2. 100), and sought to foster hellenization by bringing Greek artists, especially Euripides, to his court, and by celebrating games at Dion. Moving his court from Aegae to Pella near the coast and adopting the Persian coin standard, he developed Macedonian trade. He maintained friendly relations with Athens, averted the

revolt of Elimiotis by a marriage alliance, and captured Pydna (410); c. 400 he put the philo-Macedonian party into power at Larissa, probably annexing Perrhaebia.

F. Geyer, *Historische Zeitschrift*, Beih. 19 (1930). N. G. L. H.

ARCHELAUS (3) (fl. 1st c. B.C.), Greek general of Mithridates VI, perhaps from Sinope or Amisus. After overrunning Bithynia and most of central Greece ('First Mithridatic War', 88-85 B.C.), he was twice defeated by Sulla, and commissioned by Mithridates to negotiate a peace. Falling under suspicion of treasonable dealings with Sulla, on the renewal of war (83) he deserted to Rome, and he assisted Lucullus early in the third war (74). His only defeats were by Rome's best general with an army better, and not much smaller, than his own.

Appian, *Mithridatica* 18 ff.; Plutarch, *Sulla* 11 ff. For army figures, see esp. Memnon (II. 22, *FCG* II B, no. 434). G. T. G.

ARCHELAUS (4), on the death of his father Herod (q.v. 1) the Great, became ethnarch of the southern part of his kingdom—Judaea, Samaria, and Idumaea. His rule was so unpopular that in A.D. 6 Augustus deposed him at his subjects' request and annexed his territory as the province of Judaea.

E. M. S.

ARCHERMUS, sculptor (6th c.) of Chios. According to Pliny, son of Micciades and grandson of Melas, father of Bupalus (q.v.) and Athenis. Inscribed plinth in Delos names Micciades and Archermus, probably as both dedicators and sculptors, and Melas, as a Chiot hero. It probably belonged to the Nike of Delos (Athens, N.M. 21). A signature of Archermus found on the Acropolis of Athens has been connected with the Nike (Acropolis Museum 693). Archermus is said to have been the first to represent Nike winged.

Ovetbeck 314 f., A. E. Raubitschek, *Dedications from the Athenian Acropolis* (U.S.A. 1949), 484 ff., G. M. A. Richter, *Archaeological Greek Art* (U.S.A. 1949), 116.

T. B. L. W.

ARCHERS (Greek and Hellenistic). In Homer the chieftains, except Teucer, Pandareus, and Paris, did not use the bow in war, but the rank and file did. In classical times the Persians were dreaded for their attacks with arrows, but Greek citizens were not organized into regular bodies of archers. Archery, which had gone out of normal use, was kept up only in Crete and the backward parts of Greece, such as Acarnania. Cretan archers, who were specially renowned, were frequently employed at all periods to supplement the ordinary citizen-soldier. Athens also in the fifth century imported Scythian mercenaries who acted both as police and as soldiers, and were reinforced by additional recruits from the poorer citizens up to a total of 1,600 (Thuc. 2. 13. 8). Mounted archers were few in the classical period. In the Hellenistic armies under Oriental influence the use of archers, whether mounted or on foot, was somewhat more frequent, but only the Parthians made them the main arm of their offensive.

H. W. P.

ARCHESTRATUS of Gela, a contemporary of Aristotle, styled ὁ τῶν ἀποφάγων 'Ἡσίοδος ἢ Θέογνις' (Ath. 6. 310 a). Wrote a *Ἡδυσμᾶθεια*, a sort of gastronomical Baedeker, the source of Ennius' *Hedyphageta*.

Brandt, *Corpusc. poes. ep. graec. ludibundae* I. 114-93. J. D. D.

ARCHIAS, AULUS LICINIUS, a Greek poet of Antioch, arrived in Rome before 100 B.C. He celebrated Marius' Cimbric victory, and the Mithridatic victories of Lucullus

(q.v. 2), who obtained for him the citizenship of Heraclea in Lucania (93 B.C.). Under the *Lex Plautia Papiria* he acquired Roman citizenship. This was contested by Gracius (62), and defended successfully by Cicero (*Pro Archia*). Cicero hoped for a laudatory poem from him, but (*Att.* 1. 16. 15) in vain, as he was engaged by the Metelli. He improvised in verse (*Quint. Inst.* 10. 7. 19). His epigram on the infant Roscius discovered asleep with a serpent coiled round him is mentioned by Cicero (*Dir.* 1. 79); it may be inferred he was alive in 45. Forty-one epigrams in the Greek Anthology are headed 'Archias', but identification is not possible (he might be the elder Archias, cf. *Anth. Pal.* 9. 91).

Susemihl, *Gesch. gr. Lat. Alex.* 1. 900

G. C. R.

ARCHIDAMUS, the name of several Eurypontid kings of Sparta. The most notable were—

ARCHIDAMUS II, who reigned from 469(?) B.C. (476, Diodorus) to 427–426; grandson of Leotychidas (q.v.). He distinguished himself on the occasion of the great earthquake in 465/4 (or 469/8; see SPARTA) and the subsequent Messenian War, after which we hear nothing of him for thirty years. Having failed to dissuade Sparta from going to war with Athens, he led the Peloponnesian forces to invade Attica in 431, 430, and 428, and to attack Plataea in 429. He left two sons, Agis II and Agesilaus II (qq.v.).

Thuc. bks. 1 and 2, *passim*; Diod. 11. 63–64.

ARCHIDAMUS III, who reigned from 361–360 to 338, son of Agesilaus II. He brought back the Spartan army after Leuctra (371), in which Diodorus wrongly states that he took part, and fought against the Arcadians (367, 364). He distinguished himself in the defence of Sparta against Epaminondas (362), and supported the Phocians in the Sacred War, but returned in disgust at the duplicity of their commander Phalaecus (346). Invited to help Tarentum against the Lucanians (c. 342), he landed with a force in Italy but soon fell in battle at Manduria (338). Isocrates' *Archidamus* purports to be the appeal of the king to a congress at Sparta (366–365) to refuse the Theban demand for the recognition of the independence of Messene. Pausanias mentions a statue of him at Olympia.

Xen. *Hell.* bks. 5–7, Theopompus *FGH* 115 F 232, Diod. bks. 15 and 16, Plut. *Agis* 10. 31–34, 40, *Taus.* 3. 10. 3, 5, 6, 4, 9, F. Meyer, *Forschungen* (1892) 91 n. 505 f.

A. M. W.

ARCHIGENES of Apamea in Syria, pupil of Agathinus (q.v.); well-known physician at Rome in the time of Trajan (A.D. 98–117). He belonged to the Eclectic school, but was chiefly influenced by the doctrines of the Pneumatic school. The leading principle of his therapeutics was to combat the eight *δυσκρασίαι* (bad temperaments). Galen's theory of the pulse was borrowed from that of Archigenes, while at other points Galen reacts against his teaching. Works. *Περὶ τῶν κατὰ γένος φαρμάκων*; *Περὶ τῶν πεποιηθῶτων*; *Περὶ κασσιόριον χρήσεως*; eleven bks. of letters of medical advice; and many others: all lost except for frs.

W. D. R.

ARCHILOCHUS, iambic and elegiac poet, of Paros, son of Telesicles (Acl. fr. 80) and a slave-woman. His date is disputed. The ancient authorities vary from the time of Romulus, 753–716 B.C. (*Cic. Tusc.* 1. 1. 3), to that of Gyges, who died c. 652 B.C. (*II. dt.* 1. 12). The eclipse of the sun mentioned in fr. 74 is usually taken to be that of 6 Apr., 648 B.C., which is more likely than that of 14 Mar., 711 B.C. Though Archilochus took part in the colonization of Thasos (Euseb. *Præp. Evang.* 6. 8), which is dated c. 708 B.C. (Clem. Al. *Strom.* 1. 333 b), it was probably in the later stages. Archilochus mentions

contemporary events in a war in Euboea (fr. 3). Little is known of his life except of warfare in Thasos, and his quarrels with Lycambes in his attempts to marry Neobule (*Hor. Epist.* 1. 19. 23 ff.). Fr. 18 proves that he went to the Thracian mainland. He was killed in battle (*Plut. De sera* 7). Considerable remains of his work survive: (1) elegiac epigrams, probably songs sung to the flute over the wine, often about himself, sometimes influenced by epic language, but remarkable for their strongly personal note, whether about war (frs. 3, 6, 7) or wine (fr. 4); (2) iambic trimeters, also about himself, though in fr. 22 another character is represented as speaking. In them he seems to have assailed Lycambes (fr. 24), and fr. 25 has been referred to Neobule; (3) trochaic tetrameters catalectic, including lines on the colonization of Thasos (frs. 52–4), the approach of war (fr. 56), his own misfortunes (frs. 58, 67), the eclipse of the sun (fr. 74), and his own skill in poetry (frs. 76–7); (4) epodes, or stanzas of mixed metres, of which there are different types: (a) frs. 81–7 iambic trimeter followed by hemiepes, (b) frs. 88–97 iambic trimeters followed by iambic dimeters, and (c) fr. 104 dactylic hexameters followed by iambic dimeters. In this class he composed *αἰνῶς*, fables of traditional character about the fox and the monkey, the fox and the eagle, the fox and the hedgehog, probably with personal references to himself and his circumstances; (5) tetrameters of mixed rhythms, (a) frs. 107–11, paroemiacs and ithyphallics, (b) frs. 112–17, dactylic tetrameters and ithyphallics; (6) Pindar (*Ol.* 9. 1) attributes to him the song of victory used by victors at Olympia. He was regarded as a great innovator (*Plut. Demos* 28) in metre, language, and subjects, and the fragments support this reputation. They are less violent and abusive than we might expect (cf. *Pind. Pyth.* 2. 99). His language is mostly colloquial Ionic, though in his elegiacs he admits epic forms. See also IAMBIC POETRY, GREEK.

C. M. B.

ARCHIMEDES, mathematician and inventor (c. 287–212 B.C.). Born at Syracuse, son of an astronomer Phidias, and killed at the sack of the city by the Romans under Marcellus, he was on intimate terms with its king Hieron II. He probably visited Egypt: he corresponded with the Alexandrian scholars Conon of Samos and Eratosthenes (qq.v.). Popular history (see especially *Plut. Marc.* 14–19) knew him as the inventor of marvellous machines used against the Romans at the siege of Syracuse and of other devices such as the screw for raising water (*κοχλίας*); for his boast 'give me a place to stand on and I will move the earth' (*Simpl. in Phys.* 1. 110. 5); for his determination of the proportions of gold and silver in a wreath made for Hieron (*εὐρηκα, εὕρηκα*, *Vitr.* 9. 9–12); for his construction of two 'sphaerae' (a planetarium and a star globe) which were taken to Rome (*Cic. Rep.* 1. 21–2); and for his tomb, which by his wish depicted a cylinder circumscribing a sphere, with the ratio $\frac{2}{3}$ which he discovered between them (*Plut. Marc.* 17, *Cic. Tusc.* 5. 64–6).

His extant works, with the most important features of each are:

In Greek: (1) *On the Sphere and Cylinder*, bks. 1 and 2: the formulas for the surface-area and volume of a sphere and any segment of it. (2) *Measurement of the Circle*: by inscribing and circumscribing regular polygons of ninety-six sides upper and lower limits of $3\frac{1}{7}$ and $3\frac{1}{8}$ are found to the value of π ; Archimedes incidentally gives a rational approximation to $\sqrt{3}$ and to the square roots of several large numbers. (3) *On Conoids and Spheroids*:

determination of the volumes of segments of various solids formed by the revolution of a conic about its axis.

(4) *On Spirals*: properties of tangents to the 'Archimedean' spiral, and determination of its area. (5) *The Equilibrium of Planes or Centres of Gravity of Planes*, bks. 1 and 2: the theory of the lever is propounded and the centres of gravity of various rectilinear plane figures (bk. 1) and of segments of conics (bk. 2) are established. (6) *Quadrature of the Parabola*: the area of a parabola is determined first by 'mechanical' (see below) and then by geometrical means. (7) *The Sand-reckoner*: description of a system for expressing enormously large numbers in words (in effect a notation in which 100,000,000 is used as a base as we use 10). Archimedes employs it to express the number of grains of sand which, on certain assumptions, the universe is calculated to contain. It is the only surviving work of Archimedes touching on astronomy (see below), and is our best source for the heliocentric system of Aristarchus (q.v. 1). (8) *Method of Mechanical Theorems*: description of the method invented by Archimedes for finding by 'mechanical' means the areas and volumes of various figures (e.g. the parabola and the sphere). (9) *On Floating Bodies*: deals with the positions which segments of a solid of revolution can assume when floating in a fluid; for this Archimedes had to invent a science of hydrostatics *ab ovo*. The Greek text of the latter two works was discovered only in 1906, though *On Floating Bodies* was already known in Latin translation.

In Arabic: (1) *Book of Lemmas* (available only in Latin translation): a miscellany of fifteen problems in plane geometry. (2) *On the Heptagon in a Circle* (available in German translation): geometrical construction of a regular heptagon. Both these works have undergone alteration in the Arabic tradition.

The most notable characteristic of Archimedes' mathematical work is its freedom from the trammels of traditional Greek mathematics. It is true that in the *proofs* of those theorems for which the integral calculus would now be used (e.g. those determining the surface-area and volume of a sphere, the area of a parabola, and the volume of conoids) he uses the traditional Greek method of bypassing infinitesimals (invented by Eudoxus, q.v., and deployed in Euclid, bk. 10; it has been misnamed 'method of exhaustion' in modern works). But the *Method* reveals that for the *discovery* of these theorems he used a technique which consists essentially of dividing two figures into infinitely thin strips, weighing these strips against each other, and then summing them to get the ratio of the two whole figures. This is analogous to the procedure of the first practitioners of the integral calculus in the seventeenth century, but unlike them Archimedes recognized its lack of logical rigour, and used it only as a heuristic method. The same freedom of thought appears in the arithmetical field in the *Sand-reckoner*, which shows an understanding of the nature of a numerical system immeasurably superior to anything else from antiquity. It is this breadth and freedom of vision, rather than the amazing ingenuity which Archimedes everywhere displays in the solution of particular problems, which justifies his title not only as the greatest mathematician of antiquity, but as one of the greatest ever. His work in hydrostatics (see no. (9) above) was epoch-making (though the effect in antiquity was negligible). The same is true of statics, though here he probably had predecessors (see PHYSICS).

All his work in astronomy is lost except for an ingenious method of finding the sun's apparent diameter described in the *Sand-reckoner*, and a passage giving the distances of the heavenly bodies preserved in Hippolytus (*Haer.* 41, 18 ff. Wendland). This (highly corrupt) passage suggests that he had no mathematical theory of astronomy. However, his construction of a planetarium suggests the reverse. On this he wrote a work (*περί σφαίροποιίας*,

Pappus 8. 3), now lost. Other lost works include treatises on semi-regular polyhedra (Pappus 5. 34), on elementary mechanics (*περί ζυγῶν* or *περί ἰσορροπιῶν*, Pappus 8. 24 and 8) and on reflection in mirrors (*κατοπτρικά*, Theon in *Syntax. I.* 347 f. Rome). An epigram preserves a 'cattle-problem' attributed to Archimedes; this poses a problem in indeterminate analysis with eight unknowns. There is no evidence that Archimedes found the solution, which is in immense numbers. Fragments of a work entitled *σποράχων*, dealing with a square divided into fourteen pieces for a game or puzzle, are preserved in Greek and Arabic.

Commentaries by Eutocius to *Sphere and Cylinder*, *Measurement of the Circle*, and *Equilibrium of Planes* survive.

EDITIONS. Critical text of Greek works (with Latin translation), fragments, some Arabic works in Latin translation, and of Eutocius' commentaries by J. L. Heiberg, 2nd ed. Leipzig (Teubner), 1910-15, 3 vols. German translation of texts concerning the *Heptagon in a Circle* in Carl Schöy, *Die Trigonometrischen Lehren des . . . al-Biruni*, (1927), 74 ff. For the history of the text see Heiberg iii *Prolegomena*. For earlier editions see Heath's translation, xxix ff. For the texts of Archimedes that were available to Islam and the Latin West see M. Clugett, *Archimedes in the Middle Ages*, 1 (U.S.A. 1964).

TRANSLATIONS. T. L. Heath, *The Works of Archimedes* (1897), and *The Method of Archimedes* (1912), repr. in one vol. (U.S.A. 1957); French, P. ver Eecke, *Les Œuvres complètes d'Archimède*, (1921) (includes commentaries of Eutocius).

COMMENT. Heath, *Hist. of Greek Maths.* ii 16 ff., F. J. Dijksterhuis, *Archimedes* (Copenhagen, 1956); best detailed account, in English, of his and works). On the *Heptagon* see Tropke, *Ossis* 1936, 636 ff. For the mechanical inventions see A. G. Drachmann, *The Mechanical Technology of Greek and Roman Antiquity* (Copenhagen, 1961).

G. J. T.

ARCHIPPUS, Athenian comic poet, won first prize (at the City Dionysia?) in 415 B.C. We have six titles, and four other plays were variously attributed to Archippus or Aristophanes. In his best-known play, *Fishes* (after 403, as the reference to the archon Euclides in fr. 27 shows), he exploited an idea similar to that of Aristophanes' *Birds*; fr. 27 concerns a treaty between Athens and the fishes. *Rhinos* no doubt satirized the man of that name who came into prominence in 404/403 (Arist. *Ath. Pol.* 38. 3 f.).

ECG 1. 205 ff., C.F.F. 1. 679 ff., F.A.C. 1. 794 ff.

ARCHITECTURE. I. GREEK. With the decline of Mycenaean civilization (see MYCENAE) architecture in Greece was reduced to very simple materials and forms. Remains from the early centuries of the first millennium are slight (cf. H. Drerup, *Arch. Anz.* 1964, 2, 180 ff.). Most interesting are a number of clay models of houses or temples, some of which may have some affinity with the Mycenaean megaron or hall (see TEMPLE). Monumental architecture developed in the seventh century, and reached great heights in the sixth.

The architects concentrated their efforts mainly on the temple. To the simple rectangular *cella* which formed its nucleus they added an outer colonnade, or *pteron*, which served for both protection and decoration; and it was in the treatment of this that the great Orders of architecture were evolved.

The independent stoa too (q.v. 2) was tentatively developed in the archaic period. Some building types remained rudimentary until a comparatively late date. The Greeks were not very successful in designing council-houses and other covered halls, relying for the support of the roof on the multiplication of columns. The unroofed theatre (q.v.) remained simple in form in the fifth century and attained perfection in the fourth. Buildings such as the stadium and gymnasium (qq.v.) were open and informal in design until the late fourth century. Throughout the same period houses too (q.v.) were mostly unpretentious in plan and construction. Next to its temples, the most

impressive architectural creation of the archaic and classical city was its fortification wall (see TOWNS).

The commonest Greek mode of construction was in unbaked brick on a stone foundation and socle (cf. HOUSES). This remained usual in the more modest buildings, throughout the classical period. Construction in solid stone, with some influence from Egypt, developed in important temples in the seventh and sixth centuries. Fine marbles were increasingly used where available—the western Greeks lacked ready supplies—with knife-edge joints and continuous highly polished surfaces. Fine masonry dispensed with bonding material, but used clamps and dowels. City-walls continued to be built in unbaked brick in their upper portions; but in the fifth and still more in the fourth century the best were of massive stone throughout, in styles which combine beauty with rugged strength. Fortification and terrace walls were sometimes built of carefully designed polygonal masonry; in the variety known as Lesbian the lines of the joints run in swinging curves (see R. Scranton, *Greek Walls*, U.S.A. 1941).

The great architectural Orders show traces of an origin in early wooden construction; but how the forms ultimately standardized for decorative purposes are related to the original constructional elements is not always clear. The Doric order may owe something to surviving Mycenaean capitals. The Ionic capital has oriental affinities; where the peculiar type known as Aeolic, found in Lesbos and the neighbouring mainland, stands in the line of development is uncertain. Both orders attained full stature in the sixth century, Ionic somewhat later than Doric; Doric in Greece proper, and the West, where there were interesting experiments and variations, Ionic in East Greece and the neighbouring islands, most notably in the vast temples of Hera at Samos and Artemis at Ephesus (q.v.). In the fifth century the Orders reached their highest point of refinement, both in general proportions and in perfection of detail, including their elegant mouldings (see L. Shore, *Profiles of Greek Mouldings*, 1936, and *Profiles of Western Greek Mouldings*, 1952). At Athens Doric and Ionic were most subtly related and combined, even in the same building (see PARTHENON, PROPYLAEA).

The main elements of a Doric structure are, in elevation, the foundation; the euthynteria (levelling course); the three steps, forming a platform the top of which is the stylobate; the massive column shafts, rising from the stylobate without a base (after some variation, in its classic fifth-century form, the Doric column was in height, with capital, about $5\frac{1}{2}$ times its lower diameter, and had 20 shallow flutes); the capital, consisting of the echinus, a simple convex moulding swelling out from the top of the shaft, surmounted by the abacus, a flat rectangular slab; the architrave, constructed of plain blocks spanning the columns; the frieze, consisting of triglyphs (so called because they were divided vertically by grooves into three bars), normally placed over each column and the centre of each intercolumniation, alternating with metopes, square slabs set back from the face of the triglyphs; and, finally, the cornice (*geison*) surmounted by the gutter (*uma*). At the ends of the temple the horizontal and sloping cornices together formed the pediment.

The Ionic Order was lighter in proportions and more ornate in detail, with more elaborate mouldings. The column had a base, of which there were several local variations, and 24 flutes, more deeply cut than in Doric and separated by plain strips. The Ionic capital too had a convex moulding, carved with 'egg-and-tongue', but this was surmounted and partially masked by the characteristic volute member. The architrave consisted of three bands each projecting a little above the one below. Above it, over an 'egg-and-tongue' moulding, and in place of the

Doric triglyph frieze, was a row of small projecting blocks, the dentils. Sometimes a continuous sculptured frieze was inserted at this point, instead of or occasionally in addition to the dentils.

In both orders the architects faced awkward problems at the corner of the building, in Doric with the triglyph frieze, in Ionic with the capital. The Corinthian capital, invented in the later part of the fifth century, according to tradition by the sculptor Callimachus (q.v. 2), had the advantage that all four faces were the same, with volutes rising vertically from luxuriant bands of acanthus leaves. Corinthian was not a complete new order but a variant on Ionic. First found in a single capital (or possibly three) in the temple of Apollo at Bassae (q.v.), it was used for some time tentatively and experimentally, mainly in interiors. In the Olympieum (q.v.) at Athens, in the second century B.C., it assumed its classic form and was used on a vast scale. Imported to Rome (Sulla actually transported some columns from the Olympieum) it became the great imperial order.

In the finest temples, and sometimes in other buildings, certain subtle 'refinements' were introduced. The horizontal lines, from the foundations upwards, were given a slight but accurately planned upward curve. The columns had entasis, i.e. besides tapering upwards they had a slight outward curve or bulge, pronounced in some archaic temples, more delicate in the time of the Parthenon. They tilted slightly inwards, the corner columns diagonally. Besides their subtle optical and aesthetic effect, some of these features had a practical purpose, giving the building greater stability and ensuring drainage for the stylobate.

Architects and sculptors worked in close collaboration; some artists were both, e.g. Scopas (q.v.). Most sculpture was meant to be seen in an architectural setting. The interior of the temple was designed to show off the great cult statue. Sculpture was applied to the structure of the building in the pediments and metopes of Doric temples; the continuous sculptured frieze, characteristic of Ionic, was incorporated in some Doric buildings too (Bassae, the Parthenon, temple of Hephaestus at Athens). Statues called acroteria stood on the summit and corners of the pediments. The essential structural members, such as the columns and architrave, were very rarely sculptured (see, however, CARYATIDES). Bright paint was freely applied to architectural details, as well as to sculpture. A few temples and stoas had paintings on their walls, in the form of frescoes or on wooden panels (see PAINTING, PROPYLAEA, STOA). Thus not only sculpture but painting served the master art.

See TERRACOTTAS for decoration in this material.

For architects see CALLICRATES (1), HERMOGENES (1), HIPPODAMUS, ICTINUS, PHILON (1), PYTHIUS, SCOPAS.

II. ROMAN architecture represents a fusion of traditional Greek elements, notably the trabeated orders, with new structural principles based on the development of the arch and of a new building material, concrete. The element inherited from Greece catches the attention today, as it did that of the architects of the Renaissance, but it was in fact increasingly restricted to a few traditional building forms, such as the temple and the basilica (qq.v.), and to such secondary features as colonnades and porticoes, or else relegated to a superficial, decorative role. Already in the late Republic (e.g. in the façade of the Tabularium (q.v.); cf. the Colosseum) we find the three Orders (to which the Romans added a fourth, the 'Composite') used simply as a decorous adjunct to an arcuated façade; and the development of applied marble veneer, wall-mosaic, and moulded stucco facilitated a steady divergence between the traditional classical elements of the visible decorative surfaces and the functional realities

of the underlying structures. The process was not carried to its logical conclusion before Byzantine times, but it was already a significant factor in the first and second centuries A.D.

The decisive developments in Roman concrete architecture took place between c. A.D. 50 and 130 and are embodied in such buildings as Nero's Golden House (see *DOMUS AUREA*), Domitian's palace on the Palatine, Hadrian's Villa, and the Pantheon (q.v.), as well as in the apartment-houses and warehouses of Ostia and, later, the great 'imperial' baths (q.v.) or the Basilica of Maxentius (see *BASILICA*). The revolutionary structural properties of the new material were used to create, for the first time in history, an architecture in which the dominant factor was not the solid masonry but the space which it enclosed. Instead of the rationality and structural lucidity of Greek architecture, this was an architecture of illusion and suggestion, of subtly curvilinear forms and above all of inner light and colour and of soaring, vaulted space. The exterior architecture by contrast moved steadily towards a functional severity comparable to that of the aqueducts, bridges, and other monuments of Roman engineering.

The great contribution of Greek architecture to posterity was its perfecting of the Orders, that of the Romans the first realization of the architectural significance of interior space. Both proved to be achievements of perennial significance, the former as an ever-fresh source of rediscovered inspiration, the latter as one of the fundamental concepts of all subsequent architectural thinking.

ARCHIVES. I. GREEK (*ἀρχεῖον*, originally = 'magistrate's office'), acquired a specialized sense in the Hellenistic period). Temple officials kept records of dedications and property from the archaic period onwards. Secular public documentation, from beginnings in the sixth century B.C., gathered momentum in the fifth and reached its maximum efficiency in the Hellenistic age. Athens offers the most easily surveyed evidence. In the early period each magistracy kept its own records, on *pinakes* (writing tablets—sometimes *leukomata* or whitened boards) or papyrus. These were co-ordinated into a record-office, housed in the Metroon, at the end of the fifth century. Material thereafter readily available for research and quotation went back to the time of Solon and included historical documents such as the Themistocles-decree (*SEG* xvm. 153). These were *ἀπογράφαι*, recopied from time to time; many of the *ἀντίγραφα* of selected items usually of sacred or international importance, on stone or bronze, have survived as the inscriptions which, though the principal source for modern study, should not be mistaken for the archives themselves. It became possible for citizens to deposit documents such as wills in the *ἀρχεῖον*, and in some cases this was a legal requirement. The registration of land-property and the preservation of records were particularly elaborate in Ptolemaic and Roman Egypt.

G. Rusolt-H. Swoboda, *Griechische Staatskunde*² (1926), i. 488 ff., ii. 1076 ff.; Huguett, *Hist. Athen. Const.* 12 ff., does not believe that early documents survived to the fourth century; G. Klaffenbuch, *Bemerkungen zum griechischen Urkundenwesen* (Sb. Akad. Berlin 1906-6), with refs. to earlier literature.

A. G. W.

II. ROMAN (*tabularia*, from *tabulae* as 'records'). From the early Republic, as tradition shows, Rome had public

records, variously kept, though they were not systematically organized until the late fourth century B.C. We know, for instance, of lists of magistrates (see *IUSTI*), copies of legislative acts and treaties, census details, and priestly records that also referred to public affairs (see *TABULA PONTIFICUM* and *ANNALS*), later edited for historical use. Some documents, e.g. copies of treaties in bronze, were stored on the Capitol (see *EPIGRAPHY*); other records were held in the magistrates' offices and the priestly colleges. The chief archives were the *acrarium* in the temple of Saturn, after 78 B.C. moving to the Tabularium, which still stands on the Capitol slope facing the Forum. It contained originally financial documents and later almost all official records, including laws, *plebiscita*, *senatus consulta*, as well as imperial 'constitutions' and decrees; the urban quaestors were in charge. The temple of Ceres also held first *senatus consulta* and then copies of *plebiscita*. Under the Empire the *tabularum Caesaris* preserved all documents relating to landed property, and we may add the archives of the imperial court departments along with those of the *municipia* and provinces; Marcus Aurelius established a register of Roman births in the provinces.

Mommisen, *Rom. Staatsr.* ii, 545 ff.

A. H. McD.

ARCHONTES, the general term for all holders of office in a State. But the word was frequently used of a particular office, originally at least the highest office of the State. *Archontes* are found in most States of central Greece, including Athens, and in States dependent on or influenced by Athens.

In Athens there were at first three archons, the *basileus*, the polemarch, and the archon *eponymos*, this being probably the order in which they were first instituted. The royal house of Medontidae (see *COENUS*) continued to hold a hereditary life-office (probably as *basileus*, not as *archontes eponymoi*, as Aristotle says) after the institution of polemarch and archon, the two latter being presumably elective. Later (c. 750 B.C.?) the three archons were made ten-yearly, and in 683 yearly magistrates; all rights of the Medontidae had disappeared. Shortly after this the number of archons was increased to nine by the addition of six *thesmothetai* (q.v.). They were elected by the people and were the chief magistrates of the State. The archon *eponymos* was the most important because he had the widest range of duties. Political struggles in the seventh and sixth centuries centred upon the elections to this office till the tyranny of the Pisistratids, who arranged that one of themselves or their adherents should hold it. In 487 the lot (first from an elected body of perhaps 500, later from a body of 100 chosen by sortition) was introduced as the mode of their appointment, and therewith their political importance ended. No influential politician held the office afterwards; before 487 Solon, Hippias, Themistocles, and Aristides had been archons.

The nine archons and the secretary to the *thesmothetai* were each chosen from one of the ten *phylai*. Solon's arrangement was preserved, by which the archonship was open only to men of the highest or two highest census-classes (see *SOLON*); it was opened to the *zeugitai* in 457, never formally to the *thetes*, though questions were not asked if one of the latter was chosen.

All ex-archons after their *euthyna* (q.v.) entered the Areopagus, and remained life-members of that council. This added considerable importance to their office in early times; when the introduction of the lot as the method of election affected a majority of the Areopagites, the Areopagus too lost its political importance.

Like most public offices in Greece, the archonship involved wide judicial as well as executive duties. In early times the nine archons tried cases entirely themselves (except those involving life or citizen rights, where there

was trial by the Areopagus or appeal to the citizen-body). The relationship between the archons and the Heliastai (q.v.) in the sixth century is obscure. In the developed democracy the archons (and other magistrates) were only required to examine a case to decide if it could be brought at all, and if so in what court, to collect the evidence, and to preside at the trial (see DIKASTERION).

The *archon eponymos* was so called because he gave his name to the year: the list of eponymous archons was kept continuously from 683 B.C., but the term *eponymos* was not officially used before Roman imperial times. He was chief magistrate until 487 and always remained the nominal head of the State. His archonship was a civil office, and was concerned especially with the protection of property; on entry into office he took an oath that at the end of his year everyone should hold what he held at the beginning: that is, he guaranteed the citizens against disorder and arbitrary executive action. Since property involved inheritance, the archon had to protect the family (and in particular orphans and heiresses), and in his judicial capacity had charge of all cases involving family and inheritance rights. He regulated certain religious festivals, particularly the City Dionysia, and had the charge of lawsuits arising from them.

7. The *Basileus* had certain religious duties and presided over the Areopagus. He had charge of the Lenaea and the Mysteries (qq.v.), and in general of all the religious duties of the former kings. He introduced lawsuits arising from these, and also those between claimants for a priesthood. His jurisdiction included all charges of impiety, and all homicide cases (because a man guilty of shedding blood must be kept away from sacred places till purified). See also POLEMARCHOS, THESMOTHEAI.

Aristotle, *Ath. Pol.* chs. 3, 8, 13, 55-9. T. J. Cadoux, *JHS* 1948, 70 f.; Hignett, *Hist. Athen. Const.* A. W. G.

ARCHYTAS of Tarentum flourished in the first half of the fourth century B.C. He was visited by Plato, and had a great reputation in antiquity. He is said to have been the founder of mechanics; he distinguished harmonic progressions from arithmetical and geometrical; he solved the problem of doubling the cube, by means of two half-cylinders. He worked out the ratios which underlie the relations of successive notes in the enharmonic, the chromatic, and the diatonic scales. In philosophy he belonged to the Pythagorean school. Frs. of his mathematical works remain, but the other frs. cited as from him are late fabrications.

Testimonia and fragments in Diels, *Vorsokr.* I. 421-30. W. D. R.

ARCISIUS (*Ἀρκείσιος*), in mythology, father of Laertes and grandfather of Odysseus (q.v.); his own parentage is variously given. In one story, his mother was a she-bear (*Ἀρκείσιος*—*ἄρκτος*), Aristotle in *Etym. Magn.* 144. 25.

ARCTINUS of Miletus (? 8th c. B.C.), epic poet; author of the *Aethiops* and *Iliu Persis*, and probably of the *Titanomachia*. See EPIC CYCLE.

EGF, 3, 6 ff., 33 ff., 49 ff.

ARDEA, a city of the Rutuli, a Latin people. Although three miles distant from the sea it served as a port for Latium. Archaeological remains (ditch and wall defences, acropolis, and temples that long served as federal sanctuaries for the Latin League) confirm the tradition that Ardea was once an important city, worthy of signing a separate treaty with Rome (444 B.C.). In 442 a Latin colony strengthened Ardea against the Volsci and in 390 Camillus, it was said, set out from here to repel the Gauls. Apparently, too, Ardea remained loyal in the Latin War (Livy 8. 12). A Samnite raid c. 315 B.C. and subsequently malaria caused Ardea to decline. However, the erection of

numerous villas and possibly the dispatch of a Hadrianic colony prevented the village from entirely disappearing. In republican times Ardea served as a State prison; later its fields supported the imperial elephants.

Alföldi, *Early Rome and the Latins* (U.S.A. 1965), A. Andren, *Opuscula Romana* 1 (1954), 1 ff. (acropolis excavations), II (1961), 1 ff. E. T. S.

AREITHOUS (*Ἀρηϊθούς*), a mythological character, surnamed *Κορυνήτης*, i.e. Club-man, because he fought with a club of iron; his armour had been given him by Ares. Lycurgus the Arcadian caught him in a narrow road where he had no room to swing his club, ran him through with a spear, and took his armour (*Il.* 7. 138 ff.). H. J. R.

ARELATE, a town in Gallia Narbonensis, modern *Arles-sur-Rhône*. The *periplus* of Avienus (679) mentions a Greek town Theline which preceded 'Arelatus', and the 'Rhodanusia' of Ps.-Scymnus (206) was presumably in the vicinity; but archaeological vestiges are slight (cf. Jacobsthal-Neuffer, *Préhistoire* 1933, 51). Arelate came into importance with the construction of the 'Fossae Marianaë', and was used as a naval base by Caesar against Massilia (49 B.C.). A colony of veterans of the sixth legion was founded here in 46 ('colonia Iulia Paterna Arelate sextanorum'), but the town was much enlarged, as appears, by Augustus, to whom the earliest surviving town-wall, and probably the still visible east gate, are due. The *territorium* was created mainly at the expense of Massilia. Early buildings still partially surviving are the forum, amphitheatre (136 m. x 107 m. externally), and the theatre. The principal importance of Arelate was due to its position as a port of trans-shipment for sea-going vessels which were under the control of the five corporations of *navicularii Arelatenses*. In the Later Empire it acquired importance as the occasional residence of emperors, in the fourth century a mint was set up, and in the fifth it became the seat of the praetorian prefecture. Extensive baths (*La Trouille*) date from this period, and though the area within the walls was reduced, Ausonius (19 73-80) and the Emperor Honorius (Hacnel, *Corpus legum*, 238) attest its prosperity. After various vicissitudes it was annexed by the Visigoths in A.D. 476.

L. A. Constans, *Arles antique* (1921); Grenier, *Manuel* I. 289 ff.; II. 403 ff., III. 157 ff. C. E. S.

ARELLIUS FUSCUS, Augustan rhetor, perhaps a Greek. His style was brilliant but affected and undisciplined (Sen. *Contron.* 2 *praef.* 1). Ovid was one of his many pupils (ibid. 2. 2. 8-9). He had a son of the same name.

Schanz-Hosius, § 336, 6.

AREOPAGUS, the 'Hill of Ares' (*Ἄρειος πάγος*) at Athens, north-west of the Acropolis (see ATHENS (TOPOGRAPHY)), and the ancient Council associated with it. This Council was probably first called simply *ἡ βουλὴ*; later, after the creation of a second Council (see BOULE), it was known as *ἡ ἐξ Ἀρείου πάγου βουλὴ* or the like and its members as *Ἀρειοπαγίται*.

2. During the monarchy and much of the aristocratic period the Council consisted exclusively of Eupatridai (q.v.), how chosen in early times we can only guess. Under an arrangement introduced at latest by Solon it came to comprise all the ex-archons, who entered it on the expiry of their term of office—and, at least in the fourth century, after passing the Council's own *dokimasia* (q.v.)—and remained in it normally till death. The annual entry of nine new members in middle life maintained a strength of 200-300. With this system of recruitment, the

Areopagus gradually ceased to be exclusively aristocratic; for a time it represented the wealthy element and eventually came to include citizens of all classes (see ARCHONTES, THETES); some more specifically political effects of the system are suggested below (under 5). In late Roman times the Areopagus consisted of thirty-one members chosen by the proconsul.

3. Under the monarchy, the king summoned and presided over the Council; of the annual magistrates, although all nine archons apparently attended, only the Basileus is indicated as president. The original meeting-place may have been the king's palace on the Acropolis; later, and for a time exclusively (as the name indicates), it was the Hill of Ares, and murder-trials before this Council always took place there; meetings were also (at least in the fourth century) held in the Stoa Basileios. Some meetings were held in private, but the murder-trials were public and something is known of their procedure.

4. The original function of the Areopagus must have been to advise the king in his capacity as leader, priest, and judge. As the monarchy declined, the influence of the Council increased; the tradition that in the seventh century it was virtually in charge of the government (cf. Arist. *Ath. Pol.* 3. 6) is probably sound; it would be natural for the yearly magistrates to defer to the collective wisdom of their ex-colleagues, serving for life. The general scope of the Council's activity probably remained unchanged till the reform of Ephialtes, though the codification of the law rendered its jurisdiction less arbitrary, and Solon set down its constitutional powers in writing and so perhaps to some extent limited them. That before Solon it actually chose the archons (Arist. *Ath. Pol.* 8. 1 f.) is doubtful (cf. Arist. *Pol.* 1273^b35-1274^a2); nor would the creation of a second Council deprive it of probouleutic functions, since these were hardly necessary in the pre-Solonian State (see BOULE, ΕΚΚΛΗΣΙΑ); on the other hand, its function of giving general advice must have continued as long as the archons remained the principal magistrates. However, the functions for which we have specific evidence are wholly judicial. The Council judged in cases of deliberate homicide, wounding, and arson, and in a variety of other matters, mainly of a religious character; it also exercised a 'guardianship of the laws' (νομοφυλακία), dealing, by means of the procedure called *eisangelia* (q.v.), with attempts to subvert the constitution and with the improper use of their powers by magistrates. The penalties it could inflict included fines, exile with loss of property, and death, and its judgements were final.

5. Under the tyrants, the Areopagus came to be composed entirely of their partisans (cf. Thuc. 6. 54-6), and must therefore have been discredited by their fall, though it may have re-aligned itself behind Cleisthenes (q.v. 1; see also BOULE). From 507/6 to 488/7 it was recruited from archons freely elected by the people for merit, including such persons as Themistocles and Aristides, and thus and the crises of 490 and 480/79 may explain the revival of influence which, according to Aristotle (*Pol.* 1304^a17-24, *Ath. Pol.* 23. 1, 25. 1) it enjoyed for some years after 480. But with the rapid advance of the naval class and of democratic institutions the great powers of the Areopagus seemed out of place, and the gradual disappearance of its elected members after 487/6 weakened its resistance. In 462/1 Ephialtes (q.v. 4) deprived the Areopagus of its 'guardianship of the laws' and apparently circumscribed its jurisdiction in other respects. It remained the court for deliberate homicide, wounding, and arson; and for some other matters, on which, however, its judgements seem to have been no longer always final. It lost all political influence and became a minor, if venerated, part of the judicial system. A proposal to restore the νομοφυλακία in 403/2 (And. 1. 84) does not seem to have been put into effect. In the later fourth century we

find the Areopagus, both on its own initiative and on the instructions of the *ekklesia*, holding criminal investigations (ζητήσεις)—particularly into allegations of treasonable conduct, e.g. desertion of the city after Chaeronea (q.v.) in 338 and acceptance of bribes from Harpalus (q.v.) in 323. Such investigations ended in reports (ἀποφάσεις) which could lead to trials in the dicasteries. In 337/6 a law against tyranny provided the penalty of outlawry for Areopagites who recognized an overthrow of the democracy: whether there was any real likelihood of such behaviour is not clear.

In the more oligarchical constitution favoured by the Romans the judicial functions of the Areopagus seem to have been extended, and it was associated with the *boule* in the administration. It was still in existence in the fourth century A.D.

G. Gilbert, *Const. Antiquities of Sparta and Athens* (1895), see Table of Contents, Busolt-Swoboda, *Griech. Staatskunde* (i. 1920; ii. 1926), see Index, R. J. Bonner and G. Smith, *Adm. of Justice from Homer to Aristotle* (i. 1930, ii. 1938), see Indexes, H. T. Wade-Gery, *GO* 1931, 1 ff. (*Essays in Greek History* (1958), 86 ff.) Hignett, *Hist. Athen. Const.* see Index, B. D. Meritt, *Hesp.* 1952, 355 f.; R. Sealey, *AJP* 1958, 71 ff.

ARES (Ἄρης, Aeolic Ἄρεος; etymology unknown, but good Greek formation; it is uncertain whether the name appears on Linear B tablets), the Greek war-god, not in the sense of a warlike deity who leads his people into battle, but rather a deification of warlike spirit F. Schwenn, *ARW* 1923-4, 224 ff., finds difficulty in supposing this possible for early times and suggests that Ares was originally a deity of vegetation, who became a war-god secondarily by some unknown process. There is, however, no reason to assume that Ares was worshipped by the earliest Greeks. He is unpopular, is an important god only in Thebes and perhaps Athens (contrast Mars, q.v.), belongs especially to the northern and western communities (Aetolia, Thessaly, etc.), and has been considered by some to be of Thracian origin (Farnell, op. cit. *infra*, 399 ff.). It is conceivable that he was 'projected' from some widespread rite of war-magic, earlier than civilization in any Greek people. He never develops into a god with any moral functions, like Zeus or Apollo, and in mythology he appears either as instigator to violence or as a tempestuous lover, a divine *miles gloriosus*. He frequently has Aphrodite (q.v. § 4) as his partner (e.g. at Thebes they are the parents of Harmonia, see CADMUS); he is associated with her, Athena, and Enyo in his temple at Athens (Paus. 1. 8. 4). It must be noted that Aphrodite (q.v.), like many mother-goddesses, has warlike qualities. Hence, as she is also thought of as wife of Hephaestus, the story that Ares is her paramour (*Od.* 8. 266 ff. and often later). In his ritual perhaps the most remarkable feature is that at Tegea he was worshipped by women under the title of Γυναικολόβας (Paus. 8. 48. 4); it should be remembered that women are often active in war-magic. Dogs were sacrificed to him (under his common title of Enyalios) at Sparta (Plut. *Quaest. Rom.* 290 d; Paus. 3. 14. 9), a procedure associated with purifications and deities of an uncanny sort, such as Hecate. The name Enyalios as that of a god occurs on a tablet at Cnossos, and this deity may have been identified later with Ares.

In mythology, although son of Zeus and Hera, he is commonly the helper of foreign peoples, such as the Trojans, or unusually warlike ones, as the Amazons (q.v.). He is father, by various mothers, of numerous children, mostly sons and commonly of warlike, often violent and outrageous character, as Ascalaphus (*Il.* 13. 518; 15. 113 for Ares' fury at his death); Diomedes the Thracian (see HERACLES); Cynus the brigand (see *ibid.*); Meleager in some versions of the story (*Hyg. Fab.* 14. 16); Phlegyas, eponym of a whole people of impious raiders

and ferocious fighters (Paus. 9. 36. 2). Such genealogies seem to waver between the complimentary (a brave warrior is a 'shoot from Ares' stock', *ἄλκός Ἀρηος*, in Homer) and the uncomplimentary, the god's own character being ferocious and unlovely. That he is the father of Eros (Simonides, fr. 24 Diehl) is a by-product of the original lack of any association between Eros and Aphrodite. Of his daughters, Harmonia has already been mentioned; by Agraules daughter of Cecrops (see ATTIC CULTS AND MYTHS) he became the father of Alcippe, who was violated by Halirrhothius son of Poseidon. Killing him, he was tried by the Areopagus and acquitted (Apollod. 3. 180) or sent into a year's servitude (Panyassis ap. Clem. Alex. *Protr.* 26, 22 Stahlin). As early as Hesiod (*Th.* 934) Aphrodite bears him his Homeric attendants Deimos and Phobos (Fear and Rout). Cicero (*Nat. D.* 3. 60) adds Anteros to the family from some late author.

In Rome he was identified with Mars (q.v.).

In early art Ares is seldom shown by himself but often in assemblies of gods: in the Gigantomachy; the birth of Athena; the wedding of Peleus and Thetis; the return of Hephaestus to Olympus; the introduction of Heracles; and on the Parthenon frieze. There is also an archaic tradition showing Ares and Aphrodite as a wedded couple in a chariot (see C. Karusos, *JDAI* 1937, 172 ff.). Early a bearded warrior, he is later shown naked and young (already on the Parthenon); and often as Aphrodite's lover.

Much material collected in Roscher's *Lexikon*, s.v. 'Ares' (Stoll-Furtwangler). Brief account in Rose, *Handbook of Gk Myth.*, 157 f. For his cult, see especially Nilsson, *GGR* 1st 517 ff.

H. J. R.; C. M. R.

ARETAEUS of Cappadocia, medical author, a contemporary of Galen (c. 150–200), wrote in Ionic in imitation of Hippocrates. Works (extant but incomplete): *Περὶ αἰτίων καὶ σημείων ὀξέων καὶ χρόνιων παθῶν*; *Περὶ θεραπειᾶς ὀξέων καὶ χρόνιων παθῶν*, (lost) *Περὶ πυρετῶν*; *Περὶ γυναικείων*; *Περὶ φυλακτικῶν*; *Χειρουργία*. His main merit is that he builds on the solid foundations of Archigenes (q.v.).

Ed. K. Hude, *CMG* ii (1921); F. Kudlien, *Unters. zu A. von Kapp* (1964). W. D. R.

ARETAS, the name of several kings of the Nabataeans (q.v.).

ARETAS II (c. 110–96 B.C.) in 96 tried to help Gaza (a gateway to the Mediterranean) against Alexander Jannaeus, who was defeated by his successor, Obodas I (c. 96–87) probably c. 94.

ARETAS III (c. 87–62) defeated Jannaeus and occupied Damascus, but yielded it to Tigranes before 70. He supported Hyrcanus (see JFWS, A. 2) and in 66 besieged Jerusalem, until he was compelled to leave by Scaurus (q.v. 2), who in 62 advanced to Petra but in return for 300 talents recognized Aretas as king of the Nabataeans.

ARETAS IV (9 B.C.–A.D. 39). On the death of Obodas III (30–9 B.C.) a certain Aeneas seized the throne and took the royal name. He was recognized by Augustus only after some delay caused by the intrigues of Syllaeus, the vizier of Obodas III, who had given bad advice to Aelius Gallus (q.v. 4) about the Roman attack on Arabia Felix: Syllaeus' later quarrels with Herod had provoked the latter to invade Nabataea (12 B.C.) and thus incur Augustus' displeasure. After recognizing Aretas, Augustus had Syllaeus executed for further intrigues. Aretas sent help to Varus (q.v. 2) against Judaea after Herod's death (4 B.C.). His daughter married Herod (q.v. 2) Antipas, who later divorced her: in due season Aretas, without consulting Rome, invaded Perea and defeated Antipas. Aretas was saved from a Roman punitive attack because L. Vitellius (q.v. 2) withdrew when he heard of the death of Tiberius. Gaius granted Aretas control of

Damascus, which at the time of St. Paul's escape from the city (c. A.D. 40) was under an ethnarch of Aretas (2. Cor. xi. 32). H. H. S.

AREUS (c. 312–265 B.C.), son of Acrotatus, succeeded his grandfather, Cleomenes II, on the Spartan throne (309–308). In 280 he invaded Aetolia, after organizing a Peloponnesian coalition against Macedon; on his repulse this collapsed. In 272 he returned hurriedly from helping Gortyn in Crete, to drive Pyrrhus back from Sparta, and assisted in his destruction at Argos. During the Chremonidean War he failed to force Craterus' Isthmus lines to relieve Athens; in 265 he fell outside Corinth. He was the first Spartan king to hold an elaborate court and to issue silver coins.

Beloch, *Gruch. Gesch.* iv.

F. W. W.

ARGAS, citharode and poet of the first half of the fourth century B.C., renowned for his badness (Plut. *Dem.* 4, schol. Aeschm. 2. 99). Hence his name was used as a term of abuse of Demosthenes by Aeschines (2. 99).

ARGEI. On 16 and 17 March a procession went *ad Argeos* (Ov. *Fasti* 3. 791–2), i.e. to the twenty-seven *Argorum sacra* (Varro, *Ling.* 5. 45) situated at various points in the four Servian regions of Rome; Varro locates twelve (see Platner-Ashby, *Topog. Dict.* 51 ff.). The festival has been thought by some to date from a pre-urban period of independent village communities, but more probably it reflects the stage (6th c.) when Rome was united in four regions which did not yet include the Capitoline and Aventine hills (cf. A. Momigliano, *JRS* 1963, 99 f.). On 14 May (15, Dion. Hal. *Ant. Rom.* 1. 38. 3), the Vestals, pontiffs, and others threw from the Pons Sublicius into the Tiber twenty-seven effigies of men in old-fashioned clothing (Ov. op. cit. 5. 621 ff.; Dion. Hal. loc. cit.; Varro, op. cit. 7. 44 and Ennius quoted there; see further Frazer on Ovid, loc. cit.). The ancients commonly explained this as a surrogate for human sacrifice (Ov. *ibid.*, and other passages). Of moderns, Wissowa holds a similar view (art. 'Argi' in *PIW*, = *Gesammelte Abhandlungen*, 211 ff.), and dates it from the third century B.C., the age of the document quoted in Varro, *Ling.* 5. 47 ff. This is generally rejected. That it is a vegetation-rite, with the well-known drowning or bathing of a sort of Jack-in-the-Green, is unlikely, if only from the number of the figures (why more than one?) (L. Deubner, *ARW* 1925, 299 f.). Frazer suggests (*Fasti of Ovid*, iv. 91 and references there), that the puppets are 'offerings to the river-god to pacify him and induce him to spare the real persons using the bridge or otherwise approaching the stream. Latte (*RR* 412 ff.) proposes to interpret it as a more general ceremony of purification, linking it with the use of *oscilla* in the Compitalia (see LARES).

H. J. R., H. W. P.

ARGENTARIUS (1), MARCUS (fl. early 1st c. A.D.), is the gayest of the Greek epigrammatists whose work, collected in the *Garland* of Philippus (q.v. 7), has partly survived in the Greek Anthology. He carries on the tradition of Leonidas (q.v. 2) of Tarentum, writing about poverty and drink (*Anth. Pal.* 9. 229); as a humorist and punster he precedes Lucilius and Martial. He may be the eccentric Latin-speaking Greek rhetor mentioned by the elder Seneca (*Contr.* 9. 3 (26). 12–13).

R. del Re, *Mina* 1955, 184 ff.; S. G. P. Small (text, commentary, analysis), *YCIS* 1951, 65 ff. G. H.

ARGENTARIUS (2), Augustan rhetor, a Greek; a slavish follower of Cestius (Sen. *Contr.* 9. 3. 12–13).

He may be identical with the epigrammatist of the Greek Anthology.

ARGENTORATE, modern *Strasbourg*. The Celtic name (silver fort) hints at a pre-Roman settlement, of which traces have been found. Perhaps first occupied as one of Drusus' *castella* by 'Ala Petriana Treverorum'. It was garrisoned c. A.D. 12-43 by Legio II Augusta, then by legionary detachments including one of XXI Rapax, who constructed the first basalt wall. C. A.D. 80 Legio VIII was transferred here. Its fortress (606 × 300 m.) was defended by an earth bank with 90 cm. thick revetment wall of small blocks and brick borders. From the third century Argentorate was exposed to barbarian attacks (an incident of which was Julian's victory, A.D. 357), and for increased protection the wall was fronted by another, 2 m. 50 cm. thick, of re-used masonry with bastions c. 25 m. apart. In this period the *canabae* (q.v.), previously important, were given up and the civil population crowded into the fortress.

R. Forrer, *Strasbourg-Argentorate* (1927); J. J. Hatt, *Hist.* ii, 1953/4, 234 ff. C. E. S.

ARGONAUTS (*Ἀργοναῦται*), one of the oldest Greek sagas, based originally on a perhaps real exploit of the semi-historical Minyae, known as early as Homer (*Od.* 12. 70). It is attached by its origins to Thessaly but may have been developed into its earliest extant version through the influence of Milesian exploration in the Black Sea. The chief surviving accounts are Pindar, *Pyth.* 4; Apollonius Rhodius, *Argonautica* (both of these, especially the latter, have very helpful scholia); Valerius Flaccus, *Argonautica* and the 'Orphic' *Argonautica*; Apollodorus, 1. 107 ff.; Hyginus, *Fab.* 12 ff. The later authors all draw more or less on Apollonius, but not exclusively.

2. Aeson son of Cretheus (see **AEOLUS** 2) was deprived of the kingship of Iolcus in Thessaly by his half-brother Pelias. His young son Jason (q.v.), on reaching manhood, came to reclaim the throne. Pelias was afraid to refuse openly, so induced him (how, accounts vary) first to go and fetch the Golden Fleece (see **AFHAMAS**) from Colchis. With the help of Hera, who favoured him and had been insulted by Pelias, he got together a band of the noblest heroes in Greece (lists differ widely, owing no doubt to ambitious families, many not Minyan, claiming an ancestor in the *Argo*; but all include Argos (q.v. 1b), Tiphys the helmsman, Lynceus, whose sight was preternaturally keen, and a few more, among them Heracles and Orpheus, both manifest intruders; cf. also Rose, *Handb. of Gk. Myth.*, 295). Argos built him a ship, the *Argo*, by help of Athena; she was the first longship ever made. They set sail for Colchis and had several adventures by the way. At Lemnos (see **HYPSIPYLE**) they stayed a year with the women of the island; at Cyzicus they were hospitably received by the eponym of the island and Heracles rid him of the Gegeneis who infested the hills. Driven back by a storm, they killed Cyzicus in a scuffle at night, and mourned for him. At Cios, Heracles' page Hylas was carried off by water-nymphs and he, staying to look for him, was left behind. After visiting the Bebryces (see **AMYCUS**) they touched at Salmydessus and learned from Phineus (q.v.) that to get to the Euxine they must pass the Clashing Rocks (Symplegades), which he advised them to test by seeing if a dove could fly between them before they met. The dove did so, and the *Argo* likewise passed; in some accounts the rocks became stationary (at the present Bosphorus). Arrived finally at Colchis, they were confronted with a task set by King Aeetes; they must yoke a pair of fire-breathing bulls, plough a field, sow it with teeth from Cadmus' dragon (see **CADMUS**), and overcome the warriors who should

spring up. This Jason succeeded in doing with the help of Medea (q.v.), and, still by her advice, he took the Fleece that same night and fled, accompanied by her.

3. The story now divides into several main variants, conditioned partly by the geographical ideas of different periods, partly by the desire to bring the Argonauts into connexion with places traditionally Minyan. (1) They returned the way they came. (2) Because they did not want to face the Symplegades again or for some other reason, they ascended the river Phasis, got to the stream of Ocean, and so sailed around till they reached the Mediterranean again. (3) They went up the Ister (Danube), thence got into the Eridanus (fabulous, but in part the Po), down it to some part of the Mediterranean, and so home. (4) From the Ister they got (via the Rhine?) into the North Sea, and so down to the Straits of Gibraltar and through them. The subsidiary adventures vary accordingly; some of the commonest are, that they reached Africa and there met a Triton who showed them the way through the shallows near Cyrene and foretold the founding of the colony by one of their descendants (Pind. *ibid.* 19 ff.); they passed the Sirens (see **ODYSSEUS**) and were protected against their song by Orpheus' still more lovely playing (Ap. Rhod. 4. 891 ff.); they came to Crete, and there encountered Talos (q.v.), who guarded the island. Medea charmed him into a magic sleep, and he was killed by destroying the fastening that closed his one vein, thus letting out his blood, or whatever corresponded to it in him (Ap. Rhod. 4. 1638 ff., Apollod. 1. 10-1; details vary, however). For their meeting with Alcinoüs, see s.v.

4. Not only is the story diversified with details which are pure *Märchen* (a feature of many sagas, since one good story attracts another; cf. Rose in *Folklore* (1935), 16 f.) but the motive of the voyage is of the same sort, together with two principal episodes at least. To send a hero on a dangerous journey to get rid of him, to confront a dangerous visitor with tasks, to be helped in those tasks by the daughter of a tyrant, wizard, or other formidable person, are all well-known themes (Stith Thompson, nos. H 1211, H 900, G 530, 2), and the Golden Fleece itself seems a sort of magical treasure, the kind of thing which fairy heroes go to look for. If a real voyage underlies the tale, it is deeply buried.

5. The *Argo* is shown on a Sicyonian metope at Delphi before the mid sixth century; otherwise only the funeral games of Pelias and the pursuit of the Harpies occur often in archaic art (see H. G. G. Payne, *Necrocorinthia* (1931), 141 f.; E. Kunze *Archaische Schildebrander* (1950), 177 f.). Micon painted the Argonauts in the Anaceum at Athens towards the mid fifth. The punishment of Amycus with all the Argonauts present is shown on the Ficoroni cista and other fourth-century Italian works, evidently reflecting a wall-painting (see J. D. Beazley, *Etruscan Vase-painting* (1947), 58).

Roscher's *Lexikon*, arts. 'Argo', 'Argonautai' (Seeliger). J. R. Bacon, *Voyage of the Argonauts* (1925); R. Roux, *Le Problème des Argonautes* (1949). In art, Brommer, *Vasenlisten*, 346 ff. H. J. R.; C. M. R.

ARGOS (1), in mythology, (a) a monster, of variously stated parentage, who had a third eye in the back of his neck, or four eyes, two before and two behind (Pherecydes and the anonymous epic *Aegimius* ap. schol. Eur. *Phoen.* 1116), or many eyes (Aesch. *PV* 678 and most authors). He was of huge strength and size, and killed a bull and a satyr which were troubling Arcadia; he also took vengeance on the killers of Apis the son of Phoroneus (Apollod. 2. 4). When Io (q.v.) was turned into a heifer, Hera set Argos to watch her (Aesch. *loc. cit.*), but by command of Zeus, Hermes killed him (Apollod. *ibid.* 7 and many authors). He turned into a peacock (Moschus, 2. 58 ff., schol. Ar. *Av.* 102), or Hera took his eyes to deck its

tail (Ov. *Met.* 1. 722-3). (b) An Argonaut, builder of the *Argo*, see ARGONAUTS. His parentage and nationality are variously given. (c) Eponym of the city Argos, Apollod. 2. 2-3.

H. J. R.

ARGOS (2), a city in the southern part of the Argive plain, 3 miles from the sea, at the foot of the Larissa hill which was occupied from prehistoric, through classical and Hellenistic, to Frankish and Turkish times. A low hill, the Aspis, which has remains of earlier Bronze Age occupation, formed part of the city. Middle Bronze Age (Helladic) remains have been found over a wide area (the Deiras ridge, and the South Quarter), and a Mycenaean cemetery with chamber tombs on the Deiras. Mycenaean Argos appears to have been at its height in Mycenaean IIIA-B (roughly later 14th-13th c.). Occupation (as opposed to burials) of the Geometric period has been found recently for the first time near the chapel of Panaghia tou Vrachou. Extensive remains of the classical and Roman city (which lay for the most part in the plain) have been found in following up earlier excavations: in the region of the classical Agora: bouleuterion (?) of the first half of the fifth century, stoa, tholos, a large building (heroon?) of Roman date, and late Roman baths; the theatre (restored under Hadrian) and the Odeion have also been investigated. Elsewhere Roman houses and interesting late mosaics have been found. Among interesting earlier remains are a hoplite panoply, spits, Argive Geometric, and seventh-century figured ware. A late Geometric krater recalls those from the Fusco cemetery at Syracuse, and the problem of the possible promotion of western colonization by Argos (cf. N. G. L. Hammond, *BSA* 1954, 99 ff.).

In the *Iliad* Argos was the kingdom of Diomedes, who owed Agamemnon's leadership; also, in a wider sense, Agamemnon's empire. In the Dorian invasion Argos fell to Temenus, the eldest of the Heraclids. It probably was the base from which the Dorians occupied north-east Peloponnesus, and retained the overlordship until the eighth or seventh century, when its ascendancy was challenged by Sparta. Early in the seventh century a strong king, Pheidon (q.v.), defeated the Spartans, presided in person over the Olympic Games, and made Argos the first power in Greece. It is doubtful if he was concerned with the issue of silver coinage in Aegina (see *Num. Chron.* 1950, 177 ff.). But his power died with him, checked perhaps by the rise of Corinth. Henceforth Argos maintained a suspicious neutrality, fighting once a generation with Sparta. Her heaviest defeat was c. 494 B.C., when Cleomenes was barely repelled from the walls by the women of Argos, rallied by the poetess Telesilla. In 480-479 the Argives observed a benevolent neutrality towards Persia. Shortly afterwards they set up a form of democracy. They were repeatedly allied with Athens against Sparta (461, 420, 395), but remained an ineffective power. Argos sided with Philip II of Macedonia and was one of the last cities to join the Achaean League, after a period of rule by tyrants. The territory of Argos in classical times included Mycenae, Tiryns, Nauplia, Asine, and other strongholds in the Argive plain, but not the cities of the Acte east of Argos, nor Phlius and Cleonae in the northern hills. The great Argive goddess was Hera, worshipped at the Heraeum six miles north of Argos. The minor arts were important in the earliest period, but from the seventh century they shared in the general decline. Argive sculptors of the early classical period were pre-eminent; the greatest was Polyclitus (q.v. 2).

ARGOS, CULTS AND MYTHS OF. The most famous cult of the Argolid was that of Hera, whose great temple, however, was not in Argos itself but some distance away (see HERA). In the city itself, on the lower acropolis (the Aspis), stood a very ancient temple of Athena (see Vollgraff, *Mnemos.* 1928, 319). Of great importance in historical times was Apollo Lykeios, whose temple stood in the Agora (Soph. *El.* 6 f.; Paus. 2. 19. 3); its foundation was ascribed to Danaos (q.v.). Also Apollo had a sanctuary on the acropolis with an oracle under the title Pythaeus (for excavation see W. Vollgraff, *Le Sanctuaire d'Apollon pythéen à Argos* 1956). Myths connected with the city and district are innumerable, nearly every important legend touching them at some point; more local are the lists of Argive kings, of which the oldest is in a *βασταροφιδόν* inscription from the Aspis (Vollgraff, *Mnemos.* 1931-2, 369 ff.); Potamos (?Inachus), Sthenelas son of Echedamidas, Hippomedon, Charon (otherwise unknown as a hero), Adrastus (q.v.), Orthagoras, Cteatus, Aristomachus, and Ichonidas. See, for later lists, Apollod. 2. 1 ff., Hyg. *Fab.* 124. H. J. R.

See bibliography s.v. ARGOS (2).

ARGOS (3) AMPHILOCHICUM, traditionally founded by Amphilochus after the Trojan War, on the eastern shore of the Ambraciot Gulf. In its struggles against Ambracia (Thuc. 2. 68) it was helped by Athens and Acarnania, and played its part in Athenian operations in north-west Greece in the early years of the Peloponnesian War. It maintained its independence, was the capital of the Amphilochi, and issued coins of Pegasus type c. 350-250 B.C.

P-K, *GL* 2. 1. 194 ff.; Hammond, *Epirus*.

N. G. L. H.

ARGUMENTUM, an explanation of the circumstances in which the action of a play is supposed to open, addressed direct to the audience by the speaker of the prologue (which may be deferred, cf. Plaut. *Cist.* 155, *Mil.* 79). The *argumentum* forms part of all the prologues of Plautus except in the *Asinaria* and *Trinummus* (where we are informed that it is unnecessary); no doubt it was often translated from the Greek original (cf. the exposition uttered by Agnoia in Menander's *Perikeiromene*); it may vary from a brief statement (as in the *Truculentus*) to a detailed account (e.g. *Amph.* 97-150). Frequently it anticipates the plot to some extent. Terence abandoned the *argumentum* altogether. Cf. HYPOTHESIS.

G. Michaut, *Plaute* (1920), i. 101 ff.; G. Duckworth, *The Nature of Roman Comedy* (1952), index s.v. 'argument' and 'prologue'. W. B.

ARIADNE, in mythology, daughter of Minos (q.v.) and Pasiphaë. When Theseus (q.v.) came to Crete, she fell in love with him and gave him a clue of thread by which he found his way out of the Labyrinth after killing the Minotaur. He then fled, taking her with him, but (magically?) forgot and left her on Naxos (Dia). It is generally said that Dionysus found her there and married her; but Plutarch (*Thes.* 20, from Paeon of Amathus) preserves a curious local legend and custom. Theseus left her there pregnant, and she died in childbirth. In commemoration of this, every year at Amathus a young man imitated a woman in childbirth in honour of Ariadne Aphrodite (see APHRODITE, § 1). It is probable that Ariadne was originally a goddess, Minoan in origin, but with a Greek name meaning 'very holy'.

A figure shown with Dionysus in sixth-century vase-paintings, distinct from the nymphs who accompany the satyrs, has sometimes two children and is probably Ariadne. She appears in some early representations helping Theseus in the adventure of the Minotaur. Her desertion by Theseus on Naxos is found from the early fifth century, and remains popular later when it is joined by the sequel, Dionysus discovering Ariadne.

ARIARAMNES (280?–230?), eldest son of Ariarathes II (q.v.) of Cappadocia, and the leader who probably secured recognition of the independence of Cappadocia from the Seleucid kings perhaps before 250 B.C. He made his son Ariarathes III (q.v.) his co-ruler. T. R. S. B.

ARIARATHES, the name of several kings of CAPPADOCIA:

(1) **ARIARATHES I** (b. c. 404 B.C.) claimed descent from the house of Cyrus the Great. Satrap of Cappadocia, which then included Pontus, he resisted Alexander's appointee, and after Alexander's death was captured and killed by Perdiccas and Eumenes in 322, aged 82.

(2) **ARIARATHES II** (c. 301–c. 280 B.C.), escaped to Armenia in 322, and after 301 recovered Cappadocia, now separated from Pontus, perhaps with Armenian help, but remained nominally subject to the Seleucid kings.

(3) **ARIARATHES III** (c. 250–220 B.C.), co-ruler with his father Ariaramnes (q.v.), perhaps from before 250 B.C., married Stratonice, daughter of Antiochus II Theos, and added Cataonia to his realm. He was the first to issue coins with the royal title.

(4) **ARIARATHES IV EUSEBES** (220–163 B.C.), son of Ariarathes III, married (c. 192) Antiochis, a daughter of Antiochus III the Great, but after the battle of Magnesia (190) allied himself with Eumenes II of Pergamum, to whom he gave his daughter Stratonice in marriage, and the Romans. He remained a faithful ally of Rome against Pharnaces I of Pontus and the Gauls. Passing over two older princes whom Antiochis introduced and later admitted to be supposititious, he gave the succession to her late-born son Mithridates, as Ariarathes V.

(5) **ARIARATHES V EUSEBES PHILOPATOR** (163–130 B.C.), son of Ariarathes IV, rejected on advice from Rome a marriage alliance with Demetrius I of Syria, who then aided Orophernes, one of the supposititious children mentioned above, in expelling him from his kingdom. On appeal Rome divided the kingdom between them, but with the aid of Attalus II of Pergamum he recovered the whole (c. 157). Failing to obtain Orophernes' treasure from Priene, he sacked the city. He died while aiding Rome against Aristonicus (q.v. 1), but Lycania was added as a reward to the kingdom of his son. A lover of Hellenic culture, he became a citizen of Athens, and promoted Hellenism in his kingdom.

(6) **ARIARATHES VI EPIPHANES PHILOPATOR** (130–c. 116 B.C.), son of Ariarathes V. During his minority the ruthless regime of his mother Nysa stirred up strife, which Mithridates V of Pontus used to interfere in the kingdom and to arrange the marriage of Ariarathes with his daughter Laodice. On his coinage regnal years are numbered up to fifteen. He was assassinated by Gordius, a Cappadocian noble, perhaps at the instigation of Mithridates VI of Pontus.

(7) **ARIARATHES VII PHILOMETOR** (c. 116–c. 101 B.C.), son of Ariarathes VI. During the regency of his mother Laodice invasion by Nicomedes III of Bithynia led Mithridates also to invade Cappadocia, ostensibly to protect his sister, but when she married Nicomedes he changed his plea to protection of her son, whom he put upon the throne. Ariarathes' objections to the return of Gordius, his father's assassin, led to hostilities. During a conference in the presence of both armies Mithridates murdered the young king with his own hands, occupied the country, and placed his own son upon the throne. The coinage of Ariarathes VII numbers up to sixteen regnal years. See **ARIARATHES IX**.

(8) **ARIARATHES VIII**, second son of Ariarathes VI and brother of Ariarathes VII, was placed on the throne by the Cappadocian nobles in revolt against Ariarathes IX (q.v.), the son of Mithridates. Mithridates promptly expelled him and he died soon afterwards, the last of his dynasty.

(9) **ARIARATHES IX EUSEBES PHILOPATOR** (c. 101–87/86), son of Mithridates VI of Pontus, who placed him at the age of 8 on the throne of Cappadocia with Gordius as regent. Expelled by the Cappadocians in favour of Ariarathes VIII (q.v.) and restored by Mithridates, both he and a rival claimant sponsored by Nicomedes III of Bithynia and Laodice were disallowed by the Roman Senate, which offered the Cappadocians their freedom. They, however, requested a king and chose a noble, Ariobarzanes, who was probably installed by Sulla as proconsul c. 95 B.C. When Ariobarzanes was expelled by Mithridates' ally, Tigranes of Armenia, Ariarathes was restored, but was again removed by the Roman commission under Aquilius (89 B.C.). With the outbreak of the First Mithridatic War he returned to his claim, and should probably be identified with the Ariarathes (Arcathias), Mithridates' general in Macedonia, who died at Tisaeum in Thessaly before March of 86. Regnal years on his coinage number up to fifteen.

(10) **ARIARATHES X EUSEBES PHILADELPHOS** (42–36 B.C.) succeeded his brother Ariobarzanes III (q.v.), after being one of his vassals. At least six regnal years are numbered on his coinage, so it was in 36 B.C. that Antony executed him and replaced him with Sisines, one of the rival priestly family of Comana, who took the name Archelaus (see also **CAPPADOCIA**).

Diodorus Siculus 31. 19. 22, 28, 32; Strabo 12. 533–540 Th. Reinach, *Trois Royaumes*; Magie, *Rom. Rule Asia Min.* see Index; B. Simonetta, 'Notes on the Coinage of the Cappadocian Kings', *Num. Chron.* 1961, 9 ff.; 1964, 83 ff.; O. Mørkholm, *ibid.* 1962, 407 ff.; 1964, 21 ff.; E. Badian, 'Sulla's Cilician Command', *Stud. Gr. Rom. Hist.* 157 ff. T. R. S. B.

ARICIA, modern *Ariccia*, at the foot of the Albanus Mons (q.v.), 16 miles south-east of Rome, on the edge of a remarkably fertile volcanic depression (*valis Aricina*; the impressive, beggar-infested viaduct, which carried the Via Appia across this (Juv. 4. 117), survives). Founded in mythical times, Aricia was temporarily the leading city of Latium (c. 500 B.C.): under Turnus Herdonius it organized resistance to Tarquinius Superbus, helped Aristodemus (q.v. 2) of Cumae to crush the Etruscans (c. 505 B.C.), supplied the Latin League with a meeting-place (*caput aquae Ferentinae*), and had a prominent role in the Lake Regillus (q.v.) battle and ensuing *foedus Cassianum* (499–493). In 446 Aricia quarrelled with Ardea over boundaries. After participating in the Latin War it received Roman citizenship (Festus 155, L. represents this, probably inaccurately, as partial citizenship), and became a prosperous *municipium* (Cic. *Phil.* 3. 15). Such it remained, despite its sack by Marius (Livy, *Epit.* 80;

Iib. Colon. 230), until barbarian invasions ruined it. Aricia was the birthplace of Augustus' mother Atia, and is celebrated for its wealthy Temple of Diana Nemorensis, whose ruins still exist nearby in the woods surrounding Lake Nemi; its presiding priest was a runaway slave who had murdered his predecessor (*see* REX NEMORFENSIS).

Strabo 5 239; Verg. *Aen.* 7. 761 f.; Livy 1. 50 f. etc.; G. Floescu, *Ephemeris Dacorumana* 10 (1925) (documented); A. E. Gordon, *Cults of Aricia* (U.S.A. 1934); A. Alföldi, *Early Rome and the Latins* (U.S.A. 1965), 47 ff. E. T. S.

ARIMASPEANS. A legendary people of the far North, between the Issedones and the Hyperboreans. They were one-eyed, and fought with griffins who guarded a hoard of gold. Aristeas (q.v. 1) was said to have written an epic about them (Hdt. 3. 116, 4. 13 and 27; Aesch. *PV* 803 ff.). W. K. C. G.

ARIMINUM, modern *Rimini* with imposing Augustan monuments, an Umbrian and later Gallic town on the Adriatic which became a Latin colony, 268 B.C. (Vell. Pat. 1. 14; Beloch, *Röm. Gesch.*, 490, for magistrates; A. Sambon, *Monnaies ant. de l'Italie* (1903), 88, for coins; A. Bernardi, *Studi Ghisleriani* 1948, for the *Ius Ariminum*). An important harbour and road-centre, Ariminum was the key to Cisalpine Gaul, controlling the bottleneck between Apennines and Adriatic (Polyb. 3. 61, etc.; Livy 24. 44, etc.; Strabo 5. 217). It remained loyal to Rome against Hannibal (Livy 27. 10) and obtained Roman citizenship c. 89 B.C. (Pliny, *HN* 3. 115). Surviving sack by Sulla, occupation by Caesar, confiscation and colonization by the Triumvirs, attacks by Flavians (A.D. 69) and Goths (538), it became one of five towns composing the *pentapolis maritima* under the Ravenna exarchs (App. *BCiv.* 1. 67; 4. 3; Plut. *Caes.* 32; Tac. *Hist.* 3. 41; Procop. 2. 10).

G. A. Mansuelli, *Ariminum* (1941).

E. T. S.

ARIOBARZANES, the name of some kings of CAPPADOCIA (q.v.):

(1) **ARIOBARZANES I PHILOROMAIOS** (c. 95–63/62), a Cappadocian noble whom the Cappadocians chose in preference to Ariarathes IX (q.v.) when the previous dynasty came to an end. His career consists almost entirely of a series of expulsions and restorations. Installed by Sulla (c. 95), driven out by Tigranes of Armenia, and restored by Aquilius (90/89 B.C.), driven out again the following year, and restored by Curio at Sulla's command in 85/84, he had to retire before Tigranes again in 78, suffered the ravages of the Third Mithridatic War, and the renewed attacks of Tigranes in 67. Pompey increased his kingdom to include, in the east, Sophene and Gordyene, and, in the west, Cybistra, restored his capital Mazaca, and gave him large loans. Yet in 63 or 62 (his coins have the numbers of at least thirty-two regnal years) he abdicated in Pompey's presence in favour of his son.

(2) **ARIOBARZANES II PHILOPATOR** (63/62–c. 52), son of Ariobarzanes I and Athenais, and married to Athenais, a daughter of Mithridates VI, had an uneasy reign, requiring the help of Gabinius in 57 to crush his enemies, and was assassinated shortly before Cicero became governor of Cilicia in 51, probably by members of a pro-Parthian faction. Years 7 and 8 are numbered on his coins.

(3) **ARIOBARZANES III EUSEBES PHILOROMAIOS** (52–42 B.C.), son of Ariobarzanes II, recognized by the Senate as king and commended to Cicero, who found him in 51 beset by enemies in his kingdom, including his mother, and by heavy debts to Pompey

and other Roman nobles, remained loyal to Rome and aided Pompey in the war with Caesar. Caesar, however, confirmed him and added Armenia Minor to his kingdom. Cassius had him killed in 42 for refusing aid. Years 9 and 11 are numbered on his coins.

See bibliography s.v. *ARIARATHES*.

T. R. S. B.

ARION (1) (*Ἀρίων*), in mythology, the wonderful horse of Adrastus (q.v.); at Thelpusa in Arcadia (Paus. 8. 25. 5) he was said to be the offspring of Poseidon and Demeter in horse-shape. He could speak (Propertius 2. 34. 37). He belonged successively to Poseidon himself, Copreus, Heracles (*see* CYCNUIS 1), and Adrastus (schol. *Il.* 23. 346).

H. J. R.

ARION (2) (*Ἀρίων*) (fl. 628–625 B.C.), son of Cycleus, of Methymna in Lesbos (*Suda*, s.v.), spent most of his life at the court of Periander, paid a profitable visit to Italy and Sicily, returned to Corinth after being thrown overboard and carried to land, it was said, by a dolphin (Hdt. 1. 23). He was an important figure in the history of the dithyramb, which he composed himself and taught Corinthian choirs to perform. He seems to have made it formal and stationary and to have given his poems names, i.e. definite subjects. The *Suda* connects him with the birth of tragedy, but this probably means no more than that his type of dithyramb helped eventually to produce tragedy. Nothing survives of his work, and a piece attributed to him by Aelian (*NA* 12. 45) is certainly spurious, being probably work of the fifth or fourth century B.C.

Text. Page, *Poet. Mel. Gr.* 506–7. See also Pickard-Cambridge-Webster, *Dithyramb*, 97 ff.; C. M. Bowra, *ML* 1963, 121 ff.

C. M. B.

ARIOVISTUS, king of the Suebi, invaded Gaul c. 71 B.C. at the invitation of the Sequani, and defeated the Aedui, then the pre-eminent Gallic tribe. He invited more Germans and defeated at Magetobriga (site unknown) a combined Gallic attempt to eject him. The Senate ratified his conquests by the title of 'friend'. In 58, however, Caesar, influenced by the petitions of Gallic chiefs, picked a quarrel with him, and after a difficult campaign routed him in the plain of Alsace. His death is mentioned incidentally in *BGall.* 5. 29.

Caesar, *BGall.* 1. 31–53; Cicero, *Att.* 1. 19. 2. Rice Holmes, *Ancient Gaul*, 37 ff., 553 ff., 636 ff.; C. E. Stevens, *Latomus*, 1952, 166 ff. C. E. S.

ARISBE, name of two cities: (1) in the Troad, from Arisbe daughter of Merops, wife of Priam, or Paris, afterwards of Hyrtacus, or daughter of Teucer of Crete and wife of Dardanus; (2) in Lesbos, from Arisbe, daughter of Macar (Steph. Byz., s.v.).

ARISTAEUS (1), son of Apollo and Cyrene (daughter of Hypseus, king of the Lapithae), a god or hero, protector of cattle and fruit-trees, whose cult originated in Thessaly, but is found also in Cyrene, Ceos, Boeotia, and elsewhere. Pindar in *Pyth.* 9 tells how Apollo, enamoured of Cyrene in Thessaly, carried her off to Libya, where Aristaeus was born. Virgil in *G.* 4. 315–558 narrates an otherwise unknown story of Aristaeus, which he is said by Servius on doubtful authority to have substituted for a eulogy of Gallus after his disgrace. Aristaeus had offended the nymphs by pursuing Eurydice, wife of Orpheus, who in her flight was bitten by a serpent and died. The nymphs in revenge destroyed his bees. On his mother's advice he takes counsel of Proteus, who explains the cause of his misfortune. Cyrene urges him to sacrifice cattle to the nymphs. Returning after nine days Aristaeus finds bees swarming in the carcasses. C. B.

ARISTAEUS (2), of Croton, son-in-law and first successor of Pythagoras, is said to have written works on

mathematics. In an extant fr. of a work *Περὶ ἀφρονίας* ascribed to him, the eternity of the world is inferred from that of God.

ARISTAGORAS (1) (fl. c. 500 B.C.), son-in-law of Histiaeus (q.v.), in whose absence he ruled Miletus. In 499 B.C. he is reported to have persuaded the Persians to undertake an expedition against Naxos. On the failure of this enterprise he profited by the widespread discontent of the Ionians to raise them in revolt. He restored freedom to Miletus, and combated the other tyrants, who all had Persian support. In winter 499/8 he went to Greece to obtain help. Refused by Cleomenes of Sparta, he was successful in Athens and Eretria: Athens sent twenty ships, quite a large section of her fleet, Eretria only five. Their help was ineffective. Before the final failure of the revolt Aristagoras emigrated to Myrcinus in Thrace, to perish there with his companions in a fight against the Thracians. It is difficult to believe that he was a great man.

Hdt. bk. 5, De Sanctis, *Riv. Fil.* 1931; A. R. Burn, *Persia and the Greeks* (1962). V. E.

ARISTAGORAS (2), comic writer of uncertain date. His *Μαμαῦκλῶς* ('The Simpleton') was possibly a *réchauffé* of Mctagenes' *Αὔραι* (Ath. 13. 571 b).

FCG 1. 218; CAF 1. 710.

ARISTARCHUS (1) of Samos (PIV 25), astronomer (fl. first half of 3rd c. B.C.), was a pupil of the Peripatetic Straton (q.v. 1) of Lampsacus. He is famous as the author of the heliocentric hypothesis in astronomy, that 'the fixed stars and the sun remain unmoved, and that the earth revolves about the sun on the circumference of a circle, the sun lying in the middle of the orbit' (Archimedes, *Sand-reckoner* 4-5); he combined with this the rotation of the earth about its own axis (Plutarch, *De fac. in orbe lunae*, 6). His only extant treatise, *On the sizes and distances of the sun and moon*, is, however, on the geocentric basis. Starting with six 'hypotheses', the treatise has eighteen propositions combining clever geometry with facility in arithmetical calculation. The ratios of sizes and distances which have to be calculated are really equivalent to trigonometrical ratios, and Aristarchus finds upper and lower limits to their values on the basis of assumptions equivalent to well-known theorems in trigonometry. The gross discrepancy of the results from reality (see Heath's edition, 330) is due partly to errors in the 'hypotheses', but mainly to the choice of method, which, though mathematically correct, is ill-suited for its purpose (see ARISTARCHUS 3). Aristarchus is said to have invented the hollow spherical sun-dial (σκάφη) (Vitruv. 9. 8), and to have added $\frac{1}{1440}$ of a day to Callippus' estimate of 365 $\frac{1}{4}$ days as the length of the year (Censorinus *de die natali* 10. 2, emended), and to have observed the solstice in 280 (Ptolemy, *Alm.* 3. 1).

Text, translation, and full commentary in T. L. Heath, *Aristarchus of Samos* (1913, repr. 1959). See 117 ff. of the latter for history of the text and editions. See also Pappus 6. 69-73. Aristarchus' life and works are discussed in Heath, 299 ff. T. H.; G. J. T.

ARISTARCHUS (2) of Samothrace (c. 217 to 145 B.C.) belonged to the school of Aristophanes of Byzantium at Alexandria and was tutor of Ptolemy VII Eupator, son of Ptolemy Philometor. He succeeded Apollonius ὁ εἰδογράφος as head of the Alexandrian Library (c. 153 B.C.). On the accession of Ptolemy VIII Physcon (145 B.C.) he left Alexandria for Cyprus, where he died. With him scientific scholarship really began, and his work covered the wide range of grammatical, etymological, orthographical, literary, and textual criticism. He was styled ὁ γραμματικώτατος (Ath. 15. 671 f.), and for his gift of critical divination was nicknamed μάγιστρος by Panaetius (Ath. 14. 634 c). His name has often been used to typify

the complete critic (e.g. Cic. *Att.* 1. 14. 3. Hor. *Ars P.* 450). In matters of language he was an Analogist and an opponent of Crates (q.v. 3) of Mallos. The school which he founded at Alexandria and which lasted into the Roman imperial period had many distinguished pupils, e.g. Apollodorus and Dionysius Thrax. His writings fall into three main groups:

1. Critical recensions (διorthώσεις) of the text of Homer, Hesiod, Archilochus, Alcaeus, Anacreon, Pindar. For these, particularly for his double recension of the *Iliad* and *Odyssey*, he used symbols to indicate his suspicions of the genuineness of verses, wrongfull repetition, confused orders of verses, etc. (see SCHOLARSHIP, GREEK). The *disiecta membra* of his commentaries surviving in medieval scholia often enable us to reconstruct his apparatus of critical signs; indeed they were so reconstructed for Homer by Byzantine scholars of the tenth century. In his treatment of textual problems in Homer he was more cautious than his Alexandrine predecessors and sought to remove corruption, conjecture, and interpolation by scrupulous regard for the best manuscript tradition, by careful study of the Homeric language and metre, by his fine literary sense, by emphasis on the requirements of consistency and appropriateness of ethos, and by his practice of interpreting a poet by the poet's own usage. He avoided allegorical interpretation, as practised by the Stoics. But his work seems to have had comparatively little influence on the traditional text of Homer.

2. Commentaries (ὑπομνήματα) on Homer, Hesiod, Archilochus, Pindar, Aeschylus, Sophocles, Ion, Aristophanes, Herodotus.

3. Critical treatises (συγγράμματα) on particular matters relating to the *Iliad* and *Odyssey*, e.g. the naval camp of the Greeks; and polemics against other writers and scholars, e.g. against Philetas and the *Chorizontes* (see HOMER, § 6), especially Xenon.

Romei, *Die Homerexegese Aristarchs* (ed. E. Heitsch 1924); H. Erbse, *Hermes* 1959, 275 ff.; M. van der Valk, *Researches on the Text and Scholia of the Iliad II* (1964), 84 ff. J. F. L.; R. B.

ARISTARCHUS (3) of Tegea, a contemporary of Euripides, dated by Eusebius (*Chron.* 2. 105) 455-454 B.C.; said by the *Suda* (s.v.) to have written seventy tragedies and won two victories. His plays included *Tantalus*, *Achilles* (adapted by Ennius), *Asclepius* (a thank-offering for recovery from illness, *Suda*, s.v.). No precise meaning can be attached to the *Suda's* statement that Aristarchus πρώτος εἰς τὸ νῦν μῆκος τὰ δράματα κατέστησεν.

TGF 728. 9.

A. W. P.-C.

ARISTEAS. (1) of Proconnesus, a legendary servant of Apollo (cf. ABARIS), and reputed author of a poem on the Arimaspeans (q.v.). His story has three features of especial interest for Apolline religion (Hdt. 4. 13): (a) Ecstasis, literal separation of soul from body. Aristeas produces the semblance of death and appears at the same time elsewhere. (b) The taking of non-human shape. Aristeas accompanies Apollo in the form of a raven. (c) Missionary spirit. The object of Aristeas' miraculous disappearance from Cyzicus and reappearance at Metapontum is to spread the cult of the god.

E. D. Phillips, *The Legend of Aristeas: fact and fancy in early Greek notions of East Russia, Siberia and Inner Asia, Aristeas Asiae* (1955), 161 ff.; J. P. D. Bolton, *Aristeas of Proconnesus* (1962).

W. K. C. G.

ARISTIAS (5th c. B.C.), son of Pratinas (q.v.) of Phlius, contended against Aeschylus in 467, when Aeschylus

produced his Theban tetralogy and Aristias his father's *Perseus*, *Tantalus*, *Antaeus* (?), and *Παλαιστοί Σάτυροι* (Arg. Aesch. *Sept.*, POxy 2256 fr. 2.). He achieved some fame as a composer of satyric plays (Paus. 2. 13. 5). His name is doubtfully restored, two places below that of Sophocles, in the list of Dionysiac victors in IG ii'. 977 a.

TGF 726-8.

A. W. P.-C.

ARISTIDES (Ἀριστείδης) (1), Athenian statesman and soldier. His family is not named, but he was a cousin of Callias (q.v. 1). Although he is stated to have been an associate of Cleisthenes (q.v. 1), nothing certain is known of him until, as *strategos* in 490/89 B.C., he supported the plans of Miltiades (q.v.) at Marathon. In 489/8 he was archon. In 482 he was ostracized, apparently as a result of rivalry with Themistocles (q.v.). Two years later, on the approach of Xerxes, he was recalled in the general amnesty, and held the *strategia* at least for the next three years (480/79-478/7). He led the Athenian hoplites who landed on the islet of Psytaleia in the battle of Salamis, commanded the Athenian army at Plataea, and helped Themistocles to secure the rebuilding of the walls of Athens against the wishes of Sparta. In 478 he commanded the Athenian contingent of the Greek naval forces, and was chiefly responsible for the secession of the Asiatic and island Greeks from the Spartan Pausanias (q.v. 1). When the Delian League (q.v.) was formed (spring 477), Aristides fixed the quota of each contributory State. Aristotle (*Ath. Pol.* 24) says that he also initiated the policy of democratic state-socialism; but this is doubtful. He was, apparently, still alive in 467.

He died a poor man, if it is true that the State had to support his children; earlier, he had been rich enough to stand for the archonship (see ARCHONTES). His reputation for honesty went back to his contemporaries, and dominated the later tradition about him. He was contrasted with the deceitful Themistocles, and this may have led to the conclusion that ideologically they were on opposite sides. But it is doubtful whether their rivalry was anything but personal, or persisted after Aristides' ostracism. They co-operated closely in the repulse of the Persians and the foundation of the Athenian Empire; and some at least classed Aristides equally with Themistocles as a party-leader on the popular side.

Plutarch, *Aristides*. On the tradition of his 'justice', I. Calabi Lumentani, *Rend. Ist. Lomb.* 1960, 43 ff. A. W. G.; T. J. C.

ARISTIDES (2), painter, of Thebes, pupil of Euxinidas (late 5th c. B.C.), and teacher of Euphranor (q.v.). His use of encaustic was further developed by Praxiteles (q.v.). Probably father and teacher of Nicomachus, whose son and pupil (see below) has been confused with the elder Aristides by Pliny. The statement that he was the first to represent the soul, the affections, and the emotions, though his colour was rather hard, is more credible of early than late fourth-century painting. He probably painted the Baby creeping to its dying mother's breast (before 335) and the Suppliant whose prayers could almost be heard.

T. B. L. W.

ARISTIDES (3), painter, son of Nicomachus. Of Pliny's list the 'Battle of Greeks and Persians' (for Mnason of Elatea) probably, and the portrait of Leonion, pupil of Epicurus (after 306), certainly, were by the younger Aristides.

Overbeck, 1762, 1772, 1778-85; Pfuhl, 780, 814; H. Fuhrmann, *Philoxenos von Eretria* (1931), 72. T. B. L. W.

ARISTIDES (4) of Miletus (c. 100 B.C.), author (or arranger into 'Rahmenerzählungen') of the lost *Μηλοιακά*. Ancient references indicate that the *Μηλοιακά* were

erotic, often obscene, short stories (Ov. *Tr.* 2. 413-14; Plut. *Crass.* 32; ps. Luc. *Amores* 1). The genre, about whose exact nature there is no general agreement amongst scholars, seems to have had no direct connexion with the Greek novel (so Rohde, followed by Schmid and Lesky, against Bürger) but to have exerted, on the other hand, considerable influence upon the later, realistic novel: stories like Lucian's *Asinus*, the *Widow of Ephesus* in Petronius (*Sat.* 111 f.) and those contained in Apuleius' *Metamorphoses* (cf. *Metam.* 1. 1 ego tibi *sermone isto Milesio varias fabulas conseram*) seem to be specimens of the 'Milesian genre'.

Aristides' *Μηλοιακά* were translated into Latin by Corneliu Sisenna (cf. Ov. *Tr.* 2. 443-4; fragments in Buecheler-Heraeus, *Petronii Saturae*³, 237 ff.), and *Milesiae fabulae* became in Rome a generic title for erotic short stories. See also NOVEL, GREEK.

Christ-Schmid-Stählin, ii. 1^a, 481 ff.; W. Stählin, in Rohde, *Greek. Roman*, 605 ff.; W. Aly, *PW*, s.vv. *Milesia*, *Novelle*; A. Calderini, *Le Avventure di Chercha e Calliroe* (1913), Prolegomeni, 29 ff. (short but accurate discussion). G. G.

ARISTIDES (5), AELIUS (A.D. 117 or 120-81 or later), public speaker and man of letters. Born of a land-owning family in Mysia, he studied Greek literature under Alexander of Cotiaeon, the tutor of Marcus Aurelius, and rhetoric at Athens, probably under Herodes Atticus. At the age of 26, when on a visit to Rome, he was struck down by the first of a long series of maladies, apparently psychosomatic in origin, which put an end to his hopes of a great public career and drove him to spend much of his time as a patient at the Asclepieum of Pergamum. The remainder of his life was passed mainly in Asia Minor, where he made his home in Smyrna and in the intervals of illness occupied himself in writing and lecturing. His writings were admired by his contemporaries for the purity of their Attic diction; today, with the exception of the *Sacred Teachings*, they are read chiefly for the incidental light which they throw on the social history of Asia Minor in the second century. They include addresses delivered on public and private occasions, model 'declamations' on historical themes, polemical essays, prose hymns to various gods, and six books (the last unfinished) of *Sacred Teachings* (Ἱεροὶ Λόγοι). (The two τέχνηαι of rhetoric transmitted under Aristides' name and edited by W. Schmid in the Teubner series are not from his hand.) Among the public addresses, *Εἰς Πάμωτον* paints an impressive picture of the Roman achievement as seen by an admiring provincial, while the *Παναθηναϊκός* provides a potted history of classical Athens, which was much used as a schoolbook in Byzantine times. Of the polemical works the most interesting are *Π. ῥητορικῆς* and *Υπὲρ τῶν τετραράων*, designed as replies to Plato's charges in the *Gorgias*. The *Sacred Teachings*, a record of revelations made to Aristides in dream by Asclepius, are in a class apart: they are of major importance both as evidence for the practices associated with temple medicine (see MEDICINE. 1.) and as the fullest first-hand report of personal religious experiences which has come down to us from any pagan writer.

ARISTIDES (6) QUINTILIANUS (probably 3rd or 4th c. A.D.), author of a work in three books *Περὶ μουσικῆς* which contains interesting material not found elsewhere, some of which may possibly go back to the school of Damon in the fifth century B.C. Book 1, dealing with ἀρμονική, ρυθμική and μετρική, is a compilation based partly on Aristoxenus but containing some unique rhythmic and harmonic doctrines. Book 2, stylistically elaborate, deals with the value of music in education and psychotherapy, book 3 with the numerical relations thought to exist between music and the natural world. The metaphysical background has connexions with the teaching of Porphyry and Iamblichus, but Aristides should perhaps be reckoned a Neopythagorean rather than a Neoplatonist.

Ed. R. P. Winnington-Ingram (1963); German translation and commentary, R. Schafke (1937). R. P. W.-I.

ARISTIPPUS, (1) a citizen of Cyrene and a companion of Socrates. His date is uncertain, but he was probably somewhat older than Plato. He appears, from the earliest evidence, to have been a professional teacher of rhetoric, a man of luxurious habits and, for a time, a courtier of Dionysius I. But his close friendship with Socrates, which is undoubted, suggests that there must have been something more in him than appears from this. He has sometimes been described as the founder of the so-called Cyrenaic school (see CYRENAICS), but this is almost certainly a mistake for

(2) a grandson of above through his daughter Arete. He appears to have been the first to teach the characteristic doctrine of this school, that immediate pleasure was the only end of action. This was combined with a sensationalist theory of knowledge and the belief that the present moment is the only reality. But it is uncertain how much of these developments should be ascribed to Aristippus himself.

Ed. E. Männebach, *Aristippi et Cyrenaicorum Fragmenta* (1961), G. Giannantoni, *I Cyrenaei* (1958). Zeller, ii 1st 336 ff., 361 ff.; T. Gomperz, *Greek Thinkers* (E.T. 1905) ii 209 ff.; L. Robin, *La Pensée grecque* (1912, I.T.), 160 ff.; G. B. L. Colosio, *Aristippo di Cirene* (1925), C. J. Classen, *Hermes* 1958. G. C. I.

ARISTOBULUS (1) of Cassandrea, historian of Alexander, was one of the Greek technicians with the army. He wrote before Ptolemy I; his history was used by Arrian to supplement Ptolemy and was Strabo's basis for Alexander in India. He was better on geography and natural history than on military matters; but he knew much that was really important about Alexander himself, and must have had his confidence.

See ALEXANDER (3), Bibliography, Ancient Sources; Pearson, *Lost Histories of Alexander*, ch. 6. W. W. T.

ARISTOBULUS (2), an Alexandrian Jew, probably of the second half of the second century B.C., author of a commentary on the Pentateuch which is known only through quotations by Clement, Anatolius, and Eusebius. This has been thought by some scholars to be a much later work (of the 3rd c. A.D.) falsely ascribed to Aristobulus; but the character of the quotations does not necessitate this conclusion. If the earlier date be accepted, the book is the earliest evidence of contact between Alexandrian Jewry and Greek philosophy. Its object was twofold, to interpret the Pentateuch in an allegorical fashion and to show that Homer and Hesiod, the Orphic writings, Pythagoras, Plato, and Aristotle had borrowed freely from a supposed early translation of the O.T. into Greek. Though Aristobulus toned down the anthropomorphism of the O.T., his thought remained Jewish and theistic; it did not accept the pantheism of the Stoics nor anticipate the Logos-doctrine of Philo.

Zeller, *Phil. d. Gr.* iii. 2^d 277 ff.

W. D. R.

ARISTOCLES (1) of Pergamum (2nd c. A.D.), Peripatetic, studied under Herodes Atticus at Rome (c. A.D. 130-40) and practised as a sophist and teacher of rhetoric at Pergamum, and as a travelling lecturer in Ionia and Italy, and became suffect consul. Works: *Τέχνη ῥητορική*; letters; *Μελέται*; an address to the emperor *Ἐπὶ τῇ δια- νεμῶσει τοῦ χρυσίου*.

W. D. R.

ARISTOCLES (2) of Messana in Sicily (2nd c. A.D.), Peripatetic, teacher of Alexander (q.v. 14) of Aphrodisias. Works: *Περὶ φιλοσοφίας*; *Πότερον σπουδαιότερος Ὅμηρος ἢ Πλάτων*; *Τέχνη ῥητορική*; *Περὶ Σαρπίδους*; *Ἠθικά βιβλία*. His history of philosophy was probably superior to that of Diogenes Laertius in insight, his chief interest being in tracing the development of doctrine and in philosophical criticism.

Testimonia and fragments in Mullaeh, *EPG* iii 206-21. H. Heiland, *Aristocles Messanensis Reliquiae* (1925). F. Trabucco, *Arme* 1958. W. D. R.

ARISTOCRACY, the 'rule of the best', was originally the rule of the nobility. How far the court aristocracy survived the dark ages is uncertain. Homer shows the king's authority and, in an equal measure, the importance of the assembly of the people, restricted by the chiefs of the noble families. Pretending to share descent from the gods with the king, the nobles were the ruling class of the city-state (see POLIS). They were the landowners, and owners of livestock, mostly living in town, prominent by birth, wealth, and personal prowess. They formed a class of knights (ἵππεις), connected by their unwritten laws of nobility, and by the old social and religious communities of tribe, brotherhood, and family (see PHYLAI, PHRATRIAI, GENOS). The nobles governed the State by means of the council, whose authority long remained unquestioned. After the eighth century B.C., however, military tactics changed, and rows of heavy-armed foot-soldiers (hoplites) displaced knights fighting in single combat. By subsequent economic evolution, new sources of wealth (mines, trade, industry) arose, and were utilized by nobles as well as by other people. In these circumstances aristocracy gradually changed its character, and non-aristocrats rose to the same political level as the nobles. Either the smaller communities, especially the phratries, were opened to the non-nobles, or else new ones with analogous rights were founded. Aristocracy became oligarchy (q.v.), but the moral standards and the political leadership of the nobility guided Polis society for a long time. Some noblemen like Theognis (q.v. 1) fought the upstarts, others like Pindar (q.v.) praised and consolidated their own ideals. Later on, aristocracy became the political and moral ideal of philosophy, the rule of the best and wisest men.

ARISTODEMUS (1), the traditional hero of the First Messenian War (c. 735-715 B.C.; see SPARTA). When the Messenians had withdrawn to their stronghold of Ithome in the fifth year of the war, he offered his daughter for sacrifice to the gods below, in response to a Delphic oracle. Eight years later he was elected king, and after carrying on guerrilla warfare for five years, signally defeated the Spartans. But in the following year he slew himself in despair on his daughter's grave.

PAUS. 4 9-13. For the value of his traditions, see ARISTOMENES (1) and MESSENIA. A. M. W.

ARISTODEMUS (2), nicknamed the Effeminate, repulsed Etruscan and other attackers of Cumae and exploited his constant popularity to support the people against the nobles (524 B.C.). Aristodemus again defeated the Etruscans twenty years later at Aricia (q.v.) and

helped break their power in Latium (q.v.); seizing power, he became tyrant of Cumae. Later he harboured Tarquinius Superbus after the Battle of Lake Regillus (q.v.) and died c. 492. Despite his legendary features Aristodemus is the earliest truly historical figure at Cumae (q.v.).

E. T. S.

ARISTODEMUS (3), of unknown date (? 4th c. A.D.), compiled a history of Greece which included at least the period 480–431 B.C., perhaps as a handbook for students of rhetoric. Aristodemus drew on a pro-Athenian tradition and included Ephorus among a variety of sources; but the work is inaccurate, lacking in chronology, and makes no significant addition to the historical evidence. The fragments suggest that its value was negligible.

ARISTOGITON (Ἀριστογείτων), Athenian tyrannicide. He and Harmodius, both members of the ancient family of the Gephyraei, provoked by private differences, plotted with others to kill the tyrant Hippias (q.v. 1) and his younger brother Hipparchus (q.v. 1) at the festival of the Panathenaea in 514 B.C. The plot miscarried: only Hipparchus was killed. Harmodius was at once cut down by Hippias' guards, Aristogiton arrested and executed after torture.

After the expulsion of Hippias in 511/10 the deed of Aristogiton and Harmodius received ample recognition, public and private. Bronze statues of them by Antenor (q.v. 2) were set up, and, these having been carried off by Xerxes in 480, were replaced in 477/6 by a second group designed by Critius (q.v.) and Nesiotes; the quatrain inscribed on the base (which may go back to the first group) was composed by Simonides (F 76 Diehl; *SEG* x. 320). Their tomb (or cenotaph) was placed in the Ceramicus; the polemarch sacrificed annually to them; and their descendants received free meals in the Prytaneum. Privately, scolia (q.v.) were sung claiming them as the men who gave Athens *isonomia* (Ath. 695). All this fostered the popular belief that Hipparchus, not Hippias, was the tyrant and that Aristogiton and Harmodius, rather than the Alcmaeonidae (q.v.) and Spartans, had ended the tyranny; and despite the deliberate refutations of this view by Herodotus and Thucydides, it continued to influence the tradition.

ARISTOMENES (1), a traditional hero of Messenian resistance to Sparta (q.v.), usually assigned to the Second War of c. 650 B.C. With support from Argos and Arcadia, the story runs, he won a striking victory, at Stenyclarus. Defeated in the battle of 'The Great Trench' by the treachery of Aristocrates the Arcadian, he held out for eleven years, twice escaping after capture. After the fall of his stronghold, Eira, he lived in exile at Rhodes.

PAUS. 4. 14–24, probably following Callisthenes and Rhianus, a Cretan poet of the third century B.C., whose works are lost. The story of Aristomenes and of Aristodemus (q.v. 1) was much embellished, if not virtually created, after the founding of Messene in 169.

A. M. W.; W. G. F.

ARISTOMENES (2) Athenian comic poet, competed as early as 439 B.C. (*IG* xiv. 1097. 13) and as late as 388 B.C. (with *Admetus*, hyp. 4 Ar. *Plut.*). He produced *Κοιλοφόροι*

(hyp. 1 Ar. *Eq.*, emended [from 'Υλο- or 'Ολο-] to conform with *IG* xiv. 1097) in 424 B.C.; he won the first prize at the City Dionysia (with Διόνυσος ἀσκητής) in 394 B.C., but the first of his two victories at the Lenaea cannot have been much after 440 (*IG*. ii². 2325. 120). We have five titles in all.

FCG i. 210 ff., *CAF* i. 690 ff.; *FAC* i. 198 ff. K. J. D.

ARISTON (1) of Chios, pupil of Zeno of Citium, founded an independent branch of the Stoic school and was, about 250 B.C., the most influential philosopher at Athens, with the exception of Arcesilaus. He apparently left behind him no writings except letters. He represented a return towards the views of the Cynics, taking no interest in logic or physics, and rejecting Zeno's recognition of a distinction between the *προηγμένα* and the *ἀποπροηγμένα* (preferable and non-preferable) among things indifferent, and holding that the end of life is *ἀδιαφορία*, complete indifference to them all.

Testimonia in II von Arnim, *STF* i. 75–90. M. Pohlenz, *Die Stoa* (1955). W. D. R.

ARISTON (2) of Ceos, Peripatetic, probably succeeded Lycon (q.v.) as head of the Lyceum c. 225 B.C. He was not an original philosopher but became an important source for the earlier history of his school: Diog. Laert. seems to have derived from him the wills of Aristotle and his successors, Theophrastus, Straton, and Lycon, together with some biographical details and a bibliography of Straton and perhaps of Aristotle. Works: *Lives* (mainly anecdotal) of philosophers; *Περὶ τοῦ κομφιζεῖν ὑπερηφανίας*; *Τὴν ὁδὸν ἢ περὶ γήρας*; *Λύκαν*; *Ἑρωτικά ὅμοια*; a supplement to Theophrastus' *Περὶ ὑδάτων*. He continued the Theophrastean tradition of writing *Χαρακτήρες* and was influenced in his writing of them by the lively style of Bion (q.v. 1) of Borysthenes.

Ed. F. Wehrh (1952) P. Moraux, *Listes anciennes des ouvrages d'Aristote* (1951), 237 ff. (contra, I. During, *Glass et Med.* 1956).
W. D. R.

ARISTON (3) of Alexandria, a Peripatetic associated with Antiochus of Ascalon at Alexandria in 87 B.C. He is quoted by Simplicius as an authority on Aristotle's *Categories*.

ARISTONICUS (1) (d. 128 B.C.), perhaps an illegitimate son of Eumenes II of Pergamum. He led a formidable popular rising after the death of Attalus III and the bequest of his kingdom to Rome (133–130). His motives may have been mainly nationalistic and anti-Roman, but his appeal was to the depressed classes, especially slaves and non-Greeks. The name *Heliopolis* ('City of the Sun') in connexion with his projected State, and the presence of Blossius (formerly tutor of the Gracchi), suggest a 'Utopian' programme of social revolution. But if he was really claiming the throne of Pergamum as Eumenes III, as a recent and attractive attribution of a rare coin series suggests, his aims may well have been more down-to-earth. After some early successes in the field he was captured by Roman forces and put to death.

G. T. G.

ARISTONICUS (2), son of Ptolemaeus, an Alexandrian grammarian of the Augustan age (Strabo. 1. 2. 31). Much of his chief work—on the Aristarchan recensions of Homer—is preserved in our scholia (cf. Nicanor). He also wrote *Περὶ ἀσυντάκτων ὀνομάτων*, commentaries on Hesiod and Pindar, and *Περὶ τοῦ ἐν Ἀλεξανδρείᾳ Μουσείου*.

CRITICISM. M. van der Valk, *Researches on the Text and Scholia of the Iliad* 1 (1963), 553 ff.
F. B. R. F.; R. B.

ARISTONOUS (3rd c. B.C.), son of Nicosthenes, a Corinthian citharode. On a *stèle* found at Delphi (*BCH* 1894, 563 ff.) the Delphians give to him and his descendants certain privileges because of his hymns to the gods. The date has been fixed at 222 B.C. by Pomtow (*Klio* 1914, 305). Then follows a Paean to Apollo of forty-eight lines written in regular eight-lined stanzas of glyconics and pherecrateans.

Diehl, *Anth. Lyr. Graec.* ii. 297-300, Powell, *Coll. Alex.* 162 ff.; Powell and Barber, *New Chapters* 145. C. M. B.

ARISTONYMUS, comic writer, contemporary of Aristophanes (schol. Pl. *Ap.* 19 c), whom he attacks in his *'Hlaos pūvōv*.

FGG i. 196-7, CAF 1 668-9.

ARISTOPHANES (1), the greatest poet of the Old Attic Comedy, was the son of Philippus and the father of Araros (q.v.). It has been inferred (wrongly, perhaps) from *Ach.* 652 ff. that he lived, or owned property, on Aegina. Since he considered himself too young in 427 (*Ar. Nub.* 530 f. c. Schol.) to produce a play himself, he is unlikely to have been born earlier than 457, and may have been born as late as 445. He died in or shortly before 385. Eleven of his plays survive; we have in addition thirty-two titles (some of them alternative titles, and some certainly attributed to other authors) and nearly a thousand fragments. The surviving plays, and the datable lost plays*, are:

427: *Banqueters**, produced by Callistratus. It contained (frs. 198 and 222 and *Nub.* 529 c. Schol.) an argument between a profligate son and his father and also between the profligate and a virtuous young man.

426 (City Dionysia): *Babylonians**, produced by Callistratus. Dionysus was a character in the play (fr. 70), and by its 'attacks on the magistrates' it provoked a prosecution—apparently unsuccessful—by Cleon (Schol. *Ar. Ach.* 378).

425 (Lenaea, first prize): *Acharnians* ('*Ach.*'), produced by Callistratus; the 'hero' makes, and enjoys to the full, a private peace-treaty.

424 (Lenaea, first prize): *Knights* ('*Eq.*'), produced by Aristophanes himself, Cleon is savagely handled and worsted in the guise of a favourite slave of Demos, and a sausage-seller replaces him as favourite.

423 (City Dionysia, third and last prize): *Clouds* ('*Nub.*'), ridiculing Socrates as a corrupt teacher of rhetoric. We have only the revised version of the play, dating from the period 418-416; the revision was not completed and was never performed (Schol. *Nub.* 552).

422 (Lenaea, second prize): *Wasps* ('*Vesp.*'), produced by Philonides (q.v.), ridiculing the enthusiasm of old men for jury-service.

421 (City Dionysia, second prize): *Peace* ('*Pax*'), celebrating the conclusion of peace with Sparta.

414 (Lenaea): *Ampharaus**, produced by Philonides (hyp. 2 *Ar. Ar.*).

414 (City Dionysia, second prize): *Birds* ('*Av.*'), produced by Callistratus, a fantasy in which an ingenious Athenian persuades the birds to build a city in the clouds and compels the gods to accept humiliating terms.

411: *Lysistrata* ('*Lys.*'), produced by Callistratus, in which the women of all the Greek states compel their menfolk, by a 'sex strike', to make peace; and *Thesmophoriazuesae* ('*Thesm.*')—datable in relation to Euripides' *Helena* and *Andromeda*, and by political references—in which the women at the Thesmophoria plan to obliterate Euripides, and an elderly kinsman of his takes part in the debate, disguised as a woman.

408: the first *Plutus** (Schol. *Ar. Plu.* 173).

405 (Lenaea, first prize): *Frogs* ('*Ran.*'), in which Dionysus goes to Hades to bring back Euripides, finds

that he has to be the judge in a contest between Aeschylus and Euripides, for the throne of poetry in Hades, and ends by bringing back Aeschylus.

392: *Ecclesiazusae* ('*Ecl.*'), the date depends on a partially corrupt scholium (on *Ecl.* 193) and on historical references, and a case can be made for 391. In this play the women take over the running of the city and introduce community of property.

388: the second *Plutus* ('*Plu.*'), in which the god of wealth is cured of his blindness, and the remarkable social consequences of his new discrimination are exemplified.

After 388: *Aiolosikon** and *Cocalus**, both produced by Aristophanes' son Araros (hyp. 4 *Ar. Plu.*). *Cocalus* anticipated many of the characteristics of Menander (q.v. 1), according to *Vit. Ar. = Proleg.* (Dübner) XI.

In the first period, down to 421, Aristophanes followed a constant procedure in the structure of his plays, particularly in the relation of the *parodos* (entry of the chorus) and the *parabasis* (address by the chorus to the audience) to the rest of the play. From *Ar.* onwards we see significant changes in this procedure, culminating, in *Ecl.* and *Plu.*, in the introduction of choral songs irrelevant to the action of the play (indicated in our texts by the word *χοροῦ*), and in *Plu.* the chorus seems, for the first time, something of an impediment to the unfolding of the plot (see COMEDY, MIDDLE). At the same time *Ecl.* and *Plu.* show a great reduction (though not a disappearance) of strictly topical reference. All the evidence suggests that Aristophanes was a leader, not a follower, in the changes undergone by comedy in the early fourth century B.C. Aristophanes' language is colourful and imaginative, and he is a master of lyric poetry in every vein, humorous, solemn, or delicate. He has a keen eye and ear for the absurd and the pompous; his favoured media are parody, satire, and exaggeration to the point of fantasy, and his favourite targets are men prominent in politics, contemporary poets, musicians, scientists, and philosophers, and—as is virtually inevitable in a comedian writing for a wide public—manifestations of cultural change in general. His sympathetic characters commonly express the feelings of men who want to be left alone to enjoy traditional pleasures in traditional ways, but they are also ingenious, violent, and ruthlessly self-seeking in getting what they want. Having been born into a radical democracy which had been created and strengthened by his father's and grandfather's generations, Aristophanes nowhere betrays sympathy with oligarchic reaction, least of all in 411, when this reaction was an imminent reality. His venomous attack on Cleon in *Eq.* is adequately explained by Cleon's earlier attack on him (see above), and his treatment of other politicians does not differ significantly from the way in which 'we' satirize 'them' nowadays. No class, age-group, or profession is exempted from Aristophanes' satire, and if we interpret his plays as moral or social lessons we never find the lesson free of qualifications and complications. In *Eq.* Cleon is worsted not by an upright and dignified man but by an illiterate and brazen cynic who beats him at his own game. In *Nub.* Socrates' 'victim' is foolish and dishonest, and in the contest between Right and Wrong, Right, who is characterized by bad temper, sexual obsession, and vacuous nostalgia, ends by 'deserting' to the side of Wrong. In *Thesm.* Euripides, sharply parodied in much of the play, triumphs in the end. In *Ran.* the end of the contest between Aeschylus and Euripides finds Dionysus in a state of complete irresolution. Modern sentiment admires the heroine of *Lys.*, but possibly Aristophanes and his audience found preposterous much in her which seems to us moving and sensible. Aristophanes' didactic influence (as distinct from his influence in raising the intellectual and artistic

mostly Neoplatonists, beginning with Aspasius (fl. c. A.D. 110) and ending with Sophonias (c. 1300).

7. The extant works were not prepared for publication, but they are for the most part too full and elaborate to be mere notes for lecture purposes. They rather suggest memoranda meant to be shown to students who had missed the lectures, and to preserve a more accurate record than memory or the notes of students could provide. The indications of date are slight; there are references which indicate that some of the works were begun early, and several which show that they were finished late in Aristotle's life. Many references imply an Athenian audience. The writings would probably reflect a progressive withdrawal from Plato's influence. Using this and other indications of date, we may say that Aristotle began by writing dialogues on the Platonic model, but that in the latest of these his protest against Plato's 'separation' of the Forms began to be felt. To the period of his stay in the Troad, in Lesbos, and in Macedonia belongs the earliest form of the extant works largely Platonic in character—the *Organon*, *Physics*, *De Caelo*, *De Generatione et Corruptione*, *De Anima* 3, *Eudemian Ethics*, the oldest parts of the *Metaphysics* and the *Politics*, and the earliest parts of the *Historia Animalium*. To the second Athenian period belong the rest of his works of research—*Meteorologica*, the works on psychology and biology, the *Constitutions*, and the other historical researches, the *Nicomachean Ethics*, the *Poetics*, the *Rhetoric*, and the completion of the works begun in the middle period.

8. It is impossible in a few pages to offer any useful summary of Aristotle's philosophy; for a philosopher's conclusions are worth little without his reasons for them, and Aristotle's reasons cannot be stated briefly. It may be more useful to offer a more general characterization. The main lines of his thought were to a large extent determined by his association with Plato and the Academy; and if we may distinguish his philosophical from his scientific works (though the distinction is only one of degree), it may be said that there is hardly a page of them which does not betray Plato's influence. The dialogues written before Plato's death seem to have shown little originality, and even in *Metaph. A*, written in the Assos period, Aristotle thinks of himself as still a member of the Platonic school. But by that time important differences begin to be apparent. Aristotle was an Ionian, with all the Ionian interest in observation and in the world of change. He felt unable to follow Plato in asserting the 'separate' existence of the Ideas, and unable to accept unchanging Ideas (as he mistakenly assumes that Plato did) as sufficient explanation of the facts of change and motion. The later development of Plato's thought, in which numbers took the place of Ideas as the explanation of the universe, he thought at least equally unsatisfactory. He is sometimes described as 'no mathematician', but this is an exaggeration. He was probably abreast of the mathematics of his time; he was interested in the astronomical theories of Eudoxus and Callippus (*Metaph. A* 8) and his discussion of the problems of infinity and continuity is masterly. But he did not realize to anything like the same extent as Plato the importance of mathematics as the foundation of physical science. It is true that 'God always geometrizes'; in physical science mathematical precision is all-important, and from his failure to realize this he was led, in his physical works, to adopt and reason from assumptions which to common sense, in the absence of exact measurement, were highly plausible, but were mistaken; so that his influence on dynamics and on astronomy was a retarding one. The science in which he was most at home was biology, in which, in its early stages, exact measurement is less important. Here his combination of close observation with acute

reasoning made him *facile princeps* among the ancients. 'Linnaeus and Cuvier have been my two gods,' Darwin wrote, 'but they were mere schoolboys to old Aristotle.' It is possible that Plato stimulated him to this study; for at least one other member of the school, Speusippus, tried his hand at biology. But in the main Aristotle was here reverting to the Ionian, pre-Socratic tradition of curiosity about all sorts of natural phenomena.

9. The same passion for research was shown in his vast collections of materials about the constitutions of Greek States, the history of the drama, the history of the Pythian games; apparently nothing was too great or too small to rouse his curiosity. One may even say that his political thought was to some extent modelled on his biological researches. He took over his original classification of constitutions from Plato's *Politicus*, with a difference. But in one passage (*Pol.* 1290^b21–1291^b13) he envisages a classification which takes account of the various forms assumed in various States by the organs of the body politic, as biological classification takes account of the forms assumed by the bodily organs; and we can see in *Pol.* 4 and 6 an attempt to achieve for States such a precise description of their types as he gives for animals in the *Historia Animalium*.

10. His mind has two well-marked characteristics. One is a sort of inspired common sense which makes him avoid extremes in any direction. In theory of knowledge he is neither a rationalist nor an empiricist; he recognizes the parts played both by the senses and by the intellect. In metaphysics he is neither a spiritualist nor a materialist; he admits the claims both of mind and of body, and regards the two as inseparable elements in the living being. In ethics he is neither a hedonist nor an ascetic; he recognizes in pleasure an element, though a secondary and consequential one, in the good life. In politics he is neither an aristocrat nor a democrat; he advocates the rule of the middle class, which he regards as the steadiest element in the State. He often writes what will not bear very close scrutiny; for many distinctions have become clear through later philosophical discussion that were not clear in his day. But by virtue of his strong common sense he rarely writes what anyone would regard as obviously untrue.

11. The other leading characteristic of his mind is its tidiness and love of order; and by this philosophy has greatly benefited. For one thing, we owe to him, in the main, the classification of the sciences with which we habitually work. He divides them into the theoretical, which aim simply at knowledge, the practical, which aim at improving conduct, and the productive, which aim at the production of things useful or beautiful; and among the theoretical he distinguishes mathematics, which studies things that are eternal and unchangeable but not substantial, physics, which studies things substantial but subject to change, and 'first philosophy' or theology, which studies what is both eternal and substantial (*Metaph. E*. 1). And what is more important, he practises what he preaches. In a dialogue of Plato we are apt to find metaphysics and ethics, psychology and politics, all present together; the variety is part of the charm, but sometimes leaves the reader perplexed as to what Plato is mainly driving at. To logic, to physical science, to zoology, to psychology, to metaphysics, to ethics, to politics, to rhetoric—to each Aristotle devotes one or more works in which, though with many false starts, he sticks to one great subject with a wonderful feeling for relevance; the continuity he achieves is the more remarkable because none of the extant works was revised for publication, and several if not all of them consisted originally of separate essays which he never brought formally into a whole. So it is that, while there have always been philosophers who derived more inspiration

from Plato, the working programme of the philosophical sciences has owed more to Aristotle.

12. His orderliness of mind shows itself also in the development of a terminology which has been of great service to philosophy. When we talk or write philosophy, we use a vocabulary which derives more from him than from anyone else; and much of it has entered into the speech of all educated men. Universal and particular, premise and conclusion, subject and attribute, form and matter, potentiality and actuality—these are a few of the many antitheses which he first introduced by name. They have their danger, and much harm has been done by the glib repetition of them when the danger has not been recognized; but they have provided philosophy with a framework that has been of great service.

13. His love of classification is another result of his orderliness of mind. The leading categories—substance, quality, and relation—received their names from Plato; but the idea of a complete classification of the *summa genera* of nameable entities seems to be Aristotle's own; for Plato never attempts a classification of categories in this sense, and the 'greatest kinds' of the *Sophistes* correspond rather to the *transcendentia* which characterize all existing things. Again Aristotle has a much more elaborate classification of the faculties of the soul than Plato. But it may be noted that he is singularly free from the dangers of faculty psychology. He thinks it important to mark off mental activities into their kinds, but he does not think he has explained activities by referring to the faculties of which they are the manifestation; and his distinction of the faculties is accompanied by an awareness of the links between them. Sensation, for him, is of particulars, and knowledge of universals; but sensation is of particulars as characterized by universals, and knowledge is of universals as exemplified in particulars. Again, he has a most elaborate classification of animal kinds; but these form a *scala naturae* in which the transition from one kind to another is never very wide, and the lower kinds present analogues of what is found in the higher.

14. Aristotle's work has till recently been treated as a closed system of doctrine all held by him simultaneously, and much ink has been wasted in the attempt to reconcile the irreconcilable. This tendency requires correction in two ways. First, while some of his works (most notably the account of the syllogism in the *Prior Analytics*) proceed with assured mastery from point to point, others (e.g. *De An.* 3, the *Metaphysics*, and the *Politics*) are little more than a series of *ἀπορίαι* to which only tentative answers are given. Secondly, Thomas Case and, on a much larger scale, Werner Jaeger have shown that there is a great deal more development in his doctrine than has hitherto been recognized. As Jaeger has shown, the general tendency is from Platonic otherworldliness to a growing interest in the phenomena of the world around us. Yet Aristotle, while he became more of a scientist, probably did not become less of a philosopher. The last book of the *Physics* and *A* of the *Metaphysics*, which cannot be dated early (since they presuppose the highly original treatment of the infinite and the continuous, to which apparently nothing in the Academy showed the way), show him still seeking for a super-sensuous explanation of change in the sensible world. W. D. R.

15. The foregoing account of Aristotle was written by Sir David Ross for the first edition of this Dictionary, and summarizes conclusions drawn from the most substantial and authoritative work done on Aristotle in this century. For this edition it will be enough to notice some points which recent scholarship has left controversial. (A) The thesis of Case and Jaeger, that Aristotle for many years endorsed and then progressively freed himself from Plato's metaphysics, may be said to have lost ground.

Partly this is due to fresh study of the crucial 'fragments' (not only of their content but of their claim to authenticity), partly to a growing agreement that some of the works which stress Aristotle's opposition to Plato (e.g. the logical works) can plausibly be assigned in whole or part to his years in the Academy. Many scholars no doubt remain broadly satisfied with the thesis; a few have reverted to the treatment of Aristotle's work as a 'closed system' which Ross rightly condemns; others argue that Aristotle's later work shows a positive increase in sympathy with Plato's aims, e.g. if one contrasts the analysis of substance in *Met. Z H*, or the enlargement of the idea of a science in *Met. I*, with the apparently earlier treatment of these topics in the *Organon*. (B) The belief that Aristotle's major treatises remained generally unknown until their recovery and publication in the first century B.C. has been weakened, partly by reconsideration of the debts of Epicurus and the Stoics to Aristotle, partly by discussion of the lists of Aristotle's works preserved in Diog. Laert. and the *Vita Menagiana* and dating from the third/second century B.C. (C) The picture of Aristotle as a serious and honest researcher has been attacked at one point: his accounts of the views of other thinkers, which serve as a starting-point for many of his own theories and as a foundation for later histories of philosophy, have been argued to be systematically prejudiced. The thesis as a whole has not won general assent, but it has been valuable in stimulating discussion of the texts.

For Aristotle's views on ANATOMY AND PHYSIOLOGY, ASTRONOMY, AFTER-LIFE, see under those titles. See also DIALOGUE, GREEK; LITERARY CRITICISM, § 4; METEOROLOGY; MUSIC, § 2; PAIDEMIOGRAPHERS; PHYSICS, § 2.

ARISTOXENUS, born at Tarentum between 375 and 360 B.C., philosopher and musical theorist. He received a musical training from his father Spintharus and from Lamprus of Erythrae (not the Lamprus mentioned by Plato, *Menex.* 236 a). For some time he lived at Mantinea; and during a sojourn at Corinth (after 343) he became familiar with the exiled Dionysius the Younger (fr. 9). At Athens he became the pupil of the Pythagorean Xenophilus and finally of Aristotle. His reputation amongst his fellow-pupils at the Lyceum was such that he expected to succeed to the headship of the school; but the master passed him over in favour of Theophrastus. Aristoxenus is said by the *Suda* to have assailed Aristotle's memory; but though he retailed scandalous stories about Socrates (fr. 25-30) and alleged that most of Plato's *Republic* was plagiarized from Protagoras (fr. 33), the one extant reference he makes to Aristotle by name (*Harm.*, p. 31) is laudatory. Whether he ever returned to Italy is unknown; nor is there any evidence about the date of his death. The *Suda* gives the number of his books as 453.

WORKS. (a) *Principles and Elements of Harmonics*, of which three books are in part preserved. The first deals with the scope of the subject, movements of the voice, pitch, notes, intervals, and scales; ii covers the chief topics of i, but includes keys (*τῶνοι*), modulation, and the construction of melody (*μελοποιία*) also, and is more polemical in tone; iii contains twenty-seven theorems on the legitimate combinations of intervals and tetrachords in scales. These three books do not give a complete theory of music; nor are they from a single work. The most probable view is that we have the remains of two treatises, the *Principles* (*Ἀρχαί* = i) and the *Elements* (*Στοιχεῖα* = ii and iii), both of which have suffered partly by curtailment and partly by the insertion of passages from other treatises. Further details of Aristoxenus' musical theory are found in later writers such as Plutarch

(*De mus.*), Cleonides, Aristides Quintilianus; and a short fragment on Harmonics printed in *POxy.* iv. 667 is probably from some work of Aristoxenus.

(b) *Elements of Rhythm* (*Ῥυθμικὰ Στοιχεῖα*), of which part of the second book is extant. It deals with the nature of rhythm (defined as a *τάξις ἀφωρισμένη χρόνου*), the primary unit of rhythm (*ὁ πρώτος χρόνος*), feet, their distribution between arsis and thesis, and their differences. Since Aristoxenus refers to his earlier writings on musical theory (282), this work is possibly later than the *Harmonics*. Porphyry on Ptol. *Harm.* (78 Düring) quotes from a work entitled *Περὶ τοῦ πρώτου χρόνου*; and passages based on Aristoxenus' theory of rhythm are found in later authors, especially the Byzantine Michael Psellus (11th c.). An important fragment (*POxy.* i. 9), on the rhythmization of cretic sequences, is attributed to a treatise by Aristoxenus on rhythmical composition (see Powell and Barber, *New Chapters* ii. 178).

(c) Other musical works were: *On Music* (*Περὶ μουσικῆς*, at least four books; cf. Ath. 14. 619 d), *On Melody* (*Π. μελοποιίας*, at least four books; cf. Porph., 125), *On Listening to Music* (*Π. μουσικῆς ἀκροάσεως*), *On Keys* (*Π. τῶνων*), *On Auloi and Musical Instruments* (*Π. αὐλῶν καὶ ὀργάνων*), *On the Boring of Auloi* (*Π. αὐλῶν τρήσεως*), *On Aulos-Players* (*Π. αὐλητῶν*), *On Tragic Poets* (*Π. τραγῳδοποιῶν*), *On Dancing in Tragedy* (*Π. τραγικῆς ὀρχήσεως*); and the obscurely entitled *Πραξιδιαμνεία* seems to have contained musical material.

(d) Works of a biographical, historical, and miscellaneous character were: the *Lives* (*Βίαι ἀνδρῶν*, including biographies of Pythagoras, Archytas, Socrates, and Plato), *Pythagorean Maxims* (*Πυθαγορικὰ ἀποφάσεις*), *Comparisons* (*Συγκρίσεις*), *Educational Laws* (*Νόμοι παιδευτικοί*), *Political Laws* (*Νόμοι πολιτικοί*, at least eight books; cf. Ath. 14. 648 d), *Historical Notes* (*Ἱστορικὰ ὑπομνήματα*), *Short Notes* (*Τὰ κατὰ βραχὺ ὑπομν.*), *Miscellaneous Notes* (*Σύμμικτα ὑπομν.*, at least sixteen books; cf. Photius *Bibl.* 176), *Scattered Notes* (*Τὰ σποράδην*), and *Table Talk* (*Σύμμικτα συμποτικά*).

Aristoxenus' presentation of the science of Harmonics differed in many important particulars from that of his predecessors and exercised a potent influence for many centuries (*see MUSIC*). His pride in his own achievements, his combativeness, his tedious proofs of the obvious, and his parade of logic are sometimes irritating; but he shows himself a worthy pupil of Aristotle in his method of expounding by definition and subdivision into categories, and his system of musical theory is distinctly superior to the empirical and half-mystical investigations of the Pythagoreans. He also had a deep interest in the ethical and educational value of music and showed a strong preference for the older styles of composition. The fundamental importance of his work on rhythm has also long been recognized. Like other Peripatetics, Aristoxenus did not restrict his inquiries to a single subject; but most of what has been preserved from his other works is quoted for its value as gossip. For his philosophical views we have only the evidence of Cicero (*Tusc.* i. 19) that Aristoxenus regarded the soul as a 'tuning' (*intentio, ἀρμονία*) of the body. This opinion, which would be attractive to a musician, may have been taken from the later Pythagoreans; for a somewhat similar view is expounded by Simplicius the Theban, disciple of Philolaus, in *Phaedo* 86 b; but it is quite inconsistent with the earlier Pythagorean doctrine of transmigration and could not have been countenanced by Aristotle.

TEXTS. *Harm.*: Meurius (Leyden, 1616), Meibomius (Amsterdam, 1652), P. Marquard (1868), R. Westphal (in *Aristoxenus* ii, 1893), H. Macran (1902), R. da Rios (1954); and add *POxy.* iv. 667. *Rhythm*: Morelli (with *Aristidis oratio*, etc., Venice, 1785), R. Westphal (in *Lehrdtze der gr. Rhythmiker*, 1861 and in *Aristox.* ii, 1893), P. Marquard (1868); and add *POxy.* i. 9. Fragments: F. Wehrli, *Aristoxenus* (1945).

ARIUS (1) **DIDYMUS** (1st c. B.C.) of Alexandria, philosophical teacher of Augustus. Works: a *Consolatio* addressed to Livia on the death of Drusus: a doxographical work of which Stobaeus preserves two long frs. on the Stoic and Peripatetic ethics. He is described as a Stoic, but seems to have shown an eclecticism similar to that of Antiochus of Ascalon, by whom he was influenced.

Ed. Diels in *Doxographi Graeci*, 447-72.

W. D. R.

ARIUS (2) (c. A.D. 260-336) was the most important of early Christian heretics. Probably a Libyan by birth and a pupil of Lucian presbyter of Antioch, he became a leading presbyter at Alexandria. About 319 (some argue 323) he began propagating subordinationist views about Christ's person (i.e. that the Son was subordinate to the Father). Controversy flared up, and he was condemned at the council of Nicaea (325). Though rehabilitated c. 335 through the influence of Eusebius bishop of Nicomedia with the imperial family, he died shortly after. Three important letters and some fragments of his *Thalia* (verse and prose popularizations of his doctrines) survive. His characteristic teaching was that the Son was a creature, created before time and superior to other creatures, but like them changeable and distinct in essence from the Father.

J. N. D. K.

ARMENIA, a mountainous country of Asia. Strabo (11. 520 ft.) describes it as bounded on the east by Media Atropatene, on the north by Iberia, Albania, and Colchis, and on the west and south by the Euphrates, Cappadocia, and Commagene. The country was variously divided at different periods; some districts (e.g. Sophene, Gordyene) were often independent principalities. The Romans distinguished between Armenia Maior, the whole plateau east of the Euphrates, and Armenia Minor, a small kingdom to the west of it.

Once the seat of the independent kingdom of Urartu, Armenia was incorporated into the Persian Empire, in which it formed a satrapy. Xenophon (*An.* 4. 2 and 3) describes the country as he saw it. Under Seleucid rule the Armenian cantons were administered by local governors, but after Magnesia (189 B.C.) the natives declared their independence, and one king, Artaxias, became sovereign over all Armenia Maior. The imperialistic ambitions of Tigranes (q.v. 1) the Great and his alliance with Mithridates VI, king of Pontus, brought him into conflict with Rome; after the campaigns of Lucullus and Pompey Armenia became a Roman protectorate. To restore and maintain this protectorate was the avowed aim of Augustus and the emperors who succeeded him. Armenia became the subject of a continual tug-of-war between the two world-powers, Rome and Parthia (and its successor, Sassanid Persia), each seeking to maintain control. A dynasty of Arsacid princes founded by Tiridates (q.v. 3) generally managed to maintain a balance, remaining Parthian in sympathy while professing friendship to Rome. Trajan temporarily reversed Roman policy by annexing the country.

Meanwhile Armenia Minor had suffered a bewildering succession of rulers between the time of Pompey and Nero: it was granted by Rome to various neighbouring kings. Under Deiotarus of Galatia in Pompey's day, it was later seized by Pharnaces (q.v. 2), but after Zela it was

given by Caesar to Ariobarzanes of Cappadocia (47). Antony gave it to Polemo of Pontus (37?) but after Actium Octavian installed Artavasdes, a former king of Media; later, however, in 20 B.C. it went to Archelaus of Cappadocia. Perhaps annexed by Tiberius, it was granted by Gaius in A.D. 38 to Cotys (grandson of Polemo I of Pontus). On the latter's death it was held by a son of Herod of Chalcis (54-72), and then was incorporated by Vespasian in the Roman province of Cappadocia.

Armenia was the first kingdom officially to adopt Christianity, and the new religion and its persecution by the Sassanids fostered a nationalistic spirit. In A.D. 387 the country was divided between Persia and Byzantium. The Arabs conquered it c. A.D. 653.

ARMIES, GREEK AND HELLENISTIC. The composition of the Homeric army is never clearly stated in the epic, and was no doubt never exactly defined. Generally there is a distinction drawn between the champions (*πρόμαχοι*) and the general mass of soldiers (*πληθὺς*). Probably only the chieftains were fully armed and armoured; the common soldiers equipped themselves as best they could.

2. There is no direct continuity between the Homeric army and the classical. In the latter (for which the Athenian can be taken as typical) the organization was based on the tribal system and property-qualification. The citizen of any age between eighteen and sixty, if not disabled, might be required at need to serve the State in a military capacity, as horseman, hoplite, or light-armed soldier, according to his assessment. In practice the hoplite was the chief unit. Cavalry were scarce in Greece, apart from Thessaly and Macedon, neither of which was a great military power between 550 and 375 B.C. The usual proportion of hoplites to cavalry in an army was ten to one. Light-armed citizen troops had no fixed equipment: they were only called out *en masse*, when an army marched *πανδημει* into a neighbouring State or to resist such an invasion. Their numbers might be large,

but their military efficiency was slight. The Athenian hoplites were organized into ten tribal regiments; the cavalry were grouped into two divisions of five tribes each and were led by two hipparchs. Total numbers on the Athenian army-list (*κατάλογος*) are never clearly stated; the most important summary is in Thuc. 2. 13. 6 ff., which admits of various interpretations. Ordinarily young men from eighteen to twenty and older men from fifty upwards were retained for garrison duty only. The age-classes required were called up by reference to their year-archons (*ἐπώνυμοι*) or in the fourth century soldiers were alternatively summoned by the detachment (*ἐν τοῖς μέρεσιν*). The only standing army in fifth-century Athens were the *τοξόται*, archers mostly employed for police duties. They numbered 1,600 and were mainly hired from abroad.

3. Every Greek army had its local peculiarities, but the State with the most individual system was Sparta, where all the full citizens were equals, and therefore none was less than hoplite in status. Their cavalry were few and unsatisfactory. In the Persian wars the Spartans sent to Plataea a force of 5,000 citizens as hoplites, supported by 5,000 *perioikoi*. At that period they were divided into five territorial regiments, but at the battle of Mantinea (418 B.C.) the regiments were seven in number, subdivided into *πεντηκοστῆς* and *ἐνωμοτίαι*, and in addition there was an eighth, separate, *Scirite λόχος* of 600. Thucydides reckoned the main hoplite force at Mantinea as 4,298 men, excluding the Scirites, and described them as five-sixths of the Spartan army. The cavalry force may have been 400, as in 424 B.C. (Thuc. 4. 55. 2). The early fourth century saw a further reorganization into five *morai*, subdivided into *λόχοι*, *πεντηκοστῆς*, and *ἐνωμοτίαι*. The extent to which the army at Mantinea or later was composed of a blend of Spartans and *perioikoi* is uncertain, but the best theory is that Spartans and *perioikoi* were incorporated in the same organization, and that the changes of system correspond to increasing proportions of *perioikoi* and declining numbers of Spartiates. During the Peloponnesian War the Spartans were also compelled more and more to use Helots for foreign expeditions and garrison duty abroad. They were sent out under the command of one Spartiate with perhaps another Spartan or two as his lieutenants. In the fourth century Sparta like other Greek states was forced to employ mercenaries (q.v.).

4. The Macedonian army is best known as it was organized under Alexander the Great, but no doubt his system was taken over directly from Philip II, and its general lines may be much older. At that time the infantry consisted of the *πεζεταίροι*, about 3,000 strong, who formed the phalanx (q.v.), and the *ὑποπισταί*, probably about twice as many, who were more lightly armed. The *corps d'élite* of the Macedonian cavalry were the *ἐταῖροι*, grouped in eight *ἑταίαι*; but Alexander also had at his command large forces of Thessalian cavalry as well as Thracians, and special light-armed levies, such as the Agrianes. In addition he led into Asia the forces of his Greek allies and a certain number of mercenaries.

5. The armies of the *Diadochi* were in practice little else than mercenary bands, but with the founding of the Hellenistic kingdoms new national armies were established. (1) The army of the Ptolemies is best known from Polybius' account (5. 65) of the battle of Raphia (217 B.C.) and from many casual references in inscriptions and papyri. The main divisions were (a) native Egyptians, (b) Macedonians, and (c) mercenaries. Of these the Macedonians were the most important, drawn from settlers with an obligation to provide military service, but the standing army mostly consisted of mercenaries who supplied the palace guard. (2) The army of the Seleucids was remarkable for the great

variety of nationalities from which it drew its soldiers. Its phalanx was armed in the Macedonian style, but was no doubt of very mixed blood, and was raised from the military settlers (*κἀταίκοι*). (3) The Macedonian army was still in theory based on its former system of citizen levies, but actually the manpower of Macedon had been seriously exhausted, and in later periods barbarian mercenaries from the north had to be hired in large numbers. (4) In the Hellenistic period the Achaean and Aetolian Confederacies were the chief military powers among the Greek States. Their forces were composed in varying proportions of citizens and mercenaries. They copied the royal armies in having more varied types of troops, and tended more and more to depend on professional soldiers.

ARMIES, ROMAN. Traditional accounts of the early Roman army are tendentious and may often reflect later conditions. It seems, however, probable that from the first military service was regarded as an essential feature of citizenship, but as the poor could not provide suits of armour, in practice service devolved upon the rich. This inequality was lessened by two reforms. (a) Citizens were grouped for service in accordance with their means (traditionally since Servius Tullius). Thus the richest provided the cavalry and the poorest the light-armed troops. (b) As the need for longer campaigns grew, pay was introduced (traditionally c. 400 B.C.). Thus gradually the State assumed responsibility for the maintenance of its soldiers.

2. By the time of the Punic Wars the Roman army consisted of a citizen militia levied according to seasonal requirements from citizens possessing a certain property qualification (although in a crisis even slaves might be enrolled), and organized in legions under consuls and military tribunes. The *Socii* were obliged by treaty to provide contingents, of equal numbers (theoretically) with those of Rome. They were commanded by *praefecti*, half of whom were Roman officials under the supreme control of the consuls.

3. This system of military service was radically altered by the Marian army reforms and the enfranchisement of Italy. By the former service in the legions was opened to all Roman citizens, and a professional army voluntarily enlisted replaced the conscript militia. By the latter Italians became eligible for military service. Consequently the separate contingents of *Socii* disappeared, and the Roman army now consisted of legions and of *auxilia* raised outside Italy. During the last century of the Republic the army became divided into *de facto* standing armies permanently stationed in certain of the provinces, and emergency armies raised to meet specific crises by generals with long-term commands. The men of the emergency armies, who were often induced to volunteer because of the general's personality and reputation, increasingly felt their allegiance owed to him rather than to the State: the generals in their turn recognized their need for the soldiers' political support. Thus the republican army disintegrated into a series of professional armies owing loyalty each to its own general.

4. Out of the armies of the triumvirs Augustus established a permanent standing army, composed of legions recruited from Roman citizens and *auxilia* from *peregrini*, who were enfranchised after their service. The normal term of service in the legions was at first sixteen years—the maximum liability during the Republic—with an additional four years' liability as a veteran, serving in a

separate corps, 'sub vexillo'. In A.D. 6 service was extended to twenty years 'sub aquila' and five years 'sub vexillo'. By the second century service had become entirely 'sub aquila' and for twenty-five years. In addition Augustus instituted the Praetorian Guard (see PRAETORIANI).

5. For the remainder of the Principate no substantial alterations were made, apart from the gradual elimination of differences between legions and *auxilia*, a process which was the inevitable consequence of the extension of Roman citizenship. The policy of concentrating the armed forces along or near the frontiers, and the absence of an adequate strategic reserve, led to the adoption of temporary expedients and the increasing use of vexillations, and were partly responsible for the crises of the third century.

6. To some extent this problem was solved in the reorganization consummated by Constantine. The imperial forces were divided into a mobile field army and stationary frontier garrisons. The praetorians were disbanded, and in place of their prefects *magistri militum* assumed the highest command under the emperors.

H. M. D. P.; G. R. W.

ARMINIUS, a chieftain of the Cherusci (q.v.), born c. 18 B.C. He had the Roman citizenship, and served in the Roman auxiliary forces, attaining equestrian rank. In A.D. 9 he lured P. Quinctilius Varus (q.v. 2) with three legions into difficult country near the Salus Teutoburgensis (in the general neighbourhood of Detmold) and destroyed the whole force. In 15 he fought against Segestes, leader of the pro-Roman faction, whose daughter Thusnelda he had married. Segestes was helped by Germanicus (q.v.) and Thusnelda fell into the hands of the Romans. In 16, though beaten by Germanicus and wounded, Arminius again thwarted the Roman conquest of Germany. In 17, helped by the Semnones and Langobardi, he seriously weakened the power of Maroboduus (q.v.); but presently, aspiring to kingship himself, he faced armed rebellion. An offer by a Chatti chief to poison him was rejected by Tiberius in 19, but he was soon treacherously killed by his own kinsfolk. He was a prudent tactician and a master of surprise attack; his greatness was recognized by Tacitus: 'liberator haud dubie Germaniae' (*Ann.* 2. 88). Much has been written, but little positive established, about his name, the period of his service in the Roman forces, and the exact site of his defeat of Varus: for the improbable suggestion that it gave rise to the legend of Siegfried no solid grounds have been discovered.

ARMS AND ARMOUR, GREEK. Homeric equipment is a special subject. No single description applies to all the passages, but a large number are best inter-

preted in connexion with Minoan and Mycenaean armaments, which are known from such representations as those on the Shaft-grave daggers. Their characteristic armour is a figure-of-eight-shaped shield made of one ox-hide and swung from the neck by a strap. The only protection used with it was a helmet. The chief weapon was a long rapier-like sword. Towards the end of the Bronze Age this style was displaced by the use of a much smaller round shield carried on the arm. This change involved the addition of a breastplate and greaves, while the sword became shorter and was used for cut as well as thrust. In the Homeric poems the champions begin by throwing spears at each other, and when these are gone they proceed to close combat with swords.

The standing type of the archaic and classical soldier is the hoplite (q.v.). This was ultimately derived from the soldier of the transition to the Iron Age. The trend was towards heavier armour and fighting based on weight of man-power. Shields were made of bronze, and spears and swords of iron. In addition hoplites wore breastplates, greaves, and helmets as defensive armour. The spear as used by hoplites and cavalry had become a pike for thrusting, not throwing, and was usually some seven feet in length. Only light-armed troops and some light cavalry used instead the throwing spear (ἀκόντιον). Along with the use of the spear as a pike, the sword (at least of the Athenian hoplite) had developed a short, straight-edged blade; it could only be used for very close fighting.

The fourth century saw the evolution of a more flexible type of equipment than the hoplite's. Experiments were first made with the peltast (q.v.), but the final change was the establishment of the Macedonian type as employed in the phalanx (q.v.). The spear (σάπσα) was increased still more in length to a maximum of 17 feet, and the shield reduced to a small target carried on the arm. The different ranks of the phalanx used different lengths of spear. The equipment for light-armed infantry and light- and heavy-armed cavalry was also specialized at this period.

H. W. P.

ARMS AND ARMOUR, ROMAN. In the regal and early republican period the Roman infantry was equipped on the Greek model (possibly under Etruscan influence). The *hasta* or thrusting spear was the chief offensive weapon, and the defensive armour varied with the individual's means. The richest soldiers had corselets (*loricae*) and light round shields (*clipei*), greaves (*ocreae*), and helmets of leather (*galeae*) or of bronze (*cassides*).

2. By the time of Polybius, however, the *pilum* or throwing spear had replaced the *hasta* as the Roman national weapon, and was carried by the first two lines (*hastati* and *principes*). For close fighting the two-edged cut-and-thrust Spanish sword (*gladius*) had been introduced. The *clipeus* was superseded by the *scutum*, a long shield of Samnite origin in two forms; the earlier oval, the later rectangular with a slight cylindrical curve, measuring four feet by two and a half feet, and metal-bound at top and bottom. Both forms survived into the Empire. A bronze plate (*pectorale*) was worn, probably over a leather jerkin, by the poorer soldiers, and a coat of mail (*lorica hamata*) by the richest. By contrast with the heavy-armed legionary the *velites* were equipped with only a small round buckler (*parma*) and a light spear (*hasta velitaria*), sword, and a helmet without a crest (*galea*). The legionary cavalry wore a helmet (*cassis*) and cuirass, and carried a *clipeus* and two-pointed spear (*hasta, tragula*), but no sword. The *Socii* were probably armed like their corresponding Roman contingents.

3. During the last century of the Republic the *pilum*

became universal in the legion, and its construction was improved so as to increase its penetrative powers. The change from *clipeus* to *scutum* had made greaves unnecessary and they dropped out of use. The *auxilia* in general were armed with their national weapons.

4. The change to a permanent standing army brought with it the introduction of a special parade uniform, which for centurions included greaves, already obsolete in service dress. Otherwise for the legionaries there were few important changes, apart from modifications in the cuirass. Of special interest is the *lorica segmentata* (the name is modern) represented on Trajan's column, which consisted of breast and back plates strengthened by iron hoops round the body and arms. On the column of Marcus Aurelius the legionaries wear the *segmentata*, others the *hamata* and the *squamata*, or scale-armour. By contrast with the legionary *pilum* and *gladius*, the auxiliary infantry and cavalry carried a *lancea* and a *spatha* or long sword, probably of German origin; the infantry had oblong and the cavalry oval-shaped shields instead of the *scutum*. In addition there was a number of specialist contingents, whose names indicate their equipment (*funditores*, *sagittarii*).

5. The Roman army eventually lost its national character. The *gladius* was replaced by the *spatha*, and the *pilum* by the *spiculum* and *vericulum*, lighter versions of the weapon. In the late Empire there was considerable variation in equipment, of which some indication is given by the titles of units listed in the *Notitia Dignitatum*, e.g. *clibanarii* ('cuirassiers'), *cataphractarii*, the iron-clad horsemen of Persian pattern (J. W. Eadie, *JRS* 1967, 161 ff.), *scutarii*, named from their heavy shields.

ARNOBIUS, a teacher of rhetoric at Sicca Veneria in Proconsular Numidia, was suddenly converted to Christianity (c. A.D. 295) and a year or two later, at the instance of his bishop, wrote seven books, *Adversus Nationes*, against the pagans. His work throws light on the Christian-pagan debate immediately before the Great Persecution, while the venom of his attack on traditional Roman paganism shows that this was by no means dead. His conversion seems to have been due, however, to profound disillusion with the old religion. The *Adversus Nationes* is directed against opponents who argued that, 'ever since the Christians have been on earth, the world has gone to ruin' (*Adv. Nat.* 1. 1), and that Christ was mortal, a magician no more important than Apollonius of Tyana or Zoroaster (*ibid.* 1. 52-53). In his answer Arnobius makes little use of the New Testament and none of the Old. His view of God is Platonic and of the soul derived from Stoicism. Christ is represented as a secondary deity. Indeed, apart from hope of his soul's salvation through Christ and his hostility to paganism Arnobius shows little trace of Christian theology. He reveals curious pagan beliefs current in Africa, while his remorseless critique of polytheism from material drawn from Varro and Lucretius anticipates St. Augustine's apologetic in the *De Civitate Dei*. His style is easy-flowing. He is the first Latin writer to use the word *deitas*, and the term *atheus* as applied to Christianity.

ARPI, the largest of the Daunian cities, lies some 3 miles north-east of Foggia, which in the Middle Ages inherited

its role as the main population centre of the Tavoliere of Puglia. Thanks to its sheer size Arpi long escaped detailed identification on the ground. Air photographs have now shown that the city was demarcated by a massive earth rampart over 8 miles long and containing eleven gateways. The site appears to have grown from a central prehistoric nucleus and, like most Daunian cities which suffered from the Hannibalic wars and the spread of malarial conditions, was in decline by the late Republican period.

C. Drago, *Archivio Storico Pugliese* III (1950), 161 ff.; J. S. P. Bradford, *Antiquity* 1957, 167 ff. G. D. B. J.

ARPINUM, a Volscian hill-town in the Liris (q.v.) valley; modern *Arpino*, with interesting polygonal walls. Rome captured Arpinum from its Samnite conquerors and gave it *civitas sine suffragio*, 305-303 B.C. (Diod. 20. 90; Livy 9. 44; 10. 1). After 188 it enjoyed full citizenship, being administered as a *praefectura* and, after 90, as a *municipium* (Livy 38. 36; Festus 262 L.; Cic. *Planc.* 20). Subsequently Arpinum is seldom mentioned. Marius and Cicero (qq.v.) were both born on its territory (Juv. 8. 237 f.); remains, possibly of Cicero's villa, still exist nearby.

L. Ippoliti, *Il luogo di nascita di Marco Tullio Cicerone* (1916) with bibliography; Castagnoli, *Stud. urb.* 21 ff. E. T. S.

ARRETIVM, modern *Arezzo*, north-easternmost of the cities of Etruria and one of the latest founded. It is not certain when it passed under Roman rule, but in the third century B.C. it was an important base for Roman operations in North Italy, and it acquired additional importance in the mid second century from the construction of the Via Cassia (q.v.), of which it was the first terminal. It became a *municipium* in the second century B.C. and a colony under Sulla, and again under Caesar. From it comes a fine series of archaic bronzes, notably the Chimaera (cf. also Livy 28. 45, where Arretium supplies large quantities of bronze weapons for Scipio's African expedition); and for nearly a century after c. 30 B.C. its red-gloss table wares, both plain and relief-moulded (see *TERRA SIGILLATA*), dominated the markets of the Roman world.

Scullard, *Etr. Cities*, 165 ff.

J. B. W.-P.

ARRIA (1, *PW* 39) **MAJOR**, the wife of Caecina Pactus, professed Stoicism. When her husband was condemned by Claudius for his part in the conspiracy of Camillus Scribonianus (A.D. 42), she stabbed herself and gave Pactus the dagger saying, 'Paete, non dolet' (Pliny, *Ep.* 3. 16; Martial 1. 13). A. M.

ARRIA (2, *PW* 40) **MINOR**, daughter of Arria (1), was wife of P. Clodius Thrasea (q.v.) Pactus, mother of Fannia (who became wife of Iulivdus Priscus), and relative of Persius. She wished to die beside her condemned husband (A.D. 66), but was forbidden. Banished by Domitian, she returned to Rome under Nerva, and was a friend of Pliny the Younger. A. M.

ARRIAN (FLAVIUS ARRIANUS, 2nd c. A.D.) of Bithynia governed Cappadocia under Hadrian and defeated the great Alan invasion of 134. He was a pupil of Epictetus, whose teaching reinforced his natural sense and honesty; if he claimed to imitate Xenophon, it was his only affection. He preserved the valuable *Discourses* of Epictetus; and beside military treatises and his lost *History of Parthia* he wrote a history of Alexander's successors, based on Hieronymus of Cardia (large fragments alone survive); the *Indike*, an account of India from Megasthenes and Nearchus, with a reproduction of Nearchus' account of his voyage; and his chief book, the *Anabasis*, his history of Alexander. He calls Ptolemy I

and Aristobulus his sources, but his main source was Ptolemy, Aristobulus being used to supplement him; the vulgate and stories he quotes as *λεγόμενα*, 'so they say'. His sober narrative is the basis of Alexander's history, a welcome contrast to the romanticism, the slander, the absurd stories, so often met elsewhere, provided that it be remembered that Arrian is relying on writers who had been 'Alexander's men'. Purists condemn Arrian's style; it is more important that he wrote plainly and eschewed rhetoric. He is not a compiler, but a real historian who tried to go to the best sources; he illustrates Polybius' dictum that only men of action could write history, and but for this practical soldier we should know little enough about Alexander.

See ALEXANDER (3), Bibliography, Ancient Sources; A. B. Breebart, *Enge historiografische Aspekte von Arrianus' Anabasis Alexandri* (1960: English Summary, 160 ff.) W. W. T.

AR(R)UNS, an Etruscan *praenomen* (arnθ, arunθ, aranθ) borne by (1) a legendary Arruns in Tarchon's army allied with Aeneas (Verg. *Aen.* 11. 759 ff.), (2) a brother of Tarquinius Priscus, (3-4) a brother and son of Tarquinius Superbus, (5) a son of Porsenna, (6) a man of Clusium (Livy, 5. 33). II. 11. S.

ARRUNTIUS (1, *PW* 7), LUCIUS, probably of non-senatorial family, was proscribed in 43 B.C., but escaped to Sextus Pompeius. He returned to Italy in 39 after the treaty of Misenum and commanded a division of Octavian's fleet at Actium. He was consul in 22, and as *XVvir sacris faciundis* took part in the *Ludi Saeculares* in 17. In spite of his wealth Arruntius was noted for the simplicity and severity of his life. He wrote a history of the (First?) Punic War.

Peter, *HRRE* 1. Ivm f., 41 f.; Schanz-Hosius II. 327 ff. G. W. R.

ARRUNTIUS (2, *PW* 8), L., consul in A.D. 6 and son of Arruntius (1). His wealth, connexions, energy, accomplishments, and integrity made him one of the most influential senators of his time. Augustus was believed, on his deathbed, to have said that he was both worthy of the supreme power and capable, if the chance came, of seizing it. Such a man naturally aroused the enmity of Tiberius' ministers, and perhaps the apprehension of Tiberius himself: though appointed by him governor of Nearer Spain, he was obliged to remain in Rome and administer the province by deputies for ten or more years (from 23?). In 31 a charge, probably of *maiestas*, brought against him by creatures of Sejanus (q.v.), was quashed by Tiberius; in 37, accused of *maiestas* and adultery through the contrivance of Macro (q.v.), he committed suicide, shortly before Tiberius' own death. Scribonianus (1) was his son by adoption.

R. S. Rogers, *CPhil* 1931, 37 ff.; Syme, *Tacitus* 380 f., 442 f. I. J. C.

ARRUNTIUS (3) **STELLA**, LUCIUS (*cos. suff.* A.D. 101 or 102), poet-patron of Martial and Statius, gave games to celebrate Domitian's Sarmatian victory (93); wrote love-poems on Violentilla, whom he afterwards married (Mart. 1. 7; 4. 6; 5. 11. 2; 7. 14. 5; Stat. *Silo.* 1. 2).

Schanz-Hosius, § 416 a.

ARRUNTIUS (4) **CELSUS** (2nd c. A.D.), miscellanist, whose (lost) works included a grammar and (possibly) commentaries on Terence and Virgil.

Schanz-Hosius, § 606, 5.

ARS, a treatise. This meaning of the word, based on the opposition (common in literary criticism) between *ars* (τέχνη) and *natura* (*ingenium*, φύσις), is first found in the

ps.-Ciceronian *Rhetorica ad Herennium*. The term is used mainly for technical works (*ars grammatica*, *ars arithmetica*); but *Ars Amatoria* was certainly Ovid's own title (cf. 2. 162). Horace's *Ars Poetica* is first so named by Quintilian (8. 3. 60). J. F. M.

ARSACIDS, the royal dynasty of Parthia (q.v.) c. 250 B.C.-c. A.D. 230. Arsaces, rebelling against the Bactrian satrap of Antiochus II Theos, became the first king of Parthia, and his descendants and successors (some 37 in number) bore his name as an official title. The Arsacids rapidly made Parthia a world-power second only to Rome: on the west they drove the Seleucids from Mesopotamia and more than once invaded Syria; in the east they reached India and extended their influence over the Indo-Scythian kingdoms. Their relations with Rome were generally hostile, yet they performed a great service to the western world in halting the constant menace of nomadic invasion from the north-east. Politically, the Arsacids were the heirs of the Achaemenids, from whom they claimed descent. They too made Media the centre of their empire and Ecbatana their capital; Ctisophon (q.v.) was their winter residence. Although not themselves Persians, they adopted Persian religion and customs, and organization into satrapies. But Persia, never reconciled to the Parthian intruders, under the leadership of a new dynasty, the Sassanids (q.v.), shook off Parthian suzerainty and brought an end to Arsacid rule both in the Parthian Empire (c. 227?) and in Armenia (c. 253).

List of Parthian kings (N. C. Debevoise, *A Political History of Parthia* (1938), 270; J. Wolski, *Hist.* 1959, 222 ff., 1962, 138 ff.; id. *Berytus* xi (1956/7) 35 ff.; B. Simonetta, *Num. Chron.* 1956).

ARSINOË I (b. c. 300 B.C.), daughter of Lysimachus (q.v.) and of his first wife Nicaca. She married Ptolemy II when he was crown prince (c. 289–288), and had by him at least three children, Ptolemy III, Berenice, who married the Seleucid king, Antiochus II, and a Lysimachus. She was accused of plotting to kill her husband and was banished to Coptus (279–274). Her motive was perhaps jealousy, as Arsinoë II had returned to Egypt a short time before. F. M. H.

ARSINOË II (*Philadelphus*) (c. 316–270 B.C.), daughter of Ptolemy I and Berenice I. She married (c. 299–298) Lysimachus (q.v.), who was strongly under her influence and gave her the towns of Heraclea, Tius, Amastria, and Cassandria as special domains. After Lysimachus' defeat and death and a short marriage to her step-brother Ptolemy Ceraunus, Arsinoë fled to Egypt. She married her brother Ptolemy II in 276–275 or perhaps a year earlier. Arsinoë was queen of Egypt only for a few years (she died in 270), but they were years of the greatest expansion of Ptolemaic power overseas, and of the greatest brilliance of the Alexandrian court. Her influence on events seems to have been as great as, or greater than that of her husband, and the impact she left on posterity is comparable to that of Cleopatra VII. She and Ptolemy Philadelphus were deified as the Theoi Adelphoi already by 272 B.C., and her death was lamented in an elegy of Callimachus (fr. 228 Pf.). The Fayûm, colonized at this time, was called Arsinoites after her. F. M. H.

ARSINOË III (*Philopator*) (b. c. 235 B.C.), daughter of Ptolemy III and Berenice II. She married her brother Ptolemy IV in 217, but fell into disfavour during his last years and was murdered in obscure circumstances in 206–205 or 204–203, shortly before or after her husband's death. A fragment of the autobiography of the great scholar Eratosthenes (Ath. 276 b) shows her as a fastidious and polished woman, disgusted by her husband's excesses. F. M. H.

ARSINOË (1) (*Crocodilopolis*) was developed by Ptolemy Philadelphus as the metropolis of the district which he reclaimed in the Fayûm; its Egyptian predecessor was unimportant. The ruins are extensive, but have not been systematically excavated; they were the first source of papyrus exploited in the Fayûm, and have produced large numbers of Roman and Byzantine documents, terracottas, etc. J. G. M.

ARSINOË (2) (*Cleopatra*), now *Ardasherud* near Suez, at the northern end of the gulf, founded by Ptolemy II, was the capital of the Heroöpolite nome, and the terminal point of a canal from the Pelusiatic arm of the Nile. It became one of the chief Egyptian ports, despite shoals and south winds, carrying Red Sea trade, but much less than Myos Hormos and Berenice (qq.v.). Near it Trajan established a garrison at Clysma, at the end of a new canal (from *Baboul*), cleared periodically through several centuries.

Warmington, *Indian Commerce*, 8 and index.

E. H. W.

ART, GREEK RELIGIOUS. A large proportion of Greek art served a religious purpose, at least in the earlier periods. The temple as a cardinal part of Greek life was known to Homer (cf. *Il.* 1. 39); foundations of such temples dating from the late geometric period and terracotta models of such shrines have come to light in Samos, Perachora, Eleusis, Sparta, and Argos. And from the succeeding centuries, of course, many actual edifices are known. These buildings were regularly decorated with friezes and pedimental groups, and inside them were placed the cult statues of the respective deities. In addition, votive statues and reliefs were erected in the sacred precincts surrounding the shrines; for it was customary in Greece to dedicate a piece of sculpture to a deity, either in recognition of a favour received or in the hope of a favour to be granted. Accordingly, the earlier Greek sculptures that have survived to our time mostly come from sanctuaries.

The small cult figures current during the geometric age of the ninth and eighth centuries were mostly of wood and have all disappeared; but many geometric bronze and terracotta statuettes have been found in the sanctuaries of Olympia, Delphi, and elsewhere. Then, from the archaic period of c. 650–480 B.C. there exists a wealth of fine marble and limestone statues, as well as statuettes in various materials, discovered in sanctuaries all over the Greek world. Some still bear their dedicatory inscriptions. Thus, one of the life-size statues signed by Genekleos at Samos is inscribed: 'I am . . . oche who has dedicated it to Hera' (c. 560 B.C.). Two female statues, also from Samos, one in the Louvre, the other in Berlin, were dedicated to Hera by Cheramyes (c. 575–550 B.C.). The famous Calf-bearer from the Athenian Acropolis is inscribed on its base with a dedication by '(Rh)onhos, son of Olos' (c. 560 B.C.). The Sacred Way to the temple of Apollo at Didyma in Asia Minor was lined with seated statues, some inscribed with their names (c. 560 B.C. and later). The intimate relationship felt by the Greeks towards their gods is shown by some of the inscriptions. For instance, an early archaic bronze statuette from Boeotia in Boston has the ingenious dedication: 'Mantikos dedicated me to the far-shooting (god) of the silver bow, out of the tithe. Do thou, Phoebus, give something nice in exchange.'

There have also been preserved some outstanding examples of archaic architectural sculptures; for instance, the stupendous central Gorgon from a temple at Corfu (c. 600 B.C.), the three-headed Typhon from the Acropolis of Athens (c. 560–550 B.C.), and a number of metopes from mid sixth-century temples at Selinus and Foce del Sele. The 'Treasures' belonging to various Greek city states were also erected in sanctuaries, and they too were decorated with sculptures, some of which have been found in fairly good preservation; e.g. the fine pediment and friezes of the Siphnian Treasury at Delphi (c. 530–525 B.C.), the metopes of the Athenian Treasury at Delphi (c. 510–500 B.C.), and some metopes of the late archaic temple of Foce del Sele, near Paestum in Italy.

The subjects represented in these early sculptures were mostly mythological—the legends about the gods and goddesses of Greece, which made Greek religion so colourful and human. And when other subjects were chosen, such as the battle of Greeks and Trojans on the pediments of the temple of Aphaea in Aegina (c. 500–480 B.C.), one finds a deity presiding in the centre of the contest. The same applies to the paintings of this period which, though they have practically all disappeared, are known from descriptions of ancient authors and by their 'reflections' on many vase-paintings. There too the majority represent the gods and heroes of Greek mythology that were worshipped by the Greeks; so they can

also be considered as part of religious art, though the objects themselves mostly served a practical purpose.

In addition, single statues and reliefs were placed in sanctuaries as votive offerings to the deity—a custom that is responsible for the survival of the famous Maidens which had remained in place on the Acropolis of Athens during the whole of the archaic period and then been buried in trenches after the sack of Athens by the Persians in 480 B.C.

2. Our knowledge of fifth-century sculpture and architecture is largely derived from a few comparatively well-preserved sacred buildings—the temple of Apollo at Olympia, the Parthenon and the Erechtheum on the Athenian Acropolis, the temple of Apollo at Phigalia in Arcadia, and the temple of Hera at Argos. Their sculptural decoration ranges in date from c. 465 B.C. to the end of the century, and they bring before us the greatest artistic achievements attained during that unparalleled period. All reveal a religious spirit by the serenity that pervades them, bringing to mind Quintilian's statement that the gold and ivory statue of Zeus at Olympia by Phidias 'seems to have added something to the established religion'.

In addition, as in the archaic period, a few surviving single statues exemplify the prevalent Greek custom of erecting figures of victorious athletes in the sanctuaries of Greece, since the periodic athletic contests were held in these sacred precincts. Thus, the famous bronze Charioteer from Delphi (c. 470 B.C.) was part of such a votive offering, made after a victorious race. Much instructive information has also been derived from a series of votive reliefs erected in various sanctuaries showing deities enthroned or reclining, and human votaries approaching with gifts. It is furthermore noteworthy that portraits of prominent individuals—those of Pericles, Xanthippos, and Anacreon, for instance—were set up not in public places but in the sacred precinct of the Acropolis of Athens.

3. In the fourth century B.C., with the growing interest in individuality, the outlook changed. More and more civic buildings arose, and commemorative statues were often placed no longer in sanctuaries but in public market-places. A change in style reflects the new mentality. The single statues made by the prominent artists of the time, by Praxiteles and Lysippos for instance, show the new attitude. The Hermes and various Aphrodites by Praxiteles (some preserved in Roman copies) and the Apoxyomenos by Lysippos indicate a more human approach than Phidias' creations. In addition to the major deities, the secondary ones—satyrs, nymphs, Pan, and particularly Eros—now became prominent. And scenes from daily life, which already had made a frequent appearance on the later fifth-century vases, pervade the representations on vases and reliefs. Religious art was losing its former pre-eminent place—though the old tradition persisted for a considerable time. Thus, the portraits of Aeschylus, Sophocles, and Euripides which were set up by Lycurgus in 340–330 B.C. were placed in the theatre, that is, in a place sacred to Dionysus; and votive reliefs still crowded the sanctuaries of Asclepius and other beneficent deities.

4. In the Hellenistic age (c. 330–100 B.C.) Hellenic civilization spread throughout the Eastern Empire created by Alexander the Great and his successors. Art now became realistic in form and content. Artists became engrossed in depicting the life around them and the emotions of human beings. Pain and suffering, joy and exaltation, sleep and death were now for the first time convincingly rendered. Portraiture became an absorbing subject. Naturally side by side with these human subjects the Olympian gods retained a prominent place. But their character changed. Instead of the Apollo of

Olympia we have the Belvedere Apollo; instead of the Poseidon from Artemision we have the somewhat theatrical Poseidon from Melos; instead of Myron's Volneratus deliciens there comes the Laocoön; instead of the battles on the Phigalia and Mausoleum friezes we have the battle of Gods and Giants on the Pergamene altar. All are splendid creations in which the creative force of the new age found powerful expression. But the religious character has waned. Furthermore, new conceptions are added to the old. The Tyche of Antioch by Eutychides had many successors in the personifications of various cities. Oriental deities—Serapis, Isis, Harpocrates—were adopted in both Greece and Italy. Finally, the deification of the Hellenistic rulers and their families, represented on coins and in statues all over the Hellenistic world, had profound repercussions. The gods had descended from Olympus to earth. Greek art had extended its boundaries but had lost its sublimity. *See also* SCULPTURE, GREEK. G. M. A. R.

ARTABANUS III, king of Parthia A.D. 12–c. 38, an Arsacid on his mother's side, gained the throne in a struggle against Vonones who fled to Armenia (11/12). When Germanicus (q.v.) installed Artaxias (Zeno) in Armenia (18), Artabanus acquiesced and renewed friendship with Rome. After strengthening his rule and his kingdom (a letter of his to Susa survives: see C. B. Welles, *Royal Correspondence in Hellenistic Period*, U.S.A. 1934, 299 ff.) Artabanus challenged Rome by installing his son Arsaces on the Armenian throne (c. 34). Tiberius replied by encouraging rivals to the thrones of both Armenia and Parthia. Artabanus also faced an Iberian invasion of Armenia which he failed to stem, and fled to Hyrcania (36). Later he won his way back to Seleucia, and, somewhat chastened, he now met L. Vitellius on the Euphrates and accepted Rome's settlement in Armenia in return for recognition of his sovereignty in Parthia. Pressure from Parthian nobles forced him to flee again, but he was restored with the help of Izates, king of Adiabene. He died soon after.

N. C. Debevoise, *A Political History of Parthia* (1938), 152 ff.; U. Kahrstedt, *Artabanus und sein Erbe* (1950). H. H. S.

ARTABAZUS (c. 387–c. 325 B.C.), son of Pharnabazus (q.v.) and Apame. His consistent loyalty to Artaxerxes II (q.v.) was rewarded by his appointment as satrap of Dascylium, a position which was hereditary in his family. Under Artaxerxes III he revolted, and, aided successively by Chares and Pammenes, held out until 352, when he was forced to seek refuge in Macedonia. His return to Persia was arranged by Mentor, his brother-in-law, in 345. After Gaugamela he fled with Darius III, but deserted from Bessus to Alexander, who made him satrap of Bactria, a command which he resigned in 328.

D. E. W. W.

ARTAPHERNES (the earlier Greek form appears to have been Artaphrenes): (1) the half-brother of Darius and satrap in Sardes. After co-operating with Aristagoras (q.v. 1) in 499 B.C., he took a leading part in suppressing the Ionian Revolt. (2) His son, together with Datis, commanded the Persian expedition which was smashed at Marathon (q.v.). H. H. S.

ARTAVASDES (1) I of Armenia succeeded his father Tigranes before 52 B.C., and was Rome's ally when Crassus invaded Mesopotamia; but Orodes' simultaneous invasion of Armenia brought him over to Parthia's side, and he married his sister to Orodes' son Pacorus. The story of the performance of the *Bacchae* at the wedding feast in the Armenian capital has led to a suggestion that Artavasdes, who is said to have written Greek 'histories',

was the unknown historian whom Plutarch followed in the Parthian part of his *Life of Crassus*; but the unknown was certainly an eastern Greek. Artavasdes remained Parthia's ally till Antony's invasion in 36, when Canidius defeated him and he became (in name) an ally of Antony; he deserted in the critical battle, and in 34 Antony in revenge entered Armenia with an army, seized the king by a trick and led him in captivity to Alexandria. He appeared in Antony's triumph there and was later put to death by Cleopatra, on the eve of the Actium campaign.

W. W. Tarn, *The Greeks in Bactria and India*² (1951), 51 ff.; H. Buchheim, *Die Orientalpolitik des Triumvirn M. Antonius* (1960), 42 ff.; W. W. T.

ARTAVASDES (2), king of Media Atropatene, whose land and capital, Phraaspa, was attacked by M. Antonius (q.v. 4) in 36 B.C. Enmity with the Armenian Artavasdes (q.v. 1) and a quarrel with Parthia soon swung him to Antony's side. In 34 after defeating Armenia Antony gave part of Armenia to Artavasdes and betrothed his own son Alexander Helios to Artavasdes' young daughter Iotape. Later Artavasdes made an alliance with Tigrdates (q.v. 2), and in 30, after they had been overcome by the Parthian Phraates, he fled to Octavian who granted him Armenia Minor. He died, in Rome, before 20 B.C.

II H. S.

ARTAXATA, the capital city of Armenia, on the river Araxes, in the district of Ararat, c. 20 miles south-west of Erivan. It was founded by Artaxias I, traditionally with the advice and assistance of Hannibal (Strabo II. 528; Plut. *Luc.* 31). It was several times captured by the Romans during their invasions of Armenia; Corbulo burnt it in A.D. 58 (*Tac. Ann.* 13. 41); it was rebuilt by Tigrdates (3) brother of Vologeses (qq.v.) and renamed Neronia (Dio Cass. 63. 7), but reverted to its old name. It was seized by Statius Priscus (A.D. 163) when he invaded Armenia. He did not destroy it, but founded a new city, Caenepolis (later, Valarshapat) not far away, and this soon replaced Artaxata as capital. M. S. D.; E. W. G.

ARTAXERXES (1) **I** (*Macrocheir*), king of Persia, son of Xerxes and Amestris, began his forty years' reign on his father's assassination in 464 B.C. He overcame affliction in the court, in Bactria, and in Egypt, which, through Athenian support, resisted until 454. The peace of Callias (449) regulating relations with Athens was, on balance, a Persian diplomatic success. He was dominated by his mother; but his generous treatment of Themistocles, and of the Jewish and Egyptian minorities, suggests political sense rather than weakness. D. E. W. W.

ARTAXERXES (2) **II** (*Mnemon*) (c. 436–358 B.C.), son of Darius II and Parysatis, ascended the Persian throne in 404. After crushing Cyrus' rebellion and repelling Spartan intervention in Asia Minor (peace of Antalcidas 386), he twice failed in the attempt to recover Egypt (385–383 and 374). He succeeded in suppressing the Satraps' Revolt (366–358), largely through mutual distrust among his enemies. His incapacity and subservience to the will of his mother and of his wife, Statira, caused a progressive decline and disintegration of the Empire. D. E. W. W.

ARTAXERXES (3) **III** (*Ochus*) succeeded his father, Artaxerxes II, in 358 B.C. He secured his position by the wholesale execution of his brothers, and by crushing Orontes and Artabazus. In 343 (after a previous failure in 351) he reconquered Egypt with the aid of Mentor, who later recovered western Asia Minor. He was poisoned by his minister Bagoas in 338. Though he misjudged the strength of Macedonia, his achievement

in restoring the power and prestige of the central government indicates high qualities of statecraft and leadership. D. E. W. W.

ARTAXERXES (4) (*Ardashir*), the name of several Sassanid kings, the greatest being Artaxerxes I (A.D. 211–12 to 241), son of Papak, founder of the New Persian Empire of the Sassanids. Taking advantage of the confusion in the eastern part of the Roman Empire to assume the kingship of Istakhr (Persepolis), and then to conquer the neighbouring principalities one by one, he finally defeated Artabanus V of Parthia in battle and entered Ctesiphon in 224. After further campaigns his empire included Iran, Afghanistan, and Baluchistan to the Oxus, Babylonia, Mesopotamia, and Armenia. He was responsible for the political and religious organization of the Sassanian Empire, and he founded many cities. He fought an indecisive campaign against Severus Alexander (230–2), but in a second invasion of Roman Mesopotamia (238) captured Carrhae and Nisibis. Towards the end of his reign his son Sapor (q.v.) became co-regent. M. S. D.; E. W. G.

ARTEMIDORUS (1) of Tarsus (2nd and 1st cc. B.C.), grammarian. For his edition of the Bucolic Poets he wrote *Anth. Pal.* 9. 205. See also GLOSSA (Greek).

ARTEMIDORUS (2) (fl. 104–101 B.C.), a Greek of Ephesus, voyaged along Mediterranean shores, outer Spain (and Gaul?), and in Alexandria wrote eleven geographical books (*Περὶ πλοῦς, τὰ γεωγραφούμενα, ἡ γεωγραφία βιβλία*), often quoted. His records, especially of distances in western regions, including (misapplied) use of Roman measurements, were fair, with errors and confusions (K. Miller, *Mappaemundi* (1898), vi. 127 ff.). For eastern waters and Ethiopia Artemidorus relied on Agatharchides (q.v.), adding distances and details as far as C. Guardafui; for India, on Alexander's writers and Megasthenes (q.v.). He made two calculations of the inhabited world's length and two of its breadth, without determining positions by latitude and longitude.

GGM 1. 74 ff. Berger, *Gesch. d. wiss. Erdkunde d. Gr.* iv. 38 ff. E. H. Bunbury, *Hist. of Anc. Geog.* ii (1879), 61 ff. E. H. W.

ARTEMIDORUS (3) (late 2nd c. A.D.), of Ephesus (but usually known as 'Daldianus', after his mother's native city, Daldis in Lydia), travelled extensively to collect dreams, and wrote an extant treatise (*Ὀνειροκριτικά*) on their interpretation, a topic which had attracted the attention of serious men, as well as anecdote-mongers, since the Alexandrian age; also *Οἰωνοσκοπικά* and *Χειροσκοπικά* (palmistry). Artemidorus is important for the study of ancient folklore.

ARTEMIS (*Ἄρτεμις*, occasionally *Ἀρταμῆς*), a goddess universally worshipped in historical Greece, but in all likelihood pre-Hellenic. The name yields no Greek etymology, *Ἀρταμῆς* being probably a popular assimilation of it to *ἄρταμος* (slaughterer, butcher; see O. Kern, *Relig. der Griechen* 1 (1926) 102). For features indicating a specifically Minoan origin, see M. P. Nilsson, *Minoan-Mycenaean Religion*² (1950), 432 ff.; the name occurs on a Linear B tablet as owner of a slave. She is often confused with Hecate and Selene (qq.v.), with the former owing to resemblance of character and functions, with the latter through learned speculation. Her proper sphere is the earth, and specifically the uncultivated parts, forests and hills, where wild beasts are plentiful; it is true that she is often a city-goddess, but this is a secondary

development of her importance, especially among women; cf. Wilamowitz-Moellendorf, *Glaube der Hellenen* (1931-2) ii. 148, for a good sketch of her. Her place among the deities was not won immediately, for she plays a feeble and even ridiculous part in the *Iliad* (21. 470 ff.); but she is already a daughter of Zeus, 'lady of wild things' (πόρνια θηρών), sister of Apollo, a huntress and a 'lion unto women' (483), because their sudden and painless deaths are ascribed to her. Her functions as a birth-goddess and a bringer of fertility to man and beast, together with health to their offspring when born (she is often *κουροτρόφος*), are still obscure, at all events in the aristocratic circles for which Homer wrote; we may believe that even then she was made more of among the common people. She also was associated, in the Peloponnese particularly, with the fruitfulness of trees. Of mythology she has not much; for the story of her birth as Apollo's twin, see LETO, DELOS; it is certain that she had originally nothing to do with him. The principal adventure which she never shares with her brother is the slaying of Orion (q.v.). But it is highly probable that many of the stories of women or nymphs who bear children were originally myths of Artemis (or some similar goddess), for being a giver of fertility she can hardly have been other than a mother-deity herself (see Farnell, op. cit. *infra*, 442 ff.); the strongest instance is perhaps Callisto, whose name is suspiciously like Artemis' title *καλλιόστη*. However, for historical Greeks she was a virgin goddess, though a friend and helper of women in childbirth.

Concerning her cult, it is characteristic that she seldom has the larger cattle sacrificed to her. Goats are a common offering, and at Patrae Artemis Laphria was annually given a holocaust of wild beasts and birds, presided over by a priestess in a chariot drawn by stags like Artemis' own (Callimachus, *Dian.* 98 ff.; see Paus. 7. 18. 12, J. Herbillon, *Cultes de Patras* (1929), 55 ff.). It is not, however, certain that this was as primitive a rite as it seems. Elsewhere her votaries simulate beast-shape, suggesting a theriomorphic form of Artemis herself. At Brauron in Attica, little girls in saffron dresses (to imitate the tawny hide of the bear?) danced before her; they were said *ἀρκτεῖν*, to play the bear, and were themselves called *ἀρκτοι* (Ar. *Lys.* 645 and schol.; Deubner, *Attische Feste* (1932), 207). The existence of the word *νεβείν*, to play the fawn, suggests a similar rite in Larissa and Demetrias (LSJ *Supplement* (1968); P. Clement, *Ant. Class.* 1934, 401 ff.). At Halae a pretence of human sacrifice was made, a few drops of blood being drawn from a man's throat with a sword (Eur. *IT* 1450 ff.); actual human sacrifice at Phocaea is alleged (Pythocles ap. Clem. Alex. *Protr.* 32, 7 Stahlin; doubtfully authentic). These are some of her most characteristic and unusual rites; in many places there probably was little to distinguish her cult from that of any other important deity. That she develops into a city-goddess has already been said; occasionally she shows a connexion with agriculture (Farnell, 455 ff.).

Artemis is very often identified with foreign goddesses of a more or less similar kind. Mythologically, the most important of these identifications is with the goddess of a barbarous people in the Tauric Chersonese (*Crimea*), whose cult was said to have been imported by Orestes to Halae (see above). Historically, that having the widest-reaching results was probably with the great goddess of Ephesus, which was in many ways essentially right, though the two cults had quite independent origins. From Ephesus the worship of this 'Artemis' was carried to Mussilia by the Phocaeans, and thence again it made its way to Rome, where the Aventine temple of Diana (q.v.) had a statuette modelled on the Ephesian type (Strabo 4. 1. 5).

Identifications with other goddesses in Greece itself, besides Hecate and Selene, were not uncommon. A clear

example is the so-called Artemis Orthia of Sparta (q.v., bibliography), where it is archaeologically certain that Orthia came thither with the Dorians, and therefore cannot have been originally the same as a pre-Hellenic deity; see *Artemis Orthia* (JHS Suppl. 5, 1929), 399 ff. There she was associated with the famous ordeal by scourging and with offerings of cheeses. No doubt many identifications were so complete that they now escape our notice.

From the seventh into the sixth century Artemis is commonly shown as Potnia Theron, often winged, as she sometimes is still in the fifth century. Early she normally wears a long dress, often with animal-skin, later a short tunic. She appears alone, with Apollo and sometimes Leto, or with other deities in conclave or Gigantomachy.

Farnell, *Cults* ii. 425 ff.; Nilsson, *GGR* i* 481 ff.; W. K. C. Guthrie, *CAH* iii. 40. 27 ff. (1961, with bibliography).
H. J. R.; C. M. R.

ARTEMISIA I, princess of Caria, ruled under Persian suzerainty over Halicarnassus, Cos, Nisyrus, and Calyndus. She accompanied Xerxes' expedition with five ships. According to Herodotus, whose account (probably based on a Halicarnassian source) is strongly biased in her favour, she vainly urged Xerxes not to attack at Salamis (probably a prophecy *ex eventu*); she fought prominently in the battle and escaped pursuit by sinking an intervening Calyndian vessel. Afterwards she urged Xerxes to immediate retreat and transported part of his family to Ephesus.
P. T.

ARTEMISIA II succeeded her brother and husband Mausolus (q.v.) of Caria in 353-352 B.C. In his memory she started the building of the Mausoleum (q.v.), though she probably did not live to see its completion, and promoted a literary competition attended by the most famous rhetoricians (Isocrates, Theodectes, etc.); Theopompus won the prize. In 350 an attack on Rhodes by democratic exiles, relying on the support of Athens which Demosthenes (*Or.* 15) vainly tried to secure, gave Artemisia a pretext to subdue Rhodes and the adjacent islands. She died soon afterwards.

U. Kahrstedt, *Forschungen* (1910), 22 f., 114 f.; A. Momigliano, *Riv. Fil.* 1936, 54 ff.; Heloeh, *Gr. Gesch.* iii. pt. 2, 142 ff. P. T.

ARTEMISIUM, a promontory on the north-west coast of Euboea, so called from a temple of Artemis Proseoa on this site. The place is perhaps to be identified with the village of *Potaki* near the Bay of Penki. For the battle of Artemisium, see PERSIAN WARS.

G. B. Grundy, *The Great Persian War* (1901), 321 ff. P. T.

ARTEMON (1) (probably not later than 2nd c. B.C.), sometimes identified with Artemon (2) of Cassandreia or Artemon (3) of Pergamum, edited the letters of Aristotle with notes on the art of letter-writing.

Demetr. *Eloc.* 223, David on Arist. *Cat.* 24*28 Brandis.

ARTEMON (2) of Cassandreia (perhaps 2nd or 1st c. B.C.) wrote two bibliographical treatises, sometimes regarded as parts of a single work: (1) *On the Collection of Books*, (2) *On the Use of Books*, in the second book of which he discussed the three types of scolia.

FGH iv 342 f.

ARTEMON (3) 'Ο ἀπὸ Περγάμου, also styled ὁ ἱστορικὸς, perhaps identical with Artemon (2) of Cassandreia, Cassandreia being his birthplace, Pergamum the scene of his literary activity (similar discrepancies in appellation often occur). He is several times mentioned in the scholia to Pindar for explanations of historical, geographical, and mythological problems.

FGH ii 569.

J. D. D.; K. J. D.

ARTEMON (4) of Miletus wrote, during Nero's reign, a book on dreams which come true, with special reference to cures by Sarapis, cited by Artemidorus.

FHG iv. 340.

ARTEMON (5) of Magnesia, date uncertain. Author of *Famous Exploits of Women* (*Τῶν κατ' ἀρετὴν γυναῖκι πεπραγμένων διηγήματα*), from which Sopater made excerpts.

ARTILLERY. In 399 B.C., at Syracuse, Dionysius I's artificers invented the first artillery (Diod. Sic. 14. 42. 1), the *gastrophetes*, shooting arrows only and somewhat resembling an early medieval cross-bow. Propellent force was supplied by a composite bow which, being too strong for a man to draw by hand, was bent by means of a mechanical stock. Later *gastrophetai*, some of which were stone-throwers, had winches (for drawing their bows) and bases.

C. 340 B.C., torsion catapults appear, possibly invented by Philip II's engineers (Polyidus?). Stock, winch, and base remain much the same, but two springs (*τόνοι*), i.e. bundles of rope made from animal sinew, horse-hair, or women's hair and held at high tension in a wooden metal-plated frame (*πλωθίον*), now provide propulsive power for each catapult. It took about seventy years of experimentation to develop torsion machines to full efficiency and reliability, a condition achieved c. 270 when calibrating formulae and lists of standard dimensions were introduced. Torsion catapults may not have ousted their non-torsion predecessors completely before the latter part of the third century.

The torsion *καταπέλτης ὀφθαλμός* shot bolts only (main calibres from one-cubit bolt to four-cubit bolt), the *λιθοβόλος* hurled stone-shot (calibres ranging from ten minae to three talents). Both types had a maximum effective range certainly in excess of 300 yards. Schramm reached 387 metres with a full-size reproduction of a two-cubit *ὀφθαλμός* employing horse-hair springs. Detailed modifications, devised between 200 B.C. and 25 B.C. and reflected in Vitruvius (10. 10-11), increased the power of standard catapults, perhaps by as much as 25 per cent.

Artillery figured most prominently in sieges (see *SIEGE-CRAFT*), in both attack and defence (e.g. Demetrius' siege of Rhodes, Diod. Sic. 20. 85 ff.). Onomarchus (To'vænus, *Strat.* 2. 38. 2) and Alexander used it successfully in field operations, but lack of mobility severely restricted its usefulness here. It was probably quite important in Hellenistic naval warfare, *pace* Tarn, to judge by Demetrius' battle off Salamis (Diod. Sic. 20. 49-51) and Agrippa's performance at Naulochus (App. *BCiv.* 5. 118 f.) based on Hellenistic practice.

The static and mobile engines, illustrated on Trajan's Column and described by Heron Alexandrinus (*Cheiroballistra*), with all-metal *πλωθία*, were the most technically advanced and powerful arrow-shooting artillery ever produced and were probably designed by Greeks in Roman pay. From the fourth century B.C. onwards, Greek states large and small regarded artillery as a valuable subordinate arm and considered the production of catapults and the training of *catapultaphetai* essential.

E. Schramm, in *Heerwesen und Kriegführung der Griechen und Römer* (J. Kromayer and G. Veith, 1928), 209 ff., with bibliography and illustrations, W. W. Tarn, *Hellenistic Military and Naval Developments* (1930), 101 ff., E. W. Marsden, *Greek and Roman Artillery* (1969). E. W. M.

ARULENUS RUSTICUS, Q. JUNIUS (*PW* 149), *tr. pl.* A.D. 66, praetor 69, *cos. suff.* 92, Stoic philosopher and friend of Thrasea (q.v.) Paetus, like whom he was probably born at Patavium (see Pliny, *Epp.* i. 14. 3, on his brother Mauricus). Thrasea prevented him from vetoing the *senatus consultum* by which he was condemned to death.

He fought for Vitellius against Vespasian and was put to death by Domitian because of a panegyric upon Thrasea and Helvidius Priscus (about 93). A. M.

ARUSIANUS MESSIUS (late 4th c. A.D.), grammarian, compiled an alphabetical list (*exemplum elocutionum*) of nouns, adjectives, verbs, and prepositions which have more than one construction (ed. Keil, *Gramm. Lat.* 7. 449-514). His citations from Sallust's *Historiae* are particularly valuable.

Schanz-Hosius, § 839.

J. F. M.

ARVERNI, a Gallic tribe, occupying modern *Auvergne*. Craniometry and archaeology agree in assuming a considerable pre-Celtic survival among the population. The Arverni are reported as having long contested the primacy of Gaul with the Aedui (Caesar, *BCall.* 1. 31. 3). In 207 B.C. they treated with Hasdrubal (Livy 27. 39. 6), and in the next century, under Luernius and his son Bituitus, their empire, according to Strabo (4. 2. 3), stretched as far as the Pyrenees, the Ocean, and the Rhône. Bituitus was, however, defeated near the Rhône by Cn. Domitius Ahenobarbus and Q. Fabius Maximus (121), and subsequently arrested at the peace conference, the Arvernian empire being reduced to suzerainty over some neighbouring tribes. In 52 Vercingetorix (q.v.), son of a former Arvernian king, led the Gallic revolt against Caesar, and defeated an attempt upon the hill-fort capital, Gergovia. Under Augustus the capital was moved to Augustonemetum (*Clermont-Ferrand*), and the tribe lost its powers of suzerainty; but it seemingly obtained the position of *civitas libera*. Its principal temple—of Mercury Dumus—on the Puy-de-Dôme was famous for a statue erected by the Greek Zenodorus at the cost of forty million sesterces (Pliny, *HN* 34. 45). The region was devastated in the third century by the Alamanni, and after a heroic struggle was ceded to the Visigoths in A.D. 475.

C. Julhan, *Hist. de la Gaule* ii. 546 ff., iii. 1 ff.; O. Hirschfeld, *Kl Schr.* (1913), 200 f. C. E. S.

ASCALABUS, in mythology, son of Misme, an Attic woman. His mother gave Demeter (q.v.), who was looking for Persephone, a vessel of water, meal, and pennyroyal; he laughed at her for drinking it greedily, and she threw what was left of it over him, whereat he became a spotted lizard.

Anton. Lib. 24, citing Nicander; Ov. *Met.* 5. 446 ff.

H. J. R.

ASCALAPHUS, in mythology, (1) son of Ares (q.v.); (2) son of Orpheus (Ov. *Met.* 5. 539), a nymph of the river Acheron, or Gorgyra (Apollod. 1. 33), and Acheron. When Persephone was carried off by Pluto (see *HADES*), Demeter obtained from Zeus a promise that she should return if she had eaten nothing in the lower world. Ascalaphus had seen her eat a few pomegranate-seeds and betrayed her; Persephone turned him into an owl (Ovid) or Demeter put him under a great stone (Apollod.).

H. J. R.

ASCANIUS, the son of Aeneas (q.v. 1). According to Virgil, his mother was the Trojan Creusa, and he accompanied his father to Italy after the fall of Troy (*Aen.* 2). Livy (1. 3) mentions an alternative version, that he was born from Aeneas' marriage to Lavinia after the foundation of Lavinium; and tells how he became king on Aeneas' death, but later left Lavinium and founded Alba Longa on the Alban Mount. Latin authors also call him Iulus, and the *gens Julia* claimed descent from him.

R. G. Austin on Verg. *Aen.* ii. 563, 598 (1964); Ogilvie, *Comm. Livy* 1-5, 42 f. (on the political use which the Julii from 125 B.C. onwards made of the alleged descent). W. S. A.

ASCLEPIADES (1) of Tragilus (4th c. B.C.), pupil of Isocrates, wrote a work, *Τραγωδούμενα*, on the myths of Greek tragedy and their treatment (*FGH* i. 12), which probably became an important source for Mythography.

ASCLEPIADES (2) of Samos, also called Sicelidas (fl. 290 B.C.), was the chief epigrammatic poet of the Alexandrian period. In particular, he developed the love epigram, filling it with lyrical emotion and introducing some deathless symbols such as Love the archer and the child Eros. His friends Hedylus and Posidippus (2) followed and sometimes imitated him: the three published a collection of literary epigrams, the *Σωπός*. With Posidippus, he was attacked by Callimachus for praising the poetry of Antimachus (*Anth. Pal.* 9. 63). The 'Asclepiad' metres used by Alcaeus and Sappho bear his name because he revived them.

O. Knaur, *Die Epigramme des A. von Samos* (1915); A. Rostagni, *Poeti alexandrini* (1916) ch. 4; L. A. Stella, *Cinque poeti dell'Antologia Palatina* (1949); W. and M. Wallace, *TAPA* 1939, 191 ff. and *A. of Samos* (1941), Wilamowitz, *Hell. Dicht.* i. 146 ff.

ASCLEPIADES (3) of Prusa in Bithynia practised medicine in Rome, where he died at an advanced age (1st c. B.C.). A sensualist and materialist, influenced by Epicurus and Heraclides Ponticus, he accepted the atomic theory, rejecting all teleology and stressing the importance of phenomenal appearances. Opposed to the theory of humours and of the healing power of nature, he explained health as the unhindered movement of the bodily corpuscles, disease as their inhibited movement. His therapy, consisting in diet rather than in drugs, was based on the principle *tuto, celeriter, iucunde*, and made him equally well liked by high and low. His system influenced contemporary and later philosophers owing to its consistency and originality, and also as representative of a medical doctrine based on the theory of atoms in contrast to the Hippocratic and Galenic theories.

TEXT. Fragmenta, Ch. G. Gumpert (1749), not complete. List of writings: Susemihl, *Gesch. gr. Lit. Alex.* ii. 439. LITERATURE. Summary: F. Überweg, K. Praechter, *Die Philosophie d. Altertums* (1926), 1381; besides W. A. Heidel, *Harv. Stud.* 1911; T. C. Allbutt, *Greek Medicine in Rome* (1921), M. Wellmann, *PIB* n. 1632, still important, though antiquated in general characterization. For A.'s influence on the 17th c. see Cocchi, *Life of Asclepiades* (1762), 41, and W. Dilthey, *Gesammelte Schriften* i (1922), 247. I. E.

ASCLEPIADES (4) of Myrleia in Bithynia (1st c. B.C.) worked in Spain, and wrote on the history of Bithynia, and of scholarship; on Homer and Theocritus; and, as Atticist analogist, *Ἐπεὶ ὀρθογραφίας*. He insisted that grammar was a τέχνη; cf. Sext. Emp. *Math.* i. 60-72.

FGH in C 697.

P. B. R. F.

ASCLEPIODOTUS (1st c. B.C.), probably Posidonius' pupil, wrote on Greek and Macedonian military tactics. His book, the earliest extant specimen of a school treatise on a virtually dead branch of the military art, is a pedantic drill-book, in which the phalanx too often becomes a mathematical scheme. Probably it largely reproduces a lost work of Posidonius; but some things may go back through Posidonius to Polybius, and occasionally it gives an item of real value, as, e.g., that the famous Thessalian cavalry fought in a rhomboid formation.

K. K. Müller, 'Asklepiodotos' in *PW*; Illinois Greek Club, *Asclepiodotus* (Loeb, 1923). W. W. T.

ASCLEPIUS (*Ἀσκληπιός*, basic non-Ionic form *Ἀσκληπίος*), hero and god of healing. In the *Iliad* he is a mortal, the 'blameless physician', taught his art by Chiron. To Hesiod and Pindar (*Pyth.* 3) he was the son of Apollo and Coronis, daughter of Phlegyas. Coronis proved faithless and with her lover Ischys was slain by Artemis, but Apollo (or Hermes, Paus. 2. 26. 6) snatched

the unborn Asclepius from the pyre, and entrusted him to Chiron. For daring to restore Hippolytus to life, he was slain by a thunderbolt of Zeus. There were conflicting versions (cf. Paus. 2. 26. 3-7): Epidauros (supported by Delphi) claimed to be his birthplace, and told how he was exposed by Coronis-Agle and nurtured by a goat; in Messenia, Apollo and the Leucippid Arsinoë were considered his parents, in southern Arcadia, Arsippus and Arsinoë. His wife is generally called Epione, and his children include Machaon and Podalirius, the physicians of the *Iliad*, and the personifications Hygieia, Panacea, Iaso, and (an Athenian addition) Aceso.

2. While many writers have classed Asclepius with the chthonian deities, Farnell has adduced strong evidence to show that he was in origin a hero, later elevated to full divinity; as a god, despite a few chthonian traits (e.g. the snake and possibly the rite of incubation), his associations are with the celestial divinities. His primary function, healing, is no criterion of his nature, for that art might be practised by gods, whether celestial or chthonian, or by heroes (cf. *ἥρωας ἰατροί* at Athens). Unlike Trophonius, with whom he has been erroneously identified, he was not, except in a limited sphere, a giver of oracles, and even though, as *Σωτήρ*, he was on rare occasions invoked to protect from shipwreck and other ills, healing remained his chief concern.

3. The cult possibly originated at Tricca in Thessaly (Strabo 437; home of Machaon, *Il.* 4. 202), though the birth story is localized in eastern Thessaly. Thence he was carried, perhaps by the 'Phlegyans', unto Phocis, where he was called *Ἀ. Ἀρχαγέρας* (Paus. 10. 32. 12), and Boeotia, and now probably originated his fateful alliance with Apollo. In the Peloponnesus, the cult at Titane contained certain archaic features (Paus. 2. 11. 6-8), and Hygieia may be native here. The cult at Gerenia in Messenia derived from Tricca, and even Epidauros, despite its pretensions, never entirely forgot the Thessalian origin of Asclepius. At Epidauros the hero, through his association with Apollo Malcatus, first attained real prominence, and Epidauros became the metropolis from which many of the later shrines were founded: at Athens in 420 B.C. (with some non-Epidaurian influence), Pergamum (apparently 4th c.), Rome in 293-291 B.C. (see *AEUSCULAPIUS*), Balagrae of Cyrene (Paus. 2. 26. 9), and, in some degree at least, Lebeue in Crete. At Cos local tradition (Herod. 2. 97) insisted on a Triccan origin. In instituting new shrines, a sacred snake, representing the god, was fetched from the mother temple; the famous story (Lucian, *Alex.*) of the charlatan Alexander's quackery at Abonuteichos is illuminating. Of the Hellenistic temples the greatest were at Epidauros and Cos (cf. Herodas 4); under the Empire Pergamum ranked highest, and thence in Pausanias' time the cult was carried to Smyrna (Paus. 2. 26. 9).

4. The cult appealed strongly to the rising individualism of the fourth and ensuing centuries, since it provided a close personal relationship with the divine and could evoke a fervid personal devotion (as with Aelius Aristides) seldom found in the formal State religion. The number and magnificence of the temples and the quantities of ex-votos attest its popularity. The central feature of the cures was the ritual of incubation, amply described by Aristophanes (*Plut.* 653-747). Many of the recorded cures are sheer miracles, and while much was accomplished by auto-suggestion and the workings of faith, use was also made of pragmatic therapeutic methods: dietetic regimens, baths (at Pergamum in radio-active springs), and exercise. In a sense the great sanctuaries were sanatoria, equipped with theatres, gymnasia, and baths, but how far the secular physicians, sometimes designated as Asclepiadae, derived their science from the priestly craft remains an open question, though the

foundation of the temple at Cos (mid 4th c.) was perhaps due largely to disciples of Hippocrates. The chronic invalid Aelius Aristides is a valuable witness for the methods employed in his time in the cult. *See* MEDICINE, II. 9.

5. Usually associated with Asclepius were his children, especially Hygieia, personified Health; Telesphorus is a late Pergamene addition to the cult. The sacred snake regularly assists in the cures, sometimes also dogs, to which, at Piraeus, sacrifices were even ordained (*IG* II², 4962). The organization of the cult followed normal lines; likewise the festivals for Asclepius, the Asclepieia, consisted of the usual hymns, processions, and sacrifices. Of the various paeans to Asclepius one, especially famous, continued in use at Athens for 500 years and more, and copies have been found also at Erythrae, in Macedonia, and in Egypt; late antiquity ascribed it to Sophocles, probably because of his famed 'reception' of Asclepius at Athens and consequent heroization as *Δεξιων*. Of epithets of Asclepius may be mentioned *Σωτήρ*, common on inscriptions, and *Ήλιον*; Zeus Asclepius is late, as is *σωτήρ τῶν ὀντων* and the title *μύστης*.

6. In art Asclepius generally appears as a mature, bearded man, similar to Zeus, but with a kinder, milder expression; Calamus and Scopas portrayed him as beardless, and Boethius as a child. His most constant attributes are the staff (cf. rite of *τῆς μάθου ἀνάληψις* at Cos, Hippocr. *Ep.* II, 778 Kühn), and the snake, often coiled about the staff. Generally the god is standing, as in the fifth-century original from Emporion in Spain (R. Carpenter, *The Greeks in Spain* (U.S.A. 1925), 104 ff.); in the famous chryselephantine statue by Thrasymedes at Epidaurus, described by Pausanias (2. 27. 2) and figured on coins, Asclepius is seated, the staff in his left hand, his right extended above the head of a serpent, and beside the throne lies a dog. The scroll or tablet which he sometimes bears probably represents medical learning.

Farnell, *Hero Cults*, ch. 10; E. J. and L. Edelstein, *Asclepius* (2 vols., U.S.A. 1945); W. H. D. Rouse, *Greek Votive Offerings* (1902), ch. 5; A. Walton, *The Cult of Asclepius* (U.S.A. 1894), U. v. Wilamowitz-Moellendorf, *Insylos von Epidaurus* (1886), C. Keilner, *Der göttliche Arzt* (1947, 1950), Eng. trans., *Asclepius*, (U.S.A. 1961). Special topics: R. Heitzog, *Wanderheilungen von Epidaurus* (1911), on paeans, J. H. Oliver, *Hesp.* 1916; P. Kutsch, *Attische Heilgötter und Heilwesen* (1913), on A. and Sophocles; F. R. Walton, *Harv. Stud.* 1935; W. S. Ferguson, *Harv. Theol. Rev.* 1944, 86; on A. and Aristides, A. J. Festugière, *Personal Religion among the Greeks* (1954), ch. vi; P. Schazmann and R. Heitzog, *Kos*, vol. 1, *Asklepieion* (1932), O. Deubner, *Das Asklepieion von Pergamon* (1938); C. Roebuck, *Corinth. Asklepieion and Lerna* (U.S.A. 1951), G. W. Bowersock, *The Sophists in the Roman Empire* (1969), ch. 5. F. R. W.

ASCONIUS PEDIANUS, QUINTUS (9 B.C.–A.D. 76; Hieron. *Chron.* on 76, the year he became blind being 64; see Clark), of Padua ('Lavius noster', Asc. 68 [on Cic. *Corn.*]; *Sil. Pun.* 12. 212), a 'historicus clarus'. Quintilian (1. 7. 24) makes probable an early relationship with Livy. Servius on *Ecl.* 4. 11 implies that he knew Asinius Gallus (d. A.D. 33); *Suda* s.v. *Ἀνίκιος* connects him with Junius Blaesus, cos. A.D. 10, not the consul of 28 (E. Klebs, *PW*). Lost writings are (1) *Vita Sallustii*, [Acron] on Hor. *Sat.* 1. 2. 41 (if the attribution is correct). (2) *Symposium*, imitating Plato, on physical exercises as promoting health and longevity (*Suda* and Pliny, *HN.* 7. 159). (3) *Contra obtractores Vergili* (Donat. ap. Suet.). We possess only a fragment of his historical commentary on Cicero's orations (*Pis.*, *Scaur.*, *Mil.*, *Corn.*, *Tog. Cand.*), written between A.D. 54 and 57, and based on Cicero's published (and unpublished) works, except the letters to Atticus. Poggio found a ninth-century MS. at St. Gall: his copy is in Madrid (P. Matritensis). It was also copied by Sozomenus of Pistoia (S. Pistoriensis), and by Bartolomeo di Montepulciano (Laur. 54. 15). Included in *Sangallensis* was a fifth-century commentary on *Div.*

Caec., *Verr.* 1 and 2 to § 35. This is of grammatical character, and is quoted as pseudo-Asconius.

LIFE AND WORKS. J. N. Madvig (1828); Teuffel-Schwabe, *Gesch. d. rom. Lit.* (1900), § 295; Schanz-Houss, § 476. TEXTS. Kießling Schöll (1875); A. C. Clark (O.C.T. 1907); T. Stangl, *Scholasticae Ciceronis Oratorum* II (1912), C. Giaretano (repr. 1965). G. C. R.

ASCULUM PICENUM, the capital of Picenum, strongly placed amid imposing mountains near the Adriatic on the R. Truentus (Strabo 5. 241); modern *Ascoli Piceno*, with numerous ancient remains. Rome captured Asculum in 268 B.C. and continued the Via Salaria (q.v.) to it (Florus 1. 14). The Social War broke out here, but the Romans recovered the town after a two-year siege and grimly punished it (App. *BCiv.* 1. 38, 47, 48). In imperial times it was a *colonia* (Pliny, *HN* 3. 111). *See also* A(V)SCULUM. E. T. S.

ASELLIO, SEMPRONIUS (*PW* 16), historian, military tribune at Numantia in 134–133 B.C., wrote a history (*res gestae*) of his own times, not in annalistic form (*Annales*), but, presumably under the influence of Polybius, with pragmatic treatment. Perhaps beginning at the destruction of Carthage, it included the year 137 B.C. in book 4, Ti. Gracchus' death in book 5, and Livius Drusus' death (91 B.C.) in book 14. In a celebrated fragment on the function of history (Gellius 5. 18. 8), he distinguishes between pragmatic *historia* and formal *Annales*.

Peter, *HRRel* I², ccxlii and 179; M. Gelzer, *Kl. Schr.* iii. (1964) 93 ff., 104 ff. A. H. McD.

ASIA (continent). The name was probably derived from 'Assiua', the Hittite designation of north-west Asia Minor; in Homer (*Il.* 2. 461) it denoted the hinterland of Ionia. Between 800 and 500 B.C. Greek explorers realized the existence of great land-masses beyond Europe and included all of these under 'Asia'. After 500 they separated Africa from Asia and fixed the boundaries of Asia at Suez and (usually) at the R. Don. Herodotus knew that a route led up the Don and into the Asian steppe; he had a fairly accurate conception of the Persian Empire as far as Babylonia, and sporadic information about Arabia, Iran, and north-west India; like most Greeks before Alexander, he gave Asia Minor a narrow neck at its eastern base. Greek knowledge of Asia progressed little until Alexander opened up the continent as far as the Syr Daria, the Himalayas, and the Jhelum, and the sea route between India and the Persian Gulf. The Hellenistic Greeks obtained some knowledge of the Ganges valley (*see* MEGASTHENES), and met Chinese travellers advancing across the Tarim basin (*see* SERES). But inner Arabia remained a secret to them, and their knowledge of the Caspian basin was inferior to that of Herodotus (*see* CASPIAN SEA, PATROCLES). The irruptions of the Parthians (250 B.C.) and of the 'Tochari and Sacae' (150) into Iran virtually cut off the Greeks from central Asia.

In the second century A.D. the Roman emperors secured greater freedom of travel through the Parthian dominions, and Greek traders, advancing to Daraat Kurgan, renewed contact with Chinese merchants and gained knowledge of the Pamirs, Tianshan, and Altai. In the first two centuries A.D. Greek traders also opened up the Indian coast as far as C. Comorin, and occasionally visited the Bay of Bengal and the Gulf of Tongking.

Cary-Warmington, *Explorers* (1929), 56 ff., 130 ff. (1963, Pelican) 73 ff., 157 ff.; Cary, *Geographic Background*, 151 ff. *See also* ARABIA, BACTRIA, HIPHALUS, INDIA, SERES, TAPOBANE. E. H. W.

ASIA (Roman province). Attalus III of Pergamum bequeathed his kingdom to the Romans. Annexed at his death in 133 B.C., it was constituted as *provincia Asia* by

M'. Aquillius (see AQUILLIUS 2). Originally the province consisted of Mysia, the Troad, Aeolis, Lydia, Ionia, the islands along the coast, and almost certainly Caria; part of Phrygia was given to Mithridates Euergetes of Pontus, and was not incorporated in the province till 116. Between 56 and 50 the *conventus* of Laodicea, Apamea, and Synnada, which lay along the route by which the governor of Cilicia travelled to his province, were for convenience assigned to Cilicia. From 49 B.C. till c. A.D. 297 Asia included all the territory from Tyriaion to the sea, with the adjacent islands; it was bounded on the north by Bithynia, on the south by Lycia, and on the east (after 25 B.C.) by Galatia.

The province Asia was rich in natural resources and in the products of agriculture and industry (its dyed wool fabrics were famous), and its harbours were entrepôts for the trade which crossed it by the Hermus and Maeander valley routes from the interior of Asia Minor and countries farther east. On this wealthy land the Roman republican governors and capitalists descended like vultures, and its hatred of Rome had grown to white heat when it joined Mithridates in 88-84 B.C. and participated in his massacre of 80,000 Italian residents in one day. In 84 Sulla reorganized Asia and (temporarily, at least) revised its system of taxation; this year was used as the beginning of the provincial era in the eastern part of the province till the end of the imperial period. Asia continued to suffer from arbitrary exactions during the civil wars; order and prosperity returned to it with the foundation of the Principate. At the partition of provinces between Augustus and the Senate Asia became senatorial, with a governor of consular rank who governed as proconsul. He was assisted by three legates and a quaestor. The governor landed at Ephesus, which the republican *publicani*, and later, also, the imperial procurators, made their headquarters. Hence Ephesus rivalled Pergamum in importance, although Pergamum presumably continued to be the seat of government of the proconsul.

Asia was a conglomeration of city territories; several of these cities had been autonomous in the Attalid period, and a few of those retained a titular freedom under the Romans. The cities, under the authority of the governor, continued to be administered by their own councils (membership of which was now for life) and magistrates, often with the assistance of a *logistes* appointed by the Emperor, who controlled finance and expenditure. For purposes of jurisdiction the province was divided into *conventus*. Pliny (*HN.* 5. 105 f.) listed nine of these, but his list is perhaps incomplete; later (and earlier) there were more than nine. The number varied during both the Republic and the Principate. Provincial unity was expressed in the *commune Asiae* (κοινὸν Ἀσίας), a General Assembly of all the cities in the province, which met annually in this or that city and provided for the official worship of Rome and Augustus (see CONCILIUM). The High Priests of Asia (ἀρχιερεῖς τῆς Ἀσίας), who presided over meetings of the κοινόν, should perhaps be distinguished from the Asiarchs (Ἀσιάρχαι), men of substance and benefactors of their own cities, the exact nature of whose connexion with the κοινόν or its festival (κοινὰ Ἀσίας) is still uncertain. City rivalries prevented the development of any sense of provincial unity. In the first two centuries of the Empire Asia enjoyed great prosperity, of which memorials survive in splendid ruins and handsome monuments all over the country, as well as in the works of Dio Chrysostom and Aelius Aristides. The cities had changed from autonomous city-states into administrative centres, but countless inscriptions attest the eagerness of members of the city aristocracies for public service, their generosity in providing civic amenities (at the expense of the rural populations they exploited) and the acquisition (by some families) of entry into the

imperial administrative aristocracy. Hellenism (and its vehicle, urbanization), completed its slow conquest of the inland regions, but the basic Anatolian element in the population of the interior was of enduring importance and stamped its own character on the religious movements that found a home there. The glittering, superficial society of the metropolitan cities of the coast, with its film-star heroes, the wealthy rhetors and sophists, was less receptive of these movements, and of Christianity in its earliest phase of expansion. The province shared in the universal sufferings of the third century, and in the fourth century, when the Anatolian roads led no longer westwards to Greece and Rome, but northwards to Constantinople, it lost its age-long position as an entrepôt of inter-continental trade. Meantime Diocletian (c. A.D. 297) had divided Asia into seven provinces: see e.g., LYDIA, PHRYGIA.

V. Chapot, *La Province romaine d'Asie* (1904); T. R. S. Broughton, in *Frank, Econ. Surv.* iv, pt. 4; Jones, *Cities E. Rom. Prov.* ch. 2; Magie, *Rom. Rule Asia Min.*; J. I. Miller, *The Spice Trade of the Roman Empire*. W. M. C.; E. W. G.

ASISIUM, modern *Assisi*, birthplace of Saint Francis and probably of Propertius, *municipium* of Umbria on the western slopes of the Apennines. It played little part in history until captured by Totila c. A.D. 545 (Procop. 7. 12). Its early imperial temple of 'Minerva' serves today as a church.

E. Zucca, *Assisi and its Environs* (Rome, 1950). E. T. S.

ASIUS of Samos (? 7th or 6th c. B.C.), poet (Ath. 3. 125 b ποιητὴν παλαιόν); author of genealogies, satirical poetry in hexameters (on the luxury of the Samians), and elegiacs.

EGF 202-5.

ASKOLIASMOS (ἀσκολιασμός), a country sport in Attica. The players tried to keep their balance while jumping on an inflated and greasy wineskin (ἀσκός). The occasion seems to have been the Rural Dionysia (see DIONYSIA; Cornutus, *Theol. Graec.*, 60, 23 Lang; *Suda*, s.v.; Verg. *G.* 2. 384). That it was a religious or magical ceremony and that it belonged to any other festival seem to be mis-statements; see L. Deubner, *Attische Feste* (1932), 117, 135.

H. J. R.

ASMONIUS (5th c. A.D.), author of works on grammar and metre (now lost) which Priscian used.

Schanz-Hosius, § 825.

ASPASIA, of Milesian family, lived with Pericles as his mistress from c. 445 B.C. after he had divorced his wife, till his death. She was a woman of considerable intellectual stature who conversed with Socrates and taught rhetoric. She was naturally enough the subject of politically inspired attacks, particularly in comedy. In addition to charges of immorality, she was supposed to have influenced Pericles unduly and to have induced him to start the Samian and Peloponnesian Wars. Aristophanes parodies these imputations in the *Acharnians* (515-539). She was prosecuted (the date is uncertain) for impurity and procuring by the comedian Hermippus (q.v. 1); but Pericles, the real object of this and the associated attacks, defended her passionately and successfully. Their son, excluded from citizenship under Pericles' own law of 451/0, was legitimated by decree after the death in the Plague of his two sons by his wife, and took his father's name; he was one of the generals executed after Arginusae (see PELOPONNESIAN WAR § 6). After Pericles' death in 429 Aspasia associated with Lysicles, a popular leader killed in 428. Her friendship with Socrates caused her to be

remembered and written about by his followers, including Antisthenes (q.v. 1), Aeschines (q.v. 2), and Plato (*Menex.* 235 e-236 d, 249 d, e).

G. Busolt, *Gr. Gesch.* (1893-1904), iii. 505 ff.

T. J. C.

ASPASIUS (c. A.D. 100-150), Peripatetic. His commentaries on Aristotle's *Cat.*, *Int.*, *Metaph.*, *Ph.*, and *Cael.*, and his *Libellus de naturalibus passionibus* are lost; his commentary on the *Eth. Nic.* survives in part (ed. G. Heylbut, 1889).

ASPENDUS, a Greek colony in Pamphylia, claiming descent from Argos. Its name (Éstvediy's on the early coins) is perhaps connected with the Asitawandas lately known from the inscriptions of Karatepe. Though assessed as a member of the Delian League (*IG* 1. 64), it preferred Persian rule, even resisting Alexander. Occupied by Ptolemy I, it was later subject to the Seleucids till 189 B.C., when C. Manlius admitted it to the alliance of the Roman people. Situated 8 miles from the mouth of the Eurymedon, which was navigable as far as the city, it was an important harbour. The ruins at *Belkis*, especially the theatre and the aqueduct, are unusually well preserved.

K. Lanckoroński, *Städte Pamphyliens* (1890) i. 85 ff.

A. H. M. J.; G. E. B.

ASPER, AEMILIUS (late 2nd c. A.D.), wrote commentaries (now lost) on Terence, Sallust (*Historiae* and *Cat.*), and Virgil, which dealt with subject-matter and diction and included parallels from Greek and Latin authors. Aelius Donatus (q.v. 1) probably borrowed freely from him. The *ars* extant under his name (ed. Keil, *Gramm. Lat.* 5. 547-54) is apocryphal.

A. Tomlin, *Étude sur le Commentaire Virgilien d'Aemilius Asper* (1952), Schanz-Hosius, § 598.

J. F. M.

ASPRENAS, NONIUS, the name of two Augustan rhetoricians, Lucius and Publius, whose declamations are mentioned in Seneca's *Controversiae* and *Suasoriae*.

Schanz-Hosius § 336, 9 n. 11.

ASSONANCE, GREEK. Assonance is the recurrence of a sound in words which strikes the ear. The definition is, of necessity, subjective; and the Greek ear seems not to have noticed recurrences which strike our ear harshly; e.g. Eur. *Alc.* 160 ἐλδούατ', ἐκ δ' ἐλδούα; *IT* 1339, *Phoen.* 1174, *Or.* 238, *Soph. Phil.* 372. The Greeks tolerated such homocoteleuta as *Thuc.* 2. 43. 6 ὁ μετὰ ρώμης καὶ κοινῆς ἐλπίδος ἅμα γιγνώμενος ἀναισθητος θάνατος (cf. *Andoc.* 4. 39, *Pl. Leg.* 949 c, *Dem.* 18. 238). Euripides, however, was taunted, perhaps unfairly, with putting in too many sigmas (*Plato Com. fr.* 30, *Eubulus fr.* 26-7).

(1) ALLITERATION. There are a few apparently intentional examples in Homer (e.g. *Φ* 181 χύντο χαμαὶ χολάδες, more in Aeschylus, not so many in Sophocles and Euripides. Alliterations in *π* are the most numerous. (The commonness of *π* as an initial letter does not wholly account for this.) Next come *a* and *κ*. The most famous example is *Soph. OT* 371 τυφλὸς τὰ τ' ὤτα τὸν τε νοῦν τὰ τ' ὄμματ' εἰ. Cf. also *Aesch. Ag.* 819-20, *Cho.* 89, 566, *Soph. El.* 210, *Eur. Hipp.* 1201-2, *Phoen.* 488-9. In the prose of the pre-Socratics alliteration undoubtedly plays a part (cf. *Heraclit. fr.* 25, *Democr. frs.* 164, 193, 215, 258, 801, *Grg.* 11. 4, 8), also perhaps in *Thucydides* (1. 69. 1, 8. 1, 5-6, 6. 9. 1; 7. 68. 1), and *Plato* (*Ap.* 39 a, *Resp.* 609 a, *Leg.* 634 e, 666 e, 688 e, 730 c, 923 a), while it is virtually absent from *Herodotus*, *Xenophon*, and the orators. Plato's use of assonance is perhaps a legacy from earlier philosophers. At *Pl. Symp.* 197 d (Agathon) ἐν πόνῳ, ἐν φόβῳ, ἐν πόθῳ, ἐν λόγῳ κυβερνήτης the medial assonance is no doubt intentional.

(2) RHYME. Theognis (in marked contrast to *Tyrtaeus*) has 'leonine' rhyme in one pentameter out of seven (cf. 173-83, 390-6), which can hardly be accidental. There is little evidence for intentional rhyme in epic, or in tragedy, but we can perhaps, as Herrmanowski suggests, detect a tendency to employ it in proverbs (e.g. *Soph. OT* 110-11) and in *lori communes* at the end of a scene (e.g. *Eur. Med.* 408-9). There are more examples in comedy (e.g. *Ar. Ach.* 30-4, 1087-92, *Pax* 341-4; *Alexis fr.* 141. 9-13). Rhyme is clearly present in some of the late *Anacreontea* (e.g. 38). In prose, Demosthenes does not seek rhyming clauses, perhaps actually avoids them, while in *Gorgias*, *Isocrates*, and writers of the *Isocratean* school they are an important part of the stock-in-trade, and double rhyme is often employed (e.g. *Isoc.* 4. 18 καὶνῶς διελθεῖν . . . ἀρχαίως εἰπεῖν).

(3) PUNNING ASSONANCE, extending over the greater part of the two words, including Cicero's 'immutatio litterae quasi quaesitae venustates' (*Orat.* 84). With us the pun is usually humorous; with the Greeks it was often serious (*Aesch. PV* 693 ψύχειν ψυχάν), sometimes the means for enforcing a philosophical lesson. Thus *Aesch. Ag.* 177 πάθει μάθος, *Heraclit. fr.* 114, *Democr. fr.* 57, *Pl. Grg.* 493 a (σῶμα-σῆμα, πῖθος-πίθανος). But in *Plato* the pun, including puns on proper names, is often humorous or semi-humorous (*Leg.* 803 a τροπιδεῖα-τρόποις, 834 d Κρής οὐκ ἀχρηστὸς, 956 e κληρώσεις-πληρώσεις, *Epin.* 982 e πορείαν-χορείαν), sometimes with a hit at the sophists (*Symp.* 185 c Πανσάνειον πανσάνεινον, *Grg.* 492 b λόγον καὶ ψόγον, in *Callicles'* mouth, *Pr.* 345 b χρόνον-πῶνον, a backhanded compliment to *Protagoras*). *Gorgias'* λαβοῦσα-λαβοῦσα (*fr.* 11. 4) is a typical sophistic instance, and φῆμη-μνήμη, ρωμή-γνώμη are common forms in this style. *Xenophon* sometimes indulges in naive puns (e.g. *An.* 2. 2. 1 Μένων-ήμεν). For punning on proper names, see ETYMOLOGY, § 1.

Pollheim, *Die lateinische Reimprosa* (1925), 133 ff. (rhyme in Greek prose); Norden, *Ant. Kunstpr.* 810 ff.; J. D. Denniston, *Greek Prose Style* (1952), 124 ff. J. D. D.

ASSONANCE, LATIN. Assonance in varying manifestations is native to Latin, aided by the structure of the language and abetted by stylistic developments.

(1) ALLITERATION. This appears in proverbs (Otto, *Sprichwörter*, xxxii), prayers, legal formulae, etc.: (a) 'flamma fumo est proxima' (*Plaut. Curc.* 53); 'mense malae Maio nubunt' (see *Ovid, Fast.* 5. 490); 'nilul utilius sale et sole' (*Pliny, HN* 31. 102); 'salua res est, salat senex' (*Servius on Aen.* 8. 110); (b) 'utique tu fruges frumenta uincta uirgultaque grandire beneque euenire siris, pastores pecuaria salua seruassis' (*Cato, Agr.* 141); (c) 'donum datum donatum dedicatumque' (*CIL* 1². 756); 'manu mancipio' (*Thes. L. L.* 8. 254. 76); 'per lancem liciumque' (*Gell.* 11. 18. 9).

In early literature it is marked in *Saturnians*: 'quoici uita deficit, non honos, honore | is hic situs quei nunquam uictus est uirtute' (*CIL* 1². 11), 'inmortales mortales si foret las flier' (*Nacvius'* epitaph, *Gell.* 1. 24. 2). *Plautus* revels in it: 'sator sartorque scelerum et messor maxime' (*Capt.* 661), 'ex malis multis malum quod minimum est id minime est malum' (*Stich.* 120). In *Ennius* its use ranges from the embarrassing ('nec cum capta capi nec cum combusta cremari', *Ann.* 359; 'o Tite tute Tati tibi tanta tyranne tulisti', *ibid.* 109) to the noble ('lumine sic tremulo terra et caua caculura candent', *Sc.* 292; 'o magna templa caelium commixta stellis splendidis', *Sc.* 196). *Pacuvius* has a fine example (246 R) 'lassitudinemque minuum manuum mollitudine'.

In time, alliteration becomes increasingly integrated with poetic art. *Lucretius*, though not entirely removed

from the earlier manner, uses it with striking power in many memorable passages. The Augustans all make it do their bidding, Virgil especially (e.g. *Aen.* 2. 692 ff., 4. 651 ff.): it is now no longer an external ornament applied more or less self-consciously, but an inner secret of sound, subtly deployed to serve emotion.

Prose employs alliteration constantly, often to point a rhetorical antithesis: contrast the naiveté of 'patrem primum, postea patronum proximum nomen habuere' (Cato, *Or. fr.* 200 M) with 'portum potius paratum nobis et periculum putemus, quo utinam uelis passis peruehi liceat' (Cic. *Tusc.* 1. 119), or 'te non custodem ad continendas sed portitorem ad partiendas mercis missum putares' (Cic. *Vat.* 12). Tacitus especially likes alliterative pairs of words, sometimes on the archaic pattern: 'fortuna famaue' (*Hist.* 3. 32), 'largitio et luxur' (*Ann.* 4. 1), 'spes in uirtute, salus ex uictoria' (*Ann.* 2. 20), 'sordida ducum, seditione legionum' (*Hist.* 3. 46). Obtrusiveness returns with the second-century archaizers (Fronto, Apuleius).

(2) HOMOEOTELEUTON, often combined with alliteration, is another aspect of assonance. The Roman ear could take such thunder as this: 'coactus lacrimis omnium ciuium Romanorum qui in Sicilia negotiantur, adductus Valentinorum, hominum honestissimorum, omniumque Regnorum testimonis multorumque equitum Romanorum' (Cic. *Verr.* 5. 158); it could be excited by this: 'tandem aliquando, Quirites, L. Catilinam furentem audacia, scelus anhelantem, pestem patriae nefarie molientem, uobis atque huic urbi ferro flammamque minitantem ex urbe uel eiecimus uel emisimus uel ipsum egredientem uerbis persecuti sumus' (Cic. *Cat.* 2. 1). Poetry produces such effects as 'dulce ridentem Lalagen amabo, | dulce loquentem' (Hor. *Carm.* 1. 22. 23 f.), 'bello armantur equi, bellum haec amenta minantur' (Verg. *Aen.* 3. 540), 'flebant et cineris ingrato suprema ferebant' (id. ib. 6. 213), 'tendebantque manus ripae ulterioris amore' (id. ib. 6. 314).

(3) Such assonances tend inevitably towards a species of RHYME, as in the early magic formula 'terra pestem teneto, salus hic maneto in pedibus meis' (Varro, *Rust.* 1. 2. 27) or the sophisticated Virgilian 'limus ut hic durescit et haec ut cera liquescit' (*Ecl.* 8. 80). Rhetorical prose structure easily produces such turns as "'in balneis delectuerunt" testis egregios' | "deum temere prosiluerunt." homines temperantis' (Cic. *Caec.* 63); they become exaggerated in Apuleius (e.g. *Met.* 11. 25 'tuo nutu spirant flamma, nutriunt nubila, germinant semina, crescent germina'), Tertullian, and St. Augustine. Grammatical 'rhyme' is frequent in poetry: 'haec omnia uidi inflammar, | Priamo ui uitam euitari, | Iouis aram sanguine turpari' (Ennius, *Sc.* 97 ff.); 'terribilem cristis galeam flammamque uomentem, | fatiferumque enssem, loricae ex aere rigentem, | sanguinem, ingentem' (Verg. *Aen.* 8. 620 ff.), 'uile solum Sparte est, altae cecidere Mycenae; | Oedipodoniae quid sunt nisi nomina Thebae? | quid Pandioniae restant nisi nomen Athenae?' (Ovid, *Met.* 15. 428 ff.).

The 'leonine' hexameter with disyllabic rhyme occurs sometimes in Virgil (e.g. *Aen.* 3. 36, 10. 756) and other classical poets (e.g. Lucretius 1. 318; Ovid, *Ars Am.*, 1. 59, *Met.* 6. 247). Its special vogue in the eleventh century A.D. coincided with the full development of deliberate rhyming in the accentual hymn-form (first seen extensively in Sedulius and Venantius Fortunatus, 5th and 6th c.) and in secular medieval lyric: the potential of assonance is now 'modernized', and Latin poetry gains new beauty in a late blossoming.

ASSOS, an impregnable site on the Gulf of Adramyttium, facing south towards Lesbos (it was originally colonized from Methymna) and controlling the coast road. The harbour is artificial. The public buildings rose in terraces on the steep hillside in a unified architectural scheme; impressive fortifications are still extant. Except in the fourth century B.C. the history of Assos is inseparable from the general history of the Troad. Ariobarzanes was besieged here in 365. Subsequently Hermias (q.v. 1) made Assos the centre for a school of Platonists, amongst whom Aristotle was numbered. It was the birthplace of the Stoic philosopher Cleanthes.

J. T. Clarke, F. H. Bacon, R. Koldewey, *Investigations at Assos 1881-1883* (1921). D. E. W. W.

ASSYRIA (Greek and Roman), the name applied by Herodotus (1. 178, 185, etc.), Xenophon (*Cyr.* 2. 5), and later writers (e.g. Pliny) to the whole country between the Armenian and Iranian mountains and the Syro-Arabian desert. More properly, Assyria denoted the ancient kingdom on the Upper Tigris, bounded on the north and east by the Masius range and the Kurdish hills—the centre of the great Assyrian Empire (c. 1000-612 B.C.). In the Parthian period the kingdom of Adiabene (q.v.) comprised most of the old territory of Assyria. Part of the Parthian city of Asshur, the ancient capital, can be reconstructed from excavations on the site.

The province of Assyria formed by Trajan in A.D. 116 and abandoned by Hadrian (Eutrop. 8. 2; Ruf. Fest. 14 and 20) corresponds to the later Sassanid 'Asorestan', i.e. Lower Mesopotamia or Babylonia, including Ctesiphon (q.v.).

W. Andrae, *Das wiedererstandene Assur* (1938); A. Marcq, *Syria 1959*, 254 ff. M. S. D., E. W. G.

ASTERIA, in mythology, sister of Leto (q.v.), mother, by Perses, of Hecate (q.v.). Being pursued by Zeus (Callimachus, *Del.* 38; Hyginus, *Fab.* 53, and several other authors; Nonnus, *Dion.* 2. 125, says it was Poseidon), who was in love with her, she turned into a quail, leaped into the sea (or was thrown into it), and then became Ortygia, i.e. Quail Island, afterwards Delos; the time and occasion of her turning into a quail are variously told. As her name means Starry, it appears as if the story were put together from disparate elements, perhaps an idea that the island was originally a falling star, i.e. meteorite, and also a desire to explain its alleged old name. See for more material Schirmer in Roscher's *Lexikon*, s.v. H. J. R.

ASTRAGALUS. Knucklebones (ἀστράγαλοι) were used especially by Greek women, in various simple games such as children now play with stones, and were also employed as dice. The four long faces of the knucklebones were of different shapes, one flat, one irregular, one concave, and one convex, and in dicing these had the value respectively of 1, 6, 3, 4.

F. A. W.

ASTROLOGY. Ancient astronomy sought to reduce to mathematical order the apparent motions of the heavenly bodies. Astrology was concerned with the supposed effects of these heavenly bodies on human destinies. Its fundamental faith was that a universal 'sympathy' binds

heaven to earth. And, as astronomy by prolonged observation had learned to predict the recurrence of heavenly phenomena, astrology professed to be a science which could forecast the earthly happenings which depend on the heavenly. This view of things, with its blend of religious and scientific elements, was first elaborated in the temples of Mesopotamia, and spread thence to Egypt. It had no great influence on Greek life until after the death of Alexander, when Greeks and Orientals mingled in the kingdoms of the Seleucids and Ptolemies. From this time on it became an increasingly important factor in the civilization of Greece and Rome, reaching its apogee in imperial times, and affecting every level of society. It is only the underworld of astrology that is represented by the casters of horoscopes, the *Chaldaei* and *mathematici*, assailed by Roman magistrates and satirists. At its highest it commanded the ardent allegiance of the best minds of the ancient world. Hardly a branch of ancient culture remained unaffected by it. The Stoic philosophers, trained in Greek thought, partially secularized this ancient temple wisdom, but gave it fresh currency. The astronomers Hipparchus and Ptolemy believed in it. It affected medicine profoundly. It found poetical expression in the *Astronomica* of Manilius and architectural embodiment in the Pantheon. It supplemented the *Ius Civile* by the concept of Natural Law. See also FATE.

B. van Hoesen, *Greek Horoscopes* (U.S.A. 1950), Cumont, *Rel. or.*, ch. 7 (a brilliant short account, with bibliography); Cumont, *L'Égypte des astrologues* (1937) which demonstrates the fresh light thrown on the ancient world by the progress of this branch of study. W. and H. G. Gunkel, *Die astrologische Literatur in der Antike* (1907). B. F.

Astrology and the Roman government. Astrological studies and research were not hampered at Rome (witness the work and interest of Varro (2) and Nigidius Figulus, qq.v.), but on certain occasions (generally of some internal tension) measures were taken against professional astrologers who were practising their craft. These took the form of expulsion from Rome and Italy, though the rest of the Empire was unaffected. At least nine such expulsion orders are known between 139 B.C. and A.D. 93, based on magisterial order (in 139 and 33 B.C.), senatus-consultum (in A.D. 16 and 52), or imperial edict (as in 69). The measures, which sometimes included sorcerers, philosophers, and other diviners, branded such activities as temporarily undesirable, but they did not aim at establishing any permanent ban. Augustus, however, in A.D. 11 issued an edict which, besides publishing his own horoscope, forbade the prophesying of the date of the death of anyone and enacted that no diviner should prophesy secretly to any one person alone. The political implications are obvious: private consultations *de principis salute* might seem—or be—treasonable. These restrictions, though difficult to enforce, apparently remained 'on the statute book' until the fourth century. But Ulpian (early third century A.D.) clearly asserts that the theoretical study of astrology was legal during the Principate. Thus there is no contradiction with the reliance that so many emperors, as Tiberius, placed upon the art and its practitioners (see THRASYLLUS, BALBILLUS). Diocletian took the step of banning all divination throughout the Empire: 'ars autem mathematica damnabilis interdicta est' (*Cod. Iust.* 9. 18. 2). This again may have had only temporary effects, but with the Christian emperors of the fourth and fifth centuries political reasons were reinforced by religious motives, and the ban was made permanent. Thus Constantius in 357 made divination a capital offence, and the ban was repeated in 373 and 409 (*Cod. Theod.* 9. 16. 4, 8, 12).

F. H. Cramer, *Astrology in Roman Law and Politics* (U.S.A. 1954); R. MacMullen, *Enemies of the Roman Order* (U.S.A. 1967), ch. iv H. H. S.

ASTRONOMY. From the earliest times the Greeks had used the rising and setting of certain stars as calendaric markers (c.g. Hes. *Op.* 619 ff.); but they had nothing that could be called astronomy in the scientific sense until comparatively late. The cosmological theories of the pre-Socratic philosophers, though containing occasional glimpses of the truth, were purely speculative. Most of the 'scientific discoveries' and feats attributed by later writers to the sixth-century philosophers, such as Thales' (q.v.) eclipse prediction, are unworthy of belief. During the fifth century, however, some of the concepts which are a necessary prerequisite for a science of astronomy were propounded. The sphericity of the earth was mentioned in Parmenides (q.v.) (A 44 D-K), who also stated that the moon receives its light from the sun (B 15). Empedocles (q.v.) not only said this but inferred the cause of solar eclipses (B 42). Anaxagoras said the same (A 77). Yet how unfamiliar all this was even in the late fifth century is shown by the remark of Thucydides (whose education was extraordinary for his time) that solar eclipses *seem* only to occur at new moon (2. 28). See also Plato *Crat.* 409 a-b. Whatever 'astronomical' activity there was in the fifth century centred on (a) the risings and settings of stars and perhaps description of the constellations (the zodiac was imported from Babylon as early as Cleostratus of Tenedos (2nd half of 6th c.), if the lines quoted from him are genuine); (b) observations of solstice and equinox, and establishment of luni-solar cycles. In the latter connexion the most famous name is Meton (q.v.). Both these activities were directed mainly towards practical, i.e. calendaric, purposes. There seems to have been general ignorance about the planets. Democritus, according to Seneca (*QNat.* 7. 3. 2) said that he suspected that there were several (*plures*) planets, but gave neither number nor names. In the same place Seneca attributes the introduction of knowledge of the planetary motions to Eudoxus (q.v. 1), and this is not unlikely: he is the first Greek who is *known* to have recognized the five planets (for it is impossible to sort out the genuinely early material from among what is attributed to Pythagoras and his school, and the passages in Plato, *Resp.* 616 d-617 b and *Ti.* 38 c ff., where the five planets are hunted at, may well be later than Eudoxus' publication). But Eudoxus is also the first to have constructed a system of mathematical astronomy in his 'theory of homocentric spheres'. The observational data incorporated into this, namely crude synodic and sidereal periods of the heavenly bodies, were probably derived from a Babylonian source (Seneca, l.c., says Eudoxus imported 'the motions' from Egypt, but what is known of Egyptian 'astronomy' makes this highly unlikely). But the idea of constructing a geometrical model to account for the phenomena was peculiarly Greek. Eudoxus' system was of great mathematical elegance, and succeeded in reproducing the motions qualitatively, but it would take little observation to establish its disagreement with the facts. In particular no homocentric system could account for the obvious variations in size and brightness of, e.g., the moon and Venus. Nevertheless Callippus (q.v.) modified Eudoxus' system to eliminate some of the grosser discrepancies with the truth, and Aristotle provisionally accepted this modified system (*Cael.*, *Metaph.* A 8), and made what had probably been for Eudoxus a purely geometrical scheme into a physical mechanism with contiguous solid spheres. Other astronomical activity in the fourth century was concerned with the traditional subjects, the calendar (Eudoxus' *Octaeteris* and Callippus' 76-year cycle) and star risings, etc. (Eudoxus' *Phaenomena*). The earliest extant astronomical works, those of Autolycus (2) and Euclid (qq.v.), are nothing but a treatment of the latter in terms of elementary geometry. At this period Heraclides (q.v. 1) of Pontus put forward a new planetary system,

apparently suggesting, among other things, that the earth revolves on its axis. The same idea was incorporated in the heliocentric hypothesis of Aristarchus (q.v. 1) of Samos. Both of these, however, were purely descriptive and non-mathematical. But there was also serious observation going on in the early third century: Aristyllus and Timocharis in Alexandria attempted to fix the position of stars, and recorded details of occultations. Aristarchus too was an observer, but his only extant work, *On the Sizes and Distances of the Sun and Moon*, is more of a mathematical exercise than a piece of serious astronomy. The third century probably saw a good deal of astronomical activity, including the production of mathematical theories, but our knowledge of it, even of the astronomical works of Archimedes (q.v.), is very slight. Important progress was made by Apollonius (q.v. 2), who proved the equivalence of the (already existing)? epicyclic and eccentric theories for planetary motion, and applied them to the motion of the moon and the problem of planetary retrogradation. The ground was thus laid for the work of Hipparchus (q.v. 3), who used Apollonius' theoretical structure, extensive Babylonian eclipse records, and his own systematic observations and practical skill to produce the first satisfactory theory for the motion of sun and moon (c. 150 B.C.). This was his greatest success, though he also made advances in every field of astronomy then studied, in particular discovering the precession of the equinoxes. The only work of importance between him and Ptolemy was done by Menelaus (q.v. 3), whose spherical trigonometry was probably the first. Ptolemy (c. A.D. 140) brought Greek astronomy to its acme. His *Almagest* (μαθηματικὴ σύνταξις) is a systematic exposition of the whole field from first principles. He took over Hipparchus' solar and lunar theory, introducing a major correction into the latter. He compiled a catalogue of stars, giving ecliptic co-ordinates and magnitudes, mostly from his own observations. He constructed a theory of motion for the five planets (Hipparchus had refrained from this because of the insufficiency of his data); for this he used the traditional epicycle and eccentric, but also introduced an innovation of his own, the equant. It was thus possible to predict the position of all the known heavenly bodies at a given moment, all the details of eclipses, the retrogradations of the planets (both times and arc-lengths), and the appearances and disappearances (φάσεις) of the planets and fixed stars, all with accuracy by the standards of observation of the time (Ptolemy reckoned agreement within 10' of arc as satisfactory). After Ptolemy no significant advances were made in antiquity: his system became canonical, and even the corrections that were applied to it by Islamic astronomers were on points of detail, made possible by the longer period over which observations could be compared.

The astronomy of the Greeks covered only a part of what is now comprised in the term. It was essentially a system for *predicting* the positions of the sun, moon, and planets and the resulting phenomena rather than an *explanation* thereof. Its basis, in the classical form, was in geometrical schemes of motion. There were also purely arithmetical schemes derived from Babylonian astronomy. It is not surprising to find these, in view of the heavy dependence of Hipparchus and Ptolemy on Babylonian records of astronomical observations. Yet they are rigidly excluded from the *Almagest*: our knowledge of them comes mostly from papyri and astrological works, i.e. the 'vulgar' astronomical literature. An early example is found in the ἀναφορικὸς of Hipsicles (q.v.) of the second century B.C. Physical astronomy, however, remained at a very low level (as did physics in general). It is mostly ignored altogether in astronomical works. In Book 2 of Ptolemy's *Planetary Hypotheses* we do indeed find an attempt to fit the kinematical models of the

Almagest into an explanatory physical system, but the theory of motion involved is as primitive as Aristotle's. Similarly such discussion as there was of the composition and evolution of the heavenly bodies remained at the level of speculation, and was carried on by philosophers rather than astronomers. Even the relative and absolute distances of the planets could not be determined scientifically (the *Almagest* gives only the distances of sun and moon). In such a situation the heliocentric hypothesis, with no physical or mechanical theory to support it, held no advantage over the geocentric, and suffered the severe disadvantage that for purposes of prediction all calculations must ultimately be geocentric. It is neither surprising nor reprehensible that Aristarchus' suggestion had no success in antiquity. Within its limits, Greek astronomy in its final development was highly successful, astonishingly so when we consider the crudity of observational instruments and the fewness of observations (Hipparchus and Ptolemy seem to have been the only astronomers who made *systematic* observations). The long life of the Ptolemaic system was not undeserved. For the effect which astronomical studies, in particular the theory of sundials, had on developments in mathematics, see also MATHEMATICS.

Best general account in J. L. E. Dreyer, *A History of the Planetary Systems from Thales to Kepler*, (1905), repr. as *A History of Astronomy from Thales to Kepler* (U.S.A. 1953). Particularly useful on the earlier period is P. Tannery, *Histoire de l'Astronomie ancienne* (1893). For information on 'astronomy' in the pre-Socratics see T. L. Heath, *Aristarchus of Samos* (1913, repr. 1959). For a detailed account of the content of ancient works, J. B. J. Delambre, *Histoire de l'Astronomie ancienne*, 2 vols. (1817), is still indispensable. See also D. R. Dicks, *Early Greek Astronomy to Aristotle* (1970). On Babylonian astronomy and traces of its methods in Greek texts see O. Neugebauer, *The Exact Sciences in Antiquity* (U.S.A. 1957), chs. 5 and 6.

G. J. T.

ASTURES, an ethnographical group of north-western Spain, holding the northern coastline between the Callaeci and the Cantabri, and reaching south across the mountains. Before their conquest by Augustus they were known as rude and predatory highlanders. The census of Pliny, *HN* 3. 28 estimated 240,000 free men divided between the Transmontani of the north and the Augustani of the south. Pacified by Roman legions (26–19 B.C.), the Astures furnished gold, chrysocola, minium, horses, and auxiliary troops. They formed an imperial *comentus*, whose capital Asturica Augusta (*Astorga*) was described by Pliny as 'urbs magnifica'. The quarters of the *Legio VII Gemma (León)* developed into a large place. Remains of Roman walls survive in both towns. An intricate road system, to aid transport of minerals, was constructed by the emperors from Augustus to Gratian.

ASTYANAX or *Scamandrius* (Il. 6. 402), in mythology, young son of Hector and Andromache (qq.v.). At the capture of Troy he was flung from the walls by Neoptolemus (q.v. 1; *Little Iliad*, fr. 19 Allen) or killed by Odysseus (*Iliu Persis*). Astyanax' death is often shown in connexion with that of Priam in archaic and classical pictures of the Sack of Troy. Polygnotus in his Troy at Delphi showed Priam dead but Astyanax still alive, a baby at his mother's breast in the Greek camp (Brommer, *Vasenlisten*², 286).

H. J. R.; C. M. R.

ASTYDAMAS, the name of two poets of the fourth century B.C., father and son. The father was the son of Morsimus the son of Philocles (nephew of Aeschylus) (*Suda*, s.v.). It is uncertain to which some of the records about 'Astydamos' refer. One of the two was a pupil of Isocrates (436–338 B.C.) in rhetoric before he became a poet. The elder produced his first play in 398 B.C., and one of the two (probably the son) won his

first victory in 372 (*Marm. Par.* 71). The elder is said to have lived to the age of 60 (Diod. Sic. 14. 43. 5), and if this is true the inscriptional records (*IG* ii.² 2320) which note Dionysiac victories in 341 with the *Achilles*, *Athamas*, and *Antigone*, and in 340 with the *Parthenopaeus* and *Lycaon* must refer to the son, and the ascription by the *Suda* and Photius of the *Parthenopaeus* to the father must be a mistake. The Athenians were so delighted with this play that they erected a statue to the poet in the theatre (Diog. Laert. 2. 43), and a fragment of the base of this survives, but he was not allowed to inscribe on it the conceited verses which made his name a byword for vanity (*Suda*, s.v. *σαυριπ ἑπαυεῖς*). The son was evidently famous in his day. Aristotle notes (*Poet.* 14) that in his *Alcmaeon* he made the hero kill his mother unwittingly instead of deliberately as in the original legend, and Plutarch (*De Glor. Ath.* 7) speaks with very high praise of the *Hector*. Of the two poets less than twenty lines in all are preserved.

TGF 777 80 Wilamowitz, *Aeschylus Interpretationen* (1914), 238 f. A. W. P.-C.

ASTYNOMOI, an office found mostly in the Ionian States. In Athens there were five for the city and five for the Piraeus, elected by lot for one year. Their principal duties were to keep the streets clean and free of obstruction. They also had duties in relation to festivals; and in particular (at least c. 326) they enforced certain sumptuary laws. They could inflict small fines and introduce to the lawcourts more important cases within their jurisdiction. They had slaves as assistants. In many States they also had harbour and market duties (see AGORANOMOI). A law governing the duties of the *astynomoi* at Pergamum, passed probably in the second century B.C., is preserved in an inscription of the early second century A.D. (*SEG* xiii. 521).

A. W. G.

ASTYOCHÉ, in mythology, sister of Priam and daughter of Laomedon (qq.v.; Apollod. 3. 146). She married Telephus (q.v. 1; Quint. Smyrn. 6. 135) and bore Eurypylus, who came to the Trojan War and was killed by Neoptolemus with many of his people, *γυναῖον εἵνεκα δῶρον* (*Od.* 11. 521). This the commentators explained either of the gift of a wife (Hermione) by Menelaus to Neoptolemus, or of the gift by Priam to Astyoche of the golden vine which was given Tros by Zeus as compensation for the loss of Ganymedes (*Little Iliad*, fr. 6 Allen), etc. See Eustathius in *Odys.*, 1697, 30 ff. H. J. R.

ASYLIA means a guarantee against seizure of property by citizens of another State exercising the right of reprisal. Whenever there were no arrangements for the settlement of disputes between States the party wronged claimed the right to use self-help and to seize the property (e.g. a ship or its cargo), not only of the offending party, but of other citizens and metics of his State. Such seizure was designated by the verb *συλᾶν* and related words. Rights of reprisal were often proclaimed by one state against another. When *asylia* was granted to individuals it meant that whatever claims there were against his State his personal property was safe from seizure at the hands of citizens and residents of the State bestowing *asylia*. This form of *asylia* could be given to entire states. Another form, connected with a locality and not applying to the property of its citizens abroad, was the recognition by other States of the inviolability of a sanctuary or a sanctuary and the city in which it was located. Such sanctuaries were used as places of refuge; hence the later meaning of 'asylum'.

E. Schlesinger, *Die griechische Asylie* (1933), assembles the evidence and cites earlier literature. J. A. O. L.

ATALANTA (Ἀταλάντη), in mythology, daughter of Iasus, son of Lycurgus of Arcadia, and Clymene,

daughter of Minyas (Apollod. 3. 105), or of Schoeneus, son of Athamas (Hesiod, fr. 20 Rzach). Boeotian and Arcadian legends often show connexion, but there is no need to suppose two heroines of the same name here, for she is in all probability a by-form of Artemis (q.v.). She was a huntress, averse to marriage, loved by (1) Meleager (q.v. 1); Parthenopaeus was her son by him (*Ilyg. Fab.* 99. 1, a late story, see Rose ad loc.); (2) Melanion (Milanion, i.e. *Μελανίων*, Prop. 1. 1. 9), her first cousin (Apollod., *ibid.*), or Hippomenes. She would marry no one who could not beat her in a foot-race (in *Ilyg. Fab.* 185. 2, she follows the suitor and spears him if she can catch him; perhaps a reminiscence of a religious rite, see Rose ad loc.). Melanion, or Hippomenes, got three golden apples from Aphrodite and delayed her by throwing them, thus winning. Their son was Parthenopaeus in most accounts. But (by the anger of Aphrodite, to whom he forgot to pay his vow, *Ov. Met.* 10. 681 ff.) he lay with her in a holy place (Apollod. 108, Hyg., *ibid.* 6, *Ov.*, *ibid.* 686); for this impiety they were turned into lions. In some versions (as Prop. 1. 1. 9) there is no race, but Melanion wins Atalanta's affection when hunting with her.

Atalanta wrestling with Pelcus at the funeral games of Pelias is a very popular subject in archaic art, still sometimes found in classical. She is also regularly shown among the hunters of the Calydonian boar, a popular subject at all periods. Generally as a huntress, and in archaic art as an athlete, she wears a short tunic; as an athlete in classical art, briefs and a brassiere (Brommer, *Vasenlisten*², 235 ff., 240, 347).

H. J. R.; C. M. R.

ATARGATIS (Aramaic 'Atar-'Ata, according to Ronzevalle 'the divine 'Atā': cf. the epithet *ἀγνή* applied to her at Delos) or *Derceto*, the goddess of Hierapolis-Bambyce in Syria. Her temple, rebuilt c. 300 B.C. by Stratonice, wife of Seleucus I, was plundered by Antiochus IV and by Crassus, but was still in Lucian's day one of the greatest and holiest in Syria. Her consort was Hadad; his throne was flanked by bulls, that of Atargatis by lions. At Ascalon, Atargatis was represented as half woman, half fish. Fish and doves were sacred to her; the myth records that, having fallen into a lake, Atargatis was saved by the fish (*[Eratosth.] Cat.* 38), or, in another version, that Atargatis was changed into a fish, and her daughter Semiramis into a dove (Diod. Sic. 2. 4. 2-6; 2. 20. 1-2; *Ov. Met.* 4. 44-8). Late in the third century B.C. her cult appears in Egypt, Macedon, and, with civic status, at Phistyon in Aetolia and (early 2nd c.) at Thuria in Messenia. Natives of Hierapolis founded a shrine on Delos in 128-127, of which Athens soon took control. Atargatis was worshipped also in a number of other Hellenic cities, whereas in the west (apart from Rome, where Nero favoured her for a while) only a few dedications, from Italy, the Danubian provinces, and England, have been found. Since Atargatis was primarily a fertility goddess, the Greeks often recognized in her a form of Aphrodite, but generally she was simply the 'Syrian goddess'. Astrologers identified her with the constellation Virgo, and a third-century 'creed' found in England (*RIB* 1791) accepts the *dea Syria* as one of several names or manifestations of the universal goddess. At Thuria her cult included mysteries. Lucian, *De dea Syria*, describes the cult in Syria; Apuleius, *Met.* 8-9, the life of her wandering Galli. See EUNUCHS, RELIGIOUS; FISH, SACRED; METRAGYRTES.

ATE, the personification of infatuation or moral blindness, in which right and wrong, advantageous and ruinous conduct cannot be distinguished. She is the subject of an elaborate allegory in *Il.* 19. 90 ff., the earliest in Greek, where she is daughter of Zeus (an early instance of the problem of the moral responsibility of Deity). She is daughter of Strife and sister of Lawlessness (*Hes. Theog.* 230).

H. J. R.

ATEIUS PRAETEXTATUS PHILOLOGUS, LUCIUS, one of the chief scholars of the Ciceronian age. Born at Athens, he became a captive of war in 86 B.C., was brought to Rome and manumitted. He claimed to have written 800 books on all kinds of subjects (*miscellanea*, ὀλη) and took the name Philologus as an indication of his interests. According to Suetonius (*Gram.* 10) he helped Sallust by compiling a *Breviarium Rerum Romanarum* and Asinius Pollio by advising about the style of his history. Festus mentions his *Liber Glossematorum* and Charisius a work entitled *An amaverit Didum Aeneas*.

G. Funari, *Gramm. Rom. Frag.*, 137-41. Schanz-Hosius, § 105, 6. J. F. M.

ATELLA between Capua and Naples in Campania (q.v.) (ruins near modern *Aversa*). Atella joined Hannibal (216 B.C.), but Rome soon recovered and grimly punished it (211 B.C.). It recovered, however, and became a prosperous *municipium*. The Atellana (q.v.), the vulgar farce staged in Oscan, which enjoyed popularity in Rome, possibly originated here.

E. T. S.

ATELLANA (sc. *fabula*): in origin a native Italian farce, named after Atella in Campania but doubtless common in Oscan towns, and probably early known in Rome. It had stock characters: *Bucco*, 'the fool' (cf. Plaut. *Bach.* 1088); *Dossennus*, perhaps wrongly connected with *dorsum* (and so 'Hunch-back') since it seems to reflect an Etruscan proper name and it was identified by Roman scholars with Manducus (Varro *Lang. Lat.* 7. 96); *Maccus*, also 'the fool' (cf. *μακκοῦς*), the most frequently occurring name in titles of *Atellanae*; *Manducus*, originally a comic effigy carried in procession (Paulus Festi 115, *Lands.*; Plaut. *Rud.* 535 ff.), perhaps 'Glutton' (connected with *mandere*, Varro *Lang. Lat.* 7. 95); *Pappus*, 'the Gaffer' (cf. *πάππος*). It became a literary form (no doubt, because the inspiration provided by Greek New Comedy to produce *palliatiae* had worn thin: see TOGATA) for a short time in the period of Sulla: its principal exponents were L. Pomponius (q.v. 1) of Bononia and Novius (q.v.). The action was set in a small Italian town that gave the dramatist opportunity to portray the humour and coarseness of provincial life. It seems to have been primarily low-life comedy, in coarse and obscene language; but the dramatic motifs were still drawn from Greek New Comedy. Surprisingly there are among the titles of Pomponius and Novius some which can only be interpreted as parodies of tragedies (e.g. Pomponius, *Agamemno Suppositus*, *Armorum Iudicium*; Novius, *Andromacha*, *Phoenissae*). The *Atellana* was sometimes used as an *exodium* (a 'follower') to a tragedy, like satyric drama in Athens, and these parodies may have been inspired by such occasions.

Fabularum Atellanarum Fragmenta, rec. P. Frassinetti (1955). Schanz-Hosius 1. 245 ff.; W. Beare, *The Roman Stage* (1964), 137 ff. P. Frassinetti, *Fabula Atellana* (1953). G. W. W.

ATESTE, the modern *Este*, has given its name to one of the principal Iron Age cultures of northern Italy, lasting from the ninth century B.C. until its peaceful annexation by Rome in 184 B.C. Until A.D. 589 it stood on the Adige, now some miles south, and throughout its history thus combined natural advantages for sea-trade, presumably coming through Adria (q.v.), with easy access to the land routes round the gulf. Already by the late seventh-early

sixth centuries its products were not only reaching Felsina (q.v.) and the head of the Adriatic, but were also crossing the Alps to Carniola and the Tyrol. Noted for its production of sheet-bronze, particularly of *atulae*, *Ateste* was for 800 years the most important commercial and artistic centre of Venetia: its commercial position led to the incorporation of foreign (e.g. Oriental) elements, via Greek and Etruscan intermediaries, into a distinctive indigenous art-style.

G. Fogolari, *Il Museo Nazionale Atestino in Este* (1957); H. Müller-Karpe, *Beiträge zur Chronologie der Urnenfelderzeit nördlich und südlich der Alpen* (1950); *Mostra dell'arte delle stule* (Florence, 1961); G. Fogolari and O.-H. Frey, *Stud. ATHAMANES, a tribal group related to the 'Hellenes', occupied the upper Achelous valley and the full-country east of its watershed towards Thessaly. They formed a tribal state under a monarchy which was powerful in the Hellenistic period.

P.-K., *GL* 2. 1. 218 f.; Hammond, *Fphus*, 682 f. N. G. L. H.

ATHAMAS, in mythology, son of Aeolus (q.v. 2) and a character in a variously told story of a stepmother's cruelty (Stuth Thompson, S31). He married first Nephele (a cloud-goddess), then Ino daughter of Cadmus; the order is reversed in Philostephanus ap. schol. *Il.* 7. 86; Hyg. *Fab.* 4, professedly from Euripides, introduces a third wife, Themisto, but omits Nephele. Nephele bore him Phrixus and Helle, and Ino in her turn Learchus and Melicertes. Ino was jealous of her stepchildren, and therefore caused the seed-corn to be roasted; when it consequently failed to grow, and Delphi was consulted, she induced the messengers on their return to say that the sacrifice of Phrixus and Helle, or Phrixus alone, was demanded. Nephele saved them, or him, by means of a golden-fleeced ram given by Hermes; the ram brought Phrixus to Colchis, where he married Chalciope, daughter of Aeetes. Helle fell into the strait thenceforth named Hellespont (q.v.) after her. See further ARGONAUTS. In Hyginus, loc. cit., Themisto tries to murder the stepchildren and fails in the same manner as Aedon (q.v.); cf. Stuth Thompson, K1611. See Hyg. *Fab.* 1-5; Apollod. 1. 80 ff.; Ov. *Fasti* 3. 851 ff.; [Pseudo]Theocritus 19; Hyg. *Poet. Astr.* 2. 20; schol. German. *Arat.*, 79, 142 Breyssig. Several of these say that the ram became the constellation Aries. Cf. Pickard-Cambridge in Powell, *New Chapters* III. 97. The rest of Athamas' story is less folk-tale and more myth. Because Ino had nursed Dionysus, Hera drove Athamas and her mad; Athamas killed Learchus, Ino ran from him carrying Melicertes, leaped into the sea, and she and her son were transformed into deities, Leucothea and Palaemon (Apollodorus and Hyginus, supra; Ov. *Met.* 4. 416 ff.; Rose, *Handbk. Gk. Myth.* 150 and authorities there cited).

At Ilalos in the Thessalian Achaia, the senior member of the clan claiming descent from Athamas was sacrificed to Zeus Iaphystios if he entered the city hall. This was explained as retribution for Athamas' joining Ino in plotting against Phrixus (Hdt. 7. 197. 1).

H. J. R.

ATHANASIOS (c. A.D. 295-373) was an outstanding theologian and church leader, and as a deacon played an influential part at the council of Nicea (325). Appointed bishop of Alexandria in 328, he vigorously championed the Nicene doctrine of the consubstantiality (ὁμοούσιον) of Father and Son against Arianism, being five times deposed and exiled. Two of his exiles he spent in the West, to which he introduced monasticism. In the last decades of his life he developed the doctrine of the deity and personality of the Holy Spirit, and did much to promote understanding between the different anti-Arian groups in the church. His surviving writings include

apologetic, dogmatic, and ascetic treatises, historical essays, and letters.

Migne, *PG* xxv-xxvii. Text ed. H. G. Opitz (Berlin Academy, 1934-). J. N. D. K.

ATHEISM. 'Denial of the gods' (τὸ μὴ νομίζειν θεοὺς [εἶναι]), J. Tate in *CR* 1936, 3, and 1937, 3) might mean atheism in the modern sense or a distaste for pagan mythology compatible with deep religious faith. The earliest motive for it was the moral inadequacy of the gods as depicted by Homer and Hesiod. Thus Xenophanes (q.v.) adduced the crimes imputed to them, and added that men everywhere created gods in their own image. Yet he upheld the existence of the divine, and taught a kind of pantheism. However, in the fifth century Ionian speculation and the Sophistic movement did make possible the doubt or denial of any form of deity. *ἄθεος* later became the term for this philosophical atheism (but see below). Of famous thinkers prosecuted for *ἀσέβεια* in this century, though political motives usually played a part in such prosecutions, Anaxagoras (q.v.) was a rationalist who sought to explain everything by natural causes and doubtless (though positive evidence is lacking) an atheist in the modern sense. Protagoras' (q.v.) position was strictly agnostic. Socrates (q.v. 1) is a more complex case. Perhaps the gods of his personal belief were not those of the State, but he conformed to official cults and was a man of deep religious feelings, sure of divine guidance. A certain Diagoras (q.v.) of Melos was always known in antiquity as 'the atheist' and was convicted of impiety at Athens c. 414 B.C. Often quoted for positive atheism is the fragment of the *Sisyphus* of Critias (q.v., fr. 23 Diels), which describes the gods as human inventions in the interests of law. Among the poets, Pindar defends the tradition by gently purging the myths of their crudities. Euripides exclaims against the folly of believing in such gods. Atheism was attributed to other contemporary philosophers, and Plato's attack in *Lates* 10 suggests that it was widespread in the next century. Aristotle's intellectual conception of divinity left no room for the traditional personal gods (*Metaph.* A 8 fin.), and the theological argument started in the Socratic schools led naturally to scepticism, and in once case at least—Theodoros the Cyrenaic—to actual atheism.

Besides 'unbelieving', *ἄθεος* meant 'abandoned by the gods', wicked, godless. (See lexica and K. Latte in *ARW* xx. 264.) The question of belief had not in general the importance which it has to-day (cf. A. D. Nock, *Conversion* (1933), 10 f.), and the word tended to be a term of abuse rather than a reasoned description, e.g. as applied to the Christians (Nock, *Sallustius* (1926), lxxxviii). Yet cf. also Theophrastus in Porph. *Abst.* 2. 7 and Plutarch *De Superst.*, where *ἀθεότης* is discussed and defined as a 'lack of sensitiveness to the divine'; also evidence in F. Cumont, *L'Égypte des astrologues* (1937), 135.

In general, see A. B. Drachmann, *Atheism in Pagan Antiquity* (London and Copenhagen, 1922.) W. K. C. G.

ATHENA (Ἀθίνα, Ἀθήνη, Ἀθηναίη(-α), Ἀθηναῖα). The patron goddess of Athens in Attica and Athens in Boeotia, also extensively worshipped in many other places in Greece proper and the colonies and islands. There is no reasonable doubt that she is originally pre-Hellenic. Her name shows the non-Greek suffix *-na* found also, e.g., in *Μοκῆνα*; her most famous cult, that at Athens on the Acropolis, is on the site of a Mycenaean palace, the 'house of Erechtheus' of *Odyssey* 7. 81, cf. *Iliad* 2. 549; and her name appears in the form *a-ta-na po-ti-ni-ja* on a Linear B tablet at Cnossos. In Minoan fashion, she takes on occasion the form of a bird, as *Od.* 3. 371-2 (the owl, though regularly associated with her in classical times, is not the only bird with which she is connected

in cult). Her peculiar cult-statues, female yet fully armed, resemble the Mycenaean shielded goddess (*Ath. Mitt.* 1912, 120 ff. and pl. viii, often reproduced elsewhere). The conclusion is hardly avoidable (Nilsson, *Die Anfänge der Göttin Athene* (1921); *Minoan-Mycenaean Religion* (1950), 417 ff.) that she is the tutelary goddess of Cretan and Mycenaean princes, especially the latter, retained in popular cult when the ancient citadels came to be reserved for the gods and not for rulers. Presumably she had been fervently worshipped by the subjects of those princes; at all events, she continued to hold a very high rank and to develop in several directions.

2. Besides her connexion with citadels, and consequently with cities (e.g. Verg. *Ecl.* 2. 61-2; see ZEUS), she has a rather decided association with water, hence her epithet *Tritogeneia*, whereof the first two syllables have something to do with water, though their exact meaning is unknown (cf. Farnell, op. cit. infra, 265 ff.). This, however, did not result in her becoming a deity of the sea, even by way of Athens' naval power; the hold of Poseidon was probably too strong.

3. She is regularly regarded as virgin. Her Elean title of *Μήτηρ* need mean no more than that mothers worshipped her (cf. the strange titles 'Maid', 'Wife', and 'Widow' applied to Hera (q.v.), and see Farnell, 302 ff., yet cf. E. Fehrle, *Kultische Keuschheit* (1910), 183 ff. 'That she is interested in fertility, both animal and vegetable, is not remarkable; she is a goddess of the State and on such increase its continued existence depends.

4. Her most conspicuous functions are perhaps those connected with war. She has a certain tendency to become a war-goddess in general, a kind of female Ares, as in *Iliad* 17. 398, where she is coupled with him as an expert in battles and liable to violent wrath; neither of them could have 'found fault with' the fury of the contest over the body of Patroclus. Normally, however, she is warlike in the sense that she fights for, or leads to battle, her chosen people, or hero (as Diomedes, *Il.* 5. 856, where she guides his spear into Ares' flank; Eur. *Heracl.* 349-50, where, though Hera leads the Argives, Athena leads Athens to fight against them). Or she protects them, as a strong warrior might a weaker one (Solon, fr. 3. 3-4 Diehl), though this does not refer only to war but to shielding Athens against all dangers. Hence also she is the inventor of sundry warlike implements, as the war-chariot (*Hymn. Hom. Ven.* 13) and the trumpet (she was called *Σάλπιγξ* in Argos, Paus. 2. 21. 3).

5. But, being female and goddess of that city which was perhaps nearer than any other in Greece to being industrialized, she is also a patroness of arts and crafts. Among these, spinning and weaving take a prominent place, as might be expected, and in general she is the goddess of women's work (*Hymn. Hom. Ven.* 14-15). But her influence extends much further than this, for all manner of handicraftsmen worship her, or regard her as their teacher, as potters (ps.-Hdt. *Vit. Hom.* 32; the scene is Samos, indicating that such worship of Athena is in no way purely Attic), goldsmiths (*Od.* 6. 233, again wholly unconnected with Athens). In Athens the Chalcia (literally the festival of smiths, *χαλκίης*) was held in her honour, though Hephaestus seems to have had some share in it (Deubner, 35 f.). It is in such connexions as this that her title *Ergane*, 'the work-woman', is especially appropriate, and here also that her functions overlap to some extent those of Hephaestus, thus explaining their mythical connexion; see below. She is on occasion goddess of medicine also, since that is a highly skilled occupation, but this seems to be a development rather of Minerva (q.v.; see Ov. *Fasti* 3. 827).

6. Identifications between Athena and foreign goddesses are fairly numerous, e.g. Neith in Egypt (*Plato Tim.* 21 c), a Libyan goddess whose name is unknown

(Hdt. 4. 180. 2), and, most familiar, the Italian Minerva. It is not always possible to tell what caused the identification. Of Greek goddesses subordinate to her, the best known is Nike, whose temple on the Acropolis is one of the best preserved; she also had some connexion with Hygieia, whose name she bore as a title (Paus. 1. 23. 4).

7. That she became ultimately allegorized into a personification of wisdom is a not unnatural development of her patronage of skill; she passes from one sense of *σοφία* to another. The process has already begun in Hesiod (*Theog.* 886 ff.), where Metis, i.e. Good Counsel, is her mother (cf. Rose, *Folklore* (1935), 27 f.).

8. The principal myth concerning her is her birth, without mother (but cf. Hesiod, above), from the head of Zeus. It was fully developed by the time of Pindar (*Ol.* 7. 35; cf. scholast. there); Zeus' head was split with an axe by Hephaestus (or some other deity, the details varying in different accounts), and the goddess sprang out, fully armed and uttering her war-cry. Helios, adds Pindar, let his sons in Rhodes know of this, so that they might be the first to sacrifice to the new power. They did so, but in such haste that they forgot to take fire with them, and so offered the victims unburned, whence, as Athena was pleased with their devotion, the custom continued at her shrine among them. This is the goddess of Landus, probably not originally Athena at all, who is not worshipped in this fashion, not being a chthonian goddess.

9. The above is no doubt a Rhodian myth; the following is Athenian. Hephaestus desired to marry her, and Zeus consented, but gave her leave to repulse his attentions. They struggled together, and his seed fell on the earth, which thus became fertile and in due season produced a boy. Athena took charge of the infant (possibly she was originally his actual mother, see above), hid him in a chest guarded by serpents and gave it to the daughters of Cecrops to keep, with instructions not to open it. They disobeyed, and at the sight of the serpents (or whatever the chest contained; chests are very common receptacles of sacred objects which must not be viewed at all, or only after some rite of initiation) they were so terrified that they leaped off the Acropolis and so perished. The child was called Erichthonius and remained a favourite of Athena (Rose, *Handb. Gk. Myth.* 6. 110 and references). In Attica also she strove with Poseidon for ownership of the land, she produced the olive-tree, thus outdoing the miracles which he performed, and won the contest; see POSEIDON.

10. That she was originally thought of as theriomorphic is not proved but suggested by her stock epithet *γλαυκῶπις* ('bright-eyed' or 'owl-faced'?).

11. Athena is constant in all forms of archaic and classical art from the seventh century, alone or with other deities or in scenes: her birth; the Gigantomachy; as patroness of heroes. She is generally armed (with helmet, aegis, shield, spear), and often has an owl, especially in fifth-century Athens.

ATHENAEUM, Hadrian's famous institute for lectures and recitations by rhetors and other literary men. Aurelius Victor (*Caes.* 14) calls it 'ludum ingenuarum artium'.

ATHENAEUS (1) (fl. c. A.D. 200), of Naucratis in Egypt. His only extant work, *Δειπνοσοφισταί* ('The Learned Banquet'), was probably completed after the death of Commodus in A.D. 192 (ib. 537 f.); other chrono-

logical inferences are uncertain. It belongs to the poly-historic variety of the symposium form (see SYMPOSIUM LITERATURI), practised earlier by Aristoxenus and Didymus. It is now in fifteen books (originally perhaps 30); there is also an Epitome, which covers existing gaps. At the 'banquet', which extends over several days, philosophy, literature, law, medicine, and other interests are represented by a large number of guests, who in some cases bear historical names (e.g. Galen and Ulpius of Tyre); a Cynic philosopher is introduced as a foil; the Roman host, Iarensis, probably the author's patron, is attested epigraphically (*CIL* vi. 212). The symposiac framework, if not devoid of occasional humour, is subordinate in interest to the collections of excerpts which are introduced into it. These relate to all the materials and accompaniments of convivial occasions; they are drawn from a vast number of authors, especially of the Middle and New Comedy, whose works are now lost; they are valuable both as literature and as illustrating earlier Greek manners. The order of these extracts sometimes suggests the use of *lexica* (Didymus, Pamphilus) or of *διδασκαλίας* (see DIDASCALIA), as well as of lists of *καμφοδύμενοι*; but Athenaeus has collected much independently from the great writers, he cites some 1,250 authors, gives the titles of more than 1,000 plays, and quotes more than 10,000 lines of verse.

ATHENAEUS (3) of Attaleia practised medicine in Rome under Claudius (A.D. 41-54). Like many other physicians of that time he founded a new school, that of the Pneumatists. Imbued with Stoic ideas, but well trained in philosophy in general, Athenaeus assumed as basic elements the four qualities, together with the *pneuma* as the fifth. Health and disease he explained through their *eukrasia* (good temperament) and *dyskrasia* (bad temperament). His physiology was dependent on Aristotle. Details of his pathology are unknown. His system apparently was important in its speculative formulation rather than in its practical consequences. Athenaeus, who considered medical knowledge as part of general education, devised most elaborate dietetic rules, in which he included pedagogical as well as medical precepts, differentiated according to the different stages of life. The ideas of Athenaeus were highly estimated by Galen.

F. Kudlien, *Hermes*, 1962, 419 ff., dates Athenaeus at the end of the first century B.C. on account of Galen in *De causis contentivis*, who says that Athenaeus was a pupil of Posidonius. But if this were true it would be strange that Celsus should not mention him. Perhaps Diels's date (beginning of the first century A.D.) is preferable (*Hermes*, 1918, 74, n. 1). Still further back one can hardly go unless a new investigation of the Pneumatic School, which is being prepared by Kudlien for *PhW*, adds new data.

ATHENODORUS of Tarsus, son of Sandon, was a Stoic, a friend of Cicero and Strabo, and a teacher of Augustus. He is to be distinguished from Athenodorus Cordylion of Tarsus, head of the Pergamene library whom Cato Uticensis brought to his home in Rome. He probably came to Rome with Octavian in 44 B.C. In his old age he was sent by Augustus to expel Boethus, Antony's ruler in Tarsus, where he then became the chief citizen. He probably represented the views of the Middle Stoa. He sent a summary of some views of Posidonius to Cicero who wanted them for his *De Officiis*. He wrote a work against the Categories of Aristotle, an account of Tarsus, a work addressed to Octavia (q.v. 2), and, like Posidonius, *On the Ocean*. Seneca used his ethical writings.

ATHENS (*Ἀθήναι*) (HISTORICAL OUTLINE). Archaeological remains are consistent with the Athenian tradition that in early times there were several kingdoms in Attica, and the thirteenth-century fortification of the Acropolis of Athens may be connected with the formation of the Athenian state by an act of union, which was attributed to Theseus (q.v.) and was celebrated annually (Thuc. 2. 15). Some such union enabled the Athenians to resist the Boeotians and the Dorians, remain a centre of Mycenaean traditions, and launch the Ionian migration from c. 1050 B.C. onwards. As elsewhere in Greece, the monarchy was succeeded by an aristocracy, when the archonship became the principal magistracy (see ARCHONTES). Though the archonship became an annual office in 683-682, and the Thesmothetai (q.v.) were instituted, the aristocracy retained and increased their power; for they not only monopolized political office, but controlled most of the land. An attempt by Cylon (c. 632) to overthrow them failed; and Draco's code (c. 624-621) left their powers untouched. In the ninth and eighth centuries Athens produced magnificent 'geometric' pottery, in the seventh the crude but vigorous 'early Attic'. Sculpture was comparatively little developed. Writing was in use from at least 700.

2. The authority of the aristocracy was challenged by Solon in 594 B.C. He liberated debt-slaves whether held on the land or sold abroad. He laid the foundations of democracy by establishing economic freedom, by making the *ekklesia* independent of the archons, by instituting the *Heliaea* and making the magistracies responsible to the people. He did not, however, secure internal peace; and after many years of struggle the popular leader Pisistratus made himself tyrant (first in 561-560 and finally c. 545). The tyranny lasted till 510, when his son Hippias was driven out. The sixth century saw a remarkable development of Athens. Her pottery, by its technical and artistic excellence, practically drove its rivals from all foreign fields; sculpture flourished; Solon was himself the earliest Attic poet, and the tyrants attracted poets from elsewhere—Athens was becoming a cultural centre. Material prosperity greatly increased, in agriculture,

manufacture, and trade; many foreigners settled in Athens, and by 500 the population was already large.

3. The attempt of the aristocrats to gain control after the expulsion of Hippias failed, and the reforms of Cleisthenes established a true democracy (see EKKLESIA, BOULE, AREOPAGUS). An active foreign policy was at first checked by an unsuccessful intervention in 498 in the Ionian Revolt; but the immense military and moral effort of Athens in two Persian wars (490 and 480-479) established her position as the most energetic and enterprising State in Greece; a fact, however, which soon drew her into rivalry with Sparta, the accepted leader. Sparta's refusal to champion the mainland Ionian States which revolted from Persia in 479 gave Athens her chance; in 477 the Delian League was founded, comprising most of the Aegean islands and the Greek cities of the Asiatic and Thracian coasts. The war with Persia was successfully continued till Cimon's victory at the Eurymedon (c. 467). Athens had a severe check when she supported an Egyptian revolt (459-454); but by the peace of 448 Persia practically recognized the Athenian Empire, agreeing not to send her fleet west of Phaselis and of the Bosphorus, nor her army nearer than three days' march of the Ionian cities. Before this, war had broken out with the Peloponnesians, in which Athens lost the battle of Tanagra (457), but won the campaign, conquering Boeotia and winning over Phocis, and gaining victories over Corinth and Aegina. Meanwhile she had reduced to submission a few seceding States in the League; she now strengthened her position by improving her fleet, by cleruchies (q.v.) and garrisons, by a better organization of the tribute, and by supporting democracies against oligarchies, by encouraging the States to look upon herself as their capital, and later by introducing her own coinage in the subject cities. The League had become an Athenian Empire. In 447 Boeotia and Phocis recovered their independence; but by the 'Thirty Years' Peace' (445) the Peloponnesians recognized the Empire.

4. By the development of tragedy and later of comedy, history, and oratory, Athens had become indisputably the literary centre of Greece. During the ascendancy of Pericles, painting and sculpture flourished there as never before; between 447 and 431 the Parthenon, the Propylaea, and many other buildings were completed. Most Greeks eminent in art, letters, and science visited Athens, and many settled there. Socrates, himself an Athenian, laid the foundations of mental and moral science in an enduring manner, and assured to Athens the primacy in philosophical studies. Trade prospered, for Athens preserved the peace of the seas. Her power and her ambitions alarmed Sparta, and the rest of Greece was nervous; in 431 the Peloponnesian League and the Boeotians went to war, 'to free Greece from the tyrant city'. The war lasted, with an interval of uneasy peace, for twenty-seven years. By 404 the whole political structure of Cimon's and Pericles' generations was in ruins: Athens was a dependant of Sparta under the heel of the Thirty Tyrants (q.v. 1), her Long Walls (q.v.) destroyed, her fleet reduced to a dozen ships, her population barely half its former total.

5. Yet Athens made an astonishingly quick recovery. By 403 she had regained her democracy and her autonomy; ten years later she had a fleet, had rebuilt the Long Walls, and had successfully revolted with other cities against Spartan imperialism. In 377 a new maritime league was formed; in 376 Chabrias won back for Athens supremacy at sea. Athens supported Thebes in her struggle against Sparta till after Leuctra (371), and later assisted Sparta against Thebes, striving for a balance of power. But when Philip of Macedon began his policy of expansion (359), Athens could not decide definitely between war and peace, and became involved in half-

hearted wars. The maritime league lost its most powerful members in the Social War (357–355); but Athens was still strong at sea and controlled the Hellespont, indispensable for her food supplies. Inspired by Demosthenes, Athens resisted Philip successfully in the Bosphorus region in 340; but after the defeat at Chacrona (338) she was glad to secure peace with Philip with the loss of the Hellespont. Overawed by Alexander in 335, Athens reorganized her forces during his absence in the East; but in the Lamian War of 323–322 she was defeated on land and sea. She now had to admit a Macedonian garrison in Munychia, and to modify her constitution. It was the end of Athens as a considerable military power.

6. The fourth century was a time of material prosperity, and trade and manufacture had quickly revived; the arts and letters (especially oratory, at its greatest in Demosthenes) were as vigorous as before. Though an Athenian dicastery had condemned Socrates to death in 399 (on grounds that were largely political *see* SOCRATES I), philosophy and science still flourished and under the leadership of Plato and Aristotle were at their height. But after 322, though comedy, philosophy, and physical and historical science continued active in Athens, the decline in creative thought began; after 300 Zeno and Epicurus were her greatest figures, and, recognized by all as the cultural centre of the Greek world, she began to live on her past. Politically the story of the century after Alexander was one of frequent struggles to rid herself of Macedonian domination, often temporarily successful, but always with the help of one or other of the *Diadochi*, who, if successful, abused his power; they all wanted her as an ally and a military station; she was finally crushed between them in the war against Antigonus (q.v. 2) Gonatas (266–262), and her independence forfeited. She was free again in 228; and as a small State had comparative peace, while Rome was establishing her power in Greece. Her last independent action was when she sided with Mithridates against Rome. Reduced by Sulla after a siege (87–86), she pleaded her glorious past; but he retorted that he was there to punish rebels, not to learn ancient history. Thereafter Athens was a cultured university town to which men came from all parts of the Roman Empire, but with no history, and no creative thought.

See also ATTICA, PERSIAN WARS, PELOPONNESIAN WAR, and the articles on individual Athenians and particular political institutions.

ANCIENT SOURCES. The *Attiches* (q.v.) or special histories of Athens (written in the fourth and third centuries) have all been lost except Aristotle's *Constitution of Athens* (Frags. in *IGR* 121–75).

ATHENS. TOPOGRAPHY:

ACROPOLIS, the central fortress and principal sanctuary of the city throughout antiquity. Already in the thirteenth century B.C. the hilltop was enclosed by a massive wall; slight traces of a contemporary palace also survive: 'the strong house of Erechtheus' (*Od.* 7. 81). Much building activity occurred under Pisistratus and his sons. Fragments of architecture and sculpture exist from two large limestone temples and from a half-dozen smaller temples or treasuries. Of all these only one can be located with certainty, a peripteral Doric temple (c. 525 B.C.) of which the foundations are still visible on the north half of the hilltop. In 480 B.C. a new temple, of marble, was rising on the higher, southern part of the hill,

and an ornamental gateway was under construction at its west end. All these buildings were destroyed by the Persians together with scores of votive statues. The debris was used in levelling behind the new fortification walls now carried around the hilltop. In the 450s a colossal bronze statue of Athena Promachus by Phidias was erected in triumph over the final defeat of the Persians. The city's defences and the Agora having been put in order, Pericles set about the rehabilitation of the Acropolis; Phidias served as general superintendent. First came the Parthenon (447–432 B.C.) for which Ictinus and Callicrates were named as architects. Erected on the site of the unfinished temple, its size and elevation assured its easy dominance. There followed a new gateway, the Propylaea, designed by Mnesicles (437–432 B.C.). Although truncated in plan and never completed, this noble portal, perfectly scaled and fitted to its setting, became justly famous. On a bastion overlooking the approach to the Propylaea an old shrine of Athena Nike was replaced by a graceful marble temple. In the last quarter of the fifth century the old Pisistratid peripteral temple was succeeded by the Erechtheum, an Ionic building ingeniously contrived to shelter a number of cults including those of Athena, Poseidon, and the heroized king Erechtheus. Among many lesser sanctuaries on the hilltop may be noted that of Brauronian Artemis just inside the Propylaea. Of various service buildings the most conspicuous was the Chalkothekê, a repository for bronze offerings, to the west of the Parthenon. Later ages respected the creation of Pericles and added few buildings. In the second century B.C., however, a tall pedestal was erected, probably by the Pergamene royal family, to carry a bronze quadriga as a pendant to the Nike temple; this was later rededicated to Agrippa. At some time after 27 B.C. the cult of Rome and Augustus was housed in a round temple to the east of the Parthenon. Pagan worship persisted on the Acropolis into the fifth century A.D.; the Parthenon and Erechtheum were eventually converted to Christian use, but scarcely before the sixth century.

ENVIRONS OF THE ACROPOLIS. The steep and sheltered south slope of the hill was developed as a 'theatre district' comprising the open-air Theatre of Dionysus (from c. 500 B.C.), the roofed Odeum of Pericles (c. 443 B.C.), and the unroofed Odeum of Herodes Atticus (c. A.D. 160). A two-storeyed colonnade, a gift of Eumenes II of Pergamum (197–159 B.C.), joined the two unroofed theatres and served as a sheltered promenade for the audiences of both. The south exposure and the presence of springs also made this area a natural choice for the Sanctuary of Asclepius (420 B.C.). Recent excavations have brought to light a sanctuary of 'the nymph' on the hillslope below the Odeum of Herodes. A broad road led from the Theatre of Dionysus around the east end of the Acropolis. It was bordered by tripods won as prizes in dramatic contests; the well-preserved monument of Lysicrates (334 B.C.) supported one such tripod. The Acropolis was approached from the Agora over the Panathenaic Way, named from its use by the procession in the national festival. Bordering this road on the slopes of the Acropolis was the Eleusinium, the principal sanctuary of Demeter and Persephone in the city. Higher on the north slope were various lesser sanctuaries, among them one of Eros and Aphrodite. The Areopagus, a low hill to the west of the Acropolis, was the seat of the council and court of the same name. Neither the meeting-place of this body, nor the Sanctuary of the Eumenides which is also attested by the authors, has yet been recognized. Prominent on a steep hill to the south-west of the Acropolis is the marble tomb of Antiochus Philopappus, an eastern prince and benefactor of Athens (A.D. 114–16).

AGORA, the civic centre, was conveniently situated midway between the Acropolis and the principal city gate

(Dipylon). It was bisected diagonally by the Panathenaic Way. Development can be traced from the early sixth century B.C. to the final destruction by the Heruli in A.D. 267. The area was sacked by the Persians in 480/79 B.C. and seriously damaged by the Romans in 86 B.C. The principal building periods are the Pisistratid era (older Temple of Apollo Patroos, Enneakrounos, Altar of the twelve Gods), the time of Cimon (Old Bouleuterion, Tholos, Theseum, Stoa Poikilē), the post-Periclean years (New Bouleuterion, Stoa of Zeus, South Stoa, Mint, Southwest Fountain House), the second century B.C. (Gymnasium of Ptolemy, Stoa of Attalus II, Metroon), and the early Empire (Odeum of Agrippa, transplanting of the Temple of Ares, Market of Caesar and Augustus, Library of Pantaenus, Library of Hadrian). The architectural development proceeded from west to east. By the end of the second century B.C. the main square had taken shape. It was bounded on the west by the administrative buildings (Tholos, Bouleuterion, Metroon, Temple of Apollo Patroos, Stoa of Zeus = Stoa Basilicos), on the east by the Stoa of Attalus, on the north (not yet excavated) by the Stoa Poikilē and the Stoa of the Hermis. On the south the Gymnasium of Ptolemy was installed in an old sanctuary of Theseus. The Temple of Hephaestus (450–400 B.C.) overlooked the Agora from the west. As the old square was given over to cultural purposes, new commercial facilities were provided further to the east in the market of Caesar and Augustus. Innumerable references in the ancient authors attest the intensity of the community life that was centred on the Agora.

PNYX, the meeting-place of the Athenian *ekklesia*, is a low hill west of the Acropolis. Three periods may be distinguished. (1) About 500 B.C. A section of the hillside sloping toward the middle of the city was smoothed as a seating floor, and a low terrace was erected for the speaker's platform. (2) 404/3 B.C. The auditorium was reversed and supported on an artificial embankment probably to gain protection against the wind; this change was attributed by Plutarch (*Them.* 19) to the Thirty Tyrants. (3) About 330 B.C. The auditorium was much enlarged, a great altar was erected above the speaker's platform, and two large colonnades were begun on the hilltop. Work on the colonnades was interrupted by the military situation and was never resumed. To the third period belong most of the visible remains, notably the rock-cut bema and the semicircular retaining wall. In the Hellenistic period the Pnyx was abandoned in favour of the Theatre of Dionysus.

SOUTH-EAST ATHENS. The principal monument in this area is the Temple of Olympian Zeus, begun by the Pisistratids and completed by Hadrian. Recent excavations between the Olympieum and the Ilissus have revealed a number of other temples and civic buildings, among them probably the Temple of Apollo Delphinus. A well-preserved arch marks the line of division between the old 'city of Theseus' and the new suburb, 'the city of Hadrian'. The only other visible remains of this suburb are a gymnasium and a number of bathing establishments with mosaic floors. Across the Ilissus lies the Panathenaic Stadium, first constructed by Lycurgus (338–326 B.C.), rebuilt in marble by Herodes Atticus (2nd c. A.D.), and restored by George Averof in 1896.

FORTIFICATIONS. The earliest enceinte of which remains exist was erected by Themistocles soon after the expulsion of the Persians (479 B.C.). In its length of 6½ kilometres the wall was pierced by a dozen gates of which the principal was the Dipylon in the north-west quadrant. To meet Macedonian threats in the late fourth century the system was strengthened by the addition of an outwork and moat on the low-lying north, east, and south sides, and by the walling off of a protrusion toward the south-west. The development of a new eastern suburb in

the time of Hadrian required an extension in that direction. After the disastrous Herulian raid of A.D. 267 a new and much smaller inner enclosure was hastily thrown up to the north of the Acropolis, but by A.D. 400 the old outer circuit was again functioning. Communications between Athens and her harbours were protected by a series of three long walls, the Northern and the Phaleric erected under Cimon, the Middle under Pericles. Demolished after 404 B.C. these walls were rebuilt in the fourth century B.C.

H. A. T.

ATHLETICS. The Greeks were more interested in athletic contests between individuals than in team games, and athletic competitions were popular and numerous. At the major athletic festivals the athletic events were running, long-jumping, throwing the discus, throwing the javelin, wrestling, boxing, and the *pancratium*. The races were the stade-race (about 200 m.), the *diadulos* (two lengths of the stadium, about 400 m.), the long-distance race (up to 24 lengths of the stadium), and the race in armour. Jumping, throwing the discus, throwing the javelin, and wrestling were generally confined to the pentathlon (q.v.). There were also at many festivals horse-races and chariot-races.

There is no evidence of the standard of performance in any of the events. Phayllus (q.v. 1) is said to have jumped 55 feet, but this is impossible if the foot by which it was measured was of the usual length (viz. 12 inches or thereabouts). Probably a smaller foot (e.g. a child's) was used on this occasion (cf. *Ar. Nub.* 144 ff.). The Greeks always used weights, *halteres* (q.v.), for jumping; so the event cannot have been a triple jump (hop, step, and jump), in which the use of weights would have been impossible. The discus was a 'heavy' event and the *diskoupa* (discus-throw) was an indeterminate but comparatively short measure of distance (*Hom. Il.* 23, 523). The Greeks, however, were more concerned with the winning of the contest than with times and distances.

The habit of stripping naked for athletic contests is said by Thucydides (1. 6) to have been recently introduced, but he seems to be referring particularly to wrestling and boxing. It seems unlikely that the Greeks would ever have stripped completely naked for events involving running, though it was an artistic convention, even in early times, generally though not always, to portray athletes naked.

Athletic competitions were originally held at the funerals of chieftains (*Iliad* II. 22, 162 ff. and 23, 630) and funeral games were not unknown in later times (*Isoc. Evagoras* § 1), but in general they were held at fixed times (see AGONES) and assumed a religious character which was not inherent in their origin. The Olympic

Games, which took place at four-yearly intervals without a break from 776 B.C. to A.D. 393, were finally suppressed by the Christian Emperor, Theodosius, as being a pagan religious festival.

E. N. Gardiner, *Athletics of the Ancient World* (1936); H. A. Harris, *Greek Athletics and Athletics* (1964); J. Jüthner (F. Brehm), *Die athletischen Leibesübungen der Griechen* (1965). R. L. H.

ATHOS, a headland on the easternmost of the Chalcidian promontories, with a conspicuous pyramid-shaped peak rising sheer from the sea to 6,350 feet. In 492 B.C. a Persian fleet was destroyed near it by a storm. To avoid the passage round Mt. Athos, Xerxes dug a canal through the neck of the promontory (483–481). This had a length of 1½ miles, a breadth of 65–100 feet, and a depth of 6–10 feet (Hdt. 7. 22–24; Strabo 7. 331). Despite the doubts expressed by ancient and modern writers, the canal was completed; the cutting is visible in places. The mountain was sacred to Zeus (Aesch. *Ag.* 289) and cast its shadow on Lemnos at sunset (Soph. *Fr.* 709).

M. C., N. G. L. H.

ATIA (1, *PIV* Attii 34), daughter of M. Atius Balbus (q.v. 1) and of Julia, Caesar's sister, was the wife of C. Octavius (q.v. 4) and the mother of C. Octavius (the future Augustus) and of Octavia (2). After her husband's death in 58 B.C. she married L. Marcius Philippus (q.v. 5). She died in 43 in her son's consulship and received a public funeral. The legend that she had given birth to Augustus by Apollo had some circulation.

A. M., T. J. C.

ATIA (2, *PIV* Attii 35), sister (presumably younger) of Atia (1). She married her sister's stepson, L. Marcius Philippus (q.v. 6), and had a daughter Marcia.

T. J. C.

ATILIUS (1, *PIV* 36) **CAIATINUS** (or **CALATINUS**), **AULUS** (cos. 1, 258 B.C.), fought successfully in Sicily, and as praetor (probably; rather than proconsul) in 257 celebrated a triumph. As consul II (254) he stormed Panormus. He was the first dictator to lead an army outside Italy— to Sicily in 249. He was censor (247). He dedicated a temple to Spes in the Forum Holitorium (probably one of the three now under S. Nicola in Carcere). He was buried near the Porta Capena (epitaph, Cic. *Sen.* 61), and was reckoned by Cicero among the most famous men of old.

II. H. S.

ATILIUS (2, *PIV* 60) **SERRANUS**, **AULUS**, praetor in 192 B.C., commanded the Roman fleet against Nabis and Antiochus (192–191). Praetor again (173), he renewed the treaty relations with Syria on Antiochus Epiphanes' accession. Envoy to Perseus in 172 with Q. Marcius Philippus, he was consul in 170, in Liguria.

Seullard, *Rom. Pol.* 123, 199 ff., 259.

A. H. McD.

ATILIUS (3), **MARCUS**, contemporary with Caccilius, composed *comediae palliatae* of which very few fragments remain. He had a reputation for harshness, and could stir the emotions deeply. Lucinius, in Cic. *Fin.* 1. 5, applies the term 'ferreus scriptor' to an Atilius who translated Sophocles' *Electra*.

FRAGMENTS. Ribbeck, *CRP*², 32 (3rd ed. Teubner, 1897).

E. H. W.

ATILIUS (4, *PIV* 39) **FORTUNATIANUS** (4th c. A.D.), metrician. The first part of his *Ars (metrica)* deals with general principles, the second with Horatian metres (ed. Keil, *Gramm. Lat.* 6. 278–304). The work depends largely on earlier writers, especially Caesius Bassus (q.v. 2).

Schanz-Hosius, § 827.

J. F. M.

ATIMIA, the loss of all or some civic rights in a Greek city. It originally implied outlawry, but later, especially in Athens, involved the loss of active rights only (or of some only of these). Deprivation might be temporary: a State-debtor's *atimia* ended automatically when the debt was paid. Permanent deprivation of all rights was the punishment for treason, bribery (of a magistrate), cowardice in face of the enemy, perjury in a lawcourt (after three convictions), and some offences against the citizenship laws. Permanent deprivation of some rights only was applied (1) if a man brought a *graphe* (q.v.) and (a) dropped it, or (b) failed to get one-fifth of the votes at the trial; (2) if a man had been convicted three times in a *γραφῇ παρανόμων*; (3) for certain moral offences.

A. W. G.

ATLANTIS, i.e. '(the island) of Atlas', 'the island lying in the Atlantic'. A very large island off the Straits of Gibraltar, which, according to myth, once ruled south-west Europe and north-west Africa, till, in an expedition to conquer the rest, its kings were defeated by the prehistoric Athenians (Plato, *Tim.* 24 e ff.). Its constitution is the chief subject of the unfinished *Critias*. Memories of Atlantic islands or of the great volcanic eruption of Thera may be behind the myth. It is interesting as the oldest surviving philosophical wonderland in Greek, a predecessor of Euhemerus' Panchaea (see EUHEMERUS), and of Iambulus (Diod. Sic. 2. 55–60).

Cf. W. A. Heidei, *Proc. American Acad. of Arts and Sciences* 1933, 189 ff.; J. Hudez, *Bull. acad. roy. Belgique* 1934, 101 ff. H. J. R.

ATLAS (Ἀτλας), probably 'very enduring', a intensive + root of ἔλάν; in mythology a Titan, son of Iapetus and Clymene (Hesiod, *Theog.* 509). He is guardian of the pillars of heaven (*Od.* 1. 53); but later (as Hesiod, *ibid.* 517, Aesch. *PV* 347 ff.), he himself holds the sky up. Both are well-known popular explanations of why the sky does not fall (see Stith Thompson, A665. 2, A842). Atlas became identified with the Atlas range in north-west Africa, or a peak of it (first in Herodotus 4. 184. 5–6); sky-supporting mountains are also popular (Stith Thompson A665. 3), and found elsewhere in Greek (Ap. Rhod. 3. 161, on which see Gillies ad loc.); a later tale explaining that Perseus had turned him into stone with the Gorgon's head is in Ovid, *Met.* 4. 655 ff. He was variously rationalized into a king (Plato, *Critias* 113 a), a shepherd (Polydus ap. schol. Lycophron, 879), and an astronomer (Diod. Sic. 3. 60. 2). From his position in the far west, he is naturally brought into conjunction with the Hesperides, as in Ovid, *loc. cit.*; he is their father in Diod. Sic. 4. 27. 2. In Homer (*Od.* *loc. cit.*), he is father of Calypso, but usually his daughters are the Pleiades (favourite subjects of popular speculation, Stith Thompson A773), Alcyone, Celaeno, Electra, Maia, Merope, Sterope, and Taygete, whose names and local connexions (Maia with Arcadia, Electra with Troy, etc.) show that the African localization of their father is no part of their story. Besides his connexion with Perseus (see above) he encountered Heracles (q.v.), when the latter was seeking the apples of the Hesperides. Atlas offered to fetch them if Heracles would uphold the sky meanwhile; he then refused to take back the burden, until forced or cheated into doing so by the hero (e.g. Pherecydes ap. schol. Ap. Rhod. 4. 1396). Atlas upholding the sky was represented in art from early times, is a favourite subject in Hellenistic art, and develops into an ornamental support.

H. J. R.

ATLAS MOUNTAINS, the great range which formed the backbone of Roman Africa. Its highest peaks are in the Great Atlas to the west, and Greek legend converted them into the bowed shoulders of the god who

held up the heavens (*see* ATLAS). The chain slopes eastward through Middle and Little Atlas to the Aurès. On the north the Atlas buttresses the Tell or fertile coastal plain. Southward the mountains slope down to the Saharan desert, which runs eastward to touch Lesser Syrtis (q.v.). Between Tell and Sahara are the High Plateaux with much good grazing land; in the centre and the east lie the shots or salt lakes. Suetonius Paulinus crossed Mt. Atlas in A.D. 42 (Pliny, *HN* 5. 14-15).

A. N. Sherwin-White, *JRS* 1944, 1 ff.

W. N. W.

ATREBATES (1), a tribe of Gallia Belgica. Conquered by Caesar in 57 B.C., they contributed 4,000 men to the Gallic forces at Alesia in 52, under Commius (q.v.), and revolted again in 51. Under the Empire they were noted for their woollens. Their centre was at Nemetacum (*Arras*), an important road junction; the 'Arras hoard', which included the medallion depicting London's submission to Constantius in 296, was found at Beaurains, 2 miles to the south, in 1922.

Hoard: J. Babelon and A. Duquesnoy, *Arethuse* 1 (1924), 45 ff.; A. Evans, *Num. Chron.* 1930, 221 ff. A. L. F. R.

ATREBATES (2), an offshoot of a Gaulish tribe which had entered Britain before 54 B.C. and occupied a region between the Thames, the Test, and West Sussex. Successive rulers recorded by coins were Commius, Tincommius (qq.v.), Eppillus, and Verica; the last three appear to have had treaties with Rome. After A.D. 43 part at least of the area was ruled by Cogidubnus (q.v.) but eventually three *civitates* were created: (i) of the Atrebatas with *caput* at Calleva (Silchester), (ii) of the Belgae with *caput* at Venta (Winchester), (iii) of the Regnenses with *caput* at Noviomagus (Chichester). An imperial tile-works of the reign of Nero existed at Pamber. Sub-Roman earthworks near Silchester suggest the survival of the town well into the Dark Age, a conclusion confirmed by the tombstone of Ebicatos inscribed in Ogham characters (perhaps sixth century).

C. E. Stevens in W. F. Grimes (ed.), *Aspects of Archaeology in Britain* (1951), 132 ff.; A. L. F. Rivet, *Town and Country in Roman Brit.* (1964), 130 ff.; Freire, *Britannia*, ch. iv and v, B II St. J. O'Neil, *Antiquity* 1944, 113 ff. S. S. F.

ATREUS, in mythology, son of Pelops (*see* TANTALUS) and husband of Aërope. From late epic on (*Alcmaeonis* ap. schol. Eur. *Or.* 995) he and his brother Thyestes are at variance. Hercules was wroth with the whole house for the death of his son Myrtilus (*see* PELOPS) and gave them a golden ram, the possession of which carried the kingship with it; Thyestes got this from Aërope, whose paramour he was; Atreus banished him, but later pretended a reconciliation. At the banquet held to consummate this, Atreus served up to Thyestes the flesh of the latter's own children, at which the sun turned back on its course in horror. *See further* AEGISTHUS. In another version (Apollod. *Epit.* 2. 12) Atreus by advice of Hermes offers to let Thyestes, who has seized the throne, keep it till the sun turns back; Thyestes agrees, and Zeus immediately turns the sun backwards, the rest of the story following much as above. There are numerous other variants; the story was much elaborated by the tragedians, *see for instance* Eur. *El.* 699 ff.; *Or.* 995 ff.; Seneca, *Thyestes*, *passim*. Continuous narratives, Apollod., loc. cit.; Hyg., *Fab.* 86-8; more in Roscher's *Lexikon*, art. 'Atreus' (Furtwängler). H. J. R.

ATRIUM VESTAE, an ancient precinct, east of the *Forum Romanum*, comprising the *aedes* and *lucus Vestae*, *Regia*, *domus publica*, and *domus Vestalium*. Republican remains of the last two underlie the existing *domus Vestalium*, built after Nero's fire of A.D. 64. The western ritual-kitchen is Flavian, while the eastern *exedra*, once

fronting a closed garden behind Nero's small peristyle, is Hadrianic. The Antonines, uniting the rooms grouped about the Neronian courtyard, added second and third stories. The enlarged peristyle now visible is Severan. Later additions are of minor significance.

E. H. van Deman, *Atrium Vestae* (U.S.A. 1909), *Bull. Com.*, 1936, 207 ff.; G. Lugli, *Roma antica* (1946), 202 ff.; Nash, *Pict. Dict. Rome* 1, 154 ff. I. A. R.

ATTA, TITUS QUINCTIUS (*PW* 21, d. 77 B.C.), Latin poet, composed *comœdiae togatae*, elegiac epigrams, and perhaps *satura*. Fragments, and titles of eleven plays survive. He excelled in character-drawing, especially feminine.

FRAGMENTS. Ribbeck, *CRP*², 160 (3rd ed. Teubner, 1897).

ATTALEIA, now *Antalya*, a city of Pamphylia, founded by Attalus II, perhaps with Athenian settlers; on its imperial coins the city boasts kinship with Athens. In 79 B.C. it was mulcted of its territory by Servilius Isauricus for its complicity with the pirate king Zenicetes. These lands were probably utilized by Augustus for settling veterans, but Attaleia was not made a colony, a status which it achieved only in the late third century. Apart from the city-walls the ruins are scanty.

K. Lanckoroński, *Stadte Pamphyliens* (1890), i. 7 ff. A. H. M. J.

ATTALUS I (SOTER) of Pergamum, 269-197 B.C., son of Attalus a cousin of Eumenes I, whom he succeeded (241). He was the first to refuse 'tribute' to the Galatians, and his great victory over them (before 230) was commemorated by his cult-name *Soter*, by the triumphal monument at Pergamum famous for its 'dying Gaul', and probably by the title of King (which Eumenes had never taken). His counter-attack on Antiochus (q.v. 8) Hierax who had co-operated with the Galatians, gained him all Seleucid Asia Minor except Cilicia (229-228); but Achaeus (q.v. 3) (223-220), cousin and general of Antiochus III, deprived him of most of his conquests.

Attalus now inaugurated a 'western' policy which was to give a new turn to the history of Pergamum. The dangerous ambitions of Philip V of Macedonia prompted him to support Philip's enemies the Aetolians, first with subsidies (220-217), and later with troops and a fleet (210-207). After the peace of Phoenice (205), Attalus replied to Philip's acts of aggression near the Hellespont by renewing the war in alliance with Rhodes (201), and securing Roman intervention against Macedon in common with the Rhodians. During the 'Second Macedonian War' he co-operated with the Romans by sea. He died shortly before the final victory.

An excellent general and diplomatist, Attalus raised Pergamum almost to the rank of a Great Power. Between Philip and Antiochus, he chose to live dangerously, and his approach to Rome, though brilliantly successful in its immediate rewards (*see also* EUMENES II), ultimately made Pergamum a pawn of Roman policy, besides precipitating the collapse of the Hellenistic political system. Apart from politics, Attalus was a notable patron of literature, philosophy, and the arts, and enjoyed a conspicuous domestic happiness with his wife Apollonis of Cyzicus and their four sons.

Hansen, *Attalus*, esp. ch. 3, and *see under* PERGAMUM. G. T. G.

ATTALUS II (PHILADELPHUS), 220-138 B.C., second son of Attalus I, and brother of Eumenes II, whom he succeeded (160-159). Before 160 he showed himself a skilful soldier and diplomatist, and was conspicuously loyal to Eumenes, whom he could probably have supplanted, with Roman support, at any time after 168 (*see* EUMENES II). As king, he fulfilled the (by now) traditional Pergamene part of watch-dog for Rome in the East. He equipped and supported the pretender Alexander Balas

to win the Seleucid throne from Demetrius I (153-150); likewise Rome supported Attalus in his two wars with Bithynia. Like all the Attalids, he was genuinely interested in letters and the arts.

Hansen, *Attalids*, esp. 123 ff.

G. T. G.

ATTALUS III (PHILOMETOR EUPRGETES), c. 170-133 B.C., son of Eumenes II and successor of Attalus II (138). His short reign was famous only for its denouement, the 'Testament of Attalus' bequeathing the kingdom of Pergamum to Rome (*OGI* 338). Its motive has never been perfectly explained, especially as Attalus was comparatively young and presumably did not expect a premature death. But the revolution after his death (see ARISTONICUS I) suggests that he may have made and published this testament partly as an insurance against social revolution while he survived.

Hansen, *Attalids*, 134 ff.

G. T. G.

ATTIS (*Ἀττίς*), a type of literature dealing specifically with the history of Attica which became popular c. 350-250 B.C. under the influence of the Sophists and Peripatetics and the general conception fostered by Isocrates and the Orators of a return to the past glory of Athens. Hellanicus' history of Attica (*Thuc.* i. 97), published soon after 404 B.C., was not strictly an *Attis*, but may have set the pattern for the longer works written after 350 B.C.

Cleidemus was recognized by Pausanias 10. 15. 5 as the first attidographer, followed by Androtion, Phanodemus, Demion, Melanthius, and Philochorus whose *Attis* ended shortly after the Chremonidean War. The later work of Ister (q.v.), of Cyrene described as *Συναγωγή τῶν Ἀτθίων*, seems to have been an epitome of previous *Attides*. Most attidographers held priestly or political offices and produced other works on religious antiquities. Characteristics of the *Attides* are their chronological arrangement, emphasis on mythology, and origins of cults and descriptions of political institutions. Scholia to Aristophanes and the *Marmor Parium* show their accepted value for dates. Their contents were traditional including the history of Athens from primeval times to contemporary events, and their length steadily increased. Although the authors adopted different interpretations of events (the *Attides* perhaps reflected current political rivalries) they did not seek new sources of information and generally agreed on the main facts of history. The *Attides* were often used by later commentators for constitutional and topographical details.

F. Jacoby, *Attis, the local chronicles of Ancient Athens* (1949), who rejects the view of Wilamowitz, *Aristoteles und Athen* i (1893), that the first *Attis* was compiled by an anonymous writer c. 380 B.C. from the records of the *Exegetae*, K. von Fritz, *Attidographers and Exegetae* and L. Pearson, *The Local Historians of Attica, TAPA* 1949 and 1942. See also HISTORIOGRAPHY, GREEK, § 5.

G. L. B.

ATTIANUS, PUBLIUS ACILIUS (PW), s.v. Caelius 17, but inscriptions do not support the name Caelius, found only in S.H.A. *Hadr.* 1. 4), an equestrian of Italica, became guardian and adviser of the young Hadrian (q.v.). He was almost certainly *praefectus praetorio* when Trajan died in A.D. 117 and helped Plotina to secure Hadrian's succession. Probably in 119, Hadrian enrolled Attianus in the Senate with consular rank, ostensibly to honour him, but perhaps in fact to remove him from office because of his part in securing the execution of four 'consular' generals for a presumed plot (see HADRIAN). He was succeeded as prefect by Turbo (q.v.).

S. H. A. *Hadr.*, Dio Cassius bk. 69; R. H. Lacey, *The Equestrian Officials of Trajan and Hadrian*, etc. (Diss. Princeton, 1917), 16, no. 37, Lambrechts, *Senat*, no. 2; Syme, *Tacitus*, see index.

C. H. V. S.; M. H.

ATTIC CULTS AND MYTHS. The chief goddess was of course Athena, her festivals being Arrhetophoria

(Pyanopsion and Scirophorion; for the month-names, see CALENDARS), Procharisteria (early spring; both the above are agricultural), Callynteria and Plynteria (Thargelion; ceremonial cleansing of temple and statue), Panathenaea (q.v., Hecatombacon 28, Great Panathenaea every four years), and Chalceia (last day of Pyanopsion). Other gods and goddesses were celebrated at the following festivals. Demeter and Core—Scira (see SCIROPHORIA, Scirophorion 12), Thesmophoria (q.v., Pyanopsion 10 at Halimus, 11-13 at Athens), Halaea (Poseideon), Chloia (early spring, to Demeter Chloe and Core, at Eleusis), Lesser Mysteries at Agrae (Anthesterion), Greater Mysteries beginning at Athens and ending at Eleusis (Boedromion 15-22: see MYSTERIES). Dionysus—Anthesteria (q.v., Anthesterion 11-13; apparently a blend of his worship with an All Souls feast), Lenaea (q.v., Gamelion ? 12), Rural Dionysia (see DIONYSIA, Poseideon), Great or City Dionysia (Elaphebolion 9-13 or 14; see J. T. Allen in *Univ. of Calif. Publs.* xii, 35 ff.; this and the Lenaea were the great dramatic festivals), Oschophoria (Pyanopsion ? 8), Kronos—Kronia (Hecatombacon 12), Zeus—Diasia (Anthesterion 23, to Zeus Meilichios, see ZEUS), Dipoleia (Scirophorion 14), Disosteria (Scirophorion, at Piraeus), and some minor feasts. Apollo—Thargelia (q.v., Thargelion 7), Pyanopsia (Pyanopsion 7), Artemis—Munichia (Munichion 16); Brauronia (at Brauron, unknown date, see ARTEMIS), Tauropolia (Halaea, unknown date). Elaphebolia (unknown, gave its name to the month Elaphebolion). There were also festivals, of which not much is known, to Poseidon, Hephaestus, Prometheus, the Eumenides, and some minor deities.

The best-known myths have to do with Athena and Poseidon (qq.v.). Heroic and aetiological tales centre on the vague and contradictory line of kings, dealing mainly with Cecrops (see CULTURE-BRINGERS), Erichthonius, Erechtheus (q.v.), and above all Theseus (q.v.). There is besides the story of Cephalus (q.v.) and Procris, and a few others little known. See also BENDIS, ERIGONE, NEMESIS (1).

S. Solders, *Die ausserstädtischen Kulte und die Fikung Attikas* (1931); L. Deubnet, *Attische Feste* (1922).

H. J. R.

ATTIC ORATORS. Caccilius of Calacte in the Augustan age wrote 'On the style of the ten orators', namely Antiphon, Andocides, Lysias, Isocrates, Isaeus, Lycurgus, Aeschines, Demosthenes, Hyperides, Dinarchus. This 'canon', though ignored by Dionysius, was recognized by the ps.-Plutarch, Quintilian, and later writers. Its origin is unknown, but the arbitrary inclusion of a definite number of names in such a class is characteristic of Alexandrian scholarship.

ANCIENT SOURCES. Pseudo-Plutarch, *Lives of the Ten Orators*; Dionysius of Halicarnassus, *De Verborum Compositione and Letters to Ammaeus*; Demetrius, *De Elocutione*; Hermogenes *Ἱστορία ὁμοίων*; [Longinus], *On the Sublime*.

MODERN WORKS. F. Blass, *Die attische Beredsamkeit* (1887-98); R. C. Jebb, *The Attic Orators from Antiphon to Isaeus* (1893); J. F. Dobson, *The Greek Orators* (1919), *Graecae, History of Greece*, C.H. vii; Croiset, *Histoire de la litt. grecque v.*; G. Kennedy, *The Art of Persuasion in Greece* (1963).

TEXTS. *Oratores Attici*, I. Bekker (1828); do. G. S. Dobson (1828); Text and Translation of *Minor Attic Orators*, K. J. Maidment and J. O. Burt (2 vols. 1906). *Selections from the Attic Orators* (text and commentary), R. C. Jebb (2nd ed. 1888).

See also under the names of the various orators.

J. F. D.

ATTICA, a triangular promontory constituting the easternmost part of central Greece, separated from Boeotia by Mts. Parnes and Cithaeron and from Megara by Mt. Cerata. This area of about 1,000 sq. m. is dominated by four mountain systems, Aegaleos, Hymettus, Pentelicus, and Laurium, which divide the landscape into three interconnected plains, to the west the Thriasian plain with its chief town at Eleusis where Demeter gave corn to man, in the centre the larger but stonier Attic

plain, and to the east the Mesogeia suitable for the vine, olive, and fig, as well as two smaller parcels of arable land to the north-east around Marathon and Aphidna. Attica's wealth, however, lay not so much in the light, sparsely watered soil, as in natural resources: excellent potter's clay, white and blue marble from Pentelicos and Hymettus, and silver and lead from Laurium (q.v.).

From Neolithic times so large a district encouraged the growth of many separate communities that were at first independent. The tradition of twelve townships in the time of Cecrops appears justified in the light of the copious Mycenaean remains from Eleusis, Marathon, Thoricos, and elsewhere. But then occurred the *synoekismos* (q.v.), a fusing of these disparate entities into a single Athenian state, an act attributed to Theseus though in fact a gradual process lasting probably until the seventh century (see ELEUSIS). The choice of Athens as capital was natural; not only was the city located within the largest plain, but it was also the centre of communications. That it had ready access to the sea at Phalerum and Piraeus was later to prove a consideration of the highest significance.

This ascendancy of Athens, religious as well as political (for the major rural cults were duplicated in the city), did not at first unduly weaken the importance and vigour of the Attic countryside. Power and wealth continued to be locally based as were men's loyalties, and the rich finds of archaic sculpture and pottery show that in the sixth century aristocratic families lived throughout Attica in a style (and with a following) akin to feudal barons. However, the tyranny of Pisistratus and the reforms of Cleisthenes broke the strength of these local associations by making everyone dependent upon the organized, central government at Athens, a dependency further intensified in the fifth century by the adoption of an aggressive foreign policy based on sea-power and sea-borne trade. Attica had now become an appendage to Athens and in an emergency such as the Peloponnesian War could be disregarded.

ATTICA, CAECILIA (*PW* Pomponii 78), daughter of Atticus, born 51 B.C. As a child she is frequently mentioned in Cicero's correspondence. Married to Agrippa through the good offices of Antony (c. 37), she was the mother of Agrippina (1). Suspected of misconduct with her tutor, Caecilius (q.v. 3) Epirota, she may have been divorced; or else she died young; at all events Agrippa married again c. 28.

T. J. C.

ATTICUS (1), TITUS POMPONIUS (*PW* 102, Suppl. 8), born in 110 B.C. as the son of a rich and cultured knight, was later adopted by an even richer uncle, whose wealth he inherited. He was a boyhood friend of Cicero, whose brother Quintus married Atticus' sister, and whose *Letters to Atticus* (which Atticus himself perhaps edited some time after Cicero's death) are the best source for his life and character. (There is also a useful, but uncritical, biographical sketch by his friend Nepos.) In 85 Atticus left Rome after realizing his assets in Italy, in order to escape the civil disturbances that he foresaw, and settled in Athens until the middle sixties (hence his *cognomen*). He there studied and adopted the Epicurean philosophy and henceforth combined a life of cultured ease and literary activity with immense success in business (where his methods were no better or worse than what we know of his contemporaries') and an infallible

instinct for survival. While urging Cicero privately to determined action on behalf of the Optimates (with whom he sympathized), especially in 40, he himself refused to engage in politics and helped all prominent politicians in need, from Marius to Octavian, without becoming embroiled in their differences. He was Cicero's literary adviser and publisher and himself wrote a *Liber Annalis* (a chronological table of world, and especially of Roman, history), which became a standard work, and other historical books (all now lost). He lived to become a friend of Agrippa, who married his daughter, and in 32 he committed suicide when suffering from an incurable illness.

Cicero and Nepos (see above) Shackleton Bailey, *Cicero's Letters to Atticus*, 1 (1905), 3 ff. E. B.

ATTICUS (2), JULIUS, like Graecinus (q.v.), a Latin writer on vines in Tiberius' time, who was a source for Columella (3. 17. 4) and Pliny (*HN* 17. 90.)

Schanz Hosius § 407. 1.

ATTICUS (3) (c. A.D. 150-200), Platonist, opposed the infiltration of Peripatetic elements into Platonism, but himself introduced into it certain doctrines proper to Stoicism.

ATTILA, king of the Huns (q.v.) (A.D. 434-53), at first ruled jointly with his brother Bleda, whom he murdered in 445. The empire which he inherited from his predecessors stretched from the Alps to the Caspian Sea. His major military campaigns were those of 441-3 and 447 against the Eastern Empire, where he ravaged the Balkan provinces and Greece; that of 451, when he invaded Gaul but was defeated at the Catalaunian Plains by the Romans, led by Aetius, and the Visigoths; and that of 452, when he invaded Italy and sacked some of the most famous cities there. He intended to invade the Eastern Empire again in 453, but died during the night after his marriage to a girl called Ildico. He was of a blustering, arrogant character, a persistent negotiator, but not pitiless. No detailed description has survived of any of his battles.

E. A. Thompson, *A History of Attila and the Huns* (1948). E. A. T.

ATTIS, in mythology, the youthful consort of Cybele (q.v.) and prototype of her eunuch devotees. The myth exists in two main forms, with many variants. According to the Phrygian tale (Paus. 7. 17. 10-12; cf. Arn. *Adv. Nat.* 5. 5-7), the gods castrated the androgynous Agdistis (q.v.); from the severed male parts an almond tree sprang and by its fruit Nana conceived Attis. Later Agdistis fell in love with him, and to prevent his marriage to another caused him to castrate himself. Agdistis is clearly a doublet of Cybele, though Arnobius brings them both into his account. Ovid (*Fasti* 4. 221-44) and others change many details, but keep the essential aetiological feature, the self-castration. In a probably Lydian version Attis, like Adonis, is killed by a boar. The story of Atys, son of Croesus, who was killed by the Phrygian Adrastus in a boar-hunt (11dt. 1. 34-35) is an adaptation of this, and attests its antiquity, though the Phrygian is probably the older version.

In Asia Minor Attis bears his native name only in the Neo-Phrygian inscriptions, though the high priest and, under the Empire, all members of the priestly college at Pessinus had the title Attis. Attis is sometimes called Papas or Zeus Papas.

Whatever his original character, vegetation god or mortal lover of Cybele, in the early cult he remains a subsidiary figure, whose death is mourned but who is not, apparently, worshipped. He appears only rarely in Greece, but at Rome attained official status under

Claudius, and after c. A.D. 150 becomes an equal partner in the cult. Under the later Empire he was invested with celestial attributes, and became a solar deity, supreme, all-powerful, and sometimes it seems a surer of immortality to his initiates. In art he is generally represented as an effeminate youth, with the distinctive Phrygian cap and trousers. See ANATOLIAN DEITIES; CYBELE; EUNUCHS, RELIGIOUS.

Nilsson, *GGR*, ii, 640 ff.; P. Lambrechts, *Attis. van herdersknaap tot god* (1962), with French résumé, M. J. Vermaseren, *The Legend of Attis in Greek and Roman Art* (Leiden, 1966). F. R. W.

AUDAX (probably 6th c. A.D.), grammarian, whose *De Scauri et Palladi Libris excerpta* is extant (ed. Keil, *Gramm. Lat.* 7. 320-62).

Schanz-Hosius § 1105

AUFIDIUS (1, *PW* 15) **BASSUS** (fl. mid 1st c. A.D.), the imperial historian, an Epicurean and subject to ill health, which prevented a public career, wrote on the German Wars (*Bellum Germanicum*), probably under Tiberius and glorifying his achievements of A.D. 4-16. He also wrote a history of his times, probably under Claudius, which may have begun with Caesar's death, included Cicero's death (Sen. *Suas.* 6. 18; 23), and was continued by the Elder Pliny under the title *a fine Aufidii Bassi*. This indicates an inconspicuous closing point, which may fall in A.D. 31, but is, on the evidence of Tacitus' use of Pliny, better set c. A.D. 50. In authority he ranks among the great historians of the early Empire (Quint. 10. 1. 103).

Peter, *HRRel* ii cxxxv 96, Ph. Fabia, *Les Sources de Tacite* (1893), 185, 355, cf. P. Munz, *Rh. Mus.* 1907, 161 ff.; Syme, *Tacitus*, 274, 288, 697 ff. A. H. McD.

AUFIDIUS (2, *PW* 6), **GNAFUS**, praetor in 107 B.C., wrote a 'Graeca historia', probably of Rome (*Tusc.* 5. 112).

FGH 814.

AUFIDIUS (3), **MODESTUS**, commentator on Virgil and Horace, in the first century A.D.

Schanz-Hosius § 264.

AUFIDUS (modern *Ofanto*), the most important river of southern Italy. A powerful stream in winter and sluggish creek in summer, it rises near the Tyrrhenian Sea but flows into the Adriatic, through the territories of Hirpini and Apuli, past Canusium and Cannae. Horace, a native of nearby Venusia, often mentions it. E. T. S.

AUGURES, official Roman diviners, forming a *collegium* which consisted originally of three but was gradually increased to sixteen members (Livy 10. 6. 7-8 and *periocha* 89; Dio Cassius 42. 51. 4), one of the *quattuor amplissima collegia*. Etymology uncertain; the traditional derivation from *auis* + *ger(o)* would give **auger*, not *augur*; that from the root *aug(eo)* (see E. Flink *Ann. Acad. Scient. Fennicae* 1921, 3 ff.), suggests rites of fertility rather than divination, but the transition is not impossible, cf. **AUGURIUM CANARIUM**. Their business was not to foretell the future, but to discover by observation of signs (*auguria*), either casually met with (*oblativa*) or watched for (*impetrativa*), whether the gods did or did not approve a proposed action. The most characteristic signs were given by birds (hence the traditional etymology). These might be chickens, which were carried by armies in the field for the purpose; food was given to them, and if they ate it so as to drop some from their beaks, that was an excellent sign ('tripudium solistimum',

Cicero, *Div.* 2. 72, where see Pease). If wild birds were observed, the augur marked out a *templum* (cf. **DIVINATION**), i.e. he designated boundaries by word of mouth (see e.g. Varro, *Ling.* 7. 7-8, which gives the formula) within which he would look for signs, and divided this space into *sinistra*, *dextra*, *antica*, and *postica* (*pari*); the significance of the flight or cry of the bird varied according to the part in which it was heard or seen. The officiant faced south or east (H. J. Rose, *JRS* 1923, 82 ff.). Such observations prefaced every important action public or (at least in early times) private, but to accept or reject augural advice was the responsibility of the magistrate or other person performing the action. For *augurium salutis*, see **SALUS**, and for augury in general see **DIVINATION**; **RELIGION**, **ETRUSCAN**. For the Auguratorium on the Palatine where Romulus is said to have taken the auspices for his new city, see Nash, *Pict. Dict. Rome* 1, 163.

Bouché-Leclercq, *Histoire de la Divination* iv. 209 ff., Wissowa, *RR* 523 ff.; Latte, *RR* 67, 397, P. Catalano, *Contributi allo studio del diritto augurale* (1960). H. J. R.

AUGURINUS, **SENTIUS**, a young friend praised by Pliny (*Ep.* 4. 27; 9. 8) for writing 'Poems in Little' (*poematia*) marked by charm and tenderness, but sometimes by satire. Pliny quotes eight hendecasyllables by him in the manner of Catullus and Calvus. Possibly he is identical with Q. Gellius Sentiis Augurinus, proconsul under Hadrian (*CIL* 3. 586).

laehr, *FPR*; Morcl *FPL*.

J. W. D.; G. B. A. F.

AUGURIUM CANARIUM. Ateius Capito (in Festus, 358, 27 Lindsay) says that reddish (*rutilae*) bitches were sacrificed *canario sacrificio pro frugibus*, to 'deprecate' the fierceness of the Dog-star. Cf. Fest. (Paulus), 39, 13, from which it would appear that the place was near the Porta Catularia and the time fairly late summer, since the crops were yellowing (*flavescentes*). This seems to be the *sacrum canarium* of Daniel's Servius on *G.* 4. 424. The ritual name, however, was *augurium canarium*, as is shown by Pliny (*IIN* 18. 14) who quotes from the *commentarii pontificum* (q.v.) the direction that the days (*dies*); it is not clear whether the rite lasted more than one day or the various days for different years are meant) for it should be fixed 'priusquam frumenta uaginis exant nec (et *codd.*, *corr.* Ulrichs) antequam in uaginas perveniant', that is to say some time in spring (see L. Delatte, *Ant. Class.* 1937, 93 ff.). The name probably means 'augurium of the dog-days'. It is most unlikely that it was a sacrifice to the Dog-star; it may have been an augury in the sense that omens for the result of the harvest were taken from the victims, but if the second etymology given under 'AUGURES' is right, it is tempting to make it mean 'ceremony of increase for the dog-days'. There is no evidence, though some probability, that the augurs took part and no reason to suppose it performed in honour of any god.

Latte, *RR* 68.

II. J. R.

AUGUSTA (1) **PRAETORIA** (now *Aosta*), a colony founded with 3,000 Praetorians on the Duria Maior in Cisalpine Gaul by Augustus (24 B.C.); it was here that Terentius Varro had encamped the previous year when subjugating the Salassi (q.v. Strabo 4. 206; Cass. Dio 53. 25). Standing at the Italian end of the Great and Little St. Bernard Passes over Pennine and Graian Alps respectively, Augusta became and still remains the capital of this whole region (*Val d'Aosta*).

For inscriptions see P. Barocelli, *Inscriptiones Italiae* i, fasc. 1 (1932); for Roman monuments, F. Haverfield, *Ancient Town Planning* (1913). F. Eysenhardt, *Aosta und seine Alterthümer* (1896); P. Toesca, *Aosta* (1911). E. T. S.

AUGUSTA (2) RAURICA (now *Augst*, near Basle), a colony founded by Munatius Plancus (q.v. 1) in 44 B.C. in the territory of the Raurici. Strengthened by Augustus, it formed with Aug. Praetoria and Aug. Vindelicorum a linked communication system and was a frontier post in the Upper Rhine valley. Though attacked by the Alamanni in A.D. 259/60, it flourished in the second and third centuries, as witnessed by the surviving remains: forum, temples, theatre, amphitheatre, basilica, baths, curia, dwellings; the city wall, begun in the third century, was uncompleted. Under Diocletian it was succeeded by a garrison nearer the Rhine in *Castrum Rauracense* (Kaiseraugst).

F. Stahelin, *Die Schweiz in röm. Zeit* (1948), 95 ff., 597 ff.; R. Laur, *Führer durch Augusta Raurica* (1950), for find of mid-fourth-century silver; R. Laur, *Der Silberschatz von Kaiseraugst* (1963).

H. H. S.

AUGUSTA (3) TAURINORUM (now *Torino*, *Turin*), an important Augustan *colonia* in Cisalpine Gaul, situated at the foot of the Mont Genève Pass over the Cottian Alps and at the confluence of the Duria Minor and the Padus (q.v.), which here became navigable (Pliny, *HN* 3. 123). Originally the capital of the Taurini, who were probably Celticized Ligurians, it is apparently identical with the Taurasia captured by Hannibal, 218 B.C. (App. *Ann.* 5). Tacitus (*Hist.* 2. 66) records its burning in A.D. 69. Ancient authors seldom mention it. The modern city preserves the ancient street plan.

F. Haverfield, *Ancient Town-Planning* (1911), 87; G. Bendinelli, *Torino Romana* (1928).

E. T. S.

AUGUSTA (4) TREVERORUM, modern *Trier* or *Trèves*, was founded by Augustus. It rapidly became the chief city of north-east Gaul, and an important trade centre between Gaul and the Rhineland; its colonial status, if not already conferred by Augustus, probably dates from Claudius. It was the seat of the *procurator provinciae Belgicae et duarum Germaniarum*; Postumus made it his capital, a precedent followed by Maximian and Constantius Chlorus (though it had been badly damaged by the Franks and Alamanni in 275/6), and it remained the capital of the Prefecture of Gaul from 297 until early in the fifth century, when it was abandoned to the Franks. Its bishop enjoyed a corresponding importance.

Trier grew far beyond the original settlement, to cover 700 acres. Notable ruins, mostly of the period when the city was frequently the imperial residence, survived into modern times—e.g. the 'Porta Nigra' (a late Roman gateway), remains of public halls, including an imperial audience hall, baths, and the first-century amphitheatre (restored by Constantius Chlorus). Excavation has revealed an extensive temple quarter (already used in pre-Roman times) outside the town, comprising about seventy shrines, a theatre, and priests' dwellings. Pottery (including samian ware) and cloth manufactured in Trier were widely exported; the city had an imperial mint from at least 296 and was also a centre of the Moselle wine trade.

K. Schumacher, *Siedlungs- und Kulturgeschichte der Rheinlande*, Bd. II (1923).

O. B.; P. S.

AUGUSTA (5) VINDELICORUM (now *Augsburg*) probably dates from c. A.D. 6–9, when the legion stationed at Oberhausen nearby was sent away. It lay at the centre of a network of important roads and was from the first the administrative and trading centre of Raetia (cf. Tac. *Germ.* 41). Hadrian raised it to municipal status (122–3), and after the reorganization under Diocletian it remained the civil capital of Raetia Secunda. It became the seat of a bishop. Nothing of Roman Augsburg remains above

ground, but numerous sculptures and smaller objects have been found.

W. Hübener, *Jahrbuch d. Röm.-Germ. Zentral-museums*, Mainz 1958, 154 ff.

O. B.

AUGUSTINUS, AURELIUS (St. Augustine, A.D. 354–430), was born at Thagaste (*Souk Ahras*, Algeria), son of Patricius and a dominant Catholic mother, Monica. He taught rhetoric at Carthage, Rome, and (384 to 386) at Milan. Patronized by Symmachus (q.v. 2), the pagan orator, he hoped, by an advantageous marriage (to which he sacrificed his concubine, the mother of a son, Adeodatus—d. c. 390) to join the 'aristocracy of letters' typical of his age (see AULONNIUS). At 19, however, he had read the *hortensius* of Cicero. This early 'conversion to philosophy' was the prototype of successive conversions: to Manichaeism (q.v.), a Gnostic sect promising Wisdom, and, in 386, to a Christianized Neo-Platonism (q.v.), patronized by Ambrose (q.v.), bishop of Milan. Catholicism, for Augustine, was the 'Divine Philosophy', a Wisdom guaranteed by authority but explored by reason: *Seek and ye shall find*, the only Scriptural citation in his first work, characterizes his life as a thinker.

Though the only Latin philosopher to fail to master Greek, Augustine transformed Latin Christianity by his Neo-Platonism: his last recorded words echo Plotinus (q.v.). Stimulated by abrupt changes—he was forcibly ordained priest at Hippo (*Bône*, Algeria) in 391, becoming bishop in 395—and by frequent controversies (see DONATISTS, PELAGIUS), Augustine developed his ideas with an independence that disquieted even his admirers. He has left his distinctive mark on most aspects of western Christianity.

Augustine's major works are landmarks in the abandonment of classical ideals. His early optimism was soon overshadowed by a radical doctrine of grace. This change was canonized in an autobiographical masterpiece, the *Confessions* (c. 397–400), a vivid if highly selective source for his life to 388 and, equally, a mirror of his changed outlook. *De Doctrina Christiana* (begun 396/7) sketched a literary culture subordinated to the Bible. *De Trinitate* (399 to 419) provided a more radically philosophical statement of the doctrine of the Trinity than any Greek Father. *De Civitate Dei* (413 to 426) presented a definitive juxtaposition of Christianity with literary paganism and Neo-Platonism, notably with Porphyry (q.v.). After 412, he combated in Pelagianism views which, 'like the philosophers of the pagans', had promised men fulfilment by their unaided efforts. In his *Retractationes* (427) Augustine criticized his superabundant output of 93 works in the light of a Catholic orthodoxy to which he believed he had progressively conformed—less consistently, perhaps, than he realized.

Letters and verbatim sermons richly document Augustine's complex life as a bishop: the centre of a group of sophisticated ascetics (notably Paulinus of Nola), the 'slave' of a simple congregation, he was, above all, a man dedicated to the authority of the Catholic Church. This authority had enabled his restless intellect to work creatively: he would uphold it, in Africa, by every means, from writing a popular song to elaborating the only explicit justification in the Early Church of a policy of religious persecution (see DONATISTS).

AUGUSTODUNUM (modern *Autun*), a town in Gallia Belgica, founded c. 12 B.C. in the plain of the Arroux to replace the hill-town Bibracte. It was laid

out on a large scale (area c. 490 acres), and important buildings (including two town gates) survive. It was celebrated as a centre of learning both in the first and in the fourth centuries A.D. It suffered for its fidelity to Claudius II (A.D. 269), and was ruined after a seven-month siege. Its restoration under Constantius I is celebrated by Eugenius, master of the local 'Scholae Maenianae'. But the reduced perimeter of the town wall shows its depopulation.

AUGUSTUS (63 B.C.–A.D. 14). C. Octavius, born on 23 Sept. 63 B.C., was brought up by his mother Atia (q.v. 1), Caesar's niece, as his father C. Octavius (q.v. 4) died in 59. His teachers gave him a taste for literature and philosophy, but Caesar himself introduced him to Roman life. Aged 12, he pronounced the *laudatio* of his grandmother Julia; he was appointed pontifex; in 46 B.C. he accompanied his great-uncle in his triumph. Despite delicate health, he joined Caesar in Spain in 45. At Apollonia, where he had been sent with his friends, M. Agrippa and Salvidienus Rufus, to complete his studies, he learnt of Caesar's sudden death. The opening of Caesar's will revealed that Octavius had been adopted and made his chief heir by the dictator. He decided to return to Italy and to avenge Caesar. The unexpected situation imposed new duties and stimulated new ambitions. Caesar had lived long enough to afford an inspiring example, but had died soon enough not to destroy the Roman traditionalism of his heir. Octavius was cautious and superstitious, but exceptionally mature, clever, and decided. In Italy he gained Cicero's sympathy and Antony's distrust. He celebrated the *ludi Victoriae Caesaris* and, while linking himself with the moderate Republicans, did not overlook Caesar's veterans. During the conflict between Antony and Dec. Brutus (q.v. 6) he obtained from the Senate the rank of senator and propraetor, and emerged victorious from the war of Mutina (43 B.C.). But when the Senate refused their champion due honours, his legions forced his appointment as consul. He was recognized as Caesar's adopted son under the name of Gaius Julius Caesar Octavianus. He soon reached a compromise with Antony and M. Lepidus (q.v. 3). By the *Lex Titia* (27 Nov. 43) they secured official acknowledgement of themselves as triumvirs *rei publicae constituendae* for five years. Octavian obtained Africa, Sicily, and Sardinia as his provinces. When on 1 Jan. 42 Caesar was recognized as a god, Octavian became *divi filius*. In the triumviral proscriptions (q.v.) he was as ruthless as his colleagues: ambition and a touch of puritanical fanaticism made him cruel. During the campaign of Philippi he suffered from ill health. Under a new settlement he held Spain, Sardinia, and for a short time Africa, and supervised the distribution of land to the veterans. This task and the suppression of the rebellion of L. Antonius (q.v. 6), in which Salvidienus Rufus, M. Agrippa, and C. Maecenas became his close collaborators, strengthened his hold on Italy and Gaul (40 B.C.). In a transitory attempt to conciliate Sextus Pompeius, who had occupied Sicily and Sardinia, Octavian married his relative Scribonia (q.v.). In Oct. 40 the pact of Brundisium sealed a new reconciliation with Antony, who married Octavian's sister, Octavia; Virgil's fourth Eclogue records the contemporary enthusiasm. Octavian divorced Scribonia and married Livia (q.v.), who shared his traditionalism and simplicity and thus became a permanent force in his life. Salvidienus Rufus was now condemned to death, since he was suspected of meditating revolt. In 38, when war with Pompeius broke out, Octavian probably assumed the *praenomen* of *imperator*

(q.v.), which was ratified in 29 by the Senate. In 37 at Tarentum Antony and Octavian confirmed their agreement and had their triumviral powers extended for another five years (until Dec. 33?). With the defeat of Pompeius and the downfall of Lepidus (36) the West was in the hands of the *divi filius*.

2. Octavian was already winning over public opinion in Italy. He put himself under the protection of Apollo. He was perhaps granted *sacrosanctitas* or some other form of tribunician privilege. He disbanded legions and founded colonies. He saw definitely that his task was to establish peace and restore Italy. The opposition to Antony and Cleopatra reinforced his position at a moment in which the consciousness of a united Italy was just formed. Between 35 and 33 B.C. his campaigns in Illyricum and Dalmatia, although not entirely successful, strengthened the eastern borders of Italy. Great attention was given to the adornment of Rome, especially under the aedileship of Agrippa (33 B.C.). Octavian's party had originally won more support from the Italian municipalities, but now a considerable part of the Roman aristocracy joined. Antony's callousness towards Octavia added a family justification to the rivalry. The triumvirate was not renewed, but Octavian, like Antony, did not abandon power and prepared for war against his partner. In Oct. 32 Italy and the western provinces swore allegiance to Octavian. They became his clients—an important step towards the Principate and a substitute for his triumviral powers. War was declared only against Cleopatra. In 31 Octavian's position became more regular when he assumed the consulship, which he held every year until 23 B.C.

3. Octavian overthrew Antony in the campaign of Actium (Sept. 31), founded Nicopolis (q.v. 3), and ascribed his success to Apollo. In August 30 he became master of Egypt and its treasure. His arrangements in the East mainly preserved the dispositions of Antony. In 30 libations for his *genius* were granted by the Senate; his tribunician competence was perhaps extended; he was authorized to create patricians. In 29 he celebrated his triumph and the temple of Janus was closed. Many legions were disbanded; new distributions of land were granted. In 28 Octavian held the census with Agrippa, reduced the Senate to some 800 members (later to 600), was appointed *princeps senatus*, revived ancient religious ceremonies, and dedicated a temple of Apollo on the Palatine. His policy was increasingly founded upon his prestige as victor, peace-bringer, and defender of Roman tradition. He was teaching the Italian people that Roman traditions were their traditions and old Roman virtue the eternal foundation of the Roman State. Poets, historians, and artists were at his side. The Republic had to be solemnly restored, because the Republic was deeply rooted in tradition. Yet the restoration had to be reconciled with the obvious fact that Octavian never seriously thought of laying down his power. He effectively controlled the State through his money and his soldiers (see ARMIES, ROMAN, § 4).

4. On 13 Jan. 27 B.C., Octavian transferred the State to the free disposal of the Senate and people, but he received Spain, Gaul, and Syria (in addition to Egypt) for ten years as his province with the greater part of the army, while preserving his consulate (see IMPERIUM). On 16 Jan. he received among many honours the title Augustus (see following article), which proclaimed his superior position in the State. The month Sextilis was called Augustus. A golden shield was set up in the Senate-house with an inscription commemorating his valour, clemency, justice, and piety; a replica found at Arles is dated 26 B.C. Possibly he was granted other powers. The Republic was restored, because his powers depended on the Senate and were formally to last only

for ten years. Yet the forces in his hands were overwhelming and supported a moral authority even greater. Half the Empire had already sworn allegiance to him. The oath was extended to the other provinces, and probably the soldiers took a special oath of allegiance to him. In the East the cult of Augustus was associated with the existing cult of Roma. In the West many forms of worship, especially of his *genius*, were widespread. Horace described him as Mercury in *Carm.* 1. 2.

5. Expansion of the frontiers and reinforcement of the Roman penetration in semi-conquered territories were equally considered. The frontiers between Egypt and Ethiopia were secured by the campaigns of Cornelius Gallus (29 B.C.) and C. Petronius (25). Augustus himself directed the main phase of the final submission of Spain and the urbanization and organization of Spain and Gaul (27-25). In 25 Terentius Varro (q.v. 4) Murena crushed the Salassi in Val d'Aosta, but Aelius Gallus failed to conquer Arabia Felix (25-24). Galatia was annexed (25) and Juba appointed king of Mauretania. These were difficult years: Augustus was critically ill in 25 and 23 B.C. In 26 Cornelius Gallus (q.v. 3) was condemned. In 23 or 22 the conspiracy of Varro Murena was discovered. In 23 young Marcellus (q.v. 7), who had married Augustus' daughter Julia in 25, died. As Augustus had no son, the problem of a successor was urgent. Constitutional reforms seemed necessary. In 24 Augustus had been granted dispensation from certain laws. In July 23 he resigned the consulship, but obtained an *imperium proconsulare maius* in the senatorial provinces and the *tribunicia potestas* for life; this included the absolute right of veto and involved complete control of the State—the very end of the Roman Republic. Agrippa was honoured with an eastern command (23) and the hand of Julia (21); their sons Gaius and Lucius were eventually regarded as the future heirs. In 22 Augustus refused the dictatorship, but accepted the *cura annonae*; Gallia Narbonensis (in 22) and Hispania Baetica were transferred to senatorial administration. Augustus' travels in Sicily, Greece, and Asia (22-19) were probably of great importance for the civil organization; the most apparent result was the reconciliation with Parthia, which recognized the Roman protectorate in Armenia. An expedition against the Garamantes in Africa was successful (19). Possibly some consular privileges were granted to Augustus by the Senate in 10. Moral and religious reforms marked the years 18 and 17 B.C. The *lex Julia de adulteriis* made adultery a public crime; the *lex Julia de maritandis ordinibus* made marriage nearly compulsory and offered privileges to married people. A *lex sumptuaria* tried to reduce luxury. Members of senatorial families were forbidden to marry into families of freedmen. In 17 the *ludi saeculares* were celebrated. In 18 the powers of Augustus were extended for five years, while a coregency was conferred upon Agrippa, and a new *lectio senatus* was held. In 17 Augustus adopted Gaius and Lucius, and in 14 he gave the Bosporan kingdom to Polemo of Pontus—an unsuccessful settlement. Three years of residence by Augustus in Gaul (15-13) marked the importance of the organization of Gaul and its frontiers. T. Statilius Taurus was left in Rome as *praefectus urbi*. In 16-15 Raetia and Noricum were annexed as imperial provinces. About 15-14 the imperial mint of Lugdunum was founded, which meant a direct control of gold and silver coinage. At latest from c. 11 B.C. (when a new *lectio senatus* was made), the organization of the senatorial and equestrian orders and the *iuvenes* (qq.v.) was complete. A *consilium* of magistrates and other senators helped Augustus to prepare business for the full Senate. In 13 the powers of Augustus and Agrippa were extended for five years. Agrippa's death in 12 was a blow. The death of Lepidus left the post of

Pontifex Maximus open: Augustus, the head of the Roman Empire, became also the head of the Roman religion (12). An altar to Roma and Augustus was built at Lugdunum (*Lyon*); later a similar altar was built at Oppidum Ubiorum (*Cologne*). In both cases the altar was meant to be the focus of provincial loyalty.

6. The substitution of Tiberius' and Drusus' influence for that of Agrippa was marked by new military activity. In several campaigns the frontier of Illyricum was advanced to the Danube (13-9 B.C.) and later Moesia was made a province. Meanwhile Drusus attempted to advance the Rhine frontier to the Albis (*Elbe*); he died in 9 B.C. In 9 the Ara Pacis (q.v.) was dedicated and (in 7?) the *collegia* (see *CLUBS, ROMAN*) were revised. In 8 the powers of Augustus were extended for ten years. Some time between 12 B.C. and A.D. 1 the Homonadeis in southern Galatia were defeated and in 6 Paphlagonia was added to Galatia. In 6 Tiberius received *tribunicia potestas*, but shortly afterwards retired to Rhodes through jealousy of Gaius Caesar, who in 5 was proclaimed *princeps iuventutis*.

7. The great creative period of the life of Augustus was over. His best collaborators were dead, including the poets, Virgil and Horace. Livy was left to witness his decline, Ovid to experience the severity of his moral code. Augustus politically favoured the upper classes, but he was careful to appeal in some measure to every class. The division of Rome into fourteen *regiones* in 7 B.C. gave the opportunity for associating the cult of the *genius* of the Emperor with the popular cult of the Lares Compitales. By the *leges Fufia Caninia* (2 B.C.) and *Aelia Sentia* (A.D. 4) manumission was limited and certain classes of slaves were excluded from the possibility of Roman citizenship. Augustus was also conservative in bestowing citizenship on provincials. In 2 B.C. he was saluted as *pater patriae*; he also banished Julia (q.v. 2). The deaths of Lucius Caesar (A.D. 2) and Gaius Caesar (A.D. 4) thwarted Augustus' plans for the succession, and he was compelled to adopt Tiberius, who again received *tribunicia potestas* for ten years. In A.D. 3 Augustus' own powers were extended for ten years. Probably in A.D. 5 (as the *Tabula Hebana* (q.v.) found in Etruria in 1947 has revealed) the elections of the magistrates were reformed: consuls and praetors were to be 'designated' by ten special centuries composed of senators and judiciary *equites* taken from thirty-three of the thirty-five tribes. This procedure (*destinatio*) reduced the power of the *comitia centuriata*. In A.D. 6 a new system was introduced to pay discharged soldiers from an *aerarium militare* (see *AERARIUM*); this superseded the necessity of founding military colonies, the last revolutionary survival. The privileged position of Italy in taxation was reduced by the imposition of two new taxes on legacies and sales. Seven *cohortes* of *vigiles* (q.v.) and three *cohortes urbanae* (q.v.) were established. In foreign affairs the year A.D. 6 was marked by the annexation of Judaea as a province and by the Pannonian rebellion which suddenly revealed the weakness of the Roman army, which had been reduced to twenty-eight legions (apart from the *auxilia*) and had been posted on the borders without a central reserve. Tiberius took three years to crush the rebellion (6-9), while the loss of three legions under Varus (q.v. 2) in Germany in 9 confirmed the insufficiency of the military organization. Augustus was shocked and decided to abandon Germany and to retain only twenty-five legions: conquest would involve increasing the army. The year A.D. 9 saw the last social law (*lex Papia Poppaea*), which mitigated the *lex Julia de maritandis ordinibus* and offered further inducements to having children. In A.D. 13 Tiberius received *tribunicia potestas* and *imperium proconsulare* for another ten years. Augustus himself was granted ten more years of power.

The decisions of his *consilium* were given the force of *senatus consulta*. In April A.D. 13 he deposited his will in the house of the Vestals. It included a *breviarium totius imperii* (a summary of the military and financial resources) and the so-called *Monumentum Ancyranum* (q.v.). His mausoleum had been ready for many years. He died on 19 Aug. A.D. 14 at Nola, and on 17 Sept. the Senate decreed that he should be accepted among the gods of the State.

8. He had preserved the calm beauty of his person until his old age. He had never forgotten his studies, but no philosophic influence is demonstrable in his government. He wrote a pamphlet against Brutus about Cato Uticensis, an exhortation to philosophy, an autobiography dealing with the period before about 25 B.C., a biography of Drusus, a short poem about Sicily, a book of epigrams—all lost works—and planned a tragedy on Ajax. His style was clear and simple, but, if required, as majestic as his mind. When he entered political life, republican liberty was already dead. He tried to establish a government in which an accurate balance of classes and of countries gave the predominance to Roman tradition and Italian men without offending the provinces and without diminishing the Greek culture. He gave peace, as long as it was consistent with the interests of the empire and with the myth of his glory. But he intended especially that the peace was to be the internal peace of the State. He assured freedom of trade and wealth to the upper classes. He did his enormous work in a simple way, living a simple life, faithful to his faithful friends. His superstition did not affect the strength of his will. Yet, as he never thought of real liberty, so he never attained to the profound humanity of the men who promote free life.

SOURCES: *Monumentum Ancyranum* (q.v.); Suetonius, *Life* (ed. Adams, 1919; Levi, 1958); Appian, *BCiv.* (only until 35 B.C.); Dio Cassius 45 ff.; Velleius Paterculus, etc. The contemporary poets and monuments are invaluable. For the coins see *British Museum Catalogue* 1 (1923). The minor fragments of Augustus' works are collected in H. Malcovati, *Caesaris Augusti . . . fragmenta* (1962). Inscriptions in V. Ehrenberg and A. H. M. Jones, *Documents illustrating the reigns of Augustus and Tiberius* (1955).

AUGUSTUS, AUGUSTA (Gk. Σεβαστός, Σεβαστή). On 16 Jan. 27 B.C. Octavian received the title 'Augustus' from the Senate, wisely preferring this to the alternative offer of 'Romulus'. The word *augustus* had been used in republican times at Rome only in a religious context—'sancta uocant augusta patres', Ovid wrote (*Fast.* 1. 609)—and was readily contrasted with *humanus*. Though Augustus apparently intended that the title should be carried by his successor (Suet. *Tib.* 26), Tiberius at first hesitated to accept it (Dio Cass. 57. 2. 1; 8. 1. Compare the similar conduct of Vitellius in A.D. 69, Tac. *Hist.* 2. 62; 80). It was held by all Roman Emperors except Vitellius, and never by any other member of the imperial family. The title 'Augusta' was bequeathed by Augustus to his wife Livia, granted by Gaius to his grandmother Antonia, by Claudius to his wife Agrippina, and by Nero

to Poppaea. From Domitian's time it was normally conferred, on the initiative of the Senate, upon the wife of the reigning Emperor. J. P. B.

AULIS, where the Greek fleet collected before sailing to Troy, is a small hill on the Euripus with a little landlocked harbour north and a deep bay south. The emigrants to Aeolis also claimed to have sailed thence (Strabo 9. 401), and Hesiod names it as a port (*Op.* 651); but it had no important later history. Recent excavations have revealed the temple of Artemis Aulideia (5th c. B.C., later modified and finally covered by a late Roman bath), remains of an enclosure possibly surrounding the ancient plane tree (Paus. 9. 10. 7) and of two fountains. Under the porch of this temple a circular structure may represent an earlier temple. The Mycenaean cemetery of Aulis has also been found and Mycenaean (?) walls on the hill above. T. J. D.; R. J. H.

AURELIA (*PW* 'Aurelius' 248), of the family of the Cottae, was the mother of Caesar (q.v. 1). She watched over the conduct of his wife Pompeia (q.v.) and detected Clodius (q.v. 1) at the Bona Dea ceremony. She died in 54 B.C. E. B.

AURELIANUS, LUCIUS DOMITIUS (*PW* 36) (c. A.D. 215–75), a man of humble origin from Dacia Ripensis, played a prominent part in the military plot that destroyed Gallienus (q.v., early A.D. 268). Appointed by Claudius II to the chief command of the cavalry, he served with distinction against the Goths, and, after the death of Claudius, was raised to the throne by the army in place of Quintillus (c. May 270).

Barbarian invasions claimed his first attention. He defeated the Vandals in Pannonia and then repulsed a dangerous attack on Italy by the Juthungi, pursuing them over the Danube. He then visited Rome, and surrounded the city with walls, to prevent a surprise attack by the barbarians (see WALL OF AURELIAN). He also disposed of three rivals in the provinces—Septimius, Urbanus, and Domitianus.

Zenobia (q.v.), ruling Palmyra for her young son, Vaballathus, had occupied Egypt and Asia Minor up to Bithynia. Coins were struck for Vaballathus as colleague of Aurelian, but he was determined to restore the unity of the Empire. He marched eastward, stopping on the way to repulse the Goths and Carpi on the Danube. Judging that the old province of Dacia was now a liability he withdrew the Roman troops and much of the population and formed a new province of Dacia, south of the Danube. The main Palmyrene army under Zabdas met him north of Antioch on the Orontes. Aurelian won victories here and at Emesa. The provincials were won over by his leniency, and Zenobia withdrew to Palmyra. Aurelian followed and soon broke down resistance. Zenobia was captured on her way to seek aid from Persia, and Palmyra surrendered.

Marching back westward, Aurelian defeated the Carpi on the Danube, but was recalled by the revolt of Palmyra (273). Striking without delay, Aurelian deposed the new king, Antiochus, and reduced Palmyra to a village. A wealthy merchant of Alexandria, Firmus, who tried to save Zenobia's cause, was soon crushed.

Aurelian now turned west and ended the Gallic Empire at Châlons, assisted by the desertion of the Emperor Tetricus (q.v.) himself (early 274). Tetricus and Zenobia headed the captives from all Aurelian's victories in a magnificent triumph.

Early in 275 Aurelian set out against Persia, but was murdered at Caenophrurium, near Byzantium, in a military plot, fostered by his secretary Eros. Some time passed before Tacitus was appointed to succeed him—

the army offering the choice to the Senate, the Senate shirking the dangerous responsibility.

Aurelian's tireless energy and brilliant military talents restored the unity of the Empire after forty years of disaster; he was rightly hailed as *restitutor orbis*. He was a ruthless disciplinarian to the soldiers and civilian officials. He attempted a reform of the now worthless coinage, issuing new money for the old. In 274 he instituted a State cult of *Sol invictus* and seems to have had the aim of making it the universal religion of the empire. At the time of his death, he was planning to renew the persecution of the Christians.

AURELIUS (1), MARCUS, Roman Emperor A.D. 161–80, was born in 121 and named *M. Annus* (PW 94) *Verus*. He was son of Annus Verus, a brother of Faustina the Elder (q.v.), and from a consular family of Spanish origin. Marcus' mother was Domitia Lucilla, whose family owned a large tile industry outside Rome, which, inherited by Marcus, passed into the *patrimonium Caesaris* (q.v.). He early gained the favour of Hadrian who justly nicknamed him *Verissimus*, made him a Syrian priest when only 8, betrothed him in 136 to the daughter of L. Aelius (q.v. 2), and supervised his education; the best teachers of rhetoric, grammar, philosophy, and law were employed to form his frank, serene, and sensitive character. With Aelius' son Lucius (— L. Verus, q.v.), he was adopted (as 'M. Aelius Aurelius Verus Caesar') by Antoninus Pius (q.v.) in 138. Quæstor in 139, and *cos. I ord.* with Pius 140, he was betrothed to Pius' daughter and his own cousin, Faustina the Younger (q.v.), whom he married in 145, as *cos. II*; a daughter's birth in 146 brought him also the *tribunica potestas* and a proconsular *imperium*. Now aged 25, a son-in-law of Pius, himself a father, and enjoying subordinate collegiality with Pius, Marcus held a position clearly excelling that of Lucius, who did not even become *cos. I* until 154. This student, frail and yet austere athletic, continued to live with Pius in close friendship and trust, ever loyal and deferential. About 146–7 he deserted rhetoric, taught by his faithful Fronto (q.v.), for Stoic philosophy, which inspired all his future life.

2. Succeeding, as M. Aurelius Antoninus, on 7 Mar. 161, Marcus immediately petitioned the Senate that L. Verus, his fellow-consul in that year (they were respectively *cos. III* and *cos. II*), should receive (as 'L. Aurelius Verus') the *tribunica potestas*, the full proconsular *imperium*, and the title *Augustus*, i.e. joint authority with himself. For the first time the Principate became collegiate (except for the office of *pontifex maximus*), and the tie was emphasized by Verus' betrothal to Marcus' daughter Lucilla (q.v.), commemorated by a fresh alimentary institution (see ALIMENTA). Revolt in Britain and Chattan aggression were settled; but in the East the Parthians, seizing Armenia, defeated two Roman armies and, in Mar. 162, Marcus sent Verus thither with a strong force. Indulgent and dilatory, Verus did not arrive until 163; but Statius Priscus soon recovered Armenia (163–4), and Avidius (q.v. 3) Cassius invaded Mesopotamia and made it a Roman protectorate (165–6). Returning, Verus' troops brought a pestilence which swept the world. About 166 German tribes poured across the upper and lower Danube and even invaded north Italy. Two new legions were hastily recruited; able generals and Marcus' insistence on a strong Dacia, now made a 'consular' province with two legions, saved a critical situation. Marcus and Verus reached Aquileia in 168; the invaders sought terms, and Italy was freed. After they returned to Rome in early

169, Verus' death of apoplexy relieved Marcus of an embarrassing partner.

3. Marcus now contemplated the permanent subjection of central and south-eastern Europe north of the Danube. In 169, after auctioning imperial treasures to replenish the treasury, and marrying the widowed Lucilla to Ti. Claudius (q.v. 15) Pompeianus, Marcus left Rome. From 170 to 174 he fought the Marcomanni and Quadi; and in 175 he successfully attacked the Sarmatian lazyges. 'Marcomannia' and 'Sarmatia' came near provincialization. But plans were shelved when Avidius Cassius revolted in 175; Marcus merely defined a neutral zone north of the Danube, and settled, in depopulated areas south of the river, semi-romanized tribesmen under obligation to defend the frontiers—the first step in the de-romanization of the frontier provinces. Though Cassius, proclaimed Emperor in Syria and Egypt, was soon murdered, Marcus set out in alarm for Syria. In 176 he visited Egypt (uneasy since a Delta revolt in 172), and returned, via Syria, to Rome, to celebrate a great triumph. When, in 177, German tribes again vexed Pannonia, Marcus raised his son Commodus (q.v.) to full collegiality as *Augustus*, consul, and holder of the *tribunica potestas* and full proconsular *imperium*. He left Commodus, married to the highly born Bruttia Crispina, as his representative in Rome while he himself went north to defeat the Marcomanni in 178. He was in a position to possess their territory with that of the Quadi and lazyges; but he died, swiftly and peacefully, on 17 Mar. 180, and Commodus soon abandoned the campaign. Marcus, sincerely mourned, was commemorated by a famous sculptured column still standing in Rome; equally well known is an equestrian statue in bronze, erected presumably during his lifetime and now on the Capitoline Hill.

4. Ironically, war thus dominated the philosopher's reign. To this is due much of the intensity of his *Meditations* (see below), compiled in solitude during his campaigns, and breathing high Stoic principles. But Stoicism endangered empire; 'self-sufficiency' did not encourage wide administrative experience based on personal contact. Marcus' faulty judgement in choosing Commodus as successor probably reflects fear lest the succession of another than his son might create dissension. Under Marcus the imperial bureaucracy increased because defence, administration, and economics were becoming more complex. Circuit judges (*iuridici*) were revived for Italy (see HADRIAN); *alimenta*, *fiscus*, *annona* (qq.v.), and even the care of minors, were controlled by permanent officials; registration of free-born children was compulsory; the various grades of officialdom received distinguishing titles. Marcus' obvious duties were faithfully discharged; jurisdiction claimed his full care; and Senate and Knights were honourably treated. But generally he was an improver rather than an innovator; foresight and imagination were lacking. Long wars and many largesses (seven, for a total of 850 *denarii* per head) emptied a treasury which auctions could not relieve; even the silver coin in circulation dropped sharply in volume. The plague of 166–7 meant a loss of population which perhaps was not fully recovered. As had Trajan and Hadrian, he felt it necessary to appoint commissioners (*curatores*; q.v.) for communities threatened with bankruptcy. The natural consequence was a loss of municipal initiative. Thus behind the façade of Antonine prosperity and meticulous but not foresighted government, economic stagnation and bureaucratic centralization prepared the way for the Severan monarchy and the crisis of the third century.

C. H. V. S.; M. H.

5. Marcus is one of the few rulers of empire whose writings have outlasted their practical achievements. The letters which as a young man he wrote (chiefly in Latin) to

his tutor Fronto (q.v.) are somewhat self-conscious and only occasionally revealing; it is on the twelve books of *Meditations* (τὰ εἰς ἑαυτὸν) that his fame rests. With the exception of the first book, in which he records his gratitude to his family, to his teachers, and to the gods, these aphorisms and reflections are arranged in no systematic order, and are often concise to the point of obscurity; they appear to have been transcribed—probably after his death, and with little or no editing—from the notebooks in which Marcus originally jotted them down for his private guidance. To this circumstance they owe their peculiar value as a personal document. Marcus had little to say to himself that had not been said before: a conservative thinker, he was resistant to the new ideas of his time and content for the most part to follow the Stoic tradition as it had been reshaped by Posidonius (q.v. 2). But he restated the old doctrines with a new intensity of religious and moral feeling, and in a lapidary style which is all his own; this has made his *Meditations* a breviary for contemplatives throughout the centuries.

AURELIUS (2) (PII) 46. ANTONINUS, MARCUS (A.D. 188–217), nicknamed CARACALLA (more correctly Caracallus). The elder son of Septimius Severus, he was created Caesar in A.D. 196 and Augustus in 198. His relations with his younger brother Geta, created Augustus in 200, always bad, worsened after the death of Septimius in 211. Their mother Julia Domna prevented a partition of the Empire, but in 212 Caracalla, the stronger character, procured the murder of Geta and became sole ruler.

In 213 he set out for Germany where the Alamanni are named for the first time as enemies of Rome. They were defeated, but the Cenni (? Chatti) were bought off with a subsidy. A strengthening of the wall along the *limes* of Upper Germany and Raetia may probably be attributed to Caracalla.

Caracalla's next objective was the East, where in his assumed role of a second Alexander he hoped for vast conquests. The year 214 was spent on the Danube fighting the Carpi and mobilizing an army, which included a phalanx of 16,000 equipped on the Macedonian model. In 215 the province of Osroene was enlarged to include Edessa, but an attack on Armenia failed. In 216 he invaded Media and spent the winter at Edessa preparing for a more intensive campaign, but was assassinated near Carrhae in April 217 (see MACRINUS).

Caracalla's chief claim to fame was his edict of 212 granting Roman citizenship to all communities inside

the Empire (see CITIZENSHIP, ROMAN); his motive in fact was to obtain increased revenue from the inheritance tax. His financial difficulties also brought about inflation through the issue of a new coin, the so-called *Antoninianus*. Caracalla's crude but vigorous personality was attractive to the army.

Herodian 4. 1–13; Dio Cassius 77–8, S. H. A.; W. Reusch, *Der Historische Wert der Caracalla-vita*, Ch. Sasse, *Die Constitutione Antoniniana* (1958). H. M. D. P.; B. H. W.

AURELIUS (3) VICTOR, SEXTUS, an African, governor of Pannonia Secunda, A.D. 361, and *praefectus urbi*, 389, published *Caesares*, probably after 360, from Augustus to Constantius (360). Based on Suetonius, this imperial history treated biographical material after a moralizing fashion, in the tradition of Sallust and Tacitus; the writer is heathen, interested in prodigies. The *Origo Gentis Romanae* and *De Viris Illustribus* (republican biography) associated with the *Caesares* in a *historia tripartita* are not by his hand.

Ed. F. Piclilmayr (1911); G. Puccioni, *Origo Gentis Romanae* (1958); C. G. Starr, *Am. Hist. Rev.* 1956, 574; A. Momigliano, *Secundo Contributo alla storia degli stud. class.* (1960), 145 ff. AUREOLUS, a soldier of humble origin from Dacia, became commander of the new cavalry corps based on Milan, helped Gallienus (q.v.) to overthrow Ingenuus in Pannonia (A.D. 258–9) and then, in 261, the Macriani, on the borders of Thrace. He also had a limited success in Gaul in 263 against Postumus. In 268, while Gallienus was fighting the Goths, Aureolus revolted at Milan. He was besieged there by Gallienus, and when the latter was assassinated, surrendered to Claudius, but his own soldiers killed him.

AURUM CORONARIUM. Gold crowns were offered to rulers and conquerors in the ancient Orient and in the Hellenistic world. Similar offerings were made from the early second century to Roman generals (e.g. Plut. *Aem. Paul.* 34, 5) and rapidly came to be exacted by them. A law of Caesar (59 B.C.) enacted that it should not be demanded until a triumph had been formally decreed. Under the Empire, *aurum coronarium* went to the Emperor alone and was exacted with increasing frequency, not only for triumphs (see *Res Gestae* 21; Pliny *HN* 33, 54) but on imperial accessions, anniversaries, adoptions, and so forth, and then became an irregular form of taxation on communities.

Th. Klauser, *Röm. Mitt.* 1944, 129, *RAC*, 4.v. F. G. B. M.

AURUNCI, neighbours of the Sidicini (q.v.) in the Latium-Campania (qq.v.) border region. Servius (*ad Aen.* 7. 727) identifies them with the Ausones (= Oscans, q.v.), the prehistoric inhabitants of much of southern Italy (called *Ausonia* after them). C. 313 B.C. Rome conquered and quickly assimilated the Aurunci. Principal towns: Aurunca (= the later Succsa), Minturnae, Sinuessa, and probably Cales.

E. T. S.

A(U)SCULUM SATRIANUM (modern *Ascoli Satriano*) was a town 18 miles south of Foggia in Apulia; little survives. Here Pyrrhus defeated the Romans in 279 B.C. Like Salapia (q.v.) it suffered for its revolt in the Social War. Opposite the town on the western bank of the Carapelle there are traces of two superimposed centuriation systems mentioned by an entry in the *Liber Coloniarum*.

CIL ix. 62 ff.

G. D. B. J.

AUSONIAN CULTURE, the name introduced in 1956 by L. B. Brca for the culture of the Late Bronze Age in the Aeolae Insulae (q.v.), is closely related to the

later Apennine Culture (q.v.) of the peninsula, with which the Islands had previously traded. The archaeological evidence coincides with the legend (Diod. Sic. 5. 7) that Liparus, son of the king of the Ausonians (see AURUNCI) in central Italy, founded a city on the island named after him. 'Ausonian I' is virtually confined to the Lipari acropolis. 'Ausonian II' is represented by villages and cremation cemeteries at Lipari and Milazzo (Mylae in north-east Sicily); the cemetery at Milazzo has much in common with Protovillanovan cemeteries on the mainland.

L. Bernabò Brea and M. Cavalier, *Bull. Palein. It.* 1956, 7 ff.; L. Bernabò Brea, *Sicily before the Greeks* (1966); R. Peroni, *Mem. Linc.* 1960, 1 ff. D. W. R. R.

AUSONIUS, DECIMUS MAGNUS (d. c. A.D. 395), was born at Bordeaux about the beginning of the fourth century. His studies were pursued at Bordeaux and Toulouse. For thirty years he taught in his native town, first as *grammaticus*, then as *rhetor*. Distinguished enough to attract the attention of the court, he was called by Valentinian to Trèves to be tutor to Gratian. He was on the staff of father and son in the campaigns against the Alamanni (368-9). After holding minor positions he became governor of Gaul, and later of other provinces. Finally, in 379, he was made consul. After the murder of Gratian (383) he returned to his early home, and added to the number of his poems, enjoying epistolary intercourse with various eminent men.

His numerous poems, written in various metres (hexameter, elegiac, hendecasyllabic, etc.), are of considerable interest, in both subject-matter and style. There are over a hundred epigrams, some of which are in Greek and others translated from Greek. There are twenty-five letters. His correspondence with Paulinus (q.v.) of Nola is the most notable part of these. The *Ephemeris* includes many poems in various metres, dealing with daily life. The *Parentalia* is a collection of short poems in memory of deceased relatives of the poet. The *Commemoratio Professorum Burdigalensium* is of interest for the history of education. The *Ordo Nobilium Urbium* describes twenty notable cities of the Roman world. This account by no means exhausts the list of the minor poems, throughout which the author's minute knowledge of Virgil is apparent and his Christian faith is not obtruded. See also (FENTO) (LATIN).

His most important poem is the *Mosella* which still attracts readers. It is a rhetorically fashioned *laudatio* in 483 hexameters, and describes in considerable detail the various fish to be found in the river as well as some of the fine buildings on the banks and other features, the whole constituting a series of episodes, composed, like the rest of Ausonius' verse, according to rule.

Glover, *Life and Letters in the Fourth Century* (1901); E. K. Rand, 'Decimus Magnus Ausonius', *Proc. Class. Ass.*, 1927; M. J. Hynde, *Prolegomena to an edition of the works of Ausonius* (U.S.A. 1916); S. Prete, *Ricerche sulla storia del testo di Ausonio, Testi e testi*, 7 (1960); M. K. Hopkins, *CQ* 1961, 239 ff. A. S.

AUSPICIUM, a term used by the Romans for certain types of divination, particularly from birds (*avis, specio*), designed to ascertain the pleasure or displeasure of the gods towards matters in hand. Despite ancient and modern attempts at definition, *auspicia* are hardly to be differentiated from *auguria*, and are not limited to signs derived from the number, position, flight, cries, and feeding of birds—particularly the sacred chickens, for which see AUGURES—but extend to other animals (Paul. ex Fest. 244 M. s.v. *pedestria auspicia*) or to inanimate phenomena. Festus and Paulus (261-262 M.), record five types: *ex caelo*, *ex avibus*, *ex tripudiis*, *ex quadripedibus*,

ex diris. Private auspices were early largely abandoned, save for weddings (Cic. *Div.* 1. 28 and other references, Latte, *RR* 264), but public ones, taken by magistrates possessing the *ius auspiciorum* (or *specio*) were important in civil and military life, and were retained by Cicero in *Leg.* 3. 10. They appear at elections, inauguration into office, entrance into a province, etc., and in the conduct of wars the phrase *ductu auspicioque* frequently recurs (*Thes. Ling. Lat.* v. 2171, 8-27). Since ex-officials, however, and later, imperial legates lacked the *ius auspiciorum* (Cic. *Nat. D.* 2. 9, *Div.* 2. 76-7), even public auspices eventually fell into neglect, and at times pains were taken to avoid observing signs divinely vouchsafed (Cic. *Div.* 2. 77-8).

Observation was usually made from a *tabernaculum*, by a professional attendant of the magistrate (Cic. *Div.* 2. 71-2 preserves the ritual in the case of the sacred chickens), and *auspicia minora* (of the lesser magistrates) were sometimes superseded by *auspicia maiora* of consuls, praetors, or censors (Gell. 13. 15. 4). *Vitium*, a ritual defect or oversight, often nullified auspices, but *perennia*, or rites at the crossing of streams (Cic. *Div.* 2. 77, *Serv. Aen.* 9. 24) provided against one type of *vitium*. Recrossing the *pomerium* (the bound between the civil and military spheres) required the taking of new auspices in order to avoid *vitium*, a famous instance being narrated by Cic. *Div.* 1. 33. For the military *auspicia ex acuminibus* see especially Cic. *Div.* 2. 77 and Pease ad loc.

P. Catalano, *Contributi allo studio del diritto augurale* (1960) For the subject in general and for bibliography, see DIVINATION, LEX, 1965, ALIIA ET FULIA. A. S. P.

AUTOCRATES, Athenian comic poet, ἀρχαῖος, according to the *Suda*, which adds 'he wrote also many tragedies'. Τυμπαρισταί (or Τυμπαριότρας, Hsch.) is the only title we have.

FCG i. 270, CAF i. 806; FAG i. 942 ff.

K. J. D.

AUTOLYCUS (1), in mythology, maternal grandfather of Odysseus. He 'surpassed all men in thievery and (ambiguous) swearing', by favour of Hermes (whose son he is in later accounts), *Od.* 19. 394 ff.; one of his thefts, *Il.* 10. 267; later stories in von Sybel in Roscher's *Lexikon*, s.v. H. J. R.

AUTOLYCUS (2) of Pitane, astronomer (fl. 2nd half of 4th c. B.C.), author of two works on elementary spherical astronomy, the earliest Greek mathematical treatises that have come down to us entire: (1) *On the Moving Sphere* (περί κινουμένης σφαίρας) treats of the poles and principal circles of the sphere. Many of its propositions are used in the *Phaenomena* of Euclid (q.v.). (2) *On Risings and Settings* (περί ἀνατολῶν καὶ δύσεων), dealing with risings, settings, and visibility periods of stars, is in two books, which are in fact two versions of the same work. In a lost work (Simplicius *de Caelo*, 504 f.) Autolycus criticized the system of concentric spheres of Eudoxus (q.v.) on the ground that it did not account for the differences in the apparent sizes of some heavenly bodies at different times, and attempted to remedy this.

Critical text by J. Mogenet (Louvain, 1950). See 22 ff. of this for history of the text and editions, and 5 ff. for Autolycus' life and works. See also Pappus b. 31 ff.

GERMAN TRANSLATION. A. Czwalina, *Ostwalds Klassiker* nr. 232 (1911).

COMMENT P. Tannery, *Mém. Scient.* ii. 225 ff. On the two versions of *Risings and Settings* see Olaf Schmidt in *Transactions of the 11th skandinaviske Matematikerkongress i Trondheim 22-25 August 1959* (1952), 202 ff. G. J. T.

AUTOMEDON, in mythology, Achilles' charioteer, son of Diore (Il. 17. 429 and often); hence by metonymy, any charioteer, as Juvenal 1. 61.

AUTONOMY, one of the leading ideas of the Greek *polis* (q.v.), meant not merely the right of self-government, but the right and the possibility of using its own laws and constitution. Therefore in the Peloponnesian War Sparta pretended to be fighting for the autonomy of the Greek States, which in the Athenian Empire had been forced to establish democratic governments. Autonomy was mostly connected with, but not clearly distinguished from, the idea of freedom (*eleutheria*). Ideally, it also demanded a large degree of economic self-sufficiency (*autarkeia*). Though mainly concerning the interior life of the *polis*, and responsible for the intensive cultural life of every single *polis*, autonomy was an instrument of inter-Hellenic policy, and the chief reason for the failure of all attempts to create political unity among the Greeks. As Persian and Macedonian supremacy over Greek towns was mainly based on local tyrants or oligarchies, autonomy thereafter implied a free democratic constitution. Under the Hellenistic kings, however, the autonomy of the Greek States was often very precarious, and sometimes it did not exclude even a royal garrison, compulsory taxation, or actual supervision by a king's official.

AUTRONIUS (PW 7) PAETUS, **PUBLIUS**, was elected consul with P. Sulla (q.v. 2) for 65 B.C. Both were convicted of *ambitus* and the consulships went to their competitors. Involved in the 'First Catilinarian Conspiracy' (see **CATILINE**) of 66/65, then in that of 63, he is said to have plotted Cicero's death, was convicted *de vi* in 62 and went into exile in Epirus. E. H.

AUXESIA and **DAMIA**, obscure goddesses of fertility (Hdt. 5. 82. 2 ff.), worshipped at Epidaurus and Aegina, with ritual abuse (ibid. 83. 4); at Troezen, with ritual stone-throwing (*Λιθοβολία*, Paus. 2. 32. 2), where the local legend made them Cretan virgins stoned in a disturbance. See **IONA DEA**. H. J. R.

AUXILIA. During the last two centuries of the Republic Rome made good her deficiency in cavalry and light-armed troops with contingents raised outside Italy. These *auxilia* greatly increased in number during the civil wars and formed the nucleus of the permanent auxiliary army established by Augustus (see **MERCENARIES**). This force was recruited from provincials who had not yet received the franchise. Thus in the Julio-Claudian period Gallia Comata and Hispania Tarraconensis provided a large proportion of *auxilia*, while Narbonensis and Baetica, two more romanized provinces, were areas for legionary recruiting. Service was sometimes, as with the Batavi, accepted in lieu of tribute. As their numbers came to be kept up by local recruiting, the *auxilia* gradually lost their native character, and the titles borne by the units ceased to indicate the origin of their soldiers. Exception must be made of the Oriental cohorts of archers, which were maintained at strength by drafts from their home countries.

The auxiliary units generally bore titles which indicated the tribe or district from which they were raised (*Alpinorum*, *Alpina*, *Lusitanorum*): a few early units are named after their founders (*ala Siliana* after C. Silius). In addition they frequently bore honorific titles (e.g. *pia*, *fideles*, *Augusta*), and descriptive ones (*miliaria*, *equitata*, *sagittariorum*, etc.). They were numbered, but not consecutively, a fresh series starting when new regiments were raised some time after the original levy. This inconvenient system renders difficult any assessment of the total strength of the *auxilia*. Probably

it ranged from 130,000 under Augustus to approximately 225,000 in the second century.

The *auxilia* comprised both cavalry and infantry, the former organized in *alae*, the latter in *cohortes*, either 1,000 or 500 strong, while there were some mixed units (*cohortes equitatae*). They were commanded generally by *praefecti*, in some cases by *tribuni*, who were of equestrian rank and mostly in their thirties when first appointed. Under them were centurions and decurions.

The pay of the auxiliary soldier was considerably lower than that of the legionary, ranging from as little as one-third of legionary pay for the *pedites* to two-thirds for the *alares* (see **STIPENDIUM**). After twenty-five years' service the auxiliary soldier received the franchise for himself and his descendants (see **DIPLOMA**).

During the second century the *auxilia* gradually became assimilated to the legions and after Caracalla's edict their distinctive character was largely lost. In the barbarian invasions of the third century many units were destroyed, and in the Constantinian reorganization *alae* and *cohortes* are regiments of the *limitanei*. The term *auxilia* remained as the designation of certain infantry units of the mobile field army and of the *limitanei*. See **ALAE**, **COHORTES**, **LIMITANEI**, **PALATINI**, **PRAEFECTUS**.

Kraft, *Alten und Kohorten an Rhein und Donau* (1951); Jones, *Later Rom. Emp.* H. M. D. P.; G. R. W.

AUXIMUM, modern *Osimo* with well-preserved ancient walls, hill-town of Picenum, 12 miles from the Adriatic. Becoming a Roman colony (128 B.C.?), it developed into a flourishing place, which supported Caesar against Pompey. Much later it and four other cities constituted the Pentapolis under the Ravenna Exarchate.

E. T. Salmon, *Athenaeum* 1963, 3 ff.

E. T. S.

AVENTICUM, chief city of the Helvetii (q.v.), modern *Avenches*. Under Vespasian (c. A.D. 73/4) a colony of veterans was founded there (Colonia Pia Flavia Constans Emerita Helvetiorum Foederata); the relationship of *coloni* and *incolae* is not very clear. It was sacked by the Alamanni (259/60). Walls (of the Flavian colony), east gate, theatre, forum, amphitheatre, baths, and private houses survive.

F. Stahelin, *Die Schweiz in röm. Zeit* (1948); G. T. Schwartz, *Die Kaiserstadt Aventicum* (1964). H. H. S.

AVENTINE, an abrupt plateau overlooking the Tiber and separated from the other hills of Rome by the Murcia valley. It formed *regio XIII* of Rome, while an eastward lobe (*regio XII, Piscina publica*) was known as *Aventinus* to Dionysius, Varro, and Festus, and later as *Aventinus minor*, though perhaps not originally so called (Cic. *Div.* 1. 107, quoting Ennius). The hill was *ager publicus* given to the *plebs* for settlement in 456 B.C. It already held two pre-republican temples, to Diana, patroness of a Latin league, and to Iuna; also the Loretum, reputed a regal tomb, and the *armilustrum* (where arms were ritually purified). These connexions are with Latium rather than Rome, and the hill lay until A.D. 49 outside the *pomerium* (q.v.). Other early temples were those of Juno Regina (396-392 B.C.) and Jupiter Libertas (238 B.C.), the latter housing Varro's library presented by Asinius Pollio. Here also dwelt Ennius (q.v.), in the plebeian quarter whose early and thriving prosperity is represented by the *clivus Publicius*, a street development of 238 B.C. I. A. R.

AVERNUS, a deep lake near Puteoli. Its unusual name (fancifully derived from *ā-ōpus*), its reputed immense depth, and its situation amid gloomy-looking woods and

mephitic exhalations inspired the belief that it led to the underworld (Strabo 5. 244; Verg. *Aen.* 6. 237 f.; Lucr. 6. 740 f.; Livy 24. 12). Agrippa temporarily remedied its lack of a natural outlet. E. T. S.

AVIANUS or **AVIENUS** (fl. c. A.D. 400), Roman fabulist; he dedicated his forty-two fables in elegiac metre to Macrobius (q.v.) Theodosius, who probably used him as a speaker in his *Saturnalia*. Nothing more is known of his life. His chief source is the Greek fabulist, Babrius (q.v.). With few exceptions, his fables are expanded paraphrases of their Babrian prototypes; and the exceptions are probably based on lost fables of Babrius. Avianus' style is picturesque; he expands his models by elaborating the descriptive element; but his effort to introduce Virgilian and Ovidian phrases produces a strained and sometimes mock-heroic effect. Mingled with classical echoes, there are frequent instances of a degenerate Latin (R. Ellis ed. xxxvi ff.). The metre is correctly Ovidian except for a few lapses showing the decline of metrical strictness in Avianus' age. Paraphrases, scholia, and quotations show that Avianus was popular in medieval schools. Stronger evidence is afforded by the *promythia* and *epimythia* attached to some of the fables to point a moral. Most of these were composed in medieval times; but some *epimythia* may come from Avianus himself.

TEXTS. E. Baehrens *PLM* v; A. Guaglianone (*Paravia* 1958), id. Ital. trans. in separate work (1958). Text with commentary, R. Ellis (1887). Text with translation, Buff. *Minor Lat. Texts*, (French) P. Constant (Garnier 1938) with Phaedrus, Publilius Syrus, and *Dactula Catonius*. Schanz-Hoebius § 1019. Alan Cameron, 'Macrobius, Avianus, and Avianus', *CQ* 1967, 385 ff. A. M. D.

AVIDIUS (1, *PIV* 8) **QUIETUS**, **TITUS**, from Faventia in Cisalpine, legionary legate not later than A.D. 82, proconsul of Achaia under Domitian, *cos. suff.* in 93, and governor of Britain in 98. He was a friend of Thrasea Paetus, Pliny the Younger, and of Plutarch who dedicated a book to him. His son was *cos. suff.* in 111. H. H. S.

AVIDIUS (2, *PW* 6) **NIGRINUS**, **GAIVS**, was probably son of an Avidius Nigrinus, proconsul of Achaia under Domitian and brother of (1) above. Avidius himself was tribune c. A.D. 105 and *cos. suff.* in 110. He then became governor of Dacia (rather than Upper Moesia; *ILS* 2417). He served in Achaia as imperial legate towards the end of Trajan's reign (*SIG*³ 827), either as actual governor, if Achaia (like Bithynia; see *PLINY* 2) had temporarily been transferred from the Senate to the Emperor, or as a special arbitrator between cities (see *MAXIMUS* 1). Rich, influential, and well connected (he was father-in-law of L. Aelius, q.v. 2), he was thought to be Hadrian's selected successor; but he became involved in the conspiracy of the four 'consulars' against Hadrian (q.v.) in 118, and was executed by senatorial order.

S.H.A. *Had.*; Dio Cassius, bk. 69. Lambrechts, *Sénat* no. 22; R. Syme, *Athenaeum* 1957, 310 ff., id., *Tacitus*, see index. C. H. V. S.; M. H.

AVIDIUS (3, *PW* 1) **CASSIUS**, **GAIUS** (d. A.D. 175), was son of the equestrian C. Avidius Heliodorus, a rhetorician of Cyrrhus in Syria and an official under Hadrian and Antoninus Pius. Avidius became *cos. suff.* under Marcus Aurelius, between 161 and 168 (*CIL* xvi, 127) and afterwards governor of Syria. He drilled the Syrian legions into efficiency, thrust east against Parthia, subdued Mesopotamia, and captured Seleucia and Ctesiphon (165-6). He was subsequently given supreme command over all the East, including Egypt, where he quelled a revolt in 172. In 175, apparently because Marcus was falsely reported to have died on the Danube, and reputedly with the encouragement of Faustina the

Younger (q.v.), Avidius had himself saluted as Emperor and for three months controlled Egypt and all the eastern provinces except Cappadocia and Bithynia. But Marcus' return to Rome meant the collapse of the revolt. Avidius himself was murdered by a centurion. Unrecognized by the Senate, he had issued no coinage. Marcus, visiting the East to restore its loyalty, displayed clemency to Avidius' family and supporters.

AVIEN(I)US (an inscription from Bulla Regia reveals his name as *Postumius Rufius Festus qui et Avienius*; see Alan Cameron, *CQ* 1967, 392 ff.) (4th c. A.D.), Latin writer to whom are ascribed: (i) *Descriptio Orbis Terrae* (title varies), 1,394 extant hexameters (material based, sometimes closely, but with omissions, additions, and amplifications, on Dionysius (q.v. 9) Periegetes) describing noteworthy things in physical and political geography, and reproducing in vigorous style much ancient ignorance which learned contemporaries could have corrected; (ii) *Ora Maritima*, 703 extant iambs (from a much larger work?) mostly about the coast from Massilia to Gades, with little order and much irrelevance, full of ancient nomenclature and ignorance, but giving interesting material from early records of Greek and Carthaginian voyages in the Atlantic c. 500 B.C.; (iii) *Aratea Phaenomena* (1,325 extant hexameters) and *Aratea Prognostica* (552 hexameters) based on Aratus, sometimes closely, often expanding, attractive in style; (iv) three short works (two personal, one on the Sirens and Ulysses). Avienius, born of a distinguished old family the Rufii Festi of Volsinii, held high office.

Ed. A. Holder, *Rufi Festi Avian Carmine*, (1965). *Descriptio Orbis Terrae* P. van de Woestijne, *Ant. Class.* 1954, 29 ff., 1955, 127 ff.; 1958, 175 ff., and *Rev. Belge de Philologie* 1955, 74 ff., 1957, 48 ff., 1958, 51 ff.; 1959, 52 ff., *Class. et Méd.* 1956, 173 ff.; id. *De vroegste uitgaven van Avienus' Descrip. Orb. Terr.* (1959) and in *Hammages à L. Herrmann* (1960), 757, and critical edition 1961.

Ora Maritima: A. Schulten (1922, 2nd ed. 1955); A. Berthelot (1934), S. Lambino, *Bull. des Études portugaises* 1956, N. Lambrogna, *Rev. di Studi Liguri* 1949. Cf. also L. F. Vidal, *Estudios geográficos* 1949; and (on the *Aratea*) A. Vigevani, *Annali della Scuola Norm. Superiore di Pisa* 1947, 49 ff. E. H. W.

AVITUS, **ALCIMUS ECDICIUS**, bishop of Vienne (c. A.D. 490-518), a vigorous opponent of Arianism, author of sermons, letters, a biblical epic in five books, and a short poem on chastity.

EDITION. Peiper, *MGI* (1883).

AXIONICUS, Middle Comedy poet, perhaps late in the period (fr. 2 mentions Gryllis, a parasite of one of Alexander's generals). In *Φιλευριπιδος*, 'I, lover of Euripides', fr. 4 is modelled on a tragic monody.

FCG iii. 530 ff.; CAF ii. 411 ff.

AXONES, the tablets of laws, in the Prytaneum at Athens, revolving on a vertical axis. Draco's and Solon's laws were written on them, and they were quoted by the number of the *axon*; the highest known number is sixteen (Plut. *Sol.* 23. 4). The axones were originally of wood, but copies were published on similar pillars of stone. Whether the stone slabs were called *κύβεις* seems doubtful; it seems impossible clearly to distinguish between the two names, even to decide which is the earlier one. A fragment found at Chios shows that similar revolving slabs were used elsewhere too.

Cratinus, fr. 276. K. Holland, *AJArch.* 1941, 346 f.; Harrison, *CQ* 1961, 5 f.; E. Ruichenbusch, *Historia Einzelschriften* 9 (1966), 23 ff. V. E.

AXUMIS or **AUXUME** (modern *Axum*), a city in the Tigré province of Abyssinia. In the first century A.D. it

became the royal seat of the Habashat or Axumites, who, through their port Adulis, traded busily with Arabians, Greeks, Romans, and Indians, eclipsing Meroë. In the second century A.D. the Axumites were powerful in Sornaliland and possibly in Arabia also, controlling much of the traffic to India from that time until far in the Byzantine era. Fragments of their history are known from inscriptions and classical references. Some of the

kings were Christians, and important relations were maintained with the West. The summit of Axumite influence was reached in the fourth and fifth centuries A.D.

Hodge, *Hist. of Ethiopia* (1928), i; Warrington, *Indian Commerce*, index, 'Axumites' (for commerce); J. Bent, *The Sacred City of the Ethiopians* (1893), appendix by D. Müller (inscriptions); J. I. Miller, *The Spice Trade of the Roman Empire* (1969). E. H. W.

B

BABRIUS, VALERIUS (?), probably a hellenized Roman, who composed not later than the second century A.D. (POxy. 10, n. 1249) *μυθίαμβου Αισώπειων*, being versions in choliambic metre of existing fables, together with some original additions. The work may have been originally in ten books (*Suda*); in the existing MS. tradition, and in that known to Avianus at the end of the fourth century, it consists of two, of which the second is incomplete. The metre, in which the stress accent begins to play a part, and the language, which is that of everyday life, are well adapted to the subject-matter. The collection enjoyed great popularity, and was paraphrased in prose and verse in the Middle Ages.

BABYLON (1) (modern *Bābil*), principal city of the southern part of Mesopotamia (q.v.). Situated at a natural centre of trade-routes, it was one of the greatest cities of the ancient world. Contact with the Greek world of the III-II B period, as shown by cylinder seals discovered at Thebes, was probably made indirectly through Syria or Egypt. The city attained its highest prosperity under the Chaldean kings of the New Babylonian Empire (626-539 B.C.). The history thereafter is one of gradual decline. The Persians, who conquered it in 539 B.C., made it the chief city of the Babylonian satrapy; it was the winter residence of the Great King. As a result of rebellions the walls and public buildings were at least partially demolished, but enough was left to impress Herodotus when he visited it about 450 B.C. His description (I. 178 ff.) is fairly accurate for what he saw, but what he was told is much exaggerated. Alexander entered Babylon without resistance in 331 B.C. His project of rebuilding it and making it the capital of his Empire was frustrated by his death there in 323 B.C.

In Hellenistic times Babylon was still a prosperous city with a considerable Greek population. A frequent bone of contention among Alexander's successors, it was more than once sacked. It suffered still more from the foundation of Seleucia (q.v. 1) as the new commercial centre of Babylonia (Pliny, *HN* 6. 122). In the Parthian period Babylon was still sufficiently important to have its own city-governor, but it declined rapidly; Trajan in A.D. 116 found little but ruins. Many of the public buildings, temples, palaces, etc., and the city walls have been excavated.

(2) Fortified town at the head of the Delta of Egypt; the headquarters of a Roman legion under the early Empire. M. S. D.; J. G. McQ.

BABYLONIA, the more southerly of the two ancient kingdoms of Mesopotamia. Its geographical limits were not clearly defined. Ptolemy (5. 20) says that it was bounded by Mesopotamia, Arabian desert, the Persian Gulf, and the river Tigris. It was sometimes included in the wider designation Assyria (q.v.).

In 538 B.C. the New Babylonian Empire fell before the Persians, and the country became an Achaemenid satrapy. Conquered by Alexander and intended as the centre of his empire, it was disputed among the *Diadochi*; Seleucus I Nicator founded Seleucia (q.v. 1) to replace Babylon as the capital city. When the eastern portion of the Seleucid empire passed to the Parthians, Babylonia became an important commercial and administrative centre; Ctesiphon, the Parthian residence, became the capital of the Sassanids.

Through all vicissitudes, until the Sassanian epoch, Babylonia retained its ancient civilization, the religion, cuneiform writing, and economic organization which it had inherited from Sumer. An attempt of Antiochus Epiphanes to hellenize it failed. In the Greek cities the native element was at first segregated, but most of the numerous Greek residents became orientalized, as the numerous business documents from Babylon and Orchoi (*Uruk*) testify. Babylonia had a considerable influence on Greece in the fields of astrology, astronomy, mensuration, and even perhaps literature (e.g. the *Epic of Gilgamesh* on the descriptions of Heracles). It also played an important part, politically and commercially, as the bridge between East and West. It was far more extensively cultivated than today, and was proverbially fertile (Hdt. 1. 193; Strabo 16. 742).

BACAUDAE, less correctly *Bagaudae*, a name of Celtic origin, but uncertain meaning, applied to insurgent peasants in Gaul and northern Spain. Its first known application was to the followers of Aelius and Amandus, suppressed in Gaul by Maximian in A.D. 285. In the early and middle fifth century prolonged revolts of this type occurred in Armorica and there were frequent outbreaks in north-east Spain. The revolts were perhaps connected with attempts to tie the peasants to the land, thus increasing their subjection to the landlords.

BACCHANALIA, the Latin name of the Dionysiac orgia. They are especially known because of the measures taken by the Roman Senate to repress them and an accompanying crime-wave in 186 B.C.: the senatorial decree is preserved (*CIL* i. 196; *ILS* 18), and Livy (39. 8-18) gives a long account of the episode. They

were widespread in southern Italy. The first trace is an inscription of the fifth century B.C. from Cumae forbidding those who were not initiated into the Bacchic mysteries to be buried in a certain place (figured in Cumont, *Rel. or.* 197). Evidently they came from Campania to Rome, bringing much disorder under the cover of religion. A connexion may exist between the decree mentioned and a regulation of the Bacchic mysteries in Egypt by Ptolemy IV at the end of the third century B.C. (Cichorius, *Röm. Stud.* 21). In the first centuries A.D. the Dionysiac mysteries were very popular, as is proved e.g. by the many sarcophagi with Dionysiac motifs and the paintings in the Villa Item at Pompeii (their interpretation is highly controversial). Very important is the inscription of Agrippinilla (early second century A.D.), enumerating the officials of a Bacchic *thiasus*. Cumont believes that oriental elements were dominant, but it seems that these mysteries were fundamentally Greek.

BACCHEIUS (*Βακχέιος*) **GERON**, author of an *Εισαγωγή τέχνης μουσικῆς*, lived in the time of Constantine (A.D. 274–337). The work is in the form of question and answer; while following in the main the tenets of Aristoxenus, it borrows freely from other schools of musical theory.

Ed. C. Jan, *Musici Scriptores Graeci* (1895), 283–316. W. D. R.

BACCHIADAЕ, a clan of Heraclid descent so named after Bacchis, a king of Corinth, held a monopoly of political power at Corinth for a century or so before the rise of Cypselus (q.v.) c. 657 B.C. They laid the foundations of Corinth's ascendancy in naval warfare, maritime commerce, literature (see LUMELUS), and art, especially in pottery. The clan, consisting of some two hundred families, practised endogamy and retained its identity long after its expulsion by the tyrants. Members of the clan went to Illyria, whence they founded the Lyncestian royal family, and to Tarquinii, where they influenced Etruscan art.

N. G. L. H.

BACCHYLIDES (fl. 5th c. B.C.), lyric poet, of Iulis in Ceos, son of Midylus (*EM* 582, 20) and nephew of Simonides (Strabo 486, *Suda* s.v. *Βακχυλίδης*). He may have been born about 524–521 (*Chron. Pasch.* 304. 6), though Eusebius–Jerome gives his *floruit* both in 467 B.C. and in 431 B.C. Remains of fifteen epinician odes and six dithyrambs found in 1896 at Al-Kussiyah and supplemented by later finds may be arranged tentatively in a chronological order. He seems to have followed the fortunes of his uncle Simonides and to have been employed by the same patrons, a fact which sometimes brought him into competition with Pindar, who was almost his contemporary. His first activities may have been in Thessaly (fr. 15, Ode 14) and Macedonia, where he wrote his Encomium for Alexander son of Amyntas (fr. 20 B). About 485 B.C. he wrote Ode 13 for Pytheas of Aegina, and Ode 12 may belong to the same period. Again like his uncle, he wrote dithyrambs for the competitions at Athens, notably Ode 19, and Ode 18, which is unique in being a dialogue between the leader of the chorus, who takes the part of Aegeus, and the remainder,

who represent his followers. It is not clear whether this is a survival of an older form of dithyramb or has been influenced by the technique of Attic drama. Ode 17, which may belong to the early years of the Delian League, is really a paean sung by a Cean choir at Delos. The date of Ode 10, written for an Athenian victor in the Isthmian Games, is not known. About 476 B.C. Bacchylides accompanied Simonides to Sicily as the guest of Hieron (Acl. VII 4. 15) after writing Ode 5 for Hieron's victory in the horse-race at Olympia, an event celebrated by Pindar in *Ol.* 1. In Sicily he seems to have incurred the dislike of Pindar, who is thought to make disparaging references to him in *Ol.* 2. 86–8, *Pyth.* 2. 72–3, *Nem.* 3. 80–2. It is not known how long he stayed in Sicily, but his connexion with it was maintained with Ode 4 for Hieron's victory in the Pythian horse-race of 470 B.C., for which Pindar wrote *Pyth.* 1, and Ode 3 for the Olympian chariot-victory of 468 B.C., when Pindar may have written *Pyth.* 2. To his later years belong Odes 6 and 7 for Lachon of Ceos in 452. He is said to have been exiled to the Peloponnese (Plut. *De exil.* 14), and in this period he may have written Ode 9 for Automedes of Phlius, and the dithyramb *Idas* for the Lacedaemonians (20). The date of his death is not known.

Bacchylides also wrote hymns (frs. 1–2), paeans, of which fr. 4 contains a fine eulogy of peace, processional songs (frs. 11–13), maiden-songs (Plut. *De mus.* 17), hyporchemata (frs. 14–16), encomia, like that to Alexander (fr. 20 B) and to Hieron (fr. 20 C). His reputation has suffered by the comparisons with Pindar, which are at least as old as 'Longinus' (*De Subl.* 33). His gifts are of a different kind: a brilliant clarity and sense of narrative, a real love for the games which he describes, an absence of didactic fervour, a choice command of epithets, and occasional moments of magical beauty.

BACIS. Although used by Herodotus (8. 20) as if a proper name, later references make it clear that Bacis was the generic title of a class of inspired prophets, characteristic of the growth of ecstatic religion in the seventh and sixth centuries B.C.

E. Rohde, *Psyche* (Engl. Transl. 1925), 292 ff.

BACTRIA (old Iranian name, Zariaspa; roughly part of northern Afghanistan, southern Uzbekistan, and Tajikistan) received its name from the Bactrus, an affluent of the Oxus. This country in the middle Oxus Valley, with its chief city Bactra, was known to Greeks as the Jewel of Iran on account of its fertility. Traditionally the home of Zoroaster and the Zend Avesta, it formed an Iranian satrapy under the Achaemenids and fought heroically against Alexander. Seleucus exercised his authority over it only by force of arms; and yet not long after his death, it revolted under the leadership of Diodotus I, a Bactrian Greek. The newly founded kingdom of the Bactrian Greeks (Indo-Greeks, Yavanas), which withstood the challenge of Antiochus III, grew into a strong power, the more important kings, out of about forty, being Euthydemus I (235–200 B.C.), Demetrius I (200–185 B.C.) and II (180–165 B.C.), Eucratides I (171–155 B.C.), and Menander (155–130 B.C.). At the height of their power they ruled over almost all Afghanistan, parts of Soviet Central Asia, and a considerable area of what is now known as Western Pakistan. They also led an expedition into the Ganges valley but

failed to annex any part of it. Among the later kings Heliocles I and Hermaeus are better known and their coin types were imitated by the Scythian and other successors. The Bactrian kingdom was known to the Chinese as Ta-hsia and Chang Ch'ien visited its northern part in 129-128 B.C., when it was under the possession of the Yueh-Chih, who crossed the Oxus and occupied the southern parts of Bactria in c. 100 B.C. and divided in among five *hsi-hou*, one of which was Kuei-shuang (Kushanas). About the beginning of the Christian era Ch'iu-ch'ueh (Kujula Kadphises), *hsi-hou* of Kuei-shuang became the master of the whole of Ta-hsia. His son Yen-kao-chen (Wima Kadphises) and the successor Kushan kings, most important among whom were Kanishka, Huvishka, and Vasudeva, ruled over a major part of northern India. Under the Kushanas the country became a centre of Buddhism. Bactria was the meeting-place not only for the overland trade between the western world on the one hand and India and China on the other but also for the cross-currents of religious and artistic ideas during several centuries.

BAEBIUS (PW 44) TAMPHILUS, MARCUS, praetor in 102 B.C., with an advance guard covered the Roman landing in Greece against Antiochus. Consul in 181, he transported 40,000 mountain Ligurians to Samnium (*Lugures Corneliani et Baebiani, ILS* 6509). To him are attributed the Baebian measure on the number of praetorships (Liv. 40. 44. 2) and the *Lex Baebia de ambitu* (Liv. 40. 19. 11).

Sculthard, *Rom. Pol.* 123, 171 ff.

A. H. McD.

BAETICA, the heart of the province originally (197 B.C.) called Hispania Ulterior. As the territory occupied by the Romans increased, an administrative division between Hither and Further Spain was formed beginning at the Mediterranean south of Carthago Nova (*Carta-gena*) and running west-north-west to the Anas (*Guadiana*) at Lacimurga (*Villavieja*); thence northward to the Tagus (*Tajo*), beyond which the west was unconquered or unorganized. In 27 B.C. the old settled province east and south of the Anas was assigned to the Senate with the name Hispania Ulterior Baetica, or simply Baetica; Augustus took the rest of Spain (see *LUSITANIA*). Baetica was divided for judicial purposes into four *conventus* centred at Gades, Corduba, Astigi, Hispalis (Pliny *HN* 3. 7), comprising more than 175 town communities. By the time of Augustus' death, many of these towns had the *us Latii* (q.v.), and spoke Latin, not Iberian (Strabo 3. 151). This Latinized culture developed chiefly in the rich Baetis (*Guadalquivir*) valley from which wine, oil, wheat, honey, sheep, fish, copper, lead, cinnabar, and silver were exported to Rome. The wealth of the country attracted pirate-bandits from Africa (A.D. 178), while the Vandals tarried there long enough to attach their name to the country (*Andalusia*).

R. Thouvenot, *Essai sur la province romaine de Bétique* (1940).

J. J. VAN N.; M. I. H.

BAIAE, reputedly named after Baios, Odysseus' companion, was a dependency, originally perhaps the port, of Cumae (q.v.) on an inlet of the Bay of Naples. Although never a *municipium*, Baiae became a fashionable resort because of its mild climate and beautiful surroundings. Great thermal buildings, impressive remains of which still survive, served its sulphur-springs (*aquae Cumanae*); and Julius Caesar, Caligula, Nero, Alexander Severus, and others built opulent villas nearby. Ulti-

mately, however, malaria, already present in republican times (Cic. *Fam.* 9. 12), and earthquakes ruined Baiae.

A. Maiuri, *The Phlegrean Fields* (1958), R. F. Paget, 'The Great Antrum at Baiae', *PBSR* 1907, 102 ff. E. T. S.

BALBILLUS, TIBERIUS CLAUDIUS, the astrologer, was probably a son of Thrasyllus (q.v.) and shared his father's lore. He won the friendship of the young Claudius (the future Emperor), but on Tiberius' death he retired to Alexandria. On Claudius' accession he returned to Rome and became an *amicus* of the Emperor. He accompanied Claudius to Britain as *comes*, *tribunus nilitum* of Legio XX, and *praefectus fabrum*; and he at some time followed an equestrian career, becoming procurator in Asia. He gained the goodwill of Agrippina and of Nero at least until A.D. 64/65, and was Prefect of Egypt (55-59). He lived until after A.D. 75 and enjoyed Vespasian's favour. He was at one time head of the Museum at Alexandria. Fragments from the *Astrologumena* of this learned man have been preserved (*Catalogus Codicum Astrologorum Graec.* VIII. iii. 103, iv. 233). Despite the objections of A. Stein (*PIR* 2 c 813), the identification, here assumed, of the astrologer with the prefect is generally accepted (cf. Syme, *Tacitus*, 508, n. 9; Magie, *Rom. Rule Asia Min.* ii, 1398 ff.; H. G. Pfau, *Les Carrières procuratoriennes* (1960), 34 ff.).

F. H. Cramer, *Astrology in Roman Law and Politics* (U.S.A. 1954), 112 ff. H. H. S.

BALBINUS, DECIUS CAELIUS (PW 20) CALVINUS and PUPPIENUS MAXIMUS, MARCUS CLODIUS (PW 50), members of a board of twenty *consulares* appointed for the defence of Italy against Maximinus, were after the deaths of Gordian I and II in Africa chosen joint emperors by the Senate (A.D. 238). Both had had long senatorial careers. Constitutionally, on the model of the consulate, they had equal powers, each being Pontifex Maximus; but Balbinus was entrusted with the civil administration and Pupienus with the command of the army. To placate the people, Gordian III was given the status of Caesar.

At the news of Maximinus' murder Pupienus proceeded to Aquileia and sent back the former's legions to their provinces, and with his German bodyguard returned to Rome to share a triumph with Balbinus and Gordian. For a few days the joint government worked smoothly, but the praetorians, who resented the Senate's action, mutinied. The two Emperors were dragged from their palace and murdered after ruling for three months.

P. W. Townsend, *YCIS* 1955, 49 ff.

H. M. D. P.

BALBUS (1), MARCUS ATIUS (PW 11), of a good senatorial family of Aricia, and related to Pompey, was the husband of Julia, sister of Caesar, and father of Atia, Augustus' mother. Praetor before 59 B.C., he was a commissioner under the *Lex Iulia Agraria* (q.v.). E. B.

BALBUS (2), T. AMPIUS, called 'tuba belli civilis' (Cic. *Fam.* 6. 12. 3, a letter addressed to him), was tribune (63 B.C.), pro-Pompeian, and proconsul in Asia in 58 (Broughton, *MRR Suppl.* 4 f.; cistophori in his name were minted at Ephesus, etc.). After raising troops for Pompey at Capua (49), he served as *legatus pro praetore* in Asia. Exiled by Caesar, he was recalled (47/6) through Cicero's influence. He wrote history (Suet. *Iul.* 77). H. H. S.

BALBUS (3), LUCIUS CORNELIUS (PW 60) (Maior), born in the *ciuitas foederata* of Gades, acquired Roman citizenship at Pompey's instance in 72 B.C. and took his name from the Cornelii Lentuli (for possible explanation see Syme, *Rom. Rev.* 44). He removed to Rome, where his political sense and the wealth derived from his adoption

organize monastic communities in Asia Minor for which he composed Rules. Solitary asceticism he discouraged. In 370 he became bishop of Caesarea, where he died after nine years of stormy controversies. A profound acceptance of classical culture appears in his writings. The ascetic Rules have many analogies with Musonius (q.v.) and Porphyry (q.v.). He wrote letters and sermons typical of the best epistolography and rhetoric of his time. His theology owes something to Plotinus (q.v.) whom he gratefully quotes. It is chiefly in the tract 'To the young' on reading pagan literature that a prickly, defensive tone appears. His Trinitarian terminology ('one *ousia*, three *hypostases*') he did not originate, but did much to interpret with the help of his friend Gregory (q.v. 2) of Nazianzus and his younger brother Gregory (q.v. 3) of Nyssa.

WORKS. Migne PG xxiv. xxxii. Letters, ed. Y. Courtonne (1957-), ed. R. J. Delorme (Loeb 1926-34); *Ad adolescentes*, ed. F. Boulenger (1952); W. Jaeger, *Early Christianity and Greek Paganism* (1962); J. Quasten, *Patrology* iii (1960), 204 ff.

BASILICA, the name applied to a wide range of Roman building-forms, most commonly and characteristically to the large, multi-purpose public halls which regularly accompanied the fora of the western half of the Roman world, corresponding roughly in function to the Greek and Hellenistic stoa. The earliest known was built in Rome by Cato in 184 B.C. The early basilicas of central Italy (Alba Fucens, Ardea, Cosa) were of the type represented later by Vitruvius' basilica at Fano (5. 1. 6-10) and by the Augustan Basilica Aemilia and Basilica Iulia in the Forum Romanum; timber-roofed, columnar halls, often with galleries, exedrae, and clerestory lighting, and with one long side facing the open area. An alternative, longitudinal (S. Italian?) form, with the entrance in one short side and a tribunal at the far end, is represented at Pompeii (early 1st c. B.C.; another early example at Corinth). The name came later, by extension, to be used of any large covered hall in domestic (Vitr. 5. 5. 2; Sid. Apoll. *Epist.* 2. 2. 8), commercial (*basilica vestiaria*, *basilica argentaria*), military (Veget. *De re militari* ii. 23), or religious (*basilica Iuliana*, *CIL* vi 30973) use. The outstanding example of such development is the Basilica Nova of Maxentius, finished by Constantine. This was a huge vaulted structure, inspired by the central halls of the great 'imperial' bath-buildings (see *BATHS*), with a triple-bayed central nave (clear span 76 feet; 114 feet from floor to vault) buttressed on either side by three enormous, intercommunicating, barrel-vaulted exedrae. Trajan's more conservative, timber-roofed Basilica Ulpia, with internal colonnades and apses at the ends of the central nave, was widely imitated in Italy and the western provinces (outstandingly in the Basilica Severiana at Lepcis Magna, dedicated A.D. 217), and exercised an important influence on the Christian church-architecture of the fourth century.

J. B. Ward-Perkins, *PBSR* 1954, 69 ff.

J. B. W.-P.

BASSAE, in south-west Arcadia, near Phigaleia, the site of one of the best-preserved Greek temples. This was dedicated to Apollo, and built by Ictinus, the architect of the Parthenon, though the suggestion has been made that it is the work of two architects, Ictinus and a younger man to whom was due the engaged side walls and the Corinthian column. The orientation, determined seemingly by that of an earlier building, was towards the north instead of the east, and the early sunlight, instead of entering through the main doorway, was admitted to the *adytum* through an opening of unique kind in the eastern side-wall. Unique too were the ten engaged Ionic columns which decorated the side-walls of the *cella* internally, and the single central Corinthian column—one of the earliest of its kind, and one of the most

beautiful—between the *cella* and the *adytum*. The sculptured frieze (now in the British Museum) shows that it belonged to the late fifth century. Traces have been found of earlier occupation of the site, and the remains of archaic revetments would point to an earlier building, of which no other evidence has yet been found, though foundations of other archaic and classical buildings show that the temple was not isolated. See *ICTINUS*.

T. J. D. and H. W. R.; R. J. H.

BASSUS (1), QUINTUS CAECILIUS (*PIV* 36), an equestrian officer under Pompey in the Civil War. After Pharsalus he fled to Syria, where after a mutiny, in which Sextus Caesar (q.v. 5) was killed (46 B.C.), he won over two legions, seized Apamea (where he was besieged by Caesarian commanders), and negotiated with Deiotarus (q.v.) and the Parthians. After Caesar's death, both his troops and his besiegers soon joined C. Cassius (q.v. 6), who dismissed him unharmed. E. B.

BASSUS (2), CAESIUS (1st c. A.D.), a friend of the satirist Persius and editor of his work. He himself was a lyric poet, and Quintilian (10. 1. 96) mentions him as the only one whose name might appear with that of Horace in a canon of Roman lyric poets. He is possibly the author of a metrical work to which later writers refer and part of which is preserved in a corrupted form under the name of Atilius Fortunatianus (ed. Keil, *Gramm. Lat.* vi. 255-72). The treatise *De Metris* printed in Keil, *Gramm. Lat.* vi. 305-12, is apocryphal.

Schanz-Hosius, § 385.

J. F. M.

BASSUS (3), SALEIUS, a well-esteemed epic writer who died young (*Quint. Inst.* 10. 1. 90, *Juv.* 7. 80). Vespasian assisted him financially (*Tac. Dial.* 5. 2; 9. 8).

Schanz-Hosius, § 411. 1.

BASTARNAE, a roving tribe which first appeared on the lower Danube c. 200 B.C. They were enlisted by Philip V and Perseus of Macedon against their enemies in the northern Balkans, and by Mithridates against the Romans. They defeated C. Antonius (c. 62 B.C.), but were subdued by M. Crassus (29-28 B.C.; cf. Cass. Dio 51. 23. 2-27. 3), and henceforth they generally appear as subject allies of Rome. One hundred thousand Bastarnae were transferred by Probus across the Danube into Thrace (*S.H.A. Prob.* 18. 1), and Diocletian settled others in Pannonia. Despite uncertainty in earlier writers the German nationality of the Bastarnae may be deduced from Strabo (7. 3. 17), Pliny (*IIN* 4. 100), and Tacitus (*Germ.* 46. 1). They appear to have been the first of the race to travel the migration route from the Baltic to the Black Sea, and their movement is recalled on the Peutinger Table, where the Carpathians are called Alpes Bastarnicae. M. C.; J. J. W.

BATAVI, a Germanic people, living between the Old Rhine and the Waal, where their name is preserved in the Dutch district of Betuwe. They were an offshoot of the Chatti (q.v.), but helped Drusus in the conquest of western Germany in 12 B.C. and frequently thereafter were of much military value to the Romans. Remaining incorporated in the Empire after the Roman withdrawal to the Rhine in A.D. 9, they paid no taxes and helped Germanicus in his attacks on their fellow Germans in A.D. 16. Their warriors formed auxiliary regiments serving under their own chiefs in the Roman army by the middle of the first century A.D.; and they are also found until A.D. 68 in the personal bodyguard of the Emperors.

It was they, under the leadership of Civilis (q.v.), who headed the great revolt of A.D. 69-70. Thereafter they were not prominent in Roman history; and their relationship to the Franks, who later occupied their territory, is obscure. E. A. T.

BATHS, one of the most characteristic and widely distributed types of Roman building, found in all provinces of the empire and enjoyed by all classes of society. A Roman bath functioned on the lines of a modern Turkish bath, the essential features being a changing-room (*apodyterium*); a sweating-room (*caldarium*) heated by the passage of hot air through hypocausts beneath the floor and through ducts imbedded in the walls, and equipped with a plunge bath, and an unheated *frigidarium* with a cold plunge. A fully equipped public bath might in addition include rooms for dry heat (*laconica*); rooms at an intermediate temperature (*tepidaria*); latrines; a swimming pool (*natatio*), exercise grounds (*palaestrae*), colonnades and gardens; cisterns; service-rooms and stoke-holes (*praefurnia*); and suites of lecture-halls, libraries, museums, and club-rooms. These buildings occupied a central position in the social life of the day; any community of any substance had at least one *thermae* for public use, and private bath-suites are a commonplace of domestic architecture in both city and country. The Roman bath was first developed in Campania, the earliest-known examples being found at Pompeii (q.v., Stabian Baths, baths in *Regio VIII*, insula 5, early 1st c. B.C.). The first public baths in Rome were built by Agrippa, c. 20 B.C. The high temperature and humidity made these buildings an important medium for the development of the new concrete-vaulted architecture. The Baths of Titus and of Trajan in Rome already illustrate the emergence of the great symmetrically planned 'imperial' type of bath-building, later represented in the capital by the Baths of Caracalla and Diocletian and in the provinces by such buildings as the Hadrianic Baths at Lepcis Magna, the Antonine Baths at Carthage, and the 'imperial' Baths at Trier. On a smaller scale, too, the influence of the capital (e.g. of the baths of Hadrian's Villa) is visible in the elaborately curvilinear vaulted forms of such buildings as the baths at Thénac in Tunisia and the Hunting Baths at Lepcis Magna. It was one of the few types of western Roman building to be widely adopted in the eastern provinces, where (as one sees at Ephesus and Miletus) it was rapidly assimilated to and finally replaced the Hellenistic gymnasium.

W. J. Anderson, R. P. Spiers and J. Ashby, *The Architecture of Ancient Rome* (1927), ch. 6, K. Nickel and K. Jäger, *Die Trierer Kaiserthermen* (1929) J. B. W.-P.

BATO (1), the Dalmatian, chieftain of the Daesitiates, raised rebellion in Illyricum in A.D. 6, raided the Dalmatian coast, fought against the Romans in the valley of the Save, and, after the capitulation of his Pannonian allies in A.D. 8, retreated southwards. After vainly defending several forts against the Romans, he surrendered and was interned at Ravenna (A.D. 9).

E. Koestermaun, *Hermes* 1957, 345 ff.

R. S.

BATO (2), the Pannonian, like his Dalmatian namesake, revolted, tried to capture Sirmium (A.D. 6), and shared in the subsequent fighting, but surrendered in A.D. 8 at the river Batinus. Soon after, however, the Dalmatian chieftain captured and killed him.

R. S.

BATON (*Bátov*), New Comedy poet in the middle of the third century B.C.; an anecdote links him (if *Bátov* is rightly conjectured at Plut. *Mor.* 55 c) with Cleanthes

(d. c. 231) and Arcesilaus (d. 241). Frs. 3 and 5 travesty Epicurus' teaching about 'the good' and pleasure.

FCG i. 480 f., iv. 490 ff.; CAF iii. 326 ff.

W. G. A.

BAUBO (*Babo*), a female daemon of primitive and obscene character, doubtless originally a personification of the *cunnius*. She appears in the Orphic version of the Rape of Kore (Kern, *Orph. Frs.* 49 ff.), and on inscriptions from Paros and Asia Minor, and is mentioned by Asclepiades of Tragilus (Harpocration, s.v. *Δουσαύλης*) as mother of the Anatolian Muses. She has been thought to have a part in the Eleusian Mysteries (Ch. Picard, *Rev. Hist. Rel.* 1927), but see L. Deubner, *Attische Feste* (1932), 83 n. 3 and G. Méautis, *Les Dieux de la Grèce* (1959), 68 ff. She survives in modern folklore (R. M. Dawkins, *JHS* 1906). Other references in Picard, loc. cit. and W. K. C. Guthrie, *Orpheus and Gk. Rel.* (1952), 136.

W. K. C. G.

BAVIUS (1st c. B.C.), a poetaster, rescued from oblivion by Virgil's contempt (*Ecl.* 3. 90).

Schanz-Hosius § 246.

BEDRIACUM (or **BETRIACUM**), near modern *Calvatone* midway between Verona and Cremona in Cisalpine Gaul, gave its name to two decisive battles in A.D. 69. Vitellius' troops defeated Otho's in the first, but were themselves defeated by Vespasian's in the second some months later. Both battles were apparently fought nearer Cremona than Bedriacum.

E. T. S.

BEE-KEEPING had the same importance for non-tropical antiquity from palaeolithic times onwards as sugar production has now. The culture of bees seems to have begun as early as the Mesolithic period. Solon introduced a law which regulated bee-keeping. Greek towns (Teos, Theangela) and the Ptolemaic empire introduced special taxes on bee-keeping and carefully organized enterprises for honey-production. Different methods of bee-keeping and breeds of bees were developed, the most important progress being made during the centuries between Alexander and Augustus. One bee-hive would produce 1-2½ and occasionally 3 *chous* (i. 6-18 pints) of honey at one harvesting. The best honey came from Attica (Hymettic region), Theangela, Chalybon, Cos, Calymna, Rhodes, Lycia, Coracesium, Thasos, Cyprus, several districts of Syria, Sicily (especially the Hyblaean region near Syracuse), Liguria, Noricum, and the south of Spain, the main honey-exporting countries of the ancient world. The practical experience of many generations of Greek and Roman bee-masters was finally codified by a number of Greek and Latin authors, the most distinguished being Aristotle, Virgil, Varro, and Columella.

F. M. H.

BELGAE. According to Caesar, a population-group of this name occupied lands to north of Seine and Marne. They were the fiercest inhabitants of Gaul and boasted of their German blood (cf. Strabo 4. 196). Certain tribes, he says, had settled in Britain, and Belgae are actually located there by later geographers. The Gallic Belgae

were subdued by Caesar in 57 B.C., but continued to give trouble for thirty years more.

Among the Gallic Belgae, archaeology distinguishes two cultural provinces separated by the Ardennes. The northern part is a backward region with Hallstatt characteristics; to the south, traditions of the Marne culture, notably the pedestal-urn, persist. Both experienced German penetration, cremation (a German practice) being normal. The northern group was reinforced under the empire by new settlers and rose suddenly to great prosperity under the stimulus of the Rhine market.

An exodus from the southern (pedestal-urn) group into Britain occurred c. 100 B.C., which developed into the kingdom of Cassivellaunus (q.v.), whose descendants extended their rule over all the south-west. About the time of Caesar's conquest, or perhaps after, a further exodus settled in Hampshire and Berkshire, spread over west (but not east) Sussex, and influenced the culture of the neighbouring Durotriges. Their rulers were the house of Commius (q.v.) and their culture was characterized by Bead-rim pottery.

Characteristics of the Belgae were their preference for woodland sites both for towns and for agricultural development, and their fondness for things Roman, which, however, made them no less hostile to Roman invasion; it appears, indeed, that it was Belgic areas which led opposition to the Roman conquerors.

C. F. C. Hawkes and G. C. Dunning, *Arch. Journ.* 1930, 150 ff.; Hawkes in *Problems of the Iron Age in Southern Britain* (ed. S. S. Frece, 1958), 14 f.; id., *Antiquity* 1968, 6 ff. C. I. S.

BELISARIUS, the famous general of Justinian, began his military career on the eastern frontier, but won his first great victory in A.D. 533-4, when he sailed to Africa and at the battle of Tricamarum overthrew the Vandal kingdom, which had plagued the Romans for a century. He also captured the last Vandal king Gelimer (q.v.). In 535 he began the conquest of the Ostrogothic kingdom of Italy by occupying Sicily. In 536 he took Naples and Rome, where he withstood a siege for over a year. In 540 he entered Ravenna, thus almost completing the conquest of the peninsula; and in the same year returned to Constantinople, taking with him King Witigis, many eminent Goths, and the royal treasure. After the Gothic reconquest of Italy Belisarius returned as commander-in-chief in 546, and after some successes was again recalled (549), leaving the completion of the war to Narses (q.v.), with whom he was on bad terms. He died in 565. Our extremely detailed knowledge of his campaigns is due to the historical works of his secretary, Procopius (q.v.).

J. B. Bury, *History of the Later Roman Empire* (1923), II, 1. Stern, *Histoire du Bas-empire* (1939), II.

BELLEROPHON (Βελλεροφών, Βελλεροφόντης). In *Il.* 6. 155 ff., Glaucus the Lycian gives the following account of his ancestor Bellerophon; the genealogy is: Sisyphus—Glaucus I—Bellerophon—Isandros, Hippolochus and Laodameia, Sarpedon being the son of Laodameia, and Glaucus II of Hippolochus. He was a man of remarkable beauty and valour, a native of Ephyræ (generally identified with Corinth). Proetus, king of the Argives,* had a wife Antea (Sthenoboea in later accounts) who tried to tempt Bellerophon, and when he refused, told Proetus that he had tried to seduce her (cf. ACASUS; Stith Thompson, K 2111). Proetus then sent Bellerophon to Lycia (in later accounts the king of Lycia, Iobates, was Proetus' father-in-law) with a letter to the king asking for his execution (cf. Stith Thompson, K 978).

* In Homer there is no hint that Ephyræ was not in his domains; later, e.g. schol. *Il.* 6. 155, the geography is modernized, and Bellerophon has to leave Corinth because of a blood-feud and take refuge at Argos.

On reading this, the king set him first to fight the Chimaera (q.v.), then the Solymi, then the Amazons, and finally laid an ambush for him. Bellerophon survived all these trials, and the king made peace with him and married him to his own daughter. Afterwards, Bellerophon became 'hated of all the gods' and wandered along on the πειδιὸν Ἀλφειὸν (to Homer at least the 'plain of wandering'). Later, he accomplishes his tasks with the help of the winged horse Pegasus, which Athena helped him to catch (Pind. *Ol.* 13. 63 ff.); he used him to take vengeance on Sthenoboea (Euripides, *Sthen.*) and offended by trying to fly on him to heaven (Eur. *Beller.*). See further Rose, *Handb. Gk. Myth.* 270 f.

Bellerophon on Pegasus attacking the Chimaera is found in Corinthian vase-painting before the mid seventh century, and in Athenian before the end, and continues to be found in various arts in later centuries (Brommer, *Vasenlisten*, 220 ff.). H. J. R., C. M. R.

BELLONA, the Roman war-goddess, older *Duellona*, rarely *Bellula*. Whether independent in origin or an offshoot of Mars, she is early, her name occurring in the formula of *derotio* (Livy 8. 9. 6). She had, however, no *flamen* and no festival, and her temple was vowed in 296 B.C. and built somewhat later (Livy 10. 19. 17). It was in the Campus Martius, near the altar of Mars, and often used for meetings of the Senate when held *extra pomerium*. Before it stood the *columna bellica*, used in formal declarations of war, cf. *FESTALES*. She was occasionally identified with Nerio, the ancient cult-partner of Mars (Augustine, *De civ. D.* 6. 10), commonly with the Greek war-goddess Enyo, and in imperial times at latest with the Cappadocian goddess Mä.

Wisowa, *RK* 151, 138, Latte, *RR* 235. Temple: Plautus-Ashby, 82, Nash, *Pict. Dict. Romae* 1. 202. H. J. R.

BELLUM AFRICUM, a record of Caesar's war in Africa (winter 47-46 B.C.). Its ninety-eight chapters are monotonous to the layman, but as military history it is painstaking and straightforward. Both style and matter suggest that the author was a trained soldier, tribune or centurion, who took part in the campaign, though not a man in Caesar's confidence; Hirtius (q.v.) was certainly not the author (see **BELLUM ALEXANDRINUM**), but his claims to editorship are still upheld. G. F. F. C.

BELLUM ALEXANDRINUM, a work continuing Caesar's commentary on the Civil War. Thirty-three chapters describe the war at Alexandria from the point at which Caesar left off; then follow the campaign of Calpurnius (q.v. 2) against Pharnaces (chs. 34-41), the war in Illyricum (chs. 42-7), and the disturbances during Q. Cassius' tenure of Spain (chs. 48-64), both in the winter 48-47; and finally Caesar's campaign against Pharnaces (chs. 65-78) ending in the victory of Zela (2 Aug. 47). On one view held in antiquity (Suet. *Iul.* 56) Hirtius (q.v.) wrote this work and the *Bella Africum* and *Hispanense* (qq.v.) besides; for the *Bellum Alexandrinum* stylistic comparison with *Bell. Gall.* viii makes his authorship quite probable, even though (contrast *Bell. Alex.* 19. 6) he took no part in the Alexandrian War.

K. Barwick, 'Caesars Commentarii und das Corpus Caesarianum', *Philol. Suppl.* xxxi (1938). G. F. F. C.

BELLUM CIVILE. (1) Caesar's books on the war begun in 49 B.C. are *Commentarii Belli Civilis*. (2) The title of Lucan's poem, often miscalled *Pharsalia*, is *Bellum Civile*. (3) *Bellum Civile* is given as the title of the poem of 295 hexameters introduced into Petronius' *Satyricon* (119-24) to illustrate Eumolpus' implied criticism on the management of the same subject by Lucan, who is not named. J. W. D.; G. B. A. F.

BELLUM HISPANIENSE, an account of the campaign which ended at Munda (45 B.C.), written by an eyewitness, certainly not Hirtius (see **BELLUM ALEXANDRINUM**), but probably from Caesar's army. The text is deplorable; but many meaningless passages are caused by the author's illiteracy and his incapacity to understand anything difficult. The work is interesting mainly as a study in half-educated Latin, which combines colloquialism with quotations from Ennius and schoolboy rhetoric. G. E. F. C.

BELUS (Βῆλος), hellenization of Ba'al, Bel, sometimes recognized as a divine title (Zeus Belus, Hdt. 1. 181. 2; Marduk?), oftener taken as the name of an ancient oriental king (of Assyria, Serv. on *Aen.* 1. 642); father of Dido (ibid.); ancestor of the founder of the dynasty of the Heracleidae in Lydia (Hdt. 1. 7. 3), father of Danaus (q.v.); founder of the rulers of Persia (Ov. *Met.* 4. 213). It thus forms a stopgap name for foreign genealogies, as Creon for Greek. H. J. R.

BENDIS (Βένδις, Βενδῖς), a Thracian goddess, worshipped with orgiastic rites in Thrace (Strabo, 10. 3. 16, p. 470); at the Piraeus, where her cult was accepted officially in 430/29 B.C. for the benefit of resident Thracians, she had processions, a torch-race on horseback, and a vigil. It is made by Plato the opening scene of the *Republic* (327 a, 354 a). The date was Thargelion 19 (Deubner, *Att. Feste* (1932), 219). She was apparently represented as carrying two (hunting?) spears (Hesych., s.v. δῖλογχον).

Ferguson, *Harv. Theol. Rev.* 1944 and *Hesp. Suppl.* vol. 8 (1949), 111 ff.; M. P. Nilsson, *Opuscula Selecta* III (1960), 55 ff. H. J. R.

BENEFICIARI were in the Roman army non-commissioned officers (*principales*) with administrative duties, who took precedence according to the rank of the officer under whom they served (*beneficarii consularis, procuratoris, legati legionis, praefecti, tribuni*, etc.). They were so called, according to Vegetius (2. 7), because they owed their promotion to the *beneficium* of their commander: the title is at least as old as the time of Caesar (*BC* 1. 75; 3. 88). During the Empire, as soldiers were increasingly employed in administration, the number and variety of *beneficarii* rose, and higher grades (*cornicularii, commentarienses*) were created. Especially from the time of Septimius Severus onwards we find them performing

of which will be described as police and civil-service functions. Appointment as *beneficiarius* usually presupposed some experience in one or more of the ranks of *signifer, optio*, and *tesserarius*, the non-commissioned grades employed on general duties. The pay of *beneficiarii* was probably twice the basic legionary rate. See **POLICE, STIPENDIUM**.

A. von Domaszewski, *Die Rangordnung des römischen Heeres* (1908), A. H. M. Jones, *JRS* 1949, 441 — *Studies in Roman Government and Law* (1960), 161 f.; R. MacMullen, *Soldier and Citizen in the Later Roman Empire* (1963). G. R. W.

BENEVENTUM, on the river Calor in southern Italy. Originally a stronghold of the Hirpini Samnites (see **SAMNIUM**) named Malventum, it fell some time after 300 B.C. to the Romans, who made it a Latin colony, changing its ill-sounding name to Beneventum, 268 B.C. (Vell. Pat. 1. 14; Festus 25 L.). Thereafter its *territorium* expanded and Beneventum flourished. Under the republic it was a military base, later an opulent *municipium*; under the Empire a *colonia* and important road-centre (Vine Appia, Traiana, qq.v.); under the Lombards a duchy. The ancient remains include Trajan's arch. (Polyb. 3. 90; Livy 27. 10, etc.; Strabo 5. 250).

Beloch, *Röm. Gesch.* 480, for magistrates; A. Sambon, *Monnies antiques de l'Italie* (1903), 114, for coins. E. T. S.

BERENICE. (1) **BERENICE I**, daughter of Lagus (father of Ptolemy I) and Antigone, was born c. 340 B.C., and died between 281 and 271. She married a Macedonian Philippos. The issue of this marriage were Magas, king of Cyrene, Antigone (m. Pyrrhus of Epirus), and other daughters. Berenice, already a widow, came to Egypt with her aunt Eurydice, who married Ptolemy I. The step-sister of the king, she presently (c. 317) became his mistress and succeeded Eurydice as his wife. Their children were Arsinoë II and Ptolemy II Philadelphus.

(2) **BERENICE SYRA**, daughter of Ptolemy II and Arsinoë I, was born c. 280 B.C. She married the Seleucid king Antiochus II after the Second Syrian War (252). Laodice, the king's divorced first wife, murdered Berenice and her son by Antiochus after his death in 246, before Ptolemy III could bring help.

(3) **BERENICE II**, daughter of King Magas of Cyrene and of Apama, daughter of Antiochus I, was born c. 273 B.C. She was betrothed to Ptolemy III, but after Magas' death Demetrius, a Macedonian prince, was called in by her mother to marry her. Berenice led a rebellion against them both, and Demetrius was killed by her orders. She married Ptolemy III in 247, who called a star 'The Lock of Berenice' after her, as Callimachus and Catullus tell us. After her husband's death she became joint ruler with her eldest son Ptolemy IV, but was murdered by him in 221. He nevertheless appointed a special Alexandrian priestess in his mother's honour in 211–210, the ἀλλοφύρος Βερενίκης Εὐεργετίδος. See **PTOLEMY** (1). F. M. II.

BERENICE (4) (b. A.D. 28), daughter of Agrippa I (q.v.), was married to Marcus, brother of Tiberius (q.v. 3) Julius Alexander in 41, and then in 46 to her uncle Herod, king of Chalcis (see **ITURAEA**). From his death (48) she lived with her brother, Agrippa II (q.v.). To quieten rumours of incest, she persuaded Polemon, priest-king of Olba in Cilicia, to marry her (53/54), but the marriage did not last long. She played some part in public affairs: in 66 she tried, at first single-handed and then with Agrippa, to prevent the Jewish revolt, and in 69, in Agrippa's absence, she supported the Flavian cause. Titus fell in love with her while he was in Judaea (67–70), and when she visited Rome with Agrippa (75) he openly lived with her, perhaps for some years. He deferred, however, to public opinion and did not marry her, and on her second visit (79) he dismissed her *inuitus invitam* (Suet. *Div. Tit.* 7).

J. A. Crook, *APPhil.* 1951, 162 ff.

E. M. S.

BERENICE, the name of several Hellenistic towns. Chief among them were: (i) a foundation of Ptolemy II on the Egyptian coast of the Red Sea below *Ras Benas*, connected with Coptus on the Nile by a desert camel-track supplied with cisterns and stations. It became the chief Egyptian port for Arabia, east Africa, and India in the first and second centuries A.D. (Warmington, *Indian Commerce*, 6 ff., 51 ff., 73 ff.); (ii) *Berenice Panchrysos*, on the African coast of the Red Sea near the gold-mines of *Jebel Allaki*; (iii) *Berenice Epideris* on the same coast at the Straits of Bab-el-Mandeb. E. H. W.

BEROSUS or **BEROSSUS** (Βηρωσός) (fl. c. 290 B.C.), priest of Bel, author of history of Babylon (*Βαβυλωνιακά*) in three books dedicated to Antiochus I. Book 1 dealt with origins to the Flood, book 2 reached Nabonassar (747 B.C.), and book 3 the death of Alexander. Its value lay in transmission of Babylonian history and astronomy to the Greek world.

FGH 680.

E. A. R.

BERYTUS (modern *Beirut*), a Phoenician city. It issued a municipal coinage, inscribed both in Greek and in Phoenician, from the reign of Antiochus IV, at first as Laodicea in Phoenice, later under its old name. Its merchants formed a wealthy colony in Hellenistic Delos. In 81 B.C., 'Tigranes made it a free city, and in c. 16 B.C. it became a Roman colony, with *ius Italicum*, veterans of two legions being settled in it by Agrippa. It received at this time a large accession of territory, perhaps at first including Heliopolis. A great trading town, it was also famed for its wine and linen, and from the third century for its school of Roman law.

R. Mouterde and J. Lauffray, *Beirut ville romaine* (1952)
A. H. M. J.; H. S.

BESTIA, LUCIUS CALPURNIUS (*PW* 23), as a Gracchan land commissioner, distributed land in Africa (*ILRP* 475). As tribune in 120 B.C., he secured the recall of P. Popillius (q.v. 2) from exile. As consul (111) he was sent to Numidia, with Scaurus (q.v. 1) as one of his legates, to fight Jugurtha (q.v.). He made a peace, which was disavowed in Rome, and was later condemned by the commission set up by the law of Mamilus (q.v. 3). He returned at some time, but went into exile again in 90, to escape prosecution under the law of Varius (q.v. 1).

E. B.

BETROTHAL, GREEK, 'ἑγγύσις, a contract to marry between a young man and the girl's father, formed an essential element in a marriage and was often in retrospect the best evidence that a legitimate marriage had been contracted. As a contract it was bilaterally actionable within the normal forms of Greek contract. By the second century B.C. the practice of formal ἑγγύσις had largely been superseded by a dowry-contract between husband and wife's father. ('This is a brief statement of Athenian practice in high strata of society: regional and social variations were complex and must be taken into account.)

J. H. Lipsius, *Attische Recht u. Rechtsverfahren* II. 2 (1912), 468 ff.; J. W. Jones, *Law and Legal Theory of the Greeks* (1956), 174 ff.; W. Erdmann, *Die Ehe im alten Griechenland* (1914), Index, s.v. Engysis, and esp. 225 ff.; H. J. Wolff, *Written and Unwritten Marriages in Hellenistic and Post-classical Roman Law* (1939), W. K. Lacey, *The Family in Classical Greece* (1967).
G. W. W.

BETROTHAL, ROMAN. *Sponsalia* in republican times consisted of reciprocal *sponsiones*, and breach-of-promise actions (in the form of actions for damages) existed. The movement of classical Roman law was in the direction of removing constraint, and the term *sponsalia* came near to an informal agreement to marry, voidable at will (except that the intending husband was required to return such *dos* as had been given to him and the intending bride was expected to return the much more usual gift from her intending husband, the *donatio ante nuptias*, for gifts after marriage were excluded). The betrothal was solemnized with a kiss and the intending husband put an iron ring (*unulus pronubus*) on the third finger of the girl's left hand; it was the occasion for a party (also called *sponsalia*).

G. W. W.

BIBACULUS, MARCUS FURIUS (*PW* 37), is said by Jerome to have been born at Cremona in 103 B.C. Suetonius makes him a pupil of Valerius (q.v. 7) Cato, another Cisalpine, and quotes two hendecasyllabic epigrams on Cato by him (*Gramm.* 11); Tacitus mentions him and Catullus together (*Ann.* 4. 34. 8; cf. Quint. 10. 1. 26) as the authors of lampoons on 'the Caesars' which Julius and Octavian ignored. These data seem to

connect him with the circle of the *novi poetae* (and he may be the Furius of Catullus 11, 16, 23, and 26); but in that case Jerome's date must be some twenty years too early. A contemporary poet whom Horace accuses of bombast (*Sat.* 2. 5. 40) is identified by the scholia with Furius Bibaculus, author of a poem on 'the Gallic War', which may be the hexameter *Annales* (in at least eleven books) of one Furius from which Macrobius (6. 1) quotes some lines. The difficulty of ascribing a historical poem to the Bibaculus of Suetonius and Tacitus has suggested that there were two poets of the same name and that Jerome's date belongs to the epic poet—a precarious suggestion in view of the incompleteness of our knowledge of the literary currents of the time.

Fragments in Morel, *FPL*.

C. J. F.

BIBRACTE (modern *Mont-Beuve*), a hill-fort, the original capital of the Aedui. Here in 52 B.C. the supreme command was conferred by a pan-Gallic council upon Vercingetorix. Its inhabitants were transferred c. 12 B.C. to a new town in the plain, Augustodunum (q.v.) (*Autun*), but inscriptions—*deae Bibracti*—at Autun kept the old name alive, and a cult survived on the site itself. Excavations have revealed numerous houses of the Gallic town, all rectangular and of dry stone, some with *atria* and even hypocausts. An important metal-workers' and enamellers' quarter was also revealed.

Bulliot, *Fouilles du Mont Beuvray* (1899), Dechelette, *Fouilles du Mont Beuvray de 1897 à 1901* (1904); id. *Manuel* n. 946 ff. C. E. S.

BIBULUS (1), MARCUS CALPURNIUS (*PW* 28), Caesar's colleague in aedileship and praetorship, and finally in the consulate of 59 B.C., when after being forcibly prevented from vetoing the agrarian law he attempted from his house to invalidate legislation by 'watching the heavens'. His only departure from strict republicanism was to propose Pompey's consulate in 52. In 51 he governed Syria, and resisted the Parthians tenaciously. In the winter 49–48 he wore himself to death, trying to prevent Caesar's crossing to Epirus. He married Porcia, daughter of Cato and future wife of Brutus. G. E. F. C.

BIBULUS (2), LUCIUS CALPURNIUS (*PW* 27), son of (1) and Porcia (q.v.), joined his stepfather Brutus and was proscribed, but after Philippi he came to an understanding with Antony and recovered his rights. He served Antony both as a mediator, on several occasions, between him and Octavian and as a naval commander, and governed Syria for him from c. 34 B.C. till his death c. 32. His brief memoir of Brutus was used by Plutarch (*Brutus* 13, 23).

Peter, *HRRel.* II. lxvii. Syme, *Rom. Rev.*, see index. A. M.

BIDENTAL. By Etruscan use, when lightning had struck any place, the supposed fragments of the bolt were collected, buried while a formula was pronounced (Lucan 1. 606–7), and the place walled in (ibid. 8. 864) and inscribed *fulgur conditum* or the like; it was tabu (ibid. 1. 608, 'dat . . . numen'), and anyone touching it was *incestus* (Hor. *Ars P.* 471). This was called a *bidental*.

BILINGUALISM IN THE CLASSICAL WORLD. The Greeks were conscious monoglots. Because they were intellectually pre-eminent and usually made a distinction (often misunderstood) between Greeks and Barbarians, they never gave foreign languages a place in their educational system. The Romans developed a bilingual culture (Marrou, op. cit. *infra*, ch. 3).

The early Romans were pioneers in a world where

you had to be either the hammer or the anvil. There was little opportunity for intellectual or artistic development. But in the third century B.C. came the impact of Greek culture on a nation of soldier-farmers. Their first conservative reaction was fear lest their established native tradition should be swamped by the intellectually brilliant Greeks, who had been established in Italy for some centuries but had kept aloof as they did in Massilia and elsewhere. Although in 240 B.C. Livius Andronicus produced a translation of the *Odyssey* which was eagerly received, and Philhellenism was strongly aided by Ennius, who said he had three hearts, Roman, Italian, and Greek, Cato the Censor supported the Nationalists and there were several expulsions of Greek teachers. But nothing could stop the enthusiasm for Greek art and letters as we may see, for example, from Cicero's speech on behalf of the Greek-speaking Archias. The earliest Roman historians, like Fabius (q.v. 6) Pictor, wrote in Greek. Where the population was mainly Greek, laws were promulgated in both languages; Roman officials could speak Greek. The Roman came to be at home in both languages, *vir utrusque linguae*, and to realize that he was thus enriching his own culture. The conversion of the Roman to Greek was of enormous importance for the Western Tradition; for it meant the preservation of the Greek cultural heritage and its spread throughout the civilized world particularly during the two centuries of peace established by Augustus. The Letters of Cicero and of Pliny the Younger, and the artistic achievement of Virgil (the first real friend of his national hero in Italy is a Greek) reveal the perfect harmonization of the two languages.

This co-operation extended to the fourth century A.D. Juvenal's outburst against the *Graeculus esuriens* is not typical. But when Constantinople became the centre of Greek influence and the Byzantine Empire began, it was difficult to find bilingual teachers in the West (*Codex Theodosius* xiii. 3. 11). St. Augustine complained about his Greek lessons. Greek was declining in his time; the teaching methods were barbarous; Latin-speaking children, as Quintilian tells us, were made to start with Greek, which was felt to be a *lingua peregrina*. Bilingual manuals were produced in the fourth and fifth centuries; they were practical books of words and phrases addressed to 'all who wish to speak Greek and Latin', and we have an example in the *Hermeneumata Pseudodositheana*. The bilingual tradition lasted for a considerable time at Constantinople; the speech of society and literature was Greek, but Latin remained the language of the Law. The loss of Greek in the West (after the two cultures had helped each other for some six centuries) is reflected in the declining standard of literature and civilization.

Roman education, beginning with diversity and hostility, produced a bilingual tradition the content of which became the basis of Western civilization.

BIOGRAPHY, GREEK. The impulse to celebrate the individual finds early expression in the dirge and funeral oration; but not until the fifth century, with its conscious recognition of the individual in various arts, do the first traces of biographical literature appear in Greece. Many of 'Thucydides' sketches approximate to this genre; and Ion of Chios and Stesimbrotus described important contemporary figures. In the fourth century appeared Isocrates' *Evagoras* and Xenophon's *Memorabilia* and *Agesilaus*, all forerunners of biography proper; though Isocrates' claim that the *Evagoras* was the first prose encomium of a living person is exaggerated.

Meanwhile the Platonic corpus was developing the figure of Socrates.

2. Aristotle gave biography a new impetus. Under his influence interest in ethical and cultural problems encouraged the writing of *βίαι*, 'ways of life' of peoples and individual types (e.g. Clearchus; Dicaearchus); simultaneously the history of rhetoric and the chronology of refinements in that art were recorded in compilations, and Aristotle himself gave such researches a literary form. Directly associated with Theophrastus was Aristoxenus, who stamped the so-called peripatetic biography with its most typical characteristics—combinations of legendary material, scandal, polemics, an interest in literary innovations, and a popular literary form in which character was revealed through a man's actions. Düris was more directly interested in personality, a trend carried further by Phaeaeas, Idomeneus, and Nearches, who treated not only literary figures but also, occasionally, men of action. Chamaeleon set a popular fashion by deducing wild stories from the works of those for whom reliable biographical data were scanty, a precedent followed by Hermippus of Smyrna, Satyrus, who ignored the distinction between men of letters and men of action, and Sotion, who instituted the *διὰ βίου*—a semi-biographical account of successive teachers and pupils in various fields.

3. About 240 B.C. Antigonos of Carystus displayed a new accuracy in describing contemporaries from personal knowledge; and in the scholarly atmosphere of Alexandria there grew up a biographical form, which revalued the findings of the Peripatetics and re-established their chronological data. Commentaries and epitomes called for biographical introductions, which generally shed their narrative character: between the particulars of a writer's birth and death short notes gave specific details of his mode of life, friends, students, works, etc. Typical of this school is Posidonius' pupil, Jason; and Heraclides Lembus took still further a literary form which led ultimately to Suetonius.

4. Meanwhile, historians too, after Alexander, stressed the individual personality; Polybius, in his *Histories* (e.g. 10. 2) and *Life of Philopomen*, and after him Panaetius, are associated with a development to which such memoir-writers as Aratus had contributed. There is, however, no proof that Peripatetic biography continued, treating political and military figures (as Leo claims). Two hundred years later Plutarch's *Lives* mark a new achievement, without continuous links with either previous biographers or Hellenistic historians. Like the Peripatetics Plutarch is discursive, and in contrast to the Alexandrians normally lets his hero's character be deduced from his actions; though his scheme is flexible, each *Life* forms a whole, generally with a strong moral bias. The *Comparisons* reveal his keen interest in psychology.

5. Later Philostratus rhetoricized and Eunapius broke up the Alexandrian form; Alexandrian too in origin, though more learned, were the Neoplatonist biographies of Porphyry and Marinus. Of the abridging and synthesizing of the materials of the literary biography an example survives in Diogenes Laertius. Much of Greek biography has perished. It seems clear, however, that the Peripatetic form, for all its weaknesses, constituted an artistic unity, though it failed to portray the development of character; whereas the Alexandrian studies, which had most influence at Rome, remained an accumulation of material lacking internal cohesion.

Biographie* (1927); D. R. Stuart, *Epochs of Gk. and Roman Biography* (U.S.A. 1928); N. T. Harbu, *Les Procédés de la peinture des caractères... dans les biographies de Plutarque* (1934). F. W. W.

BIOGRAPHY, ROMAN. In the writing of biography, the Romans were not wholly dependent on the Greeks. The attitudes and customs of their own political and family life led them to put a special value on recording the achievements of their great men. We hear of songs at banquets praising the famous (Cic. *Tusc.* 4. 3), of dirges (*neniae*) at funerals, and of a native tradition of *laudationes funebres* (Dion. Hal. *Ant. Rom.* 5. 17). *Laudationes* (q.v.) were preserved (Cic. *sen.* 12) and kept among the family records, with the *imagines* (q.v.) of distinguished ancestors. Sepulchral inscriptions were important too, and became very elaborate, often giving details of private as well as public matters (cf. *laudatio Murae*, *CIL* vi. 2. 10230; *laudatio Turiae*, *ibid.* 1527, 31670). F. Leo denied the importance of the *laudationes* for the development of Roman biography, but Stuart (op. cit. *infra*, chs. 7 and 8) puts a more positive view, and with good reason.

2. A great deal of writing which can be called biographical owes its origin to the need to compose justifications for political or military action. The bulletins sent home by generals in the field, on which the claim for a triumph would rest, are autobiographical in the sense that events recorded centre on the commander's achievements; such writing naturally goes back to an early period. Various autobiographical works of the late republic were also in one sense or another justificatory; perhaps C. Gracchus' *ad Pomponium* (Cic. *Div.* 2. 62; cf. Plut. *Ti. Gracch.* 8); more certainly the three books of M. Aurelius Scaurus (Cic. *Brut.* 112), the five or more of P. Rutilius Rufus (Charisius, *GL* 1. 139. 18 Keil) and Q. Lutatius Catulus' book 'de consulatu et de rebus gestis suis' (Cic. *Brut.* 132). Sulla's memoirs (twenty-two books in all) owed something to the Greek precedent of Aratus; he became an important source to later historians. Cicero (many of whose speeches contain descriptions of the *vita* of client or opponent) wrote about his own career and achievement both in Latin and in Greek. Under the Principate, it was especially members of the imperial family and others closely connected with the regime who wrote political memoirs: Augustus, Tiberius, the younger Agrippina (Tac. *Ann.* 4. 54), Hadrian, Severus. Similar in tendency to these autobiographical works were the memoirs sometimes written by clients or freedmen of the great: Plotus (or Pitholaus?) on the Pompeii (Suet. *rhet.* 3), Tiro on Cicero (Asconius in *Milonianum* 43).

3. A somewhat different impression is given by writings designed to praise or defend not only political actions but private character or philosophy. The career of the younger Cato (q.v. 5) inspired works by Brutus (Cic. *Att.* 12. 41), Cicero (*Att.* 12. 40. 1), and Munatius Rufus (Plut. *Cat. Min.* 37)—this last an answer to Caesar's counterblast to Cicero, the *Anticato*. L. Calpurnius Bibulus (q.v. 2) wrote on the other philosopher-statesman, Brutus (Plut. *Brutus* 23). These were the beginnings of a considerable literature, with more than a touch of hagiography about it, which clustered around Stoic opponents of the Principate in the first century: the lives of Thrascus Paetus by Arulenus Rusticus and of Helvidius Priscus by Herennius Senecio are mentioned by Tacitus in the preface to his *Agricola*—a work which itself must have been influenced by this type of encomiastic biography, though it contains many other elements as well.

4. Apart from Tacitus, the principal extant 'biographers' are Nepos and Suetonius, with his continuators and imitators, the *Scriptores Historiae Augustae*. Nepos' collection of short lives of famous men owes much to Greek writing *περί ἐνδοξῶν ἀνδρῶν*; his *Atticus*, on the other hand, is more Roman, and at the same time more encomiastic in tone and content.

Suetonius' *Caesares* deals with the Emperors primarily as private individuals and does not profess to give a history of their reigns; in terms of genre, the book is not very different from his lives of poets, grammarians, etc. Jerome (Suet. *Reliquiae*, 3 Reifferscheid) mentions Varro, Santra, Nepos, and Hyginus as Suetonius' Roman predecessors. It looks as if Varro is meant to be the founder of the genre; but nothing of his work survives to substantiate this. Of Santra we know little; Suetonius (*de gramm.* 14, *de poet.* 4) twice quotes his literary opinions. Hyginus (q.v. 1) seems to have compiled more than one collection of *vari illustres* (Gellius 1. 14. 1 with Asconius in *Pisomanum* 12). See *HISTORIA AUGUSTA*.

5. Revelation of intellectual or spiritual life is rare in Roman autobiography or biography. Cicero (*Brut.* 313 ff.) tells us something of his education and development; but the confessions in Marcus Aurelius' *Εἰς ἑαυτὸν* are unique in pagan times; they may be compared with the *Confessions* of St. Augustine.

BION (1) (c. 325–c. 255 B.C.), frequently referred to as *Bion the Borysthenite*, son of a freedman and of a former hetaira of Borysthenes (= Olbia). Because of a fraud committed by his father the family was sold into slavery. But as slave of a rhetorician Bion received a good education, was later set free, and inherited the fortune of his master. He went to Athens and studied in the Peripatos (under Theophrastus) and the Academy (probably under Xenocrates). But he was more strongly influenced by Crates the Cynic and by Theodorus the atheist and hedonist. Diogenes Laertius includes him among the adherents of the Academy. But he did not follow any particular philosophical creed. He imitated the caustic humour, the criticism of conventions, and the shamelessness of the Cynics, and preached the Cynic doctrine that happiness is achieved by adapting oneself to circumstances. He wandered from town to town lecturing for money. In his writings, which later influenced Roman satire, he used a highly eclectic style.

Sillogographi Graeci, ed. C. Wachsmuth, 71–7, Diogenes Laertius 4. 46–58. R. Heineze, *Di. Horatio Bionis imitator* (1889), and see under CYNICS. K. VON F.

BION (2) (fl. probably c. 100 B.C.), of Phlossa near Smyrna. Seventeen fragments have been preserved from his *Bucolica*. Some pieces seem complete, others to be excerpted from longer poems (? a *Hyacinthus*, a *Galatea*). The bucolic element is very slight. The theme of several pieces is playfully erotic, but in others Bion is sententious and in one fragment, where he dwells on the vanity of human effort, seems to strike a more personal note. Bion's style is easy and the language simple. Since the Renaissance he has also been credited with the *Lament for Adonis*, a highly coloured composition in ninety-eight hexameters, which some MSS. wrongly assign to Theocritus. While this has the same theme as Theocritus 15, 100–44 and in certain features (e.g. the refrain) recalls Theocritus 1, the lyrical treatment is more akin to that found in certain hymns of Callimachus, though Bion goes far beyond the latter in emotionalism. The chief argument for Bion's authorship of the *Lament for Adonis* is drawn from the references to the poem in the *Lament for Bion*, a work of some disciple of his, not, as some MSS. assert, of Theocritus or Moschus. According to the *Lament for Bion* he spent most of his life in Sicily. The fragmentary *Epithalamium of Achilles and Deidameia*, an epyllion introduced by two bucolic interlocutors, has

also been assigned by some to Bion, but without real justification.

TEXTS A. S. F. Gow, *Bucolici Graeci* (1952), 153 ff., U. von Wilamowitz-Moellendorf, *Bucolici Graeci* (1910), 122, 130, 140, Ph. Legrand, *Bucoliques grecs* II (1927), 185 ff.

GENERAL LITERATURE G. Knaack, 'Bion (6)', in *PW* III, 481; Wilamowitz-Moellendorf, *Reden und Vorträge*, I (1925), 292 f.; Callarow, *Theocritus* (1946). E. A. B.

BIOTTUS (2nd c. B.C.), Greek comic poet, mentioned only in didascalie lists. His *Ποιητής* was produced in 168–167 B.C., followed later by his *Ἀγνοῶν* (*IG* II², 2323, 212 and 238). No fragments remain.

CAF III 366.

BIRDS, SACRED, see ANIMALS, SACRED; some further particulars are given here. One of the most noteworthy associations of a bird with a deity is that of the swan with Apollo (for material, see Sir D. A. W. Thompson, *Glossary of Greek Birds*² (1936), 180 ff., q.v. in general for legends concerning birds). It was a fixed ancient belief that it could sing, at least when dying, an idea perhaps founded on the cry of the Whooper Swan; certainly no other species makes any but a harsh noise. It was also the form taken by Zeus to approach Leda (refs. *ibid.* 183), and there are several stories of metamorphoses into swan-form; when Iphigeneia hopes to become one, *Carm.* 2. 20. q. ff., he means that he is to be recognized as a true poet, Apollo's singer. The connexion of the sparrow (*σπρουθός*) with Aphrodite, as Sappho, fr. 1. 10, is not unreasonably to be explained by its fertility and lustfulness; the dove (*περιστέρα*) is associated with her most probably because of her oriental connexions, it being the sacred bird of more than one Asianic mother-goddess (Atargatis, Lucian, *Syr. D.* 14; Ishtar and others). In the case of deities with pre-Hellenic connexions, the occasional bird-form which they assume (cf. ATHENA, § 1) may plausibly be associated with the epiphanies of Minoan divinities in that shape (see M. P. Nilsson, *Minoan-Mycenaean Religion*² (1950), 285 ff.); but some birds, e.g. Hermes' cock and Hera's peacock, are much later than their owners, being comparatively recent introductions into Greece. H. J. R.

BIRTHDAY (*γενέθλιος ἡμέρα*, *natalis*, sc. *dies*). The classical Greeks seem to have paid but little attention to the anniversary of their births. A child's birth was the occasion of congratulatory visits from friends and relations, and presents might be given to the child (Aesch. *Eum.* 7. 8), but this was not confined to the actual day of the birth, but was carried out when the child was first seen by the giver, hence the name *ἑτήρηια* for such presents (Callim. *Dian.* 74, there given to an infant three years old); the word also means a sacrifice made by the father on first seeing the child (Eur. *Ion* 1127). Another word was *γενέθλια*, also used both of the sacrifice (*ibid.* 653, 805) and of the gift (Hesych., s.v.). But there is no definite proof of the yearly recurrence of this or of the family festival which accompanied it (Plato, *Symp.* 203 b) earlier than the date (conjecturally late 4th c.) of the Greek original of Plautus, *Pseudolus*, in which much stress is laid on its being Ballio's birthday (165 ff.). The nearest approach is the fact that the days of the month associated with gods are interpreted as being their birthdays as early as Hesiod, *Op.* 771 (a passage doubtfully part of the original poem) and *Hymn. Hom. Merc.* 19; it may therefore have been the custom to have some kind of remembrance, monthly rather than yearly, of the birthdays of human beings.

In Hellenistic times birthdays were more observed, particularly in the case of kings and other great persons. One of the most familiar instances of this is found on the Rosetta stone (*OGI* 90. 46), where the Egyptian clergy

decree solemnities for 'the day on which the birthday feast of the King is held'. This may of course have been connected in other cases, as it certainly was in this one, with the divine or quasi-divine honours given them; we may compare the celebration after their deaths of the birthdays of distinguished men in and just before that period, as Aratus at Sicyon (Plut. *Arat.* 53) and the founders of various philosophical schools. These had in some cases been regularly heroized and in others received from their followers and successors in the schools something like heroic honours, analogous to those paid to the founder of a city or colony. But some royal personages themselves kept their own birthdays as feasts, analogous to but more splendid than those of ordinary individuals in Rome or a modern country; Cleopatra VII is an example, Plut. *Ant.* 73, where it is expressly noted that on a special occasion she refrained from making any display on her birthday. It is quite possible that the growing belief in the personal *daimon* has something to do with the increased importance of the birthday in the case of private individuals (e.g. *Anth. Pal.* 6. 227; the epigrammatist Crinagoras sends a friend a piece of plate for a birthday present); to celebrate the birthday was to celebrate the anniversary of the deity's first manifestation of his care. See, for the belief, Th. Hopfner, *Griechisch-ägyptischer Offenbarungszauber* I, § 117 ff.

In Rome certainly a like belief had a direct connexion with birthday ceremonies, which are testified to from Plautus onwards (supposing that not all his references are taken over from Greek models) and even for quite humble persons, as Verg. *Ecl.* 3. 76, where a slave is speaking. This was the universal cult of the *Genius* (q.v.), attested for birthdays by Tibullus (2. 2. 5); at a birthday sacrifice 'ipse suos *Genius* adsit usurus honores'. It was to him, then, that the ceremonial of the day was directed. Since in classical times he was precisely equivalent to the Greek personal *daimon*, it may be that Greek influence played a part, but certainly the Romans celebrated not only private birthdays and those of Emperors but also the *natales* of cities and all manner of institutions, since every one of them had its *genius*. The *natalis* of a temple, however, is presumably an annual honour paid to its god.

W. Schmidt, *Geburtstag Altentum* (1908), and in *PW* VII, 135 ff. H. J. R.

BITHYNIA, a territory in north-west Asia Minor, originally confined to the peninsula of Chalcedon, but gradually extended eastward to Heraclea and Paphlagonia, southward to the Mysian Olympus, and westward to Mysia and the Propontis. Although much of the land is mountainous, the Sangarius river with its tributaries and the valleys that run back from the Propontis form fertile plains and provide relatively easy communications. It was a well-watered region producing good timber, excellent pasturage, and all manner of fruits and grains, possessing fine quarries of marble, and good harbours, and crossed by the chief roads to the Anatolian plateau and to Pontus.

The Bithynians were of Thracian origin, and long kept their tribal identity among the peoples about them. They warred constantly with the Greek colonies on the coast, preserved a measure of autonomy under local dynasts during the Persian regime, and in 298/7 B.C. founded a dynasty of Thracian stock, beginning with King Zipoetes. By a combination of aggressive policies and judicious alliances (especially with the Galatians, whom they invited into Asia in 278/7), the Bithynian kings protected themselves against the Seleucids and their rival Heraclea (q.v. 3) and extended their power to Inner Paphlagonia, to the valleys of Nicaea and Prusa, and finally to the cities of the coast. They were active

founders of cities, especially Nicomedes I and II and Prusias I, fostered commerce, to which the tribesmen had previously been inhospitable, and showed an interest in Greek culture. Wars with Pergamum in the second century lost Prusias I and II some territory, but otherwise changes were slight until in 75/74 Nicomedes IV bequeathed his kingdom to Rome (see NICOMEDES I-IV; PRUSIAS I-II).

In organizing the province of Bithynia-and-Pontus Pompey apparently divided all the land among the cities for convenience in maintaining order and collecting taxes. Nicaea, for instance, apparently had a common boundary with Dorylaeum. In the early Empire Bithynia-and-Pontus was at first a senatorial province, but the importance of the great highway to the eastern frontier and of maritime connexions with the Euxine coasts led imperial procurators to assume more than their regular authority. Special legates were sent under Trajan and Hadrian (Pliny and Julius Severus), and finally Marcus Aurelius made it imperial. In the time of Pliny and Dio Chrysostom peculation by magistrates, unwise and extravagant building, bitter rivalries between cities, and social discontent within individual cities created a bad situation, which they did their best to remedy.

Strabo 12. 563. 6. Th. Reinach, *Trois royaumes de l'Asie mineure* (1888), M. I. Rostovtzeff, *B.S.A.* 1918, 1 ff., Jones, *Cities E. Rom. Prov.* 148 ff.; Magie, *Rom. Rule Asia Min.*, 302 ff. and index; G. Vitucci, *Il regno di Bitinia* (1953). T. R. S. II.

BITON (*Βίτων*) (3rd or 2nd c. B.C.), the author of a small extant work on siege-engines (*Κατασκευαὶ πολεμικῶν ὀργάνων καὶ καταπαλτικῶν*) and of a lost work on optics.

Ed. A. Rehm and F. Schramm, *Abh. d. Bayer. Akad. d. Wissensch.*, Phil.-hist. Abt., N.F. II, 1929.

BLAESUS (1) of Capreae (? 2nd or 1st c. B.C.), author of *σπουδαγέλοια* (perhaps akin to Menippus' satires).

Kaibel, *CGF* 191.

BLAESUS (2), **QUINTUS JUNIUS** (*PW* 41), probably a *novus homo* of municipal origin, was *consul suffectus* in A.D. 10. As legate of Pannonia he failed to break the mutiny which Tiberius' son Drusus finally reduced (14). When proconsul of Africa in 21, his command was protracted and he defeated Tacfarinas (q.v.). Tiberius allowed his troops to hail him *imperator*, the last time a private citizen received this honour. He was uncle of Sejanus (q.v.), whose fall involved his own fate.

II H. S.

BLOSSIUS (*PW* 1), **GAIUS**, of Cumae, descendant of a prominent anti-Roman family of Hannibalic Capua and a student of Stoic philosophy, was a friend of Tiberius Gracchus (q.v. 3), after whose death he joined Aristonicus (q.v. 1). After Aristonicus' defeat he killed himself. His philosophical influence on both these men is difficult to gauge.

D. R. Dudley, *JRS* 1941, 94 ff.

E. N.

BOCCHUS, king of Mauretania and father-in-law of Jugurtha (q.v.). His offer of alliance at the beginning of the Jugurthine War was rejected by Rome. In the later stages of the war he joined Jugurtha, at the price of the cession of western Numidia. With Jugurtha, he twice nearly defeated Marius; but, impressed by Roman strength, he was finally induced by Sulla to surrender Jugurtha and became a 'friend of the Roman People', even retaining part of Numidia. The surrender of Jugurtha to Sulla (with whom Bocchus maintained his connexion) was depicted on Sulla's signet ring and is shown on a coin of his son Faustus Sulla (Sydenham, *CRR*, no. 879). A second Bocchus, together with a Bogud (q.v.), held the throne of Mauretania at the time

of the Civil War between Caesar and Pompey. For their coinage, see J. Mazard, *Corpus Nummorum Numidiae Mauretaniaeque* (1955), 61 ff. E. B.

BOEOTIA, a district of central Greece, bordering on Attica, and of similar extent. Its heart consisted of the plains of Orchomenus and Thebes, which were good wheat-land and bred horses (for the flooding of the northern plain, see ORCHOMENUS, COPALS). The south is rough and mountainous, with good harbours on the Corinthian Gulf, but not easy of access; the north is hill country with a narrow seaboard; the east rolling country watered by the Asopus. The south-east frontier is formed by Cithaeron and Parnes, the north-west, with Phocis and Locris, is not clearly marked.

The earliest prehistory from the Neolithic culture onwards is illustrated by the renewed excavations at Eutresis (Neolithic, Early Helladic). Bronze Age (Helladic) Boeotia was very important, as is clear from saga and from archaeological remains; see s.v. COPALS, ORCHOMENUS, THEBES 1. The region was earlier called the 'Cadmean' land, which was changed when the Boeotians arrived from Thessaly, some before and some after the Trojan War (Thuc. i. 12). The term 'Cadmean' seems to be the equivalent of Mycenaean or pre-Dorian. This substratum appears to have left its mark on the Boeotian dialect which is most closely related to Thessalian and Aeolic, but has west Greek (Dorian?) elements, and, in the south-east, traces akin to Arcadian. These non-Dorian elements may well be explained as survivals of Mycenaean (Old Achaean) Greek. Orchomenus and the Oropus district were relatively late additions to the Boeotian territory. Twenty-nine small Boeotian towns are named in the Homeric Catalogue. Some disappeared, others were absorbed by more powerful neighbours; in classical times the independent cities numbered about a dozen. The importance of Boeotia in Greek history varied with the degree of Theban control (see THEBES 1), though some of her rivals, Thespieae and Plataea, had more attractive histories. The Boeotians were, on the whole, a self-contained agricultural people who did not share in the overseas expansion of Greece. The proverb *Βοιωτῶν ὄν* referred to their riches, and the slowness with which the Athenians taunted them. It is preserved by Pindar, the greatest of a number of Boeotian poets from Hesiod downwards who give it the lie. The Boeotian contribution to ancient music was also important. Artistically Boeotia was always backward.

For the Boeotian Confederacy see FEDERAL STATES and THEBES (1).

BOEOTIA, CULTS AND LEGENDS. Stories of the earliest population are scanty and poor (see Paus. 9. 1. 1 and 2; cf. Cauer in *PW* iii. 640-2). We may instance the shadowy figure of Aon, eponym of the Aones (Steph. Byz., s.v.; schol. Stat. *Theb.* 1. 33), son of Poseidon. Most of the tradition concerning Orchomenus is lost (cf. MINYAS) and the bulk of the surviving tales are Theban (see ADRASTUS, AMPHIARAUS, AMPHION, ANTIOPUS, CADMUS, ETEOCLES, OEDIPUS). Much of what we know is owing to Pausanias. Cf. HERACLES.

Of cults, several are remarkable. Plataea had the Daedala, apparently a sacred marriage (see MARRIAGE, SACRED), combined with a remarkable fire-ceremony (Paus. 9. 3. 3 ff., cf. Plutarch, vol. vii, pp. 43-50 Bernardakis). At Orchomenus existed the ancient cult of the Charites (Pind. *Ol.* 14. 4; Paus. 9. 38. 1, cf. Farnell, *Cults* v. 428). On Helicon was the shrine of the Muses,

said to have been founded by Otus and Ephialtes (Paus. 29. 1 ff., Farnell, *ibid.* 435). Thespieae had the cult of Eros (Paus. 27. 1), and a virgin priestess of Heracles (*ibid.* 6); Lebadea the oracle of Trophonius (q.v.). At Chaeronea a stick said to be the sceptre of Agamemnon was the chief deity (Paus. 40. 11, see de Visser, *Die nicht menschengestaltigen Götter* (1903), 112). At Thebes (q.v. 1) itself may be mentioned the cult of Apollo *Ἰσώδιος*, the very ancient worship of Aphrodite, the so-called tomb of Amphion and Zethus (qq.v.) and the fertility-magic attaching, Athena's title of Onca and the imported cult of Hector (Paus. 11. 1 and 2; 16. 3; 17. 4; 18. 5), also the remarkable sanctuary of the Cabiri (q.v.) (*ibid.* 25. 5; see Kern in *PW* x. 1437 ff.). For a list of Boeotian cults, see Nilsson, *Feste*, topographical index under 'Boöten'.

For contacts with Arcadian myths and cults, see V. Bérard, *Les Cultes arcadiens* (1891), index under 'Boéotie'. H. J. R.

BOETHIUS, ANICIUS MANIUS SEVERINUS (c. A.D. 480–524), of high birth, son of a consul, himself became consul in 510. Theodoric, the Ostrogoth, who took an interest in learning, made him *magister officiorum*, and showed him great favour until he fell under the suspicion of treason, was imprisoned and finally put to death. In prison he wrote his famous work *De Consolatione Philosophiae*, conceived as a dialogue between himself and Philosophy, a mixture of prose and verse, largely Neoplatonic in content, using Greek sources, but showing the influence of Macrobius' commentary on the *Somnium Scipionis*, and, as regards the dialogue form, of Fulgentius (q.v.). Boethius was an accomplished Hellenist. His ambition was to provide a Latin translation of Aristotle, and then of Plato, with reconciling commentaries. He drew, for his commentaries, upon Alexandrian sources, and, of the task he had set before him, he left a translation of the *Organon*; commentaries, one on the *Categoriae*, two on the *De Interpretatione*; a translation and two commentaries on Porphyry's *Isagoge*, a commentary on Cicero's *Topica*, besides logical works of his own. He wrote also on music, geometry, and arithmetic. It is now agreed that Boethius is the author of five theological treatises that have come down under his name.

WORKS. Migne, *PL*, lxxi and lxxv, *De Consolatione*, ed. L. Bieler (1957; with bibliography), *Theological Tractates and the Consolation of Philosophy*, ed. H. E. Stewart and E. K. Rand (Loeb), also R. Pappet (1871), *De Arithmetica and De Musica*, G. Friedlein (1867).

COMMENTARIES. On *De Interpretatione*, ed. C. Meiser (1877–80), on *Isagoge*, ed. S. Brandt, *CSEL* xxxviii, on *Prima Analytica* (probably by Boethius), L. Minio-Paluello, *THS* 1957.

H. M. Barrett, *Boethius* (1949); H. R. Patch, *The Tradition of Boethius* (1935), L. Minio-Paluello in *Mediaeval and Renaissance Studies* i. 2, J. Shiel, *ibid.* iv, P. Courcelle, *La Consolation de philosophie dans la tradition littéraire: antécédents et postérité de Boèce* (1967); recent bibliography in *Clavis Patrum Latinorum*, ed. E. Dekker (1961). F. J. E. R.

BOETHUS (1) (2nd c. B.C.), sculptor and metal-worker, son of Athenaiion, of Chalcidion. Works (dated): (a) signature of dedication made by Boethus to Athena of Lindus about 180 B.C. in gratitude for the office of proxenus; (b) signature of statue of Antiochus IV (175–164 B.C.) in Delos (undated); (c) signed bronze archaizing herm, found in the sea near Mahdia, probably support for winged boy also found there (Winter, *KB* 310. 1). No other work can be certainly associated with this Boethus.

A. Rumpf, *JÖAI* 1952, 86; Lippold, *Griech. Plastik*, 352.

I. B. L. W.

BOETHUS (2) (2nd c. B.C.), sculptor, son of Apollodorus, of Carthage. Known from signature in Ephesus and Pausanias' description of gilded boy in Heraeum at Olympia (Overbeck, 1596).

BOETHUS (3) of Sidon (fl. 2nd c. B.C.), pupil of Diogenes (q.v. 3) of Babylon, was an unorthodox member

of the Stoic school. In distinction from Chrysippus' monistic psychology he propounded a dualistic one, in which the rational faculties *νοῦς* and *ἐπιστήμη* were p-n posed to the irrational, *ὄρεξις* and *αἰσθησις*. A sharp dualism appears in his derivation of soul from air and fire, of which the latter was probably regarded as the basis of reason. Similarly he rejected Pantheism and divided the universe into a part which was divine—the sphere of the fixed stars—and a part which was not. His divergences from orthodox Stoicism seem to be due to Aristotelian influence. He devoted himself specially to the study of astronomy and meteorology. Works: a commentary on Aratus' *Phaenomena*, *Περὶ φύσεως, Περὶ ἐμπνεύσεως*.

Testimonia in von Arnim, *STF* iii. 265 7, M. Pohlenz, *Die Stoa* (1955). W. D. R.

BOETHUS (4) of Sidon, Peripatetic philosopher of the time of Augustus, a pupil of Andronicus of Rhodes and probably also of Xenarchus. After Andronicus' death he seems to have been head of the school at Athens. His commentaries on Aristotle, now lost, are referred to by later Greek commentators; Simplicius quotes him on the logic of the early Academy, while challenging his account of Aristotle's logic. W. D. R.

BOGUD (*Bogud, Bogus, Báyos, Βογούας*), perhaps son of Bocchus I and brother of Bocchus II (qq.v.), with whom he shared the kingdom of Mauretania, taking the western half (the later Tingitana). He became Caesar's ally in 49 B.C.; in 48 he helped Q. Cassius (q.v. 5) in Spain; in 46 he was attacked by Cn. Pompeius (q.v. 5); in 45 he gave decisive assistance to Caesar at Munda. Later, perhaps in 41, at the suggestion of L. Antonius (q.v. 6), he attacked Octavian's lieutenant in Spain, but was forced to return by a revolt of his subjects and presently (38?) lost his kingdom to Bocchus, who aided the rebels. Bogud now took service with Antony. He fell at Methone in the Peloponnese fighting against Agrippa (31). His wife Eunoe was said to have had a love-affair with Caesar. T. J. C.

BOII, Gauls who entered Italy c. 400 B.C. (reputedly via the Great St. Bernard) and established themselves between the Po and the Apennines, ousting Etruscans and Umbrians. Their chief city was Bononia. Their Iron Age civilization was not altogether primitive. Defeated by Rome c. 282 B.C., they signed a 45-year truce. They were conquered again at Telamon (q.v. 2) (225) and submitted until Hannibal's arrival encouraged them anew; with Ligurian and other allies they continued fighting Rome until they were subjugated, massacred, and mulcted of half their territory in 191. Military roads and colonies (Bononia, Parma, Mutina, qq.v.) consolidated the Roman victory and the Boii disappeared from Italy through either expulsion or assimilation (Livy 5. 35; 21–35; Polyb. 2. 17 f.; 3). Boii are also recorded in Gaul, where they supported the Helvetii, were defeated at Bibracte (58 B.C.), and settled on Aeduan territory (Caes. *BGall.* 1. 5. 28; 7. 9). Bohemia, which preserves their name, likewise contained Boii from early times until their extermination by Burebistas the Dacian c. 50 B.C.

The relationship of these various Boii is commonly but somewhat unconvincingly explained as follows (Strabo 5. 213): large numbers left the parent Gallic stock, entered Italy, were expelled thence after 191 and settled in Bohemia.

For bibliography see CISALPINE GAUL.

E. T. S.

BOIO, an ancient Delphic priestess, to whom was attributed an *'Opiθoyoria* (description of transformations into birds) of unknown date.

Powell, *Coll. Alex.* 23–4.

BOLA (or **BOLAE**), town in Latium, which often changed hands between Romans and Aequi (q.v.) in the fifth century B.C. It disappears from history after 389 B.C. (Livy 6. 2. 14; Diod. 14. 117. 4). Its site is unknown, but was evidently somewhere near Algidus (q.v.). E. T. S.

BOLANUS, VETIUS (PW 25) commanded a legion under Corbulo in Armenia (A.D. 62), was *cos. suff.* about 66, and was sent by Vitellius as legate of Britain in 69. In that year, with his army depleted by the Civil Wars, he was necessarily inactive; but before his recall in 71 he had probably conducted important operations in Brigantia, perhaps penetrating into Scotland. He was proconsul of Asia, and raised to the patriciate perhaps by Vespasian.

Statius, *Silo* 5. 2 E Birley, *Roman Britain and the Roman Army* (1953), 10 ff., 46. G. E. F. C.

BOLUS of Mendes (Egypt), contemporary of Callimachus (3rd c. B.C.), a writer on magic or pharmacology (*Suda*, s.v.). A work of his called *On Sympathy and Antipathy* was somehow attached to Democritus' name. The same work or another is a *materia medica* divided into artificial and natural (*Χειρόμνητα* and *Φυσικά διναμικά*). He also wrote *Marvels* (*Θαυμάσια*). Bolus was one of the first in a considerable tradition of Paradoxographers (q.v.). Only fragments of his works survive.

FRAGMENTS. Diels-Kranz, *Vorsokr.* 68 B 300; *FGH*, 263. K. Ziegler, *PW*, s.v. Paradoxographoi, Max Wellmann, *Abh. d. Berl. Ak.* 1921, 4, 7 ff., 1928, 7, 9 ff.; J. A. Festugière, *La Révélation d'Hermès Trismégiste* 1 (1944), 107 ff., 222 ff., 412; J. H. Wasmink, *RAC* II 502 ff.; W. Horkert, 'Hellen Pseudopythagorica', *Philol.* 1961, 232 ff. D. J. F.

BOMILCAR (PW 5) in 111 B.C., while Jugurtha (q.v.) was in Rome under safe-conduct, murdered Massiva, a Numidian pretender, for him. He fought at the battle of the Muthul, but then tried to assassinate Jugurtha or surrender him to Metellus (q.v. 6). He was apprehended and killed. E. B.

BONA DEA, a Roman goddess worshipped exclusively by women. It has been conjectured that her name is simply a literal translation of Agathe Theos, a Greek goddess related to Hygieia (q.v.) and that her worship was introduced in the third century B.C. (Latte, *RR* 228 ff.). Her proper name was allegedly Fauna, daughter (Varro ap. Macrobius, *Sat.* 1. 12. 27) or wife (Sex. Clodius ap. Arn. *Adv. Nat.* 5, 190, 2 Reifferscheid, cf. Plut. *Quaest. Rom.* 20) of Faunus (q.v.). Her official nocturnal ceremonial was held yearly at the house of the chief magistrate, under the leadership of his wife and with the assistance of the Vestals (Cic. *Har. Resp.* 37; Plut. *Caes.* 9). The room was decorated with vine-branches and other plants and flowers; myrtle, however, was excluded. Wine was brought in, but called milk and the covered jar containing it a honey-pot (Macrobius, *ibid.* 25, and the other passages cited). It is not known how much of this was native and how much due to the superimposed ritual of Damia (cf. ALEXANDRIA; Festus, 60, 1 ff. Lindsay). The sacrifice to Bona Dea was a sow (Macrobius, *ibid.* 23), and in imperial times her temple stood on the Aventine below the *saxum*, hence her title Subsaxana (Platner-Ashby, 85). H. J. R.; H. W. P.

BONIFACIUS, Roman general (d. A.D. 432), served in Africa, but when recalled to Italy refused to go and was widely believed to have invited the Vandals to cross from Spain in 429 to assist him against the central government. Unable to rid the country of his allies, he was reconciled to the government and died of a wound received when trying to suppress Aetius. E. A. T.

BONNA, modern *Bonn*. Auxiliary troops were first stationed at Bonna c. 20/10 B.C. and remained in garrison there into the third century. The legionary fortress dates from the second quarter of the first century A.D. and was rebuilt several times. It was in use in the fourth century, very probably still by a military garrison. As well as the *canabae* there was also a separate civil settlement.

H. v. 'etrikovits, *Das römische Rheinland* (1960), 43 ff., 60, etc. P. S.

BONONIA (1) (modern *Bologna*), in Cisalpine Gaul, has always been a place of consequence. Villanovan settlements occupied the site from c. 1050 until 500 B.C. when Etruscans founded Felsina there. Felsina (q.v.) became the chief Etruscan city north of the Apennines (Pliny, *IIN* 3. 115), but fell first to the Boii (q.v.), then to Rome (196 B.C.), and acquired the name Bononia (Livy 33. 37). Subsequently as Latin colony, *municipium*, imperial *colonia*, or part of the Ravenna exarchate, Bononia was always important (Livy 37. 57; Festus, 155 L.; Tac. *Ann.* 12. 58; Procop. *Goth.* 3. 11). Antony, Octavian, and Lepidus met near here to establish the Second Triumvirate (*CAH* x. 19). As a centre of the north Italian road system (Strabo 5. 216 f.), Bononia flourished and was able to survive a conflagration in A.D. 53 and Alaric's attack in 410 (Tac. loc. cit.; Zosim. 6. 10).

(2), see GESORIACUM.

For BONONIA (1) see the bibliography under CISALPINE GAUL, and A. Grenier, *Hologne, Villanovienne et Etrusque* (1912); A. Ducati, *Storia di Bologna* (1928). E. T. S.

BONOSUS (3rd c. A.D.), son of a Gallic mother, but of British descent, was commander of the Roman fleet on the Rhine. Losing a squadron through carelessness to the Germans and fearing punishment, Bonosus revolted. He was crushed by Probus after a bitter struggle (A.D. 280). H. M.

BONUS EVENTUS, personified 'good result', originally good harvest (Varro, *Rust.* 1. 1. 6), then success in general. He had a temple on the Campus Martius (Amm. Marc. 29. 6. 19), and was a popular deity, to judge by the many inscriptional dedications to him.

Wissowa, *RE* 267.

II J. R.

BOOKS, GREEK AND LATIN. There is ample evidence not only of the use of writing in the Near East long before the earliest Greek literature, but also of the use of Greek in Crete and on the mainland for writing on clay tablets in the Bronze Age. But there is as yet no evidence that writing at this time was used for literary purposes in Greek, nor do we know what material was used later when the Homeric and Hesiodic works were written down. We may assume that it was some form of skin; its use was widespread throughout antiquity and Herodotus (5. 58) records that the Ionians, at a time when papyrus was unavailable, had long used skins. The antiquity of this practice is implied by the use among the Ionians of *διφθέρα* for a papyrus roll, just as *βίβλος* suggests that papyrus was first imported into Greece from the Phoenician town of Byblos. Thus while the *Iliad* may first have been recorded on skin, for Herodotus papyrus was and had been for long the normal writing-material and we may safely assume that it was available at least from the seventh century onwards. It was the dominant writing-material throughout antiquity, although the wooden tablet (which is of comparable antiquity, cf. Hom. *Il.* 6. 169) and skins or parchment were always in use.

Papyrus, as a writing-material, was made from the pith of a water-plant (*Cyperus papyrus*) which in antiquity grew plentifully in the Nile (Pliny, *IIN* 13. 68 ff.). The

pith was cut into thin strips, which were laid down in two layers, in one of which the fibres were laid horizontally, and in the other vertically. The two layers were fastened together by water and pressure, and the surface polished. The size of the sheets was governed by the length to which the strips could be cut without weakness, the widest being the best. Specimens are known as broad as 15 inches, but normal measurements from Greek times range from about 9 inches downwards. In height a roll might be as much as 12 or 13 inches (one Egyptian papyrus reaches 19 inches); but 8 or 9 inches is a more normal size for literary rolls, ranging down to 5 inches for a book of poetry, or even 2 inches for a booklet of epigrams. In the Roman market names were given to various qualities according to their size; but these categories cannot be identified in the extant specimens.

The sheets thus formed were glued together (*κολλήματα*) to form a roll; the join between the sheets is all but invisible in rolls of good quality and did not obstruct the pen. The commercial unit was the roll (*χάρτης*) rather than the sheet; Pliny states that a roll never consisted of more than twenty sheets, i.e. was not more than about 15 feet in length, but we know from documents of rolls of fifty sheets, and no doubt rolls were made of different length for different purposes. On this as on other topics concerned with books Pliny's statements need to be treated with reserve. For practical use the roll could be shortened (and may also have been sold in sections), or lengthened by attaching additional sheets, though this would hardly have been done with expensive rolls designed for literary MSS. At least from the Alexandrian age onwards a roll of about 30-35 feet was the norm for Greek and Latin literature, though some longer ones are known. With writing of average size this would suffice for a book of Thucydides. A single roll would often comprise two or more shorter works, e.g. some of the Homeric books. This approximate standardization of the length of the roll is probably to be credited to the Alexandrian Library; it is noticeable that in later Hellenistic and Roman times the average length of the roll supplied the writer, e.g. Diodorus, with the natural divisions for his work.

The alternative material to papyrus throughout antiquity, if generally regarded as inferior, was vellum or (as it was later known) parchment. This was made from the skins of cattle, sheep, and goats, the skins being washed, scraped to remove the hair, smoothed with pumice, and dressed with chalk. There is a slight difference between the hair- and the flesh-sides, the former tending to be darker and retaining the ink better. Pliny's statement (*HN* 13. 17) that vellum was invented at Pergamum when Ptolemy Epiphanes (205-182 B.C.) placed an embargo on the export of papyrus in order to hamper the growth of the library of his rival bibliophile Eumenes II of Pergamum (197-159 B.C.) can only mean, since skins had been used for writing for many centuries, that some special refinement in their manufacture was introduced there; to this the later Greek use of *περγαμηνή* gives some support. The extent to which vellum or parchment (there is no regularly observed distinction between the terms) was used in the ancient world is probably disguised by the fact that almost all our material evidence for ancient books comes from Egypt, where until the fourth century A.D. it would have been perverse to use anything but papyrus. Documents on vellum have been found at Dura on the Euphrates dating from the early second century B.C.; parchment rolls with texts of the Greek translation of the O.T. have been found at Qumran and Murabba'at, while a parchment roll of Xenophon's *Symposium* was excavated at Antinopolis in Egypt (perhaps an import).

Long after poems and other literary works were

written down as a matter of course, the normal method of publication was oral. Books were essentially *aides-mémoire* for the author or performer, not a primary means of communication to an audience. This view of the book as a *hypomnema* or substitute for recital persists until Plato, if not later. Only in the fifth century B.C. and at Athens do we find allusions to the circulation and collection of books and to the beginnings of a book-trade: Eupolis (fr. 304, Kock) mentions the place 'where books are for sale' and Plato (*Apol.* 26 d) makes Socrates say that a copy of Anaxagoras could be bought from the orchestra (presumably in the agora) for a drachma or less. But though Thucydides clearly writes for the serious student, Aristophanes can suggest that an interest in books was something eccentric (see J. D. Denniston, *CQ* 1927, 117), and in Xenophon it is an indication of the size of a private library that it included a complete Homer (*Mem.* 4. 2. 10). None the less, we learn from him that by the end of the century books were an article of export from Athens to the Black Sea (*Anab.* 7. 5. 14).

In the creation of the book in the modern sense it may be surmised that the principal factors were the Sophists, the development of prose, particularly forensic prose, and the popularity of tragedy with the demand for repeat performances and reading texts that it created.

There is little doubt that books and the book-trade developed fast in the fourth century. Isocrates was the first author whom we know to have written to be read rather than recited; we may note, however, that throughout antiquity reading always meant reading aloud. From a technical point of view the development was haphazard; it is likely that rolls might be either very short or very long, though hardly as large as Egyptian ceremonial rolls exceeding 100 feet. Little help was given to the reader and probably little attention was paid to calligraphy (the earliest allusion is in Plato: *Laus* 810 b). This at any rate is what the 'Timotheus papyrus, the earliest literary papyrus to be found in Egypt dating to the second half of the fourth century B.C., would suggest, and on the first point its evidence is supported by that of the nearly contemporary Derveni papyrus recently found near Salonika. With the late fourth century B.C. the evidence of the papyri first becomes available, and continues without a break to the eighth century A.D. (see PAPYROLOGY, GREEK).

No doubt the Alexandrian Library should also be credited with certain other improvements in the technique of the book besides that of standardizing the length of the roll that sharply separate the earlier and clumsy literary papyri from those of the middle third century B.C. onwards. In the earliest texts verse, except for iambs and hexameters, is not written metrically; the minimum of help is given the reader in dramatic texts; lines from one column almost run into those in the next; punctuation and spacing is even more occasional and erratic than it is later. After the Alexandrian reform, a standard literary text would have a column width of not less than 2 and not more than 4 inches, including the margin; for poetry the width was of course dictated by the metre and in a sumptuous Homer might reach nearly 10 inches, although 5 inches would be normal. The writing was arranged in columns (*σείδες* or *paginae*) which do not correspond with the *κολλήματα*. The number of lines varies with the height of the column and the size of the writing; but numbers less than 25 or more than 45 are exceptional. Neither in the roll nor later in the codex, where reference was easy, as it could never have been with the roll, was the ancient scribe concerned to keep the same number of lines to a column. The number of letters to a line similarly varied. There were fixed rules governing the division of words at the end of a line and to meet these the outer (right-hand)

edge of the column was usually uneven, though later the size of letters was adjusted to give a regular edge. About 18 to 25 letters to a line is normal; less than 16 is very exceptional. Conjectures based on the number of lines to a column or of letters in a line are therefore precarious.

It should perhaps be emphasized that the papyri have presented specimens of very different types of book; the school text, the amateur copy, the scholar's private text, the ordinary trade book, the *édition de luxe*. The quality of the text, as distinct from that of the script, is often inferior in the last-named category and Strabo's preference (13. 1. 54) on grounds of accuracy for the private copy is thus confirmed.

The writing on papyrus was normally on the side on which the fibres lay horizontally (*recto*), i.e. on the interior of the roll when folded, the side that was usually more highly polished; but frequently the other side (*verso*) of a document or literary text was subsequently utilized. Such copies were, however, for private use or, possibly, represent a form of cheap production for the market. Very occasionally the text on the *recto* is continued on the *verso*; such rolls are known as *opisthograph*, and references to them occur in ancient authors, as marks either of the poverty of the writer or the excess of his matter (Lucian, *Vit. Auct.* 9; Ezek. ii. 10; Pliny, *Ep.* 3. 5. 17; Juv. 1. 6). They were for private use, not for sale. Since the writing on the *recto* almost invariably precedes that on the *verso* (there are a few exceptions in the documents of the third century B.C. and in the late Byzantine Age), valuable evidence for dating may sometimes be obtained, especially when the *verso* of a literary roll has been used for a dated document.

The margins between columns are generally small, but those on the top and bottom of the roll may extend to 1½ or 2 inches, or even more. Here lines or words accidentally omitted are sometimes written, generally with an arrow to indicate the place in which they should be inserted. Deletions are made by a stroke of the pen or by placing dots above the words in question. An occasional note will be added in the margin but this is rarely, if ever, part of the original text; the commentaries that are found surrounding a text in Byzantine MSS. were invariably in classical times published as separate works (*ὑπομνήματα*). Occasionally, e.g. in MSS. of Homer, critical signs against the text refer to such commentaries.

Helps to the reader are strikingly rare in general, though they tend to increase in the Roman period as early Greek poetry became less readily intelligible. Words are not separated; enlarged initials are not used. Accents are found only in poetic texts, with negligible exceptions, and even here they are not systematically used. A rough breathing is sometimes inserted where misunderstanding might arise, and an apostrophe is sometimes placed between double consonants or after a final consonant in foreign, e.g. Semitic, words. Punctuation is uncertain and arbitrary: it takes the form either of a single point, generally about level with the top of the letter (there is no systematic use of high, medial, and low points), or of leaving a short space at the end of a clause. A short stroke (*παράγραφος*) was placed, from the fourth century B.C. on, below the beginning of a line in which a break occurs (often also indicated by spacing); the same symbol is used in drama to indicate a change of speaker. In the Roman period it is usual for the names of the characters to be written in the margin. Books were often illustrated; the few illustrations that survive are mostly of scientific or mathematical works, but there is one to a poem on the labours of Hercules and a few (two in colour) to works of prose literature. Titles were placed at the end of the roll, regarded as the part least liable to danger. Little informa-

tion about the author and title of the work was given, though occasionally the number of lines, reckoned on a conventional system, was added. In the Herodas MS. titles of individual poems were prefixed by the original scribe. The normal means of identifying the contents of a roll was a label (*τίτλος*, *titulus*) of papyrus or vellum, which projected from it as it lay on a shelf or in a box; one that has survived has the words *Πίνδαρος ὁλος*, but there was no MS. attached. When not in use, rolls were stored in boxes or buckets (*τεῦχος*, *capsa*, *capsilla*, *scrinium*) or laid on shelves or in pigeon-holes (*nidi*). Catullus (22. 4 ff.) gives a detailed description of an elaborate roll. It was furnished with rollers (of which no specimen has been found in Egypt), the projecting knobs of which might be made ornamental in colour or material. The roll itself might be enclosed in a vellum cover (*διϕθέρα*, *paemula*) which could be coloured and fastened with coloured strings, the papyrus soaked in cedar-oil (Horace, *Ars P.* 332), and the label coloured.

Just as Latin literature depends very largely on Greek, so Latin books in the classical period in all essentials closely resembled their Greek models. The word *liber* looks back to a time when writings were inscribed on bark (as they were in other parts of the world); for the archives written on linen (*libri lintei*) in the time of the kings Livy quotes no authority earlier than the second century B.C. Thus the main vehicle of Latin literature was the papyrus roll (*charta*, *volumen*). One divergence from Greek practice seems to have been that in Latin MSS. words were divided, usually by points, a system we find in one of the oldest surviving Latin literary texts, the *Carmen de Bello Actuaco* from Herculaneum, and this was only given up under Greek influence in the second century A.D. Very few fragments of works of Latin literature have survived compared with Greek, if only because our principal source is Egypt where there was little reason for studying Latin (see PAPYROLOGY, LATIN); but by way of compensation Latin literature is much richer than Greek in information about books and the book-trade. From the first century B.C. on we hear of professional booksellers (*librari*, the word also means copyist; later *bibliopola*) with their staffs of copyists; many of Cicero's own works were published by Atticus, who kept a large number of slaves trained in all the operations of book-production—including that of making last-minute corrections at the author's request. In imperial times references in literature are frequent; book-shops were mainly to be found in the Argiletum with advertisements of their wares suspended on the columns of the porticos (Mart. 1. 117. 9 f.). There are occasional indications of the price of books; Book 13 of Martial was sold by the bookseller Tryphon for four sesterces (13. 3. 2) while a handsome copy of another of his books was sold by Atrectus for twenty sesterces (1. 117. 17). There was no copyright in antiquity and the author never gained directly from the sale of his books; equally the publisher or bookseller was in no position to protect his trade against anyone who cared to make a copy. We hear in Aulus Gellius (18. 1. 11) of second-hand book-stalls at Brundisium, and we know from other authors that there was a considerable trade in old and rare books, sometimes as much as 200 or 300 years old, sometimes alleged by the seller to be much older (Pliny, *HN* 13. 83, 86; Quint. 9. 4. 39; Lucian, *Adv. Indoct.* 102).

An important innovation that was probably Roman in origin was the development of the tablet. The tablet itself is as old as Homer; made normally of wood, either whitened to take ink or covered with wax on which writing was inscribed with a stylus, it consists usually of two or more folds fastened together with thongs and if necessary secured with a seal. One specimen from Egypt

has no less than nine leaves or eighteen sides. They were very generally used for private correspondence, legal documents, business purposes, and by authors for their rough notes or first drafts. It seems to have been in Rome first that parchment was substituted for wood; *membranæ* is a technical term for the vellum notebook (Hor. Sat. 2. 3. 2, cf. 2 Tim. iv. 13), for which there is no Greek equivalent. Quintilian (10. 3. 31) refers to them as used by students for their lecture-notes, and there is no doubt that they were the prototype of the codex, though used at first for what may be called sub-literary texts or purposes. We first hear of their use for classical literature in Martial, who in his descriptions of gifts at the Saturnalia includes a number of books (14. 183-95), some of them specifically said to be *in membranæ*. They were pocket-editions, and unless they were extracts or epitomes must have been cheap omnibus editions. But pretty clearly this experiment by an enterprising publisher was a failure; what gave rise to the modern form of book was the adoption of the notebook by the Christian Church for the Scriptures, it would seem from the first century onwards. It originated most probably in the Church of Rome; certainly from the early second century onwards almost all the biblical texts and all the N.T. texts with no significant exceptions found in Egypt are in codex-form, the papyrus codex being probably an adaptation of the parchment notebook. For non-biblical texts as for pagan literature the roll continued to be more commonly used than the codex down to the fourth century. Both the greater capacity and the ease of reference it afforded must have commended the codex to the Church. Outside Egypt the vellum notebook may have encouraged the use of vellum rather than papyrus for the codex, for which it offered certain advantages; but either material could be and was used in either form, and we find papyrus codices still being manufactured occasionally in the sixth century.

The papyrus codex was formed by taking a sheet twice the width of the page desired and folding it once vertically, thus producing a quire of two leaves. By similarly treating a number of sheets simultaneously, a quire could be made of any desired size. Specimens exist from quires of two leaves to quires of eighteen leaves, but these seem to have been early experiments and eventually it was found convenient to form quires of ten or twelve leaves. All the later codices are of this type. Care was taken in the arrangement of the leaves, to see that on facing pages recto faced recto and verso verso. When complete the codex, whether papyrus or parchment, was often bound in leather and secured with strings; examples are known from the late third century onwards. Most extant papyrus codices have only one column to a page, but there are some examples with two; here perhaps the arrangement of columns in the roll from which the codex is copied is deliberately preserved. Most papyrus codices vary in measurement between 12 inches by 8 inches and 8 inches by 7 inches, but there is considerable variety in format which has no significance for dating.

By the fourth century A.D. the victory of the codex over the roll was unmistakable; that of parchment over papyrus hardly less so. The reason for the first, apart from the enormous prestige that its use for the Scriptures gave it, may be found in the greater capacity and solidity of the codex at a time when books were increasingly used for reference; that for the latter may probably be found quite as much in the economic decay of Egypt and in the decline of international trade as in any inherent merits in the material. Constantine ordered fifty copies of the Scriptures for the churches in Constantinople, all to be written on vellum; and at about the same time St. Jerome records that the papyrus MSS. in the library

of Caesarea, having become worn by use, were replaced by vellum copies. From this and the subsequent century come the earliest MSS. of classical authors (the finds of excavation apart) that have survived down to the present day. They are closer perhaps to the book-production of the Middle Ages than to that of classical antiquity. The classical book was severely anonymous, as perhaps fitted a tool rather than an object in its own right; we cannot find the name of a single scribe on any literary papyrus. The importance of preserving the exact text of the Scriptures leads to notes often of great interest on the history of the text, e.g. those in the Codex Sinaiticus at the end of Esdras and Esther recording the correction of the text from a MS. by Pamphilus. Similarly some of the earliest Latin MSS. which originated in the circle of the Symmachi in the late fourth century and the early years of the fifth record sometimes the copyist, the corrector, and the place of writing, and convey, as they were intended to do, both a challenge to the new religion and their owner's devotion to the old.

BOREAS, the North wind. Cults of, or magic practices directed towards, winds are fairly common in Greece (see WIND-GODS and Farnell, *Cults* v. 448 f.; more in Fiedler, *Antiker Wetterzauber* (1931)). The most famous worship of Boreas was in Attica (11dt. 7. 189, for his help against the Persians at Artemisium). Mythologically, he was 'son-in-law' of the Athenians, having carried off his bride, Oreithyia, daughter of King Erechtheus, from the Areios Pagos or the banks of the Ilissus (Plato, *Phdr.* 229 c-d). By her he had two sons, Zetes and Calais (see CALAIS AND ZETES).

Apart from this, hardly anything is told of him which does not arise from his physical characteristics. He is, for instance, son of Eos and Astraeus (Hes. *Theog.* 378-80), along with Zephyrus and Notus; in other words, winds come down out of the sky, where the stars and dawn are—an idea which competes with the conception of them as underground beings (as a kind of ghosts, cf. HARPYIAE, or because they come from below the horizon?), to whom black victims are sacrificed (e.g. Ar. *Ran.* 847). Even his begetting of horses (as *Il.* 20. 223) is a simple mythologizing of the speed of wind, or perhaps of some such belief as that in Verg. *G.* 3. 275, that mares can be impregnated by wind.

He is shown carrying off Oreithyia on Attic vases from the early classical period on, and on an akroterion of the Athenian temple at Delos of the later fifth century. He is shown as winged, with rough hair and beard.

BORYSTHENES, a river of Scythia (modern *Dnieper*). According to Herodotus (4. 53) it was the largest river after the Nile and the Ister (*Danube*), being navigable for forty days from the sea. This statement, and his failure to mention the falls at Dniestroj, show that Herodotus was unacquainted with the upper course of the Borysthenes. But the glowing terms in which he described its fisheries and meadows were not ill founded. The Borysthenes was the chief Greek trade route into Scythia, but this trade (as the record of finds shows) did not extend beyond the region of Kiev. M. C.

BOSCOREALE, a township between Vesuvius and Pompeii (2 k.), former hunting reserve of the Angevin

kings. It would have remained in obscurity, but for the discovery nearby of several *villae rusticae*, buried in the eruption of Vesuvius in A.D. 79. Two, found on the farm of V. de Prisco, are specially noteworthy. The first, excavated 1893-4 (no longer visible: model in Pompeii Museum), contained ninety-four pieces of silver plate of Alexandrine and Roman workmanship, now in the Louvre. This treasure seems out of place in a large agricultural factory (presses and store for wine and oil, threshing-floor, with only modest residential wing) and may have been deposited there from elsewhere at the time of the catastrophe. The second, discovered four years later, belied its symmetrical farm-house plan by possessing the appurtenances of a finely decorated country mansion, with wall-paintings of the first century B.C. (now in the Museo Nazionale, Naples).

BOSPORUS (1), THE THRACIAN, was a narrow strait joining the Black Sea with the Sea of Marmora and the Mediterranean and dividing Asia and Europe. Its direction is NE-SW. and it is 17 miles long, and from 600 yards at the narrowest to 3,300 at the broadest in width. The current runs swiftly from the Black Sea into the Mediterranean, breaking against Serai Point, the shores of ancient Byzantium. The strait has been worn away in a fairly recent geological past as the exit for the water of the Black Sea, which was originally a lake. The Bosphorus is noted for its wealth of fish, and many ancient Greek coastal towns bore fish as the device on their coins. The name records the legend of the crossing of Io (q.v.).

S. C. D. E. W. W.

BOSPORUS (2), THE CIMMERIAN, the *Strait of Kerch*, connected the Black Sea with the Sea of Azov (Macotis, q.v.). The chief Greek settlements were Panticapaeum (q.v.) and Nymphæum on its western shores in the Crimea, and Phanagorea on its eastern in the Taman peninsula. A group of Greek cities, in close connexion with Scythians and Sarmatians, developed into a Bosporan group which extended its influence further into the Crimea (see CHERSONESUS 2, TAUROC). The lead was taken by Panticapaeum, first under its Archacanactid rulers and then from 438 B.C. under the Spartocids (q.v.). This Bosporan kingdom, which Greeks might regard as a military tyranny, did not pass away rapidly as many Greek tyrannies, but developed into a Hellenistic monarchy and flourished for over 200 years. Its economic life began to suffer after c. 250 B.C., and pressure of Scythian and Sarmatian attacks increased until it was impelled to appeal for help to Mithridates VI of Pontus, whose general Diophantus in two campaigns drove back the Scythians. Thus, when Paerisades V (see SPARTOCIDS) was killed, all the Greek cities of the Bosphorus, Crimea, and the northern shore of the Black Sea were added to Mithridates' realm, with the local capital at Panticapaeum.

After Mithridates' defeat by Rome, Pompey allowed the king's treacherous son, Pharnaces (q.v. 2), to hold his father's Russian dominions. After Pharnaces' defeat by Caesar at Zela, the kingdom was granted to Mithridates of Pergamum but in trying to get control of it he was killed by Asander who had married Pharnaces' daughter Dynamis. Asander, who won recognition from Antony and Octavian, ruled until 17 B.C. Strategic aspects of imperial defence, together with the economic importance of the kingdom, required Rome to establish strong government there. Rome promised the throne and marriage with Dynamis to Polemon (q.v. 1) of Pontus; in 14 B.C. Agrippa forced the Bosporans to accept this arrangement. He settled the kingdom, placing the autonomous city of Chersonesus (q.v. 3) under its protection.

Thus, as under Mithridates, the two shores of the Black Sea were under unified native rule. But Polemon and Dynamis soon quarrelled. When Polemon married a Pythodorus, Dynamis sought help from a (Sarmatian?) ruler Aspurgus whom she married: they finally overthrew Polemon (8 B.C.). Augustus accepted the situation, and Dynamis was recognized as a vassal queen until her death in A.D. 7/8. Her husband Aspurgus gained control in 10/11 and received the royal title and Roman citizenship from Tiberius in 14/15. On his death (37/38) he left two sons, Mithridates (probably Dynamis' son) and Cotys, the son of a second wife, a Thracian princess named Gepaepyris. Though Gaius formally granted the kingdom to Polemon II of Pontus in 38, it was held by Gepaepyris and her stepson Mithridates, who was later recognized by Claudius (41). When Mithridates' half-brother Cotys soon afterwards revealed to Claudius that Mithridates was plotting revolt, Cotys was given the kingdom (44/45); Mithridates, defeated in battle, was taken prisoner to Rome, but was set free. Nero, to secure a base for his projected Sarmatian campaign, appears to have annexed the kingdom c. 62/63 (Cotys I being either dead or deposed). However, Cotys' son Rhescuporis was granted the kingdom in 68/69 and reigned until c. 90. Under later rulers (several named Rhescuporis, Cotys, and Sauromates) the kingdom, which was recognized as an important link in the defensive system of the Roman Empire, was allowed by Rome to issue gold and silver coins, and on occasion received military support. It enjoyed renewed economic prosperity in the second and third centuries, trading with Asia Minor and Scythian tribes and supplying corn for Roman armies on the Danube and in the east. Relations with the Alans (q.v.) appear to have been friendly, but the Greek cities were increasingly subjected to peaceful penetration by Sarmatians (q.v.), so that they gradually became 'Sarmatized' during the second century. But during the third the Alans joined the Goths in attacking the Empire, and Panticapaeum became a Gotho-Sarmatian city.

BOSTRA, a commercial town in the north of the Nabataean kingdom (q.v.). In A.D. 106 it was refounded by Trajan as the capital of the province of Arabia. In the second century it became the camp of Legio III Cyrenaica and was made a colony by Severus Alexander. It was sacked by Zenobia (q.v.). The ruins are considerable, and include the best-preserved theatre of the Roman world, recently restored.

BOTANY. Among the Greeks, as among other peoples, knowledge of herbs was linked not only with agriculture but also with medicine. It was somewhat esoteric and, from an early date, certain drugs were imported from overseas, notably from Egypt, Mesopotamia, and even India. Plant-lore was the special preserve of the rhizotomists (*ρίζοτόμοι*), who were differentiated from the physicians and doubtless represent an earlier cultural stratum. They were sometimes of evil reputation; thus, Sophocles wrote a play (now lost), dealing with the magical practices of Medea, in which *ρίζοτόμοι* appeared as the Chorus, probably employed on nefarious tasks; see also Lucian *Dial. D.* 13. 1. In gathering plants they practised complex rituals of which fragments are preserved by Theophrastus and Pliny.

2. The Hippocratic Collection mentions some three hundred herbal drugs but tells almost nothing of the plants themselves. Nevertheless, in the first half of the fourth century botany was emerging as a separate discipline and attention was paid to it at the Academy even before it was taken up at the Lyceum. Perhaps under the influence of the former, but chiefly inspired by Sicilian pneumatic views (see ANATOMY AND PHYSIOLOGY), is the Hippocratic work *On the nature of the embryo* of about 360 B.C. It discusses germination of seeds and growth of plants and contains the first attempt at a vegetable physiology.

3. Aristotle treated plants as an order of beings lower than animals, linked with them through the 'zoophytes', continued downward into non-living matter, and possessing only the lowest of the three faculties of soul i.e. nutrition, growth, and reproduction, but not locomotion or perception. The pseudo-Aristotelian treatise *On Plants* is probably later but may well contain, though in a corrupt form, some genuinely Aristotelian material. We have, however, in addition to a considerable number of botanical passages in other works of Aristotle, several treatises on plants by his pupil Theophrastus (c. 372–287 B.C.).

4. Theophrastus felt the need of a technical terminology and began to develop it. Like his master he was deeply interested in generation and, having examined the germination of seeds, with extraordinary acuteness made the distinction between monocotyledons and dicotyledons. In this and in many other matters he showed himself fully capable of following morphological homologues. Though ignorant of the nature of sex in flowers he had an approximately correct notion of the relation of flower and fruit, distinguished hypogynous, perigynous, and epigynous types, and regarded the relation of flowers to fruit as the essential floral element. He had a clear view of plant distribution as dependent on soil and climate and, benefiting by the knowledge available from Alexander's expeditions, came near to a statement of geographical plant regions. He has numerous good descriptions of the forms, habits, habitats, fructification, cultivation, and uses of plants, of which he discusses more than 400 kinds.

5. The Alexandrian school produced no botanical works of significance. Important, however, was the work of the rhizotomist Crateuas (q.v., c. 100 B.C.), who served Mithridates VI of Pontus. He wrote a herbal in which each plant was represented by a figure. Of this there survives a substantial fragment, copied from a very ancient and perhaps almost contemporary original. Since Crateuas plant representation has been an important department of botany.

6. The *Natural History* of Pliny (A.D. 23–79) records many current views on the nature, origin, and uses of plants. Being quite uncritical it is more interesting for folklore than for botany. On a higher plane is the *Materia Medica* of Dioscorides (c. A.D. 60), which consists of a series of short accounts of plants accompanied by terse descriptions which sometimes include habits and habitats. It is the most widely read botanical work ever penned. Early MSS. of versions and translations of it are to be numbered by the hundred. Many of its plant-names have passed into modern terminology. After Dioscorides there was no systematic extension of botanical knowledge in antiquity.

7. Difficulties in identifying the plants of Dioscorides led very early, perhaps during his lifetime, to the preparation of copies of his herbals provided with pictures of the plants. A magnificent representative of this practice in uncial letters is the Juliana Anicia MS. of 515 at Vienna, the earliest surviving complete Greek herbal. Illustrated Latin versions, abridgements, and modifica-

tions of Dioscorides were prepared in the time of Cassiodorus (c. A.D. 490–585), and a Latin work based on one of these versions but bearing the name of Apuleius is the commonest early medical text. A splendid half-uncial MS. of this *Herbarius Apulei* at Leyden is almost contemporary with Cassiodorus himself and is our earliest complete Latin document of this type.

8. The question of the identification of plants mentioned by classical writers frequently arises and can be answered for certain distinctive or economically important species. The question, however, ignores the semantics of plant-names. A modern plant-name—even a 'popular' one—presupposes a conception of species and of their constancy and limitations and an idea of classification that was absent in antiquity. Greek and Latin writers, like modern unlettered peasants, constantly called the same plant by different names and different plants by the same name. The question as to what a particular writer meant by a particular plant-name is therefore, with the exceptions mentioned above, normally unanswerable.

BOTTOMRY LOANS (ναυτικόν, ναυτικός τόκος; *fenus nauticum* or *pecunia trajecticia*) are known from the fourth century B.C. They took the place of modern shipping-insurance, because they were repayable only if the ship or the cargo which had been pledged for them (especially in Greek law), safely reached its destination (ἐτερόπλουον) or returned to the original port (ἀμφοτερόπλουον), according to the terms of a written contract. The debt was not forfeited if ship or cargo was lost by the debtor's fault. Creditors and debtors could be groups of persons in partnership.

The biggest loan we know of amounts to 70 minae. During the fourth century the rate charged for a voyage from Athens to the Pontus and back was 30 per cent. on the amount of the loan, from Sestos to Athens 12½ per cent., and from Byzantium to Athens 10–12 per cent. Roman law from Justinian 1 onwards allowed a rate (*usurae maritimae*) up to 12½ per cent. on *fenus nauticum*. The creditor had the right to send a supercargo (ἐπίπλους), often a freedman or slave, with the ship to control loading, unloading, and repayment. Attic as well as Roman law made elaborate regulations for this institution, which represented an important form of capital investment.

BOUDICCA (name uncertain, but 'Boadicca' has neither authority nor meaning), wife of Prasutagus, who was established as client-king of the Iceni (East Anglia) by the Romans. On his death (A.D. 60) he had left the Emperor coheir with his daughters, but imperial agents maltreated his family. Under Boudicca the Iceni,

assisted by the Trinovantes, rose in rebellion while the governor, Suetonius Paulinus, was occupied in the west. Colchester, London, and Verulamium were successively sacked. Venturing a battle, however, with Paulinus' main force, Boudicca's troops were easily routed, and she herself took poison.

BOULE in Greek States, originally the council of nobles which the king summoned to advise him; later a specially appointed council to undertake, on behalf of the citizen-body, the day-to-day affairs of State. Its range of competence was equal to that of the citizen Assembly. In an oligarchy it might be in some respects independent of the Assembly—e.g. it might have the right of summoning the Assembly only when it wished; in a democracy it was its servant, acting as a general-purposes committee. In the former, members might be elected by vote (perhaps from a restricted number of citizens) or sit by hereditary right, for a term of years, or for life; in a democracy, members were generally chosen by lot, and served for a year only. Every 'constitutional' State (hereditary monarchy, oligarchy, or democracy) had a *boule* of one kind or another.

2. In Athens, the original Council was that of the Areopagus (q.v.). Solon, according to a tradition which can be traced back to c. 400 B.C., created a second Council of 400, 100 from each *phyle* (q.v.), with probouleutic functions. Some modern critics believe that this Council, like the certainly fictitious one ascribed to Draco (q.v.), was a fabrication of the oligarchs of the late fifth century. However, the Chians had a second Council, with fifty members from each of their *phylai*, by c. 550 B.C. (Tod 1); and what little we know of the Athenian *ekklesia* (q.v.) in the sixth century suggests that there was room for *probouleusis* in Solon's constitution. That we hear nothing of the activities of his Council—unless it, rather than the Areopagus, is the Council which resisted the efforts of Cleomenes (q.v. 1) to dissolve it in 508/7 (Hdt. 5. 72)—is not a strong argument against its existence. It has been suggested, but cannot be proved, that Solon himself alluded to its institution in words which Plutarch adapts (*Sol.* 19. 2).

3. Solon's Council, if historical, was replaced by that of Cleisthenes (q.v. 1), which, with modifications, was retained till late Roman times. It had 500 members, fifty from each of the ten new *phylai*. It was known simply as *ἡ βουλὴ*, or occasionally, to distinguish it from the Areopagus, as *ἡ βουλὴ οἱ πεντακόσιοι*. After 307/6 the number varied, partly owing to the creation and abolition of additional *phylai*; in the fourth century A.D. it was 300. Members served for one (Attic) year: a second term was possible after an interval. Membership was open to all citizens over thirty, including, at least from the late fifth century, the Thetes (q.v.); the method of appointment was by lot from *πρόκριτοι* selected by the demes (*see* *DEMOI*), each deme being allotted places in proportion to its size. Those on whom the lot fell had to pass a *dokimasia* (q.v.) before the outgoing Council. Councillors were paid from the time of Pericles; in the late fourth century the pay was five obols a day.

4. The Council met daily except on festive and unlucky days. Its business was prepared by a changing committee of fifty of its own members, the *prytaneis* (q.v.); its chairman, who served for a day and also acted as chairman of the Assembly if that met on his day, was in the fifth century chosen from the *prytaneis* and thereafter from the *proedroi* (q.v.), who were also Councilmembers. The Council had its own secretary, later secretaries (*see* *GRAMMATEIS*). Ordinary citizens and most

magistrates could communicate with the Council only through the *prytaneis*. Thus the Council was carefully protected from undue influence, internal or external. An exception to this tendency was its relation to the *strategoi* (q.v.), who appear to have acquired the right both to attend the meetings and to make propositions. The Council met usually in the *βουλευτήριον* (*see* *ATHIENS* (*TOPOGRAPHY*)), on occasion elsewhere. Meetings were normally public but could be held in secret if the Council so decided. It was assisted in some of its tasks by committees of ten of its own members, viz. the *τριηροποιοί*, *ἐπιμεληταὶ τοῦ νεωρίου*, *εὐθυνοί*, *λογισταί*, and *ἱεροποιοί* (*see* below).

5. The competence of the *boule* had three overlapping aspects—probouleutic, administrative, and judicial. All debates in the *ekklesia* (q.v.) were based on *προβουλευόμενα* formulated by it, and it often had to take action in accordance with the resultant *ψηφίσματα*. In general, it supervised and co-ordinated the work of the various boards of magistrates and so gave unity to the whole administration. It was specifically entrusted with a wide variety of matters. It received foreign envoys before they proceeded to the *ekklesia*, and made drafts of treaties. It saw to the building of new triremes and the maintenance of the whole fleet and of the docks. Its financial duties were far-reaching. Through the *πωληταί* and *apodektai* (q.v.) it supervised the letting out of State contracts for the collection of taxes and rents from State property, and the receipt of the revenue from the contractors and, in the fifth century, of the imperial tribute, in the reassessments of which it assisted; it also supervised the borrowing and repayment of loans from the temple treasuries, the handing over of funds from each annual group of treasurers to their successors, and the accounts kept by magistrates of the public moneys entrusted to them (*see* *EUTHYNA*, *LOGISTAI*). It had the care of public buildings, and of certain State cults and sacrifices. It was responsible for the preservation of all State archives (*see* *GRAMMATEIS*). In its judicial capacity it held various kinds of *dokimasia* (q.v.), and tried criminal cases arising out of *εὐαγγελίαι* (q.v.) and some other types of criminal procedure. It took over from the Areopagus the right of investigating illegal conduct on the part of magistrates. In certain circumstances it could arrest accused persons pending trial, and could itself impose fines up to a limit of 500 drachmas; for a severer penalty it had to refer the case to the *ekklesia* or a *dicastery* (q.v.).

6. The *boule* was the keystone of the democratic constitution; without its assistance in the formation and execution of policy the *ekklesia* could never have exercised its sovereignty wisely and effectively. That, in spite of its wide powers, the *boule* did not dominate the State was due to the annual change of its entire membership, and to the *ekklesia*'s right of amendment and rejection of *προβουλευόμενα*. It may be doubted whether the Councillors' pay was sufficient to induce the poorest breadwinners to abandon work for a whole year, and there is evidence that in the fourth century the well-to-do were, indeed, somewhat over-represented on the Council; yet the rule that membership could be repeated once only meant that a large proportion of the population passed through its ranks, and it was therefore likely, in normal circumstances (for an alleged exception cf. *Lys.* 13. 20), to reflect adequately all points of view.

7. During the revolution of 411, the Cleisthenic Council was temporarily replaced by a Council of 400 (*see* *FOUR HUNDRED, THE*); and the Thirty Tyrants (q.v. 1) likewise appointed a Council of their own, with 500 members, which acted as a revolutionary tribunal. The *boule* of the restored democracy played an important part in the revision of the laws. Its place in the

constitution was not substantially changed by the vicissitudes of the Hellenistic period; under the Romans it shared its work of policy-making and administration with the Areopagus.

8. For the Council at Sparta, see GEROUSIA; for federal Councils see ACHAEAN CONFEDERACY, AETOLIAN CONFEDERACY, FEDERAL STATES.

G.; T. J. C.

BOVIANUM VETUS, a *colonia* in Samnium (q.v.) mentioned by Pliny (*HN* 3. 107). Mommsen sought it at a site near modern *Pietrabbondante*, with well-preserved remains of a theatre and temples, but the identification seems erroneous. Its role in the Samnite Wars in uncertain.

Mommsen, *CIL* ix 257; E. T. Salmon, *Samnium and the Samnites* (1967), 13. E. T. S.

BOVIANUM UNDECIMANORUM, capital of the Pentri Samnites: modern *Boviano*. Prominent against Rome in the Samnite Wars, it remained loyal during the Hannibalic War. In the Social War, after temporarily serving as a capital for the Italians, it was reduced to a village by Sulla. Under Vespasian veterans from Legio Undecima Claudia colonized it: hence its name. See SAMNIUM.

Strabo 5 250; Livy 9. 28. 31; 25 13; App. *BCiv.* 51, Pliny, *HN* 3 107. E. T. S.

BOVILLAE, ancient town on the Via Appia (q.v.), 12 miles from Rome. Here survivors from destroyed Alba Longa (q.v.) allegedly found refuge: they included the Gens Julia which thereafter always maintained close associations with Bovillae. Here Milo killed Clodius (qq.v.), 52 B.C. By then Bovillae had greatly dwindled, but it remained a *municipium*, whose inhabitants in imperial times were styled Albani Longani Bovillenses. E. T. S.

BOXING. In Greek and Roman boxing there was no classification of competitors by weight and so the advantage was generally with the heavier man. A contest lasted until one of the contestants was unable or unwilling to continue.

The Greeks bound leather thongs (*ιμάντες*) round their wrists and knuckles, to protect them rather than to increase the severity of the blow. Sometimes the fingers, or some of them, were left free, though this may have been the practice in the pancratium (q.v.) rather than in actual boxing. For training they used softer padded gloves (*σφαίραι*). Body-blows were not used to any extent and the face was always the principal target.

The Romans used the *caestus*, a glove weighted with pieces of iron and having metal spikes placed round the knuckles, and boxing became a gladiatorial show rather than an athletic sport. R. L. H.

BRASIDAS (d. 422 B.C.), Spartan general. Though prominent from 431, he held only subordinate commands until 424, when he was sent with a small force of Helots and Peloponnesians to damage Athenian interests in the Thracian region. After saving Megara from an Athenian attack, he hurried northwards and rapidly won several important cities, including Amphipolis and Torone. He continued his operations after the conclusion of the armistice between Athens and Sparta in 423, by

supporting the revolts of Scione and Mende, though he was unable to protect them adequately. In 422 he surprised and defeated an Athenian army under Cleon at Amphipolis, but was himself mortally wounded.

Brasidas' resourcefulness and his talent for winning confidence gained the admiration of Thucydides, who contrasts him with other Spartan leaders. His success permanently injured the Athenian cause in a vital area.

Thucydides, bks. 4-5.

H. D. W.

BRAURON (modern *Vraona*), on the east coast of Attica, was one of twelve independent townships united traditionally under Theseus (q.v.). Its early prominence is attested by remains from Neolithic to Mycenaean times. It was then deserted, and the classical settlement Philaidai had its centre further inland. Brauron regained its importance in the archaic period as a place sacred to Artemis (q.v.), whose cult was associated with Iphigenia (q.v.) whom some believed to be buried there. The cult was chiefly for women, and young girls, *arktoi*, performed a bear-dance at the annual Brauronia. Excavation of the site since 1945 has revealed many of the buildings and dedications of the classical sanctuary, which became inundated and abandoned apparently about the end of the third century B.C.

Eur. *IT* 1462 ff., Paus. 1. 33. 1 and Frazer's commentary; L. Deubner, *Attische Feste* (1932), 207 f., *ἱπποῦς* and *ἑρῶς* (excavation reports), J. Papadimitriou, 'The Sanctuary of Artemis at Brauron', *Scientific American* 1963, 110 ff. C. W. J. E.

BRENNUS (1), the Gallic king who traditionally captured Rome (in 390 B.C. or, according to Polybius' chronology, 387), and made the famous utterance: 'Vae victis.' Since neither Polybius nor Diodorus mentions him, it has been irresponsibly suggested that Brennus is a title which was mistaken for a name, or that historians transferred to him the name of the Gallic chieftain who invaded Greece in 280/79 B.C. But the former hypothesis is disproved on philological grounds, and the Greek accounts of Brennus, which can be traced back to fourth- or early third-century authors, are in any case anterior to the coming of the Celts.

J. Gagé, *Rev. arch.* 1954.

P. T.

BRENNUS (2), leader of the Galatian invasion in 279 B.C. Following on the heels of another body of Gauls under Bolgius, Brennus overran Macedonia and invaded Greece in autumn. Checked by a Greek coalition at Thermopylae, he sent a detachment to Aetolia whereupon the Aetolian force withdrew from Thermopylae; he then turned the Greek position at Thermopylae, as the Persians had done in 480 B.C. (see PERSIAN WARS); and when the Greek forces scattered, he attacked Delphi. The detachment in Aetolia and the main column under Acichorius were harassed by guerrilla tactics, while Brennus was wounded at Delphi. During the general retreat northwards the Gauls were attacked by the Thessalians; Brennus committed suicide, and few escaped. N. G. L. H.

BREVIS BREVIANS, Latin phonetic tendency between fourth and first centuries B.C., a 'short' syllable 'shortening' a following long one which is preceded or followed by an accent. Hence *calēfacio* (from *calēfācio*), but *ferufācio*. A comprehensive study setting out the conditions under which shortening becomes permanent (*benē* and *malē*, but cf. e.g. *probē*) is wanted. Poetry in general accepts the shortened forms only when they have become stabilized, but early drama shows *brevis breviāns* in active operation in scansion—such as *bonis, quid ēst, pessim(e) ōrnatu*. O. S.

BRICKSTAMPS, ROMAN. Brickstamps bearing the names of kings occur already in ancient Egypt. Used in many places up to the present day (most frequently as trade marks), they are rarely of more than limited interest. Except for the brickstamps of military units throughout the Roman Empire, these inscriptions became historically and archaeologically important documents only after the fire of Rome in A.D. 64, when there was an unprecedented demand for burned bricks. For more than a century the building activity in the city made large-scale production of bricks profitable. With the raw materials at hand in the Tiber valley on estates largely owned by members of the upper class (often well known to us), the brick industry, which had started modestly in the last century of the Republic, thrived. The stamps indicate the *praedia* where the brick-yards were located and/or frequently the names of foremen or workers employed there.

Probably because of the preference for seasoned bricks, the owner of the *figlinae Bruttianae*, M. Rutilius Lupus (*praefectus Aegypti* A.D. 113-17), introduced in A.D. 110 the consular date into his brickstamp. Dated stamps are erratically used, mainly by the big producers, from A.D. 110 to 164, except in A.D. 123 when every brickstamp had to bear a date, presumably at the behest of the government.

Stamps make it possible to trace the ownership of brick-yards for generations; e.g. those of Cn. Domitius Afer (q.v.; *cos.* A.D. 39) passed through inheritance and marriage to his descendant by law, the emperor Marcus Aurelius. By the early third century brick-production in Rome had become virtually an imperial monopoly. During the chaotic decades between Caracalla and Diocletian, brickstamps almost disappear, to be once more resurrected in Diocletian's reorganization of the brick industry, now part of the imperial bureaucracy (c. A.D. 300). Two centuries later, Theodoric's brickstamps, a fitting expression of the cultural aspirations of Ostrogoth rule, bring to a close the history of the ancient brick industry.

BRIDGES. Remains of causeway bridges are associated with Bronze Age road systems in the Argolid. Some of the bridges had water-passages with 'arches' composed of horizontal overlapping stones, and the type survived into the classical period. Timber bridges must have been built from an early period, and stone bridges constructed on the pillar-and-lintel principle are known from the fifth century B.C. The bridge over the sacred stream at Brauron has five parallel rows of orthostats spanned by lintels (*BCH* 1962, 681). In the Hellenistic period bridges up to 300 m. long were built, for instance, in northern Greece and in Asia Minor. Piers of masonry, carefully built on the rocky bed, were so shaped as to create an efficient slipstream, and they carried a removable roadway of planking. It is uncertain whether any surviving example of a stone bridge with true arches dates from before the Roman period. The Etruscan 'bridges', as at Veii and Vulci, are tunnelled spurs of natural rock, the built structures in stone being in fact Roman. For, while the wooden bridge (*pons sublicius*) is associated with the very existence of Rome, the stone bridge is a relatively late development, the earliest dated example

being *pons Aemilius* (Livy 40. 51. 4) of 179 B.C., given an arched superstructure in 142 B.C., and followed by *pons Mulvius* (q.v.) in 109 B.C. and *pons Fabricius* in 62 B.C. Typical of the state of affairs outside Rome is Strabo's description (4. 1. 12) of the Narbonese *via Domitia* or the statement of Augustus (*Mon. Anc.* 4. 19): 'refectam Flaminiam... et pontes in ea omnes praeter Mulvium et Minucium.' Nearly all monumental bridges thus belong to the imperial age. In Italy the most complete are those of Augustus at Ariminum and of Hadrian at Rome, the most imposing those of Augustus at Narnia and at Asculum, the most curious the bold foot-bridge of Val de Cogne (*JRS* 1939, 149). But they are far outclassed in length by the Augustan bridge at Emerita and in height by the famous bridge which several Spanish communities combined to erect over the Tagus gorge at Alcántara (A.D. 106). The tradition of wooden bridge-building, however, continued in the hands of military engineers (*PBSR* 1935, 34). Caesar's description of his temporary wooden bridge on the Rhine (*BGall.* 4. 17) is famous (cf. *CR* 1908, 144). Vegetius (1. 10) describes pontoon bridges of boats, while many bridges of timber more durably constructed than these must have carried even the most important trunk roads. Bridges spanning powerful rivers, however, were usually built with stone piers and wooden superstructure, as the Flavian Rhine bridge at Moguntiacum or Trajan's Danube bridge, the latter some 1,120 metres long, with stone piers and segmental arches of timber. British examples are the Thames bridge at London, the Tyne bridges at Corbridge and Newcastle upon Tyne (*pons Aelius*), where stone piers of the same kind are known to have been used. At Arclate (*Arles*) there was a famous permanent bridge of boats (Auson. *Ordo Nob. Urb.* 77), figured in a mosaic at Ostia (G. Becatti, *Scavi di Ostia* (1961), iv, pl. clxxxiv).

BRIGANTES, the most populous tribe in Britain (Tac. *Agr.* 17), whose territory, spanning the island (Ptol. *Geog.* 2. 3. 16), included the legionary fortress of Eboracum (York), a capital at Isurium (*Aldborough*), forts at Olicana (*Ilkley*), Cataractonium (*Catterick*), and Vinovium (*Binchester*), and native *oppida* at Camulodunum (*Almondbury*), Stanwick, and Rigodunum (perhaps *Ingleborough*). Under Queen Cartimandua (q.v.) early relations with Rome were friendly; later strife in the royal household compelled annexation by Cerialis and Agricola in A.D. 71-9 (Tac. *Agr.* 17, 20). The Pennines and forests of Lancashire and Durham were intersected by garrisoned roads (Tac. *Agr.* 20) and lead-mining began by A.D. 81 (*CIL* vii. 1207). In the Ouse basin civil life gave rise to a town at Isurium and widespread villas, as at Well, Castledykes, Gargrave, or Dalton Parlours. Systematic pacification of the uplands was a commonplace under Hadrian (Juv. 14. 196), but under Pius the tribe apparently lost much territory following unlawful raiding (Paus. 8. 43). The eponymous goddess *Brigantia* won local fame (Collingwood and Wright, *RIB* 627, 628, 630, 1131, 2066, 2091, cf. 623; N. C. Jolliffe, *Arch. Journ.* 1941, 36 ff.).

I. A. Richmond, *JRS* 1954, 43 ff.; id. in R. E. M. Wheeler, *The Stanwick Fortifications* (1954), 61 f.; Frere, *Britannia*, chs. 4, 6-8. I. A. R.

BRIGANTIIUM, also called Brigantia (modern *La Coruña*?), one of the mystery sites of Roman Spain. The name, obviously Celtic, is found in Dio, Orosius, and two itineraries (*Brigantia* in *Rav. Cosm.*). The evidence

from the itineraries and Ptolemy would place it in or near modern Betanzos. But the lighthouse ascribed to it by Dio and Orosius is apparently that of La Coruña (*CIL* ii. 2559, 5639). Ptolemy's name, *Flavium Brigantium*, marks it as a recipient of Vespasian's grant of the Latin Right (see *IUS LATII*). J. J. VAN N.

BRIGETIO, Ó-Szóny on the Danube, was a legionary fortress and city in Pannonia. In the early second century A.D. it was occupied in turn by Legio XI Claudia and XXX Ulpia Victrix until the end of Trajan's reign when I Adiutrix became its permanent garrison. The civil settlement became a *municipium* (*Antoninianum*) by the early third century (*CIL* iii. 11007) and later a *colonia* (*CIL* iii. 4335).

L. Dárkóczy, *Brigetio* (Diss. Pann. II. 22 (1951) Budapest). J. J. W.

BRIMO, name or title of a goddess, often identified with Persephone (q.v.); as *Etym. Magn.* 213, 49), Hecate (q.v.); as *ibid.*; Ap. Rhod. 3. 861, or Demeter (q.v.); as Clem. Alex. *Protr.* p. 13, 4 Stählin). At Eleusis it was proclaimed that she had borne 'a holy child Brimos' (Hippolytus, *Haer.* 5. 8. 40, 96 Wendland, where both names are said to mean 'strong'). H. J. R.

BRISEIS, in mythology, daughter of Briseus of Lyrnessus and widow of Mynes; Achilles' slave-concubine, taken from him by Agamemnon and afterwards restored (*Il.* i. 392; 19. 60, 296, and contexts). H. J. R.

BRITANNIA (the form *Πρεταννικαὶ νῆσοι*, used apparently by the earliest Hellenic visitor, Pytheas (c. 300 B.C.) should be cognate with Irish (q-Celt) *cruthin* (— Picts)). At the beginning of the Christian era the culture of Britain was divided fairly sharply by a line from Tyne to Exe, corresponding to a geological contrast of the Palaeozoic 'Highland' and the Caeozoic 'Lowland' zone. In the 'Highland zone', Bronze Age conditions prevailed among peoples of neolithic ancestry; in the 'Lowland' waves of Celts had imposed Iron Age cultures, the latest of whom, the Belgae (q.v.), overran the south-east (first arrival c. 100 B.C.). Caesar's invasions (55 and 54 B.C.), at least, retarded the formation of a Belgic *imperium*, which was, however, realized by Cunobelinus (d. c. A.D. 41); but disturbances in his old age invited intervention. A grotesque demonstration by Caligula (A.D. 40) indicated the trend of Roman policy, which was resumed by Claudius, who invaded Britain after Cunobelinus' death (A.D. 43). The army (four legions with accompanying *auxilia*) quickly overran the 'Lowland Zone' (A.D. 43–8), and a revolt under Boudicca (q.v.; A.D. 60) was crushed; but where Celtic civilization was combined with 'Highland Zone' conditions, as in east Wales (Silures) and Yorkshire (Brigantes), little was effected until the campaigns of an able succession of Flavian governors. The last of these, Agricola (probably A.D. 78–85), advanced far into Scotland, but after his recall the army was reduced to a garrison footing of three legions (making with the *auxilia* a strength of c. 50,000). Further withdrawal of troops compelled a retreat (c. 110) to the 'Tyne-Solway line, and c. 120 a definite frontier-line was drawn there (Hadrian's Wall). About this time the Ninth Legion disappeared. Rome had lost the initiative in Britain, a fact which anticipates the high water mark of progress soon reached in the Empire itself. Britain, indeed, is, in every respect of romanization, last in advance, first in retreat. This is its historical significance.

2. Britain was a typical imperial province, and its local government imitated the Gallic cantonal system. A late author (Gildas, 3) mentions twenty-eight *civitates*,

which included, eventually, four *coloniae* (Colchester, Lincoln, Gloucester, York). New towns were created in Roman style, where even artisans wrote Latin. The negative aspect of romanization, however, was the virtual extinction of an attractive native art, based on the La Tène style. Towns were compelled to surround themselves with walls during the late second and early third centuries, possibly through nervousness at peasant discontent. Though their subsequent decay has been exaggerated, it certainly seems that less money was spent on them.

3. Rural life follows closely the lines of pre-history. Areas of easy settlement, populated since the Bronze Age, continue so, and the normal unit of habitation, the settlement of rude well-huts, persists, as it does in the little romanized 'Highland zone'. Elsewhere either the farm or imposing residences (like Washington's Mount Vernon) are the norm. Less romanized (and far less literate) than the towns, the villas and even the villages show increased prosperity. Moreover, the mineral wealth (mainly in argentiferous lead-mines worked as early as A.D. 49) increased the value of the province to Rome. The class distinction, however, manifest in the contrast between the Celtic spoken by the common man and the stilted Latin of his superiors, had the seeds of trouble.

4. After Hadrian, political history was fairly uneventful. The northern tribes continued troublesome, and c. A.D. 142 Antoninus Pius decided to push the frontier up to the Forth–Clyde isthmus (Antonine Wall). But the new line was never very satisfactory, and by the end of the century (exact date still controversial) was abandoned.

5. The usurpation of Albinus (A.D. 193–6) illustrates an evil from which the province was later to suffer, the removal of its garrison for overseas adventures; an incursion from the north ensued. The campaigns of Severus, however (A.D. 208–11), re-established the *status quo* behind Hadrian's Wall, which he had restored. Though garrisons in the 'Highland zone' would not be seriously reduced, Britain seems fairly peaceful in the third century. But the growing strength of Saxon piracy made necessary the erection of signal-stations and forts along the eastern and southern coasts (begun c. A.D. 280).

6. Britain, however, held firm, and the attempt of a Menapian seaman, Carausius, to blackmail Diocletian, by seizing it, into recognizing him as colleague caused little internal disturbance. Carausius, in fact, was assassinated in A.D. 294, and in A.D. 297 the imperial authority was re-established by Constantius Chlorus. From now Britain, already divided into two by Severus, was administered as four provinces. Christianity began to reach it, but old ways were still strong, and pagan temples were actually built *de novo*.

7. Continuous attacks, however, were undermining its powers of resistance and recovery; and a general assault in A.D. 367 was accompanied by a revolt of the frontier garrison. Order was restored with difficulty, but a vast capital destruction had been suffered. Adventurers, Maximus (A.D. 385) and Constantine (A.D. 407), withdrew the garrison, and it is doubtful whether after A.D. 410 there was ever a Roman army there again. Left to itself, Roman Britain, with buildings enlarged and new villages created, is likely to have become the prey of its peasantry, and it was a natural resource to enrol Saxons from overseas as *foederati*; they soon revolted and invited their Teutonic fellows. In the struggle of Celt and Teuton, Roman Britain disappeared almost completely (the precise extent of survival is very controversial), even Christianity vanishing from the Lowland zone. But, in truth, the Roman element was already in retreat, and in the Highland zone, though men spoke of 'Romania' and wrote Latin on the tombstones, the spirit was Celtic

and the old Celtic art broke forth, though hesitatingly, once more.

BRITANNICUS, TIBERIUS CLAUDIUS (*Plu* 92) CAESAR, son of Claudius and Messalina, born 12 Feb. A.D. 41. His first surname was Germanicus; 'Britannicus' was added after Claudius' invasion of Britain. His stepmother Agrippina (q.v. 3) induced Claudius in 50 to adopt her son L. Domitius (Nero), who was three years older than Britannicus and so now took precedence over him; and she contrived to remove the tutors and officers of the guard who were loyal to Britannicus, thus ensuring Nero's accession on Claudius' death (54). Early in 55 Agrippina seems to have considered using Britannicus to prop up her failing influence, but he very soon died, almost certainly poisoned by Nero's order.

F. Giancotti, *Rend. Linc.* 1953, 254 ff.; 1954, 587 ff. Iconography, V. H. Poulsen, *Act. Arch.* 1951, 129 ff. G. W. R., T. J. C.

BRITOMARTIS (the name means 'sweet maid' in Cretan, Solinus 11. 8), a Cretan goddess, identified with Artemis (Solinus loc. cit. and Hesychius s.v.). She had a temple near Cydonia (Strabo 10. 4. 13). Minos loved her; she avoided him for nine months and finally, to escape him, leaped over a cliff into the sea, was caught in fishermen's nets (hence called Dictynna from δίκτυον), got away to Aegina, escaped from him again into a grove of Artemis, and was thenceforth worshipped there as Aphaca (q.v.).

See Callimachus, *Dian.* 189 ff.; Pausanias 2. 30. 3, Antoninus Liberalis 40 (no author quoted); [Verg.] *Ciris* 286 ff.; Rose, *Handb. of Gk. Myth.* 117 f. H. J. R.

BRIZO, a goddess worshipped by women at Delos, especially as protectress of sailing (Semus of Delos ap. Athen. 8. 335 a-b = *FHG* iv. 493). Her name is derived from βρίζειν 'to sleep', and she was credited with sending prophetic dreams. Bowls of all sorts of food, except fish (cf. FISH, SACRED), were offered to her in sacrifice. F. R. W.

BRONZE. The ancients used the words χαλκός, *aes*, indiscriminately for copper and for the harder and more fusible bronze, the compound of copper and tin. Implements of bronze are found in Egypt and Mesopotamia before 3000 B.C. During the third millennium (the Early Minoan period of Crete) the general use of bronze and the normal composition of the mixture (one part of tin to nine of copper) were established. Until the introduction of iron bronze remained the sole metal for utilitarian purposes, and afterwards it continued in general use to the end of antiquity for sculpture, many domestic objects, and, after the fifth century B.C., for small-denomination coins. Brass (ὀρείχαλκος, *orichalcum*, a mixture of copper and zinc) is not found before Roman imperial times, when a white metal formed by the addition of lead to bronze is also in use.

Copper is widely found in classical lands, where the principal sources of supply are, for Greece, Chalcis in Euboea and Cyprus, and, for Italy, Bruttium, Etruria, and Elba, while under Roman rule Spain produced largely. Tin (q.v.) is much rarer, though a little is still worked in Asia Minor; but Herodotus speaks of the

metal as coming from the extremities of Europe (3. 115), and Spain, Brittany, and Cornwall seem to have been the main sources.

Several varieties of bronze were distinguished in antiquity—Corinthian, Delian, Aeginetan, Syracusan, Campanian—but these cannot be identified. The technical processes employed were: hammering into plates which were riveted together (σφυρήλατον), used in the making of utensils and, during the archaic period, of statues; and casting with wax, either solid (usually in the case of small statuettes) or hollow over a core of clay or plaster (πρόπλασμα, *argilla*) to produce large-scale sculpture. Relief decoration was produced in repoussé work (ἐμπασιτική); incised ornament is also common, especially on mirrors. Tin and copper solders were used in addition to riveting for joins. The dull patina of bronzes in museums is the result of time; ancient bronzes were kept bright, and the surface was often coated with gold or silver, or variegated with damascening and inlay, while enamelling on bronze was a Celtic practice.

Pliny, *HN* bk. 34. H. Blumner, *Technologie und Terminologie der Gewerbe und Künste bei Griechen und Römern* (1874-87) iv; Kluge and Lehmann-Hartleben, *Die Antiken-Grassbronzes* (1927); W. Lamb, *Greek and Roman Bronzes* (1929); J. Charbonneau, *Greek Bronzes* (1958); Forbes, *Stud. Anc. Technol.* ix; see also the introductions to the *Catalogues of Bronzes of the British Museum* (by H. B. Walters, 1893) and of the Metropolitan Museum, New York (by G. M. A. Richter, 1915). F. N. P.

BRUCTERI, a Germanic people, living north of the Lippe in the neighbourhood of the modern Münster. A powerful people, they were allies of the Cherusci, whom they assisted in resisting the invasions of Germany by Germanicus (q.v.). They also played a prominent part in the revolt of Civilis (q.v.) in A.D. 69-70, in which their priestess Velela had much influence. They were heavily defeated (c. 98) by the Chamavi and Angrivarii, who occupied their land; but the Roman belief that some 60,000 Bructeri were killed is doubtless exaggerated: they retained their identity until much later times. E. A. T.

BRUNDISIUM (Βρενδείσιον, modern *Brindisi*), the best harbour on the Italian east coast, consisting of two arms of the sea which penetrate deeply into the land, and the nearest Italian town to the east Adriatic coast. A Messapian settlement, it was not colonized by Greeks, despite traditions of early Cretan and later Tarantine colonists. About 440 B.C. it entered into treaty relations with Thurii (*SEG* xvi. 582), but is little attested until 244 B.C., when the Romans constituted it a Latin colony. It became the terminal point of the extended Via Appia (q.v.) and the regular port of embarkation for Roman armies crossing to Greece or Epirus. Hence in 49 Caesar attempted to cut off Pompey's retreat from Italy by capturing it, and in 40 Antony besieged it when Octavian sought to prevent his returning to Italy. By the 'treaty of Brundisium' the triumvirs settled their differences. Virgil died there in 19 B.C. For so important a port—and it was a vital link in the communications system of the Roman Empire—its ancient remains are disappointingly meagre.

C. Picard, *Rev. Ét. Lat.* 1957, 285 ff.

A. G. W.

BRUTTEDIUS (BRUTIDIUS) NIGER, aedile A.D. 22; prosecuted Silanus (q.v. 9) for *maiestas* (Tac. *Ann.* 3. 66). He was a pupil of Apollodorus (Sen. *Contr.* 2. 1. 35-6). He was tempted to woo imperial favour by delation, and is probably the Bruttidius of Juv. 10. 83. His account of Cicero's death (Sen. *Suas.* 6. 20 f.) comes from an historical work by him.

Peter, *HRRel.* 2. 90-1.

J. W. D.

BRUTTII inhabited the rugged south-west peninsula of Italy (modern *Calabria*; the name *Bruttium* lacks ancient authority). Earlier inhabitants were *Morgetes* and *Oenotri* (= *Sicels*?) and *Chones* (= *Illyrians*). Sabellian *Lucani* appeared near *Laus* c. 390 B.C., defeated *Thuri* (q.v.) (*Polyaenus* 2. 10), and imposed their Oscan language on the peninsula. In 356 the Oscanized inhabitants, asserting their independence from the *Lucani*, became known as *Bruttii*—probably a pre-Sabellian name which the *Lucani* adopted as their word for 'run-aways' (*Diod.* 16. 15; *Strabo* 6. 253 f.; *Justin* 23. 1). The *Bruttii* conquered several Greek colonies on the fertile coastlands, became themselves partly hellenized (*Festus*, 31 L.), and reached their apogee in the third century. Rome, however, subjugated them for supporting *Pyrrhus* and seized half the *Sila Forest* (q.v.) (*Zonar.* 8. 6; *Dion. Hal.* 20. 15). When they revolted to *Hannibal*, Rome confiscated additional territory, ringed them round with colonies (*Buxentum*, *Tempsa*, *Vibo*, *Croton*, *Thurni*), and practically enslaved them (*App. Hann.* 61). Consequently the separate nation of *Bruttii* disappeared. In 71 B.C. *Spartacus*, following *Hannibal's* example, based his operations on *Bruttian* territory. Once famous for its ships' timber and pitch, *Hannibalic* depredations started its decline (but see *Cassiod. Var.* 8. 31). Chief towns: *Consentia*, *Clampetia*, and Greek coastal colonies.

BRUTUS (1), *LUCIUS IUNIUS* (*PW* Suppl. v, 356 ff.), the traditional founder of the Roman Republic, is probably an historical figure. There is no reason to suppose he was a god, or that his exploits were retrojections of achievements by later members of the *gens Iunia*, the more so since the name *Brutus* is likely to be a derogatory term or nickname which the annalists were at pains to explain rationally by assuming that *Brutus* longed to be 'stupid' in order to escape suspicion from or vengeance at the hands of the *Tarquins*. His consulship in 509 B.C., and his alleged attempt to humanize some primitive cults, are probably fictitious or later embellishments to connect the origins of the republican institutions with the exploits of its alleged founder. On the other hand, the story of the capital punishment which he inflicted on his sons, and of his victory over the *Etruscans* at *Silva Arsia*, where he was killed, are best explained as part of an early popular legend or epic poetry.

Wallbank, *Polybius* 339; Ogilvie, *Comm. Livy* 1-5, 216 f. P. T.

BRUTUS (2) **CALLAICUS**, *DECIMUS IUNIUS* (*PW* 57), as consul in 138 B.C. and proconsul, fought successfully in *Iberia*, triumphing over the *Lusitani* and *Callaici*. He accompanied *Tuditanus* (q.v. 2) to *Illyricum* and later opposed *Gaius Gracchus*. He was an orator, philhellene, and a patron of *Acicius* (q.v.).

A. F. Astin, *Scipio Aemilianus* (1967), see index. E. D.

BRUTUS (3) **DAMASIPPUS**, *LUCIUS IUNIUS* (*PW* 58), fought for the government in the *bellum Sullanum*. Defeated by *Pompey* (83 B.C.), he was *praetor urbanus* in 82 and had four unreliable senators (including *Scaevola* (q.v. 4)) killed. He tried to relieve *Marius* (q.v. 2) at *Præneste*, but was defeated by *Sulla* at the *Colline Gate*, captured, and executed. E. B.

BRUTUS (4), *MARCUS IUNIUS* (*PW* 52), as tribune in 83 B.C. established a colony at *Capua*. In 77, as a legate of *Lepidus* (q.v. 2), he commanded in *Cisalpine*, surrendered to *Pompey* at *Mutina*, and, after a promise of safe conduct, was executed. E. B.

BRUTUS (5), *MARCUS IUNIUS* (*PW* 53), the tyrannicide, son of *Brutus* (4) and *Servilia* (q.v.), was born probably in 85 B.C., and adopted (not later than 59) by his uncle (?) *Q. Servilius Caepio*; after this his legal name was *Q. Caepio Brutus*. In 58 he accompanied *Cato* (q.v. 5) to *Cyprus*, and in 53 was quaestor to *Appius Claudius* (q.v. 12) in *Cilicia*. He joined *Pompey* in the Civil War, but was pardoned by *Caesar* after *Pharsalus*. In 46 he was governor of *Cisalpine Gaul*, and in 44 *praetor urbanus*. He entered into the conspiracy against *Caesar* for patriotic reasons and with *Cassius* (q.v. 6) played a leading part in it. Soon after the deed he found it impossible to remain in *Rome*, and was assigned by the Senate in June the task of importing corn from *Asia* and later the unimportant province of *Crete*; in August, after a quarrel with *Antony*, he sailed instead to *Greece*. With money handed over to him by the retiring quaestors of *Asia* and *Syria*, and with the support of *Q. Hortensius*, governor of *Macedonia*, he raised an army, won over the troops of *Vatinius* (q.v.), and captured *C. Antonius* (q.v. 5) in *Apollonia* (Mar. 43). The Senate had already (in Feb.) voted him the command of all the troops in *Illyricum*, *Macedonia*, and *Achaëa*, and later probably made his *imperium* formally *maius* and valid in *Asia* as well. Ignoring appeals to come to the aid of the republicans in *Italy*, and, later, his own condemnation under the law of *Pedius* (q.v. 1), he continued to collect men and materials in the East, campaigned against the *Bessi* in *Thrace* and by the successful siege of *Xanthus* forced the *Lycians* to give him financial aid. In the summer of 42 he and *Cassius* moved into *Europe* to meet *Antony* and *Octavian*; *Brutus* committed suicide after his defeat in the second battle of *Philippi* (23 Oct.).

Brutus impressed his contemporaries by his moral earnestness and independence of spirit. The affair of *Scaptius* and the *Salaminians* (*Cic. Att.* 5. 21, 6. 1) reveals him in a bad light, but alongside it should be placed his humane governorship of *Cisalpine Gaul* (*Plut. Brut.* 6). As a man of action he was not ineffective, but his temperament inclined him to study and contemplation; and this constituted the principal bond between him and *Cicero*, who dedicated several of his treatises to him. Their surviving correspondence is only a small part of what was published. Separate collections of *Brutus's* letters have also been lost; a group of Greek letters survives, most of which are certainly spurious. *Brutus* wrote books on virtue, duty, and patience, epitomes of histories, including that of *Polybius*, and poems. In philosophy his preference was for the *Academics*; in oratory he favoured the *Attic* school.

He married (by 51) a daughter of *Ap. Claudius* (q.v. 12) and after divorcing her in 45, *Porcia* (q.v.), daughter of *Cato*.

Cicero, Letters and Philippics; Vell. Pat. 2. 56-72; *Plutarch, Brutus*; *App. HCiv.* 2-4, *Cass. Dio* 44-7. G. Rossi, *PP* 1953, 26 ff.; A. E. Raubitschek, *Phoenix* 1957, 1 ff.; *Schanz-Hosius* 1. 394 ff. *ORF*² 460 ff.; F. Portulupi, *Bruto e i neo-atticisti* (1955); L. Torraca, *Marcus Gaius Bruto, Epistole greche* (1959). Iconography: H. Möbius, *Apx. Eph.* 1953-4, 3, 207 ff. G. W. R.; T. J. C.

BRUTUS (6), *DECIMUS IUNIUS* (*PW* 55a in Suppl. v), probably son of *Decimus Brutus* (consul 77 B.C.) and *Sempronia*, the associate of *Catiline*: from the name *Albinus* given to him by Greek writers and on coins it is usually assumed he was adopted by a *Postumius Albinus*. As a young man he served under *Caesar* in *Gaul* and distinguished himself by a naval victory over the *Veneti* (q.v. 1) in 56. He successfully commanded a *Caesarian* fleet at *Massilia* in 49, and was appointed governor of *Transalpine Gaul*, where he suppressed a rebellion of the *Bellovacii* (46). He took part in the conspiracy against

Caesar, in spite of the marked favour shown him by the dictator, who gave him another provincial command in Cisalpine Gaul and designated him consul for 42. In Apr. 44 he went to his province, and in December refused to surrender it to Antony, who claimed it in virtue of the law he had passed in June. Besieged by him in Mutina (q.v.), he was released by the victory of Hirtius (q.v.) and Octavian in Apr. 43. With Hirtius dead and the other consul Pansa (q.v.) dying, the Senate placed Brutus in command of their troops, but their two veteran legions preferred to resume service under Octavian, who, moreover, failed to help Brutus with the pursuit of Antony. Brutus followed Antony into Transalpine Gaul and joined Plancus (q.v. 1) in June, but was presently deserted by him. He now planned to join Marcus Brutus in Macedonia, but was abandoned by his army, captured by a Gallic chief, and put to death by Antony's order.

Cicero, *Letters and Philippics*; Cues. *B Gall.* 3, 7, *BCiv.* 1-2, Vell. Pat. 2, 56-64, App. *BCiv.* 2-3, Cass. Dio 44-6. Tyrrell and Purser, *The Correspondence of Cicero* (1904-33), vi². lxxiv ff., Syme, *Rom. Rev.*, see index. G. W. R., T. J. C.

BRYGUS, potter, in Athens, late sixth to early fifth century B.C. Known from nine signatures. His best artist, the Brygus painter, decorated red-figure cups, plastic vases, etc. Note particularly Komos (Würzburg), Sack of Troy (Paris).

BRYSON of Heraclea on the Pontus, sophist, was probably a pupil of Euclides of Megara and a teacher of Pyrrhon (qq.v.). He is best known as the author of an inconclusive attempt to square the circle (Arist. *An. Post.* 75^b4; *Soph. El.* 171^b16, 172^a3 and Alexander, *Comm. ad loc.*).

BUBASTIS, a local cat-headed goddess of the city of Bubastis. Early identified with Isis, she was also identified by the Greeks with Artemis. A temple of Bubastis existed at Memphis, one of the many temples in the great complex of sacred structures there. The festival of the goddess is described in Hdt. 2. 60. Bubastis appears with the Egyptian deities, or with some of them, at Delos, Ostia, Nemi, and Rome. T. A. B.

BUCEPHALUS (or **BUCEPHALAS**), favourite horse of Alexander the Great, died after the battle on the Hydaspes (326 B.C.). In its memory, Alexander founded the town of Bucephala on the site. See also HORSES.

BUILDING MATERIALS. GREEK. In its developed stages Greek architecture was based on the use of finely dressed stone masonry, above all the white marbles available in many parts of the Aegean, including that of Mt. Pentelicus, used on the Parthenon (q.v.); but it contains many formal reminiscences of an earlier phase, when the principal materials were timber (together with tiles at all times the standard material for roofs and ceilings) and walls of puddled rubble or mud brick, often upon a socle of more massive stone masonry (e.g. the Temple of Hera at Olympia—q.v.). The dressed blocks were regularly fastened with cramps and dowels of wood or metal, but without mortar; and although exceptionally almost entire buildings might be of marble, including ceilings of quite large span (e.g. the Erechtheum—q.v.), considerations of cost frequently meant that the less conspicuous parts were built in local limestone (*poros*). Inferior materials were regularly surfaced with fine marble stucco to resemble masonry, but the use of marble veneer was a Hellenistic innovation, as was the introduction of coloured marbles (other than grey). Painted terracotta facings are characteristic of districts, such as much of Sicily and south Italy, where suitable fine

building-stones were not available. Bronze was used for many decorative purposes.

2. ROMAN. Roman building practice was everywhere based on the materials (stone, timber, crude brick and fired brick) locally available, supplemented where necessary by the importation of fine marbles and granites, roofing timbers, etc. In Rome itself the plentiful local supplies of soft, easily dressed, volcanic tufa were used from the sixth century B.C. onwards and remained in use at all periods as a general-purpose building material. Travertine, quarried near Tivoli, was discovered in the second century B.C. and was the fine building-stone *par excellence* of the later republic. Under Augustus its place was taken in monumental use by white marble, at first from Luna (Carrara), later from Greece and especially from Attica and Proconnesos (Marmara). Many of the earlier Italic temples were built largely of timber, with painted terracotta details; and timber-framed crude brick was widespread in Rome before the fire of A.D. 64.

It was the perfection and exploitation of concrete which constituted the chief contribution of the Romans to architecture (see ARCHITECTURE). This was a hydraulic cement which derived its unique strength from the use of the local volcanic ash (*pozzolana*, Latin *pulvis puteolanus*, from its first exploitation at Puteoli, in Campania). In Rome from the second century B.C. onwards it came to supersede the puddled clay rubble and timber ceilings of previous practice, replacing the simple traditional forms by vaulted chambers that were as strong as fine ashlar and far cheaper and more flexible to build. The aggregate was often skilfully graded by weight, the supreme example of this being the dome of the Pantheon; and the vaulting load might be further lightened by the incorporation of large jars. It was regularly used with a facing of stone or fired brick; but this was purely superficial, the strength of the structure being that of the concrete core. Outside Italy its place was taken by a tough mortared rubble, often strengthened with courses of brick, and in the eastern provinces much of the vaulting was carried out in brick, anticipating Byzantine practice. Roman masonry was regularly faced with other materials, including marble veneer, painted plaster, moulded stucco, and mosaic. Translucent window-glass was common. Gilt bronze was used occasionally for doors and roof-tiles, waterproof cement and lead and terracotta piping regularly for hydraulic installations.

3. GENERAL. Locally and for domestic building simple, practical materials persisted at all periods: crude brick or puddled rubble, often on a damp-resistant stone footing; drystone masonry, timber-framing, tiles, thatch, or puddled terrace roofs. These simpler materials are frequently reflected in the conventions of monumental architecture, and they were themselves regularly faced, usually with fine stucco, to imitate monumental masonry.

BULLA REGIA, a town in the Bagradas valley in North Africa, now *Hammon Daradji*. Burials bear witness to the Punic and Numidian periods of its history. Later it came within Africa Proconsularis; an *oppidum liberum* under Augustus, it became a colony under Hadrian. Deities worshipped there include Apollo, Jupiter, Caestus, Saturnus, and Diana. Extensive Roman ruins survive.

P. Quomani, *CR Acad. Inscr.* 1952, 460 ff.

H. H. S.

BUPALUS. Sculptor (6th c.) of Chios. Son of Archer-mus (q.v.) and brother of Athenis. Made statues of Tyche and the Graces in Smyrna and a caricature of Hipponax (q.v.), in return for which Hipponax satirized him; this was probably a grotesque labelled Hipponax. A Chiote

signature on the Acropolis of Athens has been connected with Acropolis kore no. 675, and this may be an indication of the style of Bupalus.

Overbeck 315 ff.; A. Rumpf, *Arch. Anz.* 1936, 53; A. E. Raubitschek, *Dedications from the Athenian Akropolis* (U.S.A. 1949), 486; G. M. A. Richter, *Archaic Greek Art* (U.S.A. 1949), 110, 138.
T. B. L. W.

BURDIGALA, a town in Gallia Aquitanica, modern *Bordeaux*. An important port, trading even with Britain, it had many strangers in the population. A praetor is mentioned as executive magistrate. Of remains, the amphitheatre (Palais-Gallien, perhaps as early as second century) and the important temple of Tutela (destroyed by Louis XIV) are notable. In the late Empire a reduced enceinte, c. 700 × 450 m., rectangular with bastions, was built. It was the birthplace (c. A.D. 320) of Ausonius, who celebrated its university. It fell under Visigothic rule from c. A.D. 413.

C. Julian, *Inscriptions romaines de Bordeaux* (1887-90), Grenier, *Musée I.* 410, R. Étienne, *Bordeaux antique* (1962). C. F. S.

BUREBISTAS, king of the Dacians, built up an extensive but impermanent empire in the Danubian lands (c. 60-44 B.C.). With the aid of a priest called Decaeneos he carried out a religious and moral reform in Dacia, pulling up all the vines (Strabo, 303 f.). In Pannonia he defeated and annihilated the Boni and other Celts; he harried the Greek cities on the coast of the Pontus; and he spread his power southwards over the Danube into Thrace. Pompey negotiated with him for assistance in 48 B.C. (cf. *SIG*¹ 762: decree in honour of the ambassador Acornion of Dionysopolis). Caesar was intending to march against him in 44. But Burebistas himself was assassinated about this time and his empire broke up into four or five separate kingdoms. R. S.

BURGUNDIANS (BURGUNDIONES), a Germanic people unknown to Tacitus, who appear on the upper and middle Main, though not on the Rhine, soon after A.D. 250. They had little contact with the Romans until c. 406, when they crossed the Rhine and established a kingdom in the province of Germania Prima with their capital at Worms. When they tried to occupy Belgica Prima they suffered an appalling defeat at the hands of Aetius and an army of Huns, losing (it is said) their king and 20,000 men. This event is commemorated in the *Nibelungenlied*. But their kingdom survived until it was overrun by the Franks in 534. They were converted to Arian Christianity (mid 5th c.) and to Catholicism in 516.

E. A. T.

BURRUS, **SEXTUS AFRANIUS** (*PW* 8), equestrian procurator of Iulia, Tiberius, and Claudius, came from Gallia Narbonensis (Dessau, *ILS* 1321). As Agrippina's favourite, he was appointed sole *praefectus praetorio* by Claudius in A.D. 51 and retained his post under Nero (q.v. 1). He was Nero's tutor and adviser for many years, and with Seneca was responsible for the first period of Nero's government. Unaffected in 55 by an unfounded accusation of conspiracy, he played an uncertain part in Agrippina's murder, but opposed Nero's designs against Octavia. That his death in 62 was due to poison is asserted by Suetonius and Dio, but regarded by Tacitus (*Ann.* 14. 51) as non-proven. A. M.

BUSIRIS, according to Greek mythology, an Egyptian king, son of Poseidon, who slaughtered on the altar of Zeus all foreigners who entered Egypt. Heracles is said to have come to Egypt and killed the wicked king with all his followers. Among classical writers, Herodotus,

Euripides, Isocrates, Diodorus, Virgil, Arrian, and others, it was a popular myth.

For vase representations of the Heracles Busiris legend see Brommer, *Vasenlisten*¹, 19 f. For literary sources see Hiller von Gaertringen, *PW* s.v. *Busiris* (5), 1074 ff. T. A. B.

BUTES, name of several figures of Attic legend: (1) son of Teleon, an Argonaut who, charmed by the Sirens' song, plunged into the sea, but was rescued and taken to Lilybaeum by Aphrodite, by whom he became the father of Eryx. (2) Son of Poseidon Erechtheus (or of King Pandion), legendary ancestor of the family of the Eteobutadae, hereditary priests of that god in the Erechtheum. (3) Son of Boreas, driven mad by Dionysus for the rape of the nymph Coronis. R. A. B. M.

BUTHROTUM (now *Butrinto*, uninhabited), founded traditionally by the Trojan Helenus (q.v.) on a low hill at the seaward end of a narrow channel leading from a lake, possessed fine harbours and fisheries and was a port of call on the coasting route along Epirus. It has prehistoric remains, a fine theatre, and strong Hellenistic fortifications. The centre of a tribal union, it later became a Roman colony.

L. M. Ugolini, *Albania antica* iii (1942); Hammond, *Epirus*, see index, *Studia Historica* n (Tirane, 1966), 143 ff. N. G. L. H.

BYBLOS (modern *Bebel*, Lebanon). A major port of Phoenicia, 26 miles north of Berytus (modern *Beirut*), which derived much of its prosperity from the export of timber. It was occupied already in the fourth millennium B.C. and had the reputation of being the oldest city in the world, according to Philo (q.v. 5) of Byblos. Egypt took an interest in Byblos from an early date and there are traces of relations with Bronze Age Crete and Greece. Excavations have yielded little of its later history, but for one of the earliest examples of alphabetic writing, the sarcophagus of King Ahiram (10th c. B.C.). It developed as a Phoenician port and capital, and was an independent kingdom with its own coinage under the Persians. It became a centre for the cult of Adonis. The Greeks took from its name their word for papyrus.

M. Dumand, *Fouilles de Byblos* (1939, 1951).

J. B.

BYSSUS (*βύσσος*, prob. — Hebr. and Aram. *būs*) was the fibre from which a fine and often expensive material for garments, etc. (c.g. Aesch. *Sept.* 1039), was woven. It was long thought of as cotton, but analysis of Egyptian mummy wrappings (cf. Hdt. 2. 86) makes a fine linen more probable, although usage was perhaps not always consistent and the byssus grown and manufactured in Elis (Pliny *HN* 19. 20; Paus. 6. 26. 6) may have been cotton. There is no ancient evidence for the use of the silky byssus filaments produced by some molluscs (esp. *pinna nobilis*).

PW III. 1108; Hehn-Schrader, *Kulturpflanzen und Haustiere*¹ (1911), 172, 189, 409. L. A. M.

BYZACIUM. The name, of uncertain Libyan or Phoenician origin, applied in Roman times to part of the province of Africa from the Gulf of Hammamet to the Gulf of Gabes, with the hinterland; it was probably the *Βυζαρία χώρα* of Polybius (3. 23. 2). The chief town was Hadrumetum, which, like a number of others, was of Phoenician or Carthaginian origin. The area was extremely fertile in parts, and the olive was intensively cultivated; a procuratorial region was based on Hadrumetum. Under Diocletian it became a province with the name *Valeria Byzacena*. B. H. W.

BYZANTIUM, famous city on the European side of the south end of the Bosphorus, bounded by the Golden Horn on the north, the Propontis on the south. The Greek city occupied only the eastern tip of the promontory,

approximately the area now covered by the Old Serai. Of the various founders named in the sources the Megarians have the best claim, as cults and institutions show, but groups from the Peloponnese and central Greece probably also participated. The Eusebian foundation date is 650, but calculation from that of Chalcedon (q.v.) gives 668 (Hdt. 4. 144). No material earlier than the end of the seventh century has emerged from the (to date) slight excavations. Except during the Ionian Revolt, Byzantium was under Persian control from the time of Darius' Scythian Expedition to 478. In the Athenian Empire it paid 15 talents tribute, or more, which shows its wealth,—derived throughout the Greek period from fishing and levying tolls on passing ships. It revolted from Athens in 440–439 and in 411–408. Under Spartan control after Aegospotami (405), it joined the anti-Spartan sea league formed after the battle of Cnidus (394), which is attested by alliance coins. It came under Athenian influence again from c. 390, and it became a formal ally of Athens from c. 378

to 357 and then again when resisting Philip of Macedon in the famous siege of 340–339. Hecate traditionally helped the besieged on this occasion, and her symbol, the Crescent and Star, appeared on the coins of the city; this symbol later passed from Greece to Islam. It suffered from attacks and exactions by the Celts in the third century, and was on the winning side in Rome's Greek wars in the second century. Byzantium's strategic position helped it to enjoy a privileged status in the Roman Empire, briefly and terribly lost when it supported Pescennius Niger against Septimius Severus. Then it was besieged for over two years (summer 193 to winter 195 (?); Cassius Dio, 75. 12. 1, exaggerates in his detailed and brilliant account) and was brutally punished by loss of privileges and acts of destruction. The city was soon rebuilt and reinstated. Constantine refounded Byzantium as New Rome on 11 May 330, extending the bounds of the city and adorning it with magnificent buildings. It was known thereafter as Constantinopolis (q.v.). A. J. G.

C

CABIRI, non-Hellenic deities, probably Phrygian (earlier theories of Phoenician origin are not borne out by recent researches, Kern, *Rel. d. Griech.* (1926), 1. 235 ff.), who promoted fertility and (at least from the fifth century) protected sailors. Their numbers varied, but one tradition gave four names, Axierus, Axiocersa, Axiocersus, Cadmilus (schol. Ap. Rhod. 1. 917). The Greeks also gave them the common title of *Μεγάλοι Θεοί*, and connected their worship in different places with more familiar cults, those of Demeter (material in Farnell, *Cults* iii. 367, n. 256), Hermes (ibid. v. 11 and 16), and Dionysus. With the first and last they had certainly an initial kinship, if the assumption of Phrygian origin is correct. (This would also facilitate the identification with the Corybantes and Curetes which took place in the Hellenistic period.) Their chthonian nature is confirmed by phallic rites and the presence of sacrificial pits at Samothrace (q.v.) and Thebes (Kern, loc. cit.). The historic centre of their worship was Samothrace, where mysteries were celebrated (Hdt. 2. 51; Ar. *Pax* 276), but it existed on other islands, notably Lemnos, and in Asia Minor (see MYSTERIES). On the mainland, the cult is found from the sixth century at Anthedon on the Boeotian coast and near Thebes. Pausanias' statement (4. 1. 7) that the Theban cult was founded from Athens was denied by Wilamowitz, but may be true. Probably under Orphic influence (W. K. C. Guthrie, *Orpheus and Gk. Rel.* (1952), 123 ff.), it acknowledged an elder Cabisrus and a child, and identified the former with Dionysus. The *ἀνακτες παῖδες* worshipped at Amphissa were thought by some to be the Cabiri (Paus. 10. 38. 7; cf. s.v. ANAKES). After Alexander the cult spread rapidly over the Greek world. At Samothrace it was patronized by the Ptolemies, and later by the Romans (*BCH* 1925, 245 ff., 258; Kern, op. cit. iii. 118; K. Lehmann-Hartleben, *AArch.* 1939, xlv; J. H. Oliver, *ibid.* 464 ff.). In this period the Cabiri were often confused with the Dioscuri (q.v.), who shared their character as seamen's gods. In art we have representations of a pair of Cabiri, a younger and an older, the older, bearded figure usually reclining while the younger stands (best exemplified by the *Καβίρος* and *Παῖς* at Thebes, but there are traces of the same pair at Samothrace), and later they became a pair of youths indistin-

guishable from the Dioscuri; so on coins, where also a hammer-wielding Cabisrus appears.

See in general B. Hemborg, *Die Kabiren* (Uppsala, 1950), and for a summary of the Cabiri in art, O. Kern in *PAW* x. 1177 ff.
W. K. C. G.

CACUS and **CACA** (etymology uncertain; connexion with Caeculus founder of Praeneste, of whom a miracle involving fire is related, Servius on *Aen.* 7. 678, has often been suggested but remains unproved). The former is represented in *Aen.* 8. 190 ff. (cf. Dion. Hal. *Ant. Rom.* 1. 39. 2 ff., Prop. 4. 9) as a savage fire-breathing monster, son of Volcanus (q.v.), who lived on the Palatine (Aventine according to Virgil, but the *Scalae Caci* on the Palatine go far to prove him wrong; see Platner-Ashby, 465; Nash, *Pict. Dict. Rome* ii. 299). He terrified the countryside with his brigandage till he stole some of the cattle of Geryon from Heracles (q.v.), and was overcome and killed by the latter. Servius (on *Aen.* 8. 190) says that he was betrayed by his sister Caca, and by way of reward she was given a shrine 'in quo ei pervigili igne sicut Vestae sacrificabatur' (so the best MS., F; 'in quo ei per virgines Vestae sacrificabatur' the rest). This makes it tolerably plain that originally Cacus and Caca were a divine pair, the fire-god and fire-goddess of the Palatine settlement; cf. Latte, *RR* 60, who is doubtful about the deductions to be drawn from the legend.
H. J. R.

CADMUS, in mythology, son of Agenor, king of Tyre. When his sister Europa (q.v.) disappeared, Agenor sent Cadmus with his brothers Cilix and Phoenix (the eponyms of Cilicia and Phoenicia), to seek her, with instructions not to return without her. Cadmus arrived at Delphi and was advised to settle where a cow, which he should find on leaving the temple, lay down. She led him to the site of Thebes, where he built the Cadmea, the citadel of the later town. To get water he killed a dragon, the offspring of Ares, and had to undergo a term of servitude. By advice of Athena, he sowed the dragon's teeth, and there came up a harvest of armed men, whom he killed by setting them to fight one another. Five survived and became the ancestors of the nobility of Thebes, the *Spurtoi* (traditionally 'sown men'). He married Harmonia,

daughter of Ares and Aphrodite, to whom he gave a robe and a necklace made by Hephaestus; the latter especially played a part in later events, see AMPHIARAUS. Their children were Ino, Semele, Autonoe, and Agave (see ACTAEON, ATHAMAS, DIONYSUS, PENTHILUS). Cadmus introduced writing into Greece (i.e., the 'Phoenician', or North Semitic alphabet). The discovery (1964) of a cache of inscribed Mesopotamian cylinder-seals in a Mycenaean site on the Cadmea raises the question whether there is any historic basis to the legend. In their old age he and Harmonia went away to Illyria and finally were turned into serpents. See ALPHABET.

A few late archaic vases show the wedding of Cadmus and Harmonia, in the chariot yoked with a lion and a boar; several fifth- and fourth-century ones show the fight with the dragon (Brommer, *Vasenlisten* 339 f).

O. Crusius in Roscher's *Lexikon*, s.v. F. Vian, *Les Origines de Thèbes, Cadmos et les Spartes* (1963).

H. J. R.; H. W. P.; C. M. R.

CAECILIUS (1) STATIUS, an Insubrian Gaul, probably from Mediolanum (*Milan*), taken prisoner (in 223 or 222 B.C.) and brought as slave to Rome (the *praenomen* Statius was common in north Italy and was regarded as a slave's name since its bearers normally came to Rome as prisoners of war); on manumission he took the name Caecilius and Statius became his *cognomen*. His *floruit* (Jerome, from Suetonius) is given as 179 B.C. and he died in 168 B.C. Best evidence for his early career is Terence *Heu.* 9. 27: Ambivius (q.v.) Turpio encouraged him, produced his plays, and helped him from early failure to the position of the most highly regarded of comic poets in plots and emotional power (Varro, *Sat. Men.* 399) and in *gravitas* (Hor. *Epist.* II. 1. 59), while Volcacius ranked him greatest of all. Some forty-two titles are known, of which sixteen seem clearly based on Menander. The most important fragments are preserved by Gellius 2. 23, three passages of his *Plocium* side by side with Menander's Greek. One passage shows a trimeter monologue turned into a polymetric *canticum*, close in style and metrical technique to Plautus. The passages are the best direct evidence for the procedure of *vertere*, the relationship of Roman plays to their Greek originals. Caecilius was the first of a distinguished series of writers from north Italy that includes Catullus and the Younger Pliny.

FRAGMENTS. E. H. Warmington, *Remains of Early Latin* 1 (1935), 468 ff. (with trans.), Ribbeck *CRF.* F. Leo, *Grech. d. rom. Lit.* (1913), 217 ff. G. W. W.

CAECILIUS (2) of Novum Comum, one of Catullus' friends, composed a poem on Cybele (Catull. 35).

CAECILIUS (3) EPIROTA, QUINTUS, a man of letters of the Augustan age. He was the freedman of Atticus and the friend of Cornelius Gallus, after whose death (26 B.C.) he opened a school where he taught small groups of pupils. According to Suetonius (*Gram.* 16), he was the first to give public lectures on Virgil and other contemporary poets.

Schanz-Horst, § 352.

J. F. M.

CAECILIUS (4, PW 2) of Calacte in Sicily, first century B.C.; rhetorician, possibly to be identified with the Jewish *libertus* mentioned by Plutarch, *Cic.* 7. His range of interests (he wrote a history of the Sicilian slave-war as well as rhetorical works) and his literary outlook resemble those of Dionysius (q.v.) of Halicarnassus. His most important work, *περί τοῦ χαρακτήρος τῶν δέκα ῥητόρων*, dealt with questions of authenticity in the orators. The titles *κατὰ Φρυγῶν* and *τίνι διαφέρει ὁ Ἀππικὸς ἑῷ τοῦ Ἀσιανῶν*; indicate his position as an exponent of Attic standards against 'Asiatic' rhetoric (see RHETORIC, GREEK, § 3). He is once quoted by later writers as an authority

on figures (*οχήματα*); and his *περί ὕψους* gave 'Longinus' (q.v.) the incentive to attempt his own treatment of the subject.

FRAGMENTS. E. Ofenloch (1907).

D. A. R.

CAECILIUS (5) JUCUNDUS, LUCIUS (1st c. A.D.), a Pompeian auctioneer, whose coarse features are known from a pair of priapic herms placed in his atrium by his freedman, Felix, which bore realistic heads of the master—wart and all! His trade was revealed by 127 waxed tablets, mostly receipts recording the proceeds of auction sales that Jucundus conducted, and dating with two exceptions from A.D. 52 to 62.

CIL IV 3340.

R. C. C.

CAECĪNA (1), AULUS, a friend of Cicero and a member of an old Etruscan family of Volaterrae (*Ceicna*; cf. the river Caecina, modern *Cecina* there). Cicero had defended his father in an inheritance case in 69 B.C. (cf. *Cic. Caecin.*). Caecina supported Pompey in 49 and wrote a pamphlet against Caesar; consequently he was exiled after Pharsalus (48); Cicero commended him to the governors of Sicily and Asia. He surrendered to Caesar in 46. Trained by his father, he was an expert in the *Etrusca disciplina*, on which he wrote; his work was used by Pliny (*HN* 2) and by Seneca (*Quaest. Nat.* 2. 3. 9). He has some repute as an orator.

Cic. Fam. 6. 5–9, 13. 66.

H. H. S.

CAECĪNA (2, PW 24) SEVERUS, AULUS (*cos. suff.* 1. B.C.), a *novus homo* and an experienced soldier, from Volaterrae (*Not. Scav.* 1955, 145). Attested as legate of Moesia in A.D. 6, when he rescued Sirmium from the Pannonian insurgents, but had to protect his province from Dacian and Sarmatian raiders. In 7, commanding with M. Plautius Silvanus an army of five Roman legions, he won a great battle north-west of Sirmium and marched to join Tiberius at Siscia. In 14 he was legate of Germania Inferior and had trouble with a mutiny. In 15 he nearly suffered a serious disaster when crossing the 'pontes longi' on his return from the Ems to the Rhine. In 21 he proposed without success that wives should not be permitted to accompany their husbands on provincial commands. His own wife had given him six children (*Tac. Ann.* 3. 33).

R. S.

CAECĪNA (3, PW 10) ALIENUS, AULUS (*cos. suff.* A.D. 69), born at Vicetia, was quaestor of Baetica in 68 and active for Galba. He is described as 'decorus iuventa, corpore ingens, animi inmodicus, scito sermone' (*Tac. Hist.* 1. 53). Legate of a legion in Germania Superior, he was largely instrumental in the elevation of Vitellius, one of whose army-columns he led across the Great St. Bernard to Italy and to victory at Bedriacum. Honoured and enriched by Vitellius, and dispatched northwards to arrest the Flavian invasion, he negotiated with the enemy and was deposed from command by his own troops. Rescued after the fall of Cremona, Caecina acquired the favour of Vespasian, but conspiring, so it is alleged, with Eprius (q.v.) Marcellus in 79, he was summarily executed.

R. S.

CAELESTIS, the epithet which the Romans applied to the Carthaginian goddess Tanit whom they often identified with Juno. That the goddess was brought to Rome in 146 B.C. by *evocatio* after the sack of Carthage is improbable, since the cult apparently did not spread outside Africa before the time of Septimius Severus (q.v.) whose coinage depicts Dea Caelestis seated on a lion. Her statue was brought to Rome by Elagabalus, and before A.D. 259 a shrine had been built on the Capitol at Rome near the temple of Juno Moneta. In Roman Carthage Juno Caelestis had an oracle and was the chief deity in

the city. The epithet Caelestis was occasionally applied to Aphrodite and Diana, and also, probably under astrological influence, to the constellation Virgo.

G. Ch. Picard, *Les Religions de l'Afrique antique* (1954), 100 ff.; Latte, *RR* 346 f., on Virgo, see *PW* s.v. Virgo 8. H. H. S.

CAELIUS MONS, the most south-easterly of the seven hills of Rome, lay south of the Esquiline: part of its northern side was apparently called Sucusa. Originally named Querquetulanus, its name Caelius was derived by antiquarians from Caelus Vibenna (q.v.). Archaeological evidence for early settlement is lacking, though it was included in the Septimontium. Crossed by the Servian Wall, it was densely populated in the Republic; after a devastating fire in A.D. 27 it was occupied by the houses and gardens of the wealthy.

The chief buildings on it were the following. The temple of Divus Claudius, begun by his widow Agrippina, mainly destroyed by Nero, and restored by Vespasian (only buttress walls and porticos survive). The Macellum Magnum, built by Nero (cf. *JRS* 1919, 179 ff.), perhaps on the site of S. Stefano Rotondo. Castra Peregrina, barracks for *peregrini* (q.v.) and *frumentarii* (*JRS* 1923, 152 ff.). In the eastern part lay the Castra Nova Equitum Singularium, barracks of the mounted bodyguard of the Emperor, built by Septimius Severus and used until Constantine disbanded the Equites Singulares in A.D. 312: they are now under St. John Lateran. The Sessorium, the residence of the Empress Helena, where Elagabalus had had a vast villa which included a small amphitheatre (Amphitheatrum Castrense), the great Circus Varianus (565 m. × 125 m.) and Thermae, which after a fire were restored by Helena, the Thermae Helenae. An atrium of the palace was made by Constantine into the Church of S. Croce in Gerusalemme. The grounds of the villa were cut by the Wall of Aurelian (270-2). For this last group of buildings, where excavation started in 1958, see Nash, *Pict. Dict. Rome*, s.v. and plan i. 241.

A. M. Colini, *Storia e topografia del Celio* (Mem. Pont. Acc. 1944). H. H. S.

CAELIUS (PW 35) RUFUS, MARCUS, b. 82 B.C. at Interamnia (*Terramo*), came under Cicero's tutelage in 66, but in 63 associated with Catiline (q.v.). In 59 he successfully prosecuted C. Antonius (q.v. 3) for *repetundae*; but in early 56 his prosecution of L. Bestia for *ambitus* failed, and Bestia's son L. Sempronius Atratinus charged Caelius with *ris*. According to Cicero, who with Crassus secured Caelius' acquittal, the attack was inspired by Caelius' ex-mistress Clodia (q.v.). Tribune and opponent of Pompey in 52, in Aug. 50 Caelius, now aedile, declared for Caesar; but in 48 Caesar's reluctance to cancel debts shook his enthusiasm, and as *praetor peregrinus* he opposed the official policy of Trebonius, *praetor urbanus*. The *senatus consultum ultimum* (q.v.) being passed, Caelius fled, joining Milo to start insurrection in Italy. He was captured and executed at Thurii (48).

Seventeen letters to Cicero (*Fam.* 8) show brilliant political insight, with agreeable attacks on the more pompous personalities; fourteen are written to Cicero in Cilicia on Roman affairs. His wit made him a master of invective (cf. Quintilian, 4. 2. 123). Catullus, whom Caelius supplanted as Clodia's lover, addresses him in poem 77, and surely also in 58.

Cic. *pro Caelio*, ed. R. G. Austin (1960); T. A. Dorey, *Greece and Rome* 1958; C. J. Fordyce, *Catullus* (1961). G. E. F. C.

CAENEUS (Kawēus), a Lapith (see CENTAURS), of whom three principal stories are told. (1) He was invulnerable, and therefore the Centaurs disposed of him by hammering him into the ground (Pind. fr. 150 Bowra, cf. *Ilyg. Fab.* 14. 4 and Rose ad loc.). (2) He set up his spear to

be worshipped (schol. in Ap. Rhod. 1. 57, in *Il.* 1. 264). (3) He was originally a girl, Caenis, loved by Poseidon, who gave her (invulnerability and) a change of sex (*Aen.* 6. 448 and Servius there, and scholiasts as above). He was son of Elatus of Gyrtone (*Il.* 2. 746 and schol. 1. 264, Ap. Rhod. 1. 57). II J. R.

CAEPIO (1), QUINTUS SERVILIUS (*PW* 49), praetor in 109 B.C., triumphed over Iberian rebels in 107. Made consul for 106, during a temporary reaction in favour of the Optimates due to the failure of Marius to finish the Jugurthine War, he passed a law giving senators a share (perhaps a majority) of seats on criminal juries (see *QUAESTIONES, REPETUNDARUM*) and probably restricting rewards for successful prosecution. Sent to fight against the Tectosages, he took Tolosa and captured the sacred (but accursed) treasure there, said to be that taken by the Gauls from Delphi. The gold disappeared *en route*, not (it was thought) without his knowledge. In 105 his refusal to co-operate with the *notus homo* Cn. Mallius Maximus, his successor, against the Cimbri led to the disaster of Arausio and indirectly to Marius' series of consulships. Caepio had his *imperium* abrogated and on his return faced several trials on various charges; he was finally convicted by Norbanus (q.v. 1) in 103 and ended his days in exile at Smyrna. E. B.

CAEPIO (2), QUINTUS SERVILIUS (*PW* 50), son of (1), brother-in-law and friend of Drusus (q.v. 2), unsuccessfully opposed Saturninus (q.v. 1) as quaestor in 100 B.C., but (with a L. Piso) coined money needed for the execution of his corn law (see Sydenham, *CRR*, no. 603: probably misdated). In 95 he was accused of *maiestas* in one of a series of political trials (see *NORMIANUS* 1), was defended (half-heartedly) by L. Crassus (q.v. 3) and acquitted. Quarrelling with Drusus, originally for private reasons, he drew closer to his enemies and in 92 attacked (and was attacked by) Scaurus (q.v. 1), who had helped to defend his father, in a duel of inconclusive prosecutions. In 91 he was a leading opponent of Drusus. He was killed by Poppaedius (q.v.) in the Social War (90).

Badian, *Stud. Gr. Rom. Hist.* 34 ff.; E. S. Gruen, *JRS* 1965, 59 ff. E. B.

CAEPIO (3), FANNIUS (*PW* 16), headed a conspiracy against Augustus, probably in 23 B.C. (see *VARRO* (4) *MURENA*). When prosecuted by Tiberius before the *quaestio maiestatis* he attempted to escape but was betrayed and executed.

CAERE (Etr. *χαιρε*; modern *Cerveteri* – *Caere vetus*), 30 miles north of Rome on the Tyrrhenian coast, was one of the wealthiest of the twelve cities of Etruria. The earliest finds date from Villanovan times, and its most brilliant period fell between the seventh and fifth centuries, during which its close contact with the East Mediterranean (via, for example, its port of Pyrgi, q.v.) is attested *inter alia* by a considerable quantity of imported Greek pottery and by the 'Caeretan hydriae', presumably the work of an *émigré* East Greek craftsman active from c. 530 to shortly after 510 B.C. Excavation has been mainly confined to tombs, which from the seventh century onwards take the form of elaborate chambered *tumuli*, laid out in streets. One of the most important is the Regolini-Galassi tomb: together with the contemporary tombs at Praeneste and Vetulonia (qq.v.) it affords our best evidence for the artistic repertoire of the Orientalizing period in Etruria. For its relations with Rome, see *CAERIDES*.

L. Pareti, *La Tomba Regolini-Galassi* (1947); B. Pace et alii, *Mon. Ant.* 1955; J. M. Hemelrijk, *De Caeretanse Hydriae* (Rotterdam, 1956); M. Pallottino, *La necropoli di Caere* (1960); Scullard, *Etr. Cities*, 97 ff.; M. Cristofani, *La tomba delle iscrizioni a Cerveteri* (1965); F. Roncalli, *Le lastre dipinte da Cerveteri* (1965). D. W. R. R.

CAERITES. The ancient accounts of the so-called Caerite franchise are contradictory. They confuse together the earliest and the final stages of development of *civitas sine suffragio*. Caere received this status (see *MUNICIPIUM*) either as a reward for protecting the Vestal Virgins during the Gallic invasion of 390 B.C. (Gellius' and Strabo's view), or as a punishment for an otherwise unspecified revolt during the third century, which was possibly Livy's view. The latter is more probable, because the connexion with the Gallic invasion is unknown to Livy, and the common belief that the status of Caere was *ignominiosum* fits only the later date. The notion that Caere was the first *municipium* is a deduction from the improbable connexion of its franchise with the events of 390 B.C.

A. N. Sherwin-White, *The Roman Citizenship* (1939), 50 ff.; M. Sordi, *I rapporti Romano-etruschi* (1960). A. N. S.-W.

CAESAR (1), GAIUS JULIUS (*PW* 131), b. 100 B.C., son of C. Caesar (who died c. 85 without becoming consul) and Aurelia of the Cottae. His father's sister had married Marius; he himself in 84 married Cornelia daughter of Cinna (q.v. 1). Whether his early career shows political consistency is uncertain. Service in Asia (81); unsuccessful prosecution of Dolabella (*cos.* 81) and C. Antonius (q.v. 3) in 77, followed by retirement for study in Rhodes; service against the pirates (75-74); return to Rome when elected *pontifex* (73); support of Pompey (q.v.) in restoring tribunician rights (71-70); intrigue with the Transpadani in the year after his quaestorship (69); and at least one speech in favour of Pompey's commands (67-66). His 'Marianism' at least was sustained. He had supported the Lex Plota (? 70) recalling the partisans of Lepidus (q.v. 2); and even after Cornelia's death in 68 and his remarriage to Sulla's grand-daughter Pompeia, he restored Marius' trophies during his aedileship in 65.

2. As aedile Caesar spent heavily, probably financed by Crassus (q.v. 4), whom he supported in designs on Egypt; Suetonius also implicates him in the alleged plot to murder the consuls (see *CATILINI*). In 63 he engineered the trial of Rabirius (q.v. 1), a demonstration against misuse of the *senatus consultum ultimum*; and he may have backed the bill of Rullus (q.v.). But his great achievement in 63 was to be elected *pontifex maximus*, defeating Catulus (q.v. 3) and other consulars. When he was accused of complicity with Catiline, Cicero abruptly dismissed the charge, and treated Caesar with great deference (e.g. *Cat.* iv. 9) when he opposed execution of the Catilinarians. His praetorship in 62 was suspended after he had supported Pompey's man Metellus (q.v. 10) Nepos; but he was quickly reinstated, and obtained Further Spain as his province, though his creditors apparently prevented his departure till June 61; meanwhile as witness at the Bona Dea trial in May he refused to depose against Clodius (q.v. 1), though he had divorced Pompeia because 'his family must be above suspicion'. In Spain he made a grandiose expedition through Lusitania to Callaecia, and on his return, greatly enriched, he claimed a triumph. This he had to forgo because the Senate refused him permission to stand for the consulate outside Rome, but forming a close compact with Pompey and Crassus (called in modern times 'the First Triumvirate') he secured election for 59.

3. Though showing respect to the Senate at the outset, Caesar ruthlessly overrode opposition and disregarded the vetoes of his colleague Bibulus (q.v. 1.) Land for Pompey's veterans was quickly provided by a *Lex agraria*, extended by a hotly contested *Lex Campana* in June; and Pompey's eastern *acta* were confirmed. The *publicani* secured rebate on the Asiatic tax contracts of 61; Caesar also colonized Novum Comum, passed an important *Lex de repetundis*, compelled publication of the

Senate's transactions, and (as *pontifex maximus*) transferred Clodius to the plebeians. Meanwhile a *Lex Vatinia* (? May) revoked the grant to Caesar of an insignificant province, and conferred on him Cisalpine Gaul and Illyricum for five years, legalizing his immediate possession of an army. The Senate added Transalpine Gaul, and Caesar left early in 58, to be engaged for the next nine years on the Gallic Wars (q.v.). In the early years there is no evidence of any discord with Pompey, now his son-in-law (see *JULIA* 1); but by Apr. 56 the attacks of Domitius (q.v. 4) looked dangerous, and Caesar met Pompey and Crassus at Luca. Pompey and Crassus became consuls for 55, and renewed Caesar's command for five years more, themselves receiving equivalent terms of *imperium* under a *Lex Trebonia*. Caesar was temporarily safe; thereafter he received from the Senate *supplicationes* of unprecedented length for his Gallic successes, and bribed nobles in Rome, and cities and kings abroad, to foster his designs. But in 54 Julia died, and in 53 Crassus was killed. Caesar approved of Pompey's measures in 52 (*BGall.* 7. 6), and gained on balance from Pompey's *Lex de Iure Magistratum*, for his tribunes could now veto attempts to recall him before he could stand for the consulate, which a law of this year enabled him to do *in absentia*. Yet the crux was whether Pompey, who now had a fresh *imperium*, would support these attempts at recall. Although he opposed in 51 the motion of M. Marcellus (q.v. 4), after much hesitation he threw in his lot with Caesar's opponents. The final compromise of Caesar's tribune Curio (q.v. 2) failed, and on 1 Jan. 49 (pre-Julian) the Senate voted that Caesar lay down his command. On 10 Jan. Caesar crossed the Rubicon.

4. Caesar rapidly overran Italy, capturing Donutius (q.v. 4) at Corfinium on his way, but he failed to prevent Pompey's crossing to Greece. He therefore turned to Spain, where he forced Pompey's lieutenants Afranius and Petreius to surrender after some brilliant manoeuvring near the town of Ilerda (2 Aug.). On his way home he received the capitulation of Massilia. In 48 he effected a crossing to Epirus, Antony later bringing the bulk of his army. Shortage of troops frustrated his blockade of Pompey at Dyrrhachium, and a sortie by Pompey inflicted considerable loss. But reinforced by Domitius Calvinus in Thessaly, Caesar fought a set battle against Pompey's force (still far superior numerically) at Pharsalus, where the courage of his veterans in withstanding cavalry brought complete victory (9 Aug. 48). He pursued Pompey to Egypt, and was involved through the winter in a difficult war against Ptolemy XIII and the Alexandrians, which ended in the establishment of Cleopatra, now his mistress, as queen. He proceeded to Asia Minor and defeated Pharnaces (q.v. 2) of Bosphorus at Zela, the battle which occasioned his famous boast, 'Veni, vidi, vici'. He returned to Rome, but in Dec. 47 landed in Africa, where after four months he overcame the Pompeian forces under Scipio at Thapsus. The wars seemed over, and he celebrated four triumphs, Gallic, Alexandrian, Pontic, and African; but in 45 he was called to Spain to fight Pompey's sons and Labienus, and his victory at Munda—17 Mar., now Julian—was his hardest battle.

5. On his return from Ilerda Caesar was made dictator to hold elections, in Oct. 48 he was again appointed, in 46 he became dictator for ten years, and in 44 for life. He secured his consulate for 48, in 46 and 45 held nine months' consulates (the last without a colleague), and in 44 was consul again. In 44 he received tribunician *sacrosanctitas*, in 46 a *praefectura morum*. Other powers and honours, including a full *tribunicia potestas*, he refused, but received extraordinary emblems of royalty, statues, a purple robe, a temple to his Clementia, and a *flamen* (M. Antonius); and his head appeared on coins of 45-44. But full deification was given only after his death. The

reforms of his period of power were necessarily sporadic and incomplete; he reduced the number of recipients of corn dole and abolished *collegia* (q.v.), but settled veterans in Italy and outside, founding numerous colonies, many for commercial reasons, especially Corinth and Carthage; he curtailed indiscriminate emigration and ordained that at least one-third of Italian herdsmen be freemen; he carried out public works in Italy, prepared standard regulations for Italian municipal constitutions, carried sumptuary laws, introduced the Julian calendar (beginning 1 Jan. 45 = 709 A.U.C. see CALENDARS, § 7), and abolished tax farming in Asia and perhaps in other provinces. His revision of debts was moderate, and offended extremists like Caelius (q.v.). He was lavish in granting citizenship (Cisalpine Gaul received it from a *Lex Roscia* in 49), and went outside Italy in recruiting the Senate, which he enlarged to 900. At the time of his death he was preparing wars against Parthia and Dacia. His famous 'clemency', which reached its climax with the recall of M. Marcellus (q.v. 4), attempted to conciliate the aristocracy. But his powers and honours, and especially perhaps his control of offices, even though he refused the title *Rex* in 44, were intolerable even to men who had been of his party, and on the Ides of Mar. 44 he fell to a conspiracy led by M. Brutus and C. Cassius, and died at the foot of Pompey's statue. By will dated 13 Sept. 45 he had 'adopted' his great-nephew C. Octavius (see AUGUSTUS, § 1), in the event that he had no son of his body; and to every citizen he left 300 sesterces, repeating a previous gift. His largesse to his soldiers had also been considerable, though their loyalty to him, the chief factor in his power, was in the main spontaneous. In 59 he had married Calpurnia (q.v. 1) as his third wife; among his numerous mistresses the most famous after Cleopatra was Servilia, half-sister of Cato and mother of Brutus.

6. WRITINGS: seven books *De Bello Gallico*, each covering a year from 58 to 52 (completed to 50 by Hirtius, q.v.) and three *De Bello Civili*. Both works show Caesar as the simple, efficient patriot, fighting necessary wars; but the propaganda (cf. *BCiv.* 1. 1-11; 3. 31-3, 82-3) never breaks unduly the masterly descriptions of warfare, studied in all later ages. The Commentaries were a new literary genre; their style (cf. Cicero, *Brutus*, 262; Hirtius' preface to book 8) is lucid and compressed, entirely free from rhetoric, and the diction is simple but brilliantly chosen. As the author of a (lost) work on 'Analogy' (q.v.) Caesar eschewed the 'inauditum atque insolens verbum' (Gellius, 1. 10. 4), and he wrote a verse epigram to 'Terence, the 'puri sermonis amator' (*FPL* 91). As an orator he was second only to Cicero, but his (lost) *Anticato* in reply to Cicero (see CATO 5) was not a success.

7. Caesar's style mirrors the clear vision which was his outstanding quality. His generalship, unsurpassed in antiquity, rested chiefly on his sense of the moment to strike. As a statesman he had abandoned the palliatives of earlier reformers, and the urban populace was no longer first in his mind: the inchoate programme of his dictatorship finds coherence in the promotion of good government, economic development, and greater social equality in Italy and in the empire as a whole. Yet his radicalism, however far-seeing, went too far for the Italy of his day; and though the stories of trousered Gauls in the Senate or of an intended transference of the capital to the East are fabrications, they may point the direction in which Caesar was moving. But he legislated almost in spite of himself. The man who by 46 could say 'satis diu uel naturae uixi uel gloriae' (Cic. *Pro Marcello* 25) was ambitious for personal position rather than reform, and the Civil War (see CAES. *BCiv.* 1. 9. 2) was fought to save his *dignitas*. He was not, like Augustus, economical in the powers he held, nor did he understand the indirect exercise of *auctoritas*; again, the exaggerations of our

sources about his honours, royal and divine, reveal something which even contemporaries thought about him. But his impatience was characteristic of his zest for life; his continued accessibility moved the reluctant Cicero; and his culture is another proof of his astonishing versatility, which makes him one of the most impressive characters of antiquity.

ANCIENT SOURCES. After Caesar's own writings (above), with the *Bella* (*Alexandrinum*, *Africum*, *Hispanicum*, qq.v.) and the many references in Cicero (q.v. 1), the most important contemporary author is Sallust (q.v.). see R. Syme, *Sallust* (1964) against the view that the *Bellum Catilinae* was written to exculpate Caesar from revolutionary aims, and against the authenticity of the *Epistulae ad Caesarem senem*. Among later writers (see APPIAN, DIO (2) CASSIUS, LIVY, LUCAN, PLUTARCH, SULLONIUS (2), VILLENUS) Suetonius, though his collation of contemporary material is sometimes perverse, provides invaluable evidence about Caesar's personality; but in Caesar's earlier career it is often difficult to evaluate the significance of incidents which for less successful politicians of his generation would not have been recorded. For documentary (including numismatic) evidence see the particularly full entries in Broughton, *MRR*, especially on the years 49-44, note also Bruns, *Font.* 15, 18, 28.

MODERN LITERATURE. (a) General. Mommsen, *History of Rome* iv-v, Engl. Transl. W. P. Dickson (1895), E. Meyer, *Caesars Monarchie und das Principat des Pompejus* (1922), T. CAESAR (2) LUCIUS JULIUS (*PW* 142), brother of (3) and of Catulus (q.v. 2), was governor of Macedonia c. 94 B.C. Consul in 90, he commanded on the southern front in the Social War, winning a battle against Papius (q.v.) after several disastrous defeats. He passed the basic law offering the citizenship to the Italian allies (see Cic. *Balb.* 21) and, as censor in 89 with P. Crassus (q.v. 2), helped to enrol the first of them. With his brother (3), he opposed Marius, whom he had previously supported, and was killed in 87 after Marius' return. His daughter married Antonius (q.v. 2) and became the mother of Antonius (q.v. 4). E. II.

CAESAR (3) STRABO (VOPISCUS), GAIUS JULIUS (*PW* 135), brother of (2) and of Catulus (q.v. 2), a distinguished orator and wit, is the chief speaker on wit and humour in Cicero's *De oratore*. He supported Marius and was land commissioner under a law of Saturninus (q.v. 1) and aedile (90 B.C.). Though he had not been praetor he tried to gain the consulship of 88, clashing violently with Marius and Sulpicius (q.v. 1), whom he thus brought together. He was killed after Marius' return in 87.

E. Dieckel, *Rh. Mus.* 1957, 1 ff.; cf. Malcovati, *ORF* 272, no. 71.

E. B.

CAESAR (4), LUCIUS JULIUS (*PW* 143), was the son of (2), and father of (6); uncle of Antony. Quaestor in Asia in 77 B.C., he was consul in 64. In 63 he and Caesar were appointed to the antiquated office of *duumvir perduellionis* for the trial of Rabirius (q.v. 1). He was legate of Caesar in Gaul (52-49) but took no part in the Civil War; in 47 as *praefectus urbi* (q.v.) he was unable to check the disturbances caused by Dolabella (q.v. 3).

After Caesar's death he opposed Antony and was proscribed, but was saved by the intercession of his sister Julia, Antony's mother. He wrote *Libri Auspiciorum* or *Augurales*.

Syme, *Rom. Rev.*, see index; Schanz-Hosius i. 600. T. J. C.

CAESAR (5), **SEXTUS JULIUS** (*PIW* 153), from the dictator's branch of the family, took his side in the Civil War. He served under him in Spain in 49 B.C., was quaestor in 48, and governor of Syria, probably 'pro quaestore pro praetore', from 47 to 46, when he was murdered by some of his own troops at the instigation of Caccilius Bassus (q.v. 1).

T. J. C.

CAESAR (6), **LUCIUS JULIUS** (*PIW* 144), grandson of (2), played an important part in negotiations between Caesar and Pompey (49 B.C.). After failing to prevent the crossing of Curio (q.v. 2) to Africa, he joined the Pompeian forces there, was pardoned after the death of Cato (q.v. 5), but was mysteriously killed soon after.

E. H.

CAESAR (7), **GAIVS** (*PIW*, Julius 134), eldest son of Agrippa and Julia, was born in 20 B.C. and adopted by Augustus in 17. Augustus evidently hoped that he or his brother Lucius would succeed him, and the favour he showed them probably caused Tiberius' retirement in 6. In 5, when he assumed the *toga virilis*, he was designated consul for A.D. 1, admitted to the Senate, and saluted by the *equites* as *princeps iuventutis*. From now on he was virtually heir apparent. In 1 B.C. he married Livia (q.v.) and was sent with proconsular authority to the East. In A.D. 2 he had a conference with the Parthian king on the Euphrates and appointed a Roman nominee king of Armenia. This led to a revolt, which Gaius proceeded to suppress. Seriously wounded at the siege of Artagira, he died eighteen months later in Lycia on his way back to Italy (21 Feb. A.D. 4), greatly to Augustus' sorrow and dismay. He and Lucius were honoured in the following year by the naming after them of ten electoral centuries (see *TABULA ILLIANA*).

Syme, *Rom. Rev.*, see index; M. L. Paladini, *Nuova Rivista storica* 1957, I ff.; P. Sattler, *Studien aus dem Gebiet der alten Gesch.* (1962), I ff. Iconography: L. Curtius, *MDAI* 1948, 53 ff.; F. Chamoux, *BCH* 1950, 250 ff.; *Rev. Arch.* xxxvii, 1951, 218 ff.; *Bull. Soc. Nat. Ant. France* 1961, 205 f.; L. Fabbrini, *Rend. Linc.* 1955, 469 ff.

G. W. R.; T. J. C.

CAESAR (8), **LUCIUS** (*PIW*, Julius 145), second son of Agrippa and Julia, was born in 17 B.C. and at once adopted by Augustus with his elder brother Gaius. In 2 B.C., when he assumed the *toga virilis*, he received the honours previously conferred on Gaius. He died at Massilia, on his way to Spain, on 20 Aug. A.D. 2.

Syme, *Rom. Rev.*, see index. Iconography: see no. 7. G. W. R.

CAESARAUGUSTA (modern *Zaragoza*), in north-easterly central Spain. On the site of the Iberian Salduba Augustus built a colony which Strabo compares with Emerita (q.v.) for its civilizing effect on outlandish parts. Workmen imported from Italy took part in building its walls, which had a perimeter of about 2,900 metres. Literary and monumental records are scanty.

L. A. Richmond, *JRS* 1931, 86 ff.

M. I. H.

CAESAREA (1) **OF CAPPADOCIA** (formerly Mazaca), was created by the Cappadocian kings to be their capital. Ariarathes V gave it a Greek constitution (the laws of Charondas, q.v.) under the name of *Eusebeia* under *Argaeus*, which was changed to *Caesarea* by Archelaus in 12-9 B.C. From A.D. 17 it was the capital of the province of Cappadocia and an imperial mint. The name survives as *Kayseri*, but virtually nothing remains of the ancient city.

A. H. M. J.; G. E. B.

CAESAREA (2) **PALAESTINAE** occupied the site of the coastal city of Strato's Tower, so named presumably after one of the fourth-century kings of Sidon. It was captured by the Hasmonaean king Alexander Jannaeus soon after his accession (103 B.C.), removed from Jewish control by Pompey in 63 and attached to Syria, and restored to Herod the Great (q.v.) by Octavian in 30. Between 22 and 10 B.C. (or 12 B.C.; see *JTS* 1935, 22 ff.) Herod rebuilt the city on a lavish scale, renaming it Caesarea and providing it with a huge artificial harbour, *portus Augusti*. It rapidly developed into an important commercial centre, with a purple-dyeing industry. Herod intended it as a Greco-Syrian city, but many Jews also settled there, and tension over the claim of this large minority to citizenship led to riots (c. A.D. 60); the matter was referred to Nero, who decided against the Jews. Further disturbances (66), culminating in a massacre of the Jews, sparked off the revolt against Rome. Vespasian made Caesarea a colony with immunity from *tributum* (q.v.) *capitis*; Titus added immunity from *tributum soli*. It was the administrative capital of the province of Judaea under both the procurators (A.D. 6-66) and the legates (from 70).

L. Haeftli, *Caesarea am Meer* (1923); M. Weippert, *Zeitschr. des Deut. Palästina Vereins* 1963, 172; G. Dell'Amore (ed.), *Caesarea* (1965); L. Kadman, *Corpus Nummorum Palaestinensium* ii (1956).

E. M. S.

CAESAREA (3) (modern *Cherchel*), a seaport in Mauretania. The old Carthaginian trading-station of *Iol* became Caesarea when Juba II (q.v.) and Cleopatra Selene made it the capital of their Mauretanian kingdom and a centre of Greek art. Under Claudius it received a colony of veterans and became the residence of the procurator of Mauretania Caesariensis. With a population of 100,000 Caesarea became the third most important African port; it traded with the Mediterranean and Atlantic, and was a naval base. Its best-known citizen was Macrinus (q.v.). Sacked by Moors and Vandals, it was refortified by Belisarius.

P. M. Duval, *Cherchel et Tipasa* (1946); S. Gsell, *Cherchel, antique Iol* (1952, revised by M. Leglay). Excavation reports in *Labya*, 1953 and subsequent years.

W. N. W.

CAESARION was the nickname conferred by the Alexandrians on Ptolemy XV Caesar (*PIW*, Ptolemaios 37), eldest son of Cleopatra VII (q.v.). He was born in 47, probably on 23 June (Julian calendar), and Cleopatra claimed that Caesar (who had been with her in Alexandria from the preceding summer) was the father. In 44 he was associated with his mother as joint-king; in 34, at the 'Donations', he was named 'King of Kings'. A king claiming Caesar as his father might well seem a rival to Octavian, Caesar's adopted son and heir; and it was probably at his instigation that Oppius (q.v. 2) wrote his pamphlet denying the claim. Antony declared that Caesar had himself acknowledged the boy as his son. In 30 Cleopatra declared him to be of age, to stimulate the loyalty of the Alexandrians, then sent him away for safety, but he was tricked into returning and executed on Octavian's order. Caesar's paternity is still disputed.

H. Volkmann, *Cleopatra* (1958); J. P. V. D. Balsdon, *CR* 1960, 68 ff.; H. Heinen, *Hist.* 1960, 181 ff.

T. J. C.

CAESELLIUS VINDEX, **LUCIUS** (early 2nd c. A.D.), wrote a miscellany (now lost) entitled *Stromateus* or *Lectiōnes antiquae* (Aul. Gell. 6, 2, 1).

Schanz-Hosius, § 593.

CAKES. The ancients, especially the Greeks, had an enormous variety of cakes and bread (lists in Pollux 6, 72 ff., Athenaeus 643 c ff., cf. the lexicographers under the names of the different kinds). Of these, many were

used in sacrifices (material collected in Lobeck, *Aglaophamus*, 1060 ff.; see also Eitrem, *Opferriktus*, index under 'Kuchen'). Examples are the ἀμφιφών, stuck with lights and sacrificed to Artemis Munichia (Ath. 645 a); the βασιύας, of wheat-flour and honey, sacrificed to Iris (ibid. 645 b); many kinds were in shapes of animals, etc. (ibid. 646 e, 647 a; schol. Thuc. 1. 126. 6, and often). Cakes are the poor man's offering (Porphyry, *Abst.* 2. 16), and often prelude a greater sacrifice (as Ar. *Plut.* 660 and schol.). The usual Latin name for a sacrificial cake is *libum* (as Ov. *Fasti* 1. 127-8).

H. J. R.

CALABRIA, in antiquity the flat and arid but fertile south-eastern promontory or 'heel' of Italy, uninhabited by Messapii (q.v.). Its prehistoric monuments resemble those of Sardinia. The Lombards seized Calabria c. A.D. 700, whereupon the Byzantines transferred its name to the south-western promontory or 'toe' of Italy—the Calabria of today.

O. Haas, *Messapische Studien* (1962).

E. T. S.

CALAIS and **ZETES**, in mythology, sons of Boreas (q.v.), hence often called together the Boreadae. They took part in the expedition of the Argonauts (q.v.), and, being winged, freed Phineus from the Harpies (q.v.). They persuaded the others to leave Heracles behind at Cios (see *HYLAS*), for which he afterwards killed them, setting over their grave two stones, of which one moves when the north wind blows (Ap. Rhod. 1. 211, 1298; 2. 240 ff.).

Winged men common on vases from before the middle of the seventh century in no narrative context may sometimes be meant for Boreadae. The type is used from the sixth for Calais and Zetes chasing the Harpies from Phineus' feast (Bronner, *Vasenlisten*², 351).

H. J. R.; C. M. R.

CALAMIS, Greek sculptor, active during the first half of the fifth century B.C. Perhaps from Boeotia. He worked in marble, bronze, and gold and ivory. His style was distinguished for its grace and refinement, and he was famous for his statues of horses. Pausanias (9. 16. 1) states that he made a statue of Zeus Ammon for Pindar, and a Hermes Criophorus for Tanagra (9. 22. 1); the latter is reproduced on Roman coins of that city. His most ambitious work was a colossal bronze statue of Apollo, 30 cubits high, which he made for Apollonia Pontica (Pliny 34. 39; Strabo 7. 319). It is perhaps reproduced on silver coins of that city. The Sosandra, praised by Lucian (*Eikones* 6) for the simple and orderly arrangement of its drapery, may have been the original of the so-called *Aspasia*, preserved in a number of Roman copies. His Apollo Alexikakos, which stood in the Ceramicus of Athens (Paus. 1. 3. 4), has been thought to be reproduced in the Apollo of the Omphalos.

It is possible that this Calamis is identical with the artist by that name mentioned as a caelator, 'a chaser of silver cups' (Pliny 33. 156); but the Calamis, teacher of Praxias, belongs to the fourth century B.C. G. M. A. R.

CALCHAS, in mythology, son of Thestor; a diviner who accompanied the Greek army to Troy (*Il.* 1. 69 ff.). He reveals the reason for the plague on the camp (ibid.) and foretells the length of the war (2. 300 ff.). After Homer he is introduced into several episodes, as the sacrifice of Iphigenia (q.v.); Aesch. *Ag.* 201 ff., from the *Cypria* directly or otherwise; the building of the Wooden Horse (Verg. *Aen.* 2. 185, cf. Quint. Smyrn. 12. 3 ff.), and generally the actions fated to capture Troy. After the war he went to Claros, and there met Mopsus (q.v.). It had been foretold that Calchas would die when he met a better diviner than himself; Mopsus answered a question which he could not answer (the number of figs on a tree), and Calchas died of mortification (Strabo 14. 1. 27).

Another story of his death is that he died laughing at a prophecy that he would not live to drink the wine of his vineyard (Servius on Verg. *Ecl.* 6. 72); cf. ANCAEUS. An oracle in Apulia was identified with his name (Strabo 6. 3. 9). He is depicted on an Etruscan mirror from Vulci: see, e.g. O. W. von Vacano, *The Etruscans* (1960), pl. 1.

H. J. R.; H. W. P.

CALEDONIA, the name used by Tacitus and Dio Cassius for the Scottish Highlands, beyond the *ciuitates trans Bodotriam sitas* (*Ag.* 25). Others use the adjective, sometimes of inland Britain (Florus 1. 45. 18; *Stat. Silv.* 5. 2. 142), mostly of north Britain, referring to its seas (Lucan 6. 37), its north cape and monument with Greek letters (Solinus 22; Mommsen, *Addit.* 234), its frosts (Claudian *IV Cons. Hon.* 26), fauna (id. *I Cons. Stil.* 2. 247), pearls (Auson. *Mos.* 68), and people (Mart. 10. 44. 1; Claudian, *Laus Serenae* 45; Sid. Apoll. *Carm.* 7. 89). Its wooded hills (*saltus*) were early famous (Florus 1. 17. 3, 1. 45. 18; Pliny *HN* 4. 102) but vaguely located (op. cit.) until Ptolemy (*Geog.* 2. 3. 8) placed δρυμὸς Καλιδόνας south-west of Beaulieu Firth. The name survives (Watson, *Celtic Place-names of Scotland* (1926), 21) in Dunkeld, Rohallion, and Schiehallion. It occurs as a personal (*Epigr.* vi. 1077) and tribal (*ILS* 4576) name.

J. Agricola (q.v. 1) defeated the *Caledonii* without conquering them. In A.D. 197 they broke a treaty with Rome (Dio Cass. 75. 5), were reduced by Severus in 209, but broke faith again in 210-11 (id. 76. 15). Dio (76. 12) divides non-Roman Britain into *Caledonii* and *Maeatae*. Ammianus (27. 8. 5) distinguishes *Dicalydonas* (cf. Ptol. *Geog.* 2. 3. 1, ὠκεανὸς Δουρικαλιδόνας) and *Verturiones*, the latter of Fortrenn (Watson, op. cit. 68 f.). I. A. R.

CALENDARS. Almost every ancient community had a calendar of its own, differing from others in names of months and date of New Year. All were, at least originally, lunar (see *TIME-RECKONING*). The months were either simply numbered (Protos was the first month in Phocis, September the original seventh month in Rome) or named after festivals held or deities specially worshipped in them (Dios and Apellaios, the first two Macedonian months, from Zeus and Apollo; Anthesterion at Athens, from the Anthesteria; Martius in Rome and several other Italian communities, from Mars). Some of the Greek month-names are found in Linear B; both they and the Italian names are usually adjectival, the word for 'month' being expressed or understood.

2. Of Greek calendars, the least imperfectly known is the Athenian. The names of the months were Hekatombaion, Metageitnion, Boedromion, Pyanopsion, Maimakterion, Poseideon, Gamelion, Anthesterion, Elaphebolion, Mounichion, Thargelion, and Skirophorion. All are named after festivals, some very obscure to us and probably to fifth- and fourth-century Athenians, which occur in them. Each month was in length 29 or 30 days; a leap-year, 384 ± 1 , an ordinary year, 354 ± 1 days. A leap-year was obtained by inserting a second (δεύτερος) or later (ὑστερος) month; of nine attested examples of the terms, five are applied to a second Poseideon, four to a miscellany of months.

3. The first day of the Athenian month was the 'new moon' (νομηνία), determined presumably by observation of the first visibility of the new moon after conjunction. The next nine days were the 'rising' month, μὴν ἱστάμενος, and numbered forward, as with us: Βοηδρομιώνος πέμπτη ἱσταμένου for Boedromion 5. The eleventh and twelfth were simply ἐνδεκάτη and δωδεκάτη. The thirteenth to the nineteenth were numbered forward in the style Βοηδρομιώνος τρίτη ἐπὶ δέκα, Boedromion 13. The twentieth was called δεκάτη προτέρα and the twenty-first δεκάτη ὑστερά. The next eight days, the 'waning' (φθίνων)

month, were numbered backward in the style *Boēdromiōnos ἐνὰ τῇ φθίνοντος*, Boedromion 22. In the late fourth century B.C. the phrase *μετ' εἰκάδας* replaced *φθίνοντος*. The last day of the month was commonly called throughout the Greek world *τριάκας*, or thirtieth, but at Athens *ἐνῇ καὶ νέα*, 'old and new'. The omitted day in a hollow month was the twenty-ninth, *πρωτριάκας* (IG 12. 1. 4), or (Athens) *δευτέρα φθίνοντος* (Proclus' scholium on Hesiod's *Works and Days* 765). An examination of the attested distribution of leap-years at Athens fails to reveal any purposely devised scheme, as was the case, for example, in Babylon, where the so-called Metonic cycle was current. In Italy, at all events in Rome, days were numbered backwards from the three fixed points, the *kalendae* (new moon), *idus* (full moon), and *nonae* (the ninth day, counting inclusively, before the Ides). Thus *ante diem octavum kalendas Aprilis* is 25 Mar.; *pridie nonas Iunias* is 4 June.

4. The Athenians designated dates in their lunar calendar as *κατὰ θεόν* ('according to the moon'; see, recently, J. Pouilloux, *Rev. Ét. Anc.* 1964, 211). Dates in their festival calendar, on the other hand, were at times termed *κατ' ἀρχοντα* ('archon's time'). Such dates were arbitrary modifications of the lunar calendar made by the chief magistrate in the form of intercalated or suppressed days. An example is *Ἐλαφθολαῖνος ἐνὰ τῇ ἰσταμῖνου τετάρτῃ ἐμβολίμῳ*, 'fourth intercalary Elaphebolion 9' (Hesph. 1954, 290). The vast majority of dates preserved to us are in terms of the festival calendar - an unfortunate fact for modern scholarship, because one can rarely be sure when a given date is a true lunar date or a modified one. The politicians, not the astronomers, ruled the calendar.

5. Athenian assemblies were convened in accordance with a third calendar, the 'prytany' calendar, which reflects the division of the year according to the prytanies of the boule. The prytany comprises the length of time the *bouleuterai* of any given tribe presided over the council. In inscriptions, the number and the day of the prytany are given by ordinary numerals: *ἐπὶ τῇ Ἐρεχθίδος ἐνάτῃ, τριακοστῇ τῇς πρωτάρειας* = thirtieth day of the ninth prytany, in which the tribe Erechtheis presided. Aristotle (*Ath. Pol.* 43. 2) records a schematic arrangement for this calendar in which the prytanies are of uniform length. All explicit evidence proving the lengths of prytanies at Athens confirms the Aristotelian fixed pattern. Until the end of the fifth century, the only calendar dates found in inscriptional sources are by prytanies. In the fourth and following centuries, the prytany and festival calendars began on the same day, the first new moon of the month Hekatombaion. Before 407 B.C., the prytany year totalled 366 days, a fraction of a day longer than a solar year.

6. The original Roman calendar consisted of ten months only, the later March–December, and must therefore have had an uncounted gap in the winter, between years (see especially Ov. *Fasti* 1. 27 ff., with Frazer's note; cf. Nilsson, *Time-Reckoning*, 223). The republican calendar, represented for us by the fragmentary *Fasti Antiaties* (see Mancini in *Not. Scav.* 1921, 140 for first publication) and literary descriptions (notably Censorinus 20. 4 ff., Macrobi. *Sat.* 1. 13. 1 ff.; their chief ultimate sources are no doubt Varro and Verrius Flaccus), was introduced from Etruria by Tarquinius Priscus (so Junius Gracchus ap. Censorinus, *ibid.*), as is shown among other things by the month-name *Iunius*, pure Latin *Iunonius*, clearly connected with the Etruscan form of Juno's name, *Uni*. It is earlier, however, than the Capitoline temple (traditionally not dedicated till after the expulsion of the kings), for of the feast-days which it marks in large capitals none is connected with that cult. January, as containing the festival (**Iamuar*, presumably the

Agonium of later calendars, 9 Jan.) of the god of gates who was on his way to be a god of all beginnings, must have been intended to be the first month, but the revolution which expelled the Etruscan dynasty put a stop to this and March remained the first of the year till 601/153. March, May, Quintilis (July), and October had 31 days each (Ides on 15th, Nones on 7th), Feb. 28 and the rest 29 (Ides on 13th); total, 355.

7. To intercalate, a 'month' of 22 or 23 days, called *Mercedonius* or *Intercalaris*, was placed between the 23rd and 24th of Feb. This intercalating was so clumsily done that by the time of Julius Caesar the civic year was about three months ahead of the solar. In his capacity of *Pontifex Maximus*, he intercalated sufficient days to bring the year 708/46 to a total of 445 days (Censorinus, *ibid.* 8), which was thus the 'last year of the muddled reckoning', 'ultimus annus confusionis' (Macrobi. *ibid.* 14. 3). From the next year onwards the Egyptian solar calendar (see *TIME-RECKONING*) was adapted to Roman use, by inserting enough days in the shorter months to bring the total up to 365 and arranging for the insertion of a day, not a month, between 23 and 24 Feb. in leap-year (hence called bissextile year, since the date *a. d. vi. kal. Mart.* occurs twice in it; the non-existent date '29 Feb.' is a modern absurdity). No substantial change was made thereafter till the reforms of Gregory XIII (promulgated by Bull, 24 Feb. 1582), whose calendar is now in general use.

8. The official year of the consuls (and of most other Roman magistrates) was appointed in 153 B.C. to begin on 1 Jan. That of the *tribuni plebis* began on 10 Dec.

W. K. P.

CALES, town, probably Auruncan, on the borders of Campania (q.v.): excavations at modern *Calvi* have yielded seventh-century *bucchero* ware. In 334 B.C. a Latin colony was sent to Cales, presumably to counter-balance Samnite-controlled Teanum (see *SIDICINI*) and Cales became a centre of Roman authority in Campania (Livy 8. 16; 10. 20). A *quaestor navalis* was stationed there (Tac. *Ann.* 4. 27; text uncertain). Cales was an important base in the Hannibalic War, but, sustaining heavy losses, refused Rome further aid in 209 (Livy 27. 9). Rome reinforced it in 184 B.C. (Dessau, *ILS* 45). In Ciceronian and imperial times Cales was a *municipium* (q.v.), and the birthplace of Vmicius, Velleius Paterculus' patron (Cic. *Leg. Agr.* 2. 86; Tac. *Ann.* 6. 15). The fertile Ager Calenus was famous for its pottery. Numerous monuments survive.

A. Sambon, *Monnaies antiques de l'Italie* i (1903), 351; C. L. Woolley, *JRS* 1911, 109; L. Pareti, *Storia di Roma* i, n (1952/3). E. T. S.

CALIDIUS, MARCUS, as praetor (57 B.C.) he helped to effect Cicero's return from exile; in 52 he supported Milo (Asc. *Mil.*). A leading Atticist pupil of Apollodorus in oratory (cf. *RHETORIC, LATIN*), he was praised by Cicero (*Brut.* 274 ff.).

Schanz-Hosius, § 139; Malcovati, *ORF* no. 140.

CALLEVA ATREBATUM, modern *Silchester*, on the Hampshire-Berkshire border. The Roman town was enclosed by a polygonal earthwork (230 acres), and c. 100 was laid out in *insulae*. A flint wall erected c. 200 behind a slightly earlier bank reduced the enclosed area to c. 100 acres. The land within it was completely excavated 1890–1909. Shops, a dyeing industry, and some sixty

houses were exposed, and of public buildings a *forum* with *basilica*, baths, a presumed *hospitium*, five small temples, and a small Christian church. The population was perhaps c. 2,000. The town was eventually deserted in circumstances still obscure.

Coins of Epillus (fl. A.D. 10), son of Commius, REX CALLE or CALLEV are known, but nothing earlier than a polygonal enclosure just before or just after 43 has appeared. See also ATREBATES (2).

Excavation Reports of public buildings and houses in *Archaeologia*, xl, xlv, 1, li-lxi (1866-1910). Dating of defences and street-grid, *Archaeologia* xcii (1946), 121 ff. G. C. Boon, *Roman Silchester* (1957) is a complete study of the town and its remains. C. E. S.

CALLIAS (1), son of Hipponicus, of one of the richest families in Athens. He was cousin to Aristides (q.v. 1), and married Elpinice, sister to Cimon (q.v.). He is said to have distinguished himself at the battle of Marathon; he won the chariot-race at Olympia three times. He was noteworthy for his diplomatic services to the State. He supposedly negotiated (c. 450 B.C.) the 'Peace of Callias' ending hostilities between Athens and Persia and recognizing each party's sphere of influence (see ATHENS: HISTORICAL OUTLINE § 3). The reality of this treaty was impugned by Theopompus (q.v. 3), and has been doubted by some modern scholars. The negotiations, according to the most circumstantial account (Diod. 12. 4), took place in Cyprus: if so, Callias' mission to the court of Artaxerxes (q.v. 1) at Susa, recorded by Herodotus (7. 151), may have been on another occasion. Callias was probably one of the negotiators of the Thirty Years' Peace with Sparta (446/5), and may also have been author of the alliances with Rhegium and Leontini made about the same time (*Att.* iii. 276). He was father of Hipponicus, a general in the Archidamian War who died at Delium, and grandfather of Callias (3).

The ancient evidence for the 'Peace of Callias' is listed in Hill-Meiggs-Andrewes, *Sources for Greek History* (1951), index i 615, the numerous modern discussions extend from Grote (*History of Greece* (1888) iv. 422 ff.) to K. Kratt, *Hermes* 1964, 148 ff. and H. B. Mattingly, *Ist.* 1965, 273 ff. T. J. C.

CALLIAS (2), Athenian comic poet, won first prize at the City Dionysia in 446 B.C. (*IG* ii². 2318, col. 3), and was active at least until 430 (*IG* xiv. 1097. 5 f.). We have eight titles (including *Ἀνάλαντα*), and thirty-five fragments; fr. 12 mentions Socrates. 'Callias the Athenian, a little earlier than Strattis' (Ath. 453 c) who composed a *γραμματικὴ τραγωδία* (cf. 448 b, 276 a) might be the same person.

FCG i. 213 f.; CAF i. 693 ff.; FAC i. 170.

K. J. D.

CALLIAS (3) (c. 450-370 B.C.), an Athenian nobleman, notorious for his wealth and his extravagance. He was ridiculed by comic poets, and attacked by Andocides whom he accused of sacrilege. More sympathetic pictures of his house and life are given by Xenophon (*Symposium*) and Plato (*Protagoras*). He was general in 391/0, and took part in the famous victory of Iphicrates (q.v.) over Spartan hoplites. As an old man, he was a member of the embassy sent to Sparta in 371/0. V. E.

CALLIAS (4) of Syracuse, lived at the court of Agathocles, tyrant of Syracuse (316-289 B.C.), and wrote a history of his reign in twenty-two books, variously described as *Tὰ περὶ Ἀγαθοκλέα, Ἡ περὶ Ἀγαθοκλέα ἱστορία*, etc. It so favoured Agathocles that Callias was suspected of accepting bribes; so Diod. Sic. (21. 17. 4) who, however, probably knew Callias only through the medium of Agathocles' enemy, Timaeus. The history had little influence on the tradition, which remained unfavourable to the tyrant, although, apart from the account written by

Agathocles' brother, Antandrus, it was the first important work on this subject. The fragments do not provide sufficient material to determine the contents of the work.

FGH iii. B. 564.

G. L. B.

CALLICRATES (1), a Greek architect of the fifth century B.C. He was associated with Ictinus and the sculptor Phidias in the building of the Parthenon (q.v.).

CALLICRATES (2) (d. 149-148 B.C.) of Leontium, the Achaean pro-Roman statesman, in opposition to Lycortas after the death of Philopoemen, announced in Rome in 181-180 B.C. his policy of subservience to Rome. General in 180-79, he repatriated Spartan and Messenian exiles, and restored Spartan local rights. In 168 he prevented assistance to Egypt. After the Third Macedonian War, with the detention of the leading independent Achaean politicians in Italy, he maintained his ascendancy with Roman support, despite his unpopularity with the masses, until his death.

CALLICRATIDAS, Spartan admiral, who succeeded Lysander (q.v.) in 406 B.C. He resented Spartan dependence on Persian subsidies and refused to submit to humiliating treatment by Cyrus. He defeated a squadron under Conon at Mytilene and blockaded it there. Leaving 50 ships to maintain the blockade, he proceeded with 120 to attack an Athenian relief fleet of 150. In a battle off the Arginusae Islands he suffered a heavy defeat and was drowned. He displayed energy, spirit, and forthrightness, but his qualities are perhaps overrated by authorities hostile to Lysander.

CALLIMACHUS (1), Athenian polemarch and commander-in-chief in the campaign of Marathon (490 B.C.). He accepted Miltiades' plan to meet the Persians in the field. His part in the actual battle, in the last stage of which he was killed, has been obliterated by the personality and achievements of Miltiades, but his share in the victory was fully recognized in the wall-paintings on the Stoa Poikile (c. 460 B.C.), where he was portrayed among the Athenian gods and heroes, and in two surviving epigrams (Tod, 13).

H. Berve, *Miltiades* (1937), 78 ff.; C. Robert, *Die Marathon-schlacht in der Poesie* (1895), 19 ff.; N. G. L. Hammond, *JHS* 1968, 41, 45 f. P. T.

CALLIMACHUS (2), Greek sculptor, active in the later fifth century B.C. Perhaps an Athenian. He is reputed to have been the inventor of the Corinthian capital (Vitruv. 4. 1. 9-10) and to have made a golden lamp for the Erechtheum (Paus. 1. 26. 6-7); also a seated statue of Hera for a temple at Plataea (Paus. 9. 2. 7). He was noted for being the first artist to employ the running drill, and it is said of him that he spoiled his art by overelaboration (Pliny, *HN* 34. 92). His style has been recognized in a series of reliefs representing dancing Maenads. The signature 'Callimachus made it' on a relief in the Capitoline Museum representing Pan and the three Graces, in archaistic style, presumably is by a Roman copyist of that name. Still another Callimachus signed (together with Gorgias) a statue of Hellenistic style, found at Minturno.

G. M. A. R.

CALLIMACHUS (3) (c. 305-c. 240 B.C.) of Cyrene, son of Battus (hence Battadias in *epigr.* 21 Pf.; Catull. 65. 16; Ov. *Am.* 1. 15. 13, etc.). He is described as a pupil of Hermocrates of Iasos. Early in life Callimachus migrated

to Alexandria and became a schoolmaster in its suburb Eleusis. Later he was given employment at the Alexandrian library and produced a *catalogue raisonné* in 120 volumes with the title *Πινυκες τῶν ἐν πάσῃ παιδείᾳ διαλαμπνάντων καὶ ὧν συνέγραψαν*, the first scientific literary history. It is now clear that he never became *prostates* (director) of the library (cf. *POxy.* 1241, col. ii. 1). The quarrel between Callimachus and his pupil Apollonius—later known as Apollonius Rhodius—seems to have been one of the important episodes in the bitter literary controversy between the writers of long traditional epics and those of short and highly finished poems. The freedom with which Apollonius refashioned in his own style whole passages of Callimachean poetry suggests the turning of a purely literary discussion into a personal feud (cf. *Pf. Call.* ii, xli and vol. 1 *passim*). Callimachus was victorious and Apollonius retired to Rhodes, but it appears that finally the long traditional epic won the day (cf. K. Ziegler, *Das hellenistische Epos*, 1934). Tradition records a reconciliation between Callimachus and Apollonius and that they were buried close to one another (Vit. Apollon. Rhod. A, in Schol., Wendel, p. 2. 5). It was during that dispute that Callimachus wrote the *Ibis*, a wilfully obscure poem in mockery of Apollonius, which gave Ovid the idea for his poem of the same name. The literary critics of Callimachus were many and persistent, including such well-known names as Asclepiades and Poscidippus. These he vigorously counter-attacked till the end of his life. His fame and popularity in late antiquity must have exceeded that of every other Hellenistic poet, to judge by the great number of Callimachean papyri—even greater than those of Euripides—and the many quotations found in grammarians, metricians, lexicographers, and scholars; only Homer is more frequently quoted. One poem only of Callimachus can be definitely dated, the *Plokamos* (fr. 110 Pf.), which treats of events of the year 246/5, but a *terminus post quem* can also be found: (a) for the *Galatea* (fr. 378 Pf.), which speaks of the attack of the Gauls in 278 B.C.; (b) the *Ektheosis Arsmoes* (fr. 228 Pf.), which must have been composed after the death of the queen in 270 B.C.; and (c) Hymn IV *On Delos*, where Ptolemy II, who was deified in 270, is mentioned as *θεὸς ἄλλος*. If the *Sosibou Nike* (fr. 384 Pf.) refers to Sosibius, who was later minister of Ptolemy IV and *pseudepitropos* of Ptolemy V, Callimachus must have still been composing remarkable poetry in the late forties of the third century.

WORKS

Verse. Callimachus' longest and most famous poem was the *Aetia* (*Αἰτια*, Causes), a narrative elegy of roughly 7,000 lines in four books. It contained a series of aetiological legends connected with Greek history, customs, and rites; the length of the individual *aetia* varied. The poet imagined himself carried in a dream from Lalva to Mount Helicon, where the Muses instructed him in all manner of legendary lore (cf. *Anth. Pal.* 7. 42). The extant fragments indicate that in the first two books Callimachus conversed with the Muses, but that in books iii–iv the various stories were not connected by a fictitious dialogue or otherwise. The number of *aetia* contained in the first three books is unknown; it is evident, however, that they received varied treatment, and that personal and realistic touches were introduced by the poet. The *Diegeseis* (expositions), which gave the arguments and other information on the poems of Callimachus (fragments of three separate *Diegeseis* have been found in papyri, all presumably going back to a common lost source, cf. *Pf. Call.* ii, xxviii and n. 1), contain the subjects of the last few *aetia* of book iii, and possibly all of book iv. The longest fragments of the *Aetia*, such as those from the stories of *Acontius and Cydippe* (fr. 75 Pf.), *Icus* (fr. 178 Pf.), or the *Sicilian Cities* (fr. 43 Pf.), come

from papyri. It appears that Callimachus published a second revised edition of the *Aetia* which was included in his collected works. As a general introduction to these, and perhaps as a more special introduction to the *Aetia*, he composed the *Answer to the Telchines* (the Retort to his Critics) (fr. 1 Pf.), in which he expounds his final and most polemic views on poetry. As last *aetion* to the revised edition we find the *Plokamos* (fr. 110 Pf.), also known from Catullus' adaptation (Catull. 66), which is followed by the Epilogue (fr. 112 Pf.), in which reference is made to the poetry of Hesiod, as at the beginning, in the *Somnium* (fr. 2 Pf.). In the final edition of Callimachus' works the *Aetia* were followed by a book of iambic poems of approximately 1,000 lines. The favourite metres are the scazon and iambic trimeter, but some pieces are in epic form and there are other experiments. The thirteen poems included in this book are of miscellaneous content and character. In I–III and V Callimachus satirizes contemporary morals and literary attitudes. In IV and XIII he deals with his literary critics; VI describes Phidias' statue of Zeus at Olympia for an intending tourist; VII–XI are more on the line of the *Aetia*; XII celebrates the birth of a daughter to a friend Leon. A veritable *lanx satura*, the *Iambi* must have influenced Roman satire. Of Callimachus' lyrics very little survives, but enough to prove his skilful use of a variety of metres. His galliambics probably served as a model to Catullus and Varro. The most interesting fragment comes from the *Ektheosis Arsmoes* (fr. 228 Pf.). It is in archaic dactylic and shows Callimachus at his best as a court poet. Epic on the grand scale was avoided by him on principle. Instead, and as an answer to his critics, he composed the *Hecale*, the most famous epyllion (q.v.) in Greek literature. The details of the narrative cannot be reconstructed, but we know that it described in about 1,000 lines the victory of Theseus over the bull of Marathon. In true Alexandrian manner the emphasis was laid not on the great heroic deed of Theseus, but on the noble poverty of Hecale, the old woman who had offered him hospitality on his way to Marathon. The scene of the rustic meal in particular was greatly admired and copied (cf. *Ov. Met.* 8. 620 f.; *Ps.-Virgil, Moretum*, etc.). The *Hecale*, which also contains a remarkable scene in which birds are the speakers, was yet one more *aetion*, explaining the name and cult of an Attic deme. As the *Argonautica* of Apollonius Rhodius depend in many points on the *Hecale* (cf. *Pf. Call.* i *passim*), the view that this was Callimachus' answer to the *Argonautica* is untenable. A small number of fragments from his minor epic and elegiac poems have survived. Of these fr. 384 Pf. from the *Sosibou Nike* is the most interesting as it appears to be an endeavour to revive in elegiacs the Pindaric epinician ode. The only complete works of Callimachus which have been transmitted in medieval MSS. are his *Hymns* and his *Epigrams*. Of the *Hymns*, I–IV and VI are in hexameters, V in elegiacs. Up to a point Callimachus' model is the Homeric *Hymns*. His *Hymns*, however, were not intended to be recited at a public festival, still less to accompany religious ritual. They are literary pieces, meant for reading or recitation to a select audience. I, II, and IV contain political propaganda. The style varies. I (Zeus) reads at times like a humorous report of a learned controversy. III (Artemis) approximates to an epyllion. IV (Delos), which competes with the Homeric *Hymn* to the Delian Apollo, comes nearest to the traditional manner. II (Apollo), V (Baths of Pallas), and VI (Demeter) represent Callimachus' greatest originality in this department. By a combination of dramatic mime and lyric the poet brings to life the spectacle itself and the emotions of the spectators. In V and VI a 'Holy Story', pathetic in V, grotesquely gruesome in VI, contributes an epic element. I–IV are in the epic dialect, V–VI in Doric. Of

Callimachus' *Epigrams* some sixty survive. More interesting than the dedications and epitaphs, though some of the latter are excellent, are the occasional pieces, prompted by his own experiences and emotions, especially during early manhood. Of Callimachus' tragedies, comedies, and satirical plays mentioned by the *Suda* nothing survives.

Prose. Besides the *Pinakes* Callimachus wrote many other works in prose, e.g. a *Chronological Register of the Athenian Dramatic Poets*, a study on Democritus' writings and language, numerous encyclopaedias (*About Nymphs, Birds, Games, Winds, Rivers*, etc.), collections of Paradoxa and Glosses. His scholarly activities may also be judged from the distinguished men numbered among his pupils; they include not only Apollonius Rhodius, but Eratosthenes of Cyrene and Aristophanes of Byzantium.

It is clear that Callimachus was a poet of great originality and extraordinary refinement. His amazing productivity (the *Suda* credits him with more than 800 volumes) was accompanied by bold experimentation in his poetry and a great versatility of style. The scholarly element, it is true, often adds a frigidity to his verse, but the lively personal and realistic touches which appear never allow his writings to degenerate into arid selections of obscure myths.

CALLINUS, elegiac poet, of Ephesus, lived in the first half of the seventh century B.C., when Cimmerians and Trerians were attacking Phrygia, Lydia, and Ionia (Strabo 627, 647). He refers to them in frs. 3 and 4. He also refers to the destruction of Magnesia by the Ephesians (Ath. 525 c). His one long fragment (fr. 1) summons men lying at a feast to take up arms and defend their country, and attributes the rank of demigod to the brave fighter. It is written in epic language, but with certain originalities of phrasing.

TEXT: Dichi, *Anth. Lyv. Græc.* i 3, 5 COMMENTARY: T. Hudson-Williams, *Early Greek Elegy* (1926), 71 ff. CRITICISM: C. M. Howra, *Early Greek Elegists* (1938), 13 ff. C. M. B.

CALLIPHON, philosopher of uncertain date (probably not before Ariston of Chios and Hieronymus of Rhodes, who flourished c. 250 B.C.). Cicero says he held that the supreme good consists in the union of pleasure and virtue.

CALLIPPUS of Cyzicus, astronomer (fl. 330 B.C.), went with Polemarchus to Athens, where he stayed with Aristotle. He corrected and added to Eudoxus' (q.v.) theory of concentric spheres designed to account for the movements of the sun, moon, and planets (Simpl. on *de Cael.* 493, 5-8 Heib.); Callippus added two more spheres in each case for the sun and moon, and one more for each of the planets (as to these changes see Arist. *Metaph.* 1073^b 32-8, Simpl. loc. cit. 497, 17-24). Callippus proposed a year-length of 365½ days, and consequently introduced the 76-year cycle named after him, containing 27,759 days and consisting of 940 months—28 intercalary—as an improvement on Meton's cycle of 19 years (Geminus, *Isagoge* 8, 57-60); the first 76-year cycle began in 330-329 B.C.

On the concentric spheres see J. L. E. Dreyer, *History of the Planetary Systems* (1906), 103 ff. On the 'Callippic Cycle' see F. K. Ginzel, *Handbuch der Chronologie* ii (1911-14), 409 ff.

T. H.; G. J. T.

CALLIRHOË (1), in mythology, daughter of the river Achelous; for her story, see ACARNAN, ALCMABON (1); (2) a virgin of Calydon, vainly loved by Coreus, priest of Dionysus there, in a romantic and obviously late legend (Paus. 7. 21. 1-5).

CALLISTHENES of Olynthus, Aristotle's nephew, already known for works on Greek history, but not a wise man, accompanied Alexander's expedition as its historian. In his history he wrote up Alexander as champion of Panhellenism, partly propaganda against the Greek opposition; but he also made him son of Zeus, a far-reaching extravagance. He quarrelled with Alexander in 327 by opposing the introduction of *proskynesis* (his reasons remain doubtful), and was executed for alleged complicity in the Pages' conspiracy, which had its effect on the attitude of the Peripatetic school towards Alexander thereafter.

See ALEXANDER (3), Bibliography, Ancient Sources, T. S. Brown, *APPhil.* 1049, 225 ff., Pearson, *Lost Histories of Alexander* ch. 2; E. Meuschung, *Hist.* 1963, 274 ff. W. W. T.

CALLISTO, probably in origin a by-form of Artemis *Kallίστη*; in mythology, daughter of Lycaon. She was loved by Zeus and bore him Arcas (q.v.). Either Artemis, angered at her unchastity, or Hera then turned her into a she-bear; or she was shot by Artemis. In her transformed shape, either Artemis mistook her for a real bear and killed her, or her own son pursued her (as a quarry, or because she was trespassing on the precinct of Zeus Lycaeus), when Zeus took pity on them and transformed him into the constellation Arctophylax, her into the Great Bear.

See Apollodorus 3. 100-1; Ps.-Eratosthenes 1 and 8, *Ov. Met.* 2. 405 ff., *Fasts* 2. 155 ff. H. J. R.

CALLISTRATUS (1), a *διδάσκαλος* of Old Comedy, possibly himself a comic poet, but better known as the man under whose name Aristophanes produced his three earliest plays.

CALLISTRATUS (2) of Aphudna, nephew of Agyrrius (q.v.), was a talented orator and financier, who influenced Athenian policy from 377 to 361 B.C. Having prosecuted the ambassadors who proposed peace with Sparta in 391, he was elected strategus in 378 when the Second Athenian League was founded. He is known to have organized the finances of the league and is believed to have inspired its liberal constitution. With Iphicrates he prosecuted Timotheus for misconduct in 373 and acted as *strategos* in 372, when Spartan naval power was broken. Realizing that Thebes was becoming more dangerous than Sparta, he negotiated the peace of 371 with Sparta (Xen. *Hell.* 6. 3. 10 f.). Endeavouring to maintain the balance of power between Thebes and Sparta, he proposed the dispatch of Iphicrates to aid Sparta in 369. Since his policy failed to check Thebes, he was impeached and only saved by his oratory (366). When Timotheus' policy of imperialism failed, Callistratus perhaps regained popular favour by negotiating alliance with Arcadia, but in 361 he was impeached, and was condemned to death *in absentia*. After reorganizing the finances of Macedonia for Perdiccas II, he landed in Attica and was put to death. A realist and constructive statesman, he was thwarted by the rise of Thebes.

P. Cloché, *La Politique étrangère d'Athènes 404-338 B.C.* (1934). N. G. L. H.

CALLISTRATUS (3), pupil of Aristophanes of Byzantium, edited Homer and other authors, and wrote *Σύμμικτα*, quoted by Athenaeus. He attacked his fellow-pupil Aristarchus for departing from his master's doctrines.

CALLISTRATUS (4), a Roman jurist of the first half of the 3rd c. A.D. He was evidently of Greek origin: his Latin is awkward, and his interest lay in the legal life of the Hellenistic provinces and the imperial rescripts directed to them. Works: *Questiones*, four books *De Iure Fisci*, *Institutiones*, an exposition of the edictal law (with a title of which the meaning is not clear: *Ad Edictum Monitorium*), and of the procedure *extra ordinem* (*De Cognitionibus*).

R. Bonini, *I 'libri de cognitionibus' di Callistrato* (1964).

A. H.; B. N.

CALLISTRATUS (5) (3rd or 4th c. A.D.), a sophist who wrote *Ἐκφράσεις* (descriptions) of fourteen statues, in imitation of the *Εἰκόνες* of Philostratus of Lemnos.

TEXT: C. Schenkl and E. Reich (Teubner, 1902).

TRANSLATION: A. Fairbanks (Loeb, with Philostratus, 1931).

CALLISTUS, GAIUS JULIUS (PW 306), an influential freedman of the Emperor Gaius, who took part in the conspiracy leading to Gaius' murder in A.D. 41. Under Claudius he increased his wealth and power in the post of a *libellus*, and was patron of the physician Scribonius (q.v. 3) Largus. He prudently refused help to Narcissus in accomplishing Messalina's downfall, but later was unsuccessful in championing the claims of Lollia Paulina to be Claudius' (fourth) wife. Agrippina, no doubt, secured his dismissal after Claudius' death, for nothing more is heard of him (see CLAUDIUS 1).

J. P. II.

CALLIXENUS (fl. c. 155 B.C.), a Rhodian Greek, wrote *Περὶ Ἀλεξανδρείας*. Athenaeus (5. 196 a; 203 c) quotes Callixenus on ships built by Ptolemy Philopator and on a *πυρπιγὴ* of Philadelphus.

FGH III. 627.

CALPURNIA (1, PIV 126), daughter of Piso (q.v. 5) Caesoninus, married Caesar in 59 B.C. cementing an alliance between her husband and father. Though Caesar was prepared to divorce her to marry Pompey's daughter in 53, her affection for him was great, and she attempted to keep him from the Senate on the Ides of March (Plut. *Caes.* 63). After the murder she handed his papers and 4,000 talents to Antony. Her age is not known, but it is noteworthy that her brother Piso (q.v. 6) 'Frugi' lived until A.D. 32.

G. E. F. C.

CALPURNIA (2, PIV 130), third wife of Pliny the Younger, whom she accompanied to Bithynia. She was grand-daughter of L. Calpurnius Fabatus, a Roman knight of Comum (ILS 2721). See Pliny *Epp.* 6. 4. 7; 7. 5; 10. 120-1.

G. E. F. C.

CALPURNIUS (1, PIV 110) **SICULUS**, TITUS (fl. A.D. 50-60), was the author of seven pastorals associated until 1854 with four others which Haupt proved to be by Nemesianus (q.v.). Calpurnius' Neronian date is clear from allusions to the comet of A.D. 54 (1. 77-83), to the amphitheatre of 57 (7. 23-24), to Nero's speech for the people of Ilion (1. 45), and to the handsome young and divine ruler welcomed as the restorer of a Golden Age (cf. *Apocolocyntosis* 4; see SENeca 2, § 4) in 1, 4, and 7. These are his three courtly poems, placed at the beginning, middle, and end of the collection, while 2, 3, 5, and 6 are more strictly rural. In 2 Crocale's praises are sung alternately by a shepherd and a gardener (an innovation in pastoral); in 3 (possibly the earliest) Lycidas has thrashed his faithless sweetheart but swears repentance in a pretty love-song; 5 is an old herdsman's advice to his foster-son on managing goats and sheep, while 6 is a singing-match broken off by the ill temper of the competitors. Of the court-pieces, 1 represents two

shepherds finding a poem by Faunus cut into the bark of a tree to prophesy a new Golden Age—they hope that their poetry will reach the emperor through their patron Meliboeus; and 4, the longest eclogue (169 lines), hints that they have had some success; 7 gives Corydon's impressions of the amphitheatre built by Nero at Rome.

The problems concerning Calpurnius have produced many theories. His name may imply that he was son of a freedman of C. Calpurnius Piso, who conspired against Nero in 65; the epithet 'Siculus' may mean literally 'Sicilian' or symbolize the poet's debt to Theocritus. 'Meliboeus' in 1 and 4, described as learned and a new Maecenas, has been questionably identified with Seneca, with Piso, and others. The contemporary Einsiedeln eclogues (q.v.) have unconvincingly been ascribed to Calpurnius. It has further been debated whether he could have written the *Laus Pisonis* (q.v.).

The situations, names, and phraseology in Calpurnius' poems are often reminiscent of Virgil, to whom (as Tityrus) he does notable homage in 4. 64-72. There are signs of the influence of Ovid, Propertius, and Tibullus. Calpurnius can take a cue from Theocritus and follow it up with some independence. He shows skill in coherent dialogue when he employs amoebean verse in eclogues 2, 4, and 6. See also PASTORAL POETRY, LATIN, § 5.

LIFE AND WORKS. Clementina Chiavola, *Della vita e dell'opera di Calpurnio Siculo* (1921).

J. W. D.

CALPURNIUS (2, PW 40) **FLACCUS** (2nd c. A.D.), author of declamations (see DECLAMATIO) from fifty-three of which excerpts survive (Schanz-Hosius, 592).

G. Lehnert, *Calp. Flacc. Declamationes* (1903).

CALVINUS (1), GAIUS SEXTIUS (PIV 20), as consul in 124 B.C. and proconsul fought successfully in Transalpine Gaul, triumphing over Ligurians, Vocontians, and Salluvians c. 122. He founded Aquae Sextiae (*Aix-en-Provence*), as a Roman garrison post.

E. II.

CALVINUS (2), GNAEUS DOMITIUS (PW 43; cf. 11), served in Asia in 62 B.C., supported Bibulus (q.v. 1) when tribune in 59, and was praetor in 56. To secure election as consul he engaged in a scandalous compact with the consuls of 54 (*Cic., Att.* 4. 17. 2, etc.); disturbances followed revelation of the plot, but he was finally elected in July 53 for the rest of that year. He may have suffered exile in 51 (R. Syme, *Sallust* (1964), 217). In the Civil War he was Caesarian, fighting against Scipio in Thessaly, commanding the centre at Pharsalus, suffering defeat by Pharnaces (q.v. 2) at Nicopolis, and assisting Caesar in Africa. In 42, while bringing reinforcements to the triumphers, he was trapped on the Adriatic by Ahenobarbus, and lost his whole force. Consul again in 40, he afterwards governed Spain, with notorious severity to the troops; in 36 he triumphed, and from his spoils decorated the Regia (q.v.).

G. E. F. C.

CALVISIUS (PIV 13) **SABINUS**, GAIUS, of obscure and probably non-Latin family, served under Caesar in Greece in 48 B.C. and became governor of Africa in 45. He tried to protect Caesar on the Ides of March (44). Antony's reappointment of him to Africa (Nov. 44) came to nothing (see CORNICIFICIUS 1). He was consul in 39. He

commanded a fleet for Octavian against Sextus Pompeius (38), and was responsible for restoring order in Italy (36). Later he was governor in Spain and triumphed in May 28. His son was consul in 4 B.C. and his grandson in A.D. 26.

Syme, *Rom. Rev.*, see index.

T. J. C.

CALVUS, GAIUS LICINIUS (*PW* 113) (82–?47 B.C.), orator and poet, son of the annalist C. Licinius Macer (q.v. 1). In oratory he practised a severe Atticism, but he was a vivacious speaker (*Sen. Controv.* 7. 4. 7). Cicero, who deplored his uncompromising Atticism and thought that over-fastidiousness of style impaired his effectiveness, pays tribute to his great abilities (*Brut.* 283–4, *Fam.* 15. 21. 4) and Quintilian's balanced judgement indicates that some critics placed him above Cicero (10. 1. 115). He left twenty-one speeches, of which those against Vatinius (one probably delivered in 54 B.C., when Cicero was defending) were still models for the student of oratory in Tacitus' time (*Dial.* 18, 21, 25). He was an intimate friend of Catullus and shared his attitudes and his tastes—the two are paired by Horace, Propertius, Ovid, and Pliny—and his writing was in the same genres—an 'epyllion' (on the story of Io), epithalamia (one in glycomics), elegiac verse, and epigrams (some attacking Caesar and Pompey): only a few lines survive.

FRAGMENTS in *ORF*, n. 165; Morel, *FPL*.

C. J. F.

CALYPSO (*Καλυψώ*, 'she who conceals'), a nymph, daughter of Atlas (q.v.; *Od.* 1. 14 and 50 ff.). She lived on the island of Ogygia, 'where is the sea's navel', i.e. a great way from any known land, and there received Odysseus when shipwrecked on his way from Circe's island (cf. ODYSSEUS). Though she promised to make him immortal if he would stay and be her husband (5. 209), he desired to return home; therefore, at the command of Zeus, conveyed by Hermes (5. 105 ff.) she let him go in the eighth year (7. 259–61), providing him with materials and tools to construct a makeshift boat (*αὐχέδιον*, 5. 251; the description shows that it was not a 'raft'). After Homer, little is added to her story. In the *Odyssey* nothing is said of her having children by Odysseus; but in Hesiod, *Theog.* 1017–18 (an interpolation?) she has two sons, Nausithous and Nausinous. More commonly her son (by Odysseus or Atlas; in post-Homeric genealogies she is often daughter of Oceanus or Nereus) is Auson, eponym of Ausonia (S. Italy), also called son of Circe (see, e.g., schol. Ap. Rhod. 4. 553 and Eustathius on Dionysius Periegeta, 78).

H. J. R.

CAMARINA, a Syracusan colony founded c. 599 B.C. at the mouth of the river Hipparis in southern Sicily, near modern Scoglitti. In constant dispute with the Syracusans, it was destroyed by them in 553 and again c. 484 after refoundation by Hippocrates of (q.v. 1). Gela Established once more in 461 by the Gelians, it supported the anti-Syracusan coalition in 427–4, but decided for Syracuse after 415 (cf. Thuc. 6. 75–88). Abandoned by Dionysius I (q.v.) in 405, it revived in the period of Timoleon. The supposition that it was finally destroyed and abandoned in 258 (Diod. Sic. 23. 9. 4–5) is invalidated by the discovery of buildings of Roman republican date. Strabo (6. 2. 5) records the site as deserted.

Hérard, *Bibl. topogr.* 44 f. for earlier literature. More recent researchers: A. di Vita, *Kamalos* 1958, 83 ff., id., *Bollettino d'Arte* 1959, 347 ff., P. Pelagutti, *ibid.* 1962, 251 ff.

A. G. W.

CAMBYSES (Kambūjiya), son of Cyrus the Great; king of Persia 530–522 B.C. The main achievement of his reign was the conquest of Egypt in 525 B.C. (Hdt. 3. 1–15). He planned further military expeditions against Carthage, Ethiopia, and Siwa Oasis, but the first proved

impracticable, the second was a partial failure, and in the third the Persian force perished in the desert. These misfortunes may have changed him from a wise and tolerant ruler to the tyrannical madman of Herodotus' account. He died in Syria while returning to suppress the rebel Gaumata, the Pseudo-Smerdis.

J. V. Pražek, 'Kambyses', *Alte Orient* xiv. 2 (1913); *PW*, s.v. 'Kambyses' (C. F. Lehmann-Haupt).

M. S. D.

CAMELS. The camel of the Graeco-Roman and Iranian worlds, including Bactria, was the one-humped Arabian species; the two-humped 'Bactrian' camel belonged to India, China, and central Asia; the 'Bactrian' camel sent to Xerxes with the Saca tribute is depicted at Persepolis as an Arabian with two humps. Camels were common draught-animals in Ptolemaic and Roman Egypt; Alexander and Ptolemy I utilized swift dromedaries for messages across the desert; Antiochus III had a camel corps, as had Romans (*dromedarii*) and Parthians later. But the real use of camels in war was shown by Surenas (q.v.), though seemingly he had no imitators.

O. Brogan, *PBSR* 1954, 126 ff.; E. H. Bull, *Antiquity* 1956, 117 f.

W. W. T.

CAMENAE, Roman goddesses, identified since Livius Andronicus (*Odisia*, fr. 1) with the Muses. They seem, however, to be water-deities: they had a grove and spring outside the Porta Capena (Plut. *Numa* 13; Platner–Ashby, 89) whence the Vestals drew water daily, and also a little shrine (*aedicula*, Servius on *Aen.* 1. 8, who says it was of bronze and dedicated by Numa; its dedication-day was 13 Aug., *fast. Antistes*). Libation was made to them with milk and water (Serv. Dan. on Verg. *Ecl.* 7. 21). Their shrine, being struck by lightning, was removed to the temple of Hercules Musarum (Servius, first citation above).

Wisniewa, *RK* 219.

H. J. R.

CAMERINUM, town of the Umbrians, (q.v.), modern *Camerno*, midway between Perugia (q.v.) and the Adriatic. Its inhabitants, known as Camertes, were sometimes mistaken for burghers of Etruscan Clusium (q.v.), whose earlier name was Camars. Camerinum signed a 'most equal' treaty with Rome before 300 B.C. and was favoured by her thereafter, even as late as imperial times.

E. T. S.

CAMILLA, a legendary Volscian maiden, whose father, Metabus, in flight fastened her to a javelin, dedicated her to Diana, and threw her across the Aricinus river. After life as a huntress she joined the forces of Turnus, engaged in battle, and was killed by the Etruscan Arruns. Virgil alone (*Aen.* 7. 803; 11. 539–828) relates her story. See HARPALYCE (2).

A. S. P.

CAMILLUS (1), MARCUS FURIUS (*PW* 44), the saviour and second founder of Rome after the Gallic invasion (387/6 B.C.). The splendour of his career is emphasized by the continuous embellishments which the account of it underwent from the fourth century B.C. onwards. He is said to have been military tribune with consular power in 401, 398, 394, 386, 384, and 381 B.C. Of five alleged dictatorships and four triumphs, those of 396 and 389 may be accepted. Political pamphleteers, especially from the time of Sulla, exploited the story of Camillus for propaganda purposes: so Livy (5. 51 ff.) puts into his mouth a programme foreshadowing the Roman traditionalism of Augustus' policy.

Camillus' earliest and greatest, and undoubtedly historical, victory was the capture of Etruscan Veii (c. 396 B.C.); soon afterwards he reduced Falerii. As a war memorial a golden basin was dedicated to Apollo in

the treasury of the Massalioes at Delphi. This fact need not be questioned, since contacts had long been established, through Etruria, between Rome and the Greek world, while Greek fourth-century historians (e.g. Aristotle) dealt with Camillus' career, or at any rate with the Camillus legend. Tradition alleged that Camillus, who had been exiled for appropriating some booty, returned to Ardea in exile, where he was appointed dictator when the Gauls attacked Rome: he levied an army, defeated the Gauls, and recovered the gold with which the Romans had bought off the invaders. Whether Camillus was ever actually exiled or not, the story was obviously invented to balance the defeat on the Allia and, despite traces of accounts drawn from the contemporary legends, the main elements in it were borrowed from the trial of the Scipios. If Camillus did nothing to prevent the catastrophe, nobody contributed more whole-heartedly to Rome's subsequent recovery. Although his home policy aimed at reasserting patrician influence, and he crushed the sedition of M. Manlius (q.v.) by force, his military reforms proved nevertheless favourable to the plebeians, since they gave recognition to individual merit and provided public pay, and he supported the plebeian claims to the supreme magistracies. In 367 during the struggle of the Licinian-Sextian rogations he vowed a temple to Concord; it was built at the foot of the Capitoline hill. Camillus' policy of appeasement at home enabled him successfully to lead the Romans against the Aequi and Volscians (389), although his subsequent victories were undoubtedly exaggerated by a tradition which in general regarded him as 'parens patriae conditorque alter urbis' (Livy 5. 49. 7).

Mommsen, *Rom Forsch.* ii. 321 ff.; O. Hirschfeld, *Kl. Schr.* (1913), 273 ff.; E. Taubler, *Klio* 1912; F. Buick, *Die Erzählungskunst des 1. J. v. Chr.* (1934), 109 ff.; A. Momigliano, *Secondo contributo alla storia degli studi classici* (1960), 89 ff.; J. Hubaux, *Rome et Veser* (1958), Oglivie, *Comm. Livy* 1. 5, 669 ff. P. T.

CAMILLUS (2), LUCIUS FURIUS (PI' 41), a son of Camillus (1). As consul in 349 B.C. he defeated the Gauls through the efforts of Valerius (q.v. 3) Corvus. Probably this success, and not an alleged Auruncan victory in 345, induced him to dedicate the temple of Juno Moneta (Livy 7. 28). E. T. S.

CAMILLUS (3), LUCIUS FURIUS (PI' 42), a grandson of (1). In 338 B.C. he and his fellow consul, C. Maenius, crushed the Latins and dissolved the Latin League - an exploit that earned them honorific statues in the Forum (Livy 8. 13). Camillus' second consulship (325) was undistinguished owing to illness (Livy 8. 29). E. T. S.

CAMILLUS, an acolyte in Roman cult, fem. *camilla*. They might be the children of the officiant, but must have both parents alive (*pueri patrum et matrum*), be below the age of puberty, and of course free-born.

Latte, *RR* 407.

H. J. R.

CAMPANIA lies between the Apennines and the Tyrrhenian Sea in Italy, extending from Latium to the Surrentine promontory. This fertile, volcanic plain annually produced three, sometimes four, cereal and vegetable crops. Its roses, fruits, olives (from Venafrum), and wines (from the isolated mountains Vesuvius, Gaurus, Massicus, Callicula) were also famous. In the Bay of Naples it possessed an excellent harbour, and Puteoli (q.v.) became Italy's chief port. The mild climate and beautiful luxuriousness of Campania constantly attracted invaders and reputedly sapped the martial energies of its inhabitants (Polyb. 3. 91). After 750 B.C. Greeks began colonizing the coast, drove back the indigenous population (known traditionally as *Ausones*, q.v.), and extended

their influence even to Rome (see *CUMAE*). In the interior c. 600 an invading Etruscan minority established a league of twelve cities headed by Capua, but failed to capture Cumae (Polyb. 2. 17). The Greeks indeed badly defeated these Campanian Etruscans in 474. Invading Sabelli (q.v.), however, proved irresistible: they captured Cumae as well as Capua (c. 425), and imposed their language on, and merged with, the indigenous population (Diod. 12. 31. 76; Livy 4. 37). Thus, the nation of the Campanians was created. Their language was called, after the original inhabitants, Oscan (q.v.). The Campanians, although more civilized than their Samnite or Roman neighbours and although skilled mercenary soldiers, were no match for fresh Sabellian invaders and consequently sought Roman protection c. 343 B.C. Thereafter, although the Oscan and Greek languages long survived here, Campanian history is linked with Roman (see *CAPUA*). Campania witnessed heavy fighting in the wars of the Republic and suffered disasters like the eruption of Vesuvius. Nevertheless it remained a prosperous area with an excellent road-system and numerous villas. Augustus joined Campania to Latium to form his First Region; indeed the name was ultimately restricted to Latium, the *Campagna* of today.

K. J. Beloch, *Campanien* (1890), A. Sambon, *Monnaies antiques de l'Italie* i (1901), 137; R. M. Peterson, *Local Cults of Campania* (Rome, 1919), J. Day, *YCLS* iii (1932), 167 (well documented), J. Wharmouth, *Foundations of Roman Italy* (1937), 292; G. Spano, *La Campania felice nelle età più remote* (1941); E. Vetter, *Handbuch der ital. Dialekte* (1953), t. 1 ff.; P. E. Arias (ed.), *Ricerca archeologica nell'Italia meridionale* (1960), 1 ff. E. T. S.

CAMPS. When the Roman camp (*castra*) was described by Polybius (6. 27-32) about 143 B.C., its stereotyped form was already taken for granted; indeed, no Roman historian troubles to describe it. It is associated with the earliest annals of Roman history (cf. Livy 10. 32. 9; 34. 46. 8; 40. 27. 1-7; 41. 2. 11), but its origins are doubtful. R. Lehmann-Hartleben assigns its introduction to the Etruscans and would connect it with Assyrian war-trenchments (*Die Trauanssäule* (1926), 10), while others would connect it with the *terramaras* (q.v.) settlements of prehistoric Italy, too often assumed to be normally symmetrical (*Antiquity* 1939, 320). The augural principles associated with its planning certainly appear in the earliest Roman colonies of which we have archaeological knowledge, and its development is undoubtedly a Roman invention.

Polybius describes a camp for a consular army of two Roman legions with an equivalent number of Italian allies. It is square, and faces in the most convenient direction (contrast Veget. 1. 23). Its plan is based upon the general's tent (*praetorium*, q.v.) and the 100-foot street (*via principalis*), parallel therewith. The legions (each grouped as 1,200 *hastati*, 1,200 *principes*, 600 *triarii*, and 1,200 *velites*) and the bulk of the allies were encamped by *centuriae* (then of 60 men each) and *turmae* in parallel divisions along streets at right angles to the *via principalis*, and were divided at the position of the fifth cohort by a second large cross-street, hence called *via quintana*. The *praetorium* is flanked by six tribunes' tents disposed along the *via principalis*, with open spaces behind them serving respectively as *forum* and *quaestorium*. Then comes a third cross-street, behind which lay the *extraordinarii* (selected allied troops) with *auxilia* (foreign levies) on the flanks. The enclosing rampart (*vallum*) and ditch (*fossa*) were divided from the host by an *intervallum* 200 feet wide, serving for booty, and probably for the *velites*, about whose position there is ambiguity (Stolle, *Das Lager und Heer der Römer* (1912), 94-104). There are many points of resemblance between this Polybian plan and the camps of the second century B.C. excavated by A. Schulten at Numantia (q.v.), though the allotment of

space differs considerably, maniples being grouped round a square rather than in long narrow *strigae*.

An imperial camp of the third century A.D. (*Rh. Mus.* 1893, 243) is described in the anonymous treatise *De Munitionibus Castrorum*. While Polybius had tried to describe common practice, this imperial camp is treated as a mere exercise in castrametation, using factors unlikely to be found in conjunction. The differences are striking. The proportion of the whole work is not square but *tertiata*, one-third being called *praetentura* and two-thirds *retentura*. Auxiliaries and irregulars take the place of *extraordinarii* and occupy the whole *praetentura*. The *via quintana* has moved to behind the *praetorium*. The legionaries are quartered around the whole encampment, lying between the *intervallum* and a street called *via sagularis*. The unit for all regulars is no longer the manipule, but the *centuria* of 80 men. The *quaestorium* has moved to behind the *praetorium* and such institutions as the hospital (*valetudinarium*), of which Polybius makes no mention, have appeared. Archaeology does not supply examples of imperial camps on so large and detailed a scale as the republican camps at Numantia. For defences and outlines, the British groups of Northumberland and Scotland are unrivalled. At Masada (q.v.), west of the Dead Sea, there is a remarkable series of small siege-camps, filled with temporary buildings in the manner of Numantia, while the manœuvre-camps of Cawthorn should also be noted.

H. Stuart Jones, *Companion to Roman History* (1912), 226 ff.; A. Schulten, *Numantia 139* (1914-31), Kromayer-Verth, *Heerwesen und Kriegsführung der Griechen und Römern* (1928), for Northumberland examples, I. A. Richmond, *Northumberland County History* xv, 116 ff. and id. *Proc. Brit. Acad.* 1955, 297 ff.; for Scottish examples, W. Roy, *Military Antiquities of the Romans in North Britain* (1793); for Masada, see s.v. MASADA, *De Munitionibus Castrorum*, ed. Lang (1848), von Domaszewski (1887). I. A. R.

CAMPUS MARTIUS, originally the Tiber flood-plain bounded by the Pincian, Quirinal, and Capitoline hills, though its precise limits, especially to the south, are still arguable. It was originally pasture, outside the *pomerium* (q.v.) and therefore used for army musters and exercises and for the *romita centuriata*. In early times, the Campus contained the altar of Mars, from which it took its name, the *Villa Publica* (435 B.C.), and the temple of Apollo (431 B.C.); later came the famous altar to Dis and Proserpina, on which centred the Secular Games (q.v.). Republican public works, the *Forum Holitorium*, *Circus Flaminius* (221 B.C.), *Porticus Octavia* (168 B.C.) and *Minucia* (110 B.C.), and many unidentified temples, as in the *Forum Boarium* and Piazza Argentina, had, by the first century B.C., overrun its south end. The *Theatrum Pompei* (52 B.C.), with huge *porticus*, foreshadows the immense buildings of the Augustan *viri triumphales*: the temple of Neptune by Domitian Ahenobarbus (c. 32 B.C.), Statilius Taurus' amphitheatre (29 B.C.), Augustus' own *Mausoleum*, gardens, and crematorium (28 B.C.), *porticus Octaviae* (27 B.C.), and the *Saepta Julia* (q.v., 26 B.C.), Agrippa's Baths, water-garden, aqueduct (q.v.), Pantheon (q.v.) and *porticus Argonautarum* (25 B.C.), the theatres of Marcellus and Balbus (the latter with *Crypta*) of 13 B.C., a monumental sundial (10 B.C.) of which the gnomon was an obelisk of Psammetichus II, and the *Ara Pacis* (q.v., 9 B.C.). Imperial buildings gradually filled the remaining space. Gaius projected an amphitheatre, and perhaps built the *Iseum et Serapeum* vowed by the triumphs. Nero built *thermae* (A.D. 62-4) and Domitian the *Templum Divorum (Vespasiani et Tit)*, a *stadium* (now Piazza Navona), and *odeum*. Hadrian added the *basilicae* of Matidia and Marciana, with a temple to the former. Pius honoured Hadrian with a temple (A.D. 145), and is himself commemorated by a crematorium and *columna Divi Pri*, with famous panels on its base, while the *templum divi Marci* is associated with the more famous

Column, with spiral reliefs of the Marcomannic wars. Eventually, the whole area was included within the Wall of Aurelian (q.v.).

F. Castagnoli, *Mem. Acc. Linc.* 1948, 103 ff.; for buildings, see Nash, *Pict. Dict. Rome*, s.vv. I. A. R.; J. N.

CAMULODUNUM, modern Colchester (Essex). A site to the west of the Roman (and modern) town, was occupied c. A.D. 9 by the Belgic conquerors of the Trinovantes and was the capital and mint of Cunobelinus (q.v.), as well as the principal trading port of Britain (cf. Fox, *Proc. Prehist. Soc. E. Anglia* vii, 159). Captured in Claudius' campaign of A.D. 43, it served as a base for the conquest of Britain, and in 49 a colony (*colonia Victricensis*) was founded close by, which was probably at first the provincial capital. This unwallled town was sacked by Boudicca in 60 and was subsequently rebuilt in regular *insulae* to cover an area of c. 108 acres. Its defences were a clay bank, to which, as appears, a stone wall was added c. A.D. 180. Important remains are the substructures of a temple (probably that of Divus Claudius), and the monumental west (Balkerne) gate. In the suburbs are temples and a large theatre. Samian pottery was made here in the second century. Its subsequent history is virtually unknown.

C. F. C. Hawkes and M. R. Hull, *Camulodunum* (1947); M. R. Hull, *Roman Colchester* (1957), *VCH Essex* iii, 7 ff. (I. A. Richmond), 90 ff. (M. R. Hull) C. E. S.

CANABAE, the name given to the civil settlements that grew up around the legionary fortresses, e.g. at Moguntiacum, Carnuntum, and Lambaesis. Many of their inhabitants were veterans. *Canabae* were *vici* (q.v.) and had magistrates with the titles of *magistri* or *curatores*, and probably a local council. During the second century A.D. some of them were given the status of *municipia* (q.v.), or *coloniae* (see COLONIZATION, ROMAN).

Soldiers who give *castris* as their birthplace were born in the *canabae* of the camp where their fathers, who before A.D. 197 were unable to contract a legal marriage, were stationed. During the second century A.D. a high proportion of legionaries were recruited in this way.

R. MacMullen, *Soldier and Civilian in the Later Roman Empire* (1963), 119 ff. H. M. D. P., G. R. W.

CANALS (*fossae*, *διώρυγες*). Drainage and irrigation canals were freely used throughout the ancient world. Egypt and Mesopotamia depended entirely on a system set up in prehistoric times and extended and maintained later. The water of Lake Copais (q.v.), from very early times, was carried for many miles over the surrounding plain in canals and under it in tunnels; in Italy, the Etruscans built canals that laid the foundations of the prosperity of the Po valley (Pliny, *HN* 3. 20). These were kept up even by the Gallic invaders and extended by the Romans. In southern Italy the Pomptine Marshes (q.v.) posed a more difficult problem, never really solved. The Via Appia (q.v.), however, was safeguarded against the water, and the canal built for this purpose by M. Cethegus (cos. 160 B.C.) provided a popular transport route (Hor. *Sat.* 5. 5). Latium and Etruria were, on the whole, kept well drained by means of canals and tunnels (*cuniculi*). Claudius converted the Fucine Lake into cultivable land by draining the water through tunnels, which were repaired and improved in the second century. In Roman Africa, following up earlier Carthaginian efforts, the Romans built a system of canals that caught all the available water and vastly extended the cultivable area. Its remains are still an impressive sight.

Navigable canals were also known in Egypt (especially in the Nile Delta) and Mesopotamia. Xerxes, for his invasion of Greece, by-passed the stormy Athos (q.v.)

peninsula by a canal nearly 20 feet wide across its neck. This was regarded as sacrilege ('Where Zeus wanted an island, he made one'), duly avenged by his defeat. Yet there were one or two similar canals in Classical Greece, and more were planned at various times and abandoned, notably—on different occasions from Periander to Nero, who intended to set Jewish prisoners to work on it—one across the Isthmus of Corinth. In Italy, the mouth of the Po, and under the Empire that of the Tiber, frequently called for canalization. So did river mouths in the provinces, e.g. the Rhône and the Rhine-Meuse, where canals were built, respectively, by Marius and Drusus (q.v. 3). Corbulo (q.v.), as legate of Lower Germany, connected the Meuse with the Rhine above the delta. In Britain, a system of canals linked Fenland with the Trent. In Italy, Agrippa (q.v. 3) joined the Lucrine Lake to Avernum and made them into one large land-locked harbour; and Nero envisaged, and actually started on, a scheme to connect this with Rome, thus avoiding the difficulties posed by the Tiber mouth. Egypt remained the principal country of canals. Alexandria was connected with the Nile by the 'Canopus Canal'; and though Egyptian schemes for digging through the Isthmus of Suez had apparently failed, Ptolemy II, using some of their workings, built a canal from the Nile (near Helio-polis) to the Bitter Lakes, which he connected with Arsinoë (q.v. 2). This was kept up and improved, in part by new diggings, by various successors, last by Trajan and Hadrian. Alexandria thus became a centre for sea-borne trade between the East and the Mediterranean.

Dar Sag, 'Tossa'; S. Judson and A. Kahane, *PHSR* 1961, 74 ff (Taurus anconculi), Forbes, *Stud. Anc. Technol.* n, ch. 1. E. B.

CANDIDATUS, a candidate for a magistracy. Officially named *petitor* (his rivals were therefore styled *competitores*), he was called *candidatus* because he wore a white, or whitened, toga when greeting electors in the forum. He was then accompanied by a slave (*nomenclator*) who reminded him of the names of the electors, and by a crowd of partisans (*sectatores*), mostly freedmen, whose task was to secure votes by bargaining and bribing, either directly or through special agents. The *divisores* were charged with distributing money to the voting members of the tribes. To prevent or limit canvassing, legislation *de ambitu* (see **AMBITUS**) was enacted, but unsuccessfully. These activities frequently began a full year before the elections, but candidature became official only with *profectio* to, and consequent *nominatio* by, the presiding magistrate or his colleague. Although this right of *nominatio* was shared in the imperial period by the Princesps, probably by virtue of his consular power, it is not to be confused with the entirely unofficial recommendation of candidates by an influential private citizen (*commendatio*), a practice republican in origin which was later widely employed by the emperors in order virtually to ensure the election of candidates of their own choosing.

Mommsen, *Röm. Staatsr.* 12, 477 ff; 112, 921 ff. P. T.; E. S. S.

CANIDIUS (*PIV* 2) **CRASSUS**, **PUBLIUS**, of obscure and probably non-Latin family, served under Lepidus (q.v. 3) in Gallia Narbonensis and helped to bring about his *rapprochement* with Antony in May 43 B.C. He is probably the Crassus who led an army for Antony during the Perusine War. At the end of 40, after the peace of Brundisium, he held a suffect consulship, and subsequently served Antony in the East. Early in 36 he subdued the Iberians and Albanians in the region of the Caucasus, and then joined Antony's Parthian expedition. Probably left in command in Armenia, he brought his army to join Antony in 32, and took charge of all the land forces in the Actium campaign. After the battle he

deserted his troops and rejoined Antony in Egypt, where he was put to death by Octavian in 30.

Syme, *Rom. Rev.*, see index.

T. J. C.

CANINIUS (1, *PIV* 9) **REBILUS**, **GAIVS**, of praetorian family, served as Caesar's *legatus* in 52 B.C. against Vercingetorix. In 49 he was sent by Caesar to Pompey to arrange a compromise, and then fought under Curio (q.v. 2) in Africa. In 46 he was in Africa again with the status of proconsul, taking part in the campaign of Thapsus; in 45 he served as a *legatus* in the campaign of Munda. On the last day of 45, on the sudden death of Q. Fabius Maximus, Caesar appointed him *consul suffectus* for the few hours of the year that remained. Apparently proscribed (43), he escaped to Sextus Pompeius in Sicily and there refounded Cephaloedum as a Roman *municipium*. His son and grandson also reached the consulship.

Syme, *Rom. Rev.*, see index, M. Grant, *From Imperium to Auctoritas* (1946), 192 f. T. J. C.

CANINIUS (2, *PIV* 13) **RUFUS**, of Comum, a neighbour of the Younger Pliny, much occupied with his landed estates, but possessing an epic bent which Pliny encouraged, as he encouraged production of poetry in the case of Octavian and others. His literary interests are discernible from Pliny's letters to him (1. 3; 2. 8, 3. 7; 6. 21; 7. 18; 8. 4; 9. 33).

J. W. D.

CANIUS RUFUS, from Gades, a poet and friend of Martial, who alludes to his versatility and merriment in epigram 3. 20 (cf. 1. 61. 9; 1. 69).

CANNAE, a village on the south bank of the Aufidus in Apulia, the site of Hannibal's great victory in 216 B.C. (Polyb. 3. 107-18; Livy 22. 43-9). L. Aemilius Paullus and C. Terentius Varro (qq.v.) with perhaps 48,000 infantry and 6,000 cavalry (rather than the 86,000 which Polybius implies) faced Hannibal's 35,000 infantry and 10,000 cavalry. Hannibal's convex crescent-shaped formation gradually became concave under pressure of the Roman centre which, being thus encircled and finally surrounded by Hannibal's cavalry in the rear, failed to break through and was cut to pieces. The long-debated question whether the battlefield lay north or south of the river has not been settled by recent archaeological discoveries: the cemeteries, found in 1937 and after, are medieval, not ancient.

For a summary of the problems see Wallbank, *Polybius* 1, 415 ff. For the burials and other excavations, F. Bertocchi, *Rend. Linc.* 1960, 337, *Studi annali* (1964) 93 ff., and N. Degraffi, *ibid.* 83 ff.

H. H. S.

CANTABRI, a sea-coast and mountain tribe of Spain situated east of the Astures (q.v.). Their poverty and primitive characteristics are described by Strabo (3. 3. 7-8, pp. 155-6), who ascribes to them a sort of gynaeocracy (3. 4. 18, p. 165). They were finally reduced by the Romans in campaigns from 26 to 19 B.C. which were led by Augustus (26-25) and Agrippa (19). Those who survived this Cantabrian War were either deported from their mountain homes or remained under the supervision of Roman troops. Juliobriga (modern *Reinosa*) was the only considerable town before Vespasian's colony of Flaviobriga. Pliny mentions *plumbum nigrum*, or lead, and magnetic iron, as natural resources.

On the wars see D. Magie, *CPH*, 1920, and R. Syme, *APH*, 1934. A. Schulten, *Los Cantabros y Astures* (1943). J. J. VAN N.

CANTHARUS, Athenian comic poet, victorious in 422 B.C. (*IG* ii². 2318). His *Συμμαχία* seems to have dealt with the ostracism of Hyperbolus in 417.

FCG i. 251; CAF i. 764-6; Demiaček, *Supp. Com.* 28.

CANTIACI, inhabitants of Kent who formed a *civitas* of Roman Britain, the only one to adopt not a tribal but a geographical title (Canton, cf. Caesar, *BGall.* 5. 14) which perhaps goes back to Pytheas. Kent received numerous immigrations in the later pre-Roman period, and Caesar himself records four kings there (*BGall.* 5. 22). The Cantiaci, therefore, were probably an artificial grouping of these elements created by Rome (cf. the *Belgae* and *Regnenses* for local-government purposes. The *caput civitatis* was Durovernum (*Canterbury*) (*Rav. Cosm.* 72), but Durobrivae (*Rochester*), where there had been a Belgic mint, was a secondary centre round which were many villas. *Richborough* (Rutupiae, q.v.), *Dover* (Portus Dubris), and *Lympne* (Portus Lemannis) were important ports and bases of the *Clavis Britannica* and later became forts of the Saxon Shore, as did *Reculver* (Regulbium). A substantial pottery industry existed along the Thames estuary (Upchurch marshes) and iron was worked in the Weald.

VCH Kent iii, A. L. F. Rivet, *Town and Country in Roman Brit.* (1964), 144 f.; D. P. Allen in *Iron Age in S. Britain*, 97 ff., *Archaeologia* 1944, 1 ff.

CANTICA, the lyric or musical portions of a Latin comedy (e.g. in Plautus, q.v. § 3) as contrasted with *drverbum*. Lyric *cantica* scarcely exist in Terence (q.v.). It seems clear that they represent an invention of Roman dramatists (see *MEIRE, LATIN*, 1 (ii)).

CANULEIUS (*PIV* 2), GAIUS, tribune of the plebs in 445 B.C., is reputed to have enacted a *rogatio* or *Lex Canuleia* that allowed intermarriage between patricians and plebeians, probably by recognizing the legitimacy of children of plebeian mothers, and by admitting them to the patrician *gentes*. Livy's lively but historically almost worthless account contains difficulties (e.g. the carrying of the law in the tribal assembly, and its connexion with the first plebeian attempts to win admission to the consulate), but the fact and approximate date of the law are indisputable.

De Sanctis, *Stor. Rom.* ii 55 ff., Ogilvie, *Comm. Livy* 1-5, 527 ff. On the question of intermarriage between patricians and plebeians see H. Last, *JRS* 1945, 31 ff.

CANUSIUM, city of Apulia (q.v.), on the river Aufidus (q.v.), of probable Daunian origin (cf. Pliny *HN* 3. 104): modern *Canosa*. Late Canosan pottery, necropolis finds, coins, and language indicate much hellenization by 300 B.C. (cf. Hor. *Sat.* 1. 10. 30). After submitting to Rome (318 B.C.), Canusium remained faithful until the Social War, which apparently caused it to decline somewhat (Strabo 6. 283; Livy 9. 20; App. *BCiv.* 1. 42, etc.). However, situated on the Via Traiana (q.v.), it soon recovered to become a *municipium*, an Antonine *colonia*, and the chief Apulian city in the sixth century (Procop. 3. 18). For a list of its decurions (A.D. 223) see Dessau, *ILS* 6121 (cf. 8703 b, 5188).

N. Jacobone, *Canusium* (1925).

E. T. S.

CAPANEUS (Καπανεύς), in mythology, son of Hippodromus and father of Sthenelus (*Il.* 4. 367; Hyg. *Fab.* 70. 1); one of the Seven against Thebes, cf. ADRASTUS. As he climbed on the walls, boasting that not even Zeus should stop him, he was destroyed by a thunderbolt (Aesch. *Sept.* 427; Eur. *Phoen.* 1172 ff. (from the cyclic *Thebais*?)).

H. J. R.

CAPENA, the centre of a small independent territory on the west bank of the Tiber, south and east of Mt. Soracte. The original settlers were closely related to, if not identical with, the Faliscans (q.v.) and in classical times spoke a similar, near-Latin Indo-European dialect. Politically the city was closely associated with Etruscan Veii (q.v.),

and was annexed to Rome after the destruction of Veii in 396 B.C., but culturally the remains of its cemeteries reveal strong affinities also with the Faliscan cemeteries of Falerii and Narce (q.v.), as well as with the Sabine territories. Though a *municipium*, the city was of small importance in Roman times and was eventually abandoned. It occupied the hill of Civitucola, 2 miles north of the modern Capena and is known chiefly from the contents of its cemeteries. Near the south-east border of its territory, at Scorano, lay the important early river crossing, market-town, and sanctuary of Lucus Feroniae (q.v.).

Not. Scav. 1906, 1922, and 1953; G. D. B. Jones, *PHSR* 1962, 116 ff., 1963, 100 ff.

J. H. W.-P.

CAPER, FLAVIUS (late 2nd c. A.D.), grammarian, whose lost treatises *De Latinitate* (containing citations from old Latin authors) and *De Dubus Generibus* were freely used by later writers. The *Orthographia* and *De Verbis Dubis* extant under his name (ed. Keil, *Gramm. Lat.* vii. 92-107; 107-12) are apocryphal.

Schanz-Hosius, § 599.

J. F. M.

CAPITO (1), GAIUS ATEIUS (*PIV* 7), of undistinguished family, was tribune in 55 B.C. He opposed the consuls Pompey and Crassus and stigmatized the latter's proposed attack on Parthia as a war of unjust aggression. Unable to prevent Crassus' departure by announcing adverse prodigies, he solemnly cursed him as he left the city (November). In 50 he received a *nota* from the censors on the ground that he had invented the said prodigies: the punishment was, in Cicero's view, illogical (*Div.* 1. 29 f). He is probably the Capito who distributed land to veterans by Caesar's appointment in 44.

J. Bayet, *Hommages à G. Dumézil* (1960), 31 ff.

T. J. C.

CAPITO (2), GAIUS ATEIUS (*PIV* 8), a Roman jurist of the early Empire. He came of a modest family, but obtained the consulship (in A.D. 5), and was *curator aquarum* from A.D. 13 to 22, the year of his death. With his contemporaries 'maximae auctoritatis fuit' (Pompon. *Dig.* 1. 2. 2. 47; cf. Tac. *Ann.* 3. 75), but his reputation did not last. His writings are referred to only once by another jurist, though more plentifully by non-legal authors. This neglect is probably attributable at least in part to his conservatism in legal matters, although in politics he was a supporter of the new order. In both these respects he contrasted sharply with his rival M. Antistius Labeo (q.v. 1), whose subsequent reputation was very different. It was indeed their rivalry that was the origin, if Pomponius' statement is true, of the schools of jurists which came to be called Sabinians and Proculians (see SABINUS 2). Capito's later eclipse may also be attributable to the fact that his writings (*De Iure Pontificio*, *Coniectanea*, *De Iure Sacrificiorum*) seem to have been principally concerned with sacred and constitutional law and were therefore probably soon considered obsolete.

L. Strzelecki, *C. Ateii Capitolini Fragmenta* (1960). Also Huschke-Seckel-Kuhler, *Jurispudentia anteaustiniana* 12 (1908), 62 ff.

A. B., B. N.

CAPITOL, CAPITOLIUM, or MONS CAPITOLINUS, one of the hills of Rome: an isolated mass left by erosion, with two peaks, Capitolium proper and Arx. It seems not to have been settled at all before the sixth century, but attained importance as the site of the great temple started by King Tarquin and dedicated, in the first year of the Republic according to tradition, to Jupiter Optimus Maximus, Juno, and Minerva; these deities had an earlier temple at the so-called Capitolium Vetus on the Quirinal (Varro, *Ling.* 5. 158). At all periods, the hill was less an inhabited part of the city than a citadel and religious centre; here the consul took vows before going

to his province and here he returned in triumph after a victory. The original platform of the temple (55 m. by 60 m. in area) still exists; but the original temple, often embellished, was burnt in 83 B.C. The new temple of Lutatius Catulus (69 B.C.), renovated and repaired by Augustus in 26 and 9 B.C., was burnt down in A.D. 69, while Vespasian's temple perished in the fire of A.D. 80. The last building was dedicated two years later by Domitian and cost 12,000 gold talents. It was plundered by Gaiseric (q.v.) in A.D. 455. The Tarpeian Rock (q.v.) lay close by, on the south-west shoulder of the hill. On the north summit of the hill, originally distinguished as the *arx*, lay the temple of Juno Moneta (344 B.C.), the *auguraculum* (an augur's observation post with primitive hut), and the temple of Concordia (216 B.C.). On the col between the hills, known as *inter duos lucos*, lay the *aedes Vivicis* (Vitr. 4. 8. 4) and the *asylum* associated with Romulus. The east face of the hill was occupied by the *Tabularium* (q.v.) and the approach-road from the Forum (*clivus Capitolinus*), paved in 174 B.C.

Both hill and the temple of Jupiter were reproduced in many cities of Italy and the Roman West, and either hill or temple or both in Roman Byzantium; Jerusalem, as refounded by Hadrian, was styled *Aelia Capitolina*. The right to erect such *Capitolia* was at first probably reserved for Roman *coloniae*.

E. Gjerstad, *Early Rome*, 1 (1960), 168 ff., for buildings, see Nash, *Pat. Dict. Rome*, s.vv. A. W. V. B.; I. A. R.; J. N.

CAPPADOCIA at one time designated the whole region between Lake Tatta and the Euphrates, and from the Euxine Sea to Cilicia; but the northern part became 'Cappadocian Pontus' or simply 'Pontus' (q.v. 2), and the central and southern part Greater Cappadocia. This latter consists of a rolling plateau, almost treeless in its western portion, some broken volcanic areas in the centre and west (the cone of Mt. Argæus reaches 12,000 ft.), and the ranges, for the most part well watered and well timbered, of the Taurus and Antitaurus. A rigorous winter climate limits production to hardy cereals and fruits. Grazing was always important; the Persian kings levied a tribute of 1,500 horses, 50,000 sheep, and 2,000 mules, and Roman Emperors kept studs of race-horses there. Mines are mentioned of quartz, salt, Sinopic earth, and silver. Since the passes were frequently closed in winter the country was isolated, and consequently developed slowly.

In the second millennium B.C. this region of small principalities and temple states was penetrated by Assyrian trading colonies, and became subject to the Hittite rulers of Boghaz Köy. After their fall (c. 1200 B.C.) it lay open to Phrygian, and later to Cimmerian, invasion and devastation. The Medo-Persian conquest (585 B.C.) led to the formation of an Iranian nobility with feudal dominion over considerable districts. Besides these there existed large areas owned by temples and ruled by priests, such as the territories of Ma of Comana and Zeus of Venasa. Nobles and priests often rivalled the authority of the kings. The ordinary people lived in villages on the large estates or as serfs on the temple territories, supplying their masters with labour and revenues and the raw material for an active slave-trade.

The satrap Ariarathes (q.v. 1) refused to submit to Alexander and was killed by Perdicas (322). His descendants, restored after 301, added Cataonia to their possessions, and were recognized as kings from c. 255 B.C. Ariarathes IV (q.v.) supported Antiochus III against Rome at Magnesia in 190, but he and his successors thereafter adopted a philo-Roman policy. Their efforts at hellenization and urbanization made slow progress, as Mazaca and Tyana remained almost the only cities. Devastated by Tigranes (q.v. 1) of Armenia in the

Mithridatic Wars, Cappadocia was restored by Pompey, who gave the king large loans for reconstruction. Antony replaced this line, which had proved disloyal in the Parthian invasion, with the energetic Archelaus, who renamed Mazaca Caesarea and founded Archelaia (Garsaura). He lost favour in Rome in his old age, and the military importance of Cappadocia led to its annexation in A.D. 17. A procuratorial province until Vespasian, it was joined (in A.D. 72) with the Galatian complex under a consular legate until Trajan, who, between 107 and 113, formed the new province of Cappadocia with Pontus which remained united to the time of Diocletian. The eleven royal *strategiai* remained the basis of the provincial administration. Development of commerce from the West, the transfer of legions to the upper Euphrates, and the system of military roads aided the belated advancement of native communities to city rank, but at most they hardly occupied a third of the territory. Imperial estates, beginning with the royal properties, steadily increased through confiscations.

T. R. S. B.

CAPREAE (modern *Capri*), a beautiful, mountainous island near Naples (Strabo 5. 248). Neolithic people once dwelt here, and, in prehistoric times, legendary Teleboae (*Mon. Ant.* 1924, 305; *Verg. Aen.* 7. 735). In historical times Capreac was Neapolitan territory until Augustus, who often stayed here, gave Neapolis Aenaria in exchange (Suet. *Aug.* 92). Tiberius spent his last ten years on Capreac, amid wild debaucheries according to incredible ancient records. Ruined villas afford tangible memorials of his sojourn; he is said to have built twelve, named after various deities (Tac. *Ann.* 4. 67). After Tiberius the Caesars avoided Capreac except as a place of banishment, e.g. for Commodus' wife and sister (Dio Cass. 72. 4). Although arid, Capreac was fertile, but in antiquity never experienced municipal organization. The Romans knew its famous Blue Grotto.

H. E. Trower, *Book of Capri* (1924); A. Mauri, *Breviario di Capri* (1938).

E. T. S.

CAPROTINA, a title of Juno (q.v.), derived from the Nonae Caprotinae (7 July), i.e. Nones of the Wild Fig (*caprificus*), under which maidservants had a sham fight with stones, etc., and abused each other. It seems to be an old rite of fertility (fig-juice as equivalent to milk? cf. the Akikuyu rite in *Man* 1913, no. 3), grown unintelligible and relegated to slaves, though freeborn women also sacrificed on that day (Macrobi. *Sat.* 1. 11. 36); see further Wissowa, *RR* 184, Latte, *RR* 106.

H. J. R.

CAPSA (modern *Gafsa*), an oasis in southern Tunisia. The Libyan settlement there was destroyed by Marius in 106 B.C. (Sall. *Iug.* 89 ff.). It later revived, becoming a *municipium* under Hadrian and subsequently a *colonia*. Under the Byzantines, it was the centre of defence against the desert nomads.

B. H. W.

CAPUA, city in western Italy. Archaeological evidence indicates that Capua was founded before 600 B.C., probably by Etruscans; it was certainly Etruscan in the sixth century (Vell. Pat. 1. 7; Livy 4. 37). Capua gave its name to the entire surrounding plain, *Ager Campanus* (i.e. *Capuanus*), later called Campania (q.v.). But it specifically dominated the immediately neighbouring territory (Falernus Ager, Casilinum, Calatia, Suessula, Acerrae, Atella). Other Campanian cities (Suessa, Teanum, Nola, Nuceria, Neapolis, Cumae) pursued

independent policies. After 474 B.C. Etruscan power in Campania declined and c. 440 Sabelli (q.v.) were becoming numerous in Capua; c. 425 they seized and soon osanized it (Diod. 12. 31). Henceforth the Campani of Capua are frequently mentioned. Threatened by fresh Sabellian invaders c. 343, they sought Roman protection but immediately proved treacherous. Accordingly Rome confiscated the Falernus Ager, gave Roman citizenship to the *equites Campani* and *civitas sine suffragio* (see *MUNICIPIUM*) to the other Campani (Livy 7. 29–8. 14). Capua, however, retained its Oscan language and magistracies (*meddices*), the latter with somewhat curtailed powers after 318 when *praefecti Capuam Cumas* were appointed (Mommsen, *Röm. Staatsr.* ii³. 608). After 312 the Via Appia linked Capua still more closely to Rome. In the Samnite Wars Capua behaved equivocally and witnessed much fighting (Diod. 19. 76; Livy 9. 25); it continued, however, to prosper, becoming indeed proverbial for its luxuriousness and pride (Ath. 12. 36). By 218 it rivalled Carthage and Rome (Florus i. 16. 6). In 216 Capua revolted to Hannibal, but in 211 Rome recaptured and severely punished it, executing its prominent citizens, depriving the remainder of political rights and confiscating its territory, which as Roman public domain was partly used for colonies (194) but mostly rented out at a substantial profit until distributed to 20,000 colonists by Julius Caesar (59) (Livy 23. 2 f.; 26. 14 f.; Cic. *Leg. Agr.* 1. 7; Vell. Pat. 2. 44). Capua itself remained a populous town, but without municipal privileges until after 90 B.C. (Cic. *Sest.* 10). It suffered in the wars of the late Republic but under the Empire was a prosperous *colonia*, Augustus particularly favouring it (Dio Cass. 49. 14). It had declined somewhat, but was still a considerable city when Vandals sacked it (456). Saracens finally destroyed Capua (840), the church of Santa Maria alone escaping to give the town its modern name (*Santa Maria di Capua Vetere*). Its refugees settled at Casilinum, the Capua of to-day. Capuan perfumes and bronzes were famous (Cic. *Sest.* 19; Pliny *HN* 34. 95). Its large amphitheatre proves its fondness for gladiatorial shows; see also SPARTACUS.

E. T. S.

CAPYS (1), father of Anchises (*Il.* 20. 239); (2) companion of Aeneas (*Aen.* 10. 145) and founder of Capua; (3) king of Alba Longa (Livy 1. 3. 8).

CARATĀCUS (the form Caractacus is found only in an inferior manuscript), son of Cunobelinus. He took part in the resistance against the Roman invasion of A.D. 43 perhaps at Bagendon, near Cirencester, among his subjects the Dobunni (so emend Dio's *Βοδοοννῶν*) rather than in Kent and Essex, as Dio states. He could easily escape over the Severn to the Silures of Monmouthshire, where he renewed hostilities against the governor Ostorius Scapula, by whom, however, he was defeated somewhere in the hills of the Welsh border. He fled to Cartimandua (q.v.), queen of the Yorkshire Brigantes, who surrendered him to the Romans (51). Tacitus puts into his mouth a rhetorical speech delivered at Rome to Claudius, who spared his life.

Dio 60. 20. 1–2, Tac. *Ann.* 12. 31–7. E. M. Clifford, *Bagendon, A Belgic Oppidum* (1961), 56 ff.; D. R. Dudley and G. Webster, *The Roman Conquest of Britain A.D. 43–57* (1965), see index. C. E. S.

CARAUSIUS, MARCUS AURELIUS MAUS(AEUS?) (cf. Dessau, *ILS* 8928), a Menapian of mean origin who was appointed c. A.D. 287 to a command in the English Channel. He aroused, however, the suspicions of Maxi-

mian and fled to Britain, where he proclaimed himself emperor. An unsuccessful attempt to suppress him led to a settlement whereby he could represent himself as a colleague of the Emperors (c. 290) and extend his rule over north-eastern Gaul. His remarkable realm utilized the support of Franks and possibly Picts; and he may have instituted the fortification of the Saxon shore. The Caesar Constantius, however, ejected him from Boulogne (293), and he was assassinated by his *rationalis* Allectus.

Seston, *La Tétrarchie* (1946), 60 ff.; E. Stein, *Hist. du Bas-Empire* (1959), 1. 67 ff., 433; R. A. G. Carson, *Journ. Brit. Arch. Assoc.*, 33 ff.; D. A. White, *Latius Saxonicum* (U.S.A. 1961), 10 ff.; Frere, *Britannia*, 335 ff. C. E. S.

CARBO (1), GAIUS PAPIRIUS (*PIV* 33), supporter of T. Gracchus (q.v. 3), on whose agrarian commission he served from 130 B.C. As tribune in 131, he passed a law extending secret ballot (see CASSIUS 4, GABINIUS 1) to legislative comitia and unsuccessfully proposed a bill permitting iteration of the tribunate. Having turned against Gaius Gracchus (q.v. 4), he won the consulship for 120 and—being an orator of some distinction—successfully defended Optimus against Decius (5) Subulo (q.v.). Universally detested, he was prosecuted by young L. Crassus (q.v. 3) in 119 and committed suicide. He is among the alleged murderers of Scipio (q.v. 11) Aemilianus.

Malcovati, *ORF*, 152 ff.; A. E. Astin, *Scipio Aemilianus* (1967), see index. E. B.

CARBO (2), GNAEUS PAPIRIUS (*PIV* 38), seditious tribune in 92 B.C., fought in the Social War and in 87 supported Cinna (q.v. 1), who made him his colleague as consul in 85 and 84. As sole consul after Cinna's death, he abandoned Cinna's Liburnian campaign and continued his moderate policy, but gave equality in citizenship to the Italians. After supporting a vote for disarmament, he gave up the consulship at the end of the year. With Sulla advancing in Italy, he became consul (82) with Marius (q.v. 2) and, with inexperienced levies, campaigned unsuccessfully in Picenum, Etruria, and Cisalpine Gaul against Sulla, Metellus (q.v. 7), and Pompey. After failing to relieve Marius at Praeneste, he fled to Africa. His name headed the proscription list and, captured by Pompey (whom he had once defended on a criminal charge), he was ignominiously executed at Lilybaeum.

E. B.

CARBO (3), ARVINA, GAIUS PAPIRIUS (*PIV* 40), son of (1), was the only member of his family with Optimato sympathies, according to Cicero. He remained the enemy of L. Crassus (q.v. 3) who had accused his father. During the Civil War he supported Cinna (q.v. 1) and, perhaps when on the point of going over to Sulla, he was executed by Brutus Damasippus on orders from the Younger Marius. He was probably tribune in 90 B.C. and is to be distinguished from C. Papirius Cn. f. Carbo, brother of (2), who was tribune in 89 (or possibly 88, cf. E. Badian, *Stud. Gr. Rom. Hist.* 76 ff.), was joint author of the *lex Plautia Papiria* (see Plautius 1), and died at Volaterrae in 81.

Broughton, *MRR* ii. 30 f.

H. H. S.

CARCINUS (1), son of Xenotimus of Thoricus, a tragic poet mercilessly ridiculed, with his sons, by Aristophanes (*Pax* 781 ff., *Vesp.* 1497 ff.) and other comic poets. He is probably identical with the general mentioned by Thucydides (2. 23).

CARCINUS (2), son of Xenocles (1) and grandson of Carcinus (1), a tragic poet who is said to have written 160

plays (*Suda*, s.v.) and won 11 victories (*IG* ii². 2325, according to a probable restoration) in the fourth century. He passed much time at the court of the younger Dionysius of Syracuse (*Diod. Sic.* 5. 5. 1). He is referred to by Aristotle, *Poet.* 16 (the recognition scene in the *Thyestes*) and 17 (a mistake in theatrical management in the *Amphiarus*), *Eth. Nic.* 7. 7 (the endurance of Cercyon in the *Alope*), *Rh.* 2. 23 (an argument in the *Medea*—apparently she did not kill her children in this play) and 3. 16 (arguments of Iocasta in the *Oedipus*), and Plutarch (*De Glor. Ath.* 7) praises his *Aërope*. The phrase *Καρκίνου ποιήματα* is said to have been applied to obscure poems (*Suda*, s.v., etc.) but only on the strength of a single passage in the *Orestes*.

TGF 797–800

A. W. P.-C.

CARCINUS (3) OF NAUPACTUS (? 7th–6th c. B.C.), epic poet, probable author of the *Naupactia*, a Catalogue of Famous Women.

EGF 198. 202.

CARDIA, a Greek city on the west side of the Thracian Chersonesus (q.v. 1), at the head of the Gulf of Melas, with a strategic position at the narrowest part of the isthmus. Founded jointly by Milesus and Clazomenae in the late seventh century B.C., it received an addition of Athenian colonists led by the elder Miltiades (q.v.), who strengthened its fortifications by constructing a wall across the isthmus, and was controlled by him and his successors, till it was abandoned to the Persians in 493. In the fifth century Cardia remained in the Athenian sphere of influence, and in the fourth it was the centre of a bitter struggle for possession between Athens and the kings of Thrace and then between Athens and Macedonia. In 352/1 Cardia joined Philip II and during the reign of Alexander was ruled by a tyrant Hecataeus. In the struggle between Alexander's successors, Lysimachus destroyed Cardia and removed its inhabitants to the new foundation of Lysimachia nearby. Though Cardia was soon restored, Lysimachia continued to serve as capital of the Chersonesus, but by the time of the Elder Pliny, the latter had declined and Cardia had recovered something of its former importance.

U. Kahstedt, *Beiträge zur Geschichte der thrakischen Chersonesus* (1954). E. I. McC.

CARIA, the mountainous region inhabited by Carians in south-west Asia Minor south of the Maeander, with Greek cities (Cnidos and Halicarnassus) occupying the salient peninsulas and mixed communities on the shores of the gulfs. Until the fourth century the pastoral Carians lived mainly in hill-top villages grouped under native dynasties and sanctuaries, the principal seat being Mylasa. The Carians themselves claimed to be indigenous; but in Greek tradition they came from the islands, and the interior of Caria is in fact lacking in prehistoric sites. They preserved their language until Hellenistic times, using a mainly alphabetic script; the relics that survive are not really intelligible, but it seems doubtful whether the language can have Indo-European affinities.

Carians were early associated with Ionians in mercenary service (especially under the Pharaohs). Subjected by Croesus and then by the Persians, they joined in the Ionian revolt (c. 499–404) and ambushed a Persian army. The coastal communities joined the Athenian League at the time of the Eurymedon campaign. Under the rule of the Hecatomnids (395–334), and especially of Mausolus, Caria was intensively hellenized and modern cities were planned to promote the Greek way of life, with the result that Caria was quickly absorbed in the later Greek world.

Stroba 14. 651 ff. J. and L. Robert, *La Carie* i (forthcoming).

J. M. C.

CARINUS, MARCUS AURELIUS (*PW* 75), elder son of Carus (q.v.), left by him as Caesar in the West, when he marched against Persia (A.D. 282). Made Augustus before his father's death, Carinus succeeded him as colleague of Numerian and crushed the rebel 'corrector Venetiae', Julianus, in battle near Verona. Early in 285 Diocletian, appointed Emperor to succeed Numerian, ended a difficult campaign at the battle of the Margus in Moesia.

W. Eisslin, *PW*, s.v. VALERIUS (142), 2424 f.

H. M.

CARISTIA, a Roman family feast, otherwise *cara cognatio*, celebrated on 22 Feb., immediately after the *dies parentales* (Feb. 13–21). Ovid (*Fasti* 2. 617 ff.) says it was a reunion of the surviving members of the family after the rites to the departed; Valerius Maximus (2. 1. 8) adds that no outsiders were admitted and any family quarrels were then settled. It is mentioned under the date in the calendar of Philocalus and under February in the *Menologia Rustica*.

Latte, *RR* 274, 339.

H. J. R.

CARMEN: Cicero refers to the Twelve Tables (*Leg.* 2. 59) or an ancient sentence of execution (*Rab. Post.* 13, cf. Livy 1. 26. 6) as a *carmen*; the word is equally used of spells, prayers, oaths, oracles, epitaphs—in fact of any solemn saying or formula whose characteristic was not that it was in verse but that it was in rhythmical prose. It was not the fact that they were composed in verse that gave the *carmen Arvale* (q.v.) or the *carmen Saliare* (q.v.) this title, but the solemn formulaic rhythm which they shared with similar prayers that were not strictly in verse. An excellent example of the latter is the prayer on the occasion of the *lustratio agri* preserved by Cato (*Agr.* 141): it is composed in parallel clauses, in dicola and tricola, linked by anaphora or alliteration or placed in asyndeton, synonyms are linked, and the whole is characterized by measured movement and balance. That this was not just a Latin style but also Italic seems indicated by the fact that similar linguistic phenomena can be traced on the *tabulae Iguvinae* (q.v.).

Cicero *Brut.* 75 (cf. *Tusc.* 1. 2. 3, 4. 2. 3, Varro ap. Nonium 77, 2) refers to a report of Cato that in olden days *carmina* used to be sung at aristocratic dinners about the great deeds of ancestors. This report was built up into a most imaginative theory about the tradition of early republican history by Niebuhr (cf. Macaulay's preface to his *Lays of Ancient Rome*). Unfortunately it is clear that Cato did not know these *carmina* and their existence is open to considerable doubt (see A. D. Momigliano, *JRS* 1957, 104 ff.).

The word *carmen*, *carmina* came in the first century B.C. to be used as the 'poetic' word for poetry, and in this sense it was given full currency by the Augustans. (This development was very similar to the way in which the word *vates*—which originally meant 'soothsayer' or 'seer'—and was used in no complimentary way by Ennius in reference to his predecessor, *Ann.* 7 proem—came, through Varro's influence, to be used as the elevated word for 'poet', especially by the Augustans; see H. Dahlmann, *Philol.* 1948, 337 ff.)

C. Thulin, *Italische sakrale Poesie u. Prosa* (1906); G. Pasquali, *Preistoria della poesia romana* (1936); E. Norden, *Aus ultrom. Priesterbüchern* (1939). G. W. W.

CARMEN ARVALE (see CARMEN). The Arval ritual-hymn would be invaluable if we possessed a correct copy. Unfortunately what we have (text: E. Diehl, *Allatinate Inschriften*, 118) is most corrupt and its interpretation therefore doubtful. *Lases* equals *Lares*, *enos* may be *nos*, and *Marmar*, *Marmor* may be reduplicated forms of *Mars*. If *semunis*, *advocabit* represent *sēmōnes*, *advocabit* then they show dialectal changes, the

former $\delta > \tilde{u}$, the latter (Faliscan? $b > p$. It was already obscure before the time of Aelius Stilo (see Schanz-Hosius i. 18). E. Norden, *Aus altrömischen Priesterbüchern* (1939), thinks the hymn not a pure relic of Italian ritual but influenced by Greek.

L. R. Palmer, *The Latin Language* (1954), 62 ff. P. S. N.

CARMEN DE FIGURIS, anonymous Latin poem (c. A.D. 400), describing figures of speech in 186 hexameters. Three lines are devoted to each figure, explaining its name and giving one or two examples. Material largely taken from Rutilius (q.v. 2) Lupus. Prosody late, aphæresis of final *s* and ancient forms (*indupetravi*, *prosiat*) imitating pre-classical poetry.

Baehr. *PLM* iii. 272.

O. S.

CARMEN DE PONDERIBUS ET MENSURIS, a Latin didactic piece of 208 hexameters, fourth to fifth century A.D., at one time erroneously ascribed to Priscian, but of uncertain authorship. It deals with weights and measures (giving Greek and Latin names), with the specific weight of different liquids, and with a test for an alloy of silver and gold.

Baehr. *PLM* v. 71; A. Riese, *Anth. Lat.* 1. 2. 29. J. W. D.

CARMEN NELEI. Of this dim work five fragments (19 words) survive, embedded in Charisius and Festus. Charisius ranks it for age with the *Odissia* of Livius. The metre and content of three fragments suggest, if anything, a drama.

Morel, *FPR*.

CARMEN SALIARE. The fragments of the ritual-hymn of the Salar priests (text: E. Diehl, *Poet. Rom. Vet.* 1) have come down in far too corrupt a state to allow us certainty of interpretation. It was already unintelligible in Republican times to the priests themselves. Interesting are the syncopated form *cante* (= *canite*), the termination of *tremonti* (cf. Dor. *φρόντι*), the diphthong, and -s of *Leucesie* (= *Lucerie* 'god of light'), and the archaic superlative *dextumum*. The rest is quite uncertain and obscure.

Schanz-Hosius, i. 18.

P. S. N.

CARMENTIS or **CARMENTA** (the latter form is found in Greek authors and very rarely in Latin, as Hyg. *Fab.* 277. 2), mythologically a prophetic, mother of Evander; she (Hyg. *ibid.*; Isid. *Etym.* 1. 4. 1 and 5. 39. 11) or more commonly Evander (as Tac. *Ann.* 11. 14. 4) taught the Aborigines to write. As Carmentis is also called a nymph (as *Aen.* 8. 336), she may have been a water-goddess; certainly she was a goddess of birth, worshipped by matrons (Plut. *Rom.* 21, *Quaest. Rom.* 56). Hence there are sometimes two Carmentes, Prosa and Postverta in reference to the position of the child in the womb (Varro ap. Gell. 16. 16. 4). Her, or their, relation to the triad Parca Nona Decima, or Nona Decuma Morta (*ibid.* 3. 16. 11) is obscure, as is also the question whether Carmentis or the Carmentes are the older. A minor *flamen* was assigned to the goddess and a two-day festival (11 and 15 Jan.).

The shrine of Carmentis was at the foot of the Capitoline hill, near the Porta Carmentalis (a gate in the Servian Wall, so called from the shrine): see Platner-Ashby, 101, 405.

Wisowa, *RK* 220; Latte, *RR* 136.

H. J. R.

CARMINA TRIUMPHALIA, songs sung, in accordance with ancient custom, by soldiers at a triumph (q.v.),

either in praise of their victorious general or in a satiric ribaldry supposed to avert the evil eye from him.

Cf. Schanz-Hosius i. 21 f., Baehr. *FPR*, 330 f. J. W. D.

CARMO (modern *Carmona*), some 25 miles east of Hispalis (q.v.), was a stronghold of the Iberian chief Luxinius. It was prominent in the Second Punic War and in Galba's operations of 151 B.C.; in 49 B.C. it declared for Caesar, expelling its Pompeian garrison. Municipal status is not attested before Gaius, but was probably earlier. Strength and prosperity, sustained into the Moslem period, are illustrated by the Roman walls with towers and gates, still partly extant, and by a large cemetery.

M. Fernández López and G. F.onsor, *Itinerario de la necropolis romana de Carmona* (1880); G. E.onsor, *Archaeological Sketch-book of the Necropolis at Carmona* (1931); J. de M. Carriazo-K. Raddatz, *Madrider Mitteilungen* 1901, 71 ff. M. I. II.

CARNEA (Κάρνεια), a Doric festival, whose frequent occurrence is proved by the name of the month Karneios (Aug./Sept.) which is common to most Doric calendars; this month was considered to be holy. Details are known from Sparta. A meal took place in bowers like tents in a military fashion and there was a race of youths called *σταφυλοδρόμοι*. A youth put *tainiai* on his head and ran away; if he was overtaken by the others, it was a good omen; if not, a bad one. The festival belonged to Apollo, but he has certainly ousted an old god Karnos or Karneios. The fact that *κάρνος* signifies 'ram' has given rise to various hypotheses; the interpretation of the festival is uncertain.

S. Wide, *Lakonische Kulte* (1803), 74 ff., Nilsson, *Feste*, 118 ff.; *GGR* i. 531 ff. M. P. N.

CARNEADES (214/3-129/8 B.C., Apollod. in Diog. L. 4. 65), from Cyrene, son of Epicurus (or Philocomus), studied in the Academy under Hegesinus, whom he succeeded as its head at a date earlier than 155, when he was sent by the Athenians on a political embassy to Rome along with the Peripatetic Critolaus and the Stoic Diogenes of Babylon. He resigned his position as head of the Academy in 137/6, owing to age and weakness, and was succeeded by a younger namesake. He published no writings, but his views and arguments were transmitted by his pupils, particularly Clitomachus (q.v.), and were long influential.

Carneades was known as the founder of the New or Third Academy, which superseded the Middle Academy of Arcesilaus (q.v. 1). He argued, using terms taken from the Stoics, that grasp of reality could come only through 'presentations' (*φαντασίαι*, lit. 'seemings'), mental events of which we are directly aware. These presentations may give true or false evidence, but there is no mark by which one that is true can be known to be true. Since we can therefore never be certain that any presentation, whether arising from the senses or from the mind, is veracious, we must always reserve our judgement (*ἐπέχειν*) and never assent. But a presentation may be persuasive (*πειθάνη*), i.e. seems true or probable, or not. Persuasive ones are usually true, the unpersuasive usually false. For the purposes of life we have to assume, although we must not assert, the truth or falsity of many presentations. The more important the decision, the more probable we wish the presentation to be on the acceptance of which we act. Probability is greater if associated presentations are also persuasive, greater still if each member of the group retains its credibility after close examination (Sextus *Math.* 7. 159-89, 403-25; *I.P.* 1. 227-9 gives an earlier erroneous version).

Carneades also attacked the dogmatic philosophers in detail, exposing their inconsistencies and improbabilities.

Many of his arguments against a belief in gods, providence, prophecy, and fate are to be found in Cicero (particularly *Nat. D.* 3 and *Div.* 2). He frequently maintained the two sides of a question successively, with great force and rhetorical skill. His speeches delivered at Rome in 155 in favour of and, the next day, against just behaviour by men or states made a deep impression and were used by Cicero in *Rep.* 3.

By the so-called *Carneadea divisio* he maintained that there were only 9 possible ends of human action (*Cic. Fin.* 16 ff.). Which of them he himself thought the most probable Clitomachus could never determine; he argued both for pleasure *plus virtute* and for the *enjoyment* of the 'primary natural goods', but this may have been to show the inadequacy of the Epicurean and Stoic views. He believed that happiness was a broad term, and that something deserving the name was in the reach of most men.

The differences between the New Academy and the later so-called Pyrrhonian sceptics are set out by Sextus, *Pyrr.* 1. 220-32; they all turn on Carneades' admission of probability.

H. von Arnim in *PH*, s.v. Carneades, and see the bibliography under SCEPTICS. F. H. S.

CARNEISCUS, Epicurean of the third or second century B.C., author of *Φιλίστας*, a discussion of friendship in which Praxiphanes (q.v.) was criticized.

Ed. W. Cronert, *Kolotes u. Menedemos* 60 (1906).

CARNUNTUM, on the Danube between Petronell and Deutsch-Altenburg, was an important Roman military base and the seat of government of Pannonia (Superior). At first part of Noricum, Carnuntum was probably added to Pannonia c. A.D. 14 when Legio XV Apollinaris was transferred there from Emona (q.v.). The legionary fortress was constructed at this date: the stone wall probably dates from Tiberius, while some rebuilding in stone appears to have taken place in A.D. 73 (*CIL* iii. 11194-6). The legion remained at Carnuntum, except for the years 62-71, until c. 114 when it was replaced by XIV Gemina Martia Victrix. The civil settlement became a *municipium* (*Aelium*) under Hadrian and a *colonia* (*Septimia*) under Severus, who was proclaimed Emperor there. It was often visited by emperors: thus M. Aurelius wrote there the second book of his *Meditations*; Diocletian, Galerius, and Maximian met there in 308; Valentinian stayed at Carnuntum in 375, and ordered the camp to be reconstructed. Carnuntum was flourishing in the second century before its destruction in the Marcomannic Wars, after which it was soon rebuilt. Under Septimius Severus the civilian town increased largely, but later diminished. About 400 Carnuntum was burnt down. Temples, private houses, baths, two amphitheatres, military and civil burial-places have been excavated.

E. Swoboda, *Carnuntum, seine Geschichte und seine Denkmäler* (1904). F. A. W. S.; J. J. W.

CARRHAE (modern *Harran*), city in north Mesopotamia, the Haran of Genesis xi. 31, Ezekiel xxvii. 23, etc., 25 miles south-west of Edessa. Haran and its temple of the moon-god Sin are first mentioned on a tablet from Mari about 2,000 B.C. It was an important provincial capital, trading city, and fortress in the Assyrian empire (the site yielded notable inscriptions of Nabonidus in 1956). A Macedonian military colony (probably without full city status) under the Seleucid dynasty, it preserved its native name in the Hellenized form 'Carrhae'. The disastrous defeat of the Roman general Crassus, who invaded Parthian Mesopotamia in 53 B.C., occurred near Carrhae (Plut. *Crass.* 19 ff.; Pliny *HN* 5. 85, etc.). Carrhae was included in the territory annexed as a re-

sult of the eastern war of M. Aurelius and issued coins as a Roman city from his reign until that of Gordian III. Severus gave it colonial status and additional titles attest further honours from Caracalla, who was visiting the temple of Sin in 217 when he was assassinated. It was a fortress city, changing hands more than once during the centuries of frontier warfare between Rome and Byzantium and Sassanid Persia. At the time of its final capture by the Arabs in 639 the city was inhabited jointly by Christians and pagan Sabians.

The town walls survive, with the principal gateways; but most of the visible remains, including the Great Mosque and the Castle, are Islamic.

Jones, *Cities E. Rom. Prov.* ch. 9; C. J. Gadd, *Anat. Stud.* 1908, 35 ff.; S. Lloyd and W. Brice, *ibid.* 1951, 77 ff. E. W. G.

CARRIAGES. In Greece, from the earliest times, the *ἄμαξα* (or *ἀπήνη*), a cart usually with two (but sometimes with four) wheels and drawn by mules or donkeys, was used to transport loads in peace and war. Made of light wood or wicker-work, it became the common means of transport for persons. (It is often simply called *ζεύγος*, 'a yoke'.) It could be covered with canvas and used for sleeping *en route*. Men preferred to be seen on horseback; but the *ἄμαξα* had to be used on long journeys with heavy luggage.

In Rome, the *plaustrum* was a similar primitive vehicle, often drawn by oxen and used for all rustic purposes. (The pronunciation 'plostrum' was taken as marking a rustic.) Very early—probably via Etruria (cf. Livy 1. 34)—the Romans came across other (Celtic) vehicles and all other names of vehicles are Celtic. Some cannot have been very different from the *plaustrum*, and the old word continued to be used generically for all of them. Only the most important can be mentioned here. The first was the *carpentum*, a covered two-wheeled wagon for two or three passengers. In 395 B.C. (Livy 5. 25. 9), traditionally, matrons were allowed to use it freely in Rome, the *pilentum* (a four-wheeled luxury version) being approved for religious ceremonies, including weddings and funerals. The *carpentum* became the standard small vehicle (normally mule-drawn) of the Postal Service (q.v.), used even by emperors on their travels; though for them and other important people there may have been a four-wheeled version. For longer journeys with heavy baggage, the standard vehicle was the *raeda* (spelling varies), familiar by the late republic. It was a four-wheeler with bench seats and a removable canvas top, strongly built for heavy loads. (The *Theodosian Code* allows it a maximum of 1,000 lbs. in the public service, against 200 for any two-wheeler.) It was drawn by any number of mules up to twenty (eight or ten in the public service), giving varying speeds; but it was, of course, expensive to run. However, *raedae* could be hired for a journey. The *carruca* was an aristocratic form of *raeda*, highly ornate and used only by eminent personages. The *carrus* was a smaller vehicle, with two or four wheels, modelled on a Celtic war-chariot, but used (it seems) chiefly for freight. In the late *cursum publicum* heavy *angaria* ('post-wagons') appear, drawn by oxen and used for slow freight. No doubt they existed before and were more generally used—perhaps simply a version of the old *plaustrum*. For rapid transport for one or two persons, the *cisium* (an open *carrozza*), drawn by one or two animals, provided such speed that speed-limits had to be imposed; nevertheless, it remained liable to accidents. In Cicero's day (*Rosc. Am.* 19) one could cover 56 difficult miles in ten hours at night in relays of *cisia*. They could usually be hired at the town gates, and the corporations of *cisarii* probably had interchange agreements. The *essedum*, originally the great Celtic war-chariot used (e.g.) by the Britons (cf. Caes. *B.Gall.* 4. 33), was very similar to the *cisium*. When used

by nobles and emperors, it could be luxurious and very ornate.

The law of Oppius (q.v. 1) prohibited the use of carriages in Rome during daylight hours (other towns probably had similar regulations), and this seems to have been generally observed, with statutory exceptions (e.g. religious ceremonies), down to the Empire. It then gradually fell into disuse as far as important people were concerned.

Chiefly owing to such regulations, and to the fact that no shock-absorption was attempted in the case of any type of carriage, litters (*φopcia*, *lecticae*), of oriental origin and long frowned upon, except for the use of invalids and perhaps women, became increasingly popular in the Hellenistic age and the late Republic. Basically portable beds carried by slaves, they could be curtained and highly ornamented and were comfortable for short-distance travel. Cicero was in a litter when he met the soldiers who killed him. Caesar and various emperors imposed restrictions, but quite ineffectively, since later even spoilt children were used to them (Quint. 1. 2. 7). Roman litters became heavy and elaborate, requiring up to eight burly slaves, and the number of *lecticarii* in a wealthy household became a measure of opulence. The sedan chair (*διφπος*, *sella*), at its simplest a chair carried by two porters, was freely on hire and common in the streets. When used by the rich, it could be a luxurious curtained box with a comfortable seat.

Dar -Sag. 'Vehiculum' and individual Latin words; E. M. Jope in *History of Technology* (ed. C. Singer and others), vol. II (1950), 537 ff. E. B.

CARRINAS (*PW* 1), GAIUS, perhaps praetor in 83 B.C., commanded government troops against Sulla and was several times defeated in central and northern Italy. After the escape of Carbo (q.v. 2), he tried to join Marius (q.v. 2) at Praeneste, in fact marched on Rome with the Samnite Pontius (2) and shared his defeat at the Colline Gate. He was captured and executed. E. B.

CARSOLI, 42 miles east of Rome on the Via Valeria (q.v.), town of the Aequi which Rome converted into a Latin colony (c. 298 B.C.). Always an important and flourishing stronghold in antiquity, it disappeared in medieval times. Meagre ruins between modern *Arsoli* and *Carsoli* mark its site.

A. Cederna, *Nat. Scav.* 1951, 169 ff.

E. T. S.

CARSULAE, on the Via Flaminia (q.v.) in Umbria, 10 miles north of Narnia (q.v.). Although rarely mentioned in ancient literature, the town was an important one, to judge from its recently excavated site. Its remains include a gate and double temple (of Honos and Virtus? cf. Livy 27. 25. 7; Plut. *Marc.* 28. 1). E. T. S.

CARTEIA, a town near San Roque on the coast of S. Spain in Baetica, lay some 4 miles from Gibraltar. The recent discovery of Hispano-Carthaginian coins suggests a pre-Roman origin, Punic if not Phoenician (the derivation of the name from *Kart* — Phoenician 'City' is thus made more probable). It figures in the Second Punic War as a naval base, and in 171 B.C. it was made a 'colonia civium Latinorum et libertinorum', comprising over 4,000 sons of Roman soldiers and Spanish women, together with Carteginians who enrolled — the first Latin colony outside Italy (Livy 43. 3). It was famous for its fisheries, which were advertised on the coinage.

Coinage: A. Vives, *La Moneda hispanica* IV (1924), 18 ff.

H. H. S.

CARTHAGE (*Kart-Hadasht*; *Καρθηδών*; *Carthago*). This Phoenician colony on the Tunisian coast was traditionally founded from Tyre in 814 B.C., but in reality

somewhat later. It provided anchorage and supplies for ships trading in the west for gold, silver, and tin. It remained dependent on Tyre for about two centuries but outstripped other Phoenician colonies because of its position and better harbour.

2. Trade was more important for Carthage than for any other ancient state. Most of it was conducted by barter with backward tribes in Africa and Spain, where metals were obtained in exchange for wine, cloth, and cheap manufactures. Voyages of exploration were undertaken along the Atlantic coast of North Africa and Spain. Carthage maintained a monopoly of trade in the western Mediterranean, sinking ships of other states which entered. From the fourth century, Carthage also exported agricultural products and entered the Hellenistic economy. The city grew fast; it was surrounded by a massive wall 22 miles in length and an artificial harbour basin was built; the population may have reached 400,000.

3. The Constitution of Carthage was oligarchic, and its stability was admired by Aristotle. The chief magistrates were two shophets (Lat. *suffetes*) who were elected annually on a basis of birth and wealth. Military commands were held by separately elected generals. There was a powerful 'senate' of several hundred life-members. The powers of the citizens were limited. A body of 104 'judges' scrutinized the actions of generals and other officials. Largely through this body the ruling class was successful in preventing the rise of tyranny either through generals manipulating the mercenary armies or officials working on popular discontents. Military service was not obligatory on the Carthaginians, whose population was too small to control a large area by citizen armies; instead, mercenaries were raised from various western Mediterranean peoples.

4. In the fifth century, owing to set-backs in Sicily, Carthage occupied much of the hinterland in Tunisia, and in course of time developed a prosperous agriculture. At the same time many small settlements were made along the coast, which Carthage controlled from the borders of Cyrenaica to the Atlantic. The native Berber population in areas near Carthage adopted some elements of settled life (e.g. at Thugga); in general they were harshly ruled by the Carthaginians and eager to revolt.

5. The chief external policy of Carthage was the control of sea-routes to the west. From c. 600 B.C. it was clear that rival claims must lead to war between Etruscans, Carthaginians, and Greeks. The westward thrust of Phocaea and Massilia was crushed off Alalia in Corsica by the Etruscan and Carthaginian fleets (c. 535). Carthage established its control in southern Sardinia and consolidated its hold on Gades, Malaca, and other parts of southern Spain. Earlier Malchus had won successes in Sicily, and the western end of the island was held for Carthage by Panormus, Lilybaeum, and Drepanum.

6. For three centuries Carthaginians and Greeks fought intermittently for Sicilian territory and the allegiance of Sicans, Sicels, and Elymians. In 480 B.C. a great Carthaginian army under the shophet Hamilcar was defeated at Himera by the tyrants Gelon and Theron. His grandson, Hannibal, avenged him by destroying Himera (409); but the ensuing wars with Dionysius of Syracuse ended with Carthaginian power confined to the west of the island. Agathocles carried the war into Africa, but was defeated near Tunis (307).

7. With Rome Carthage had concluded treaties in 508 and 348, in which she guarded jealously her monopoly of maritime trade, while abstaining from any interference in Italy. When Pyrrhus attacked (280), her fleet helped Rome to victory. But sixteen years later Sicilian politics brought the two Powers into conflict and precipitated the Punic Wars (q.v.), which ended with the destruction of the city (146).

8. Rome decreed that neither house nor crop should rise again. But Carthaginian blood survived. The grim pantheon, which had nerved the Phoenician warriors in battle and siege, still persisted, and Africa continued to worship Baal-Hammon, Tanit-pene-Baal, Eshmoun, and Melkart. Proof of the practice of human sacrifice has come from the excavation of the so-called 'tophet' at Carthage. Urban life and the rule of shophets continued in many Berber towns. Carthage never developed an art of her own, and was content to copy Greece and Egypt. She manufactured and exported carpets, rugs, purple dyes, jewellery, pottery, lamps, tapestry, timber, and hides. Her great carrying trade passed to Italians and Greeks. Her agricultural skill, which had made excellent use of the richly phosphated Tunisian plain, profited her Roman conquerors and her Berber subjects; Mago's thirty-two books on scientific farming were translated into Latin.

9. The site of Carthage was too attractive to remain unoccupied for long. The attempt of C. Gracchus (q.v. 4) to establish the colony of Junonia on the suburban land failed, but the city site was colonized by Caesar and Augustus. It received colonial rank (see COLONIZATION, ROMAN) and became the capital of proconsular Africa. Great buildings rose on Byrsa Hill, and by the second century A.D. Carthage had become second only to Rome in the western Mediterranean. A few urban troops and a cohort of the Third Augustan legion sufficed to keep order. But through his control of the African corn-trade, the proconsul was a potential danger to the Emperor, as was shown by the rebellions of Clodius (q.v. 2) Macer and the Gordians (qq.v.).

10. Carthage became an outstanding educational centre, especially famous for orators and lawyers. In the third century the genius of Tertullian and the devotion of Cyprian made her a focus of Latin Christianity. Her bishop held himself the equal of the bishop of Rome, and she played a great part in establishing western Christianity on lines very different from the speculations of the Greek churches. As a great Catholic stronghold, she fought against the Donatist heresy. When the Vandals (q.v.) overran Africa, she became the capital of Gaiseric and his successors. After Belisarius' victory Catholicism was restored on stricter lines. Carthage remained loyal to the East Roman Empire and beat off the earlier Moslem invasions, until captured in 697.

CARTHAGE (Topography). Carthage was situated on part of a peninsula which projected seawards (and eastwards) within the Gulf of Tunis; the isthmus, which linked it to the mainland in the west, was 2-3 miles wide at the narrowest point. Topographical details are controversial and the remains of Punic Carthage small. The earliest settlers (nothing earlier than c. 750 B.C. has yet been found) probably disembarked on the little bay of El Kram, which faces south and is protected by a small headland from the east. Nearby were built the Sanctuary (tophet) of Tanit (of which a dedicatory deposit contains Greek vases of c. 725 B.C.) and the artificial harbours of Carthage. The settlement gradually spread northwards to the Byrsa hill, the citadel. Despite some modern doubts this should be identified with the Hill of St. Louis, and the ancient harbours with the Salammbô lagoons. If the

walls of Punic Carthage were over 20 miles in circumference (Livy, *Ept.* 51), a large part of the enclosed area must have been sparsely populated; traces of a ditch outside the wall which ran across the isthmus have been identified. The citadel (Byrsa) had its own walls (which perhaps also included the so-called Juno and Odeon Hills).

The fortifications were destroyed by Rome in 146 B.C.; Theodosius II (A.D. 425) and Belisarius (553) re fortified the site. The main harbour (Cothon), which was small and artificial, comprised an inner circular naval port and an outer rectangular commercial basin: it is visible as two adjacent lagoons; traces of the paved bottom of the circular port and of a quay survive. Between the harbour and citadel was the central meeting place (agora). Cemeteries spread over the slopes of the hills of St. Louis and of Juno, and Bordj el Djedid graves of the seventh and sixth centuries show that this area was at this time outside the inhabited part. Traces of the residential quarter of the Hellenistic period have been found on the southern part of the St. Louis hill, and a new quarter developed in the district of Sidi Bou Said further north (c. 300 B.C.). No traces of Roman colonial delimitation of the land can with certainty be attributed to the Gracchan settlers of Junonia. Remains of cisterns, an aqueduct, amphitheatre, houses, and the proconsular palace survive from Roman Carthage. See especially Appian, *Pun.* 8. 95 ff., Strabo 17. 3. 4, Orosius 4. 22.

H. H. S.

CARTHAGO NOVA, a town in Hispania Citerior, today *Cartagena*. It lay on a peninsula within one of the best harbours of the Mediterranean. Originally named Mastia, it was refounded as New Carthage by Hasdrubal in 228 B.C. as a base for the Carthaginian conquest of Spain. It was captured by Scipio Africanus in 209, visited by Polybius in 133 (described in 10. 10), and made a colony (*Col. Iulia Victrix N.C.*) by Julius Caesar or more probably by Octavian after a prior grant of Latin rights by Julius (cf. M. Grant, *From Imperium to Auctoritas* (1946), 215 ff.). During the Empire it was overshadowed by Tarraco, though remaining an important city until its destruction by the Vandals (A.D. 425). It was famous for the neighbouring silver-mines, which brought the Roman treasury a daily revenue of 25,000 *drachmae*, for a fish sauce called *garum*, for mackerel, and for esparto grass (*spartum*) used for ropes, baskets, and sandals.

For the topography see H. H. Scullard, *Scripto Africanus* (1930), Appendix I. Numerous articles by A. Beltrán are listed by J. M. Blázquez, *Emerita* 1962, 104 n. 3. Coinage. A. Vives, *La Moneda hispanica* (1924), 1. 37 ff., iv. 28 ff. H. H. S.

CARTIMANDUA, queen of the Brigantes (q.v.), whose treaty-relationship with Claudius protected the early northern borders of Roman Britain. In A.D. 51, true to her obligation, she handed over the fugitive Caratacus (q.v.), but was weakened by the resulting breach with her husband, the patriot Venutius, and twice required the help of Roman troops in the period 52-57. Later, planning to deprive him of support, she divorced Venutius and married his squire Vellocatus; but with the Roman world otherwise engaged in 68-9 Venutius seized his chance and drove her out. The result was the conquest of

Brigantia under Vespasian and its incorporation in the province.

I. A. Richmond, *JRS* 1954, 43 ff., Frere, *Britannia*, ch. v.
S. S. F.

CARUS, MARCUS AURELIUS (*PW* 77), born at Narbo, praetorian prefect of Probus, rebelled in Raetia in A.D. 282, and, after Probus had been murdered by his troops, announced to the Senate his accession as Emperor. Leaving Carinus as Caesar in the west, Carus marched east against Persia with his younger son and Caesar, Numerian. On the way he defeated the Quadi and Sarmatae on the Danube. Carus invaded Persia and captured Ctesiphon, but, venturing on a further advance, was killed, perhaps by treachery on the part of Aper, the praetorian prefect.

T. B. Jones, *CPhil.* 1942, 193 f.; P. Meloni, *Il regno di Caro* (1948).
H. M.

CARVILIUS (1, *PW* 9) **MAXIMUS, SPURIUS**, twice consul with Papirius Cursor: in 293 B.C. when he conquered the Samnites at Cominium and dedicated a statue of Jupiter Capitolinus made from their armour (*Livy* 10. 43; *Pliny, HN* 34. 43); and in 272, when he closed the series of triumphs over the Samnites (*Zonar.* 8. 6). His censorship (*Vell. Pat.* 2. 128) probably belongs to 289.

E. T. S.

CARVILIUS (2), freedman of Spurius Carvilius Maximus (*cos.* 235 B.C.). "The Romans were late in beginning to teach for payment, and the first of them to open an elementary school was Spurius Carvilius" (*Plut. Quaest. Rom.* 59). It is unlikely that Carvilius' school was the first to be opened at Rome, where literacy is attested c. 450 B.C. (*Livy* 3. 44). Cicero's statement, that boys in the early Republic were required to learn the XII Tables by heart, points to the probability that schools existed before 250. Carvilius probably was the first to open a school for pay, earlier teachers having depended on voluntary gifts from pupils.

According to Plutarch, Carvilius was the first to differentiate between the letters C and G (*Quaest. Rom.* 54). Some scholars have attributed the distinction to Appius Claudius Caecus. See also EDUCATION, V 2.

A. Gwynn, *Roman Education* (1926), 29 ff.

T. J. H.

CARYATIDES, a Greek term for columns or pilasters the shafts of which were carved in the form of draped females. The most famous caryatides are those of the Athenian Erechtheum (q.v.), one of which is now in the British Museum. Others have been found at Delphi, notably in the porch of the Siphnian treasury.

The name seems to have come from Caryae in Laconia. Vitruvius (1. 1. 5) tells an unlikely tale to explain it; more likely is some connexion with the dancers who performed in honour of Artemis (*Paus.* 3. 10. 7). The simple term *Korai* is sometimes used; male equivalents were called Atlantes (see ATLAS).

H. W. R.; R. E. W.

CASCA, SERVIUS (*PW* 52 f.). Two brothers so named joined the conspiracy against Caesar in 44 B.C. One, Publius Longus, took a leading part and was the first to strike on the Ides of March. In 43 he was tribune, but when Octavian marched on Rome he fled and joined Brutus. The brothers killed themselves after Philippi (*Anth. Lat.* 457).

A third Casca, with the praenomen Gaius, apparently from another gens, was tribune in 44; alarmed at the fate of Helvius Cinna (q.v. 3), he put out a statement asserting that he had nothing but the cognomen in common with the two conspirators.

T. J. C.

CASILINUM, town in Campania (q.v.), where the Viae Appia and Latina (qq.v.) met and crossed the Volturnus (q.v.): modern *Capua* (a name it acquired in A.D. 856 when the inhabitants of nearby ancient Capua (q.v.), fleeing the Saracens, settled here). Casilinum resolutely resisted, but finally fell to Hannibal. It has always been a strategic keystone.

E. T. S.

CASINUM, town on the Via Latina (q.v.), near the southern extremity of Latium (q.v.): modern *Cassino*, with Saint Benedict's celebrated monastery on the mountain above it. Volsci and Samnites (qq.v.) successively held Casinum. Under Rome it was a flourishing *municipium*, where Mark Antony caroused in Varro's renowned villa.

E. T. S.

CASPIAN SEA (also called 'Hyrcanian' from its SE. coast). This large and brackish inland water was correctly described by Herodotus as a lake. In spite of partial exploration by Greeks, all subsequent writers thought that the Oxus and Iaxartes flowed into it; many believed that it was joined to the Black Sea (by the river Phasis), or to the Sea of Azov; and the prevalent view was that a channel linked it with a not far distant Northern Ocean. The first of these opinions may have had apparent support from the remains of a prehistoric channel between the Caspian and the Aral Sea, and the last may have been prompted by a vague knowledge of the Volga. About 285 B.C. Patrocles (q.v.) sailed up both sides, but failing to reach the north end, gave currency to the belief that one could sail from the Caspian to India by the Northern Ocean. Renewed exploration after the reign of Tiberius led to the rediscovery of the Volga ('Rha' in Ptolemy), and Ptolemy restated the truth that the Caspian is a lake, though he got its shape wrong.

E. H. W.

CASSANDER (c. 358–297 B.C.), son of Antipater (q.v. 1), joined Alexander in Asia (324). They seem to have disliked one another intensely, but the tradition which makes him Alexander's murderer is false. When the Empire began to split up after the death of Antipater (319), Cassander drove the regent Polyperchon from Macedonia and most of Greece (319–316); henceforth his aim was to keep what he held, which involved resisting the efforts of Antigonus to reunite the Empire under himself. These efforts he finally joined in defeating (with Ptolemy, Lysimachus, and Seleucus) by the decisive victory of Ipsus (301). His last four years were devoted mainly to consolidating his position at home.

Ruthless and drastic though he was in politics, Cassander was no barbarian. He founded two great cities, Cassandreia and Thessalonica (*Salonika*), and he rebuilt Thebes. As befitted the slayer of Alexander's mother, son, and widow, he had friends among the Peripatetics, the literary group which had least cause to cherish Alexander's memory.

Diodorus, bks. 18–20. W. W. Tarn, *CAH* vi, ch. 15, and vii, 75 ff.; Berve, *Alexanderreich* ii, no. 414; Bengtson, *Strategie* 134 ff.

G. T. G.

CASSANDRA or **ALEXANDRA**, in mythology, daughter of Priam (q.v.). In Homer, nothing is said of her being a prophetess; she is mentioned (*Il.* 13. 365) as being the most beautiful of Priam's daughters, and (in 24. 699 ff.) she is the first to see the body of Hector being brought home. Nor is it clear that post-Homeric epic enlarged on the Homeric picture; its principal new episode, assuming that Homer did not already know of it, is her mishandling by Aias (q.v. 2) the Locrian. How

old the tradition of her prophetic gifts is we do not know, but in surviving literature it appears first in Pindar, *Pyth.* 11. 33 (474 or 454 B.C.; if the latter, then later than Aeschylus, *Agamemnon*, with which it has points of contact; perhaps both draw on the *Oresteia* of Stesichorus). In *Agam.* 1203 ff., Apollo has given her the power of prophecy, to win her love; as she cheats him, he turns the blessing into a curse by causing her always to be disbelieved. Later authors follow this form of the story, which indeed Aeschylus seems to imply was already well known when he wrote. There is, however, another (schol. *Il.* 7. 44 and Eustathius 663, 40) which says that she and Helenus, when children, had their ears licked by serpents while asleep and so got their prophetic gift. She commonly appears, in Tragedy and elsewhere, as foretelling vainly the evil results of successive events, such as the birth of Paris, and finally warning the Trojans against the Wooden Horse (as Verg. *Aen.* 2. 246). On the basis of this, Lycophron (*Alexandra*) takes occasion to put into her mouth a forecast of mythological and historical adventures of both Trojans and Greeks from the war to his own day. For her story see AGAMEMNON, AIAS (2).

In art she is chiefly represented at the moment when she clutches the image of Athena and Aias seizes her: a favourite scene in archaic and classical periods, by itself or as part of the Ilupersis. In archaic pictures she is naked. Polygnotus showed her in his Troy at Delphi, and apparently also that at Athens, sitting on the ground clasping the fallen image, while Aias at an altar took an oath about the assault.

CASSIAN, JOHN, c. A.D. 360–435, came from the East (Bethlehem, Egypt, Constantinople) to found monasteries at Marseille, c. 415. He wrote *Instituta* or rules for his monastic communities, and then the more inward 'Conferences' (*Collationes*), using his recollections of famous Egyptian ascetics. He was the principal transmitter to the West of the best ascetic wisdom of the desert fathers. His good sense and moderation (exemplified in explicit refusal to pander to demands for miracles) and his psychological and spiritual penetration made him a determinative influence on western monasticism. His delicate critique of Augustine's doctrine of grace (*Coll.* 13) drew a charge of Semi-Pelagianism from Prosper (q.v.) of Aquitaine, and in the West he has never been a canonized saint.

WORKS. Ed. M. Petschenig, *CSEL* xiii, xvii O. Chadwick, *John Cassian* (1967).

CASSIODORUS (FLAVIUS MAGNUS AURELIUS CASSIODORUS, SENATOR). Roman politician and writer (c. A.D. 490–c. 583). He was born in southern Italy of a senatorial family of distant Syrian origin. He had a large estate near Scylacium (q.v.). His father had been a prefect of the praetorium of Theodoric, king of the Goths, and he followed his father in the same career. Consul A.D. 514, *magister officiorum* between 523 and 527 in succession to Boethius, he became prefect of the praetorium of King Athalaric in 533. In 535 he made an unsuccessful attempt (in collaboration with Pope Agapetus) to set up a Christian university in Rome. In 537 he retired and devoted himself increasingly to scholarship and religion. He may have been taken prisoner by the Byzantines and brought to Constantinople in 540. By 550 he was an influential man there. He must have gone back to Italy a few years later when Justinian pacified and reorganized the country. He established a religious community called Vivarium on his ancestral estate in Calabria. Its characteristic feature was the emphasis on the intellectual

activities of the monks. Though the monastery of Vivarium did not survive beyond the seventh century, it had far-reaching importance for the preservation of ancient books and in creating a model of monastic life which was later to influence the Benedictine order.

Cassiodorus wrote among other works: (1) a brief summary of Roman history to A.D. 519 (within the context of a universal history) which is known as *Chronica*; (2) a great work on the history of the Goths in twelve books which are lost, but were summarized by Jordanes (q.v.) in the extant *Getica*; (3) a treatise on the soul; (4) a commentary on the Psalms; (5) *De Orthographia*; (6) the *Institutiones*, a very influential guide to the education of his monks in both secular and religious matters.

The history of the Goths which was written before 534 (but probably revised and brought up to date in different circumstances in 551) was meant to reconcile Goths and Romans. It brings together much important information not only on the Goths, but also on the Huns: truth, however, is sometimes distorted to please the Gothic masters. About 538 Cassiodorus edited under the title *Variae* the most important letters and edicts he had written on behalf of the Gothic kings. He also organized the Latin translation of Greek works (such as Flavius Josephus' *Jewish Antiquities* and the so-called *Historia Tripartita*, an ecclesiastical history from A.D. 306 to 439 compiled from Theodoretus, Socrates, and Sozomenus). He is one of the founders of western medieval civilization.

All the works in Migne, *PL* lxx–lxx. The *Variae* and the *Chronica*, ed. by Th. Mommsen in *MGH*. A condensed English translation of the *Variae* by T. Hodgkin (1886). *Institutiones*, ed. by R. A. B. Mynors (1917) and transl. into English with important introd. by L. W. Jones (1946). *De Anima*, ed. by J. W. Halporn, *Traditio*, 1960, 39; the commentary on the Psalms, ed. by M. Adriaen in *Corpus Christ.* (1958); *De Orthographia*, ed. H. Keil, *Gramm. Lat.* 7. 143. An excerpt from the Cassiodorus' lost history of his own family was first published by H. Usener, *Anecdota Holderi* (1877). D. M. Cappeluyts in A. Baudrillart, *Dict. hist. geogr. eccles.* 11, 1949, 1340, J. J. van den Besseelaar, *Cassiodorus Senator* (1945, in Dutch); W. Wattenbach-Levison, *Deutschlands Geschichtsquellen* 1, 1952, 67; A. Momigliano, *Proc. Brit. Acad.* 1955, 207 ff., id., *Entretiens Hardt* 4. 247 ff. (both repr. in *Secondo Contributo*, 1960); P. Riché, *Éducation et culture dans l'Occident barbare* (1962), 200 ff. A. M.

CASSITERIDES ('Tin Islands'), a name applied generically to all the north Atlantic tin lands, but especially to Cornwall and the Scillies (which may have served as depots for Cornish tin). They were probably first discovered by Phoenicians or Carthaginians from Gades; the latter eventually established an open-sea route from north-west Spain. A Greek named Midacritus (c. 600 B.C.?) is recorded to have imported tin from Cassiteris island (Pliny, *HN* 7. 197), but it is doubtful whether he actually reached the Cassiterides. The Carthaginians kept their tin-routes secret, hence Herodotus (3. 115) doubted the existence of the Cassiterides. Pytheas (q.v.) visited the miners of Belerium (*Land's End*) and their tin depot at Ictis (q.v., *St. Michael's Mt.*); but it was left to a Roman, P. Crassus (probably a governor in Spain c. 95 B.C.), to make the tin-routes generally known. Strabo, who enumerates ten Cassiterides (the Scillies group contains thirty islands), describes the Cornish tin and lead mines and the black cloaks and long tunics of the natives. The importance of the Cornish mines declined in the first century A.D., after the discovery of tin deposits in Spain. See also TIN.

Strabo 3. 175–6. T. R. Holmes, *Ancient Britain* (1907), 483 ff.; F. J. Haverfield, *PW*, s.v. 'Kassiterides', Thomson, *Hist. of Anc. Geog.* 55, 195 f. E. H. W.

CASSIUS (1, *PW* 91) **VECELLINUS**, SPURIUS, according to the Fasti, was consul in 502, 493, and 486 B.C., though bearing a plebeian name, and mediated the treaty made between Rome and the Latins in 493. This established peace throughout Latium, providing for mutual military assistance on equal terms, and held good till

c. 380. Dubious legends attached to the name of Spurius (e.g. that in 486 he planned an agrarian law in the interest of the plebeians, aiming at royal power, and was condemned to death in 485) need cast no doubt upon the treaty. Its effect is discernible beneath the surface of Livy's narrative, which tends, through pride, to obscure the fact that Rome was only an equal partner.

For bibliography, see under LAFINE. A. N. Sherwin-White, *The Roman Citizenship* (1939), 20 ff.; Ogilvie, *Comm. Livy* 1-5, 337 ff. A. N. S.-W.

CASSIUS (2, *PW* 47) **HEMINA**, LUCIUS, the Latin annalist, treated Roman history from early Italian times (book 1) and the founding of Rome (book 2) to the Second Punic War (book 4), writing before the Third Punic War (cf. the title *Bellum Punicum posterior* of book 4); but fr. 39 (146 B.C.) indicates an extension. His interest in Italian origins, in etymological, religious, and social antiquities, and in synchronism (fr. 8), reflects the influence, especially, of Cato's *Origines*.

Peter, *HRRel.* 1^a, clxv and 98. T. Frank, *Life and Literature in the Roman Republic* (1930), 172 ff. A. H. McD.

CASSIUS (3, *PW* 42) **DIONYSIUS** of Utica, wrote (1) (88 B.C.) a Greek translation (with additions) of the work of the Carthaginian Mago on agriculture, which became the standard work on the subject, used by all its successors in antiquity; (2) *Περίοτοιμικα*, a compilation much used by Pliny the Elder.

W. D. R.

CASSIUS (4, *PW* 72) **LONGINUS RAVILLA**, LUCIUS, as tribune in 137 B.C. passed a *lex tabellaria* introducing secret ballot in all trials before the People (except for treason). He was consul in 127, and as censor (125) he (with his colleague Cn. Servilius Caepio) brought the *Aqua Tepula* (an inferior aqueduct) to Rome. Renowned for severity as a *iudex* (called 'scopulus reorum'), he gained fame by formulating an important principle of investigation in the question 'Cui bono?' (= 'Who profited?'). In 113, when three Vestals had been accused of unchastity and two acquitted by the Pontifex Maximus Metellus (q.v. 5), he was appointed as special investigator and convicted them and other people involved.

E. B.

CASSIUS (5, *PW* 70) **LONGINUS**, QUINTUS, probably cousin of the tyrannicide, was Pompey's rapacious quaestor in Further Spain c. 52 B.C. In 49, as one of the two tribunes who supported Caesar, he fled to his camp and in April summoned the Senate on his behalf. Caesar made him governor of Further Spain, where he surpassed his conduct as quaestor. While preparing an expedition against Juba (48) he was surprised by a rebellion of provincials and soldiers; peace was restored after the arrival of Bogud (q.v.) and Lepidus (q.v. 3), to whom he had sent for help. When his successor Trebonius (q.v.) also arrived (early 47), he left with his treasures, but his ship was wrecked.

T. J. C.

CASSIUS (6, *PW* 59) **LONGINUS**, GAIUS, the tyrannicide, was quaestor to M. Crassus (q.v. 4) in 53 B.C., escaped from Carrhae (q.v.), collected the remnants of the army, and organized the defence of Syria, staying on as proquaestor till 51; in 52 he crushed an insurrection in Judaea and in 51 repelled a Parthian invasion. As tribune in 49 he supported Pompey and was appointed by him to a naval command; in 48 he operated in Sicilian waters but on the news of Pharsalus abandoned the war and presently (perhaps at Tarsus, spring 47) obtained Caesar's pardon and the post of *legatus Praetor peregrinus* in 44, he played a leading part in the conspiracy against Caesar. Soon after the deed he was forced by popular hostility to leave Rome, and was assigned by the Senate

in June the task of importing corn from Sicily, and later the unimportant province of Cyrene. After quarrelling with Antony, he sailed instead for Asia (Sept. or Oct.) and thence to Syria, where, early in 43, the governors of Bithynia and Syria, Marcus Crispus and Staius Mercurus (q.v.), put their armies at his disposal. Caecilius Bassus (q.v. 1), whom they had been besieging, followed suit; a force under A. Alienus on its way from Egypt to Dolabella (q.v. 3) was intercepted and made to join him; and after the capture of Laodicea he took over Dolabella's army too. After Mutina the Senate had given him, with Brutus, command over all the eastern provinces and probably also *imperium maius*; but in the autumn they were outlawed for the murder of Caesar under the law of Pedius (q.v. 1). After raising more troops and money and subduing the Rhodians, who had refused their support, Cassius crossed with Brutus to Thrace in the summer of 42 and encountered Antony and Octavian at Philippi (q.v.). In the first battle his camp was captured and, probably under the impression that the day was altogether lost, he killed himself.

More keen-sighted and practical than Brutus, Cassius seems nevertheless to have been less respected and less influential. He was a man of violent temper and sarcastic tongue, a strict disciplinarian, and ruthless in his exactions. The charge of covetousness may have been well founded; but there is no convincing evidence that he was influenced by petty motives in the conspiracy against Caesar. He married Brutus' half-sister Junia Tertia (Tertulla), who survived till A.D. 22 (*Tac. Ann.* 3. 76).

Cicero, *Letters and Philippics*; Caes. *BCiv.* 1. 5, 101, *Vell. Pat.* 2. 46-73; Joseph. *AJ* 14; *Plut. Crass.*, *Caes.*, *Brut.*, *Ant.*, *App. BCiv.* 2. 4, *Cass. Dio* 40-7; Tyrrell and Purser, *Correspondence of Cicero* vi^a (1913), clx ff.; Syme, *Rom. Rev.*, see index. G. W. R., T. J. C.

CASSIUS (7, *PW* 65) **LONGINUS**, LUCIUS, brother of the tyrannicide, took Caesar's side in the Civil War and in 48 B.C. held a proconsular command in Greece. Tribune in 44, he took no part in the conspiracy against Caesar; he may have passed the *Lex Cassia* enabling Caesar to create patricians. He supported Octavian against Antony, and after their reconciliation in 43 fled to Asia, where Antony pardoned him in 41. Cassius (11) was probably his grandson.

T. J. C.

CASSIUS (8, *PW* 80) **PARMENSIS** (i.e. of Parma) was, like Cassius (6) Longinus, among Caesar's murderers. Horace (*Epist.* 1. 4. 3) thinks of Albius (Tibullus) as writing poetry to surpass that of this Cassius (confused by the scholiasts with an inferior poet Cassius Etruscus, *Hor. Sat.* 1. 10. 61).

J. W. D.

CASSIUS (9, *PW* 89) **SEVERUS**, Augustan orator whose speeches were brilliant but bitter (*Sen. Controv.* 3 *praef.*; *Quint. Inst.* 10. 1. 116; 12. 10. 11; *Tac. Dial.* 19 and 26). Like T. Labienus (q.v. 3), he had his works publicly burned (*Tac. Ann.* 1. 72; 4. 21; *Suet. Calig.* 16). He died in the 25th year of his exile about A.D. 34 (*Euseb. Chron.*).

J. W. D.

CASSIUS (10, *PW* 37) **CHAEREA**, a centurion in Lower Germany in A.D. 14. In 41, as a tribune in the Praetorian Guard, he was mocked by Gaius for his supposed effeminacy. He played a leading part in the latter's murder (41). On Claudius' accession he was executed.

J. P. H.

CASSIUS (11, *PW* 60) **LONGINUS**, GAIUS, a prominent Roman jurist. After holding the urban praetorship he was *cos. suff.* A.D. 30, proconsul of Asia 40-1, *legatus* of Syria 45-9. Exiled by Nero in 65 to Sardinia, he lived to be recalled by Vespasian. His principal work was the *Libri iuris civilis*, known through a revised edition by

Javolenus (q.v.) and citations in later jurists' works. He enjoyed high authority as a jurist, and his *responsa* are often cited. He was a pupil of Sabinus, after whose death he became head of the Sabinian school; hence it is sometimes called *schola Cassiana* (*Cassiani*). See *SABINUS* 2.

A. B.; B. N.

CASSIUS (12, *PW* 3), a Roman physician of the time of Augustus and Tiberius (31 B.C.–A.D. 37). His specific for the relief of colic was famous in antiquity.

CASSIUS (13, *PW* 8), Ἰατροσοφιστής, the author of Ἱατρικαὶ ἀπορίαι καὶ προβλήματα φυσικά, not earlier than the 3rd century A.D. The author must have been a rather eclectic member of the Pneumatic school of medicine.

Ed. J. L. Ideler, *Physici et Medici Graeci Minores* (1841) 1: 144. W. D. R.

CASSIVELLAUNUS, king presumably of the Catuvellauni (Herts.), appointed supreme commander of the south-eastern Britons on the occasion of Caesar's second invasion (54 B.C.). After an initial defeat in Kent, he endeavoured to avoid battle and hamper his enemies' foragers—strategy which much embarrassed Caesar, who was able, however, to capture his capital (probably Wheathampstead, cf. R. E. M. Wheeler, *Verulamium* (1936), 20). A peace was arranged through Caesar's agent Commius, by which Cassivellaunus agreed to pay a tribute and allow the independence of the Trinovantes (Essex). No coinage can be certainly attributed to him.

Caesar, *BGal* 5, 11, 8, 18–22; Collingwood–Myres, *Roman Britain*, 46 ff.; D. F. Allen, 'The Origins of Coinage in Britain', *Iron Age in S. Britain*, 97 ff.

(E. S.)

CASTOR AND POLLUX. The cult of the Dioscuri (q.v.) was introduced into Rome at an early date, traditionally (Livy 2, 20, 12; 42, 5) in 481 B.C., in consequence of a vow made by A. Postumius at the battle of Lake Regillus. In this connexion the famous legend (derived from Locri in Magna Graecia) arose, that they actually took part in the battle and brought word of it to Rome (Dion. Hal. *Ant. Rom.* 6, 13, 1–2). Their temple was in the Forum (cf. Platner Ashby, 102; Nash, *Pict. Dict. Rome* 1, 210 ff.), it was commonly called *aedes Castoris*, the two brothers being not infrequently referred to as *Castores*. Several indications point to the introduction of the cult from Tusculum (Wissowa, *RK* 269 ff.), but an inscription from Lavinium, discovered in 1958, shows that their cult was known there about 500 B.C. with a title (*quirois*) directly derived from Greek (Degraess, *ILLRP* ii, 1271; cf. S. Weinstock, *JRS* 1960, 112 ff.). There is no evidence that the cult in Rome was under the control of the *quindecimviri* (q.v.), like normal Greek or other foreign worships. The most outstanding feature of the ritual was the close connexion of the brethren with the *equites*, whose ceremonial parade (*transvectio equitum*) took place on 15 July, the traditional date of the battle (Dion. Hal., *ibid.* 4; for the age of this, see S. Weinstock, *SMSR* 1937, 10 ff.). A controversial point is the connexion of the Castores with Juturna, whose *larus* in the Forum is near their temple. F. Altheim (*RGV* 1930, 4 ff.) argues that her name has an Etruscan suffix (*bur*), means 'daughter of Jupiter' or the like, and indicates close association between her and them. Other scholars hold the nearness of the places of worship to be merely fortuitous.

Wissowa, *RK* 268 ff.; Latte, *RR* 173 ff. H. J. R.; H. W. P.

CASTOR OF RHODES, rhetorician, possibly to be identified with the son-in-law of Deiotarus, the Galatian tetrarch, published *Χρονικά*, synchronistic tables of Oriental, Greek, and Roman history, from the Assyrian

Belus and Ninus and the Sicyonian Aegialeus to Pompey (61–60 B.C.), adding the mythical period of Greek kings to the tables of Eratosthenes and Apollodorus; the work was used by Varro, Julius Africanus, and Eusebius.

FGH ii B, 1130; BD, 814.

A. H. McD.

CASTRA REGINA, modern *Regensburg* (also known by Celtic name Rataspona, hence modern *Ratisbon*), was a Roman military station in Raetia on the Danube at the mouth of the River Regen. From the Flavian period it was garrisoned by an auxiliary cohort, replaced by Legio III Italica under Marcus Aurelius when it became the provincial capital.

J. J. W.

CASTULO, a city of the Oretani situated near the upper Baetis (*Guadalquivir*) in the Salus Castulonensis (*Sierra de Segura*). Its importance, indicated by the description *urbis valida ac nobilis*, derived from the lead and silver mines nearby, and from its situation on an old route from Valentia to Corduba. Hannibal chose a wife from Castulo. It was a key fortress which thrice changed hands in the Hannibalic War. Pliny lists it among the *Latini veteres* of early imperial Baetica.

M. Acelo, *Castulo* (1902), P. Spranger, *Hist.* 1958, 95 ff.

J. J. VAN N., M. I. H.

CATACOMBS, a term derived from *κατὰ κύμβας*, a locality close to the church of St. Sebastian on the Via Appia, 3 miles south of Rome. The name may refer to the natural hollows across which the road passes or to an inn-sign, but was in use in the fourth and fifth centuries A.D. for the Christian cemetery associated with St. Sebastian's in the form *ad catacumbas* or *catacumbae*. This famous cemetery was a series of narrow underground galleries and tomb-chambers, cut in the rock. Their walls are lined with tiers (up to seven are known) of coffin-like recesses (*loculi*) for inhumation, holding from one to four bodies apiece and sealed with a stone slab or with tiles. The affinity to *columbaria* (q.v.) is evident, but the type itself seems to have been immediately derived from Jewish catacombs (H. W. Beyer and H. Lietzmann, *Die Katakomben Torlonia*, 1930), where Jews, like Christians, remained a household of the faithful, united in death as in life. Catacombs were not confined to Rome: examples are known at Albano, Alexandria, Hadrumetum, Kertsch, Naples, Malta, and Syracuse. All are associated with soft rocks, where tunnelling was easy.

The catacombs at Rome, however, are much the most extensive, stretching for at least 350 miles. Their distribution, along the main roads outside the city, is explained by their later growth out of, or side by side with, pagan cemeteries lying beyond the city boundaries in conformity with the law. That of St. Priscilla, on the Via Salara, grew out of the burial-ground of the Acilii Glabrones (q.v. 4), possibly persecuted for their Christianity under Domitian. The Domitilla catacomb, on the Via Ardeatina, developed from the hypogeum of the Flavii. The official organization by the Church of public catacombs, mainly for the poor of the Roman Christian community, began c. 200, when the then pope, St. Zephyrinus, directed St. Callixtus to provide τὸ κοιμητήριον (see the third-century Greek document known as the *Philosophumena*), which is represented by the oldest part of the catacomb beside the Via Appia that bears St. Callixtus' name today. Another important catacomb near the same road is that of Praetextatus.

In the tomb-chambers (*cubicula*) of the catacombs are altar-tombs and arched recesses (*arcosolia*) for the bodies of popes and martyrs. Walls and ceilings received paintings which represent the first development of Christian art and are executed in the same technique and style as contemporary pagan work. Their subjects are biblical

(scenes from the O.T. far outnumbering those from the N.T.) or symbolic (the Good Shepherd, Christus-Orpheus, Christ as Lawgiver, Eucharistic and celestial banquets, figures of Orantes, etc.). A few motifs are drawn from daily life and some are frankly pagan. A remarkable and probably private catacomb, dating from the fourth century and brought to light on the Via Latina in 1955, has paintings which include a medical class and six episodes from the Hercules cycle, as well as biblical scenes more elaborate and showing a much wider range of content than those in the official public catacombs. Furniture in the catacombs included carved sarcophagi, lamps, pottery vessels of various kinds, and painted glass medallions.

The presence of these large cemeteries is explained partly by the size of the Christian community in Rome and partly by the long periods of toleration. By about a century after the official recognition of the Church, the catacombs passed into desuetude and became centres of pilgrimage.

Göschel, *Die Katakomben* (1961), J. Wilpert, *Die Malereien der Katakomben Roms* (1901), A. Ferrua, *Le pitture della nuova catacomba di Via Latina* (1960). On the Jewish catacombs of Rome, see G. B. Frey, *Rend. Pont.* 1937, II J. Levi, 'The Jewish Catacombs and Inscriptions of Rome' (*Hebrew Union College Annual*, 1928, 200 ff.), E. R. Goodenough, *Jewish Symbols in the Graeco-Roman Period* II, 1953, 3 ff.; III, 1957, figs. 702-838. See also *Rivista di archeologia cristiana*, passim, *Jahrbuch für Antike und Christentum*, passim. I. A. R., J. M. C. T.

CATANA (Κατάνη, Latin *Catīna*, modern *Catania*), founded from Naxos (q.v. 2) in 729 B.C., lies beside the sea at the southern extremity of the slopes of Mount Aetna; to the south stretches the fertile *Piana di Catania*, coveted by the Syracusans, whose superior power dominated Catania for much of its history. Its lawgiver Charondas was its most famous citizen in its early period. Hieron I (q.v.) removed the Catanacans to Leontini and renamed the city Aetna, repopling it with Dorian mercenaries. In 461 these were expelled (see *AFENA*) and the old name restored. The Athenians used Catania as a base in 415-413. Captured by Dionysius I (q.v.) in 403, it thenceforward formed part of the Syracusan Empire, with brief intervals of independence or subjection to Carthage. After 263, when the Romans captured it, it became a *civitas decumana*, and it flourished greatly under Roman rule (Cic. *Verr.* III. 103) although it suffered in the first Servile War. Eruptions and earthquakes, especially those of 1160, 1669, and 1693, have left few ancient remains in the prosperous modern city.

Béard, *Bibl. topogr.* 45 ff.; Dunbabin, *Western Greeks*, esp. 129 ff. A. G. W.

CATILINE (LUCIUS SERGIUS [PW 23] CATILINA), of patrician (but not recently distinguished) family, served with Pompey and Cicero under Pompeius Strabo in the Social War. He then reappears as a lieutenant of Sulla both in the *bellum Sullanum* and in the proscriptions, when he killed his brother-in-law Marius (q.v. 3). There is no further record of him until his praetorship (68 B.C.), after which he governed Africa for two years. On his return he was prosecuted *repetundarum* and was prevented from standing for the consulates of 65 and 64, though finally acquitted with the co-operation of his prosecutor Clodius (q.v. 1). In 66/5 he was said to be involved in a conspiracy with Autronius and Sulla (q.v. 2); the details are obscured by gossip and propaganda. His frustrated ambition became his driving force: in the elections for 63 he made a compact with C. Antonius (q.v. 3) and gained the support of Caesar, Crassus (q.v. 4), and others, but was defeated by Cicero. He then began to champion the cause of the poor and discontented, especially dissolute

aristocrats, bankrupt Sullan veterans, and those whose land they had occupied. Again defeated for 62, he organized a widespread conspiracy, with ramifications throughout Italy. Cicero, fully informed by his spies, could not take decisive action against him owing to lack of sufficient support; for Catiline, as a demagogue, a patrician, and an old Sullan, was both popular and well connected. In November Cicero succeeded in frightening Catiline into joining a force of destitute veterans that had assembled in Etruria; soon afterwards some Allobrogan envoys, carelessly approached by conspirators in Rome (see LENTULUS 4), provided Cicero with the written evidence he needed, and the leaders of the conspiracy in Rome were arrested and (after a vote in the Senate) executed. Antonius marched out against Catiline, who was caught between him and Metellus (q.v. 9) Celer and defeated and killed by Petreus (q.v.) near Pistoria (early Jan. 62). Cicero was hailed as saviour of Rome, but incurred much unpopularity on account of the executions.

SOURCES Chiefly Cicero, *In Catilinam* and Sallust, *Catiline*. Modern discussions are numerous; the best perhaps still C. John, *Die Entstehungsgeschichte der catilinischen Verschwörung* (1876). G. Boissier, *La Conjuración de Catilina* (1905); E. G. Hardy, *The Catilinarian Conspiracy* (1924); Z. Yavetz, *Hist.* 1961, 485; for recent bibliography, N. Criniti, *Accum* 1967, 370 ff. On Sallust, see R. Syme, *Sallust* (1964), 60 ff.

CATIUS, TITUS, an Insubrian, mentioned by Cicero (*Pam.* 15. 16) as a recently deceased writer on Epicureanism.

Schanz-Hornus, § 157 b.

CATO (1) 'CENSORIUS', MARCUS PORCIUS (PW 9) (234-149 B.C.), was born of peasant stock in Tusculum. He fought as military tribune in the Second Punic War and was at Metaurus (207). His proof of legal ability and stern traditional morality impressed L. Valerius Flaccus, with whom he began his political career. Quaestor in 204, he was in Sicily, and on his return via Sardinia brought Ennius to Rome (203-202). Plebeian aedile in 199, he became praetor in Sardinia in 198, expelling usurers; *Leges Porciae de sumptu provinciali* and *de provocazione* are probably to be dated here. Consul in 195 with L. Valerius Flaccus, he opposed the repeal of the *Lex Oppia* and took the province of Spain; here, after extensive operations, he settled the administration and initiated the development of Roman rule.

After distinguished service under Manius Acilius Glabrio at Thermopylae (191), he prosecuted Q. Minucius Thermus (190), and, himself a candidate, supported charges of peculation against Glabrio in the censor elections for 189. He instigated and openly helped the attacks on L. Scipio, aiming to destroy the predominance and Hellenistic influence of Scipio Africanus. His success led to his censorship in 184 with L. Valerius Flaccus, at a time when social deterioration among nobles and people gave his doctrines full scope. He taxed luxury, strictly revised the senatorial and equestrian rolls, and checked the publicani; he also spent heavily on building, e.g. 1,000 talents on the sewerage system. He represented a policy of reconstruction, moral, social, and economic. The character of colonization at this time does not necessarily prove a predominantly agrarian policy on his part; he treated senators, *equites*, people, Latins, and provincials with equal regard to their traditional place in the State. This conservatism was associated with hatred of things Greek entering into Roman life, and he disguised his wide knowledge by a rustic pose in the cultivated senatorial society, which added ill manners to his natural robustness. He supported the *Lex Baebia* in 181, and opposed its modification and the repeal of the *Lex Orchia*; he attacked M. Fulvius Nobilior after the latter's censorship (179-178). In 171 he was patron in the

Spanish appeal against extortion, prosecuting P. Furius Philus. He supported the *Lex Voconia* (169), favoured the independence of Macedonia, and rejected war against Rhodes (167), and attacked Sulpicius Galba for his opposition to Aemilius Paullus' triumph. In 155 he spoke against the Athenian embassy of philosophers, and in 154 upheld the case of Ptolemy Philometor in the Egyptian question.

His embassy to Carthage (153), when he saw the new prosperity of the old enemy, brought into his policy the demand for the destruction of Carthage. The reason probably lies less in any commercial consideration than in distrust of Carthaginian resurgence and moral indignation at its character. In 151 he supported the return of the Achaean hostages, favoured Attalus II in a dispute with Prusias II, and approved of the prohibition of re-election to the consulship. In 150, despite the opposition of Scipio Nasica, he saw war declared on Carthage. In 149 he attacked Sulpicius Galba on behalf of the Lusitanians. He died in 149 aged 85 years, leaving two sons, Cato Laenianus by his first wife, Cato Saloniianus by a second marriage; the latter was grandfather of Cato Uticensis.

Cato's whole policy appears based on a conception of traditional government and life, with the single aim of establishing social solidarity again in Rome and Italy, administrative control in the West, but no more than security, with justice, in the East. His thought found expression also through his strong natural literary talent. He published his speeches: Cicero knew more than 150, and we have fragments of 80. He wrote an encyclopaedia for his first son, including agriculture, rhetoric, and medicine, and separate treatises on medicine, jurisprudence, and military science. We know of letters to his son, apophthegmata, and the *Carmen De Moribus*, a gnomic book of morality; the *Catonis Disticha* date from imperial times.

The *De Agri Cultura*, written c. 160 B.C., dealt with the development of vine, olive, and fruit-growing and grazing for profit in Latium and Campania; for all its lack of form, its details of old custom and superstition, and its archaic tone, it was an up-to-date work directed from his own knowledge and experience to the new capitalistic farming. The *Origines* in seven books, written from c. 168 to 149, following the Hellenistic *κρίσις* histories and the senatorial historiography, included Aeneas, the founding of Rome (751 B.C.), the kings in book 1, the foundation traditions of the Italian cities in books 2 and 3, the Punic Wars to Cannae in book 4, the Rhodian debate of 167 B.C. in book 5, the prosecution of Sulpicius Galba (149) in book 7. He used Fabius Pictor, Hellenistic legends, local traditions, inscriptions, later inserting his own speeches; his treatment was discursive (*capitulatum*) and pragmatic, and, unlike the senatorial historiography, omitted the names of generals. The work, the first of its kind in Latin, inspired historical study and founded prose style; for to the principle of 'rem tene, verba sequentur' he joined plain rhetorical device, including imitation from Greek, and a sense of effect in sentence structure and vocabulary. The style is the man, and if his talent moved narrowly in the expanding field of imperial politics, it touched greatness in his literary stimulus to the Roman tradition.

CATO (2), GAIUS PORCIUS (*PW* 5), grandson of (1) and of Paullus (q.v. 2), was in his youth a friend of T. Gracchus (q.v. 3). Consul in 114 B.C., he was disastrously defeated in Macedonia by the Scordisci and, on his return, convicted *repetundarum*. Probably a legate in the war with Jugurtha, he was condemned by the commission of Mamilius (q.v. 3) and went into exile, becoming a citizen of Tarraco.

E. B.

CATO (3), LUCIUS PORCIUS (*PW* 7), grandson of (1), perhaps the tribune who in 100 B.C. opposed Saturninus (q.v. 1) and tried, with Pompeius (q.v. 2), to secure the recall of Metellus (q.v. 6) Numidicus. He fought successfully in the Social War until killed in his consulate (89).

E. H.

CATO (4), GAIUS PORCIUS (*PW* 6), towards the end of 59 B.C. called Pompey 'privatus dictator' when prevented from prosecuting Gabinius (q.v. 2). In 56 as tribune he attacked Pompey again over the Egyptian business and proposed a bill to abrogate Lentulus (q.v. 5) Spinther's command. Milo (q.v.) made him ridiculous by buying his gladiators and auctioning the 'familia Catoniana'. After Luca he postponed the elections in the interests of Pompey and Crassus. In 54 he was prosecuted, and though apparently acquitted is not heard of again. Pompey in 56 was confident he was a tool of Crassus (*Cic. QFr.* 2. 3. 4), and he may have been such throughout.

G. E. F. C.

CATO (5) UTICENSIS, MARCUS PORCIUS (*PW* 20) (95-46 B.C.), great-grandson of Cato (1), nephew of Livius Drusus, and brought up in the Livian household with the children of his mother's marriage to Cn. Servilius Caepio. Quaestor probably in 64, in 63 he became tribune-designate in order to check Metellus (q.v. 10) Nepos, supported Murena's (q.v.) prosecution, and intervened powerfully in the Senate to secure the execution of the Catilinarians. As tribune he conciliated the mob by increasing the doles of cheap corn, but in all else remained uncompromising; Cicero (*Att.* 1. 18. 7; 2. 1. 8) deprecates his lack of realism which prevented revision of the Asian tax-contracts (61 B.C.) and frustrated every overture of Pompey (q.v.) until the 'Triumvirate' was formed. In 59 he opposed Caesar obstinately and was temporarily imprisoned, but next year Clodius (q.v. 1) removed him by compelling him to undertake the annexation of Cyprus, over which, though King Ptolemy killed himself and Cato's accounts were lost on the voyage home, his reputation for fairness remained unimpaired. After Luca he persuaded his brother-in-law Domitius (q.v. 4) not to despair of the consulate, but the two were driven from the field; and Vatinius (q.v.) by bribery defeated Cato for the praetorship, which he subsequently obtained in 54. In 52, forsaking his principles, he supported Pompey's consulate: he himself stood for 51, but failed. In the war he strove to avert bloodshed of citizens but resolutely followed Pompey: he served in Sicily, whence Curio expelled him, then in Asia, and during the campaign of Pharsalus held Dyrrhachium. After Pompey's defeat he joined the Pompeians in Africa, composed their quarrels, and had Scipio made general. During the war he governed Utica with great moderation, and was honoured by the inhabitants when after Thapsus he compassed his famous death.

His character was not agreeable: his first wife Antistia proving unfaithful, he lent the second, Marcia, daughter of Philippus (*cos.* 56), to Hortensius. But his constitutionalism, a mixture of Stoicism and old Roman principles, was genuine. After death he was more dangerous than

ever to Caesar, who in his *Anticato*, a reply to Cicero's pamphlet *Cato*, pitched the hostile case too high, and left the fame of Cato's life and death to give respectability to the losing side, and to inspire 'Republicans' a century later: 'uictrix causa deis placuit, sed uicta Catoni' (Lucan i. 128).

SOURCES. Plutarch's *Cato Minor* is wholly laudatory but rich in anecdote. See also the sources cited s.v. CAESAR (1). On Cato's portrait see *Acta Archaeologica* 1947, 117 ff., on Cyprus, E. Badam, *JRS* 1965, 110 ff. G. E. F. C.

CATREUS (*Karpeús*), in mythology, son of Minos and Pasiphae, father of Althaemenes, Aerope, Clymene, and Apemosyne. In consequence of the prophecy that one of them should kill him (see ALTHAEMENES) he sold Aerope and Clymene, who, however, married respectively Pleisthenes, who here replaces Atreus as father of Agamemnon and Menelaus, and Nauplius, her sons being Palamedes and Oeax. Apemosyne was killed by Althaemenes, who did not believe her when she told him that she had been violated by Hermes, and supposed her unchaste. See Apollod. 3. 12 ff. H. J. R.

CATTIGARA (*τὰ Καττίγαρα*), important city-port of the Sinae (Southern Chinese) near the mouth of river Cottiaris. C. A.D. 100, one Alexander discovered it by sea from India, on a gulf inhabited by fish-eaters. Cattigara may be *Hanoi* or *Kian-chu* in the Gulf of Tongking, or possibly *Canton*. After the Gulf of Siam Ptolemy makes the Chinese coast face west, so that by mere calculation with his figures Cattigara would fall in Borneo.

Ptol. *Geog* 1. 14. 4. 10, etc.; 7. 3. 8. 27. 14. G. E. Gerini, *Journ. Royal Asiatic Soc.* 1897, 551 ff.; Warrington, *Indian Commerce*, 190, 125 f.; 129, 177. A. Heilmann, *PW*, s.v. 'Kattigara', Thomson, *Hist. of Anc. Geog* 314 ff. E. H. W.

CATULLUS (1), GAIUS VALERIUS (*PW* 123), was born at Verona in Cisalpine Gaul. St. Jerome gives the dates of his birth and death as 87 and 57 B.C. and adds that he died in his thirtieth year. The second date cannot be true: that Catullus was alive in 55 is proved by his references to Pompey's second consulship (113. 2), to the Porticus Pompei (55. 6), and to Caesar's invasion of Britain (11. 12, 29. 4), but he makes no reference to any event after 55. It is a reasonable hypothesis that he was born in 84 and died in 54. His family was of some standing in the province; his father was in a position to entertain Julius Caesar when he was governor (Suet. *Jul.* 73). He came to Rome young and for the rest of his life it was his home (68. 34-5), but he remained a northerner (39. 13) and did not lose touch with his province. He was back in Verona after the death of his brother in Asia (65. 68. 19 ff.), and it was to a villa at Sirmio on Lake Garda, presumably a family property, that he returned from foreign travel (31). At Rome he moved in fashionable society and there he fell under the spell of the woman whom he calls Lesbia. Her real name was Clodia (Apul. *Apol.* 10) and she was a married woman of some social position: if, as there are grounds for supposing (though the identification cannot be proved), she was the sister of P. Clodius Pulcher, Cicero's enemy, and the wife of Q. Metellus Celer, governor of Cisalpine Gaul from 64 to 62, she was some ten years Catullus' senior and the connexion must have begun by 59, when Metellus died. Catullus' last message to her (11) was probably written in 55 or 54. Between these years lay the story of happiness and disillusion which is contained in the twenty-five Lesbia poems: during that time he spent a year, 57-56, in Asia Minor, probably with his friend C. Helvius Cinna, in the entourage of the governor of Bithynia, C. Memmius (10. 46).

The poems fall into three groups. 1-60 are short occasional pieces, lyric, amatory, or satiric, mostly in phalaeacian hendecasyllables or scazons (two are in sapphics

and there are examples of pure iambs, glyconics, asclepiadeans, and priapeans). 61-4 are longer poems: 61 a glyconic epithalamium for the marriage of Torquatus and Aurunculeia, 62 a fanciful wedding-poem in hexameters, 63 a galliambic poem suggested by the myth of Attis, 64, the longest, in 408 hexameters, a 'miniature epic' on the marriage of Peleus and Thetis, much of it occupied by a digression on the story of Ariadne. 65-116 are all in elegiacs: 66 (to which 65 is a preface) is a translation of a piece of Hellenistic court-poetry, Callimachus' poem on the Lock of Berenice; 67, 68, and 76 are of types which were to be developed in Augustan elegy; the rest are miscellaneous epigrams with a range of subjects like that of the first group. Catullus himself prefixed a dedication to Cornelius Nepos (q.v.) to a volume of his verses, but that cannot have included the whole collection as we have it, which must have been put together after his death: there is evidence that some poems have been lost in transmission.

The epithet *doctus* which is given to Catullus by his successors (Tib. 3. 6. 41; Ovid, *Am.* 3. 9. 62; Mart. 1. 61. 1) is itself a recognition of his acceptance of the literary ideals of Alexandrianism (q.v.). The scholarly concern for technical perfection which he learned from the Alexandrians lies behind all that he wrote and he does not leave his literary creed and standards in doubt: he admires the extreme Alexandrianism of his friend Cinna's *Zmyrna* (95) and he makes fun of the unadventurous representatives of the older tradition of poetry (14. 36). But though the influence of Alexandrian poetry on him is strong, it does not dominate his work. He translated Callimachus, but he also translated Sappho. The *Peleus* and *Thetis* is a deliberate essay in a characteristically Alexandrian genre: the romantic handling of the story and the disproportionate digression are Alexandrian and he indulges again and again in Alexandrian mannerisms—the learned allusion to gratify the scholarly reader, the devices of apostrophe and exclamation, tricks of style (anaphora and symmetry) and preciosities of rhythm (e.g. the 'spondaic' hexameter): but much of its technique is inherited from earlier Latin poetry and conventions of vocabulary and forms of phrase are derived from the tradition of Ennius and shared with Lucretius and Cicero. In the elegiac 68, in which verbal pattern is at its most intricate and allusion verges on pedantry, the native Latin ornament of alliteration is put to greatest use. While the conception of the *Attis* (63) must be drawn from a Hellenistic original, the power of its language and the skill with which Latin words are fitted to an exotic rhythm are Catullus' own. In the lyrics and epigrams too Catullus is *doctus*, but uses *doctrina* in his own way. The phalaeacian metre was itself an Alexandrian invention, but Catullus makes it the vehicle for the brisk raciness or the pathetic simplicity of everyday Latin speech. The lament for the pet bird (3), the invitation to dinner (13), the lines on an old ship (4), all have their prototypes in self-conscious Hellenistic epigram, but Catullus' imagination has used these to produce something new, personal, and immediate.

In the short poems Catullus conveys his own feelings with simple and passionate sincerity. Some convey deep emotion, rapture or despair over Lesbia, sympathy for a friend, sorrow for his brother; others reflect the uninhibited vitality of a young privileged intelligentsia, its conventions, its enthusiasms, and its dislikes. His views of persons and events are the reactions of an individualist: his friends are those who share his sophisticated tastes and when he attacks Caesar and Pompey his attacks are not political but personal, inspired by fastidious indignation at the rise of upstarts under their patronage.

On the side of technique the importance of Catullus' work lies in the refinement of standards which reached its full development in his Augustan successors. His influence

is to be seen in Horace's lyrics and much more in his fellow countryman Virgil, whose admiration for him shows itself in many verbal echoes: his elegiacs point the way to the art of Propertius. In the next century it was his epigrams that were remembered and Martial acknowledged him as his master.

CATULLUS (2, *PW* 2), a mime-writer of the middle of the first century A.D. (Juv. 8. 185 ff., 13. 111; Mart. 5. 30. 3), whose lost works include a piece *Phasma* (The Ghost) called *clamosum* by Juvenal, and a realistic one, *Laurcolus*, in which the crucifixion of a notorious bandit was staged (Mart. *Spect.* 7. 4; Suet. *Calig.* 57; Joseph. *Ag.* 19. 94).
J. W. D.

CATULUS (1), GAIUS LUTATIUS (*PW* 4), was consul in 242 B.C. when Rome determined to renew naval warfare against Carthage. His great service was his decision to attack when a Carthaginian fleet appeared off Aegates Insulae (W. Sicily); there he terminated the First Punic War by a naval victory, 10 Mar. 241. He negotiated peace terms with Hamilcar.
H. H. S.

CATULUS (2), QUINTUS LUTATIUS (*PW* 7), of noble (but not recently prominent) family, brother of two Caesares (qq.v. 2 and 3) and married first to a Domitia, then to a sister of Caepio (q.v. 1), was three times defeated for the consulship, until helped by Marius—then at the summit of popularity—to success for 102 B.C., probably through the mediation of the Caesares. Defeated by the Cimbri on the upper Adige, he had to retreat and give up the Po valley, but in 101, joined by Marius (who treated him with great courtesy) and assisted by Sulla (q.v. 1) as legate, he helped to win the victory of the Vercellae (perhaps near Rovigo, on the lower Po). Marius and Catulus triumphed jointly, and Catulus built a portico on the Palatine out of the spoils. Alienated from Marius, who received most of the credit for the victory, he became one of his chief opponents, drawing his friends away from him. He probably fought under L. Caesar in the Social War, opposed Marius and Cinna in 87, and after their return was prosecuted by Marius (q.v. 3) and committed suicide.

A cultured man, interested in philosophy, art, and literature, he was a link between the friends of Scipio (whom he knew in his youth) and the generation of Cicero, who greatly admired him and introduced him as a character in the *De Oratore*. He wrote light verse (two epigrams, one on young Roscius (q.v. 3), survive) and a monograph on his German campaign, and he was a competent—though not outstanding—orator. His funeral oration on his mother Popillia was the first example of a Roman woman being thus honoured. He was also a patron of literary men (e.g. Archias, q.v.); but he was not the centre of a literary circle.

Malcovati, *ORF.* 218 ff. H. Bardon, *LEC* 1950, 145 ff. (on his alleged literary circle), id. *La Littérature latine inconnue* (1952), 115 ff.; Badian, *Stud. Gr. Rom. Hist.* see index. E. B.

CATULUS (3), QUINTUS LUTATIUS (*PW* 8), son of (2) and of a Domitia, perhaps escaped from Rome after the return of Cinna (q.v. 1) in 87 B.C., but seems to have come back. On Sulla's return he joined him and brought about the cruel death of Marius (q.v. 3) in revenge for his father's; but he opposed the lawlessness of the *Sullani*. Consul in 78 with Sulla's support, he opposed his colleague Lepidus (q.v. 2), carried a law against violence, and

secured Sulla a solemn funeral, at which the power of his veterans was displayed. When Lepidus rebelled, Catulus, as proconsul, was chiefly responsible for his defeat. Henceforth he was an acknowledged leader of the *Optimates*. He was entrusted with the rebuilding of the Capitoline temple, which he carried out lavishly, dedicating the temple in 69 (cf. *ILLRP* 367–8). During the seventies he defended the Sullan settlement, but finally acknowledged that it did not deserve to survive and accepted its modification (70). In 67 and 66 he opposed the laws of Gabinius and Manilius (qq.v.)—Pompey had offended him in 77—and in 65, as censor, the attempt of his colleague M. Crassus (q.v. 4) to enfranchise the Transpadanes. In 63 he was ignominiously defeated by Caesar in an election for the chief pontificate and tried to involve Caesar in suspicion as a Catilinarian. This was the end of his great *auctoritas*: in 61 he was asked his opinion in the Senate after two men much junior to him, and he died soon after. He was a mediocre orator and never equalled his father's interest in literature and philosophy.
E. H.

CATUVELLAUNI, the most powerful British Belgic tribe, occupying parts of Herts., Beds., Cambs., Bucks., and Northants. It is probable that Cassivellaunus (q.v.) ruled this tribe, later kings were Tasciovanus and his son Cunobelinus (qq.v.) who became the leading ruler in pre-Roman Britain. After A.D. 43 a *civitas* was created with *caput* at Verulamium (q.v.), though this town itself may have possessed municipal status. Building done by a *corvée* of this *civitas* is attested on Hadrian's Wall (Collingwood and Wright, *RIB* 1962). The region was mainly agricultural with important pottery industries near Radlett (Herts.) in the Nene valley and in Oxfordshire.

A. L. F. Rivet, *Town and Country in Rom. Brit.* (1964), 145 ff., *Ferris, Britannia*, ch. iv. S. S. F.

CAUCASUS. For long the Greeks knew only the name and great size of this range. Herodotus describes it as a vast high mountain with many primitive peoples, skirting the west side of the Caspian, and he knew of the Derbent pass. Others believed that it contained many lakes and large rivers. Alexander mistook the Hindu-Kush for part of the Caucasus, thus causing some confusion in Greek literature. Not much more was learnt until Pompey subdued the Iberi (see *IBERIA*). Strabo could give details of the Caucasus—a well-wooded barrier between the two seas and connected with the Armenian heights and Mt. Taurus; he described the customs of the natives and their use of snow-shoes and hides which served as toboggans. No accounts survive of subsequent discoveries.

Strabo II, esp. pp. 499–506; Ptol. *Geog.* 5. 9. 14, 15. Thomson, *Hist. of Anc. Geog.* 170 L., 253 L., 363 L., etc.; Cary, *Geographic Background* 156, 177, 309 ff. E. H. W.

CAUDINE FORKS, the narrow defile where a Roman army was trapped by, and surrendered to, Gaius Pontius (q.v. 1), 321 B.C. (Livy 9. 2–6). It lay in the territory of the Caudini Samnites, somewhere between Capua and Beneventum, but cannot be certainly identified. The Arrienzo–Arpaia valley, the traditional site, contains the significantly named hamlet l'orchia, but seems too small; an objection that applies also to the valley between S. Agata de' Goti and Moiano. The plain between Arpaia and Montesarchio, although large enough, does not fit Livy's description.

P. Sommella, *Antichi campi di battaglia in Italia* (1967), 49 ff. E. T. S.

CAULONIA, Achaean colony on the 'sole' of the Italian 'boot', near *Punta di Stilo*, that shared the Pythagorean

vicissitudes of Croton (q.v.), its probable metropolis. Dionysius (q.v. 1) of Syracuse captured Caulonia (389 B.C.) and transferred its inhabitants to Sicily. Sabellian assaults about a century later completed its ruin. E. T. S.

CAVES, SACRED. It would appear that Greek cave-sanctuaries mostly belong either to pre-Hellenic cults or to oriental importations: an exception is perhaps the cave-shrines of the Nymphs, common from Homer (*Od.* 13. 347 ff.) on. The most famous is that of Zeus on Mt. Dicte in Crete (cave of Psychro, M. P. Nilsson, *Minoan-Mycenaean Religion*² (1950), 393). This was vaguely remembered as his birthplace and belongs to the cult of the Cretan god identified with him. Hardly less celebrated was the cave of Trophonius at Lebadea (Farnell, *Hero-Cults*, 21; description, Paus. 9. 39. 5 ff.). Here the date of the cult is unknown. In Italy, one of the most celebrated holy caves was the Lupercal on the Palatine, where the Luperci met for their ritual (see Platner-Ashby, 321). This is undoubtedly old, but we have no reason to suppose the ceremony pre-Italic. Of imported cults in both countries, that most closely connected with caves, or artificial underground vaults, was Mithraism (see MITHRAS).

For Cybele and caves, cf. L. Robert, *Mélanges Bidez* (1934), 795 ff., A. J. Festugière, *Rev. Bibl.* 1935, 382 f. H. J. R.

CEBES of Thebes, pupil of Philolaus the Pythagorean, and later of Socrates, plays an important part in the discussions in the *Phaedo*, and in the *Crito* is represented as one of those who were prepared to spend money in helping Socrates to escape from prison; the (suspect) 13th Platonic Letter represents him as still alive in 366. The extant dialogue (probably belonging to the 1st c. A.D.) called *Κέβητος Θηβαίου Νίναξ* makes no pretence to be by Socrates' friend, and has been ascribed to him by a mere error. It presents an eclectic doctrine which in spite of its Pythagorean setting owes more to Plato, Aristotle, and the Stoics than to the Pythagoreans.

Ed. K. Praechter (1893).

W. D. R.

CECROPS (*Κέκροψ*), mythical first king of Athens (though Actaeus is sometimes called first king), was a child of the Attic soil, though some late writers said that he was of Egyptian or Cretan origin. Sometimes it is said that his father was Hephaestus. As an indication of his autochthonous origin Cecrops is often represented as of serpent shape below the waist. By Aglauros or Agraulos, daughter of Actaeus, he had three daughters, Pandrosos, Herse, and Aglauros II. He was succeeded upon the throne by Cranaus. According to some writers there were two Cecropses who had ruled in Athens, the second being a son of Erechtheus.

Among late writers Cecrops had the reputation of having been a great benefactor of mankind. The story that he had instituted monogamy among men had its origin in a rationalistic interpretation of his double nature. He was also credited with the institution of burial of the dead and with the invention of writing. During his reign the contest of Athena and Poseidon for possession of Athens took place, and in some accounts he was judge of the contest. In a small structure on the Acropolis at the south-west corner of the Erechtheum the Athenians saw the tomb of Cecrops.

CELSUS (1) **ALBINOVANUS**, a friend of Horace (*Epist.* 1. 3. 15-20; 8. 1), who rebukes him gently for writing poetry which is too slavishly imitative. M. S.

Schanz-Hosius, § 220, 279 n. 8.

CELSUS (2), **AULUS CORNELIUS** (*PW* 82), under Tiberius (A.D. 14-37), wrote an encyclopaedia comprising agriculture, medicine, military science, rhetoric, and probably philosophy and jurisprudence (see ENCYCLOPAEDIC LEARNING). Apart from a few fragments of the other sections only the medical books are preserved. The work, dealing with the whole of medicine, is most important for the reconstruction of Hellenistic doctrines. The introduction outlines briefly but admirably the history of medicine up to the author's time. Celsus, a layman, writing for his own instruction and that of other laymen, selected with sound judgement his material from different sources (see SURGERY, § 7). In philosophy he was a follower of the Sextii; in medicine he was influenced most strongly by Themison. The Latin of Celsus, the 'Cicero medicorum', became the model of Renaissance writing when his book, almost unnoticed in antiquity and in the Middle Ages, was rediscovered and printed at a very early date.

TEXT. F. Marx, *CML* 1 (1915), text criticism, H. Lyngby, *Textkritiska studier till Celsus' Medicina* (Göteborg, 1931).

TRANSLATION. with text, Loeb, James Greive (1756).

LITERATURE. Celsus' book not based on one Greek original, O. Tenkin, *Bull. of the Inst. of the Hist. of Med.* 1915, opposite theories summarized, Marx, loc. cit. lxxiv, M. Wellmann, *Arch. f. Gesch. d. Med.* 1925; Celsus as philosopher, A. Dyroff, *Rh. Mus.* 1930; J. Ilberg, *Neue Jahrb.* 1907; G. Haader, *Forschungen und Fortschritte* 1906, 215 ff.; J. Scarborough, *Roman Medicine* (1969). L. E.

CELSUS (3), **PUBLIUS JUVENTIUS** (*PW* 13), a distinguished Roman jurist, praetor A.D. 106 or 107, *legatus* of Thrace, twice consul (the second time 129), proconsul of Asia, member of Hadrian's *consilium*. He was head of the Proculian School (see SABINUS 2), as his father, Juventius Celsus (whose pupil he probably was), had been before him. His reputation evidently greatly surpassed that of his father, of whom little is known. The son's principal work, and the only one of which extracts survive, was thirty-nine books of *Digesta*, but this incorporated material drawn from his earlier *Epistulae*, *Commentarii*, and *Quaestiones*. Celsus had a profound knowledge of the earlier literature, which he often cites, but he is a severe and caustic critic of other jurists' views. His constructions are original; his language is clear and as independent as his mind. See also JULIANUS (2).

F. Stella Maranca, *Intorno ai frammenti di Celso* (1915); F. Wieacker, *Iura* 1962, M. Bretonne, *Labbe* 1903, and see under JURISPRUDENCE. A. B.; B. N.

CELSUS (4), author of the first comprehensive philosophical polemic against Christianity, the *Ἀληθὴς λόγος*, written c. A.D. 178-80, of which the greater part is quoted in Origen's *Contra Celsum*; and of a book of advice to converts from Christianity. Celsus wrote from the standpoint of a Greek and a Platonist, but put certain objections to Christianity in the mouth of Jews in Egypt familiar with the Logos-theory. The *Ἀληθὴς λόγος* is important evidence for the knowledge of, and attitude towards, the Christianity of the Greek world; it shows knowledge of Gnostic sects as well as of the 'Great Church'. Celsus' criticism became part of the material for the Neoplatonic polemic against Christianity.

R. Bader, *Ἀληθὴς λόγος* (1940).

W. D. R.

CELTIBERIANS, a large ethnographical group in north central Spain, probably formed by a fusion of the Celtic invaders with the existing Iberians, whose traditions dominate the mixture. They were sheep-owners and fighters, living chiefly in hill-forts. From their native iron they developed the two-edged Spanish sword which was adopted by the Roman legions. After their first encounter with Cato (195 B.C.) a smouldering war against Rome flared up in 181 to 179 (peace of Tiberius Gracchus), 153 to 151, and finally 143 to 133 (the war of Numantia, q.v.).

The Romans brought down hill-forts, encouraged agriculture, and established a few towns. The region, incorporated in the imperial *conventus* of Clunia, became peaceful but not sophisticated (see Martial XII preface and 18, on his home Bilbilis, a Roman *municipium*).

A. Schulten, *Numantia*, 4 vols (Munich 1914-17), esp. vol. i, introduction, P. Bosch-Gimpera, *Etnología de la península ibérica* (1932), chs. 24 and 25. M. I. II.

CELTs, a name applied by ancient writers (and extended by modern to the British Isles) to a population group occupying mainly lands north of the Mediterranean region from Galicia in the west to Galatia in the east. Their unity is recognizable by common speech and common artistic tradition. (1) Dialects of Celtic are still spoken (Ireland, Scotland, Wales, Brittany), or are attested by inscriptions, quotations, and place-names in this area. The language seems closely akin to the Italian group, showing like it a division between 'q' and 'p' renderings of the velar guttural. The significance of this division is still obscure. (2) The artistic unity is expressed in the La Tène style (called from the Swiss type-site), which appears c. 500 B.C. inspired by increasing trade contacts. It derived principally from living Italo-Greek styles, but archaic Hellenic motives which had survived in a Villanovan backwater are also noticeable, as well as eastern influences conveyed by way of Scythia. Out of these chronologically and regionally different borrowings the Celts evolved a very idiosyncratic art of swinging, swelling lines, at its best alive and yet reposeful.

The view is generally accepted that the primary elements of 'Celtic Culture' originate with the Bronze Age 'Urn-field people' of the Upper Danube (13th c. B.C.) on whom a warrior aristocracy from the east imposed itself c. 750. It is likely that the 'Urn-field people' spoke a 'proto-Celtic' language, though the 'Celtic race' is likely to be a product of the Hallstatt leaders. Induced probably by worsening climatic conditions of the Later Bronze Age and after, 'Urn-field' and subsequent 'Hallstatt' invaders brought peoples whom we may call Celts to Spain and to Great Britain as early as the eighth and seventh centuries. Southwards the Celts penetrated Italy, sacking Rome in 390. Typical Hallstatt graves are present in Bohemia in the seventh century, and Celts descended the Danube, entered the Balkans, and raided Delphi (279). Another band crossed the Hellespont (278) and founded a state called Galatia where Celtic was still spoken in the fifth century A.D.

Celtic culture is above all recognizable by common speech and common artistic tradition.

The ancients knew the Celts as fierce fighters and superb horsemen, and noticed the savagery of their religious rites conducted by the priesthood, the Druids, who derived their doctrine from Britain. But Celtic political sense was weak, and they were crushed between the migratory Germans and the power of Rome, to be ejected (e.g. from Bohemia and south Germany), or more or less assimilated (as Belgae, q.v.) by the former, and conquered outright by the latter.

CENOMANI, Gauls, reputed to be Aulerici, who established themselves in Cisalpine Gaul c. 400 B.C. (Polyb. 2. 17; Strabo 5. 216). Their territory lay around Lake

Garda. Chief towns: Brixia and probably Verona and Bergomum (Livy 5. 35). The Cenomani usually supported Rome, e.g. in 225 B.C. against Boii and Insubres and in 218 against Hannibal (Polyb. 2. 23, 24, 32; Livy 21. 55). In 200, however, they joined Hamilcar, but were quickly subjugated and romanized, disappearing from history (Livy 31. 10; 32. 30). In 49 B.C. Gallia Transpadana, including the Cenomani district, obtained Roman citizenship. For bibliography see CISALPINE GAUL.

E. T. S.

CENSOR (cf. *censere*, to estimate) was the title of a Roman magistrate who, although lacking *imperium* and the right to an escort of lictors, nevertheless possessed great authority, since he controlled public morals and supervised the leasing of public areas and buildings. The censorship was probably instituted c. 443 B.C. as a civil magistracy, in order to make up and maintain the official list of citizens, or *census* (q.v.)—a function previously fulfilled by the consuls. If a citizen was found guilty of suppressing or delaying information about his status and property, the censors (who always numbered two, in obedience to the principle of collegiality) were empowered to take judicial proceedings against him. The enrolment of the population, which generally took place in spring (probably in May), ended in a religious ceremony called *lustrum* ('cleansing', see LUSTRATION). Originally this ceremony was held *quinto quoque anno*, i.e. every four years, but from 209 B.C. onwards the formula was taken to mean every five years, and the interval between two celebrations was called a *lustrum*. The censors entered office in early spring and held it for eighteen months, the revised roll being issued twelve or fifteen months after their appointment. This registration took place in a special building in the Campus Martius. The *equitum census*, i.e. the making-up of the list of those liable to cavalry service, was held in the Forum. The censors had the right of striking off the names of those who had given false statements, or who no longer merited the privilege of fighting as knights, because of unbecoming behaviour at home or on military service, bad administration of provinces or public property, and the like.

A plebeian was elected to the censorship in 351 B.C., if not before, and one of the *Leges Publiliae* of 339 declared that at least one censor must be a plebeian, although two collegiate plebeian censors were not elected until 131. The power of the censors reached its zenith in the third and second centuries, and throughout the middle and later Republic the office stood at the head of the *cursus honorum*. Its prestige sprang largely from the power of the censors to revise the senatorial rolls and to strike off those who had not observed the *ordo magistratum* or had acted against law and public morality. The authority of the censorship was greatly reduced by Sulla and, although down till the Augustan age several distinguished citizens filled the office, it soon became a dead letter. The Emperors tended increasingly either to assume responsibility for censorial functions themselves or to confer such responsibility upon lesser officials. This process reached its logical conclusion when Domitian appointed himself censor for life.

Monmsen, *Röm. Staatsr.* ii. 1, 374 ff.; H. F. Jolowicz, *Hist. Introduction to the Study of Roman Law* (1939), 36 f., 50 ff.; A. Klotz, *Rh. Mus.* 1939, 27 ff.; J. Suolahti, *The Roman Censors* (Helsinki, 1963), with full bibliography. For the censorial Fasti see also Broughton, *MRR*. P. T.

CENSORINUS (3rd c. A.D.), a Roman grammarian (Prisc. 1. 4. 17), wrote *De accentibus* (lost), and a *De die natali uolumen illustre* (Sid. Apoll. *Carm.* 14 *praef.* 3), dedicated to Q. Caerellius on his birthday in A.D. 238, which is preserved. The first part deals with human life, particularly its origins, the second with time and its

divisions. The work is derived from different sources, above all Varro, and also Suetonius (*De anno Rom.*), and is valuable for its mainly competent transmission of these. It is accompanied in the MSS. by an anonymous and noteworthy collection of articles on various topics, e.g. the universe, geometry, metre (our earliest source for Roman metre), and music, known (since L. Carrion's edition, Paris, 1583) as *fragmentum Censorini*. See also SCHOLARSHIP, LATIN.

CENSUS, a national register which was prepared at Rome from the time of the kings for taxation and military service. The holding of a census was at first the duty of the king, then of the consuls, and from 443 B.C. of the censors (q.v.). A census was normally held at intervals of five years. The citizens were registered in tribes and distributed into five classes according to their wealth: each class was subdivided into *seniores* and *iuniores*. They were required to state their full name and age and the amount of their property (*Tabula Heracleensis*, 145). The names of women and children were not included in the census, but parents gave information about their families (Dion. Hal. *Ant. Rom.* 4. 15). Under the later Republic the census was taken very irregularly, but it was revived by Augustus, who held it three times (*Res Gestae* 8). The last known census was held in Italy by Vespasian and Titus: it had come to be unnecessary here, as Italians had become exempt from direct taxation. The taking of a census was concluded with a religious purification (see LUSTRATION). In the *Tabula Heracleensis* the chief magistrates of Italian towns are ordered to take a census simultaneously with the holding of one in Rome, and this must have been done earlier in communities possessing Roman citizenship (see Livy 29. 15).

In some provinces, e.g. Sicily (Cic. *Verr.* 2. 131), a local census was held even in republican times, but it was not till the reign of Augustus that the census was organized by the imperial government. Information could be easily acquired in the municipalized senatorial provinces. Augustus was well informed by 7 B.C. about the wealth of the people of Cyrene (*SEG* ix. 1. 8). But new machinery had to be set up in the more backward provinces, where organized city life did not exist. A census was held in Gaul in 27 B.C., 12 B.C., A.D. 14 and 61, and, like the census held in Judaea in A.D. 6 after its annexation in the governorship of Quirinius, provoked popular resistance. Most of the inscriptions referring to officials of the census come from imperial provinces. The governor was normally responsible and records the fact in his inscriptions, but many other men of senatorial and later of equestrian rank were concerned with the matter (*ILS* iii, Index, p. 351); minor officials were entrusted with the duty in particular districts, e.g. Q. Aemilius Secundus, who when prefect of a cohort conducted the census of Apamea under Quirinius (*ILS* 2683). The census-return (*forma censualis*) included full details of the character and extent of cultivated land and the number of slaves owned (*Dig.* 50. 15. 4), and of other forms of property. This information was necessary to those responsible for levying the *tributum* (q.v.) *soli* and *tributum capitis*. It was probably the duty of governors to keep the register up to date, but no regular census-period seems to have been prescribed.

In Roman Egypt there was a census-period of fourteen years. Numerous papyri contain the census-returns made by householders, which gave full details of properties and occupants and had to be addressed separately to a number of different officials.

A. H. J. Greenidge, *Roman Public Life* (1901), 221 ff., 420 ff.; S. L. Wallace, *Taxation in Egypt* (1918), 96 ff.; G. Pieri, *L'Histoire du cens jusqu'à la fin de la répub. rom.* (1968). G. H. S.; F. G. B. M.

CENTAURS, a tribe of wild, beast-like monsters usually thought of as having the upper part of a human being and the lower part of a horse. Centaurs live in woods or mountains of Elis, Arcadia, and Thessaly. In the *Iliad* they are described as 'beasts' (θήρες; and cf. *Od.* 21. 303). Possibly the conception of horse-shaped centaurs originated with the horse-breeders of Thessaly. Myths of Centaurs must be very old, since they occur in Homer, in late Mycenaean, and in early orientaling art. For the Greeks Centaurs are representative of wild life, animal desires, and barbarism. They are lustful and over-fond of wine. Their fight against the Lapiths, whose king Peirithous invited Centaurs to his marriage (*Il.* 1. 263; 2. 742; *Od.* 21. 295 ff.; [Hes.] *Sc.* 178 ff.) is famous. Either one (Eurition) or several Centaurs attempted to rape the Lapith women. In the ensuing fray the Centaurs were routed, although they killed the invulnerable Caeneus. Heracles had a clash with them when he visited the Centaur Pholus. Attracted by the smell of wine, Centaurs assailed Heracles with rocks and stones, but were beaten back with fire-brands and arrows and fled to Cape Malca.

Individual Centaurs have myths of their own. Nessus offered to carry Deianira across the river Euenus and then attempted to rape her (Archilochus in Dio Chrys. 60). Heracles killed him with his sword or with arrows. This scene is a great favourite with archaic vase-painters. Before Nessus died he gave to Deianira the garment which later caused the death of Heracles (Soph. *Trach.*). Chiron is the wise and kind old medicine-man among the Centaurs. He is of divine origin, son of Kronos and Philyra (Pherecyd in schol. Ap. Rhod. 1. 554; Apollod. 1. 9), well versed in medicine (*Il.* 4. 219) and other arts, and educates divine children and heroes, Achilles, Asclepius, and Jason. He also helps Peleus to woo Thetis (Apollod. 3. 13. 5). Chiron had a cult in Thessaly.

The Centaurs are sometimes children of Ixion (q.v.), but in Pindar the offspring of Centaurus, son of Ixion and Nephele, who mated with mares near Mt. Pelion (Pind. *Pyth.* 2. 44).

In art, the earliest Centaurs brandish boughs or hunt. The Nessus episode appears in the seventh century B.C. (J. M. Cook, *BSA* 1934-5, 191). The fight with the Lapiths occurs on the famous François vase (A. Minto, *Anthemion, Scritti in onore di Carlo Anti* (1955), 21 ff.) and in sculpture on the pediment of the temple of Zeus in Olympia. Later, Centaurs join the Dionysiac *thiasos* and are so shown on Roman funeral reliefs. (Cf. Nonnus, *Dion.* 14. 49, 149, 193.)

(1964). G. M. A. H.; J. R. T. P.

CENTO. I. GREEK. A patchwork (*cento*, a patchwork cloak) of existing verses, sometimes humorous in intention, sometimes not. 'Trygaeus' improvisation at Ar. *Pax* 1090-4 is an early example, and in the *Frogs* (1264 ff., 1285 ff., and 1309 ff.) the cento is pressed into the service of literary criticism. Lucian (*Symp.* 17) mentions a 'very funny song', made of a medley of Hesiod, Anacreon, and Pindar. Cf. also *Anth. Pal.* 9. 381-2. 'Ὀμπροκέντρωτες were composed in Byzantine times, e.g. by the Empress Eudocia in the fifth century A.D. Many parodies, e.g. the one of Homer quoted by Dio Chrysostom in *Or.* 32 (see Brandt, *Corpusc. poes. ep. graec. ludib.* 100 ff.) are virtually centos.

G. Kaibel, *Epigrammata Graeca e lapidibus collecta* (1878), 1009; E. Stemplinger, *Das Plagiat in der griech. Lit.* (1912), 193 ff. J. D. D.

II. LATIN. The main victim of Latin cento-makers was Virgil: perhaps the sport began quite early (see Petronius 132. 11, and cf. the parodies in Donatus, *vit. Verg.* 43). The earliest extant specimen is the *Medea* of Hosidius Geta (late 2nd c.), in which the characters (even the Messenger) all speak Virgilian hexameters patchworked together, and the choral lyrics consist entirely of final *hemistichia*. An anonymous cento *de alea* (date uncertain) is an amusing squib, contrasting sharply with the vulgar and nasty cento *nuptialis* of Ausonius (q.v.), perpetrated c. 368 at Valentinian's request (and in the hope of going one better than the emperor). Ausonius describes his technique at some length in a prefatory letter.

Roughly contemporary with Ausonius' *facetae*, Virgilian cento took a new turn. The Christian poetess Proba used it for rewriting parts of the Old and New Testaments ('*cunus quidem non miramur studium sed laudamus ingenium*', Isidore *de ur. ill.* 22); other Christian centos are the *de Verbi incarnatione* (once attributed to Sedulius), the *Tityrus* of Pomponius (an 'Eclogue' in which Meliboeus is instructed in the Faith), and the *de ecclesia* of Mavortius (?) which ends with an 'improvised' postscript after the poet had been hailed as *Maro iunior*. Proba's compilation may be the *centimetrum de Christo* declared apocryphal by Pope Gelasius in 494 (Migne 59. 162; cf. Isidore *de ur. ill.* loc. cit.), in a *decretum* whose authenticity is itself disputed (Schanz *Hosius*, iv². i. 220, 'Teuffel-Schwabe, *Gesch. d. romisch. Lit.*⁶ (1913-20), iii. 449).

Apart from the formal genre, long passages that are largely centos occur in later poets, e.g. Columban (6th c.), Waldran (9th c.), and the author of the *Echasis Cyprius* (10th c.), and now other writers besides Virgil are pillaged, Horace and Ovid among them.

Isidore, loc. cit. and *Orig.* i. 38. 25; Tertullian *de praescr. haeret.* 39.

CENTUMVIRI, a special civil court at Rome, or, strictly, the panel, numbering in fact during the Republic 105 persons (three taken from each *tribus* (q.v.)) and in the Empire 180, from which a court (*consilium*) was chosen. The number forming a *consilium* is not known, but in the Empire there were usually four *consilia*, though the full court of 180 might sit for a particular case (Pliny, *Ep.* 4. 24; 6. 33). The presidents of the *consilia* were, in the late Republic at least, ex-quaestors, but Augustus assigned this duty to the *decemviri* (see VIGINTISEXVIRI). The president of the whole panel was apparently a *praetor hastarius* (Pliny, *Ep.* 5. 9. 5). The *centumviri* took only the second stage of the proceedings, in place of the more usual single *iudex* (q.v.). The first stage, before the *praetor urbanus* or *peregrinus* (Gai. *Inst.* 4. 31) was by *legis actio sacramento* (see SACRAMENTUM), even after *legis actiones* had otherwise been abolished by the *Lex Iulia de iudiciis* (see LAW AND PROCEDURE—ROMAN II). The extent of the court's competence is obscure. Recorded cases are mainly concerned with matters of inheritance, and the *querela inofficiosi testamenti* (see INHERITANCE § 5) was developed by the court (an apparently unique instance of court-made law in Rome), but its competence was evidently considerably wider (Cic. *De Or.* 1. 38. 173). Its jurisdiction was alternative to that of the *unus iudex*.

What determined the bringing of a case before the *centumviri* is not known, but the court was evidently, at least at certain periods (Cic. *De Or.* 1. 57. 242 ff.; *Brut.* 39. 144 f.; Tac. *Dial.* 38; Pliny locc. citt.) a forum for *causes célèbres*. The court was presumably created after 241 B.C., when the number of *tribus* was increased to 35; its first recorded case was about a century later (Cic. *De Or.* 1. 40. 181, 1. 56. 238).

B. N.

CENTURIA was the smallest unit of the Roman legion. Each legion contained 60 centuries (see LEGION, § 1; MANIPULUS).

According to tradition, Servius Tullius founded a new political assembly based on the centuries. The real date of this reform is doubtful, and many scholars prefer the middle or the end of the fifth century B.C. The assembly consisted of 18 centuries of horsemen, 6 of which were called *sex suffragia*, and 170 centuries of foot-soldiers. The foot-soldiers were divided into five *classes* (q.v.) according to their census. The first class fell into 40 centuries of *iuniores* (between 17 and 45 years) and 40 of *seniores* (between 46 and 60); the second, the third, and the fourth into 10 centuries of *seniores* and *iuniores* apiece, and the fifth into 15 of each category. Five centuries of non-combatants, including one of *capite censi* (*proletarii*), were attached; two of these centuries (of *fabri*) were apparently ranked with the first class. The age limit of sixty for the *seniores* disappeared in the centuries of the *comitia*.

Between 241 and 218 B.C. the distribution of the centuries underwent a reform about which Livy (1. 53. 12) and Cicero (*Rep.* 2. 22. 39) leave us uncertain, except to show that its object was to correlate the centuries and the local tribes, and that the first class was reduced to 70 centuries. Some scholars hold that each class was now equally divided into 35 centuries of seniors and 35 of juniors; but others with greater probability hold that the number of the centuries remained fixed at 193. The discovery of the Tabula Hebana (q.v.) has shown that Augustus created a system of voting for the *destinatio* of consuls and praetors in which senators and *equites* from thirty-three tribes voted in 10 (later 15) centuries.

The name *centuria* was also used for the block of 100 *heredia* (little allotments, theoretically each of 2 *iugera*), which was the unit for the delimitation of the *ager publicus* (see CENTURIATION).

See AUGUSTUS; COMITIA.

A. M.

CENTURIATION. Centuriation was a Roman agromensorial technique designed for large-scale land partition. It is particularly associated with such important foundations as *coloniae* and many examples of *ager centuriatus* or *limitatus* are known in Italy and the Mediterranean provinces. The systems can be recognized by surviving stretches of the chequer-board grid of roads that normally divided the area into squares (*centuriae quadratae*) with sides of twenty *actus* (776 yds., 710 m.) and an area of 200 *iugera*. The *actus*, or 120 Roman feet, was the basic measurement involved. A *iugerum* was formed by 1 × 2 *actus* and two *iugera* formed a *heredium* in the form of an *ager quadratus*. In turn 100 *heredia* equalled the main land unit, the *centuria*. Its name was perhaps derived at first from its division among 100 settlers, each

receiving a *heredium*. The lines of demarcation between *centuriae* were called *limites*, which were further termed *decumani* or *cardines*, the former theoretically running east-west, the latter north-south. In places like Lugo (near Ravenna), where the centuriation system had two main *limites* radiating from a central position, these were known as the *decumanus maximus* and the *cardo maximus*. The four subdivisions so created were called *dextra* and *sinistra* (north and south of the *decumanus*) and *ultrata* and *citrata* (west and east of the *cardo*). The evidence on the ground shows that the theoretical arrangements of the surveyors (*agrimensores*, *gromatici*) were considerably modified by topography and other local factors. Likewise there are *centuriae* of non-standard size and in early examples from Italy (Cosa, Cales, Lucera) the systems are based on parallel roads alone (*per decumanos solos*); otherwise most systems appear to be of early imperial date. Little is known of the internal arrangements within *centuriae*, but examples from Apulia and Tunisia show that intensive mixed farming was practised.

G. D. B. J.

CENTURIO. The centurions were the principal professional officers in the Roman army. In the post-Marian army each of the ten cohorts had six centurions, whose titles, except in the case of the first cohort, were: (*secundus*, *tertius*, etc.) *pilus prior*, *pilus posterior*, *princeps prior*, *princeps posterior*, *hastatus prior*, and *hastatus posterior*. Between these centurions of the lower-ranking cohorts there was little difference in status apart from seniority. The first cohort had, probably from early in the Empire, only five centuries and was double the size of the others. Its centurions were *primus pilus*, *princeps*, *hastatus*, *princeps posterior*, and *hastatus posterior*. This group constituted the *primi ordines*, and within it a strict seniority was observed, with the post of *primus pilus* as the final honour.

During the Republic centurions were selected from the legionary soldiers; under the Principate, the majority of the centurions continued to be promoted legionaries, but some were *ex equite Romano*, i.e. men who had transferred from an equestrian career, or ex-praetorians (*evocati*). They were attracted by high pay (five times that of the praetorian soldier for the centurion, ten times for a member of the *primi ordines*), and good prospects on retirement. (See also *PRIMIPILUS*.)

Centurions are found also in the *Auxilia* and the Praetorians (qq.v.), but without the distinguishing titles of their legionary counterparts.

H. M. D. P.; G. R. W.

CEPHALAS, CONSTANTINUS, held an official post in the palace at Constantinople in A.D. 917. Some time before this he compiled an anthology of Greek epigrams, on which the Greek Anthology (q.v.) was later based. Apparently he died or abandoned the task before completing it, since his collection is imperfectly edited and appears not to have been published in the normal way; but the material is invaluable. G. H.

CEPHALUS, a hero, apparently Attic. He is eponym of the Attic *genos* *Κεφαλίδαι* (Hesych. s.v.), marries Procris (q.v.), and lives at Thoricus (Pherecydes, infra). He has, however, connexions outside Attica, for he takes part with his hound in the hunt for the Teumessian

vixen (see *AMPHITRYON*), in the Cyclic *Epigoni* (fr. 2 Allen); he marries Clymene daughter of Minyas (*Nostoi*, fr. 4 Allen). His principal adventures are: (1) his affair with Eos (q.v.), first in Hesiod (*Theog.* 986), where their son is Phaëthon the attendant of Aphrodite. Generally (e.g. *Ov. Met.* 7. 704, supported by much earlier evidence from art, see Roscher's *Lex.* s.v.), she carries him off. (2) His jealousy of Procris. To test her, he stayed away for eight years, came back in disguise, and succeeded in obtaining her favours (schol. V on *Od.* 11. 321, citing Pherecydes). (3) Her jealousy of him, because he spent so much time hunting (Pherecydes, *ibid.*, cf. Ovid, *ibid.* 796 ff.). Learning that he was accustomed to call for a cloud, *νεφέλη* (Pherec.), or a breeze, *aura* (Ovid), to cool him, she supposed this the name of a mistress, followed him in hiding, and was killed by his throwing-spear, which he flung at her supposing her to be a beast (the spear never missed, *Ov.*, *ibid.* 683; further fanciful details of the legend, Hyg. *Fab.* 189). That Cephalus was eponym of Cephallenia (Arist. in *Etyim. Magn.* 144. 26) is hardly more than a pun. His father is regularly Deion or Deioneus. H. J. R.

CEPHEUS (Κηφεύς), name of four or five mythological persons, the best known being the father of Andromeda (q.v.). Though generally called an Ethiopian from Euripides on, he and consequently the whole legend are very variously located; for particulars see Tümpel in Roscher's *Lexikon* ii. 1109-13. H. J. R.

CEPHISIA, an Attic deme situated north-east of Athens at the modern *Kephissia*. A community of great antiquity to judge from both its name and its inclusion in the list of twelve townships traditionally brought together by Theseus (q.v.), it became widely known in the second century A.D. as the seat of one of Herodes (q.v. 2) Atticus' most luxurious villas, where amid groves, playing waters, and singing birds the great sophist held court.

Philochorus *FGH* 328 F 94; Gell. *NA* 1. 2. 1-2 and 18. 10. 1; Philostr. *VS* 2. 1. 30. W. Peek, 'Attische Inschriften', *Ath. Mitt.* 1942, 136 ff.; A. Tschira, 'Eine römische Grabkammer in Kephissia', *Arch. Anz.* 1948/9, 83 ff. C. W. J. E.

CEPHISODORUS (1) (fl. c. 400 B.C.), writer of Old Comedy (*IG* ii². 2325; *Lys.* 21. 4 *Κηφισοδότῳ* codd.). The *Antikais* satirized the *εταίρα* Laïs.

FCG 1. 267-9; *CAF* 1. 800-2.

CEPHISODORUS (2) of Athens or Thebes, pupil of Isocrates, wrote a history of the Sacred War and a treatise directed against Aristotle.

FGH ii. 112.

CEPHISODOTUS (1), sculptor, Athenian, probably father of Praxiteles (q.v.), and a brother-in-law of Phocion. Pliny dates 372, probably by his work at Megalopolis. No convincing attributions, since Rumpf has shown that the 'Irene' group goes back to an original of 350-320 B.C.

Overbeck, 878, 1137-43; Lippold, *Griech. Plastik* 223; A. Rumpf, *Archäologie* ii (1956), 80 ff. T. B. L. W.

CEPHISODOTUS (2), sculptor, Athenian, son of Praxiteles. Pliny dates 296 B.C. (inscription of 344-343, published as signature of Cephisodotus, probably refers to dedicator). Selected works: 1 (with his brother Timarchus). Lycurgus and his sons, probably after Lycurgus' death 323. 2 (with Timarchus). Menander, in the theatre at Athens, probably after Menander's death, 291; copies of head at Boston, etc. (Winter, *KB* 320. 4). 3 (with Timarchus). Statues on the altar of the Asclepium at Cos (Herod. 4. 1-26); fragments have been discovered.

4 (with Euthycrates, son of Lysippus). Anyte (fl. 284). 5. Symplegma (erotic group) in Pergamum. 6. Leto, later on the Palatine; reproduced on the Sorrento base. He continued the Praxitelean tradition into the third century.

Overbeck, 1331-41; Lippold, *Griech. Plastik* 209; Hiebert, *Sculpt. Hellenist. Age* 20 f.

CEPHISSUS (Κηφισός), the name of several rivers, the best known being the Attic and the Boeotian Cephissus. The Attic Cephissus was the main river of the Plain of Athens, gathering all sources and streams of the mountains around, and emptying itself into the bay of Phalerum; its water, divided into many streams, irrigates the plain west of Athens (cf. Soph. *OC* 685); its clay-bed provided the material for Athenian pottery. The Boeotian Cephissus springs from the northern Parnassus, near Lilaea, and waters the plains of Phocis and northern Boeotia, debouching into the lake Copais.

Cary, *Geographical Background*.

V E.

CERBERUS, monstrous dog guarding the entrance to the lower world. According to Hesiod (*Theog.* 311) Cerberus is the son of Typhon and Echidna, has fifty heads and a voice like bionze. He is often referred to simply as 'the dog of Hades'. The canonical type of Cerberus, established in late archaic and classical literature and art (Eur. *HF* 611), shows him with three heads and mane or tail of snakes. Cerberus is most frequently mentioned in connexion with the descent of Heracles to Hades (*Il.* 8. 367; Apollod. 2. 5. 12). With the permission of Hades Heracles dragged Cerberus out of the lower world, showed him to Eurystheus, and then returned him to Hades. This episode is depicted with much gusto on the Caeretan hydriae in the Louvre (G. Roux, *Mélanges Picard* 1949, 896) and the Museo Villa Giulia (E. Pfuhl, *Malerei und Zeichnung der Griechen* (1923), pl. 36, fig. 154, and G. Q. Giglioli, *Arte etrusca* (1934), pl. 128, 3). The same scene appeared on the Amyclaeon throne (Paus. 3. 18. 9, Frazer).

G. M. A. II

CERCIDAS (c. 290-c. 220 B.C.), of Megalopolis, was friendly with Aratus of Sicyon, who sent him c. 226 to Antigonos Doson to ask the latter's intervention on behalf of the Achaean Confederacy against Cleomenes (Polyb. 2. 48). In 222 before the battle of Sellasia Cercidas is mentioned as the leader of 1,000 men from Megalopolis (Polyb. 2. 65). Other authorities refer to his success as a lawgiver, alluding probably to the restoration of liberty at Megalopolis after the tyranny of Lydiadas (235). An alternative description of Cercidas as a Cretan (Diog. Laert. 6. 76) may indicate his residence in the island during that tyranny. Outside politics, he attained fame as a Cynic philosopher and poet.

WORKS. Literary sources have preserved only nine short fragments of Cercidas' verse. Of these one (fr. 14 Powell) is cited from the *Iambi*. It proves that the work was in the choliambic or scazon metre and may come from a diatribe against luxury. An attempt has been made (by A. D. Knox, *The First Greek Anthologist*, 1922) to claim Cercidas as the editor of an anthology of moralizing verse preserved in several papyri, and possibly the author of some of the pieces written in scazons. But his best-known work was his *Meliambi*, i.e. poems lyrical in form, but satiric in content. Substantial remains, preserved in *POxy.* 1082, show that Cercidas was a skilful and original metrist and a keen critic of social conditions in his day. Though a member of the property-owning class, he makes himself in these poems the mouthpiece of the poor and oppressed, and attacking the cult of

wealth and its attendant vices exhorts his fellows to mend their ways while there is yet time. In his use of verse to inculcate the Cynic view of life and in his mixture of the earnest and the jesting Cercidas was clearly influenced by Crates (2) of Thebes, whose example was followed about the same time by Menippus (1) of Gadara (qq.v.); but his opinions seem to have been formed chiefly by the example of the sect's founder, Diogenes, to whom he pays a glowing tribute (fr. 1), and by the teaching of Bion (q.v. 1) the Borysthenite. The so-called 'Diatribe Style', of which Bion is the reputed founder, finds frequent illustration in Cercidas' verse, but he combines with it other features, such as new and lengthy compounds, which derive rather from the dithyramb, Old Comedy, and Timon of Phlius. His skilful use of citations from Homer, of whose poetry he is said to be a warm admirer, and from Euripides is in the Cynic vein. The language of the *Meliambi* is a literary Doric which avoids local peculiarities and pedantic consistency. See also IAMBIC POETRY, GREEK.

E. A. B.

CERCOPS OF MILETUS (? 6th c. B.C.), epic poet, to whom (or to Hesiod) is ascribed the *Aegimius* (on the Dorian hero Aegimius who fought against the Lapithae).

EGF 82-5.

CERES, an ancient Italian corn-goddess, commonly identified in antiquity with Demeter (q.v.). Her name (Oscan *Kerri-*, see the 'Curse of Vibia', Conway 130, 1) suggests that of Cerus ('in carmine Saliari Cerus manus intellegitur creator bonus', Festus, 109, 7 Lindsay), but in cult she is found associated not with him but with Tellus (q.v.) Mater. This is shown by the juxtaposition of their festivals (Fordicidia, to Tellus, 15 Apr.; Cerialia, 19 Apr.) and the fact that the *feriae sementinae* are celebrated in January in honour of both (*Ov. Fast.* 1. 657 ff., on which cf. Frazer). The occurrence of the Cerialia on the calendars and the existence of a *flamen Cerialis* testify to the antiquity of Ceres' cult at Rome, but her whole early history is extremely obscure, particularly her relations, if any, with non-Italian (Greek) deities; see, for some ingenious conjectures, Altheim, *Terra Mater* (1931), 108 ff. One of the many difficulties is to determine whether the rite of swinging attested by 'Probus' on Verg. *G.* 1. 385-9 as used at the *feriae sementinae* is really, as he says, borrowed from the Attic αἰώπα (see ERIGONE) or an independent development. Another is the question whether the long list of minor deities invoked by the officiant on the same occasion (Servius on *G.* 1. 21) arises out of genuinely early ideas or is a relatively late priestly elaboration (see Rose, *JRS* 1913, 233 ff.).

There is, however, no doubt that Ceres' most famous cult, that on the Aventine (introduced 493 B.C.), is largely under Greek influence. She is there worshipped with Liber and Libera, the triad apparently representing the Eleusinian group of Demeter, Kore, and Iacchus (but see Altheim, op. cit. 15 ff.). The temple became a centre of plebeian activities, was supervised by the plebeian *aediles Cereris*, and was connected with the *Iudi Cerialis* which became a prominent feature of the Cerialia. To this Greek cult belongs also, no doubt, the annual festival conducted by the women in August, called Greek and an initiation by Cicero (*Leg.* 2. 21); also probably Ceres' occasional association with the underworld (as in the 'Curse of Vibia', above), the purely Roman goddess in

this connexion being Tellus (as Livy 8. 6. 10). *See also* **MUNDUS**.

WISROWA, *RK* 191 ff., 297 ff.; F. Altheim, *A History of Roman Religion*, passim; K. Latte, *RR* 71, 101, 161; H. Le Bonniec, *Le Culte de Cérès à Rome* (1958). Ceres' temple in Rome: Nash, *Pict. Dict. Rome* 1. 227 ff. H. J. R.

CERIALIS CAESIIUS RUFUS, QUINTUS PETILLIUS (*PW* 8) (*cos. suff.* A.D. 70, *cos. II suff.* 74), a relative of Vespasian, likewise perhaps Sabine by origin. Legate of Legio IX Hispana in Britain, he suffered a serious defeat in the revolt of Boudicca (61). With the Flavian forces at the capture of Rome, he was sent to restore order in Gaul and the Rhineland. He won a battle at Rigodulum, captured the city of the Treveri, and then proceeded to deal with Civilis and Classicus: after confused fighting the latter capitulated (towards the end of 70). Tacitus invents for him a notable oration in defence of the Roman rule in Gaul (*Hist.* 4. 73 f.). Cerialis was next appointed legate of Britain (71-4), in which command he shattered the power of the Brigantes and made extensive conquests in northern England (cf. Tac. *Agr.* 17). Nothing more is heard of him after his second consulship. The family ends with his son (*cos. II ord.* 83).

Syme, *Tacitus*, 175; 452 f.

R. S.

CERSOBLEPTES (or **CERSEBLEPTES**, *IG.* ii. 65 b), the Odrysian king (*see* **THRACE**), son of Cotys I. Cersobleptes found himself, when he came to the throne in 360 B.C., engaged in a war, which he had inherited from his father, with Athens, and with two pretenders to the throne, Berisades and Amadocus. Charidemus (q.v.), the Athenian general, married Cersobleptes' sister, and continued to advise him, as he had done his father. In 359 B.C. the Athenian commander, Cephisodotus, was forced to make a treaty with Cersobleptes, which the Athenians repudiated. In the following year, Berisades and Amadocus joined forces, and, with Athenian help, forced Cersobleptes to sign a treaty dividing the kingdom of Cotys between the three princes, the Chersonese (q.v. 1) being ceded to Athens; Cersobleptes' share seems to have been the eastern part, Cypsela, Cardia, and the Propontis. Charidemus, however, persuaded Cersobleptes to renounce the treaty, and it was not till 357 that he was forced by the Athenian commander, Chares (q.v. 1), to surrender the Chersonese, and agree to the partition of Thrace. In the following years Philip II (q.v.) of Macedonia proposed an alliance with Cersobleptes for the expulsion of the Athenians from the Chersonese, but nothing came of it. Meanwhile, through the agency of Charidemus, Athens secured Cersobleptes' goodwill, while his rival Amadocus (Berisades was now dead) turned to Philip. Philip invaded Thrace, and it was only his severe illness that prevented its subjection. In the peace of 346 B.C. between Athens and Philip, Cersobleptes was not included. 342 B.C. saw the last war between Philip and Cersobleptes, and in that year or the next the Odrysian kingdom passed into the control of Macedonia.

Demosthenes, 23; Head, *Hist. Num.* 257, 284; A. Hocke, 'Das Odrysenreich in Thracien', *Hermes* 1891, 76 ff. J. M. R. C.

CERTAMEN HOMERI ET HESIODI, ἀγὼν Ὁμήρου καὶ Ἡσιόδου, abbreviation of περὶ Ὁμήρου καὶ Ἡσιόδου καὶ τοῦ γένους καὶ ἀγῶνος αὐτῶν, title of an anonymous treatise preserved in a Florence MS. It is a joint life of Homer and Hesiod, written round an account of a contest between them supposed to have taken place at Chalcis (the circumstances inspired by Hes. *Op.* 650-60). Hesiod is adjudged victor, despite the crowd's acclamation of Homer, after each has recited 'the best' part of his poetry: the passages are chosen to show Homer as the poet of war, Hesiod as the poet of peace (cf. Ar. *Ran.* 1033-6). The

story is familiar to Varro and later writers, ignored in the Lives of Homer. The treatise as we have it dates from the Antonine period, but much of it was taken bodily from an earlier source (it agrees closely with a papyrus fragment of the third century A.C., P. Lit. Lond. 191), thought to be the *Μοῦσείον* of Alcidas (q.v.), to which Stobaeus 4. 52. 22 ascribes two verses found in the *Certamen* (78-9), and which contained accounts of the deaths of Hesiod (cited in *Cert.* 240) and Homer (P. Michigan 2754, agreeing closely with the end of *Cert.*, but followed by what appears to be a transition to a new section). Some of the verses were current before this (78-9 = Theog. 425, 427; 107-8 = Ar. *Pax* 1282-3), and the contest of verses and riddles represents an early form (Rohde, *Kl. Schr.* (1901), i. 103 f.); but it is not known whether Homer and Hesiod were matched before Alcidas.

A fragment ascribed to Hesiod (357 M.-W.) referring to an earlier contest with Homer in Delos is of uncertain origin and date.

TEXT. O.C.T. *Homeri opera* (1911 20), v. 218 ff. (Allen), U. von Wilamowitz-Moellendorf, *Vitae Homeri et Hesiodi* (1916), 34 ff.; A. Colonna, *Hesiodi Opera et Dies* (1959), 71 ff.

CRITICISM. T. W. Allen, *Homer, the Origins and the Transmission* (1924), 20 ff.; E. Vogt, *Rh. Mus.* 1959, 193 ff.; K. Fleiss, *Der Agon zwischen Homer und Hesiod* (1960); M. L. West, *CQ* 1967, 433 ff. M. L. W.

CESTIUS (1, *PW* 7) **EPULO**, GAIUS, from a rich family which had recently entered public life, held the tribunate and praetorship, was *septemvir epulonum* (*see* **EPULONES**), died before 12 B.C., naming Agrippa as one of his heirs, and was buried in the large pyramidal tomb still to be seen in Rome by the Porta S. Paolo.

ILS 917 (his epitaph); Platner-Ashby, *Topog. Dict.* 478, Nash, *Pict. Dict. Rome* ii. 321 ff. T. J. C.

CESTIUS (2, *PW* 13) **PIUS**, LUCIUS, Augustan rhetor, a Greek from Smyrna; a popular teacher distinguished for his conceit, his outspoken wit, and his dislike of Cicero, to several of whose speeches he wrote answers.

Sen. *Controv.* 3 *praef.* 15-16; *Stas.* 7, 3. Schanz-Horsus, § 336, 8.

CESTIUS (3, *PW* 9) **GALLUS**, GAIUS, son of a consul and himself *cos. suff.* A.D. 42, was legate of Syria from 63 (or 65) to 67. In 66 he marched into Palestine to restore calm, but failed to occupy Jerusalem and on his withdrawal was defeated at Beth-horon. He died in 67.

A. M.

CETHĒGUS, PUBLIUS CORNELIUS (*PW* 97), of patrician (but not distinguished) family, fled with Marius in 88 B.C., returned with him in 87 and stayed in Rome. He then joined Sulla and took an active part in the proscriptions. During the next few years, though he held no high office, his knowledge of procedure and skill at intrigue gave him power equal to that of consuls. Antonius (q.v. 2) and the Luculli (qq.v. 2 and 3) obtained their commands by cultivating him and his mistress.

E. B.

CEYX, in mythology, (1) king of Trachis, friend of Heracles, and father-in-law of Cycnus son of Ares ([Hesiod], *Sc.* 354 ff.). (2) Son of the Morning Star; husband of Alcyone daughter of Aeolus (1) or (2). He and his wife were turned into the birds which bear their names (*see* Sir D'A. W. Thompson, *Glossary of Greek Birds* (1936), s.vv.) as punishment for calling themselves Zeus and Hera (Apollod. 1. 52); or, he was drowned and she, finding his body, leaped into the sea and both were changed by the pity of the gods (Ov. *Met.* 11. 410 ff.). H. J. R.

CHABRIAS (c. 420–357/6 B.C.) of Athens, a professional soldier who for over thirty years was frequently engaged in warfare for Athens (being a general at least thirteen times) and for the kings of Cyprus and Egypt in revolt from Persia. His greatest achievements were the defence of Boeotia in 378, during which he invented a useful method of defence against hoplites, the decisive naval victory over Sparta near Naxos in 376, and the extension of the Second Athenian League. After 370 he fought in the Peloponnese, and his fortunes seem to be linked to those of Callistratus (q.v. 2), with whom he was prosecuted by Leodamas, the *βοιωπιάρχων*, in 366; like Callistratus he was restored to power shortly before the battle of Mantinea, and, when soon afterwards Callistratus was in exile, Chabrias was with Agesilaus (q.v.) in Egypt supporting King Tachos. After further campaigning as general for Athens in the Hellespont, he died, out of office, fighting gallantly for Athens at the battle of Chios in 357/6.

Nepos, *Chabrias*; Xer., *Hell.* 5. 1 ff.; Diod., 15. 29 ff.; Dem. 20. 75 ff. H. W. Parke, *Greek Mercenary Soldiers* (1933). G. L. C.

CHAEREMON (1), tragic poet of about the middle of the fourth century B.C., wrote a *Centaur* which Aristotle (*Poet.* 1) calls 'a rhapsody in which all metres were mixed'. ('Metres' probably do not include lyric metres.) The term 'rhapsody' may imply some affinity to epic poetry, but Athenaeus (608 c) called it a drama; his plays were better adapted for reading than for performance (*Arist. Rh.* 3. 12) and indulged in far-fetched and artificial metaphors, some of which might almost be parodies of the style of Aeschylus, though others are picturesque. Athenaeus' description of him (13, 608 d) as 'especially fond of flowers' is supported by several fragments in which they are mentioned, and a passage from the *Oeneis* shows some descriptive power and feeling for beauty of colour. A few epigrammatic and even cynical lines also survive.

TGF 781–92.

A W P-C.

CHAEREMON (2) of Alexandria, a Stoic, and Egyptian priest, teacher of the young Nero, wrote, *inter alia*, on Egyptian history and grammar (*Σύνδεσμοι παραπληρωματικοί*). Not extant.

FGH 618.

CHAEREPHON, of Sphettus in Attica, an enthusiastic disciple of Socrates. He was banished by the Thirty Tyrants and returned with Thrasybulus in 403, but died before the trial of Socrates in 399. He is best known as having drawn from the Delphic oracle the saying that Socrates was the wisest of men; the story is related both by Plato and by Xenophon, and there is no reason to doubt its truth. The *Suda* refers to works of Chaerephon, but these were early lost.

W D R.

CHAERIS, a pupil of Aristarchus, whose text of Homer he defended, wrote also a commentary on Pindar and Aristophanes, and a *Τέχνη γραμματική*, all lost.

CHAERONEA (*Χαιρώνεια*), in the Cephissus valley, was the northernmost town of Boeotia. It was subject to Orchomenus in the fifth century. It owes its fame to its position on the through-route from northern Greece, and to the defeat of the Athenians and Thebans by Philip in 338 B.C., which is commemorated by a colossal stone lion now restored and re-erected. In 86 Sulla won a decisive victory there over Mithridates' armies. Plutarch was born and lived at Chaeronea, and kept alive its customs.

N. G. L. Hammond, 'The two battles of Chaeronea', *Klio* 1938, 136 ff.; G. Soteriades, *Ath. Mitt.* 1903, 301 ff.; 1905, 113 ff., P-K, GL 1. ii 430 ff.

T. J. D.

CHALCEDON, Megarian colony on the Asiatic side of the Bosphorus opposite Byzantium (modern *Kadıköy*). Cults and institutions confirm its Megarian origin. Traditionally founded (Eusebius) 685 B.C. Known archaeologically from inscriptions, coins, and chance finds, but no excavation to date. Called the 'city of the blind' (cf. Hdt. 4. 144) because its founders missed the then uncolonized site of Byzantium, with which city its history throughout antiquity was closely linked. A. J. G.

CHALCIDICE, the triple peninsula projecting from Macedonia, was inhabited originally by the Sithonians (Strabo 7, fr. 10), a branch of Edonian Thracians. Their name survived in 'Sithonia', the central promontory between the western 'Pallene' and the eastern 'Acte'. By the early seventh century the Bottiaei, displaced by the Argæad Macedonians from the plain west of the Thermaic Gulf, 'Bottiaea' or 'Emathia', occupied the north-west portion of the peninsula, thereafter known as Bottice. The first Greek colonists from Chalcis in the eighth century dispossessed the Sithonians and founded around thirty settlements, giving the name 'Chalcidice' to the entire peninsula. Eretria founded colonies, e.g., at Dicaea and Neapolis; Andros at Sane, Acanthus, and Stagirus; and Corinth at Potidaea (q.v.) on the narrow isthmus of Pallene around 600 B.C.

Followers perforce of Xerxes, the cities joined the Delian League and became subjects of imperial Athens. Revolting in 432/1 they established a common capital at the former Bottic town Olynthus (q.v.), thus inaugurating *οἱ Χαλκιδεῖς* or the 'Chalcidic Confederacy', which became a most interesting specimen of ancient federalism. The member cities shared a common citizenship and common laws (Xen. *Hell.* 5. 2. 12); the confederacy struck a magnificent silver coinage, circulating especially in the Balkans and copied there by barbarian mints. In the 380s it extended its control to the north-west, depriving Macedonia of Anthemus and its capital Pella. But at the request of Acanthus and other States Sparta intervened in 382 and forced the confederacy to capitulate in 379 and become subordinate allies (Xen. *Hell.* 5. 3. 26). The Chalcidians soon joined the Second Athenian League (Tod, no. 123), but the creation of an Athenian cleruchy at Potidaea (c. 362) and other signs of Athenian ambition led to an unwise alliance in 356 with the Macedonian king Philip II (Tod, no. 158), who *more suo* cynically ceded to the Chalcidians Anthemus and Potidaea. The sequel was war in early 349. Aid from Athens was ineffective, and the capital Olynthus, taken by means of treachery, was destroyed in 348. Thus ended a remarkable experiment in federal government.

Ancient authors (e.g. Demosth. 9. 26) seem definitely to exaggerate the number of Chalcidic cities destroyed by Philip. Olynthus, resited or refounded, possibly by King Cassander (316–298), continued to exist as an important city throughout the Hellenistic period, as did Acanthus, Torone, Aphytis, and others. Land grants in Bottice were given by the kings to Macedonian nobles (Ditt. *Syll.* 332), and new cities were founded by them, notably Cassandrea, created by Cassander in 316 on the site of the former Potidaea, which seems to have been the most important single city of Macedonia down to the Roman conquest. Antigonus II Gonatas founded Antigonea 'the Sandy' on the Bottic coast of the Thermaic Gulf and in all likelihood Stratonicea, probably the successor to Uranopolis, the curious creation of Cassander's eccentric brother Alexarchus. In 348–168 Chalcidice seems to have held a special place within the Macedonian realm, for the inscriptions reveal no instance of a citizen of any city in the peninsula being designated as a Macedonian.

Around 43 B.C. Q. Hortensius Hortalus, the proconsul

of Macedonia, founded a colony of Roman citizens at Cassandrea, which did not, however, displace the older Greek city. By the reign of Augustus a *conventus* of Roman citizens existed at Acanthus. In A.D. 268 Cassandrea successfully withstood a Gothic assault.

D. W. Bradeen, 'The Chalcidians in Thrace', *AJPhil.* 1952, 356 ff.; J. M. F. May, *The Coinage of Damastion* (1939); D. M. Robinson and P. A. Clement, *The Chalcidic Mint* (U.S.A. 1938); A. B. West, *The History of the Chalcidic League* (U.S.A. 1919); J. A. O. Larsen, *Greek Federal States* (1968), 58 ff. C. F. E.

C(H)ALCIDIOUS (Calcidius is more correct), 4th c. A.D., Christian translator and commentator on Plato's *Timaeus* (to 53 c only), using earlier Neoplatonic and Peripatetic exegetes, especially Adrastus, Gaius, Numenius, and Porphyry (q.v.). He dedicated his work to Hosius, according to MS. tradition the bishop of Corduba (d. 358), prominent under Constantine, but perhaps (since Macrobius and Isidore of Seville were ignorant of Calcidius) a high Milanese official of c. 395 whose epitaph survives. The *Timaeus* was read in Latin in his crabbed version throughout the Middle Ages.

Fd. J. H. Waszink (1962). Waszink, *Studien zum Timaioskommentar des Calcidius* (1964). Epitaph: F. Diehl, *Inscriptiones Latinae Christianae Veteres* (Berlin, 1925-31), 83. H. C.

CHALCIS, the chief city of Euboea (q.v.), commanding the narrowest part of the Euripus channel. In the eighth century B.C. Chalcis, with its neighbour Eretria (q.v.), planted colonies in Italy and Sicily, and may already have led Greek settlement at the trading-post, Al Mina, in Syria. In the later eighth century she disputed with Eretria possession of the Lelantine plain, which lay between them. In the seventh century colonies were sent to the north Aegean shores. It was a great manufacturing and trading city, famous for its metal-work. In 506 it was compelled to cede part of its plain to Athenian cleruchs. The city made common cause, however, with Athens during the invasion of Xerxes. She led a revolt of Euboea against Athens (446), but was defeated and became a tributary ally until 411. A member of the Second Athenian League, from 350 she was a focus of Macedonian intrigues until 338, when, by imposing a Macedonian garrison, Philip II created here one of the three 'fettors' or 'keys' of Greece. The city was a great trade-centre of Hellenistic Greece, but was involved in the Macedonian and Syrian wars against Rome. For its participation in the Achaean Confederacy's struggle against Rome, Chalcis was partly destroyed (146); sixty years later it served as a base for the Pontic general Archelaus.

Strabo 10 445-8, *IG XII* (9) 106 ff. W. A. L.; J. B.

CHALDAEAN ORACLES, a poem in Greek hexameter verse, allegedly based on divine revelations, edited or composed by Julianus 'the Chaldaean', who lived under Marcus Aurelius. By the later Neoplatonists, from Porphyry to Psellos, it was regarded as a sacred book; upwards of 300 lines from it have been preserved by them. Its doctrine is an amalgam of Greek philosophical speculation (Platonist or Neopythagorean) with elements derived from several different oriental cults; it also taught the magico-religious practice of theurgy, which became, in Lewy's words, 'the last form of pagan religion'. Porphyry, Iamblichus, and Proclus are all said to have written commentaries on it.

FRAGMENTS. W. Kroll, *de oraculis Chaldaicis* (1894, repr. 1962), supplemented by J. Ilietz, *Cat. des MSS alchimiques grecs vi* and *Mélanges Cumont* (1936), 95 ff.

DISCUSSION. H. Lewy, *Chaldaean Oracles and Theurgy* (Cairo, 1956; includes additional fragments, of disputable ascription); S. Etrem, *Symb.* Oslo. 1942, 49 ff.; E. R. Dodds, *JRS* 1947, 55 ff. and *Harv. Theol. Rev.* 1961, 263 ff. E. R. D.

CHALYBES, a people of the south-east coast of the Euxine, famed in Greek legend as the first workers of

iron, which from early times they sent southward across Asia Minor and westward to the Aegean. Geographical sources locate them at various points from Paphlagonia to Colchis. Xenophon and Strabo appear to place them among the mountain tribes south of Trapezus, but both also mention other Chalybes near Cerasus who worked iron mines. The region is rich in iron and other minerals.

Magie, *Rom. Rule Asia Min.* 179.

T. R. S. B.

CHAMAELEON of Heraclea Pontica (c. 350-after 281), Peripatetic writer; almost no biographical details exist. Chamaeleon wrote works on satyric drama and comedy, and studies of a number of early poets, probably including Sophocles and Euripides, deducing biographical data from their works and references to them in comedy. These works, which were anecdotal and uncritical, are often cited by Athenaeus. His philosophical writings, *Προτρεπτικός*, *Περὶ μέθης*, *Περὶ ἡδονῆς* (this last attributed to Theophrastus *Περὶ θεῶν*), closely followed the Aristotelian tradition.

G. Scorza, *Riv. Indo-Greco-Italica* 1934, F. Wehrh, *Phainias von Eresos, Chamaeleon, Praxiphanes* (1957) F. W. W.

CHAONES, name of a tribal state (*ἡ πόλις ἡ τῶν Χαόνων*) in North Epirus which extended from the Dexari, probably near Berat (*FGRII* 1 F 103), to the river Kalamas (ancient Thyamis) in the sixth century but was eaten into later by the Illyrians and the Thesprotians. The royal house claimed descent from Helenus of Troy, and in 429 B.C. its representatives commanded the army under an annual *prostataia*; the capital was probably at Phoenice. As a part of the Epirote Alliance and then of the Epirote Confederacy the Chaonian State shared the history of Epirus until 170 B.C., when the Chaones and the Thesproti joined Rome and survived under the Roman settlement.

L. M. Ugolini, *Albania antica* 2 (1932), *Praktika* 1952, 279; Hammond, *Epirus*. N. G. L. 11

CHAOS. 'The very first of all Chaos came into being', says Hesiod (*Theog.* 116); it is noteworthy that he implies by the verb (*γένετο*, not *ἦν*) that it did not exist from everlasting. What it was like he does not say; the name clearly means 'gaping void'. Later, presumably influenced by the *ἁμῶς πάντα* of Anaxagoras (q.v.), it is described (*Ov. Met.* 1. 5 ff.) as a mixture of the 'seeds' (*semina*) or potentialities of all kinds of matter. H. J. R.

CHARAX of Pergamum, living probably late in the period between Nero and the 6th c. A.D., published a World History in forty books, the *Ἑλληνικά* including at least ten books on Greek saga in Euhemeristic and allegorical fashion; Roman history began in book 12, with a second *syn taxis* for the Empire. He also wrote *Χρονικά*. *FGRII* n. A. 482, C. 312. A. H. McD.

CHARES (1) (c. 400-c. 325), famous Athenian soldier, probably more often general than any other Athenian of the fourth century save Phocion (q.v.), notorious for his treatment of the allies of the Second Athenian League: Isocrates' speech *de Pace* was directed at him especially (*Ar. Rhet.* 1418^a32). He operated largely in the northern Aegean partly against Cersobleptes (q.v.) and the Chersonese (q.v. 1), in 352 winning back Sestos (q.v.), and partly against Philip (q.v. 1), notably at Olynthus and Byzantium (qq.v.). His troops were generally mercenaries, for whose payment he was largely left to provide himself. During the Social War (357-355) he was obliged to hire the services of his mercenaries to the rebellious satrap, Artabazus (q.v.) and won a great victory, 'sister to Marathon' as he claimed (*Schol. ad Dem.* 4. 19), but this precipitated the Persian ultimatum which abruptly ended the Social War. Chares fought in the campaign of

Chaeronea, and was one of those whose surrender was at first demanded by Alexander in 335. Shortly after, he retired to Sigeum and held command in Mytilene during the Persian offensive in the Aegean in 333 and 332. He was with the mercenaries at Taenarum in the mid 320s, but died before 324/3.

H. W. Parke, *Greek Mercenary Soldiers* (1933).

G. I. C.

CHARES (2), of Mytilene, Alexander's chamberlain, wrote a history or memoir of him in at least ten books (*Historiai peri Alexandron*) such as a chamberlain would write, full of court ceremonial and personal gossip; but he probably witnessed the attempt to introduce *proskynesis* (prostration as a sign of obeisance), which he described.

See ALEXANDER (3), Bibliography, Ancient Sources, and Pearson, *Last Histories of Alexander*, 50 ff.

W. W. T.

CHARES (3), a writer of *Γνώμαι*, from which over fifty lines are preserved, in a mutilated state, in a papyrus of the early third century B.C.

Powell and Barber, *New Chapters* i. 18.

CHARIDEMUS (4th c. B.C.), Euboean mercenary leader. He fought alternately for the Athenians, whose citizenship he gained, and for their enemy, the Thracian king Cotys (c. 360 B.C.). Having joined the satraps' revolt (362), he again went to Cotys, and after his murder he supported Cotys' young son Cersobleptes, whose sister he married. He was, however, highly honoured by Athens for helping to restore the Chersonesus to Chares. Thereafter as an Athenian general he fought against Philip of Macedon, and became bitterly anti-Macedonian. After the suppression of the Theban revolt in 335, Alexander pardoned the demagogues, but insisted on the surrender of Charidemus. He escaped and entered Persian service. He is said to have been executed by Darius for his outspokenness (333).

H. W. Parke, *Greek Mercenary Soldiers* (1933).

V. E.

CHARISISUS, FLAVIUS SOSPATER (late 4th c. A.D.), African grammarian. His *Ars grammatica* is a compilation and alongside of elementary material contains sections copied from learned sources which he names (e.g. Remmius Palaemon, Julius Romanus) and from which he took citations of Ennius, Lucilius, Cato, etc. It is to these borrowings that his work owes its value. Of the original five books, the first lacks its introduction, the fourth (dealing with style and metre) has gaps, and the fifth has to be pieced together from various sources. H. Keil's edition (*Gramm. Lat.* i. 1-296; 534-65) is superseded by that of K. Barwick (1925).

Schanz-Hosius, § 831.

J. T. M.

CHARITES, goddesses personifying charm, grace, and beauty. Like the Nymphs and the Horae, the Charites are originally indefinite in number and stand for the joy and beauty produced by the blessings of fertile nature and by other things that evoke spontaneous emotion of pleasure. They make roses grow (Anacr. 44. 1. Bergk), they have myrtles and roses as attributes, and the flowers of spring belong to them (*Cypria* ap. Ath. 15. 682 e). Their varying names bespeak their qualities: *Thaleia*, the Flowering; *Auxo*, the Grower; *Kale*, the Beautiful; *Euphrosyne*, Joy; *Aglaiä*, the Radiant, etc. In their further development they reflect the development of the truly Greek notion of *charis*. As representatives of beauty and grace they are naturally connected in mythology with Aphrodite (Paus. 6. 24. 7), but they are also present at all divine and human celebrations where Olympian joy prevails. They bestow their qualities of beauty and charm, on the one hand physical (*Anth. Pal.* 7. 600), on the other intellectual, artistic, and moral ('wisdom, beauty, and glory' Pind. *Ol.* 14. 6). In the Hellenistic poet

Hermesianax, *Peitho* (q.v.), Persuasion, becomes one of the Charites. Charites are fond of poetry, singing, and dance (Hes. *Th.* 64; Theog. 15) and perform at the wedding of Peleus and Thetis. *χάρις* is, however, not only grace but also favour and gratitude for favour. In Athens, statues of benefactors and decrees in their honour were placed in the precinct of Demos and Charites (W. S. Ferguson, *Hellenistic Athens*, 212, 238), and Aristotle says that 'the sanctuary of the Charites is placed in a prominent position' so that those seeing it may be reminded to requite one another's benefits (*ἀνταπόδοις*, sc. *χάρμις*, *Eth. Nic.* 5. 1133⁴³).

Charites are always daughters of Zeus, but their mothers vary. From Hesiod on (*Th.* 907) their usual number is three. They play secondary parts in many myths and are connected with many divinities. Their most important cults were in Orchomenus, Paphos, Athens, and Sparta (Paus. 9. 35). Statues of Charites, shown as draped female figures, were seen in many archaic and classical sanctuaries. The type of three nude Charites, known throughout countless Roman copies, may go back to a famous Hellenistic painting. The Charites were Latinized as *Gratiae*.

S. Gsell, in *Dar. Sag.*, s.v. 'Gratiae' G. Rodenwaldt, *JRS* 1918, 60; E. Paulsen, *Bolet. d'Art* 1951, 105; R. Pfeiffer, *JW* 1 1952, 20; K. Marot, *Musen, Sirenen und Charites* (1958); F. Rosado, *O tema das Graças na poesia clássica* (1962).

G. M. A. H.

CHARITON, Greek romancer, author of a novel in eight books entitled *Chaereas and Callirhoe* (*Τὰ περὶ Χαίρεως καὶ Καλλιρόης*), mentions his name and describes himself, at the beginning of his work, as a native of Aphrodisias and secretary to the orator Athenagoras. The name of the author and that of his birthplace have been suspected of being allegorical; the name of his employer has also come under suspicion, Athenagoras being the famous enemy of one of the novel's characters, Hermocrates. However, inscriptional evidence for the names Chariton and Athenagoras at Aphrodisias in Caria has been offered by Rohde. Papyrus fragments date Chariton not later than the second century A.D. (thus confirming Schmid's arguments): the presence in the novel of a genuine historical character (Hermocrates), the author's accuracy in avoiding hiatus, and the absence of *aphelia* apparent in his style, confirm Chariton's position as the earliest extant (instead of the latest, as was previously believed by most scholars) Greek romancer.

The story is that Chaereas and Callirhoe were married at Syracuse: soon after the marriage Chaereas, in a fit of jealousy, kicks his wife so severely that she is taken for dead. The desperate husband buries his wife, but tomb-robbers find her alive, take her to Miletus, and sell her as a slave. Chaereas is apprised of Callirhoe's abduction, and, in the course of his search for her, is himself captured and enslaved. After innumerable adventures, in which the exceedingly beautiful Callirhoe virtuously resisted the advances of numerous suitors, including no less a person than the king of Persia, the couple are at last reunited and return to Syracuse, where they lived happily ever after.

The traditional elements of the genre (apparent deaths, voyages, pirates, enslavements, shipwrecks, happy ending) are all present: the plot, in spite of its complicated nature, is narrated, without irrelevant digressions, with a great clarity (the novel has been described by Reitzenstein as a drama neatly divided in five acts) to which there corresponds a much less rhetorical style than that of the other romancers (Chariton strove to imitate, in particular, the Attic historians Thucydides and Xenophon).

EDITIO PRINCEPS. Villoison (Amsterdam, 1750)

STANDARD EDITION. W. E. Blake (1938).

ENGLISH TRANSLATION. W. E. Blake (1939).

COMMENTARY. D'Orville (Amsterdam, 1750; Leipzig, 1783², with notes by Reiske and others).

CRITICISM W. Schmid, *PW*, s.v. Chariton (important for style); Rohde, *Griech. Roman* 517 ff.; Christ-Schmid Stählin II. 2^a, 808 ff.; A. Lesky, *Gesch. d. griech. Litt.* (1963), 918 ff.; J. Jakob, *Studien zu Chariton dem Eritiker* (Prag: Aschaffenburg, 1903); W. E. Blake, 'Modal Usages in Chariton', *AJP* 1936, 10 ff.; J. E. Calderini, *Le avventure di Chere e Calliroe* (1913 with important *Prolegomena*). C. G.

CHARMADAS (fl. c. 107 B.C.), member of the New Academy and pupil of Carneades. Sextus Empiricus describes him as having founded, with Philon of Larissa, the Fourth Academy. We learn from Cicero that he attacked the ordinary schools of rhetoric as Plato had done in the *Phaedrus*. W. D. R.

CHARMIDES (d. 403 B.C.), an Athenian of noble family, nephew and ward of Critias, uncle of Plato, and member of the Socratic circle. He is mentioned in *Pl. Symp.* 222 b, *Prt.* 315 a, *Xen. Mem.* 3. 6. 1, 7. 1-9, and plays a large part in the Platonic dialogue that bears his name. According to *Xen. (Mem.* 3. 7) he was encouraged by Socrates to take up political life. He assisted Critias in the oligarchic revolution of 404 and fell with him in battle in 403, when the democrats returned under Thrasybulus. W. D. R.

CHARON (1), in Greek mythology, the aged ferryman in Hades who for an obolus conveyed the shades of the dead across the rivers of the lower world. As a fee for Charon the Greeks used to put a coin into the mouth of the dead. He is first mentioned in the *Minyad* and by Aeschylus (*Sept.* 842) and introduced by Aristophanes in the *Ranae* (183). In art he is first seen on a terra-cotta of the sixth century B.C. He was painted by Polygnotus in Delphi (Paus. 10. 28. 1) and is often shown on white-ground *lecythi*. The Etruscans knew a demon *Charun* who is perhaps a hellenized native hammer-god. Virgil's famous description of Charon (*Aen.* 6. 298-315) embodies some Etruscan features.

F. de Ruyt, *Charon* (1934); F. Sullivan, *CJ* 1950, 11; G. van Hoorn, *Mel. Hypanck* (1954), 141; H. Borza, *Orbis* 1955, 134; A. van Windekens, *BN* 1958, 161. G. M. A. II.

CHARON (2) of Lampsacus is called a predecessor of Herodotus (*Plut. De malign. H.* 859 b; *Tert. De Anima* 46; *Dion. Hal. Thuc.* 5; *Pomp.* 3. 7). He is listed in the *Suda* as 'born under Darius I' and as author of *Aethiopica*, *Persica*, *Hellenica*, *On Lampsacus*, *Chronicles* (*Ἱστορίαι*) of the *Lampsacenes*, *Ἱστορίαι ἢ ἀρχαῖες τῶν Λακεδαιμονίων* (*ἔστι δὲ χρονικά*), *Κρίσις πόλεων*, *Cretica*, and a *Periplus of the area outside the Pillars of Hercules*. This list, if correct, suggests a later date for Charon, since even Thucydides shows no knowledge of a chronological work based on Spartan magistrates; but there are no fragments from this work, nor from the *Hellenica* (cf. *Thuc.* 1. 97). Only *Ἱστορίαι* and *Persica* are cited by name, and the few surviving fragments can all be assigned to these works. The verbal quotations seem to indicate a less detailed treatment of historical incidents than in Herodotus, a similar interest in anecdote and romance, local legends and tradition, and a more archaic manner of writing. See LOGOGRAPIERS, HELLENICUS.

FHG I. 32-5, IV. 627 B; *FGH* in A, no. 262; F. Jacoby, *Abh. z. gr. Geschichtschreibung* (1956), 178 ff., repr. of *Stud. Ital.* 1918, 207 ff.; L. Pearson, *Early Ionian Historians* (1930), ch. 4; H. Fränkel, *Dicht. u. Philosophie d. frühen Griechentums* (1950), 450 f. L. P.

CHARONDAS, the lawgiver of his native town Catana, and other Chalcidic colonies, especially Rhegium. He is often associated with Zaleucus (q.v.), but he lived later, probably in the sixth century B.C. Aristotle emphasizes the precision of his laws, but he may have included later measures under the name of Charondas. His laws seem

to have embraced almost all departments of life. We do not know whether he established a new constitution, but he certainly was an aristocrat. The tradition in Diodorus is mostly legendary.

Arist. Politics, esp. 1274^a b; Diodorus, 12. 11-19; Adcock, *CHJ* n (1927); Muhl, *Klio*, Beiheft xxn, 1929; G. Vallet, *Rhegium et Zancle* (1958). V. E.

CHAROPS, a pro-Roman leader in Epirus, was educated at Rome; his grandfather, also Charops, had helped Flamininus against Philip V in 198 B.C. During Rome's war against Perseus (q.v. 2) he undermined Rome's trust in his political rivals. Polybius (30. 12) denounced his character in such terms as to suggest that he might have encouraged Rome's devastation of Epirus: thereafter until his death c. 159 B.C. he acted tyrannically in Epirus, but he was not overthrown although he had lost the favour of leading Romans.

H. H. Scullard, *JRS* 1945, 55 ff.; S. I. Oost, *Roman Policy in Epirus* (1954), 72 ff.; Hammond, *Epirus*, 626 ff. II. II S.

CHARYBDIS, a sort of whirlpool or maelstrom in a narrow channel of the sea (later identified with the Straits of Messina, where there is nothing of the kind), opposite Scylla (q.v.; *Od.* 12. 101 ff.); it sucks in and casts out the water three times a day and no ship can possibly live in it. Odysseus, carried towards it by a current when shipwrecked, escapes by clinging to a tree which grows above it and dropping into the water when the wreckage is cast out (432 ff.).

Hence proverbially, a serious danger, as Horace, *Carm.* 1. 27. 19. II. J. R.

CHATTI, a Germanic people, who lived in the neighbourhood of the upper Weser and the Diemel. Although not mentioned by Caesar, they were the most powerful enemies of Rome in western Germany throughout the first century A.D. Overrun by Drusus in 12 B.C., they took part in the revolt of A.D. 9 and were later attacked by Germanicus, who in A.D. 15 burned their town of Mattium (exact site unknown), and by the generals of Claudius and Domitian. They fought a war in A.D. 58 against the Hermunduri for the possession of some salt-beds, took part in the revolt of Civilis (q.v.) in 69-70, and by their constant attacks sapped the strength of the Cherusci (q.v.). Their social and military organization was more highly developed than that of the other Germans: they were disciplined, they obeyed their officers' orders, and they had something like a commissariat. Their nobles took even less part in productive life than those of other Germanic peoples. They are occasionally mentioned later than the time of Tacitus as attacking the Roman Empire, but in the late Roman period we hear practically nothing of them. Their name appears to have survived in that of Hessen.

E. A. Thompson, *The Early Germans* (1965).

E. A. T.

CHAUCI, a Germanic people, living on the North-Sea coast between the mouths of the Ems and the Elbe. Overrun in the Augustan conquest of western Germany, they apparently took no part in the revolt of Arminius (q.v.); but they more than once raided the Gallic coast from the sea during the first century A.D. Little is known of their history; but Tacitus comments on the great numbers of 'the noblest people among the Germans', and Pliny vividly describes the poverty-stricken lives of the coast-dwellers (*HN* 16. 2-4). Their relationship with the Saxons, who lived on that same coast at a later date, is unknown. E. A. T.

CHERSONESUS (1), Thracian, or *Gallipoli*, peninsula. This territory had a double importance in Greek history, as a wheat-growing district which produced a surplus for

export, and more especially because it lay on a main passage between Europe and Asia. It was occupied in the eighth and seventh centuries by settlers from Miletus and other Ionian towns, the chief colonies being Cardia (near the Bulair isthmus) and Sestos (q.v.), at the principal crossing-point of the Dardanelles. It passed into the hands of the Elder Miltiades, probably by arrangement between Pisistratus and the native Thracian population, for whose protection he fortified the Bulair isthmus (c. 560 B.C.). It remained in the possession of his family until 493, when the Younger Miltiades (q.v.), who had held the peninsula as a vassal of King Darius, abandoned it to the Persians. After the Persian Wars it was at once brought into the Delian League by the Athenians, who established colonies at Sestos, Callipolis, and elsewhere (c. 450). After a period of Spartan domination (404-386) the Athenians recovered control, but had some difficulty in keeping out the Thracian dynasts, and in 338 they ceded the peninsula to Philip of Macedon. After passing through the hands of various Hellenistic rulers, most of the Chersonese became a domain of the Pergamene kings (189). In 133 a large part of it was converted into Roman *ager publicus*, and under Augustus into an imperial estate.

S. Casson, *Macedonia, Thrace and Illyria* (1926), 210 ff.; U. Kahrstedt, *Beiträge zur Geschichte der thrakischen Chersones* (1954), M. C.

CHERSONESUS (2), Tauric, or *Crimea*. The main attractions of the Crimea to the Greeks were the fisheries of the Cimmerian Bosphorus (q.v. 2: *Straits of Kerch*), the cornlands of the interior, and the partial protection which its peninsular situation gave against the mainland peoples of Russia. It was colonized by Milesians and other Ionians in the seventh century. The principal settlement was Panticapaeum (q.v.) on the Bosphorus. In 438 most of the Chersonese came under the rule of a dynasty of Thracian stock but of Hellenic culture, under whom it attained great prosperity as a granary of Greece (see SPARTOCIDS).

See bibliography for BOSPORUS (2).

M. C.

CHERSONESUS (3), city of, situated on the Crimean Riviera near *Sevastopol*, in a vine-growing district. This Milesian colony was refounded at some later date by Dorians from Heraclea Pontica. After a long period of independence it sought protection from Mithridates VI against Scythian incursions (c. 115 B.C.), and from his death in 63 B.C. until the third century it remained in the hands of his descendants, who held it as vassals of Rome. Nero provided it with a Roman garrison, and Hadrian gave it further protection by means of a wall across the Crimea. It remained an outpost of Greek civilization until the thirteenth century.

See bibliography for BOSPORUS (2).

M. C.

CHERUSCI, a Germanic people, living around the middle Weser. They are the best known of the Germanic opponents of Rome in the first century A.D. Overrun in the Augustan conquest of western Germany, it was their chieftain Arminius (q.v.) who led the revolt of A.D. 9, which resulted in the destruction of Quinctilius Varus and his army. They successfully defended themselves against Germanicus' punitive expeditions in 15-16, inflicting heavy losses on the Romans. They expelled the tyrant Maroboduus from among the Marcomanni (A.D. 17), and defeated the attempt of Arminius himself to set up a tyranny over them. Thereafter they weakened themselves by their internal struggles which, together with the hostility of the Chatti (q.v.), reduced them to comparative impotence by the time of Tacitus. In later times they are rarely heard of.

CHILDREN. The role of children in the religious life

of antiquity was not inconsiderable, no doubt partly because of their sexual purity (see E. Fehrle, *Die kultische Keuschheit* (1908-10), 112). Hence also in magic the prescription of child-mediums (*PGM* 5. 1; *S.H.A. Did. Iul.* 7. 10; in black magic, child victims, *Hor. Epod.* 5. 12 ff.; *Lucan* 6. 710). In family cult, an unmarried daughter would on occasion sing or lead off the hymn at the beginning of a symposium, when the third libation was poured (*Aesch. Ag.* 243 ff.). In like manner, after a Roman family dinner, one of the children would announce that the portion of food offered to the household gods was acceptable ('*deos propitios*', Servius on *Aen.* 1. 730; more in W. Warde Fowler in Hastings, *ERE* iii. 545). This was readily extended to public cult. Apart from the common occurrence of choirs of boys, girls, or both (Fehrle, loc. cit.), a striking instance is the ceremonial of the *Arrhephoroi* at Athens, wherein little girls, after long preparation, were entrusted with the carrying of very sacred objects from the Acropolis to the temple of Aphrodite in the Gardens (*Paus.* 1. 27. 3, cf. L. Deubner, *Attische Feste* (1932), 9 ff.). Cf. also the ritual at Brauron (see ARTEMIS). That the vestals (q.v.) develop out of the services of young daughters in domestic hearthcult is practically certain. Generally speaking, the presence of a *παῖς ἀμφιβαλὴς*, *puer patrimus et matrimus*, was necessary for all manner of rites, public and private, as diverse as a Roman marriage and the cutting of the olive-garlands at Olympia.

CHILDREN'S SONGS, GREEK. Pollux (9. 123) gives a list of eighteen *παιδιαί*, children's songs often accompanied with some sort of action, and adds details about *χαλκή μυία*, a kind of Blind Man's Buff, *χειλελώνη*, a kind of Prisoner's Base, and (9. 113) *χυτρίνδα*, a kind of Catch. Another such game was *ἀνθεμα* (*Ath.* 629 c).

J. M. Edmonds, *Lyra Graeca* (1952) iii. 536-43, Page, *Poet. Mel.* Gr. 463-7. C. M. B.

CHILON (*Χίλων*), Spartan ephor (556/5 B.C.), was the first 'to yoke the ephors (q.v.) alongside the kings' (*Diog. Laert.* 1. 68), i.e., presumably, to increase their powers in some unrecorded way. As ephor he may have helped to overthrow the tyranny at Sicyon (*PRyl.* 18). He is credited by modern scholars with a momentous change in Sparta's foreign policy which led to the development of the Peloponnesian League (q.v.). Universally accepted as one of the 'Seven Sages' (*Plato, Prt.* 343 a), he was worshipped as a hero at Sparta, but mainly for his political services (*Paus.* 3. 16-4).

V. Ehrenberg, *Neugründer des Staates* (1925), 7-54; G. I. Huxley, *Early Sparta* (1962), 69 ff. and bibliography n. 486. W. G. F.

CHIMAERA, properly 'she-goat'; a triple-bodied monster, 'lion before, serpent behind, she-goat in the middle' (*Il.* 6. 181), of divine race (*Hesiod, Theog.* 319 ff., explains that it was the offspring of Typhon and Echidna) and fire-breathing, slain by Bellerophon (q.v.). In art, the goat is represented by the head and neck of one protruding from the creature's back, as in the famous bronze Chimaera at Florence (*CAH*, vol. i of plates, 336 f.). This is so oddly inorganic as to suggest an early misunderstanding of some kind, and there is much to be said for the theory of Anne Roes (*JHS* 1934, 21 ff.) that originally (in oriental art) it had wings ending in a goat-like head, a type known to exist (*ibid.* 23 and illustrations there).

H. J. R.

CHIONIDES is treated by Aristotle (*Poet.* 1448^a33) as one of the two earliest Attic comic poets, and it is probable that he was the first recorded comic victor at the City Dionysia, in 487 (*Suda* s.v.). Two plays ascribed to him, *Heroes* and *Beggars*, existed in Hellenistic times (*Ath.* [137 e and 638 d] doubts the authenticity of

Beggars) and the *Suda* mentions also the title 'Persians or Assyrians'. See COMEDY, OLD, § 1.

FCG i. 27 ff.; CAF i. 4-7; FAG i. 6 ff.

K. J. D.

CHIOS, a large island lying off the Erythraean peninsula, roughly oblong in shape, but narrowing towards the centre through the broad indentation on the lengthy western side. The mountains of the north give way to fertile plains in the south. Chios was renowned in antiquity for its wine, corn, figs, and gum-mastic. The city of Chios, the focus of political, economic, and cultural life, was founded at the finest harbour of the eastern seaboard, and became highly prosperous. From the time of Homer (whose birthplace it claimed to be) Chios had a distinguished literary tradition, and schools of artists working in stone and metal flourished on the island.

After its occupation by Ionian settlers Chios was a consistent ally of Miletus against Phocaea, Erythrae, and Samos. Incorporated in the Persian Empire under Cyrus, it fought heroically in the Ionian Revolt, and was devastated after Lade. As a member of the Delian League, Chios remained loyal until 413; Athenian efforts to retake the city proved ineffective. It was pro-Athenian during the fourth century B.C. until the Social War (357-355), which resulted in a temporary Carian domination. Its relations with Rome were cordial; in 86 it was sacked by Zenobius, Mithridates' general, the inhabitants being transported to Pontus. Sulla restored them to their homes, and Chios enjoyed the privileges of a free city under the Empire, until these were suspended by Vespasian. See also *NOULE*.

J. M. Cook, *The Greeks in Ionia and the East* (1962); P. Argenti, *Bibliography of Chios from Classical Times to 1916* (1940); D. W. S. Hunt, *B&A* (1940-5), 29 ff.; J. Boardman, *Ant. Journ.* 1959, 170 ff. (on architecture). D. E. W. W.

CHLOË, i.e. 'green', title of Demeter as goddess of the young green crops. She had a shrine near the Acropolis at Athens (Paus. i. 22. 3) and a festival, the Chloia, perhaps on Thargelion 6 (Deubner, *Attische Feste*, 1932, 67).

CHOERILUS (1), an Athenian tragic poet, according to the *Suda* (s.v.) wrote plays from c. 523 B.C. onwards, winning thirteen victories, competed against Aeschylus and Pratinas, and, as some said, made innovations in the tragic mask and costume. Only one of his plays, the *Alope*, is known by name. One or two bold metaphors are quoted from him (*TGF* 719-20). He is probably not the Choerilus described in a line of an unknown writer (quoted by Plotius *de metris*) as 'King among the Satyrs'.

A. W. P.-C.

CHOERILUS (2) of Samos, epic poet of the late fifth century B.C., famed for his *Persica*. It was in more than one book, and contained a catalogue of the tribes that crossed the Hellespont with the Persians; it was still read in the third century A.D. (*P.Oxy.* 1399). Fragments show skill and originality. Choerilus may also have written *Samiaca*. Lysander, when in Samos (c. 404), cultivated him in the hope of epic immortality, and Archelaus (q.v. 2) paid him to move to Macedon, where he died.

EGF 265-72; FGrH iii C. 545-7; Schmid-Stählin i. ii 542 ff. M. L. W.

CHOERILUS (3) of Iasus, epic poet; travelled with Alexander the Great; paid to celebrate him; a bad poet (Hör. *Epist.* 2. 1. 232-4; id. *Ars P.* 357-8; Porphyry on ad loc.).

EGF 308-11.

CHOREGIA. The main part of the expense of the production of dithyramb, tragedy, and comedy at the Dionysiac festivals at Athens was laid upon individual citizens of sufficient wealth. For dithyramb these *choregoi* were chosen by the ten tribes (Arg. ii to Dem. *Meid.*, cf. Ar.

Av. 1403-4); for tragedy and comedy at the Dionysia by the *Archon Eponymos*, at the Lenaia by the *Archon Basileus* (Arist. *Ath. Pol.* 56, 7); about the middle of the fourth century B.C. the appointment for comedy was transferred to the tribes (ibid.). No one could be obliged to serve as *choregos* until a year had elapsed after his last period of office (Dem. *Lept.* 8), but any citizen might volunteer to serve (Lys. 21. 1-6). No one under forty years of age might be *choregos* to a dithyrambic chorus of boys (Aeschin. *In Tim.* 11-12). The smaller expenses of dithyrambs performed at the Thargelia, Panathenaen, and Hephaestea were also laid upon individual *choregoi* (Antiphon 6. 11, Lys. 21. 2) and the same system was applied to some other entertainments, such as the exhibition of pyrrhic dancers (Isae. 5. 36). *Choregia* for the men's dithyramb, which involved a chorus of fifty members and the most highly skilled flute-players, was much more expensive than for tragedy; the boys' dithyramb and comedy might cost less than either (Lys. 19. 29, 42; 21. 1-5).

Choregia at the Great Dionysia probably began shortly before 500 B.C. for tragedy, and about 486 for comedy. The first dithyrambic victory is said to have been in 509. At the Lenaen comedy was introduced about 440, tragedy before 430. In 405, when there may have been a lack of rich men, *choregia* at the Great Dionysia was shared between two *choregoi* (Schol. Ar. *Ran.* 404); this arrangement probably lasted only a single year. (Such *synchoregia* at certain Rural Dionysia is attested by several inscriptions of later dates in the fourth century.) Under Demetrius of Phalerum, perhaps in 309, a State-appointed *agonothetes* was instituted to manage the festivals and share the expense with the State, which is frequently named in inscriptions as *choregos* (ὁ δῆμος χορηγός), but *choregoi* reappear, with or without an *agonothetes*, in inscriptions of the first century A.D. (See Haigh, *op. cit. infra*, 54, 55.)

Dithyrambic poets were assigned to the several *choregi* by lot, and the *choregoi* then drew lots for the order of choice of a flute-player—a matter of great importance (Dem. *Meid.* 13-14; Antiphon 6. 11). It is probable that tragic and comic poets were also assigned by lot, but there is no record. *Choregoi* had nothing to do with the selection, payment, or dresses of actors, but if we can trust Plutarch, *Phocion* 19, they were responsible for the 'supers'. They chose the members of the chorus, provided a room for their practices, and paid the expense of their costumes and training (Arg. 1 to Dem. *Meid.*; pseudo-Xen. *Ath. Pol.* 1. 13, etc.). As it was a misfortune for a *choregos* to be assigned to a bad poet, so it was important for a poet to have a liberal *choregos*, since it depended upon him whether a play was well or badly presented in respect of costumes, mute characters (attendants, etc.) and other additions to the setting (*παρὰχορηγίματα*). An ambitious or public-spirited *choregos*, like Nicias, might provide a magnificent spectacle and so win the victory; a mean one, hiring cheap costumes, could ruin a play (Antiphanes fr. 204; Dem. *Meid.* 16, 61; Arist. *Eth. Nic.* 4. 2; Pollux 7. 78), though a negligent *choregos* might be brought to book by the archon (Xen. *Hieron* 9. 4).

The prize won by a successful *choregos* for dithyramb was a tripod, which he subsequently dedicated, often as a part of a more elaborate monument—the extant monuments of Lysicrates and Thrasyllos are instances—and the locality where most of the Dionysiac tripods were collected was named 'the Tripods'. Those gained at the Thargelia were erected in the precinct of Apollo Pythius (Isae. 5. 41; *Suda*, s.v. *Πύθιον*). The *choregoi* for comedy did not receive the tripod, nor, almost certainly, did the *choregoi* for tragedy; they erected tablets commemorating their victory, and some of these survive. There remain also some laudatory inscriptions erected by fellow tribesmen

or citizens in honour of public-spirited *choregoi*. The choregic system was in use in many cities besides Athens, and a large number of inscriptions testify to its continuance in these to the end of the second century B.C., and in some much later. See also LITURGY.

CHREIA, a collection of witty or clever sayings, so called because designed for utility (*χρησίμους τινός ἐνεκα*, Hermog. *Prog.* c. 3); one of the varieties of *progymnasmatata* (q.v.). Such collections were already being made in the fourth century B.C., e.g. by Theocritus of Chios and Demetrius of Phalerum, and some biographies of philosophers, e.g. that of Diogenes by Diogenes Laertius, consist largely of *Chreiai*; the ancestry of the genre may be seen in some parts of Xenophon's *Memorabilia*. The greatest extant collection is the *Gnomologium Vaticanum*, published in *Wien. Stud.* 1887-9. The *Chreia* of Machon (q.v.) is a collection of scurrilities. J. D. D.; K. J. D.

CHREMONIDES (fl. 270-240 B.C.), Athenian nationalist statesman, pupil of Zeno. In the archonship of Peithodemus (probably 267/6) he carried a decree by which Athens joined the Peloponnesian anti-Macedonian coalition, supported by Ptolemy (*IG* 11². 1. 686 and 687). The subsequent war, named after him (*Ath.* 6. 250 f.), ended with the surrender of Athens in 263-262. He found refuge with Ptolemy, and as Egyptian admiral was defeated off Ephesus by Agathostratus of Rhodes (c. 258); he was still admiral c. 240.

CHRISTIANITY. The life and teaching of Jesus Christ, the activities of St. Paul (Roman citizen though he was), the history and organization of the early Church, and even the importance of the New Testament as a source of knowledge of the Graeco-Roman world, these are topics too vast to be included in a classical dictionary (for some aspects, see, e.g., *The Oxford Dictionary of the Christian Church*, ed. F. L. Cross). This article, therefore, is confined primarily to the relations of Christianity with the Roman government.

The attitude of the Roman authorities towards primitive Christianity was influenced by two factors—first, their policy towards foreign cults in the city of Rome, and secondly, the repercussions of the long conflict between the Jews and the Seleucids to which Rome unwittingly found herself the heir.

The Roman Republic was famed for *religio*. Foreign observers, such as Polybius (6. 56), and citizens, such as Cicero (e.g. *Nat. D.* 2. 3. 8), testified to the reality of the Roman's devotion to his ancestral religion. This, however, was regarded in the nature of a contract rather than a creed or individual hope of salvation. The *pax deorum* implied that the gods protected the Roman people in return for receiving due worship and reverence from them. Acknowledgement (*recognitio*) of the ceremonies of the Roman people was to be one of the main demands made by the authorities on the Christians in the second and third centuries. The Senate as guardian of the common weal was responsible for the maintenance of traditional worship and, while not attempting to regulate the worship of the numerous alien population in Rome, suppressed as *prava religio* cults which appeared either

horrific or subversive, and thus dangerous to the authority of the Roman gods. In 186 B.C. the *Bacchanalia* (q.v.) were suppressed in Rome on these grounds, and in the provinces the Druids suffered the same fate under Tiberius and Claudius.

Meantime, in the Jews Rome had encountered a people who had the strongest national sentiment, who had adherents and sympathizers in every part of the Mediterranean world, and who believed that their religion was to be the religion of mankind. Nevertheless, Rome and the Jews first met as allies against the Seleucids (1 Maccabees viii. 11). As the religion of an allied nation Judaism was tolerated and in the first century B.C. favoured against the clamant pressure of the Greek oligarchies in Asia Minor and the Greek islands.

The institution of the imperial cult (*see* RULER-CULT II), however, brought about a change in Rome's relations with the Hellenistic world. Its peoples now found a centre of religious loyalty in a common Graeco-Roman culture, while Rome's relations with the Jews began to deteriorate. Fears of a world-wide Jewish rising led by some prophetic king of the Jews were rife by A.D. 33.

The Christian Church first became known to the authorities as a troublesome sect of Jews. At first, however, it benefited from the *de jure* acceptance that Judaism enjoyed. Acts, if written from an apologetic angle, shows Roman officials and the provincials, despite the Ephesus riot (*Acts* xix), as generally tolerant towards the new religion. The Jews, however, were determined to smother their rival, and attempted so far as possible to embroil the Christians with the authorities (cf. *Acts* xxiv. 2 ff.). Until 64 they were unsuccessful. Nero, however, found the Christians useful scapegoats for the Great Fire at Rome in that year. The Christians were punished, as the *Bacchanals* had been, for conspiracy and incendiarism inspired by *superstitio nova et malefica* (Suet. *Nero*, 16. 2). The popular reproach against the Christians recorded by Tacitus (c. 115: *Ann.* 15. 44) of 'odium humani generis' had been, however, one reserved for the Jews (cf. Tac. *Hist.* 5. 5. 1). A generation after the affair the writer of 1 Clement suggests that internecine rivalries within Judaism had their share in bringing about the deaths of Peter and Paul (1 Clement 4-5).

The Neronian persecution was neither followed up in Rome nor repeated elsewhere in the Empire. For the next century relations between the Christians and the remainder of the inhabitants of the Empire are shrouded in obscurity lit at rare intervals by well-commented incidents. Three factors dominate the period: first, the uninterrupted hostility between Jews and Christians, particularly in the province of Asia where both were numerous; secondly, the strongly apocalyptic tendency prevalent among the Christian communities and their expectation of the persecutions and disasters that would presage the Millennium of the Saints; and thirdly, despite increasing popular hostility, the comparative indifference of the authorities to them. Judaism, not Christianity, remained Rome's most intractable internal problem.

In 95 Domitian arrested his cousin Flavius Clemens, Domitilla, and Acilius Glabrio (4), consul in 91 (qq.v.). They were charged with 'atheism' (*ἑγκλημα ἀθεότητος*) for which also many others who had drifted into the practices of the Jews were condemned' (Dio Cass. 67. 14). Clemens and Glabrio were killed; Domitilla was exiled. It is not easy to see an attack on Christianity in this. Suetonius, otherwise hostile to the Christians, does not connect these events with them, and Domitian's suspicions both of possible rivals to the throne and of *externa religio* in general, coupled with his merciless scrutiny of the Jews, may be sufficient explanation. The connexion of this incident with Judaism is further suggested by Nerva's recall of the victims of his predecessor's

repression and the proclamation on his copper coinage *FISCI IUDAICI CALUMNIA SUBLATA*.

The real 'Domitianic persecution' was probably taking place in Asia. The 90s provide evidence for the alliance of Jewish and pagan adversaries of Christianity. Thus, combined with Christians' exaltation to martyrdom, produced the vivid picture of strife and persecution found in Revelation. The 'synagogue of Satan' (the Jews) of Rev. ii. 9 was henceforth associated with 'Satan's seat' (Rev. ii. 13), perhaps the altar of the imperial cult at Pergamum, where the martyr Antipas met his end.

The Asian provinces also provide the next information about the Christians. In 112 Pliny (q.v. 2) wrote to Trajan asking how to deal with the Christians in Bithynia. Like Tacitus and Suetonius, Pliny regarded them as an extravagant and noxious superstition (*superstitionem pravam, immodicam*) whose obstinacy rendered them worthy of punishment even if their practices did not. He had ordered the execution of Christians before writing to the Emperor about them. Trajan upheld Pliny's acts: Christians if denounced and proved to be such, were to be punished, but they were not actively to be sought out (*conquirendi non sunt*). If they recanted, they were to be freed. Anonymous accusations also were not to be accepted (*Ep.* 10. 96 and 97). Christians, so far as is known, took no part in the great Jewish rising of 115-17. They received a further measure of relief in 125, when Hadrian instructed the proconsul of Asia, Minucius Fundanus, in reply to a question by his predecessor, that Christians must be charged by regular accusation and proved to have acted contrary to the laws. The courts were open to hear accusations against them, but Christians were protected against vexatious attacks by the *calumnia* (malicious prosecution) procedure. In normal circumstances they could count on being left alone.

The legal position of Christianity in the first two centuries has caused difficulties to generations of scholars. Why were the early Christians persecuted at all? Christianity was certainly illegal. Pliny knew that there had been trials of Christians but he himself wanted to know whether punishment was attached to the Christian *nomen* or the *flagitia cohaerentia nomini*. The standard procedure against them was formal denunciation by a *delator* who had not merely to inform but conduct the prosecution in person with attendant risks for failure. Moreover, Trajan was not prepared to allow them to be treated as malefactors whom the authorities would be expected to destroy as a matter of course. Tertullian (*Apol.* 5) thought the procedure illogical. Others have done so too. *Maiestas* (treason), *flagitia* (crimes), atheism, and sheer *contumacia* all seem inadequate as explanations of the charges against them. Though it is true that we never hear of a Christian being prosecuted as a member of a *collegium illicitum*, it is probably in the assumption that Christians belonged to an illicit Judaistic organization suspected of criminal and anti-social proclivities that the answer must be sought. The opening words of Celsus' *Alethes Logos* (written c. 178), 'societies that are public are allowed by the laws, but secret societies are illegal' (Origen, *Contra Celsum* 1. 1), are significant. Even after the second fall of Jerusalem in 135, the Jewish religion was tolerated on grounds of antiquity (Origen, *Contra Celsum* 5. 41). The Christians, who in the eyes of the provincials were an off-shoot of Judaism, but had abandoned the Jewish law as well as that of their cities, had no *locus standi* in society. An illuminating statement of the Roman point of view is that of the proconsul of Africa, Galerius Maximus, at Cyprian's trial in 258. To Cyprian he said: 'You have long lived an irreligious life, and have drawn together a number of men bound by an unlawful association, and professed yourself an open enemy of the gods and religion of Rome' (*Acta Proconsularia* 3).

Under Hadrian and Antoninus Pius the Christians enjoyed a period of calm. The Church spread and its leaders travelled freely from place to place discussing increasingly varied opinions. Individuals such as Polycarp (q.v.), bishop of Smyrna, were well respected in the communities in which they dwelt and held their offices for decades. By the 150s, however, Christians had begun to replace the Jews in popular estimation as the enemies of the Empire and its civilization. Refusal to participate in the imperial cult and indeed in any form of activity connected with the pagan gods was regarded as deleterious to the rest of the community. Under Marcus Aurelius sporadic outbreaks of violence flared up into pogroms at Smyrna (c. 165) when Polycarp was seized and burnt and at Lyons in 177 when forty-eight members of the nascent Christian church were martyred. Personal denunciation by a rival philosopher led to the execution of Justin Martyr in Rome in 165. The Emperor himself, while not formally abandoning Trajan's rulings, is said by Melito, Bishop of Sardes, to have acquiesced in 'new instructions' (*καὶνὰ δόγματα*) that were circulated to the authorities in Asia facilitating the evil work of informers against the Christians (Euseb. *Hist. Eccl.* 4. 26. 5). In this reign, the Christians in the East touched the lowest point of unpopularity. They were the prey of popular rumour which attributed to them crimes such as incest, cannibalism, and child-murder as well as the more general and damning charge of atheism. Educated provincials, while less concerned with these accusations, regarded the Christians as disloyal citizens and their proselytizing as a disruptive force in the life of the Empire. Celsus' *Alethes Logos* and Lucian of Samosata's *De Morte Peregrini* (c. 165) provide important testimony for the views of thoughtful and observant pagans of the time. For their part, the Christian Apologists such as Justin, Melito of Sardes, Athenagoras, and Theophilus of Antioch attempted to refute the popular charges and claim toleration for themselves as loyal subjects while proclaiming the saving message for mankind.

Under Commodus and for most of the Severan period the Church enjoyed relative calm in Rome and the Greek-speaking east. There was now, however, a change in the character of the Christian communities. The Church's progress had originally been most strongly marked among the outer circle of semi-proselytes and inquirers in the Jewish synagogues to whom St. Paul had preached. The few documents that we have relating to the Church in the first half of the second century suggest an inward-looking body interested in perfecting itself before the Coming of the Lord. However, each decade brought new progress; merchants from the eastern Mediterranean carried the message into southern Gaul, and individuals such as Justin Martyr despairing of finding answers to their questionings from the current philosophies joined the Church's ranks. By 180 it was established in North Africa, and from now on the Church was to be Latin-speaking as well as Greek-speaking. Conflict with dissenting and non-orthodox movements, particularly Gnosticism, accelerated the establishment of common Rules of Faith, a recognized canon of Scripture and an organized hierarchy under the government of an urban episcopate. By 200 Christianity had ceased to be a Judaistic sect and was becoming one of the major religions of the Graeco-Roman world.

For reasons which are not clear Septimius Severus associated Jews and Christians in a ban which he imposed in 202 on conversion to either faith. This resulted in the first Empire-wide action against Christian converts. There were martyrs in Alexandria, Rome, Corinth, and Carthage, including Saints Perpetua and Felicitas at Carthage. In 212, however, Caracalla by granting Roman citizenship to nearly all free inhabitants of the Roman world rendered the Christians vulnerable to a general

persecution: as Roman citizens the great majority of provincials could now be required to acknowledge the gods of Rome and participate in the imperial cult. So long as the Severan dynasty lasted, however, the Church suffered little molestation. Carthage is an exception, where outbreaks similar to those characteristic of the Hellenistic cities a generation previously took place. Elsewhere, persecutions arose out of local causes or even the personal embitterment of a provincial governor against the sect. It was in this period that the first buildings identifiable as churches were erected, in Dura Europos, Edessa, and in Cappadocia.

The removal of Alexander Severus in Mar. 235 ended the long period of quasi-toleration. Maximinus (235-8) associated the Christians with what he considered to be the weakness of the previous regime and acted against its leaders (Euseb. *Hist. Eccl.* 6. 28). In Rome Bishop Pontian and his rival Hippolytus were exiled to Sardinia, where they died. These measures did not last long and in the reigns of Gordian III and Philip (238-49) the Church again enjoyed a period of peace. Both Eusebius (*Hist. Eccl.* 6. 36) and Origen (*Contra Celsum* 1. 43) speak of large numbers of converts, and Origen, too, of Church office now becoming a desirable social asset. To Origen also the Church owed the beginnings of an intellectual ascendancy over paganism which it was never to lose.

The fall of Philip again brought a change of policy towards the Church. The danger to the Empire from the revived power of the Sassanids in the East and the combined pressure of Goths on the Danube and Franks and Alemanni on the Rhine frontier was increasing. The new Emperor, Decius (249-51), aimed at restoring traditional Roman virtue and discipline. He took the name of 'Trajan', revived the office of censor, and embarked on a skilful offensive-defensive campaign on the Danube frontier. At a time when the unity of the whole Empire behind its ruler was called for, the Christians were regarded as non-co-operators and their strength was feared. Decius' measures against them fell into two phases. In Jan. 250 he followed the precedent set by Maximinus and arrested senior members of the clergy; Pope Fabian was executed. Then in the late spring, orders were sent throughout the provinces for a general sacrifice to the gods of the Empire, perhaps a *dies imperii* designed to inaugurate a new age of human happiness. Commissions were established to supervise the sacrifices, and those who performed were given a certificate (*libellus*) testifying to their act. Forty-three of these *libelli* have been recovered from various sites in Egypt. These measures took the Christians by surprise and had immense initial success. From Rome, Alexandria, Smyrna, and Carthage we hear of the flight or apostasy of clergy and droves of Christians thronging the temples to sacrifice (cf. Cyprian, *De Lapsis* 8, Euseb. *Hist. Eccl.* 6. 41, and the *Acta Pionii* (ed. Knopf and Krueger) 18). The government, however, had no means of following up their success and on the death of Decius (June 251) the danger passed. In a few years the Church had regained all the ground it had lost.

Once more, under Valerian (253-60), the Church faced the hostility of the Empire. The early part of Valerian's reign had been favourable to the Christians, but in the summer of 257 he attempted to suppress the Christian cult and enforce veneration of the gods of Rome on the Christian clergy. This was followed a year later by a much more severe edict including in its scope highly placed Christian laity and civil servants and aimed perhaps at diverting some of the wealth of the Church to the imperial fisc. In the West this was the most destructive and bloody of the persecutions, lasting through 258 and 259; the victims included Cyprian of Carthage.

Valerian's capture by Sapor in June 260 ended the persecution. His son Gallienus, perhaps in a bid for

popular support against his rival the anti-Christian Macrianus, restored peace to the Church and ordered the return of its confiscated property. This peace, broken only by a threat of persecution by Aurelian in 275, lasted until Diocletian began to purge the civil service and army of Christians (c. 298). The last battle between Church and Empire had begun.

Why Diocletian started a full-scale attack on the Christians in 303 is not clear. The previous nineteen years of his rule had been characterized by conservative restoration under the aegis of the gods of Rome, Jupiter and Hercules. His rescript to the proconsul of Africa, Julianus (probably in July 297), shows that he hated foreign cults and religious innovation. It may be that he feared that the Christians were a powerful contrary influence on the fortunes of the Empire and must be made to conform. Pressed on by his avowedly anti-Christian Caesar, Galerius, Diocletian ordered on 23 Feb. 303 the destruction of church buildings, the surrender of the Scriptures, and the performance by clergy of an act of sacrifice. There was, however, to be no bloodshed. More stringent edicts followed, culminating in the spring of 304 when Diocletian was incapacitated by illness, with a command for a universal sacrifice.

In general these instructions were carried out without question in the provinces. But the Church was now immensely stronger than under Decius and Valerian. It had become the religion of the countryside as well as the cities of some of the great provinces bordering the Mediterranean. It had spread east into Armenia and Persia. Only the Celtic provinces of the Empire remained unassailable. Persecution was foredoomed to failure and Diocletian may have realized as much when he abdicated on 1 May 305.

While this ended the persecution in the West, the East suffered six more years of misery. By Apr. 311, however, Galerius admitted defeat and on his death-bed granted the Christians grudging toleration. For another year, however, Maximinus (q.v. 2), his successor as senior Augustus, maintained the repression and made a final but vain bid to rally the forces of tradition against the Christians. Meantime, whether convinced by a vision or not, Constantine having made himself master of the West called off the persecution. The Edict of Milan 313 marks the end of an era.

After a period of eleven years when Constantine combined veneration for the 'Unconquered Sun my companion' with that of Christ, the cause of Christianity triumphed at Chrysopolis in Sept. 324, and at the Council of Nicaea in 325 it became *de facto* the religion of the Empire. Thenceforth, paganism declined. Julian's attempted restoration (361-3) was shortlived. Under Theodosius the revolution was complete. Christianity had become the religion of the Mediterranean world.

Victory eventually went to the Church from a combination of circumstances. The turning-point would not seem to have come until after the failure of Valerian's persecution (260). The catastrophic events of the period 250-75 may have shaken the faith of many in the saving powers both of the immortal gods of Rome and in local territorial divinities. Where there is evidence, the rejection of the latter by Christian converts of this time was apparently complete. The bravery of martyrs and the Christian social message may also have had their effect in providing inspiration and refuge which the old gods failed to do. In the end, as Lactantius pointed out (*Div. Inst.* 5. 22-18), God may have permitted the persecutions in order to bring the pagans within the community of the Church.

CHRISTODORUS (5th c. A.D.), prolific epic poet from Coptus in Egypt. Wrote an epic on the Isaurian victory of Anastasius in 497, versified histories (*ἱστορίαι*) of Thessalonica, Nacle, Miletus, Tralles, Aphrodisias, and Constantinople (*Suda*, s.v.; cf. A. Cameron, *Hist.* 1965, 489) and a work on the pupils of Proclus (John Lyd, *De Magg.* III. 26)—all now lost. Apart from two epigrams (*Anth. Pal.* 7. 697-8; cf. L. Robert, *Hellenica* 1948, 93), his only surviving work is on the statues decorating the Baths of Zeuxippus in Constantinople (*Anth. Pal.* 2. 1-416). Both in diction and in metrical practice it shows clear traces of the influence of Nonnus, though not in all respects as strict as the master.

F. Baungarten, 'De C. poeta "Thebano"' (Diss. Bonn 1881); A. Wilstrand, *Von Kallim. zu Nonnos* (1933), ch. 1. A. D. E. C.

CHRISTUS PATIENS, a play in 2,610 verses describing the Passion of Our Lord, bearing the name of Gregory the Nazianzene, but written by a Byzantine of the eleventh or twelfth century, possibly Constantine Manasses. It contains a very great number of lines from Euripides, and some from Aeschylus and Lycophron. It is of doubtful use for the textual criticism of Euripides, but portions of the lost end of the *Bacchae* have been recovered from it (See E. R. Dodds' edition of *Bacch.* (1960), 243 ff.).

TEXT. J. G. Brambs (Teubner, 1885), K Horna, *Hermes* 1929, 429 ff. J. D. D., K J. D.

CHRYSEIS (*Χρυσέης*), in mythology, daughter of Chryses, priest of Apollo at Chryse. She was taken prisoner and given to Agamemnon as his gift of honour (*γέρας*). On his refusal to let her father ransom her, Apollo, at Chryses' prayer, sent a plague on the Greek camp, which was not stayed till she was returned to him. Agamemnon compensated himself by taking Briseis (q.v.) from Achilles, thus starting the quarrel between them (*Il.* 1. 11 ff.). In a late legend (Hyg. *Fab.* 121) she has a son by Agamemnon. H. J. R.

CHRYSIPPUS (c. 280-207 B.C.), son of Apollonius of Soli (Cilicia), successor of Cleanthes as head of the Stoa. He came to Athens about 260 and there first attended the lectures of Arcesilaus (q.v. 1), then head of the Academy. From him he got the training in logic and dialectic which he later used to great advantage in fighting the scepticism of Arcesilaus and the Middle Academy. He was converted to Stoicism by Cleanthes, whom he succeeded in 232. He devoted his life to elaborating the Stoic system in almost innumerable works and to defending it against the attacks of the Academy. He was so successful that his philosophy became identified with Stoic orthodoxy, and obscured that of his predecessors, from whom he differed in many points, especially in his logic and theory of knowledge. The catalogue of his works given by Diog. Laert. 7. 189-202 is not completely preserved.

CHRYSOGONUS, LUCIUS CORNELIUS (*PW* 101), freedman of Sulla (q.v. 1), in collusion with two relatives of Sex. Roscius of Ameria (who had been murdered) placed the dead man's name on the proscription lists, to enable them jointly to buy his property at a nominal sum. He is the chief object of attack in Cicero's speech on behalf of Roscius (q.v. 1), whom he accused of his father's murder. When the case acquired political overtones, Sulla seems to have withdrawn his support.

Cicero, *pro Roscio Amerino*.

F. N.

CHRYSOSTOM, JOHN (c. A.D. 354-407), bishop of Constantinople. Though educated at Antioch by Libanius, John turned to asceticism at home and later became a hermit. Ordained deacon at Antioch in 381 and priest (386), and pre-eminently a preacher, he reluctantly became bishop of Constantinople (398). Trouble with the Empress Eudoxia, Theophilus of Alexandria, and Asiatic bishops resenting his extension of Constantinople's quasi-patriarchal authority, caused his deposition by the Synod of the Oak (403). He was banished, recalled, banished again to Armenia (404), and died in exile (407).

Most eloquent of preachers (hence his name Chrysostom, 'the golden-mouthed') but not an outstanding theologian, he expounded Scripture in the Antiochene tradition according to its historical sense, practically and devotionally. Denunciation of luxury, care for the poor, interest in education are characteristic. The homilies *De Statuis*, occasioned by riots in 387, are notable; *De Sacerdotio* gives his conception of clerical duties. The *Liturgy of Chrysostom* is not his work.

EDITIONS. H. Savile (1612), B. de Montfaucon (Paris, 1718-38); Migne, *PG* XLVI LXIV. Late by C. Baur, 2 vols (Munich, 1920-19, E.T. 1950). See also J. A. de Aldama, *Repertorium Patrologico-chrysostomicum* (1965). S. L. G.

CICERO (1), MARCUS TULLIUS (*PH* 29), the first of two sons of a rich and well-connected *eques* of Arpinum, was born on 3 Jan. 106 B.C., the year following the first consulship of C. Marius, with whose family (also from Arpinum) his grandmother Grattia had marriage connexions. His intelligent and ambitious father (who was to die in the year of Cicero's canvass for the consulship), advised perhaps by L. Crassus (q.v. 3), gave his two sons an excellent education in philosophy and rhetoric in Rome and later in Greece, with their two first-cousins as their fellow students. Cicero did military service in 90/89 under Pompey's father, Cn. Pompeius (q.v. 3) Strabo, and attended legal consultations of the two great Scaevolae (qq.v. 3 and 4). He conducted his first case in 81 (*Pro Quinctio*) and made an immediate reputation through his successful defence of Roscius of Ameria on a charge of parricide in 80, a case which reflected discreditably on the contemporary administration of the dictator Sulla. Cicero was then from 79 to 77 a student of philosophy and oratory both in Athens and in Rhodes, where he heard Posidonius (q.v. 2); he visited P. Rutilius (q.v. 1) Rufus at Smyrna.

2. He returned to Rome, his health greatly improved, to pursue a public career, and was elected quaestor for 75, when he served for a year in western Sicily, and praetor for 66, in each case at the earliest age at which he could legally become a candidate. By securing the condemnation of C. Verres (q.v.) for extortion in Sicily in 70 he scored a resounding success against Q. Hortensius, eight years his senior, whom he was to replace as the leading figure at the Roman Bar. In a cleverly disarming speech delivered during his praetorship (*De imperio Cn. Pompei*) he supported, against strong Optimatist opposition, the tribune Manilius' proposal to transfer the command in the war against Mithridates to Pompey; this was the first public expression of his admiration for Pompey who was, with

occasional short interruptions, henceforward to be the focus of his political allegiance. He was elected consul for 63—the first *novus homo* with no political background whatever since 94—because, in a poor field, Optimat voters were alarmed about the intentions of Catiline (q.v.), who might otherwise have been their candidate. Hampered by a weak and indeed suspect colleague, C. Antonius (q.v. 3), Cicero did very well to secure evidence which convinced the Senate of the seriousness of Catiline's conspiracy. After the last decree (*senatus consultum ultimum*) was passed, and Catiline left Rome for his army in Etruria, five conspirators prominent in Roman society and politics, including a praetor, P. Cornelius Lentulus Sura, were arrested and executed on 5 Dec. (the Nones). Although, after debate, the Senate, influenced by Cato (q.v. 5), had recommended their execution, the act itself, a violation of the citizen's right to a trial, could be justified only by the passing of the last decree and was Cicero's personal responsibility. Though approved in the first moment of panic by all classes of society in Rome, its legality was strictly questionable, and Cicero was unwise to boast as loudly of it as he did (even in a long and indiscreet letter to Pompey in the East, *Pro Sulla* 67, *Pro Planc.* 85, cf. *Fam.* 5. 7). He published his speeches of 63, including those against Catiline, in 60, wrote of his action in prose and verse, in Greek and Latin, and invited others, including Posidonius, to do the same; and to the end of his life he never wavered in his belief that he had acted rightly and had saved Rome from catastrophe.

3. Though it was unlikely that he would escape prosecution, Cicero refused overtures from Caesar, which might have saved him at the price of his political independence. In 58 P. Clodius (q.v. 1), whom he had antagonized in 61 when Clodius was charged with incest, moved a bill as tribune re-enacting the law that anyone who had executed a citizen without trial should be banished. Without awaiting prosecution Cicero fled the country, to Macedonia, and Clodius passed a second, certainly unconstitutional, bill, declaring him an exile. His house on the Palatine was destroyed by Clodius' gangsters, part of its site to be made a shrine of Liberty, and his villa at Tusculum was also badly damaged. With Pompey's belated support and with the support of the tribune Milo (q.v.), who employed violence as irresponsibly as Clodius had done in the previous year, Cicero was recalled by a law of the people on 4 Aug. 57 and was warmly welcomed on his return both in Italy and in Rome, which he reached on 4 Sept.

4. He returned to a busy winter, fighting to secure adequate public compensation for the damage to his property and, in the Senate and in the courts, supporting those chiefly responsible for his recall. Hopes of dissociating Pompey from his close political connexion with Caesar, attempts which Clodius was employed by Caesar to interrupt, were at an end when Caesar, Pompey, and Crassus revived their political union in Apr. 56, and Cicero was sharply brought to heel (*Att.* 4. 5, on his 'palinode'; cf. *Fam.* 1. 9 for his later account of his conversion). He at once spoke warmly in the Senate (e.g. in *De provinciis consularibus*) and on the public platform in favour of Caesar, as of a longstanding political friend. He claimed that it was the act of a realist, a *sapiens*, to accept the indisputable predominance of the 'Three' ('temporibus adscitendum', *Fam.* 1. 9. 21) and only revealed in conversation and in letters to such close friends as Atticus the deep wound which his pride—his *dignitas*—had suffered. He took no more part in the collapsing world of republican politics, devoting himself to writing, which he never regarded as anything but a poor substitute for active political life (the *De oratore* was published in 55, and the *De republica* finished in 51); and he was humiliated by briefs which, under pressure from Pompey and

Caesar, he was forced to accept. He defended Vatinius (q.v.) successfully and Gabinius (q.v. 2) unsuccessfully in 54. He was humiliated too by his failure, in a court packed with troops, to defend Milo adequately when, with the case already prejudiced, Milo was impeached for the murder of Clodius early in 52. The period brought him one consolation, when he was elected augur in 53 in the place of his earlier protégé, young P. Crassus (q.v. 5), who had been killed at Carrhae.

5. Cicero was out of Rome during the eighteen months preceding the outbreak of the Civil War, being selected under regulations following Pompey's *lex de provinciis* of 52 to govern Cilicia as proconsul from summer 51 to summer 50. He was a just, if not a strong, governor, but he regarded his appointment with horror as a second relegation from Rome. However, his dispatches recording the successful encounter of his troops with brigands on Mons Amanus earned a *supplicatio* at Rome and he returned, the *fusces* of his lictors wreathed in fading laurels, hoping that he might celebrate a triumph. Instead he was swept into the vortex of the Civil War.

6. Appointed District Commissioner at Capua by the government, he did not at first follow Pompey and the consuls overseas. Caesar saw him at Formiae on 28 Mar. 49, and invited him to join the rump of the Senate in Rome on terms which with great resolution Cicero refused to accept (*Att.* 9. 11 a, to Caesar; 9. 18). His long indecision up to this point which was anything but creditable was now at an end, and he joined the Republicans in Greece, irritating their leaders by his caustic criticism, himself dismayed by the absence of any idealistic loyalty on their part to the cause of Republicanism. After Pharsalus, in which he took no part, he refused Cato's invitation to assume command of the surviving republican forces and, pardoned by Caesar, he returned to Italy. But political life was at an end, and he was utterly out of sympathy with Caesar's domination. All that he could do was to return to his writing, his only important speech being that delivered in the Senate in 46 (the year in which the *Brutus* was written) in praise of Caesar's pardon of M. Marcellus (*cos.* 51), who had done so much to precipitate the outbreak of the Civil War.

7. That Cicero was not invited to participate in the conspiracy to kill Caesar in 44 is not insignificant. He hailed the news of the murder on 15 Mar. with intemperate delight (e.g. *Fam.* 6. 15). Political life began again, and Cicero had all the prestige (*auctoritas*) of a senior consular. Within three months he was saying openly that Antony should have been killed too (*Att.* 15. 11. 2). He accepted the overtures of the young Caesar (Octavian), uncritical of the lawlessness of many of his acts, misled by his youth into a mistaken underassessment of his political acumen, and he closed his eyes to the fact that Octavian could never be reconciled to Brutus and Cassius. He struggled in speech after speech (the *Philippics*, the first delivered on 2 Sept. 44, the last on 21 Apr. 43) to induce the Senate to declare Antony a public enemy. After Antony's defeat in Cisalpine Gaul in Apr. 43, Octavian fooled Cicero for a time, perhaps with the suggestion that they might both be consuls together. But Octavian's intentions were different. After his march on Rome to secure the consulship for himself and his uncle Q. Pedius, and the formation of the Triumvirate, he did not oppose Antony's nomination of Cicero as a victim of the proscriptions which were the inauguration of the new regime. The soldiers caught Cicero in a not very resolute attempt to escape by sea. His slaves did not desert him, and he died with courage on 7 Dec. 43.

8. In politics he hated Clodius, with good reason, and he hated M. Crassus and, at the end of his life, Antony. For the character of Cato, eleven years his junior, he had unqualified respect, and he published a panegyric of

Cato in 45, after his death; but in politics, especially in the years following Pompey's return from the East in 62, he thought Cato's uncompromising rigidity (his *constantia*) impolitic, and Cato never concealed his distaste for Cicero's policy of temporizing expediency, both at this period and when he capitulated to the Three in 56. With Pompey Cicero never established the intimacy to which, particularly after Pompey's return in 62, he aspired, suggesting that he might play a second Laelius to Pompey's Scipio. Few of his contemporaries, perhaps, held him in higher esteem than did his constant opponent Caesar who, though often with an imperiousness which Cicero could not tolerate, was always friendly in his approach. Cicero was not a discriminating judge of the political intentions of others, being far too susceptible to, and uncritical of, flattery; and he was inevitably condemned to a certain political isolation. Loyal and not very critically devoted to the existing republican constitution, and fascinated by the mirage of a 'concordia ordinum', he was never a liberal reformer (*popularis*); yet he was never completely acceptable to the established *Optimates*, the worst of whom despised his social origin, while the rest mistrusted his personality as much as he mistrusted theirs. And, not having the *clientela* of the noble or of the successful general, he lacked *uctoritas*. It was this political isolation which (cf. *Att.* 1. 17; 1. 18. 1, of 61/60 B.C.) enhanced the importance for him of his close association with the knight T. Pomponius Atticus (q.v. 1), a man of the highest culture in both languages, his banker, financial adviser, publisher, and most generous and tolerant friend.

9. His marriage to Terentia had issue: Tullia, to whom he was devoted, whose death in 45 was the hardest of the blows which afflicted his private life, and M. Cicero (q.v. 4). His marriage survived the storms and stress of thirty years, until he grew irritated with Terentia and divorced her in winter 47/6, to marry the young Publilia, from whom in turn he was almost immediately divorced. Cicero was a good master to his slaves and, with the rest of his family, was devoted to Tiro, to whom twenty-one of his letters in *Fam.* 16 are addressed. He gave him his freedom in 53, 'to be our friend instead of our slave', as Quintus Cicero wrote (*Fam.* 16. 16. 1).

10. Cicero, who was never a really rich man, had eight country residences, in Campania, at Arpinum, at Formiae, and, his suburban villa, at Tusculum; in Rome he was extremely proud of his house on the Palatine, which he bought in 62 for 3½ million sesterces (*Fam.* 5. 6. 2).

11. Apart from the surviving histories of the late Republic and, in particular, Plutarch's *Lives* of Cicero and of his outstanding contemporaries, the bulk of our knowledge of him derives from his own writings, in particular from his letters, only a minority of which was written with any thought of publication. His reputation has therefore suffered from the fact that we have intimate knowledge of the most private part of his personal life; in this respect he has been his own worst enemy, and his critics have given undue prominence to his extremes of exaltation and depression and to the frequent expression of his evident vanity. (See J. P. V. D. Balsdon, 'Cicero the Man', in *Cicero*, ed. Dorey.) J. P. B.

WORKS

12. **Orations** (58, some incomplete, survive: about 48 are lost). *Pro Quinctio* (81). *Pro Sex. Roscio Amerino* (80). *Pro Roscio Comoedo* (77?). In *Caecilium Divinatio*, In *Verrem Act. I*, *Act. II*. i-v (70). *Pro Tullio*, *Pro Fonteio*, *Pro Caecina* (69). *Pro Lege Manilia*, *Pro Cluentio* (66). *Contra Rullum* I-III, *Pro C. Rabirio perduellionis reo*, In *Catilinam* I-IV, *Pro Murena* (63). *Pro Sulla*, *Pro*

Archia (62). *Pro Flacco* (59). *Post reditum ad Quirites*, *Post reditum in Senatu*, *De Domo sua* (57). *De Haruspicio responso*, *Pro Sestio*, In *Vatinium*, *Pro Caelio*, *De Prov. Cons.*, *Pro Balbo* (56). In *Pisonem* (55). *Pro Plancio*, *Pro Rabirio Postumo* (54). *Pro Milone* (52). *Pro Marcello*, *Pro Ligario* (46). *Pro Rege Deiotaro* (45). *Philippicae* I-XIV (44-43). For historical context see §§ 1-11.

13. **Rhetorica**. The *De Inventione*, a largely technical treatment in two books of types of issue and appropriate arguments, was written in Cicero's youth (*De Or.* 1. 5), and probably intended as part of a larger work (cf. *De Inv.* 1. 9). After a gap of some thirty years Cicero returned, in his disillusionment after Luca, to writing about oratory, and by Nov. 55 (*Att.* 4. 13. 2) had finished the three books *De Oratore*. In this, probably the most carefully written of his literary works, and his most successful use of the dialogue (q.v.) form, Cicero advocates (through the mouth of the orator L. Crassus) a broadly based education for the orator, and deals with the general principles underlying the practice of oratory, though he still finds it hard to break away from the rules of the rhetoricians, e.g. in the classification of types of wit and humour in book 2. With the *De Oratore* Cicero himself coupled (*Div.* 2. 4) the *Brutus* and *Orator*, and in them we find the same call for a liberal education (*Brut.* 322, *Or.* 113 ff.). But his chief aim in writing them in 46 was to defend himself against criticism. The *Brutus* or *De Claris Oratoribus* gives a survey of Roman oratory and interesting details of Cicero's own training as an orator. An introductory section on Greek authors ends with a reference (51) to the Attic, Asiatic, and Rhodian schools of oratory, commending not only the *salubritas* of the *Attici*, but also the *celeritas* and *copia* of the *Asiatici*. Among the many orators discussed Calvus (q.v.) is criticized for his plain style (*exilitas*) and this introduces a polemic against the self-styled *Itali* among Cicero's contemporaries. Hortensius (q.v. 2), on the other hand, is quoted as an outstanding exponent of both types of Asianism, the one said to be balanced and epigrammatic, the other copious and ornate (325). The *Orator*, an attempt to sketch the perfect orator, continues to attack the *Attici*, while condemning the 'superfluous fat' of the *Asiatici*, from whom Cicero wishes to dissociate himself (25). A threefold classification of style—grandiose, plain, and intermediate—(20-2, 75-99) is coupled with the threefold task of the orator—*flectere, probare, delectare* (60). All three styles are necessary at different times, and the complete orator such as Demosthenes is able to use them all. Cicero claims merely to have tried. One of the features which distinguished the work of the *Asiatici* from that of the *Attici* was their excessive use of rhythm, and Cicero, having touched briefly in this subject in the *De Oratore* (III. 190-8), now treats it at length (168 ff.)—not without some inconsistencies—in defence of his own belief in the virtues of rhythmic prose. The same controversy enters into the brief *De Optimo Genere Oratorum*, written in 46 as an introduction to translations (not extant, possibly never completed) of the Greek orations *De Corona*. Demosthenes' all-round excellence, Cicero argues, should mean that 'Atticism' as a description of a severely plain style is a misnomer. The *Partitiones Oratoriae*, of uncertain date, but not before the late 50s, is a catechism in which Cicero answers his son's questions on the orator's craft. Almost equally technical is the *Topica*, written for Trebatius (q.v.) in 44, as an amplification of Aristotle's discourse on types of argument. Cicero thus returned in his final years to an exposition, for the benefit of student-orators, of the pedantic schoolroom instruction, from which he started in the *De Inventione*, and which he believed to be the groundwork of an orator's training, to be supplemented by a study of philosophy, law, and history.

14. Philosophica. These fall into two parts: (a) the political writings of the years immediately preceding Cicero's governorship of Cilicia, and (b) the works on epistemology, ethics, and theology which were produced in the incredibly short period between Feb. 45 and Nov. 44.

15. In the *De Republica*, a dialogue between Scipio, Laelius, and others, of which we have only parts of the six books (including the *Somnium Scipionis*, which thanks to Macrobius survived independently), Cicero discusses the best form of government, always with an eye on the history of the Roman State, and favours a constitution combining elements of all three main forms, monarchy, oligarchy, and democracy. His discussion reflects the troubled political conditions of the time and looks to a *rector* (for which part Cicero may at one time have cast Pompey) as a remedy for Rome's political sickness, but its chief value for subsequent ages lay in its assertion of human rights and the brotherhood of man, a notion which Stoic beliefs helped to foster. Cicero probably worked on the *De Legibus* immediately after doing most of the work on the *De Republica* (cf. *Leg.* 1. 15), but did not publish it. (It does not appear in the list he gives in *Div.* 2. 1 ff., and is not specifically mentioned in the *Letters*.) In the three extant books (Macrobius quotes from a fifth book, and the reference to *iudicia* in 3. 47 has generally been taken to point to the subject of the fourth book) Cicero expounds the Stoic conception of a divinely sanctioned Law, based on reason, and discusses legal enactments connected with religion and magistracies.

16. Political inactivity under Caesar's dictatorship and the death of Tullia finally led Cicero to write on philosophical subjects which had always interested him, from the early days of his studies under the Epicureans Phaedrus (q.v. 3) and Zeno (q.v. 5), the Academics Philon (q.v. 3) of Larissa, Antiochus (q.v. 11) of Ascalon, and the Stoic Posidonius (q.v. 2), through the years of his association with Diodotus (q.v. 3) the Stoic, to the dark days immediately after the Civil War, when Matius urged him to write on philosophy (*Fam.* 11. 27. 5). What had formerly been for Cicero a useful exercise (cf. *Tusc.* 2. 9, and his claim (*Or.* 12) to be a product of the Academy rather than of the rhetoricians' workshops) and a source of oratorical material (cf. *De Or.* 1. 56 and *Or.* 113 ff.; the *Paradoxa Stoicorum*, published, it seems, as late as the beginning of 46, is an exercise in the preparation of such material) became now a haven of refuge (*Fam.* 7. 30. 2), a *doloris medicina* (*Acad.* Post. 1. 11). Cicero needed to reassure himself, and hoped as well to make a name for himself as a philosophical writer. (This is clear from *Off.* 1. 2 ff., where he admits his inferior philosophical knowledge, but against this balances his virtues as a stylist!) He had a profound admiration and respect for Plato (*'deus ille noster'*: *Att.* 4. 16. 3) and Aristotle, and aimed at giving the Romans a philosophical literature, which would take the place of the Greek philosophers. The problem of how closely Cicero followed his Greek sources admits of no certain solution, since so much of the work of Hellenistic philosophers has been lost. Some scholars have taken Cicero's words: *ἀνόγγραφα sunt, minore labore fiunt; verba tantum adfero quibus abundo* (*Att.* 12. 52. 3) too seriously. More trustworthy are his claims (*Off.* 1. 6) to follow the Stoics (in that work) not as a mere translator but drawing from Stoic sources as he thinks fit, and (*Fin.* 1. 6) to add his own criticism (*iudicium*) and arrangement (*scribendi ordo*) to the chosen authority.

17. Two lost works probably came first: the *Consolatio*, an attempt to console himself for the loss of Tullia, and the *Hortensius*, a plea for the study of philosophy, which profoundly affected St. Augustine (*Confess.* 3. 4. 7). In the list in *Div.* 2. 1, the *Hortensius* is followed by the *Academica*, a work originally in two books, entitled *Catulus*

and *Lucullus*, of which only the second survives, but later recast in four books, of which we possess part of the first (*Academica Posteriora*). Here Cicero discussed the views of the New Academy, and in particular of Carneades (q.v.) on the impossibility of attaining certain knowledge. The recommendation (*Div.* 2. 150) to give unprejudiced consideration to different theories before approving *simillima veri* appealed to Cicero, who chose to regard himself as belonging to this philosophical school (*Tusc.* 2. 5. 4. 47).

18. But in moral questions Cicero was susceptible to the attractions of Stoic teaching, as is evident in the *De Finibus bonorum et malorum*, where he sets out and answers in turn the theories on the *summum bonum* propounded by the Epicureans and Stoics, before giving the views of Antiochus' so-called 'Old Academy' in book 5, and providing a somewhat unconvincing conclusion to the whole work. From the often difficult and sometimes tedious exposition of the schools' views on the principles of morality, Cicero turned in the *Tusculan Disputations* to the problems of death, grief, fear, passion, and other mental disorders, and of what is essential for happiness. Concerned largely to allay his own doubts, and impressed by Stoic teaching on these subjects, he writes here with a passionate intensity, and his language at times reaches heights of majesty and lyrical beauty never attained by any other Latin prose author.

19. Theological speculation next engrossed Cicero's attention. First came the *De Natura Deorum*—three books, each giving the view of a different school (Epicurean, Stoic, Academic) on the nature of the gods and the existence of a Divine Providence. Having allowed Cotta to present the sceptical Academic view in book 3, Cicero rounds off the debate with a typically Academic expression of his own opinion: that the Stoic's argument is more likely to be right (*ad veritatis similitudinem . . . propensior* 3. 95). Next, Stoic beliefs concerning Fate and the possibility of prediction are examined with a wealth of anecdote and quotation in the two books of the *De Divinatione*, published just after Caesar's murder (*Div.* 2. 4), and in this case Cicero displays no sympathy with Stoic views. He does, however, reaffirm (2. 148) his belief in the existence of a Divine Being, and maintains that it is prudent to keep up traditional rites and ceremonies. Finally, the fragmentary *De Fato* discusses the problem of Free Will and decides against Stoic fatalism.

20. The two genial and polished essays *Cato Maior de Senectute* (written probably just before Caesar's murder and included in *De Div.* list) and the *Laelius de Amicitia* show once again Cicero's anxiety to reassure himself in times of stress and danger, and his last work on moral philosophy *De Officiis* (finished Nov. 44) aims at giving advice, based on Stoic precepts and in particular (for books 1 and 2) on the teachings of Panaetius (q.v.), on a variety of problems of conduct (ostensibly to Cicero's son).

21. It was these three works, along with the *Tusc.* and the *Somnium Scipionis*, which continued to attract readers in the Middle Ages, when the work of Cicero the politician and orator was almost forgotten, to be rediscovered at the time of the Renaissance. Cicero's influence on European thought and literature as a philosopher who reproduced and commented on much that was interesting and important in Greek philosophy, as the creator of a philosophical vocabulary in Latin, and as an unusually sensitive writer of lucid and sonorous prose has been so pervasive as almost to defy assessment. Th. Zielinski's standard work, *Cicero im Wandel der Jahrhunderte* (1912), has been supplemented by M. L. Clarke and A. E. Douglas in *Cicero* (ed. Dorey, 1965).

22. *Poems.* Cicero's desire to win renown in as many fields as possible and his talent for manipulating words

led almost inevitably to attempts at verse (cf. Plut. *Cic.* 40 for Cicero's facility as a versifier). After a boyhood epic, *Glaucus Pontius*, extant in Plutarch's time (*Cic.* 2) and some youthful poems mentioned by Julius Capitolinus (*Gord.* 3, 2), which are no more than names to us, Cicero early applied himself to a translation in hexameters of the *Phaenomena* of Aratus (q.v. 1). Of the first section (entitled *Aratus*) a large part has survived independently (460 lines), the only portion of Cicero's verse to do so. The second section, Cicero's *Prognostica*, is referred to by Cicero on occasion as a separate poem. The use by Virgil of some of the same material in *Georg.* 1 makes one regret that only fragments of this section survive. (The reference in *Att.* 2. 1. 11 and a comparison of lines quoted *Div.* 1. 14 and *Isidor.* 12. 7. 37 have led some to suppose that Cicero revised the *Prognostica* c. 60; but the reference does not compel this interpretation and the quotation may be mistaken.) Other translations both of single lines and of extended passages from Homer and the tragedians which serve to embellish Cicero's philosophical writings are workmanlike rather than distinguished. After his consulship and again after his exile he thought to add to his reputation by composing the autobiographical poems *De Consulat* and *De Temporibus Suis*, which were unlikely to appeal to contemporaries already satiated with Cicero's self-glorification. Of them little has survived except a passage of seventy-two lines from the *De Consulat* (quoted *Div.* 1. 17) and the two notorious lines singled out, perhaps unfairly, for derision by contemporaries (cf. *Off.* 1. 77) and by Quintilian (11. 1. 24) and Juvenal (10. 122). More promising material was used by Cicero in his epic *Marius* which is of uncertain date: the subject suggests the 70s, whereas the style of the scanty fragments (for the main one see *Div.* 1. 106) suggests, but does not compel, a later date.

23. Cicero's verse lacks poetic imagination, vigour of movement, and variety of pauses: its chief interest lies in the possibility it affords of tracing the development of Latin hexameter verse from Ennius to Virgil. Conclusions are unsure owing to the fragmentary nature of Cicero's verse and the loss of other poets, but it seems likely that he made a significant contribution in lightening the movement of the hexameter, in obtaining a more frequent clash of ictus and accent in the first four feet and coincidence in the last two, and in refining the use of elision. For the latest assessment of Cicero's poems see G. B. Townend in *Cicero* (ed. Dorey).

J. H. S.

24. **Letters** (931 in Tyrrell and Purser). Sixteen books *Ad Familiares* were published by Tiro, his literary executor. The sixteen books *Ad Atticum* cover the years 68 to 44; Cornelius Nepos saw them and acutely appreciated their value as a historical source (*Vita Attici* 16. 3). The previously accepted assumption that, because Asconius made no explicit reference to them, they were not published until the time of Nero, was challenged by J. Carcopino, but Carcopino's suggestion that they were published in 34/3 as part of Octavian's propaganda war against Antony is not convincing (but cf. A. Piganiol, *Rev. hist.* 1949, 224 ff., for a modification of this suggestion) and D. R. Shackleton Bailey, in his *Cicero's Letters to Atticus* i, ii (1965), 59 ff., has restated the case for a Neronian date. There are also twenty-seven letters written to his brother Quintus (*Ad Quintum fratrem*) during periods when the brothers were separated, chiefly when Quintus was in the provinces, from 59 to 54, and twenty-five letters of the correspondence of Brutus and Cicero (with one interesting letter of Brutus to Atticus, in criticism of Cicero, *Ad Brut.* 25 (1. 17), all from 43 B.C. There are, all told, ninety-nine different correspondents, writers, or recipients of letters, and the whole correspondence ranges over the years 68–43. Even so, a great many

important letters (for instance, Cicero's letter to Pompey in 63 about the execution of Catiline's supporters) have not survived. Cicero's own letters vary greatly in style. Some were careful and deliberate (e.g. *Fam.* 1. 9; 5. 7; 5. 12); others were written in haste, without thought of publication. As would be expected, more letters survived from the last years of his life (163 from 45, 122 from 44, and 101 from the first half of 43). When (for the first time, as far as we know) he thought of the publication of a volume of his letters in July 44, he wrote in terms of a quite small collection, seventy, which Tiro possessed, with the addition of others which Atticus would provide (*Att.* 16. 5. 5).

CICERO (2), **QUINTUS TULLIUS** (*PW* 31) (102–43 B.C.), younger brother of Marcus Cicero (1) and similarly educated (they were both in Athens in 79 B.C.), had none of his brother's genius. He was impetuous and often tactlessly outspoken; yet he was an able administrator. Plebeian aedile in 65 and praetor in 62 (helped, no doubt, by the fact that Marcus was praetor and consul respectively when he was elected), he governed Asia from 61–59, receiving two long letters of advice and criticism from his brother in Rome (*QFr.* 1. 1 f.). He spent winter 57/6 in Sardinia as a legate of Pompey (q.v.), when Pompey received his corn commission, and was evidently a hostage for Marcus' good behaviour in politics. He was legate on Caesar's staff in Gaul from 54 to early 51, taking part in the invasion of Britain in 54 and winning deserved praise for his courage in holding out against the Nervii when the Gauls attacked the winter camps in 54 (*BGall.* 5. 40–52); though unwell, he drove himself so hard that his troops forced him to take some sleep at night (*ibid.* 40. 7). At Atuatuca a year later he took risks, probably with more excuse than Caesar allows, and was criticized (*ibid.* 6. 36–42). He was a valuable legate on Marcus' staff in Cilicia in 51/50, supplying (with C. Pomptinus) the military experience which Marcus lacked. He joined Pompey in the Civil War, was pardoned after Pharsalus and then, with his son, behaved badly in maligning his brother to Caesar (*Att.* 11. 9 f.). Victims of the proscription in 43, he and his son were betrayed by their slaves.

The twenty-seven surviving letters of Marcus to Quintus were written between 59 and 54, mostly when Quintus was serving abroad. Of the four short surviving letters of Quintus, one (*Fam.* 16. 16: 53 B.C.) congratulated Marcus on enfranchising Tiro and three (*Fam.* 16. 8–9 B.C.; 16. 26 f.: 44 B.C.) were to Tiro. Quintus was a literary dilettante, writing four tragedies in sixteen days when in Gaul (*QFr.* 3. 5. 7). Though certainty is not possible (Balsdon, *CQ* 1963, 242 ff.), a strong case has been made out for believing that neither Quintus nor, indeed, a contemporary wrote the *Commentariolum Petitionis*, a long letter on Marcus' canvass for the consulship of 63 (M. I. Henderson, *JRS* 1950, 8 ff.; R. G. M. Nisbet, *JRS* 1961, 84 ff.; W. S. Watt, *M. Tulli Ciceronis Epistulae*, in *O.C.T.*, 1958), 179).

Like his brother, Quintus owned property near Arpinum. His marriage to Pomponia, sister of Marcus' friend Atticus (q.v. 1) lasted from 69 to 44 and produced one son, but was never a happy one.

W. Wiemer, *Q. Tullius Cicero* (Diss. Jena, 1930).

J. P. B.

CICERO (3), **QUINTUS TULLIUS** (*PW* 32) (66–43 B.C.), unstable son of (2), was harmed from childhood by the disputes of his parents, each of whom canvassed his sympathy against the other. His education was supervised during his father's absences on duty abroad by his mother's brother T. Pomponius Atticus (q.v. 1) to 54 and then by his uncle M. Cicero (1). With his cousin (4) he was taken out to Cilicia in 51–50, when his father was legate on his uncle's staff. The boys stayed for a time with King Deiotarus (q.v.) of Galatia (*Att.* 5. 17. 3). On the Republican side at Pharsalus and afterwards pardoned by Caesar, he then went to Asia with his father and sought to pre-empt Caesar against his uncle (*Att.* 11. 10. 1). In 46 he was aedile at Arpinum (*Fam.* 13. 11. 3) and became Lupercus at Rome (*Att.* 12. 5. 1) and was perhaps active as such in the Lupercalia of 44, when Caesar was offered a crown. He was killed with his father in the proscriptions, in Dec. 43.

J. P. B.

CICERO (4), **MARCUS TULLIUS** (*PW* 30), b. 65 B.C., spoilt son of the orator (1) and Terentia, was educated

under his father's supervision and taken out to Cilicia by him in 51. He was a successful cavalry officer in the republican army in 49/8 (*Off.* 2. 45). Pardoned after Pharsalus, he would have liked to serve under Caesar in Spain (*Att.* 12. 7. 1), but instead was sent to Athens to study under the Peripatetic Cratippus. He served under Brutus, who praised him highly (*Brut.* 3 (2. 3). 6). After Philippi he joined Sextus Pompeius, but took advantage of the amnesty of 39. He was elected Pontifex and was colleague of Octavian (from 13 Sept. to 1 Nov.) as consul in 30; afterwards he governed Syria and was proconsul of Asia. There is no evidence to support the hypothesis (J. Carcopino, *Cicero, the Secrets of his Correspondence* (1951), 489 ff.) that his father's letters were published in 34/3 at the instigation of Octavian, partly to blacken his father's memory, and that he was an agent in the enterprise. Though he was, by his own admission, idle in his student days (*Fam.* 16. 21) and drank too much (Pliny, *HN* 14. 147) and though his distinguished public career may have been partly due to Octavian's repentance for his father's murder (cf. *Sen. Ben.* 4. 30), he cannot have been without considerable administrative ability.

J. P. B.

CILICIA, a district of southern Asia Minor. The name included various regions at various times, but came ultimately to designate the eastern half of the south coast. Of this the western portion (Cilicia Tracheia) is wild and mountainous, the eastern (Cilicia Pedias) is rich plainland. Here, after the Trojan War, came Greek settlers, bringing with them the name of the Cilices, who in Homer are located in the southern Troad (*Il.* 6. 397). Their leader, according to tradition, was Mopsus the seer, whose name survived in Mopsuestia and Mopsucene and occurs as a personal name in later inscriptions. Identified wholly or partly with the Ililakku of the Assyrian records and with the Kelckesh of the Egyptian, the Cilicians were subject to the Assyrians in the eighth century; subsequently they were governed by a line of kings, at first independent, then under the Persians, bearing the name or title of Syennesis. After liberation by Alexander, possession of the country was disputed by the Ptolemies and the Seleucids; at the same time, at Olba in the eastern part of Tracheia, a sacerdotal dynasty maintained itself for several centuries, claiming heroic descent under the names of Teucer and Ajax. In the second century the pirates established themselves strongly on the coast of Tracheia; to deal with them the Romans c. 102 B.C. instituted a special command called the province of Cilicia. This, however, did not include either Pedias or even Tracheia; Cicero defines it as *Lyciam, Pamphyliam, Pisidiam Phrygiamque totam*, but this is probably exaggerated (*Verr.* 2. 1. 95). The pirates were not in fact suppressed until Pompey's campaign of 67 B.C. Pedias was included in the province c. 64 B.C., and in 56 a considerable area of the interior north of Taurus (while in the interior Pompey had also recognized the rule of a dynast, Tarcondimotus, who survived till he died fighting for Antony in 31 B.C., with his capital at Hierapolis-Castabala); but soon afterwards this province was dismembered and shared between Syria and Galatia, and under the early Empire it ceased to exist. Tracheia was at this time ruled by a succession of kings of Galatia, Cappadocia, and Commagene. In A.D. 72 Vespasian reconstituted the province of Cilicia to include Pedias and Tracheia only, under a praetorian legate.

Cilicia Pedias is among the most fertile parts of Asia Minor; it produced flax (now mostly replaced by cotton), vines, olives, and corn. It was also important strategically as affording the only route from Asia Minor to Syria. Tracheia had little to offer apart from ship-timber, which,

however, was valuable to the Ptolemies (Egypt being lacking in timber), and later to the pirates.

CILLO, LUCIUS FABIUS (Septimius Catinus Acilianus Lepidus Fulcinianus), *cos. suff.* A.D. 193, a Spaniard, was *comes* of Septimius Severus and Caracalla. After governing Narbonensis, Galatia, and Bithynia-Pontus, he accompanied Severus to the East against Pescennius Niger (193). He then governed Moesia Superior (195/6) and Pannonia Superior (197-202), was *praefectus urbi* (203/4-? 211) and *cos. II ord.* (204). He saved Macrinus' life after Plautianus' murder in 205, and later tried to reconcile Caracalla and Geta. After Geta's murder (212) his life was threatened by Caracalla but was saved by popular demonstrations. H. H. S.

CIMBRI, a German tribe from north Jutland, where the district of Himmerland preserves their name. Towards the end of the second century B.C. over-population and encroachments by the sea drove them to migrate, in company with the Teutones (q.v.) and Ambrones. From the Elbe they arrived, by a roundabout route, in Noricum, where they defeated a Roman consular army (113 B.C.). They then turned west and entered the Helvetian territory between the Main and Switzerland, where a few of them settled; vestiges of a Cimbric element in the population are perhaps implied by inscriptions to Mercurius Cimbricus at Miltenberg and Heidelberg (*ILS* 4595, 4596, cf. 9377). About 110 they entered the Rhône valley, defeating M. Iunius Silanus and then turning into the centre of Gaul. In 105 they were again in the south, where they won the great victory of Arausio (Orange), and then entered Spain, whence the Celtiberians drove them out. They now moved towards Italy. Marius defeated the Teutones and Ambrones, who took the western route, at Aquae Sextiae (*Aix-en-Provence*) in 102, and in 101 destroyed the Cimbri, who had travelled round the Alps and entered Italy by the north-east, near Vercellae, in the Po valley. A few of the Germans had remained in northern Gaul; the later Aduatuci claimed to be their descendants. A remnant of the Cimbri was found in Jutland by the naval expedition sent by Tiberius in A.D. 5 (*Mon. Anc.* 26).

L. Schmidt, *Geschichte der deutschen Stämme Die Westgermanen* (1938), I, 3 ff.; Tacitus, *Germania*, ed. Anderson (1938), 171 ff. O. B.

CIMINIUS MONS, range of volcanic mountains rising to c. 3,000 feet, which separate southern from central Etruria. A crater lake (*Lacus Ciminius*: *Lago di Vico*) nestles amongst them. Fabius (q.v. 3) Rullianus won fame by penetrating their awe-inspiring, thickly wooded slopes in 310 B.C. (Livy 9. 36-9). Sutrium and Nepete (qq.v.) are keys to the region. E. T. S.

CIMMERIANS (Κιμμέριοι, Assyrian Gimirri, the 'Gomer' of Ezek. xxxviii. 6, Genesis x. 2), a people driven from south Russia by the nomad Scyths (Hdt. 1. 16 f.). They overthrew Phrygia under the last King Midas (c. 676?), killed Gyges (q.v.), took the lower town of Sardis (c. 644), and terrorized Ionia (Strabo 647, citing Callinus and Archilochus), but were gradually destroyed by epidemics and in wars with Lydia and Assyria. Their name survived in the Cimmerian Bosphorus (Straits of Kertch) and some place-names thereabout (though 'Crimea' itself is from Turkish *kirim*, a ditch, i.e. that across the isthmus of Perekop). In our *Odyssey* (11. 14 ff.) Cimmerians appear as a people on whom the sun never

shines, near the land of the dead; but old variants, Cheimerioi, Kerberioi (cf. Cerberus), rather suggest that the reading Kimmerioi has prevailed here only through the fame of the real Cimmerians. A. R. B.

CIMON, Athenian statesman and soldier, son of Miltiades (q.v.) and Hegesipyle, daughter of the Thracian King Olorus. On his father's death in 489 he paid the fine of fifty talents which had been imposed upon him. He took part in an embassy to Sparta in 479 and from 479/8 or 478/7 held office frequently as *strategos*. In 478 he helped Aristides (q.v. 1) to win the allegiance of the maritime Greeks and from 476 to 463 commanded in all or nearly all the operations of the Delian League (q.v.). He drove Pausanias (q.v. 1) out of Byzantium and captured Eion on the Strymon from the Persian Boges (476/5). Soon after this he conquered Scyros; the Dolopian pirates who inhabited it were replaced by Athenian colonists and Cimon brought back 'the bones of Theseus' in triumph to Athens. These successes, coupled with his noble birth, his wealth, which he lavished on entertainments and public works, and his connexions—his (second?) wife Isodice was an Alcmaeonid and his sister Elpinice married Callias (q.v. 1)—made him very influential and he became the leader of the aristocratic party in opposition to Themistocles, and later to Ephialtes (q.v. 4) and Pericles. He is not said to have commanded in the operations against Carystus and Naxos (between 473 and 469), but this may simply be due to the brevity of our sources. His greatest military achievement soon followed (c. 468)—the Eurymedon campaign, in which the Persian fleet was totally destroyed, and several Greek cities, as far east as Phaselis (q.v.), joined the League. Next he subdued the Thracian Chersonese, driving out the remaining Persians, and, apparently in the same campaign, began the reduction of Thasos, which had seceded from the League, perhaps with the covert support of Alexander I of Macedon. This task Cimon completed after a two years' siege (465-463). On his return to Athens he was prosecuted on his *euthymia* (q.v.) by Pericles and other democrats, on a charge of having been bribed by Alexander not to attack Macedonian territory, but was acquitted. He now persuaded the Athenians, despite the opposition of Ephialtes, to assist Sparta against the insurgent helots, and himself led out a large force of hoplites (462). He was, however, soon sent home by the Spartans (who feared that the Athenians might intrigue with the helots), and with this ignominy Cimon's great influence at Athens ended. The democrats, led by Ephialtes and Pericles, stripped the Areopagus (q.v.) of most of its powers either during his absence or after his failure, and he was ostracized in 461. Four years later Cimon asked to be allowed to fight against the Spartans at Tanagra to prove his loyalty; this was refused, but he was recalled soon after. He took little part in politics, however, till c. 450, when he arranged a Five Years' Peace with Sparta, and led a last expedition against Persia, to recapture Cyprus. On this campaign he died, and peace with Persia followed (see CALLIAS 1). Besides Isodice, Cimon married an Arcadian woman, apparently the mother of those three of his six sons who were called Lacedaemonius, Eleus, and Thessalus after the three peoples whose *proxenos* (q.v.) he was. Lacedaemonius was *strategos* in 433/2 and commanded in the first expedition to Corcyra in 433. In the later biographical tradition represented by Plutarch Cimon figured as a large-hearted, expansive, genial conservative; his foreign policy, in contrast with that of Pericles, one of goodwill towards the allies, friendship with Sparta, and war against the national enemy. There is some truth in this, but the Egyptian war took place during his exile, and he was as active as Pericles in opposing by force secession from the League. Attacks

were made on his character, some of them by Stesimbrotus, who came from Thasos.

Plutarch, *Cimon*. Meyer, *Forschungen* i. 1 ff.; A. W. Gomme, *An Historical Commentary on Thucydides* i (1945), 326 f.; G. A. Papanicolaou, *AJPPhil.* 1951, 176 ff. J. Barnes, *Hist.* 1953/4, 163 ff.; W. R. Connor *GRBS* 1963, 107 ff. A. W. G., T. J. C.

CINAEDIC POETRY, verses recited by *κιναιδολόγοι*, such as Sotades and Timon of Phlius. Originally accompanied by oriental instruments (Demetr. *Eloc.* 37; Polyb. 5. 37. 10), they were later recited (Pliny, *Ep.* 9. 17. 1; Strabo 648). They were of a satirical and scurrilous character (Petron. *Sat.* 23. 2) and said to be of Ionian origin (Ath. 620 c; cf. Plaut. *Stich.* 769). C. M. B.

CINAETHON OF LACEDAEMON, epic poet, of uncertain date; supposed author of a *Telegonia* (? *Theogonia*), an *Oedipodea*, the *Ilias parva*, a *Heraclea*, and perhaps genealogies; to be distinguished from Cynaethus (q.v.). See EPIC CYCLE.

EGF 4, 8, 38, 196-8, 212.

CINCINNATUS, LUCIUS QUINCTIUS (*PW* 27), an historical figure, although details of his career possibly were derived from popular poetry. In 458 B.C., according to tradition, when Minucius was besieged by the Aequi on Mt. Algidus, Cincinnatus was appointed dictator and dispatched to his rescue. He defeated the Aequi, freed Minucius, resigned his dictatorship after sixteen days, and returned to his farm beyond the Tiber. The story later underwent embellishments (e.g. the *Prata Quinctia* may have suggested the name of the hero, and various features may have been borrowed from the account of the rescue of C. Minucius in 217 B.C.), but undoubtedly it is based on more than the misinterpretation of some monument, a false etymology, or reduplication. But the story of Cincinnatus' second dictatorship in 439 has no foundation.

Ogilvie, *Comm. Livy* 1-5, 416 ff.

P. T.

CINCIUS (PI' 5) ALIMENTUS, LUCIUS, Roman senator and historian, was praetor in Sicily in 210/9 B.C., and was captured by Hannibal (Livy 21. 38. 3). His history of Rome, written in Greek, set the foundation of the city in 729-728 B.C. and reached his own times. With the work of Fabius Pictor, it formed the basis of the senatorial historical tradition, especially of the Second Punic War. The constitutional antiquarian of the same name wrote towards Augustan times.

Peter, *IRRel.* 2, ci, 40, *FGrH* iii c. 876 ff. Walbank, *Polybius* 29. A. H. McD.

CINEAS, a skilful Thessalian diplomat, famous for his observations that Rome's Senate was an assembly of kings and war with Rome a battle with a hydra. King Pyrrhus (q.v.) sent him at least once and possibly twice to Rome to negotiate peace. His terms, however, proved unacceptable.

P. Lévêque, *Pyrrhos* (1957), 346 f.

E. T. S.

CINESIAS (c. 450-c. 390 B.C.), dithyrambic poet, of Athens, connected with the abolition of the Chorus from Attic comedy (Schol. Ar. *Ran.* 404), twice engaged in legal proceedings with Lysias, who disapproved of him (Lys. 21. 20; fr. 73). No fragments of interest survive from his work, but Aristophanes refers to him at *Av.* 1377; *Lys.* 860; *Ecl.* 330; *Ran.* 1437; fr. 108; and Plutarch (*De mus.* 30) regarded him as a corrupter of Attic music. See MUSIC § 10. C. M. B.

CINNA (1), LUCIUS CORNELIUS (*PW* 106), of patrician birth, fought with distinction in the Social War and, against the opposition of Sulla, became consul in 87 B.C.

Trying to rescind the legislation that Sulla had carried by armed force, he was driven out of Rome by his colleague Octavius (q.v. 3) and was illegally deposed in favour of Merula. Collecting a force of legionaries and Italians, and supported by Carbo (q.v. 2), Sertorius, and Marius, he marched on Rome and captured it late in 87, after the death of Pompeius Strabo and the failure of Metellus (q.v. 7) Pius to relieve it. He punished those who had acted illegally, but tried (not altogether successfully) to stop Marius' indiscriminate massacre. Consul (86) with Marius, and, after Marius' death, with Valerius Flaccus, he managed to eliminate the use of force that had become accepted and to restore ordered government. He gained the co-operation of the *equites* and the People by financial reforms (see FLACCUS 6, and MARIUS 3), and that of the consulars (Perperna 3, Marcus Philippus 4, Scaevola 4, and Valerius Flaccus 6 (qq.v.)) and other responsible men by moderation and regard for *mos maiorum*. However, following Marius' precedent, he held the consulship again in 85 and 84 with Carbo, in view of the danger from Mithridates (whom he continued to fight) and of Sulla's ambiguous behaviour, though he tried to negotiate with Sulla. Embarking on a Laburnian campaign early in 84, perhaps to train an army for a possible conflict with Sulla's veterans, he was killed in a mutiny, after which Sulla rebelled and the government disintegrated. Our information on him is distorted by hostile sources.

H. Bennett, *Cinna and his Times* (1921); Badian, *Stud. Gr. Rom. Hist.* 206 ff.; C. M. Bulst, *Hist.* 1964, 307 ff. E. Il.

CINNA (2), LUCIUS CORNELIUS (*PW* 107), son of Cinna (1), took part in the revolt of Lepidus (q.v. 2), joined Sertorius (q.v.) in Spain, and was allowed to return, along with other Lepidani, by a *Lex Plautia* passed (in 70 B.C.?) with the support of his brother-in-law Caesar; but was probably still debarred from a public career, as he reached the praetorship only in 44, after Caesar had reinstated the sons of the proscribed (49). As praetor he showed Republican sympathies: he expressed approval of the murder of Caesar, and was attacked on his way to the Senate (17 Mar.) and rescued by Lepidus. He procured the restoration of the deposed tribunes Flavius and Marullus, and on 28 Nov. refused the province assigned him by Antony. He married, perhaps at this time, Pompey's daughter, widow since 46 of Sulla (3). He may have been proscribed (cf. Sen. *clem.* 1. 9. 8). T. J. C.

CINNA (3), GAIUS HELVIUS (*PW* 12, cf. 11), a native of Cisalpine Gaul, a pupil of Valerius Cato, and a friend of Catullus, with whom he was probably in Bithynia in 57 B.C. (Catull. 10). He was a *doctus poeta* of the 'Alexandrian' school. His 'epyllion' *Zmyrna*, the work of nine years (Quint. 10. 4. 4), was a masterpiece of the 'new' Alexandrian manner and the admiration of his fellow poets (Catull. 95; cf. Verg. *Ecl.* 9. 35). Its subject, the Cyprian legend of the unnatural love of Zmyrna (or Myrrha) for her father Cinyras, gave opportunity for developing the Alexandrian interest in the psychology of passion and its allusive learning was such that within a generation or two it needed a commentary and the scholar L. Crassicius made his reputation by writing one (Suet. *Gramm.* 19). His *propempticon Pollionis*, a travel-poem in a Hellenistic genre, was prompted by a visit of the young Pollio (q.v.) to the East in 56 B.C.; he also wrote light verse in hendecasyllabics, scazons, and elegiacs.

He is usually identified with C. Helvius Cinna, tribune in 44, who carried a law deposing his colleagues Flavius and Marullus, who had offended Caesar, and was said to have drafted another permitting Caesar to marry additional wives and so get himself heirs. After Caesar's

funeral he was torn to pieces by the mob, which mistook him for Cinna (2 above).

Morel, *FPL* 87 ff.; Schanz-Hosius i. 307 f. C. J. F.; T. J. C.

CINNA (4) **MAGNUS**, GNAEUS CORNELIUS (PW 108), son of Cinna (2) and grandson of Pompey, was consul in A.D. 5. According to a rhetoricized story (Sen. *clem.* 1. 9, Cass. Dio 55. 14-22) which some reject altogether, he plotted against Augustus during his absence in Gaul (possibly 16-13 B.C.), but was pardoned at the instance of Livia.

Syme, *Rom. Rev.*, see index; W. Speyer, *Rh. Mus.* 1956, 277 ff. T. J. C.

CINYRAS, mythical king of Cyprus and ancestor of the Cinyrades, the priests of Aphrodite at Paphos (Tac. *Hist.* 2. 3). Despite the legends which make Cinyras a king of Byblos (Strabo 755) or son of Sandocus, a Syrian immigrant to Cilicia (Apollod. *Bibl.* 3. 14. 3), he may represent the autochthonous culture in Cyprus (so Dussaud). Founder of the cult of Aphrodite in Cyprus, Cinyras introduced sacred prostitution (q.v.) there. He was the father of Adonis (q.v.) through unwitting incest with his daughter, Myrrha or Smyrna (Ov. *Met.* 10. 298 ff.); this story was sometimes told of Theias, who is also given as the father of Cinyras. As musician and seer, Cinyras is the son and favourite of Apollo. His name became proverbial for riches and beauty.

J. G. Frazer, *Adonis Attis Osiris* i, ch. 3; R. Dussaud, *Syria* 1950, F. R. W.

CIRCE, in Homer (*Od.* 10. 210 ff.) a goddess living on the fabulous island of Aea (ibid. 135), later identified, in Italy, with the promontory of Circeii in Latium. She is very powerful in magic; her house is surrounded by wild beasts who fawn on new arrivals (later, as *Aen.* 7. 19-20, they are men changed by her spells) and she turns Odysseus' men into swine. He is helped by Hermes to resist her spells by means of the herb moly, forces her to restore his men, and lives with her for a year, after which she gives him directions for his journey home, see ODYSSEUS. She is sister of Aeetes and daughter of Helios and Perse (*Od.* 10. 137-8). In Hesiod (*Theog.* 1011 ff., spurious?) she bears Odysseus two sons, Agrios and Latinus (see further ODYSSEUS). She touches the Argonautic legend, receiving Jason and Medea, and purifying both from the murder of Absyrtus (Ap. Rhod. 4. 557 ff.).

Odysseus and Circe, with the companions half-transformed, is a not very common subject in vase-painting from the mid sixth century on (Brommer, *Vasenlisten*², 308 ff.). H. J. R.; C. M. R.

CIRCEII, town and isolated mountain on the Tyrrhenian coast south of Rome, originally the southern limit of Latium and, by popular etymology, the abode of Circe (q.v.). A Latin colony established here (393 B.C.) helped contain the Volsci (q.v.). Massive polygonal walls remain near modern *S. Felice Circeo*.

G. Lugi, *La tecnica edilizia romana* (1957), 148 ff. E. T. S.

CIRCUS, an enclosure for chariot-racing, planned with parallel sides and one semicircular end, all fitted with seats, and with an axial rib (*spina*) marked at each end by turning-posts (*metae*) dividing the area into two runs. The seating was arranged in storied groups. At the open end were the curved stables (*carceres*) for twelve teams of horses, who competed four, six, eight, or even twelve at a time under the colours of the different factions. These were red and white at first (Tert. *De Spect.* 5 and 9) and presently green (Suet. *Gaius* 55) and blue (Suet. *Vit.* 7), Domitian's purple and gold (Suet. *Dom.* 7) being temporary. There were seven laps to

each race, measured by movable eggs and dolphins, the emblems of the Heavenly Twins and Neptune, the horse gods (Dio Cass. 49. 43. 2).

The earliest example of a *circus* at Rome is the *Circus Maximus*, in the Murcia valley between the Palatine and Aventine hills, reputed to be of kingly origin, adorned during the Republic (Livy 8. 20. 1; 33. 27. 4; 39. 7. 8; 40. 2. 1; 41. 27. 6), and rebuilt by Caesar (Pliny, *HN* 36. 102). It measured 600 m. long by 150 m. wide; a lap was approximately 1,500 m. The second was the *Circus Flaminius* of 221 B.C., in the southern Campus Martius. The third was the *Circus Gaii et Neronis* (Pliny, *HN* 36. 74) or *Vaticanus* (ibid. 16. 201), the site of Christian martyrdoms, close to the later St. Peter's basilica. Best preserved of all is the *Circus of Maxentius* on Via Appia, outside the city, dedicated in A.D. 309 (*ILS* 673).

In Italy, the *circus* is not infrequently, examples being known at Bovillae, Asisium (*CIL* xi. 5390), and Aquileia. The hippodromes of Constantinople, Alexandria, and Antioch were famous throughout the East. In the West, examples are known in Gaul at Lugdunum (*CIL* xiii. 1919), and Vienne; at Emerita, Toletum, Tarraco, Balsa, Zafra, and Urso in Spain, which was famous for its racing-stables (Pliny, *HN* 8. 166).

For *circuses* at Rome, see Nash, *Pict. Dict. Rome* i, 232 ff.

I. A. R.

CIRRHA, a port to the east of Itea, owned tin-mines which were worked in prehistoric times. The site was occupied in the Early Helladic period and in the transitional period between the Middle Helladic and the Late Helladic periods. It flourished in the latter part of the Late Helladic period as the port of Mycenaean Crisa (q.v.) and it was especially prosperous in the seventh century. It was involved in the fate of Crisa, but it revived later as a port.

P-K, *GL* 1. 2. 686 ff.

N. G. L. H.

CIRTA (modern *Constantine* in Algeria), a strong rock-fortress, commanding the gorges of the Ampsaga (*Rumel*), was the capital of Syphax and then of Masinissa, who encouraged the settlement of Italian merchants, and linked Cirta to the ports of Rusicade (*Philippeville*) and Chullu (*Collo*). Jugurtha captured it from Adherbal (112 B.C.) and massacred the Italian inhabitants. For help in overthrowing Juba I, Sittius (q.v.) and his followers were granted Cirta and the surrounding country by Caesar (46 B.C.). Under the Empire, the full name of Cirta was *Colonia Julia Iuvenalis Honoris et Virtutis Cirta* and it was the centre of a unique confederation which included three other colonies, Rusicade, Chullu, and Milev. Cirta's great prosperity in the second and third centuries A.D. depended on its crops, marbles, and copper-mines. Its best-known citizen was Fronto (q.v.). Damaged in the civil wars of the early fourth century, it was restored by Constantine who renamed it *Constantina*, and became the capital of Numidia. There was a substantial community of Christians. Cirta retained some importance under Vandal and Byzantine rule.

CISALPINE GAUL, the fertile, populous region between Apennines and Alps in north Italy. The migration of Gauls into Italy via the Brenner (c. 400 B.C.) was one phase of the great Celtic expansion (Livy 5. 33 f. mistakenly makes the Gauls arrive via the Western Alps c. 600). These Gauls, although successfully resisted by the Veneti, gradually ousted the Etruscans, pushed back the Umbrians and Ligurians, and made the Cisalpine area their own. Their gift for poetry, their art and

material culture imply a certain degree of civilization; their iron implements, e.g. badly tempered swords, have been recovered from their inhumation burials. But in many ways they were savages: they practised head-hunting and human sacrifice and were addicted to drunken brawling. Occasionally they built excellent fortifications, but many Gallic settlements were mere collections of primitive huts. The Gauls were not very cohesive; they tended to form in groups around individual and often mutually hostile chieftains. Expert horsemen, they were savage fighters, ever ready to live either by plunder or by serving as mercenaries. In the fourth century B.C. their marauding bands, one of which captured Rome (390), terrorized Italy. After 330, however, with an adaptability perhaps not surprising in so unstable a nation, these restless adventurers settled down about the Po and became skilful agriculturalists. However, they retained their fighting qualities, as their annihilation of a Roman army at Arretium (284) proves. Subsequently they waged long and ultimately unsuccessful wars against Rome: see BOII, CENOMANI, INSUBRES, SENONES. Since any *tumultus Gallicus* threatened her national existence Rome pursued a policy of denationalization and even extermination; by 150 B.C. few Gauls remained in the Cisalpine plain (Polyb. 2. 35; Sall. *Iug.* 114; Cic. *Phil.* 8. 3). South Italians, including many Romans, replaced them and Cisalpine Gaul became known as Gallia Togata. Aerial photography has revealed the grid pattern, the so-called centuriation (q.v.) of the Roman settlements. Cimbri (q.v.) threatened in 101 and were repulsed by Marius. In 89 the Transpadane region received *Ius Latii*, the Cispadane apparently Roman citizenship. Probably it was Sulla who organized the Cisalpine province with the Rubicon as its southern boundary (but see O. Cuntz, *Polybius u. s. Werk* (1902), 32). Roman citizenship was extended to the Transpadane region in 49, and in 42 the province was incorporated into Italy. Under Augustus the tribes inhabiting the Alpine foothills were conquered; thus the Alps became the frontier of Italy (Pliny, *HN* 3. 138). Its remarkable productivity and flourishing woollen trade enriched Cisalpine Gaul. 'Est enim ille flos Italiae, illud firmamentum imperii populi Romani, illud ornamentum dignitatis' (Cic. *Phil.* 3. 13). In Strabo's time (5. 217 f.), as in ours, it contained more large wealthy towns than any other part of Italy.

ANCIENT SOURCES. Strabo (5. 212 ff.) gives a valuable general account of Cisalpine Gaul, marred by anachronisms. Polybius' historical and geographical outline of Cisalpine Gaul down to the Hannibalic War, despite certain inaccuracies, is sober and scientific (books 2 and 3). For events after 202 the chief source is Livy 30-6, a confused account vitiated by rhetorical elaborations. Justin, Diodorus, Appian, and Dio Cassius are the principal subsidiary sources.

CITIZENSHIP, GREEK (πολιτεία, a word which also denotes (i) the citizen body, (ii) the constitution). In Greek city-states citizenship expressed the fact that the *polis* was a community of free men, but it was originally not an individual right; it meant membership of a religious and social community (see *POLIS*). Descent from full citizen parents always conferred citizen status, and also membership of the smaller communities of family, *genos*, and *phratría* (qq.v.). The type of constitution depended on the number and quality of those who were full citizens, but in all constitutions the citizens tended to be exclusive.

In oligarchies it was more important to own landed property or to be wealthy than to be well born, and in democracies the rule of descent from citizen parents (ἐξ ἀποδὸν δότοιν) was not always strictly enforced. The share in citizens' rights varied among the sections of the people. Women might hold some rights, such as owning property, though not at Athens. Class differences were never fully removed, not even in radical democracy, though political rights could be equal. The *ethnikon*, used in the plural (οἱ Ἀθηναῖοι), indicated the State itself. Besides, the State could grant and withdraw citizenship. Such grants were seldom made in early times, except occasionally by tyrants or other leaders bent on increasing the number of their supporters; but they became frequent after the fourth century B.C. Inscriptions recording grants of citizenship are very numerous. Finally citizenship became an empty honour which might be obtainable by benefactions or even purchase, and in many cases people obtained two or more citizenships. Citizenship was lost either by *atimia* (q.v.) or banishment. The general duties of a citizen, e.g. submission to law, defence of the State and its constitution, worship of the State gods, were often confirmed by oath. In most cases citizenship granted to a stranger carried all the rights, though in later times not the duties, of a born citizen. In the Hellenistic Leagues every citizen of a member-state normally acquired a second citizenship, that of the League.

CITIZENSHIP, ROMAN. Roman citizenship depended either upon birth—descent from Roman parents on both sides, though one parent might be a *peregrinus* possessing *conubium*—or upon a grant made by the People, or, in the Empire, by the Princesps. It implied rights, privileges, and duties, *iura, honores, munera*. All citizens, after the union of the Orders, possessed *conubium*, etc., and, under the Republic, voting rights (*suffragium*) in the various assemblies, unless specifically disfranchised (*aerarii*; q.v.). The system of wealth classification limited the value of the *suffragium* and determined eligibility for magistracies (*honores*) and liability to *munera* (q.v.), especially military service. *Honores* were thus supplementary; there was no *ius honorum*. Rome gradually extended her citizenship to her allies and subjects, in whose incorporation *civitas sine suffragio* (see *MUNICIPIUM*) or *Ius Latii* (q.v.; also *LATINI*) formed an intermediary stage. Citizenship brought the new Romans within the orbit of *iura, munera, and honores*, and entailed the surrender to Rome of the sovereignty of the community concerned. Thus Roman citizenship was incompatible with that of another independent state. But incorporated communities retained some rights of local self-government (see *MUNICIPIUM*). These principles, worked out in the incorporation between 380 and 250 B.C. of those places which formed the Roman territory down to 90 B.C., were revived by the incorporation of all Italy after the Social War (see *SOCII, MUNICIPIUM, COMMERCIVM, LATINI*). The consequent increase in the number of *municipia* inaugurated a change in the theory of Roman citizenship. Rome ceased to be a city-state and became the *communis patria* of all Italy. Municipal affairs began to supplant the Forum as the centre of interest for the mass of citizens, whose personal privileges, however, marked them as privileged élite when outside Italy. Next came the extension of the citizenship to provinces. From Caesar's dictatorship onwards Roman colonies and municipalities were regularly established overseas and provincial peoples were granted Latin rights and citizenship. Throughout the Principate these processes were accelerated by the regular grant of citizenship to soldiers

recruited in the provinces and by wealthy provincial aristocrats entering the governing class of Rome, until the western provinces became Roman in both civilization and social rights (see *COMMERCIUM*). Finally, the *constitutio Antoniniana* conferred citizenship upon all free inhabitants of the empire (A.D. 212), without, however, affecting the status of their communities. (Cf. *MUNICIPIUM*, *COLONIZATION*, *IUS ITALICUM*.) The citizenship gradually lost its political importance: the abolition of *comitia* made the *ius suffragii* illusory; provincial Romans lost their former exemption from provincial taxation; senatorial *honores* fell only to the most distinguished of provincial citizens, though the municipal aristocracy commonly aspired to equestrian rank. But the social value remained unchanged, despite some assimilation of the rights of *peregrini* (q.v.) to those of citizens, and the *ius provocacionis* remained a considerable judicial privilege guaranteed by the production of a birth-certificate or of a *diploma* of citizenship (see *APPELLATIO*). By the age of the Antonines, however, citizenship was mainly important as the symbol of imperial unity, the doctrine of the incompatibility of two citizenships had broken down with the frequent extension of the franchise to individual members of non-Roman communities (see *PEREGRINI*), and the political ambitions of ordinary men were satisfied in the service to their municipalities. So the spread of *civitas Romana* led to the elaboration of the theory that Rome was the *communis patria* of the whole civilized world.

For bibliography, see *COLONIZATION*, *LAINI*, *MUNICIPIUM*. ANCIENT SOURCES: *CIL* vii; *Digest* passim; *ILS* 212, *PGress* 40; Aelius Aristides, *Ep.* 'Πατρις'; Tertullian, *Apol.*, etc. A. N. CITY-FOUNDERS (κτίσται, οἰκισταί, *conditores*) played an important part in the city-state. In the Greek homelands, where the true origin of cities was no longer known, a god or legendary hero was looked upon as founder. But the founder is of greatest significance in the period of Greek colonization. No city sent out a band of colonists without appointing a founder, who had complete power over the colony until the new city's foundation was accomplished. If a band of exiles founded a city they selected one of their number to be founder. When a colony founded a colony in its turn, it always summoned a founder from the mother-city. The founders received heroic honours (see *HERO-CULT*) after death; there was probably no *polis* without a founder's cult. Sometimes a city changed its founder, thus symbolizing some important change in its constitution or fortunes, as when Amphipolis ousted Hagnon for Brasidas. Hadrian through his benefactions received the name of founder from many cities. J. E. F.

CIVILIS, GAIUS JULIUS (*PW* 186) (1st c. A.D.), a noble Batavian who had some grievances against the Roman government. When Antonius Primus wrote to him in A.D. 69, inciting him to create a diversion and so prevent Vitellian reinforcements from going to Italy, Civilis fomented a war of liberation under pretext of supporting Vespasian. With help from Germans beyond the Rhine he attacked the legionary camp of Vetera (q.v.), but was beaten off. The revolt, however, spread widely, finding support in the winter of A.D. 69-70 among Gallic tribes like the Treveri and Lingones. Roman troops at Novesium took an oath of allegiance to the 'imperium Galliarum' and Vetera fell at last. But meanwhile the Flavian

generals were approaching. Cerialis (q.v.) won a battle near Trier and the Gallic movement collapsed. After mixed fighting along the Rhine towards the Batavian territory, Civilis finally capitulated. His fate is not known. R. S.

CIVITAS. For the abstract sense, see *CITIZENSHIP*, *ROMAN*. In the concrete sense, the word, like the Greek *πόλις*, from meaning originally any autonomous state, came to be applied under the Empire to any self-governing municipal unit, irrespective of its civic category. But technically it denoted the least privileged grade of provincial communities possessing local autonomy, however circumscribed (see *PEREGRINI*). Their form of government was republican, with magistrates, council, and a constitution fixed according to local custom. The development of *civitates* out of an unorganized village or tribal system was the first step in the municipal development of backward areas, notably in Spain and Africa. The *civitates*, which might later be given Roman municipal status (see *MUNICIPIUM*), were the basis of the provincial administration. The governors and procurators worked through them, leaving to the local authorities the actual performance of e.g. the census surveys and collection of taxes (see *DECURIONES*, *MUNUS*, *MUNICIPIUM*).

For bibliography see *MUNICIPIUM*, *SOCI*.

A. N. S.-W.

CLAROS, oracle and grove of Apollo belonging to the Colophonians, who traced the cult back to Manto (daughter of Teiresias and mother of Mopsus) and Calchas. The sanctuary was discovered in 1907 by Makridi Bey in the valley a mile or so inland, and explored by him and Picard. Work was resumed by L. Robert in 1950, since when the main temple has been excavated with its altar and a smaller temple of Artemis. Of special interest is the rib-vaulted crypt under the temple cella, divided into an ante-room and adyton, and containing an omphalos and the well to which the (male) *prophetes* retired to drink the water of inspiration (according to Tacitus, he was told only the number and names of the consultants, and gave his responses in verse). The oracle evidently had a large clientele in Roman times; the earliest dedications reported are two statues of the sixth century B.C.

Strabo 14. 642; Tac. *Ann.* 2. 54; Paus. 7. 3. 1. K. Buresch, *Klarios* (1889); C. Picard, *Éphèse et Klarios* (1922). For the recent excavations see *Arch. Rep.* 1959-60, 41 ff.; 1964-5, 46. J. M. C.

CLASSICIANUS, GAIUS JULIUS (*PW* 188) ALPINUS, perhaps originated from the Treveri. As procurator of Britain (A.D. 61) he favoured a policy of conciliation, and begged Nero to recall the harsher Suetonius (q.v.) Paulinus. His tombstone was found in London (*AE* 1936, 3; *RIB* 12).

Syme, *Tacitus*, 456; Frere, *Britannia*, 93.

A. M.

CLASSICUS, JULIUS (*PW* 189), of royal stock among the Treveri (related presumably to C. Julius Classicianus, q.v.), and commanding as *praefectus* a cavalry regiment of his own tribe, joined Julius Civilis (q.v.) when his revolt spread into Gaul at the beginning of 70. Julius Tutor and the Lingonian Julius Sabinus were his close associates in the founding of the 'imperium Galliarum'. Classicus displayed great dash and vigour, shared in most of the fighting against the remnants of the Rhine legions and the generals of Vespasian, and remained loyal to Civilis, apparently to the end. His ultimate fate is unknown.

R. S.

CLASSIS was at first the whole Roman army; later it was a division of the army in the reform attributed to Servius Tullius. Connected with the ancient meaning

is also *classis* as 'navy'. In the Servian constitution the property owners were divided into five *classes* (apart from eighteen centuries of *equites* and four centuries of *fabri*, *cornicines*, and the like). The first three *classes* were infantry of the line, the last two light-armed troops.

The property ratings of the *classes* were perhaps at first expressed in terms of land or agrarian produce, and subsequently in terms of money. The monetary scales are variously given by ancient writers; probably they underwent several alterations (Livy 1. 43; Dion. Hal. 4. 16; Polyb. 6. 23. 15; 6. 19. 2; Gellius 6. 13; Gaius 2. 274; ps.-Asc. *Verr.* 2. 1. 41; Dio Cassius 56. 10; Cic. *Rep.* 2. 22). See CENTURIA.

F. D'Arms, *APPhil.* 1943, 424; H. Last, *JRS* 1945, 43 ff.; A. Momigliano, *ibid.* 1963, 120 ff. (with bibl.). A. M.

CLAUDIUM, town near Placentia in Cisalpine Gaul (qq.v.). Here in 222 B.C. the Roman consul Marcellus (1) (q.v.) engaged in person and slew the Celtic enemy chieftain Viridomarus—the one certainly historical instance of *spolia opima* (q.v.). E. T. S.

CLAUDIAN (CLAUDIUS CLAUDIANUS), a Greek-speaking Alexandrian, came to Italy before A.D. 395 and, turning to Latin, scored an instant success by eulogizing his young patrons, Probinus and Olybrius, thereafter becoming court poet under the Emperor Honorius and official mouthpiece of his minister, Stilicho. His efforts won him an office with the style of *vir clarissimus*, a statue (*CIL* vi. 1710), and a rich bride selected by Stilicho's wife, Serena. His death (c. 404) may be inferred from his silence in the face of Stilicho's subsequent achievements. The poems have been transmitted in three groups: (1) *Panegyric on Probinus and Olybrius* (395); (2) *Claudianus maior*, a corpus of poems concerning Stilicho, made, therefore, probably before Stilicho's ignominious death (408). These include *Panegyricus* on consulships of Honorius (396, 398, 404), Mallius Theodorus (399), Stilicho (400); *Invectives* against Stilicho's rivals at the Eastern court of Arcadius, Honorius' brother, *In Rufinum* (396), *In Eutropium* (399); *Bellum Gildonicum* (398); *Eptulaminum* and *Fescennina* on Honorius' marriage (398); *Bellum Pollentinum* (sive *Gothicum*) (402); minor poems of similar interest (e.g., *Laus Serenae*), but including epistles, idylls, and epigrams (e.g., *De sene Veronensi*) and a *Gigantomachia*; (3) *Claudianus minor*, i.e. the unfinished epic, *Raptus Proserpinae* (3 bks.), inspired possibly by the corn-shortage of 395–7 or the destruction of Eleusis (q.v.) by Alaric in 396.

Claudian is the last notable representative of the classical tradition in Latin poetry. Orosius (vii. 35) and Augustine (*De civ. D.* 5. 26), as well as his own clear predilection for the old religion, prove that he was not a Christian. In diction and technique he bears comparison with the best Silver Age work, but his considerable gifts of invective, description, and epigram are offset by a deplorable tendency to over-elaboration. His writings are a useful (and often highly distorted) historical source for his period, especially the political poems which were collected and republished separately by Stilicho after 404—a fact reflected in their separate manuscript tradition.

CLAUDIUS (1) (TIBERIUS CLAUDIUS (*PW* 256) NERO GERMANICUS, 10 B.C.–A.D. 54), the Emperor, was born at Lyons on 1 Aug. 10 B.C. and was the youngest son of the Elder Drusus (q.v. 3) and of Antonia minor. Overshadowed by the strong personality of his elder brother Germanicus, and hampered by a weak constitution and continual illness (he suffered from some sort of paralysis: see T. de C. Ruth, *The Problem of Claudius*, U.S.A. 1924), he received no public distinction from Augustus beyond the augurate and held no magistracy under Tiberius, who considered his 'imminuta mens' an obstacle to high preferment (Tac. *Ann.* 6. 46). He first held office when on 1 July A.D. 37 he became suffect consul with his young nephew, the Emperor Gaius; for the rest, he received little from Gaius but insults. His proclamation as Emperor in 41 was largely accidental. After Gaius' murder he was discovered in the palace by a soldier, hiding behind a curtain in fear of murder; he was dragged to the Praetorian Camp and saluted by the Praetorian Guard while the Senate was still discussing the possibility of restoring the Republic. The Senate did not easily forgive him, and many senators supported the fruitless revolt of Scribonianus in Dalmatia in the following year. Chosen by the Guard, Claudius emphasized his interest in the army—a policy all the more necessary because of his own lack of military distinction. He took a personal part in the invasion of Britain (43) and was present at the capture of Camulodunum. By the end of his principate he had received twenty-seven imperial *salutationes*.

Though he was consul four times during his principate (in 42, 43, 47, and 51) and censor in 47/8, in policy he reverted from the pretentious absolutism of Gaius (who was, however, spared an official *damnatio memoriae*) to a less autocratic form of principate. He went further than his predecessors in extending the *civitas* (see e.g. the Volubilis inscriptions, *AE* 1916, 42; 1924, 66) and in the foundation of new colonies (e.g. Camulodunum in Britain). This liberal aspect of his policy is well revealed in his speech advocating that the chiefs of Gallia Comata should be granted the *ius honorum* (Dessau, *ILS* 212). With the Senate he was unpopular, not because he curtailed its powers, but from the circumstances of his accession and because of the insistence with which he urged its members to take their responsibilities seriously (see e.g. *BGU* 611). Other causes of his unpopularity were his intense interest in jurisdiction, especially the hearing of cases *intra cubiculum principis*, and the political power of his wives and freedmen. Claudius' principate is marked by the emergence of rich and powerful freedmen, especially Narcissus (q.v. 2), his *ab epistulis*, and Pallas (q.v. 3), his *a rationibus*. These private secretaries exercised ministerial functions and were, no doubt, heavily bribed by candidates for preferment. Claudius was incurably uxorious. His first wife bore him two children who died in infancy. Aelia Pactina, his second wife, bore him a daughter (Claudia Antonia, A.D. 27–66). He was married at the time of his accession to Valeria Messalina (q.v. 1), and had by her a daughter Octavia (born before 41, and later married to Nero) and a son, Britannicus (q.v.), born in 41 or 42. Messalina succumbed in 48 to the intrigues of Narcissus, and Claudius then married his niece Agrippina, who could count on the support of Pallas. She persuaded Claudius in 50 to adopt her son Nero as guardian of his own son Britannicus (four years Nero's junior). Four years later Claudius died: it was generally believed that Agrippina handed him a poisoned dish of mushrooms (13 Oct. A.D. 54). He was, nevertheless, consecrated and was the first Emperor after Augustus to receive this distinction. The *Apocolocyntosis*, probably by Seneca, is a satire on his consecration.

Claudius had in his youth acquired from Livy a

thorough knowledge of Roman history and great respect for Roman religion and tradition. He celebrated the *Ludi Saeculares* in A.D. 47, founded a College of Haruspices, expelled Jews from Rome (though in Judaea and in Alexandria he did his best to still the disturbances resulting from the anti-Semite policy of Gaius), and in Gaul he suppressed Druidism. He wrote books on Etruscan and Carthaginian history, on dicing, and on the history of Augustus' principate ('a pace civili'—i.e. from 27 B.C.). He also wrote an autobiography. None of these works has survived.

Claudius added a number of provinces to the Roman Empire: Britain (whose invasion had, perhaps, been contemplated by Gaius), the two provinces of Mauretania (whose last king, Ptolemy, had been deposed and executed by Gaius), and Thrace (in A.D. 46).

Ancient writers ascribed the responsibility for Claudius' administration, both on its good and its bad side, to his freedmen and wives. This view is now untenable for the early part of his principate, thanks to the survival of a large number of imperial enactments in inscriptions and on papyri covering a great variety of administrative problems. In these the approach to problems (generally from a historical point of view) is individual and the literary style is inimitably grotesque. They are clearly the expression of Claudius' own personality, and all of them reveal profound common sense. In the last four years of his principate, however, his powers were failing and Agrippina and Pallas exercised strong influence on his policy.

ANCIENT SOURCES. Tac. *Annals* bks. 11–12 cover the period A.D. 47–54, but we do not possess Tacitus' account of the first six— unquestionably the best and most important—years of Claudius' principate. For the rest, we depend chiefly on Dio Cassius bk. 60 and on Suet. *Divus Claudius*. For other sources, see *CAH* x. 973 f. The most important inscriptions and papyri (all of which are published by E. M. Smallwood, *Documents Illustrating the Principates of Gaius, Claudius and Nero* (1967)) are the letter to the Alexandrians (see H. I. Bell, *Jews and Christians in Egypt*), the Volubilis inscriptions (v.s.), the Achaean edict (*LS* 206), the speech on the *ius honorum* of the Gauls (*LS* 212, see on this Ph. Fabia, *La Table claudienne de Lyon*), and *BGU* 611.

MODERN LITERATURE. V. M. Sramuzza, *The Emperor Claudius* (U.S.A. 1940). A. Momigliano, *Claudius* (1934, repr. 1961 with exhaustive bibliography 1942–59). J. P. B.

CLAUDIUS (2) II (GOTHICUS), MARCUS AURELIUS (PW 82) (VALERIUS), a soldier of Illyrian origin, one of the chief officers of Gallienus, chosen, after his assassination, to succeed him as emperor (early A.D. 268). Whether privy to the murder or not, he soon established friendly relations with the Senate, which had hated Gallienus.

An active soldier, he defeated the invading Alamanni near Lake Benacus, after his cavalry had suffered an initial set-back. Aurelian (q.v.) was appointed to command the horse.

In the West, the Gallic Empire, under Postumus and his successors, Marius and Victorinus, continued to hold aloof. When Augustodunum (*Autun*) revolted (269), however, Claudius sent no aid, and the city had to surrender to Victorinus.

The main achievement of Claudius was the decisive defeat of the Goths, who, even after Gallienus' successes, were plundering the Balkans. Claudius won two great battles, at Doberus and Naissus, and finally broke up their great host, absorbing many as soldiers or *coloni*. At the same time he took energetic steps against the pirate squadrons in the Aegean.

In the East, the Palmyrene government under Zenobia had begun by recognizing Claudius, but before the end of his reign had occupied Egypt and had pushed northward to Bithynia.

Claudius died of plague at Sirmium early in 270. His reputation, already solid as a victor over the Goths, was

enhanced when Constantine later claimed (without any justification) to be his descendant.

P. Darnau, *Kaiser Claudius II Gothicus* (1934).

H. M.

CLAUDIUS (3, PW 123), APPIUS (decemvir, 451 B.C.), despite his patrician descent, supported the plebeian claims for a written code of laws and became the leader of the decemvirs. While his policy and high birth attracted the patricians, he pleased the plebeians by sharing power with their representatives at least in his second year of office. He thus hoped that the plebeians would compromise, and consent to abolish the tribunate in return for admission to the highest magistracies. His success as a lawgiver is attested by the survival of the decemviral code despite the violent opposition which his policy aroused. His ultimate failure (that he was murdered or escaped assassination by suicide is probable but not certain) together with the gloomy recollections of the civil struggle in which his dictatorship ended (see *VERGINIA*), gave rise to the legend of Appius' tyranny, which, embellished with details taken perhaps from the deeds of the later Claudii, and certainly from the stock-in-trade material supplied by Greek tyranny and its critics, overshadowed his work and memory.

Mommsen, *Röm. Forsch.* i. 295 ff.; Ogilvie, *Comm. Lit.* 1–5, with bibliography, 476 ff., 503 ff. P. T.

CLAUDIUS (4, PW 91) CAECUS, APPIUS (censor in 312 B.C.) stands out as the first clear-cut personality in Roman history. He has rightly been compared with the aristocratic founders of Athenian democracy for, although a patrician, Appius used his censorship to increase the part taken by the lower classes in managing public affairs. He made citizens of low birth and even sons of freedmen senators. Their support, and also heavier taxation, enabled him to build during the eighteen months of his censorship the first aqueduct (*Aqua Appia*) and the Via Appia (q.v.) on which he founded a market (*Forum Appi*). It was meant as a first step towards Rome's expansion in southern Italy, which was indeed the cardinal principle of Appius' policy which he relentlessly pursued (and the major reason, eventually, for making him reject Pyrrhus' peace proposals). Whether he distributed the landless citizens of Rome throughout all the existing tribes, independently of their income, in order to establish a balance of power between the urban and the agrarian population, which alone had hitherto enjoyed full political rights, is a matter of dispute, although the step accords with his policy. He transferred the cult of Hercules from private to public superintendence, and perhaps helped Cn. Flavius (q.v. 1) to publish a book of forms of legal procedure. Despite his reforms Appius could still rely on senatorial support, as his subsequent career shows. As consul in 307 and 296 (when he dedicated a temple to Bellona) and praetor in 295, he took an active part in the wars against the Etruscans, Sabines, and Samnites. Despite old age and blindness, Appius was still one of the most authoritative statesmen when he persuaded the Senate to reject Pyrrhus' peace proposals (279/8), claiming that Rome had the right to consider as her property or at any rate her sphere of influence the whole of the southern mainland to the Straits of Messina. The speech he delivered on that occasion soon became famous, was poetically elaborated by Ennius, and still circulated in the age of Cicero. Appius was the first Roman prose-writer and author of moral apophthegms (e.g. 'faber est suae quisque fortunae'), which probably owed much to Graeco-Pythagorean sources.

Mommsen, *Röm. Forsch.* i. 301 ff.; P. Lejay, *Rev. Phil.* 1920, 105 ff.; Beloch, *Röm. Gesch.* 481 ff.; A. Garzetti, *Athenaeum*, 1947, 175 ff.; E. S. Staveley, *Hist.* 1950, 410 ff.; P. Cassola, *I gruppi politici romani* (1962), 128 ff. (with full bibliography). P. T.

CLAUDIUS (5, *PW* 102) **CADEX**, APPIUS (*cos.* 264 B.C.), formally commenced the First Punic War by crossing to Sicily with two legions. He relieved Messana by successive attacks on the camps of Hieron and Hanno (Polyb. 1. 11-12, 15). Philinus, however, described these Roman engagements as unsuccessful. H. H. S.

CLAUDIUS (6, *PW* 304) **PULCHER**, PUBLIUS, held the Sicilian command as consul in 249 B.C. To intensify the naval blockade of Lilybaeum he attacked the Carthaginian fleet at Drepana. The Carthaginian admiral, however, fell on the flank of the Roman line as its head entered Drepana harbour. Claudius lost 93 of his 123 ships in this the only serious Roman naval defeat in the First Punic War. The pious attributed his defeat to his disregard of religious form before the battle: when told that the sacred chickens would not eat, he drowned them: 'let them drink' (this anecdote is not found in Polybius). He was court-martialled and fined, and died soon afterwards. Polybius, 1. 49 52. H. H. S.

CLAUDIUS (7, *PW* 29), **QUINTUS**, *tribunus plebis* in 218 B.C., was author of a law which forbade senators and their sons to own sea-going vessels capable of carrying over 300 *amphorae* (i. 225 bushels). Small vessels would suffice to transport their agricultural produce. He may be identified with the praetor of 208, unless the latter's *cognomen* was Flamen.

Livy 21 63. For modern views of Claudius' motive see F. Cassola, *I gruppi politici romani* (1962), 216 ff. H. H. S.

CLAUDIUS (8, *PW* 300) **PULCHER**, GAIUS, augur (195 B.C.), praetor (180), was consul in 177, when, after repatriating Latins in Rome, he closed the Istrian War and crushed a Ligurian rising, recapturing Mutina in 176. He was military tribune in Greece in 171. Censor in 169 with Ti. Sempronius Gracchus, he intervened in the levies for Greece; his severity against the *equites* brought a prosecution in which he was nearly convicted. On the commission for settling Macedonia he died in 167. Strong-willed and conservative, he represented the traditional authority of the Senate in Roman and Italian affairs. Scullard, *Rom. Pol.* 187, 201 ff. A. H. McD.

CLAUDIUS (9, *PW* 295) **PULCHER**, APPIUS, as consul in 143 B.C. won a victory over the Salassi in Cisalpine Gaul and, against the will of the Senate, celebrated a triumph, protected by a daughter who was a Vestal. Censor in 136, he became *princeps senatus* and one of the leading statesmen. An enemy of Scipio (q.v. 11), he married a daughter to Tiberius Gracchus (q.v. 3) when he too fell out with Scipio. He advised Tiberius during his tribunate, and then served on his agrarian commission until his own death (c. 130).

D. C. Earl, *Tiberius Gracchus* (1965); A. E. Astin, *Scipio Aemilianus* (1967), see index. E. B.

CLAUDIUS (10, *PW* 296) **PULCHER**, APPIUS, son of (9), as praetor in 89 or 88 B.C. enrolled some newly enfranchised allies. As an enemy of Cinna he left Rome in 87, was outlawed and struck off the Senate list by his own nephew Marcus Philippus (q.v. 4). As consul (79) he went to Macedonia (78), and, despite illness, won some victories, but died in 76. He was married to a daughter of Metellus (4) Balaricus and was the father of P. Clodius (q.v. 1). E. B.

CLAUDIUS (11, *PW* 308) **QUADRIGARIUS**, QUINTUS, the Roman annalist of the immediate post-Sullan period, wrote a history of Rome in at least twenty-three books, from the Gallic sack to his own times. Book 3 included the Pyrrhic War, book 5 the battle of Cannae,

book 6 the year 213 B.C., book 9 (probably) Ti. Gracchus at Numantia, book 13 the year 99 B.C., book 19 the year 87 B.C.; the latest date preserved is 82 B.C., the latest book 23. If he is the Claudius who translated Acilius (Livy 25. 39. 12; 35. 14. 5), he presumably adapted the senatorial historian's material to his own annalistic form; the *ἑλεγχος χρόνων* of Κλαύδιος (Plut. *Numa* 1) is scarcely his. The choice of opening point shows his care in handling tradition, although in composition he may have used rhetorical methods of narrative elaboration. This, however, was probably not exaggerated, as by Valerius Antias. His style, as the fragments show, was simple, his vocabulary plain, with an archaic grace (Gellius 9. 13; 15. 1; 13. 29 (28)). He ranks with Valerius Antias as the leading annalist before Livy, and Livy followed him.

Peter, *HRRel.* 1² (1914), cclxxxv, 205. W. Soltau, *Livius' Geschichtswerk* (1897); M. Gelzer, *Kl. Schr.* III, 221 ff. (1961); M. Zauerner, *Der Annalist Q. Claudius Quadrigrarius* (1937). A. H. McD.

CLAUDIUS (12, *PW* 297) **PULCHER**, APPIUS, eldest son of (10), served in the East under his brother-in-law L. Lucullus (q.v. 2) in 72-70. As praetor in 57 he supported his brother P. Clodius (q.v. 1); from 56 to 55 he was governor of Sardinia. Consul in 54, he joined his colleague L. Domitius (q.v. 4) Ahenobarbus in a scandalous electoral compact with L. Memmius (q.v. 2) and Cn. Domitius Calvinus (q.v. 2), candidates for 53. After governing Cilicia (53-51), he was prosecuted by Dolabella (q.v. 3) *de maiestate*, for misconduct in Cilicia, and *de ambitu*, in connexion with his candidature for the censorship; but helped by Pompey, M. Brutus, and others he was acquitted on both counts and became censor (50), in which office he was surprisingly severe. In 49 he followed Pompey, and died in Greece early in 48. He wrote a work on augural discipline dedicated to Cicero, whose attitude towards this arrogant and unprincipled but influential aristocrat was understandably mixed (cf., e.g., *Fam.* 2. 13. 2). His wife was, it seems, a Servilia of the Caelio family and his daughters married Cn. Pompeius (q.v. 5) and M. Brutus.

Cic. *Fam.* 1. 1. A. Constant, *Un Correspondant de Cicéron, Ap. Claudius Pulcher* (1921); Syme, *Rom. Rev.*, see index; Schanz-Hosius 1. 598 f., *ORF*² 419 f. T. J. C.

CLAUDIUS (13, *PW* 31), **TIBERIUS** (or perhaps **TIBERTUS IULIUS**), a freedman from Smyrna manumitted by Tiberius, served all the emperors from Tiberius to Domitian. Under Claudius he became a procurator, and at some later date (possibly on Vespasian's accession) was made a *rationibus*. Vespasian gave him equestrian rank. Banished by Domitian c. A.D. 82, he was recalled c. 89 on the intercession of his son Claudius (q.v. 14) Etruscus. He died in 92 aged nearly 90.

Statius, *Silo.* 3. 3, with the preface to the book, Martial, 7. 40. P. R. C. Weaver, *CQ* 1965, 145 ff. G. E. F. C.

CLAUDIUS (14, *PW* 143) **ETRUSCUS**, the wealthy son of (13) above and (Tetia?) Etrusca, patron of Statius and Martial, was probably knighted by Vespasian. He obtained from Domitian the recall of his exiled father. Statius' *Silvae* 3. 3 is dedicated to him. He was possibly nephew of Domitian's general Tettius Iulianus (*cos.* 83).

S. Gsell, *Essai sur le règne de l'empereur Domitien* (1894), 219 ff. A. M.

CLAUDIUS (15, *PW* 282) **POMPEIANUS**, TIBERIUS, son of an equestrian of Antioch, rose to senatorial rank and pursued a brilliant career; c. A.D. 167 he was governor of Lower Pannonia (*CIL*, xvi. 123), where he stemmed the German invasions. He became *cos. I. suff.* either before or soon after this governorship. In 169, he married Lucilla (q.v.), widow of L. Verus (q.v.), and in 173 was *cos. II. ord.* He was now the trusted friend of M. Aurelius (q.v. 1),

and his commander in all major campaigns. Under Commodus (q.v.) he retired into private life, thus escaping the repercussions of Lucilla's plot in 182. Though by 193 aged and infirm, he emerged again under Pertinax (q.v.), who, like Didius (q.v. 2) Julianus after him, vainly pressed him to assume a share of the imperial administration.

Lambrechts, *Senat*, no. 705; H. G. Pfau, *Journ. Sav.* 1961, 28 ff., for representations on the column and reliefs of Marcus Aurelius, see bibliography in *Kl. Pauly* s.v. Claudius II 43.

C. H. V. S., M. H.

CLAUDIUS (16) MAMERTINUS is the author of a speech delivered on 1 Jan. A.D. 362 in Constantinople, in which he thanked the Emperor Julian for the gift of the consulship. The kernel of the speech is an exaggerated eulogy of Julian. Involved in an embezzlement charge, he fell into disgrace in 368. See PANEGYRIC, LATIN. A. S.

CLAVUS ANGUSTUS, LATUS. The *angustus clavus* was a narrow, the *latus clavus* a broad, purple upright stripe (possibly two stripes) stitched to or woven into the Roman *tunica*. The former indicated equestrian, the latter senatorial, rank. Under the Roman Empire the *latus clavus* was worn before admission to the Senate, on the assumption of the *toga virilis*, by sons of senators as a right (though, perhaps, the formal consent of the Emperor was required; cf. Suet. *Aug.* 38. 2); by others who aimed at a senatorial career (e.g. Ovid and his brother, *Trist.* 4. 10. 28 f.; Dio Cass. 59. 9. 5), with the Emperor's special permission. Military tribunes in the legions were distinguished as *tribuni angusticlavii* or *tribuni laticlavii* according as they were pursuing the equestrian or the senatorial *cursus honorum*. J. P. B.

CLAZOMENAE (Κλαζομεναί), one of the twelve cities of the Ionian League, situated on the south shore of the Gulf of Smyrna on a small island joined to the mainland by a causeway. The original settlement was on the mainland, where large numbers of the terracotta sarcophagi peculiar to Clazomenae have been found. The move to the island came 'from fear of the Persians' (Paus. 7. 3. 9), apparently at the time of the Ionian Revolt (500-494 B.C.). About 600 B.C. Clazomenae successfully repulsed an attack by the Lydians under Alyattes, but later fell to Croesus. In the Delian League the city was at first assessed at one and a half talents, but during the Peloponnesian War this was raised to six and even to fifteen talents; the reason for this is not known. In the early fourth century the Clazomenians were engaged in hostilities with the men of Chyttrion (or Chyton), a place on the mainland 'where the Clazomenians were formerly settled' (Strabo 645); it is not clear whether or not this is the original settlement. In 386 B.C. the island was claimed by the Persian King. Pliny and Pausanias say that the idea of constructing the causeway was due to Alexander; some scholars have rejected this evidence, but probably without justification. Distinguished Clazomenian philosophers were Anaxagoras in the fifth century B.C. and Scopelianus in the time of Domitian. The site is now called *Klazimen*, but the ruins are scanty.

J. M. Cook in *Arch. Eph.* 1953-4; G. E. Bean, *Aegean Turkey* (1966), 128-30. G. E. B.

CLEANTHES (331-232 B.C.), son of Phanius of Assos, disciple of Zeno of Citium and his successor as head of the Stoic School from 263 to 232. With him the sober philosophy of Zeno became pervaded by religious fervour. He considered the universe a living being, God as the soul of the universe, the sun as its heart. In ethics he stressed disinterestedness, saying that doing good to others with a view to one's own advantage was comparable to feeding cattle in order to eat them. He contended that evil thoughts were worse than evil deeds,

just as a tumour that breaks open is less dangerous than one which does not. Most famous among his works is his hymn to Zeus.

CLEARCHUS (1) (c. 450-401 B.C.), a Spartan officer and a stern disciplinarian, held commands in the Hellespontine region from 409 onwards. He refused to withdraw from Byzantium in 403, was ejected by Spartan troops, and sought refuge with Cyrus II, who commissioned him to recruit, and later to command, the Greek mercenaries forming the core of his army. At Cunaxa his reluctance to expose his right flank made possible the decisive Persian cavalry charge. He held his troops together after the battle, but, with the other officers, was treacherously arrested at a conference with Tissaphernes and executed. D. E. W. W.

CLEARCHUS (2), Middle Comedy poet, won at least one victory at the Lenaea c. 335-330 B.C. (*IG* ii². 2325. 154). We have three titles and five citations.

FCG iv. 562 ff., *CAF* ii. 408 ff.; *FAG* ii. 542 ff.

K. J. D.

CLEARCHUS (3) of Soli, in Cyprus (c. 340-c. 250 B.C.), a polymath, wrote *flot* (waves of life, not biographies), paradoxes, erotica, an encomium on Plato, and zoological and mystical works. These are learned but sensational, attacks on luxury reveal a Peripatetic background.

O. Stein, *Philol.* 1931, 258-9. Fragments in F. Wehrli, *Clearchos* (1948). F. W. W.

CLEDONIUS (5th c. A.D.), grammarian who taught in Constantinople and wrote an *Ars* (ed. Keil, *Gram. Lat.* v. 9-79) which is explanatory of the *Ars* of Donatus. The treatise is preserved only in a sixth-century Berne codex which is our oldest MS. of a grammatical work.

Schanz-Hosius, § 1101.

J. F. M.

CLEIDEMUS, or CLEITODEMUS (fl. c. 350 B.C.), the oldest attidographer, if we except Hellanicus, and an *exegetes* who is credited with a book on religious ritual. The *Atthis*, probably in not more than four books, was his chief work. The first two books which are most often cited dealt with the colonization of Attica, the monarchic period, and events to the time of Peisistratus. Cleidemus' main interest being apparently in the earlier history. The narrative extended at least to the Peloponnesian War and may have reached contemporary events. The work is also quoted as *Ἱπρωτογονία* (the generic term *Atthis* for this type of literature derived from Hellenistic scholarship). The fragments show a tendency to rationalize myths and an interest in etymology. They contain references to matters of cult, constitutional points, and topographical details. The work was soon superseded by later *Atthides*.

FGH iiii. 323. See under *ATTIS*.

G. L. B.

CLEISTHENES (1), Athenian statesman. He was of the family of the Alcmaeonidae (q.v.), a son of Megacles (q.v.) and Agariste, daughter of Cleisthenes (2) of Sicyon. He was archon under the tyrant Hipparchus (q.v. 1) in 525/4 B.C., but later in Hipparchus' reign, perhaps after 514, the Alcmaeonids along with other families were exiled again. It was said that it was Cleisthenes who persuaded the prophetess at Delphi (q.v.), in return for the family's services in the rebuilding of the temple, to recommend to all Spartans consulting the oracle the overthrow of the Athenian tyranny. When this had been accomplished by the Spartan king Cleomenes (q.v. 1) and the exiles had

returned (511/10), Cleisthenes headed one of the two noble factions. His rival Isagoras, with the help of the aristocratic clubs (see *ἡταιρία*), obtained the mastery and was elected archon for 508/7; Cleisthenes turned the tables on him by making an alliance with the people, and proceeded to pass far-reaching democratic reforms (see *BOULE*, *DEMOS*, *ΕΚΚΛΗΣΙΑ*, *ΟΣΤΙΑΚΙΣΜΟΣ*, *ΦΥΛΛΑ*, *ΣΤΡΑΤΗΓΕΙΟΝ*, *ΤΡΙΤΤΥΕΣ*). Isagoras now appealed to Cleomenes, who invoked the hereditary curse of the Alcmaeonidae, and Cleisthenes and his supporters judged it prudent to withdraw; but when Cleomenes arrived with a small force, expelled 700 more households, and attempted to set up a close oligarchy of Isagoras' friends, he met with strong popular resistance and was forced to retire in his turn, taking Isagoras with him; whereupon Cleisthenes and his partisans returned. The Athenians, fearing a war with Sparta, sought alliance with Persia: but the terms offered by the satrap of Sardis, though accepted by the Athenian envoys, were repudiated in Athens. It is reasonable to suppose that Cleisthenes had something to do with this attempt to get Persian help, and it has been conjectured that its abandonment involved his overthrow, since nothing further is recorded of him. However this may be, his democratic constitution was accepted and remained in force, and when he died he received a public tomb in the *Cerameicus*.

Cleisthenes was generally regarded as the creator of Athenian democracy, though the initial steps taken by Solon were not forgotten; on the other hand, Cleisthenes' constitution sometimes seemed aristocratic when contrasted with that of Ephialtes and Pericles.

CLEISTHENES (2) of Sicyon, the greatest tyrant of the house of Orthagoras, which ruled for the record period of a century (c. 665-565 B.C.). His reign (c. 600-570) was marked by a strong movement against the Argive Dorian ascendancy: the three traditional Dorian tribes were renamed Piggites, Swinites, Assites, while the non-Dorian was called *Archelaoi* (Rulers), probably in relation to cult rather than politics, Argive rhapsodes were suppressed, the ancient Argive hero Adrastus was persuaded to find a tomb elsewhere and a new festival of Dionysus was established. His daughter Agariste (mother of the Athenian Cleisthenes) married the Alcmaeonid Megacles, after her suitors had spent a year in the tyrant's palace like successors of the suitors of Penelope. In the First Sacred War (q.v.) Cleisthenes took a leading part; he destroyed Crisa and for a while appears to have controlled the sea approach to Delphi.

CLEITARCHUS of Alexandria, Alexander-historian, was most probably a secondary writer who was never in Asia and wrote under Ptolemy II, some time after 280 B.C. Little certainty can be obtained about his history, but if (as does seem certain) Diodorus book 17 substantially represents it in an abridged form, it contained much detailed straight narrative besides the patches of sensationalism which helped to make it popular. His sources can have included any of the more reputable historians who wrote before him (Callisthenes, Ptolemy, Aristobulus, Onesicritus, Nearchus), as well as popular beliefs and the poets who accompanied Alexander. He was used extensively by Curtius Rufus as well as by Diodorus (the

concurrences are frequent and striking). No critic of antiquity has a good word for him as a historian; but he was much read under the early Roman Empire and influenced the Romance.

See ALEXANDER (3), Bibliography, Ancient Sources; Pearson, *Lost Histories of Alexander*, ch. 8. W. W. T.; G. T. G.

CLEITUS (1) ('the Black') (c. 380-328 or 327 B.C.), a Macedonian of noble birth and some distinction as a commander of cavalry. His fame, however, rests on two events: he saved Alexander's life at the battle of the Granicus; and he was himself killed by Alexander nearly seven years later, in a drunken quarrel, though the underlying grounds of difference were political questions of the first importance (Arrian, *Anab.* 4. 8. 1 ff.; Plutarch, *Alex.* 51, and—more hostile to Alexander—Curtius Rufus 8. 1. 19 ff.).

Heive, *Alexanderreich*, no. 427.

G. T. G.

CLEITUS (2) (d. 318 B.C.), a Macedonian noble, served under Alexander in Asia without special distinction. Sent home with Craterus and the 'veterans' (324), he played an important part in the Lamian War as admiral of the Macedonian fleet which closed the Dardanelles to the Greeks after two victories (322). For his continued loyalty to Antipater he was rewarded with the satrapy of Lydia (321), from which Antigonus expelled him (319). He became Polyperchon's admiral with the task of preventing Antigonus from invading Europe, but was defeated by Nicanor near the Bosphorus and killed in Thrace soon afterwards.

Berve, *Alexanderreich* II, no. 428.

G. T. G.

CLEMENS, FLAVIUS (*PI* 62) (cos. A.D. 95), grandson of Vespasian's brother Flavius Sabinus (the *praefectus urbi*) and husband of Flavia Domitilla (q.v.: the niece of Domitian), a person of inoffensive habits ('contemptissimae inertiae'), who was put to death, along with his wife, for *maiestas* soon after he laid down the consulate. They are said to have been guilty of *ἀθεΐα*, or following Jewish practices (Dio 67. 14), and may have been Christians, as later tradition alleges. Domitian intended the succession to go to the two small sons of Clemens; they are not heard of after 96.

R. S.

CLEMENT OF ALEXANDRIA (TITUS FLAVIUS CLEMENS) was born c. A.D. 150, probably at Athens, of pagan parents. He was converted to Christianity and travelled extensively seeking instruction from Christian teachers and finally from Pantaenus, head of the Catechetical School of Alexandria, at that time an unofficial institution giving tuition to converts. Clement had a wide acquaintance with Greek literature; his writings abound in quotations from the Platonic and Stoic philosophers; also from Homer, Hesiod, and the dramatists (frequently drawn, it is thought, from anthologies and other secondary sources). His *Protrepticus* shows familiarity with the Greek Mysteries. After ordination he succeeded Pantaenus as head of the school, some time before 200, and held the office till c. 202, when, on the outbreak of the persecution under Septimius Severus, he left Alexandria and took refuge, perhaps with his former pupil Alexander, then bishop of Cappadocia and later of Jerusalem. Clement died between 211 and 216.

Much of his writings is lost, but the following important works survive nearly complete. These are: (1) The *Προτρεπτικός πρὸς Ἕλληνας* or 'Hortatory Address to the Greeks' (c. 190), designed to prove the superiority of Christianity to the pagan religions and philosophies. (2) The *Παιδαγωγός* or 'Tutor' (c. 190-5), an exposition of the moral teaching of Christ, not only in its general method, but also in detailed application to special points

of conduct, such as eating and drinking, dress, and the use of wealth. (3) The *Στραμαρείς* or 'Miscellanies' (probably c. 200–2), in eight books, the first seven dealing in the main with the subordination and inferiority of Greek to Christian philosophy. The eighth book is a fragment on Logic. In one of the MSS. two further pieces follow, generally known as *Excerpta ex Theodoto* and *Eclogae propheticae*.

The *Quis dives salvetur?* (*Τίς ὁ σωζόμενος πλούσιος;*) is an extant homily urging detachment from worldly goods. The *Ἰστοριώσεις* or 'Sketches' (of which only fragments survive) was probably an exegetical work consisting of notes on passages of the Scriptures.

Clement's conception of Christianity has been criticized as tinged with Hellenism and humanism and as doctrinally imperfect. His name is often found in Christian calendars on 4 Dec., but in 1748 Benedict XIV expressly excluded him from the Roman martyrology. His writings, however, have much charm and are characterized by serenity and hopefulness.

Kidd, *A History of the Church to A.D. 461* (1922), 1, ch. 15.

CLEMENT of Rome, author of epistle (c. A.D. 96) from the Roman church rebuking the Corinthian church for arbitrarily deposing clergy. The plea for order sets many Hellenistic themes in a biblical framework, and expresses a positive attitude to the Empire.

Of the numerous works later attributed to Clement, the chief are (a) the second epistle, a mid second-century sermon of uncertain origin; (b) the Clementine Romance about Peter's travels and conflicts with Simon Magus, using themes from Hellenistic novels similar to Plautus' *Menaechmi* and the *Comedy of Errors*; the original, probably written c. 200, is buried in two widely divergent fourth-century recensions with a complex mutual relation, viz. *Homilies* (Greek) and *Recognitions* (Syriac and Rufinus' Latin); (c) *Apostolic Constitutions*, eight books of law and liturgy, c. 375; book 7 contains Hellenistic-Jewish prayers.

EPISTLES. Annotated ed. J. B. Lightfoot (1890). B. Altaner, *Patrology* (1900), 99 ff.; W. Jaeger, *Early Christianity and Greek Paganism* (1962), 12 ff.

CLEOBIS and **BITON**, the two Argive brothers mentioned by Solon to Croesus, in Herodotus' story (1. 31), as among the happiest of mortals. Their mother, presumably as Cicero says (*Tusc.* 1. 47) a priestess of Hera, found that her oxen were not brought in time for a festival, and they drew her car the 45 stades to the temple. She prayed to the goddess to grant them the greatest boon possible for mortals, and Hera caused them to die while they slept in the temple. The Argives honoured them with statues at Delphi, which have been discovered, their identity being ensured by an inscription.

CLEOMEDES (probably c. A.D. 150–200), astronomer, author of a popular work *Κυκλική θεωρία μετεώρων* (*De Motu Circulari Corporum Caelestium*), largely founded on Posidonius, but with a certain number of optical discoveries which appear to be original.

Ed. H. Ziegler (1891).

W. D. R.

CLEOMENES (1) I (reigned c. 510–490 B.C.), an Agiad king of Sparta, the son of Anaxandridas by his second

wife. He pursued an adventurous and at times unscrupulous policy designed to extend and strengthen the Peloponnesian League (q.v.) and crush Argos (aims perhaps inherited from Chilon). He sought to embroil Athens with Thebes by referring the request of the Plataeans for help against Thebes to Athens (probably in 519, Thuc. 3. 68); later to attach her to the League by expelling the tyrant Hippias in 510, by interfering on behalf of Isagoras against Cleisthenes (q.v. 1) in 508, and by trying to organize two full-scale League expeditions (c. 506 and 504), the first to restore Isagoras, the second to restore Hippias. Both were frustrated by the obstruction of the Corinthians and of his colleague Demaratus (q.v.). The Argive army was ruthlessly crushed at Sepeia (near Tiryns, c. 494).

But he disliked distant commitments (he refused to interfere in the affairs of Samos (c. 515), or to support the Ionian Revolt (499)) and showed no certain awareness of the Persian danger before 491 when his attempt to punish Aegina for Medism was thwarted by Demaratus. He persuaded the Delphic Oracle to declare Demaratus illegitimate and had him deposed but the intrigue was exposed and he fled to stir up revolt among the Arcadians. Recalled to Sparta, he soon met a violent end. According to Herodotus he killed himself in a fit of insanity.

Herodotus (5. 39 ff.) may underrate Cleomenes, see J. Wells, *Studies in Herodotus* (1923), 71 ff.; G. L. Huxley, *Early Sparta* (1962), chs. 6 and 7. W. G. F.

CLEOMENES (2) III (c. 260–219 B.C.), son of Leonidas, king of Sparta, imbibed ideals of social revolution from his wife Agiatis, Agis IV's widow. Becoming king in 235, he first moved in 229, when he annexed Tegea, Mantinea, Orchomenus, and Caphyae from Aetolia. Having provoked Achaea into war (228), he secured victories at Mt. Lycacus and Ladocaea (227), he now seized despotic power at home (winter 227–226) and set up a 'Lycurgan' regime, cancelling debts, dividing up land, and restocking the citizen body from *perioeci* and metics. After his capture of Mantinea and victory at Hecatombaeum, a peace conference was called, but postponed owing to his illness; but meanwhile Aratus had opened negotiations with Antigonus III and war recommenced. By seizing Argos (225) and besieging Corinth (224) Cleomenes threatened to shatter the Achaean League; but Antigonus reached the Isthmus, Argos revolted, and Cleomenes was reduced to the defensive. In winter 223 he took Megalopolis; but after a decisive defeat at Sellasia (July 222) he fled to his patron Euergetes in Egypt. Imprisoned by Euergetes' successor, he broke out, tried in vain to stir up revolution in Alexandria, and committed suicide (winter 220–219).

An idealist and a nationalist, Cleomenes used social revolution as the tool of Spartan expansion. He was able to inspire allegiance, and his ideals lived on after him; but he devised no means of securing his gains.

Polyb. 2. 45–70; Plut. *Cleomenes*, *Aratus*; F. W. Wallbank, *Aratus of Sicyon* (1933); E. Gabba, *Athenaeum* 1957; T. W. Africa, *Phylarchus and the Spartan Revolution* (U.S.A. 1961); B. Shumron, *Hist.* 1964. F. W. W.

CLEOMENES (3) of Naucratis was appointed financial manager of Egypt and administrative chief of the eastern Delta district by Alexander in 332–331 B.C., and was also entrusted with the completion of Alexandria. He made himself satrap of the whole of Egypt after a few years without the consent of Alexander, but was afterwards recognized and pardoned by him. Cleomenes became *hyparchos* of Egypt, with Ptolemy I as satrap, in 322–321; but the future king of Egypt brought serious charges against him, and executed him afterwards. The tricks with which Cleomenes exploited Egypt's wealth

and collected 8,000 talents are described in the second book of Ps.-Aristotle's *Oeconomica*.

CLEON, Athenian politician, the son of a rich tanner. His first-known action in politics was to attack Pericles in 431 and 430; he succeeded him as 'leader of the people'. In 427 he proposed the decree (rescinded next day) to execute all the men of Mytilene after the suppression of its revolt. In 426 he attacked the *Babylomans* of Aristophanes as a libel on the State. In 425, after the Athenian victory at Pylos (q.v.), he frustrated the Spartan peace proposals, and later accused the generals in charge of the siege of Sphacteria of incompetence. Nicias (q.v. 1) offered to resign the command to him, and he was compelled to take it; with the help of Demosthenes (q.v. 1), the general on the spot, he was completely successful, forcing the Spartans to surrender. He doubtless approved, if he cannot be shown to have originated, the measure now passed greatly increasing the tribute paid by the allied states, and he was certainly responsible, in the same year, for an increase of the dicasts' pay from two to three obols. In 423 he proposed the decree for the destruction of Scione and the execution of all its citizens. In the late summer of 422, as *strategos*, he led an expedition to the Thracian area, and recovered Torone and Galepsus, but failed in an attack on Stagira and was defeated by Brasidas before Amphipolis and killed.

We have a vivid picture of Cleon in Thucydides and Aristophanes. Both were clearly prejudiced against him; but in the absence of independent witnesses we cannot do much to correct the picture. Beyond doubt he was an effective, if vulgar and unscrupulous, speaker, and was vehement in his pursuit of power and glory for Athens; that he was corrupt is perhaps unlikely: but there is little to show that he was a far-sighted statesman or able administrator; as to his generalship, the undisputed facts include both successes and failures. By the fourth-century orators he was spoken of with respect; in the later history he is the conventional vulgar demagogue.

CLEONIDES (beginning of 2nd c. A.D.), author of an *Εισαγωγή ἁρμονικῇ*, one of the best sources for the harmonic theory of Aristoxenus (q.v.) of Tarentum.

Ed. C. Jan, *Musici Scriptores Graeci* (1895), 167–207, and H. Meuge, *Euclidis Opera* 8 (1916), 186. W. D. R.

CLEONYMUS (fl. 305–270 B.C.), younger son of Cleomenes II, guardian to his nephew Areus, who ascended the Spartan throne in 309–308. In 303–302, answering a Tarentine appeal with 5,000 mercenaries, he forced the Lucanians to make peace, annexed Metapontum, and seized Corcyra. When Tarentum revolted he returned to Italy, but was defeated, and soon lost Corcyra. In 293 he helped Boeotia ineffectively against Demetrius; in 279 he seized Troezen, and attacked Messene and Megalopolis. Banished from Sparta c. 275 (Plut. *Pyrrh.* 26), he last appears accompanying Pyrrhus' Laconian invasion (272). Violent, and soured by missing the throne, he was a constant foe of the Antigonids.

Beloch, *Griech. Gesch.* iv; P. Meloni, *Giorn. ital. di fil.* 1950. F. W. W.

CLEOPATRA I (c. 215–176 B.C.), daughter of Antiochus III and Laodice. She married Ptolemy V in 193

and ruled after her husband's death in 180 as regent for her young son, Ptolemy VI, but died four years later.

W. Otto, *Zur Gesch. Zeit des 6 Ptol.* (Bayer. Abh. N.F. 11 (1934)), 23 f. F. M. H.

CLEOPATRA II, daughter of Ptolemy V and Cleopatra I, was born between 185 and 180 B.C. She married her brother, Ptolemy VI, c. 175–174. Later she was co-regent with him and his brother Ptolemy VIII from 170 until Ptolemy VI was restored as sole ruler. After his death in 146 Cleopatra's further life was a continuous struggle for power against her brother Ptolemy VIII by open war (short regency for Ptolemy VII in 146, rebellion 132–124) or diplomacy (marriage to Ptolemy VIII in 144, conciliation in 124). She survived her second husband, but died in 116 or 115. The details of the later stages of Cleopatra's career are very obscure: see especially W. Otto and H. Bengtson, *zur Geschichte des Niederganges des Ptolemäerreiches* (Bayer. Abh. N.F. 17, 1938), *passim*, which contains elaborate reconstructions of this period of Ptolemaic history, based to a considerable extent on the appearance and disappearance of Cleopatra II and III from the dating-prescripts of Greek and demotic papyri. F. M. H.

CLEOPATRA III, daughter of Ptolemy VI and Cleopatra II. Ptolemy VIII seduced and married her in 142 B.C., and made her co-regent, as a counterweight against her mother's influence. After his death in 116 her eldest son, Ptolemy IX, was made co-regent against her will. She incited unsuccessful rebellions in 110 and 108, but succeeded in 107 in giving her second son, Ptolemy X, his brother's throne. Her last years were filled with quarrels with this second son, who was accused by many of matricide. See **CLEOPATRA II** and **PTOLEMY** (1). F. M. H.

CLEOPATRA VII (Plut. 20), daughter of Ptolemy XII, born in 69 B.C., became joint-ruler of Egypt with Ptolemy XIII in 51. In 49 they supplied Cn. Pompeius (q.v. 5) with ships, men, and corn for his father's forces. Expelled in 48 by Ptolemy's party, she was reinstated by Caesar, who, after defeating her opponents, made Ptolemy XIV her new consort and departed early in 47 leaving three legions for her support. In the summer she bore a son whom she called Ptolemy Caesar, asserting that Caesar was his father. In 46, on his invitation, she came to Rome with her son and husband, returning to Egypt after his murder. Ptolemy XIV presently dying, supposedly poisoned by her order, she made her son co-ruler in his place.

In 42 her efforts to aid the Caesarians were thwarted by Cassius (q.v. 6) and by contrary winds. Summoned by Antony to Tarsus in 41 she vindicated her conduct and secured the death of her sister Arsinoë. Antony spent the winter in Alexandria, and after his departure she bore him twins: we cannot say if either yet contemplated a lasting association.

In 37 he summoned her to Antioch and they joined in a permanent political and personal alliance. Antony recognized the twins, and named them Alexander Helios and Cleopatra Selene; a third child born in 36 was called Ptolemy Philadelphus. In 48 Caesar had restored Cyprus to Egypt, and Antony now added further portions of the old Ptolemaic Empire including Cyrenaica. In return Cleopatra was to back him and his projects with the resources of Egypt. In 35 she gave money and stores to repair the losses of his Parthian expedition. Antony's rebuff of Octavia (q.v. 2) was probably due more to his resentment against Octavian and sense of the value of Cleopatra's support than to any special pressure exerted by her: his treatment of Herod (q.v. 1) shows there were limits to her influence.

In 34 they staged at Alexandria the so-called 'Donations', in which all the lands ruled by Alexander from the Hellespont to the Indus were nominally apportioned between Cleopatra and her children. She and Ptolemy Caesar were hailed not only as rulers of Egypt and Cyprus but as 'Queen of Kings' and 'King of Kings', i.e. overlords of this whole Empire; Alexander Helios became king east and Ptolemy Philadelphus west of the Euphrates, and Cleopatra Selene queen of Cyrenaica. Though much of this territory remained unconquered or governed by client-kings and Antony's lieutenants, the vision was attractive to the Greek-speaking world and was elaborated with the aid of religious and national symbolism.

The real extent of the threat to the integrity of the Roman Empire and to Octavian is hard to recover: at all events Cleopatra was a convenient focus for Octavian's propaganda and in 32 Rome declared war on her alone. She probably did not betray Antony at Actium and afterwards did her best to delay the inevitable end: but after his suicide she had to follow suit (10 Aug. 30) to avoid figuring in Octavian's triumph. She may have chosen death by the asp because it was a royal symbol.

Cleopatra was attractive rather than beautiful, with a lively temperament and great charm of speech. She was well-educated; and unlike her predecessors could speak Egyptian, besides numerous other tongues. She cared for her subjects' material welfare, entered into their religious beliefs, and was remembered by them with affection. Her image has been distorted by Roman propaganda and the subsequent tradition. She was, of course, not Egyptian, but Macedonian. She was admittedly ruthless towards her family, in the true Ptolemaic tradition. But she was not sexually lax, associating, to our knowledge, only with Caesar and Antony. Nor is it likely that she was concerned in this association merely to exploit sex for political ends. Ambitious for Egypt and for herself as Egypt's queen she certainly was—this was her crime in Roman eyes; and she sought to achieve her aims with her help; but this does not prove that she felt no affection or loyalty towards them; with men of their stamp, the contrary is probable, and is in some measure indicated by the evidence.

H. Volkmann, *Cleopatra* (1958), with an account of the sources and a full bibliography, J. G. Griffiths, *JEGArch.* 1961, 113 ff.; T. C. Skeat, *ibid.* 1962, 100 ff. Iconography: G. M. A. Richter, *The Portraits of the Greeks*, (1965), 209. T. J. C.

CLEOPHON (1), Athenian politician. He was a lyre-maker, son of Cleippides, *strategos* in 429/8, apparently by a Thracian wife. He was already a public figure at the time of the ostracism of Hyperbolus (q.v.), and became 'leader of the people' after the restoration of democratic rule in 410 B.C. He introduced the δωβελία, a dole of two obols a day, the allotment of which is unknown. He apparently managed Athenian finances between 410 and 406; he was honest and died poor, and seems to have been efficient. But he was as violent in his manner as Cleon. He attacked both Critias and Alcibiades; and prevented the peace terms offered by Sparta after Cyzicus in 410 from being accepted, and again after Aegospotami in 405. He was prosecuted and condemned to death in 404.

E. Vanderpool, *Hesp.* 1952, 114 f.

A. W. G.; T. J. C.

CLEOPHON (2), Athenian tragic poet of whose plays some titles (*Suda*, s.v.) but no fragments survive. Aristotle mentions his idealized characters (*Poet.* 2), his prosaic style (*ibid.* 22; *Rh.* 3, 7), and illustrates from him a method of evading a question (*Soph. El.* 15).

A. W. P.-C.

CLERUCHY (κληρουχία), a special sort of Greek colony in which the settlers kept their original citizenship and did not form an independent community. The term is

confined to certain Athenian settlements founded on conquered territory (Greek and barbarian) from the end of the sixth century, especially during the Empire. It is often difficult to decide whether a settlement of the fifth century is a cleruchy, as ancient authors do not always distinguish cleruchies from other colonies. The chief certain or probable cleruchies down to the end of the fifth century are: Chalcis (506, again c. 446), Naxos, Andros, the Chersonese, Lemnos, and Imbros (c. 450), Hestiaeae (c. 446), Aegina (431), Lesbos (427), Melos (416). (Definite evidence is lacking for an early cleruchy as such on Salamis, which seems to have had a unique position. The status of Scyros in the fifth century is uncertain.) These cleruchies did not survive Athens' defeat in 404. Later cleruchies are: Lemnos, Imbros, and Scyros (from the early fourth century till the Roman period, with intervals), Samos (c. 361–322), Potidaea (361–356), Chersonese (353/2–338).

The numbers in a cleruchy varied from 4,000 (Chalcis) to 250 (Andros). Each settler (κληρουχός) received an allotment (κλήρος) which maintained him as a *zeugites* (q.v.). The theory, however, that the Athenians in this way swelled the numbers of hoplites at Athens conflicts with definite evidence that the cleruchs resided in the cleruchies, which may sometimes have served the purpose of garrisons in addition to providing land for the poor. As Athenian citizens cleruchs were liable for military service, paid war-tax (*eisphora*), and took part in religious activity at Athens. Distance, however, forced them to create organs for local self-government on the Athenian model, boule, ecclesia, and magistrates. In the fourth century at least cleruchies were supervised by officials sent out from Athens.

A. J. Graham, *Colony and Mother City in Ancient Greece* (1964), 166 ff. A. J. G.

CLIENS. In early Rome a client was a free man who entrusted himself to another and received protection in return. In the late Republic and early Empire, clientship was essentially a social hereditary status consecrated by usage and reflected in the law. The rules of the law were far more binding for the special case of the freedman, who was *ipso facto* 'clients' of his former owner (see *LIBERTINI*). The ordinary client might receive daily food, often converted into money (*sportula*), or assistance in the courts. In return he helped his patron in his political and private life, and showed him respect, especially by greeting him in the morning. Client and patron could not bear witness against one another, or at least the evidence could not be enforced. Dionysius (*Ant. Rom.* 2, 9–10) records other rules, many of which were out of use or are mere conjectures, for instance that the client must try to ransom his patron.

The 'Twelve Tables recognized the tie of clientship: 'patronus si clienti fraudem fecerit sacer esto' (8, 21).

In imperial times the client was practically confused with the parasite. Martial describes himself as a client. Clients were called *salutatores* because of their duty of daily salutation and *togati* because custom compelled them to wear the toga, by that time obsolescent.

In the provinces (especially in Gaul) the Roman clientship superimposed itself on pre-existing local forms of social ties. It is a controversial point whether the relations of certain vanquished states with Rome are to be described as clientship. But there is little doubt that Roman individuals and families built up large *clientelae* among foreigners: whole communities could become clients.

Mommsen, *Rom. Forsch.* i, 354 ff.; *id.*, *Röm. Staatsr.* iii, 54 ff.; M. Gelzer, *Die Nobilität der röm. Republik* (1912), I, Friedländer, *Darstellungen aus d. Stittengeschichte Roms* i² (1919), 223 ff.; ii, 230 ff.; J. Carcopino, *Daily Life in Ancient Rome* (1941), 171 ff.; M. Lemos, *RIDA* 1949, 37 ff.; E. Badian, *Foreign Clientelae* (1958). See also PATRONUS. A. M.

CLIENT KINGS. The first king to establish close and friendly contact with Rome was Hieron II (q.v.). By then Rome had developed the habit of expecting spontaneous subordination from her *socii* (q.v.) in return for protection: Roman nobles naturally saw a friendly relationship between strong and weak as one between patrons and clients (see **CLIENTS**). Hieron preserved freedom in internal and (to some extent) in foreign affairs by adapting himself to this, supporting Rome in her wars and refusing to treat with her enemies (cf. Polyb. 1. 16. 10 f.). Demetrius (q.v. 7), as regent of Illyria, was less wise: taking his freedom too literally, he lapsed into 'ingratitude' and was attacked and deposed. These cases at once marked out the Roman attitude to client rulers, and they can be paralleled right down to, e.g., Deiotarus and Ariovistus (qq.v.) respectively. In return for the *beneficia* of freedom and protection (about which, however, she grew less conscientious), Rome expected 'free' allies (including kings) to remain *in officio*.

During the second century B.C. contact with rulers ranging from Hellenistic monarchs to Spanish chieftains demonstrated the essential weakness of monarchic states, however powerful in appearance, they were at the mercy of pretenders and succession troubles. This was freely exploited by the Senate where convenient, e.g. in the cases of Macedonia and Pergamum. To most kings, being recognized as king (*rex appellari*) and called 'friend and ally' by the Senate made the difference between security and anarchy. Once recognized, a king was normally as free as his *de facto* strength permitted; this would depend on his freedom from dynastic troubles, good relations with his neighbours, and distance from Rome. Though jealous of great royal power, the Senate (aware of its short duration) did not normally use more than diplomacy against suspect rulers: it took a long time to decide on war even against Jugurtha (q.v.). But open defiance was not tolerated. The result of this system was that the Republic knew no real frontiers: beyond the provinces (and within them) a penumbra of influence extended as far as distance and diplomacy would permit (see, e.g., ALTAIUS II, MASINISSA, PHARNACES I). This inability to see kings otherwise than as clients embroiled Rome in trouble with Parthia (q.v.), which had no aggressive intentions, but was beyond the range of even effective diplomatic power: relations remained ambiguous, between equality and clientship, as long as the kingdom lasted.

In the final convulsions of the Republic, astute client kings acquired great power (see CLEOPATRA VII, JUBA I). But Augustus re-established them as *de facto* vassals, even making them liable to trial in Rome and deposition; he continued republican policy in using them to govern territory too difficult to administer directly; and he would annex their states when the time seemed ripe (see GALATIA, HEROD I), which the Republic (except in its final phase) had never claimed the right to do. Later Emperors differed in their policies; but the tendency was to absorb kingdoms within what came to be recognized as the frontiers of the Empire, while using the traditional techniques of diplomatic intervention whenever possible (e.g. in Parthia and Germany) beyond the frontiers. (See also names of individual kings and countries.)

P. C. Sands, *The Client Princes of the Roman Empire under the Republic* (1908); T. Yoshimura, *Hist.* 1961, 473 ff. (military contribution). E. B.

CLITOMACHUS (187/6–110/09 B.C.), a Carthaginian, originally named Hasdrubal, migrated to Athens at the age of 24, and at 28 became the pupil of the sceptical Carneades (q.v.), founder of the 'New Academy'. From 140/139 he conducted his own school in the Palladium, but returned in 129/8 with many followers to the

Academy, of which he became head two years later (*Acad. index Herc.* cols. 24, 30).

According to Diog. L. 4. 67 he wrote over 400 books; Sextus Empiricus *Math.* 9. 1 says that he was unnecessarily lengthy because he argued against the dogmatists from their own premisses. None of his work survives in its original form, but the arguments of Carneades, who left no writings, were preserved mainly by way of his efforts to record them. More than some other pupils he emphasized the refusal of Carneades to commit himself. His works included *Περί ἐποχής* (*On withholding assent*, Cic. *Luc.* 98), *Περί αἰρεσέων* (*On philosophical sects*, Diog. L. 2. 22), and a *Consolation*, addressed to the Carthaginians on their city's destruction (Cic. *Tusc.* 3. 54); he dedicated other books to the Romans L. Censorinus and Lucilius the poet. F. H. S.

CLITUMNUS, a river near Třebiae in Umbria, famous for the white sacrificial kine on its banks (Verg. *G.* 2. 146). It flowed into the Tinea, and subsequently into the Tiber. Shrines of the personified Clitumnus and other deities adorned its source (called *Sacraria* in the Itineraries), attracting numerous tourists (Pliny, *Ep.* 8. 8; Suet. *Cal.* 43). E. T. S.

CLOACA MAXIMA, originally an open water-course, later canalized, draining north-east Rome from the Argetum to the Tiber by way of the Forum Romanum and Velabrum. Tradition ascribed its regulation to Tarquinius Superbus, and branch drains of the fifth century B.C. do exist. Much of the existing sewer, nowhere older than c. 200 B.C., is due to M. Vipsanius Agrippa in 33 B.C.

Nash, *Pict. Dict. Rome* i, 258 ff.

I. A. R.

CLOATIUS VERUS, Augustan lexicographer and grammarian, who wrote on the meanings of Greek words and on derivations of Latin words from Greek (cf. Gell. 16. 12, Macrobi. *Sat.* 3. 19. 2). He may be the 'Clotianus' cited six times by Verrinius Flaccus. J. F. M.

CLOCKS. The hours (*ὥραι*, *horae*, not in the modern sense till Aristotle; *διδώδεκα μέρη τῆς ἡμέρας*, Hdt. 2. 109. 3, but see J. Enoch Powell, *CR* 1940, 69 f.) were told in antiquity (1) by the sundial, *ῥολόγιον* or *-εῖον*, *solarium*, consisting of a pointer, *γνώμων*, casting its shadow (hence the instrument is sometimes called *σκιόθιρας*) upon a convex surface, *σκάφη* (also *πόλος*, as being a sort of model of the sky) or (less commonly) a flat one. The inventor was Anaximander (Favorinus ap. Diog. Laert. 2. 1; Pliny, *HN* 2. 187 says Anaximenes), and the idea itself Babylonian (Hdt. loc. cit.). (2) By the water-clock, *κλεψύδρα*, *clepsydra*, *ὕδρουσκοπεῖον*, consisting of (a) a vessel from which water flowed through a small orifice, (b) a graduated container into which the water flowed. But if the water-level in (a) was allowed to grow lower, the rate of flow would decrease; hence it was necessary either to keep the level in (a) constant or in some other way to compensate for the decrease. See Hieron of Alexandria, vol. 1, 506. 23 Schmidt (Teubner, 1899), and the elaborate clock of Ctesibius (Vitruvius, *De arch.* 9. 8. 2 ff.). Ordinary clocks were, however, anything but accurate (Seneca, *Apocol.* 2. 2).

Convenient assemblage of facts in A. Rehm, *PW*, s.v. 'Horologium' Cf. W. Kubitschek, *Grundriss der antiken Zeitrechnung* (1928), 188 ff. H. J. R.

CLODIA (*PIV* 66), second of the three sisters of P. Clodius (q.v. 1), born c. 95 B.C., had married her first cousin Metellus (q.v. 9) Celer by 62 (Cic. *Fam.* 5. 2. 6). Her bitter enemy Cicero (but gossip said she had once offered him marriage, Plut. *Cic.* 29) paints a vivid picture

of her in his Letters from 60 B.C. onwards, and above all in his *Pro Caelio* of Apr. 56. Her affair with Catullus (q.v. 1—the identification with Lesbia is practically certain) began before the death of Metellus in 59, which Clodia was said to have caused by poison: by the end of that year Caelius (q.v.) was her lover. After the Caelius case her political importance ceases, but she may have been still alive in 45 (Cic. *Att.* 13. 38. 3, etc.). For bibliography see CAELIUS. G. E. F. C.

CLODIUS (1, *PW* 48) **PULCHER**, **PUBLIUS**, youngest of six children of Ap. Claudius (10) Pulcher, was born c. 92 B.C. (since quaestor in 61). In 68 he corrupted the troops of his brother-in-law Lucullus (q.v. 2). During the next years he was apparently friendly with Cicero (*Plut.* Cic. 29), though accused of collusion in his prosecution of Catiline in 65. But in May 61 Cicero gave damaging evidence against him when he was on trial for appearing in women's clothes at the Bona Dea festival the previous December (see CAESAR 1): however, Clodius was narrowly acquitted by a jury bribed by Crassus. Next year, on returning from his quaestorian province of Sicily, he sought transference into a plebeian *gens*: this was at first resisted, but in Mar. 59 Caesar as *pontifex maximus* presided over *comitia curiata* at which the 'adoption' was ratified, and Clodius was elected tribune for 58. His measures included free corn for the *plebs*, restoration of *collegia*, repeal or modification of the *Leges Aelia et Fufia* (see LEX, LEGES), grant of new provinces to the consuls Gabinius (q.v. 2) and Piso (q.v. 5), bills ensuring the exile of Cicero (who departed in late March), the dispatch of Cato (q.v. 5) to Cyprus, and grant of title of king and control of Pessinus to Brogitarus ruler of the Galatian Trocmi. Clodius then turned against Pompey, allowing the escape of the Armenian prince Tigranes, threatening Pompey's life, and probably (Cic. *Dom.* 40, *Har. Resp.* 48) suggesting repeal of the *Lex Iulia Agraria* (see CAESAR 1). These attacks were continued in 57, when they were especially related to the question of Cicero's recall, and in the early part of Clodius' aedileship in 56; but after Luca his power to disrupt the 'Triumvirate' was weakened, though he continued to control large sections of the urban mob (see also MILO). He stood for the praetorship of 52, but owing to rioting the elections had not been held when he was murdered by Milo on 18 Jan. of that year. His clients among the *plebs* burned the Senate House as his pyre.

Clodius, who like two of his sisters used the 'popular' spelling of his name, probably saw the tribunate as a vital step in his political career: revenge on Cicero need not have been either his main aim in seeking *transductio in plebem*, nor (despite Cic. *Dom.* 41, *Sest.* 16) Caesar's aim in granting it. Moreover, the view that Caesar was at any time his patron seems misconceived. In 58–56 he may certainly have been allied with Crassus; but he was surely both opportunist and independent, for before as well as after Luca he was friendly with various *optimates* (Cic. *Fam.* 1. 9. 10, 19), and in 53 he was supporting the candidates of Pompey (Asconius, 26. 42). The one consistent motif is his courting of the *plebs urbana*.

The daughter of his marriage to Fulvia (q.v., later wife to Mark Antony) was momentarily married to Augustus (q.v.) in 42.

See on CAESAR (1), and add L. G. Pocock, 'Clodius and the Acts of Caesar', *CQ* 1924; E. Mann, 'L'Utopia di Clodio', *Riv. Fil.* 1940; E. S. Gruen, *Phoenix* 1966, 120 ff.; R. G. M. Nisbet, ed. (1967) of Cic. *In Pisonem*, Cic. *De Domo* (ed. R. G. Nisbet, 1939), is an important but exceedingly complex source for the years 59–57. G. E. F. C.

CLODIUS (2, *PW* 38) **MACER**, **LUCIUS**, *legatus* in Africa in A.D. 68, revolted from Nero and cut off the corn-supply of Rome. Though inspired by messages from

Galba (q.v. 1), he never recognized him; instead he called himself *propraetor*, and raised a new legion I *Macriana liberatrix*. Galba had him executed in October.

P. Romanelli, *Storia delle province romane dell'Africa* (1950), 279 ff. A. M.; G. E. F. C.

CLODIUS (3, *PW* 52.) **QUIRINALIS**, **PUBLIUS**, from Arelate in Gaul, taught rhetoric in the Neronian age.

Schanz-Hosius, § 480.

CLODIUS (4, *PW* 17) **ALBINUS**, **DECIMUS**, belonged to a noble family. After distinguished military service in Dacia and Germany he was at the time of Commodus' death governor of Britain. As a potential candidate for the principate he was at first placated by Septimius Severus with the title of Caesar, but after Niger's death came into conflict with Septimius, who wished the imperial power to be confined to his own family. In reply Albinus was saluted Augustus by his army, and in A.D. 196 he crossed to Gaul in the vain hope of securing the support of the German legions before marching on Rome. He was killed in a battle near Lugdunum in 197.

Herodian 2. 15, 3. 7–8, Dio Cassius, bk. 73; *B.M. Coins, Rom. Emp.* v. lxxvii ff.; J. Balty, *Essai d'iconographie de l'empereur Clodius Albinus* (1966). H. M. D. P.; B. H. W.

CLOELIA, a Roman girl given as hostage to Porsenna (q.v.). She escaped across the Tiber to Rome, by swimming or on horseback, but was handed back to Porsenna who, admiring her bravery, freed her and other hostages. An equestrian statue on the Via Sacra later celebrated her exploit. Critics who dismiss the story as legend believe that the statue was dedicated to a goddess (Venus Equestris?) and that later Romans wrongly associated it with Cloelia.

H. H. S.

CLUBS, GREEK. The clubs here discussed may be defined as voluntary associations of persons more or less permanently organized for the pursuit of a common end, and so distinguishable both from the State and its component elements on the one hand, and on the other from temporary unions for transitory purposes. Despite the large number and great popularity of clubs in the Greek world, both in the Hellenistic and in the Greco-Roman period, literature makes surprisingly few references to them, and the available evidence consists almost entirely of inscriptions and, in the case of Egypt, papyri. These provide a picture which, if incomplete, is at least vivid and detailed.

2. Greek clubs, sacred and secular, are attested as early as the time of Solon, one of whose laws, quoted by Gaius (*Dig.* 47. 22. 4), gave legal validity to their regulations, unless they were contrary to the laws of the State; and we hear of political clubs (*ἐταιρίαι*) at Athens in the fifth century B.C. (Thuc. 3. 82; 8. 54; 65). In the classical period the societies known to us are mostly religious, carrying on the cult of some hero or god not yet recognized by the State, such as the votaries (*ὀρχεῖται*) of Amyntus, Asclepius, and Dexion, the heroized Sophocles. With the close of Greek freedom, clubs become much more frequent and varied, and though many of them have religious names and exercise primarily religious functions, their social and economic aspects become increasingly prominent and some of them are purely secular. They are found throughout the Greco-Roman world, but are especially common in the cosmopolitan trade-centres such as Piraeus, Delos, and Rhodes, in Egypt, and in the flourishing cities of Asia Minor, and they appear to have played a valuable role in uniting in a common religious and social activity diverse elements of the population—men and women, slaves and free,

citizens and aliens, Greeks and 'barbarians'. On the titles and aims of these guilds, their cults and festivals, their social and economic aspects, their membership and officials, their organization and finance, much light has been thrown by inscriptions, fully discussed by F. Poland (see below).

3. From the multifarious societies so revealed, incapable of a wholly satisfactory classification, three groups may be singled out for mention.

(a) Among the religious guilds a leading place is taken by those of the Dionysiac artistes (οἱ περὶ τὸν Διόνυσον τεχνῖται), which devoted themselves to the promotion of music and the drama. The earliest and most prominent of these was the Attic *σύνδοξος*, founded probably in the early third century B.C. (though some scholars assign it to the late fifth) and traceable down to the close of the Roman Republic. Slightly later and less influential was the Isthmian and Nemean *κοινόν*, a federation of several local *σύνδοξοι* with its centre at Thebes and branches at Argos, Chalcis, and elsewhere. To the third century belongs a similar *κοινόν* in Asia Minor, οἱ ἐν Ἰωνίᾳ καὶ Ἑλλησπόντῳ, with Teos as its original centre, favoured by the Attalid kings, while in Egypt and Cyprus a guild of τεχνῖται flourished under the patronage of the Ptolemies. Under the Empire further titles and privileges were showered, especially by Hadrian, on the *σύνδοξος*, a federal reorganization of the Dionysiac guilds, οἱ ἀπὸ τῆς οἰκουμένης περὶ τὸν Διόνυσον τεχνῖται, the existence of which is last attested in A.D. 291.

(b) In various cities wholesale merchants (*ἐμποροὶ*) formed associations of their own (Poland, 107 ff.), and in Athens they combined, for some purposes at least, with the shippers (*ναυκληροὶ*). In the second century B.C. two vigorous and wealthy societies, in which these two elements unite with the warehousemen (*κύδοχρεῖς*), meet us on the island of Delos, the *Heracleistae* of Tyre and the *Poseidonastae* of Berytus (W. A. Laidlaw, *History of Delos* (1933), 212 ff.); the large and well-appointed clubhouse of the latter, which apparently served religious, social, and commercial ends, has been completely excavated (C. Picard, *Explor. archéol. de Delos*, vi, 1921).

(c) Numerous guilds, some of which probably date from the classical period, are composed of fellow workers in the same craft, industry, or trade, such as doctors, bankers, architects, producers of woollen or linen goods, dyers, fullers, launderers, tanners, cobblers, workers in metal, stone, and clay, builders, carpenters, farmers, gardeners, fishers, bakers, pastry-cooks, barbers, embalmers, transport workers. Their main function was religious and social rather than economic; and though we hear of troubles at Ephesus in which the guilds play a leading part (Acts xix. 24 ff.; *Anatolian Studies presented to W. M. Ramsay* (1923), 27 ff.), their chief object was not to modify conditions of labour or to champion the interests of the workers against their employers, but to offer their members opportunities of pleasurable intercourse in leisure hours.

4. Religious feeling and observance entered deeply into every department of Greek life, and among a people with so developed a social sense religion naturally tended to be an affair of the group rather than of the individual. Hence arose one of the main incentives to the formation of associations, and such glimpses as we gain of their activities suggest that religious rites played a prominent, though rarely (except at the earliest stage) the only role therein. Deities not recognized by the State were thus worshipped by their devotees, groups of compatriots settled in some foreign city, e.g. the Phoenicians and the Egyptians resident in Delos or Piraeus, maintained their native cults, most of the club-gatherings probably opened with some religious ceremony, and we have numerous references (e.g. *IG* ii². 1275 = F. Sokolowski, *Lous*

sacrées des cités grecques (1962), 126) to the participation of the guild in the funeral rites of its members, the provision or protection of their tombs, or the perpetuation of their cult as 'heroes'. Significant also is the large proportion of guild-names (Poland, *Geschichte*, 33 ff.; 57 ff.) which indicate religious activities (*συνθῆται*, *θεραπευταί*, *θηρσκεινταί*, *μύσταί*, etc.) or are derived from divinities (*Ἀθηναῖοι*, *Ἀφροδίσται*, *Ἡρακλείσται*, etc.), while their officials frequently bear titles of an unmistakably religious character. 'No point', remarks Poland, 'is more important for the historical evolution of the whole phenomenon than its relation to the deity.' This is far more prominent than in the case of the Roman *collegia*; indeed, for many associations these religious aspects are the only thing which we learn about them. A picture of unsurpassed vividness and detail is presented by an inscription (*SIG* 1109 = *IG* ii². 1368, translated in Tod, op. cit. *infra*. 86 ff.) of the second half of the second century A.D., which records the proceedings, punctuated by the interjections of enthusiastic members, of a general meeting of the Athenian society of Iobachchi, followed by a verbatim text of the new statutes of the society unanimously adopted thereat. These deal with the admission and subscriptions of members, the dates of periodical meetings, the maintenance of order and the penalties imposed for any disorderly behaviour, the religious ceremonies (including a sermon and a dramatic performance by officers and members of the society) which marked the principal meetings, the celebration of any auspicious event in the life of any member, the duties and privileges of the treasurer, and the attendance of members at the funeral of any of their number. There we see the portrayal of typical club-life, the social activities of which are founded upon and suffused by a common religious interest and loyalty.

Tod, *Sidelights on Greek History* (1932), 60 ff. For specific aspects or regions see M. San Nicolò, *Aegyptisches Vereinswesen zur Zeit der Ptolemäer u. Römer* (1913-15); P. Foucart, *Des associations religieuses chez les Grecs* (1873); F. Poland, s.v. 'Technitae' in *PW*; M. Radin, *Legislation of the Greeks and Romans on Corporations* (1910). The decrees and laws of the Attic societies are collected in *IG* ii². 1249-369, those of the Delian corporations in *Inscriptions of Delos*, 1510-23; for a selection of inscriptions relating to clubs see *SIGP* 1095-120, Michel, 961-1018, for Egyptian religious associations A. D. Nock, etc., *Harv. Theol. Rev.* 1936, 39 ff. M. N. T.

CLUBS, ROMAN. The Latin words corresponding most closely to the English 'club' are *collegium* and *sodalitium* (*sodalitas*). The former was the official title of the four great priestly colleges, *pontifices*, *Viri epuloni*, *XVviri sacris faciundis*, and *augures*, and the word had religious associations even when the object of the club was not primarily worship. Few, if any, *collegia* were completely secular. Some took their name from a deity or deities, e.g. Diana et Antinous (*ILS* 7212), Aesculapius et Hygia (*ibid.* 7213), Hercules (*ibid.* 7315, etc.), Silvanus (*ibid.* 7317), and their members were styled *cultores*. Even when their name was not associated with a god *collegia* often held their meetings in temples, and their clubhouse (*schola*) might bear the name of a divinity (*ILS* 7218: *Schola deae Minervae Aug.*). The *collegia* illustrate the rule that all ancient societies from the family upwards had a religious basis.

Plutarch (*Numa* 17) attributes to Numa the foundation of certain *collegia*, but it is doubtful whether many existed before the Second Punic War. Complete freedom of association seems to have prevailed down to the last century of the Republic, though the action taken by the Senate against the *Bacchanales* in 186 B.C. shows that the government might intervene against an objectionable club. In the Ciceronian age the *collegia* became involved in political action; many were suppressed in 64 B.C. and

again by Caesar, after a temporary revival by Clodius. By a *Lex Iulia* (probably A.D. 7, *ILS* 4966) Augustus enacted that every club must be sanctioned by the Senate or emperor. This sanction is sometimes recorded on club inscriptions, and it undoubtedly was freely given, though the policy of different emperors varied (Trajan absolutely forbade the formation of clubs in Bithynia: Pliny, *Tra.* 34). An extant *senatus consultum* (*ILS* 7212) shows that general permission was given for burial clubs (*collegia funeraticia* or *tenuiorum*), provided that the members met only once a month for the payment of contributions. In practice these clubs engaged in social activities and dined together on certain occasions, e.g. the birthdays of benefactors. After A.D. 100 the government seems to have viewed the clubs with little suspicion.

Many *collegia* were composed of men practising the same craft or trade, e.g. smiths, clothworkers, carpenters, sailors; but there is no evidence that their object was to maintain or improve their economic conditions. In most cases they were probably in name burial clubs, while their real purpose was to foster friendliness and social life among their members. Many clubs of *iuvenes* existed mainly for sport, and associations were formed among ex-servicemen (*veterani*). Several lists of members survive (e.g. *ILS* 6174-6; 7225-7). These are headed by the names of the *patroni* (*ILS* 7216 f.), wealthy men, sometimes of senatorial rank, who often had made gifts to the clubs. The members bore titles recalling those borne by municipal officials. The presidents were *magistri* or *curatores* or *quinquennales* (who kept the roll of members). Below these came the *decuriones*, and then the ordinary members (*plebs*). The funds were sometimes managed by *questores*. In these clubs the humbler population found some compensation for their exclusion from municipal honours. The fact that at the distributions of money or food a larger share was given to the officials or even to the *patroni* implies that the object of the clubs was not primarily philanthropic, though they no doubt fostered goodwill and generosity among their members. See also *INDUSTRY*, §§ 2, 5, and 7.

The evidence is almost entirely epigraphic, though Cicero often refers to the political activity of *collegia*. See *ILS* II 2, ch. 15 and n. 2, 710 ff. Th. Mommsen, *De collegiis et sodalibus* (Kiel, 1843); J. P. Waltzing, *Étude historique sur les corporations professionnelles chez les Romains* (1895 ff.); E. Kornemann, s.v. 'Collegium' in *PW*; S. Dill, *Roman Society from Nero to Marcus Aurelius* (1905), 251 ff.; E. G. Hardy, *Studies in Roman History* (1906), 129 ff. (Christianity and the *Collegia*); P. W. Duff, *Personality in Roman Private Law* (1938), chs. 4-5 (see also D. Daube, *JRS* 1943, 91 ff., 1944, 125 ff.). G. H. S.

CLUENTIUS (*PIV* 4) **HABITUS**, AULUS, of a prominent family of Larinum, in 76 B.C. charged his stepfather Oppianicus and others with attempting to poison him; they were convicted after notorious bribery on both sides. In 66 the case was reopened by Oppianicus' son, who charged Cluentius with the murder of the Elder Oppianicus. Cicero conducted the defence and, by 'throwing dust in the eyes of the jury' (as he later boasted), won his case. The true facts cannot be disentangled.

Cicero, *Pro Cluentio*. G. S. Hoenigswald, *TAPA* 1962, 109 ff. E. B.

CLUNIA, a town in the territory of the Spanish Arevaci and later in Roman Tarraconensis, lay 25 miles northwest of Uxama (modern *Osma*). It may have been made a colony by Sulpicius Galba (q.v. 1): a long dedication to him (*CIL* ii. 2779) comes from here, and a coin (if genuine) names the city *CLVNIA SVLPICIA*. Destroyed by Franks and Alemanni c. A.D. 300, the restored town was again destroyed by Germanic tribes in the fifth century. There are many remains: e.g. of a theatre, forum, temples.

A. Vives, *La Moneda Hispanica*, iv (1924), 111 ff.; P. de Palol, *Colonia Sulpicia* (1959). H. H. S.

CLUSIUM (Etr. *Clevsin-*, *Chamars*; modern *Chiusi*), in the province of Siena stands above the Via Cassia at the south end of the Val di Chiana. It was one of the twelve cities of Etruria, and one of the oldest in the north-east. The earliest finds are Villanovan, and the cremation rite continued uninterrupted, the ossuaries developing in the Orientalizing period into 'canopic urns', i.e. images of the dead. One of the earliest of the numerous chamber tombs produced the François vase, and a number are painted. From the fifth century onwards, Clusium was a centre of decorative bronze-working, specializing in braziers and candlesticks; throughout its history it was also an important centre of stone-carving. The area has produced an exceptionally large number of Etruscan inscriptions (*CIE* 475-3306). Clusium appears to have passed into Roman hands at a comparatively late stage. See also *POSEN*(N)A.

R. Bianchi Boninelli, *Mon. Ant.* 1925, cols. 209 ff.; Scullard, *Etr. Cities*, 151 ff.; D. Levi, *Il Museo Civico di Chiusi* (1915). D. W. R. R.

CLYMENE, name of a dozen different heroines (for one see *CATREUS*), the best known being the mother of Phacethon (q.v.), wife of Merops, king of Ethiopia. Meaning simply 'famous', it is a stopgap name, like *Creusa*, *Leucippus*, etc., used where there was no genealogical or other tradition. H. J. R.

CLYMENUS, (1) euphemistic title of Hades, especially at Hermione (Paus. 2. 35. 9, cf. Lasos ap. Athen. 624 c). (2) The fabulous founder of the temple there, an Argive (Paus. *ibid.*). (3) Name of several other mythological persons, the best known being the father of Harpalice (see *ALASTOR*). Variants to the story given there are that his daughter's transformation (to an owl, in this account) took place while she was fleeing from him (*Pa. idoxographi*, 222 Westermann, where she is called Nyctimene, apparently by confusion with a like story of Epopeus, king of Ieschos (Hyg. *Fab.* 204)), and that he killed her (*ibid.* 206) and himself (*ibid.* 242. 4, Parthenius 13). H. J. R.

CLYTEMNESTRA (*Clytaem(n)estra*, *Κλυταιμνήστρα*; the shorter form is better attested; *Clutācnestra*, Iavus Andronicus, trag. 11, by iambic shortening), daughter of Tyndareos, sister of Helen and the Dioscuri and wife of Agamemnon (qq.v.). For the murder of her husband, see *AGAMEMNON*.

Her legend was a favourite one among post-Homeric authors, and the central interest being her infidelity and murder, all manner of motives are discovered; for in Homer she is a weakly good woman (*Od.* 3. 266), overpersuaded by the energetic scoundrel Aegisthus, and 'hateful' (*ibid.* 310) or 'accursed' (11. 410) only in retrospect. Her sole active cruelty is to kill Cassandra (11. 422). Stesichorus (fr. 17 Diehl) blames Aphrodite, who made Tyndareos' daughters unfaithful because he had neglected her. Aeschylus (*Ag. passim*) and others after him (but the motive may be earlier, see Pindar, *Pyth.* 11. 22 ff., cf. *CASSANDRA*) give her a double incentive, the sacrifice of Iphigenia (q.v.), and anger at Agamemnon's infidelities, the latter a non-Homeric reason. He also makes her a strong character, the leader in the whole affair, while Aegisthus is a blustering weakling (cf. *Od.* 3. 310, *ἀνάλκιος Αἰγισθίου*). Sophocles and Euripides in their *Electras* still make her the more prominent figure, but tend to increase the relative importance of Aegisthus again; Euripides (*El.* 1105-6) makes her somewhat sorry for all that has happened. In Aeschylus, again, she tries to resist Orestes (*Cho.* 889 ff.) and threatens him with the Erinyes (924), whom her ghost afterwards stirs up against him (*Em.* 94 ff.); in the other tragedians she merely pleads for life.

Her part in other legends is small; she brings Iphigenia to Aulis (Eur. *IA* 607 ff.), and Telephus (q.v.) gets a hearing from the Greeks by acting on her advice (Hyr. *Fab.* 101. 2; ?Euripidean). Her name occasionally occurs as a common noun meaning 'adulteress' (as Quintilian, *Inst.* 8. 6. 53), or 'murderess' (see Horace, *Sat.* 1. 1. 100, where 'fortissima Tyndaridarum' stands for Clytemnestra). See further **ELECTRA**.

In archaic and early classical art Clytemnestra is regularly shown withheld by a nurse or Talthybios from rushing with a double axe to help Aegisthus stricken by Orestes. On one vase, which may not antedate Aeschylus, this scene is balanced by a death of Agamemnon, caught in the closed shirt and killed with a sword by Aegisthus, behind whom comes Clytemnestra with the axe. She is also once shown wielding an axe to kill Cassandra.

H. J. R.; C. M. R.

CNIDOS, a Greek city founded perhaps c. 900 B.C., and claiming descent from Sparta, situated on a long peninsula at the south-west corner of Asia Minor. Originally set on the south coast of the peninsula, it was transferred c. 330 to a magnificent strategic and commercial situation at the cape. Excavations were carried out there by Newton for the British Museum in 1857-9; and the fortifications and two protected harbours are still open to view. The Cnidians were a maritime people and colonized the Iapari Is. Failing in the attempt to convert their peninsula into an island they yielded to the Persians (after 546). After the Persian wars they joined the Athenian confederacy, but they warmly espoused the Spartan cause after 413. Subjected to Ptolemaic control in the third century and perhaps Rhodian in the early second, Cnidos was a *civitas libera* under Roman rule from 129 B.C. Notable citizens were Ctesias, Eudoxus the astronomer, Sostratus (architect of the Pharos of Alexandria), and Agatharchides. Cnidos was famous for its medical school, its wines, and the Aphrodite by Praxiteles.

C. T. Newton, *Halicarnassus, Cnidus and Branchidae* (1863); G. E. Bean and J. M. Cook, 'The Cnidia', *BSA* 1952. J. M. C.

CODEX (legal). The earliest-known collections of imperial *constitutiones* (q.v.) were the *Codex Gregorianus* (published c. A.D. 291) and *Hermogenianus*, a supplementary collection confined, apart from some later additions, to constitutions of the years 293-4, and published probably at about that time. Neither survives, but they can to some extent be reconstructed from other collections of legal texts. They were also used by Justinian (see below). They were unofficial collections by unknown authors (perhaps officials in the imperial chancery, Hermogenianus being possibly identical with the jurist of that name, q.v.). The next compilation, the *Codex Theodosianus* (438) was an official one, made on the orders of Theodosius II and containing in sixteen books general enactments from the time of Constantine.

In 528 (six months after his accession) Justinian ordered a commission including Tribonianus (q.v.) to make a new compilation to bring up to date and supersede the three previous ones. This was published in 529, but does not survive. For in 530 and in the three succeeding years, when the *Digesta* (q.v.) were being compiled, Justinian published many reforming constitutions, which made the first *Codex* obsolete. A new edition (*Codex repetitae praelectionis*) was therefore published in 534 by another commission, directed by Tribonianus. In twelve books it contains some 5,000 constitutions from the reign of Hadrian onwards. Unlike the *Codex Theodosianus*, it includes not only *leges generales*, but also

rescripts (see **CONSTITUTIONES**), but none later than Diocletian. The compilers were ordered to make interpolations in the same way as in the *Digesta* (q.v.).

Justinian's constitutions issued after the publication of the second Code (written mostly in Greek) are called *Novellae Constitutiones* (Novels). He never published a collection of them, though he had intended to do so. Three unofficial collections survive, the largest dating from not earlier than Tiberius II (578-82).

EDITIONS. The only complete modern edition of the *Codex Theodosianus* is *Theodosiani Libri XVI* by Mommsen and P. M. Meyer (1905) (translation with some notes by C. Pharr, 1952), the *Codex Justinianus* and the *Novellae* are best found in the second and third volumes respectively of the stereotype edition of the *Corpus Iuris Civilis*, edited respectively by P. Krüger (1954¹¹) and by R. Scholl and W. Kroll (1954⁹).

VOCABULARIES. O. Gradenwitz, *Heidelberger Index zum Theodosianus* (1925), *Ergänzungsband* (1929), R. v. Mayr, *Vocabularium Codicis Justiniani* (1920), II (1923).

GENERAL WORKS. L. Wenger, *Quellen des röm. Rechts* (1953), 514 ff., 569 ff., 678 ff.; J. Guénot, *La Formation du droit séculier et du droit de l'église aux II^e et V^e siècles* (1957), 38 ff.; A. Cenderelli, *Ricerche sul Codex Hermogenianus* (1905). II. N.

CODRUS, supposedly king of Athens in the eleventh century B.C. According to the story current in the fifth century his father Melanthus, of the Neleid family, expelled from his Pylarian kingdom by the Dorians (q.v.), came to Attica, and after killing the Boeotian king Xanthus in single combat during a frontier-war, was accepted as king of Athens in place of the reigning Theseid. During the reign of Codrus the Dorians invaded Attica, having heard from Delphi that they would be victorious if Codrus' life were spared; a friendly Delphian informed the Athenians of this oracle. Codrus thereupon went forth in woodcutter's garb, invited death by starting a quarrel with Dorian warriors, and so saved his country (see Lycurg. *Leor.* 84-7). According to a simpler and probably older version, illustrated by a vase-painting of c. 450 (*ARV²* 1268, no. 1), the Dorians were defeated in a battle, in which Codrus was killed. Codrus was succeeded by his son Medon, and the kingship remained in the family until the eighth century; in a later version, Codrus was the last king and his descendants were archons (see **ARCHONTES**). Other sons of Codrus led the colonization of Ionia from Athens.

Codrus was worshipped as a hero, along with Neleus and the shadowy Basile (*IG* ². 94 of 418/17); he was allegedly buried near the Acropolis (*IG* ². 4258); Pisistratus, and hence Solon and Plato, were believed to be descended from him. How much historical truth there is in his legend it is impossible to say. It has been argued that it was invented to support the claim of Athens to be the metropolis of Ionia.

A. Wilhelm, *Anz. Ost. Akad.* 1950, 366 ff.; *FGH* 321a, P. 21 comm. (in III b (Suppl.) (1954), 141 ff., II 40 ff.); R. E. Wycherley, *BSA* 1960, 60 ff.; G. T. W. Hooker, *JHS* 1960, 115.

COELIUS (1, *PW* 7) **ANTIPATER**, LUCIUS, jurist, rhetorician, and historian, the teacher of L. Crassus, writing after 121 B.C., introduced to Rome, from Hellenistic models, the form of the historical monograph. He wrote in seven books on the Second Punic War, Cannae appearing in book 1, Scipio's landing in Africa in book 6, the capture of Syphax in book 7; the work was dedicated to L. Aelius Stilo, the grammarian. Coelius used not only Roman sources, including family archives (Livy 27. 27. 13), but Silenus' Carthaginian account (Cic. *Div.* 1. 24. 49); his relation to Polybius is uncertain. Some antiquarian fragments indicate perhaps another work, certainly digressions. His style was Asianic, with rhythm, echoes of Ennius, striking word-order, and vivid presentation; he composed speeches within the narrative. The work was epoch-making, and its authority was

recognized by Cicero, Brutus, Livy, who used him, and Hadrian.

Peter, *HRRel* 1st (1914), ccxi, 158, O. Meltzer, *De L. Coelio Ant.* (1867), Norden, *Ant. Kunstpr.* 1, 176, De Sanctis, *Stor. Rom.* III, 2, 176, A. H. MÜD.

COELIUS (2, *PW* 12) **CALDUS**, **GAIUS**, as tribune (107 B.C.) extended secret ballot to *perduellio* cases (see CASSIUS, 7). Praetor in 99 and consul in 94 (overcoming opposition due to his *novitas*), he perhaps governed Gaul during the Social War (see Broughton, *MRK Suppl.* 17).

E. H.

COERCITIO, the right, held by every magistrate with *imperium*, of compelling reluctant citizens to obey his orders and enactments, by inflicting punishment. Against this compulsion, which magistrates exercised not as judges but as the holders of executive authority, no appeal was admitted. The law of *provocatio*, however, made it illegal to issue a capital sentence as a purely coercive measure. *Coercitio* was, therefore, applied in historical times in the case of minor offences only, and took the form of imprisonment, exactment of pledges, fine, relegation, and possibly flogging. But in military law magisterial compulsion always retained much of its primitive severity. See also LAW AND PROCEDURE, III, 10.

Mommson, *Röm. Staatsr.* I, 163 ff.; *Röm. Strafr.* (1899), 35 ff.; J. L. Strachan-Davidson, *Problems of the Roman Criminal Law* (1912), I, 97 ff.

COGIDUBNUS, client king of the British Atrebatas (q.v.), c. A.D. 43–75. Tacitus (*Agric.* 14) notes his loyalty, rewarded by rule over additional *civitates*. An inscription from Chichester (Collingwood and Wright, *RIB* 91) records his title *R(ex et) legatus Aug(usti) in Brit(annia)*. This, with its implication of senatorial and even praetorian status, was probably the gift of Claudius in 47. There are many evidences of his successful philo-Roman policy. The Fishbourne villa (*Antiquity* xxxix (1965), 177 ff.) may have been built for his old age. The *civitas Regnensium* derives its name from his kingdom.

Frere, *Britannia*, ch. 5.

S. S. F.

COHORS. In the early Roman Republic the infantry provided by the *socii* was organized in separate *cohortes* of varying strength under Roman and native *praefecti*. In the legions the cohort was first used as a tactical unit by Scipio Africanus in Spain, but not for over a century (probably as part of the Marian reforms) did it permanently supersede the maniples. There were ten cohorts in a legion, and for administrative purposes each was divided into six centuries. (See CENTURIO; MANIPULUS.)

From the time of Scipio Aemilianus the general's personal bodyguard was known as the *cohort praetoria*, and the term continued to be used in this sense to the end of the Republic. An extension of meaning had developed by the middle of the first century B.C., when the term was used also to describe the entourage of personal friends and acquaintances which the provincial governor took with him. Both these usages led to developments in the Empire; the entourage of personal friends was the origin of the Emperor's *cohortes amicorum*, the military *cohort praetoria* had its successor in the Praetorian Guard. (See PRAETORIANS.)

In the *Auxilia* the infantry units were called cohorts: these were 500 strong (*cohortes quingenariae*) or 1,000 strong (*cohortes milliariae*) and commanded generally by *praefecti*. There were also some mixed units (*cohortes equitatae*) of infantry and cavalry combined. (See AUXILIA.)

Besides the Praetorians, the urban troops and the *vigiles* were organized in cohorts under tribunes. (See COHORTES URBANAE, VIGILES.)

In the Late Empire certain units of the frontier armies still retained the title of cohort. They were commanded by tribunes.

COHORTES URBANAE, the police-force of Rome, created by Augustus and commanded by the *praefectus urbi* (q.v.). Regular police (q.v.) were contrary to republican notions, hence perhaps the resignation of the first prefect (see MESSALLA 3); when finally formed (in A.D. 13?) the force had to be used with tact. In dynastic crises the prefect and his cohorts might take an independent line, as in 41 and 69, but were normally as much at the Princes' disposal as the praetorians. There were at first three, later three or four urban cohorts; their numbering was continuous (if not always strictly) with that of the praetorian cohorts. Each cohort was commanded by a tribune, and probably contained 1,000, later 1,500 men. The pay was apparently half that of the praetorians (see STIPENDIUM); for the tribunes and centurions, transfer to the praetorians was a common form of promotion. There were also single 'urban' cohorts at Lugdunum and Carthage, so called because originally withdrawn from Rome. The force was still in existence in the time of Constantine.

COINAGE, GREEK. BEGINNINGS. A coin (*νόμισμα*) is a flattened piece of metal, of regulated weight, with a device stamped on one or both sides making it clear (though not always to us) what individual or community had put it out and would receive it again. It is therefore a special development of one of those objects (lumps of metal, tools, cattle, etc., see MONEY) used in primitive societies to measure value and store wealth; and it follows that for a long time coins circulated roughly at their bullion value (for electrum see below); there could be no question of imposing artificial rates, or of a wide difference between bullion and specie values, until communities were larger and more highly organized. The first coins were of electrum (*Ἀργυρὸν χρυσός*), originally held to be a metal of itself. Lydia was its main source and to Lydians Xenophanes (fl. 525), our best authority, attributed the first coinage. The foundation deposit of the Ephesian Artemisium (c. 600), in which the earliest-known coins, some already Greek (Miletus, Ephesus), lay side by side with typeless monetaliform dumps of the same weight and metal, suggests a date say a generation earlier (c. 640–630) for their beginning. For a long time coin values were too high for regular domestic use; so presumably the first coins were meant to facilitate large payments by and to rulers, or civic authorities, who put them out, and merchants dealing in bulk. In fact they were little more than improved ingots bringing no immediate change in the daily way of life, which hardly began till 450–400 with the general increase in small change as we see in Aristophanes. Aegina, the only city west of the Aegean to join the Asiatic Greeks in founding Naucratis, was also the first (c. 625–600) outside Anatolia to adapt the invention to her own needs, with a silver coinage embodying the scale of values already established for the primitive iron currency of Greece: *spit*, handful of spits, two handfuls = *δβολός*, *δραχμή*, *διδραχμον* (see § 4) 'Standards and Distribution'. Subsequently the invention of coinage as well as the change from artefact to silver bullion was some-

times associated through Aegina with Pheidon of Argos, e.g. by Ephorus; in the first, at least, chronology is against the tradition.
